1950s, quite a few Danish authors did write occasional sf works before then. The first such book was Ludvig HOLBERG's Nicolai Klimii iter Subterraneum (1741 in Latin; trans as A Journey to the World Underground by Nicolas Klimius 1742; reprinted 1974), which was among the earliest works in any language to feature a journey inside a HOLLOW EARTH. The 18th century saw a few other satirical and fantastical sf-like works, such as the play Anno 7603 ["The Year 7603"] (1785), a gender-reversal SATIRE, by Johan Hermann Wessel (1742-1785). The early 19th century saw little Danish sf and fantasy, although Hans Christian Andersen (1805-1875), in addition to his fantasies, wrote a few sf stories, most notably "Om Aartusinder" (1853; trans as "In a Thousand Years" in The Hans Andersen Library 1869). With the arrival of a new rationalism around 1870, the ground was laid for renewed activity in sf, but not much was actually published. A very interesting work from this time is Vilhelm Bergsoe's novella "En reise med Flyvefisken 'Prometheus'" ["A Journey on the Flying Fish 'Prometheus'"] (1869), which tells of a transatlantic journey on a vessel which alternately flies above the water and dives beneath the surface. Authors who worked with UTOPIAN themes included C.F. Sibbern with Meddelelser af Indholdet af et skrift fra Aaret 2135 ["Report on the Content of Papers from the Year 2135"] (2 vols, 1858 and 1872) and Otto Moller with Guld og Aere ["Gold and Honour"] (1900). The early 20th century saw a number of action-oriented juveniles, chiefly from Niels Meyn (1891-1957), who wrote racist and imperialistic SPACE OPERAS in imitation of Hans Dominik (GERMANY) and various US authors. Satire and social criticism, mostly of a conservative bent, were produced by other contemporary authors, such as Aage Heinberg with Himmelstormerne ["Young Titans"] (1919). After WWII and Hiroshima, Danish literature reflected a mixture of fear and enthusiasm towards technology. This, together with the growing US cultural and economic dominance, made for a new trend in Danish sf. Chief among its practitioners was Niels E. Nielsen (1924-), whose sf debut was in 1952 and who has since written about 40 sf novels. He began as an imitator of Ray BRADBURY, and still harbours a cautious attitude towards TECHNOLOGY, his books usually warning against humankind's usurpation of the powers of the Creator. Among his motifs are nuclear and ecological catastrophe; as early as 1970 he wrote a novel about GENETIC ENGINEERING, Herskerne ["The Rulers"] (1970). The 1960s saw increased interest in sf as a result of two principal factors: one was the enthusiasm generated by the US space programme, the other the indefatigable Jannick Storm (1939-), who, as editor and translator, introduced a lot of US, UK and Scandinavian sf. Storm was a proponent of the NEW WAVE but also introduced such "classical" writers as Isaac ASIMOV, James BLISH and Frederik POHL. From the late 1960s onwards this increased interest in the genre led to a number of Danish authors writing occasional sf books. These may be grouped in several ways. Chiefly inspired by the New Wave and COMICS, the "flower children" of the late 1960s saw sf as a new way of telling wondrous tales, as with Knud Holten in Suma-X (1969). The realists, on the other hand, saw in sf a continuation of realism by other means and created NEAR-FUTURE scenarios; examples are Anders BODELSEN's Frysepunktet (1969; trans as Freezing Point 1971; vt Freezing Down) and Henrik STANGERUP's Manden der ville vaere skyldig (1973; trans as The Man who Wanted to be Guilty 1982). Experimental modernists took

from the genre part of its inventory and used it for other purposes, as in *Liget og Lysten* ["Corpse and Desire"] (1968) by Svendge Madsen, which contains sf elements without really being sf. Occultists and ufologists published a number of sf works, best among them being Erwin Neutzsky-Wulff's *Anno Domini* (1975) and *Gud* ["God"] (1976). Finally, politically conscious writers used near-future scenarios to debate POLLUTION and NUCLEAR POWER. One author who has managed this without his fiction suffering from the politics is Jorgen Lindgreen, whose *Atomer pa Naeset* ["Nuclear Plant on the Promontory"] (1975) is an effective TECHNOTHRILLER. In the late 1970s and early 1980s a rather disparate group of WOMEN SF WRITERS appeared, ranging from the modernist Dorrit Willumsen, with *Programmeret ti kaerlighed* ["Programmed for Love"] (1981), to the utopianist Vibeke Gronfeldt, with *Det fantastike barn* ["The Fantastic Child"] (1982). With two exceptions, the authors mentioned above do not consider themselves sf writers, and nor has any of them written more than a single recognizably sf work. Those exceptions - the writers who really know sf - are Bodelsen and Madsen: Bodelsen has published a number of sf short stories, and Madsen has developed his own unique kind of sf with such works as *Tugt og utugt i mellemtiden* ["Virtue and Depravity in the Middle Period"] (1976), *Se dagens lys* ["Face the Light of Dawn"] (1980) and *Lad tiden ga* ["Let Time Flow"] (1985). Later, Inge Eriksen joined them with a very ambitious tetralogy, *Rummet uden tid* ["Space without Time"] (1983-9). If a distinctly Danish sf is to develop, it will have to build upon the works of these three. [ND]

DENMARK, HARRISON

[s] Roger ZELAZNY.

DENNIS, BRUCE

[s] David Wright O'BRIEN.

DENNIS, GEOFFREY (POMEROY)

(1892-1963) UK writer whose *Harvest in Poland* (1925; rev 1931) deals with augurs of a grim future for Europe in supernatural terms. *The End of the World* (1930), despite its sf title, is a nonfiction discourse on the ways in which the world might in fact end. It has been suggested by Brian M. STABLEFORD that GD may have also written under the name Guy DENT. [JC]

DENNIS, NIGEL (FORBES)

(1912-1989) UK writer whose second novel, *Cards of Identity* (1955), is a FABULATION about a post-WWII England whose citizens are so bereft of security that any identity can be imposed on anyone (see also PARANOIA); the final section, entitled "The Prince of Antioch, or An Old Way to New Identity", constitutes an entire (and entirely fraudulent) Shakespeare play, hilariously couched. In *A House in Order* (1966) identity is again imperilled as the protagonist, under increasingly surreal assault, attempts to act as though WWII were not happening around him. [JC]

DENT, GUY

(? -) Pseudonymous UK writer whose one original contribution to sf, *Emperor of the If* (1926), describes two of the possible universes created by a disembodied brain in a laboratory. In the first part the past is superimposed on the present, with vivid descriptions of London being

overrun by prehistoric flora and fauna; in the second the locale is a future DYSTOPIA where humans exist under the domination of self-reproducing MACHINES. It has been suggested by Brian M. STABLEFORD that GD was in fact Geoffrey DENNIS. [JE]See also: ALTERNATE WORLDS; EVOLUTION; FAR FUTURE; SUPERMAN.

DENT, LESTER

(1905-1959) US author who began publishing work of genre interest with "Pirate Cay" for Top Notch Magazine in 1929; best known for his Doc Savage novels, which he wrote for DOC SAVAGE MAGAZINE under the house name Kenneth ROBESON (which see for details); LD wrote all but 43 of the 181 issues. He also wrote stories under his own name and other crime stories under the pseudonym Tim Ryan. Lester Dent, the Man Behind Doc Savage (1974) is a study by Robert E. WEINBERG; information about LD and about his work appears also in Doc Savage: His Apocalyptic Life (1973) by Philip Jose FARMER. The most complete study is Bigger than Life: The Creator of Doc Savage (1990) by Marilyn Cannaday. LD was famous in PULP-MAGAZINE circles for his Master Plot: the action-suspense formula he claimed never failed. His prose was described by James STERANKO as "bravura frenzy". [PN/JC]

DENTINGER, STEPHEN

[s] Edward D. HOCH.

DENTON, BRADLEY (CLAYTON)

(1958-) US writer who began publishing sf with "Music of the Spheres" in FSF in 1984, and who caused some impact in the field with his first novel, Wrack and Roll (1986), a contemporary ALTERNATE-WORLD tale which portrays heavy-metal musicians as the HEROES they might dream of being in a world absolutely divided between the "straight" majority and the anti-authoritarian "wrackers", who are defined by their MUSIC. BD displays an impressive feel for the sustaining myths of heavy metal in his depiction of the wrackers, whose random violence and passion for life are set against the sterility and genocidal tendencies of the straight world as nuclear war approaches. BUDDY HOLLY IS ALIVE AND WELL ON GANYMEDE (1991) deploys the same range of knowledge with more feeling, deeper nostalgia, and an improved control of narrative; and Blackburn (1993), a horror novel featuring a serial killer with whom it is possible to empathize (though not to defend), is a maturely controlled fable of America. BD's short stories are generally contemporary fantasies with a moral twist, like the 1988 title story of The Calvin Coolidge Home for Dead Comedians(coll 1994) in 2 vols, a fable which attacks the sterile blindness of many Christian conceptions of heaven. [NT]

de PEDROLO, MANUEL

[r] SPAIN.

De POLNAY, PETER

(1906-1984) Hungarian-born writer, in the UK from before WWII. Of his very many novels, only The Stuffed Dog (1977), a TIME-TRAVEL tale, is of genre interest. [JC]

De REYNA, JORGE

Diane DETZER.

DERLETH, AUGUST W(ILLIAM)

(1909-1971) US writer and editor, born in Sauk City, Wisconsin, where he spent his life. A correspondent with and devout admirer of H.P. LOVECRAFT, he devoted much of his life to projects aimed at preserving Lovecraft's memory. The most important of these projects was of course the founding, with Donald WANDREI, of the publishing company ARKHAM HOUSE in Sauk City in order to publish Lovecraft's stories; Wandrei later resigned his interest, but AWD carried on until his death, publishing a wide range of weird fiction, including some of his own otherwise very widely published work. He completed a number of unfinished Lovecraft stories and fragments: *The Lurker at the Threshold* (1945), *The Survivor and Others* (coll 1957) and *The Watchers Out of Time and Others* (coll 1974). In addition, he wrote two volumes of Lovecraft pastiches, *The Mask of Cthulhu* (coll 1958) and *The Trail of Cthulhu* (coll 1962), and edited anthologies of such stories by various writers like *The Shuttered Room*, and *Other Pieces* (anth 1959) - a title not to be confused with either of the Lovecraft collections likewise entitled (one 1970 UK and one 1971 US, contents differing) - *Tales of the Cthulhu Mythos* (anth 1969; vt in 2 vols as *Tales of the Cthulhu Mythos #1* 1971 and *#2*) 1971). AWD edited Lovecraft's writings for publication, including his letters (in collaboration with Wandrei) and *The Dark Brotherhood*, and *Other Pieces* (anth 1966) - a coll of Lovecraft stories, solo and in collaboration - and also wrote *H.P.L.: A Memoir* (1945) and *Some Notes on H.P. Lovecraft* (1959 chap). But AWD's literary activities were by no means dominated by his interest in Lovecraft. He was a prolific and successful writer of regional novels, receiving a Guggenheim Fellowship for this work, and of detective fiction, starting with *Murder Stalks the Wakely Family* (1934; vt *Death Stalks the Wakely Family* 1937 UK); he published a series of Sherlock Holmes pastiches about the character Solar Pons, beginning with "In Re: Sherlock Holmes" - *The Adventures of Solar Pons* (coll 1945; vt *Regarding Sherlock Holmes* 1974; vt *The Adventures of Solar Pons* 1975 UK). His very first story, however - "Bat's Belfry" for *Weird Tales* in 1926 - was of genre interest, and he remained for many years a prolific contributor to *WEIRD TALES*, mainly under his own name and the pseudonym Stephen Grendon, and to other magazines, including *STRANGE STORIES* (where he used the name Tally Mason). His best work was assembled in *Someone in the Dark* (coll 1941), *Something Near* (coll 1945), *Not Long for This World* (coll 1948; with 11 stories cut, vt *Tales from Not Long for This World* 1961), *Lonesome Places* (coll 1962), *Mr George and Other Odd Persons* (coll 1963 as Stephen Grendon; 1964 as AWD; vt *When Graveyards Yawn* 1965 UK as AWD), *Colonel Markesan and Less Pleasant People* (coll 1966) with the US critic and writer Mark Schorer (1908-1977), and *Dwellers in Darkness* (coll 1976). He wrote little sf, but his Tex Harrigan series was about a newspaperman constantly running across zany sf inventions and the like; it was included in *Harrigan's File* (coll 1975). AWD edited a great many anthologies, both sf and weird. His sf anthologies include several large volumes: *Strange Ports of Call* (anth 1948; much cut 1958), *The Other Side of the Moon* (anth 1949; cut 1956 UK; much cut 1959 US) and *Beyond Time and Space* (anth 1950; much cut 1958). His weird anthologies include *Sleep No More* (anth 1944; cut 1964 UK; much

cut vt *Stories From Sleep No More* 1967 US), *Who Knocks?* (anth 1946; much cut 1964 UK) and *The Sleeping ?* vt in 2 vols as *The Sleeping and the Dead* 1964 UK and *The Unquiet Grave* 1964 UK). AWD was one of the pioneering anthologists in the genre. The history of Arkham House was chronicled in AWD's *Arkham House: The First 20 Years* (1959 chap) and *Thirty Years of Arkham House, 1939-1969: A History and Bibliography* (1970 chap). In 1948-9 the company published a magazine, *ARKHAM SAMPLER*, ed AWD. Competent and literate and highly energetic, AWD was the central figure in bringing lasting popularity to Lovecraft and to other authors such as Clark Ashton SMITH. His own extremely various output awaits comprehensive appraisal. [MJE] Other works: *100 Books by August Derleth* (1962), nonfiction; *The Beast in Holger's Woods* (1968). As Editor: *The Night Side* (anth 1947); *Dark of the Moon: Poems of Fantasy and the Macabre* (anth 1947); *Far Boundaries* (anth 1951; cut 1967); *The Outer Reaches* (anth 1951; cut 1958; vt in 2 vols as *The Outer Reaches* 1963 UK and *The Time of Infinity* 1963 UK); *Night's Yawning Peal* (anth 1952; much cut 1974); *Beachheads in Space* (anth 1952; cut 1954 UK; cut 1957 US; with 1 story cut, vt in 2 vols as *Beachheads in Space* 1964 UK and *From Other Worlds* 1964 UK); *Worlds of Tomorrow* (anth 1953; cut 1954 UK; cut 1958 US; vt in 2 vols as *Worlds of Tomorrow* 1963 UK and *New Worlds for Old* 1963 UK); *Time to Come* (anth 1954; cut 1959); *Portals of Tomorrow* (anth 1954); *Fire and Sleet and Candlelight* (anth 1961), poetry; *Dark Mind, Dark Heart* (anth 1962); *When Evil Wakes* (anth 1963 UK); *Over the Edge* (anth 1964); *Travelers by Night* (anth 1967); *Dark Things* (anth 1971). About the author: *August Derleth: A Bibliography* (1983) by Alison M. Wilson. See also: PUBLISHING; SMALL PRESSES AND LIMITED EDITIONS.

DERNIER COMBAT, LE

(vt *The Last Battle*) Film (1983). *Films du Loup*. Dir Luc Besson, starring Pierre Jolivet, Jean Bouise, Jean Reno. Screenplay Besson, Jolivet. 92 mins. B/w. Made by Besson (later one of the best-known French directors of his generation) when only 23, the arty but vigorous LDC is low-budget and photographed in black-and-white Cinemascope, and has no dialogue at all. A young man (Jolivet) in an unspeaking post-HOLOCAUST world - holocaust and speechlessness remain unexplained - flies in a restored plane, meets an old doctor, matures, fights a swordsman, conquers a tribal leader and gets a girl. A dwarf lives in a locked car trunk; the tops of high-rise buildings project from the sand; fish fall from the sky; Samurai lurch and scuttle; women are imprisoned. [PN]

De ROUEN, REED R(ANDOLPH)

(1917-1986) US writer of half Native American (Oneida) extraction. His sf novel *Split Image* (1955 UK) mixes SPACE OPERA and speculation on POLITICS and RELIGION in its story of a space flight culminating in a landing on an exact duplicate of Earth. [PN/JC]

DESART, THE EARL OF

Working name of UK writer W.U.O'C. Cuffe (1845-1898), whose *The Raid of the "Detrimental"* (1897) describes a LOST WORLD in the South Atlantic transformed by its UK inhabitants into an advanced UTOPIA. [JC]

DESMOND, SHAW

(1877-1960) Irish novelist, poet, founder of the International Institute for Psychological Research (1934), and author of many works on the afterlife and several sf novels. *Democracy* (1919) predicts a revolution in the UK. The *DYSTOPIAN Ragnarok* (1926) envisages the destruction of civilization through a world WAR fought by armies equipped with radio-controlled planes and poisonous gases, the narrative concentrating on the derring-do of futuristic fighter pilots. His pessimism continued in *Chaos* (1938), which prophesies a future war between the UK and Germany. *World-Birth* (1938), possibly stimulated by the works of Olaf STAPLEDON, describes the troubled future history of mankind and the eventual development of an ideal state. This concluding optimism surfaces again in *Black Dawn* (1944), where world peace is the dream. His earlier works include two fantasies: *Echo* (1927) is a memory of past incarnation (REINCARNATION) and *Gods* (1921) centres on industrial exploitation. *Tales of the Little Sisters Of Saint Francis* (coll 1929) includes some fantasy. [JE]See also: WEAPONS.

DESTINATION MOON

Up until the 1950s, science fiction films were few and far between. *Destination Moon* changed all that. Based on Robert Heinlein's successful book, *Rocket Ship Galileo*, *Destination Moon* started a major sci-fi movie boom. But unlike many of the creature features that followed, this film was relatively accurate. This was probably because the screenplay was written by Heinlein himself, and he and German rocket expert Hermann Oberth were technical advisors. The only thing that the team got wrong was not a scientific error. In the screenplay for *Destination Moon*, the moon project was paid for by private enterprise. Taxpayer dollars for space programs was a thing of the future.

DESTINATION MOON

Film (1950). A George Pal Production/Eagle-Lion. Dir Irving Pichel, starring John Archer, Warner Anderson, Dick Wesson, Tom Powers. Screenplay Robert A. HEINLEIN, "Rip" Van Ronkel, James O'Hanlon, based loosely on *Rocket Ship Galileo* (1947) by Heinlein. 92 mins. Colour. DM, the first of George PAL's many sf productions, has great historical importance: its commercial success initiated the sf film boom of the 1950s after a decade that had contained almost no sf CINEMA at all. It has interest in hindsight, too, in the partial accuracy with which it anticipated the actual Moon landing of 1969. To this day, DM stands as a film obviously made by people who knew about science: along with the German rocket expert Hermann Oberth (1894-1989), Heinlein himself acted as technical advisor. The special effects are relatively convincing: astronomical artist Chesley BONESTELL provided the backgrounds for the scenes on the Moon, working with art director Ernst Fegte. The film's biggest predictive error was political, not scientific: it predicted that the first Moon landing, described as "the greatest challenge ever hurled at American industry", would be a truly capitalist affair conducted by private enterprise. DM is an austere film, semidocumentary in nature and, aside from a sequence about fuel shortage near the end, rather placid and unexciting. But, despite its colourless script and its low-key performances (except for some ill judged comic relief from the blue-collar radio operator, played by Wesson), DM is a film with considerable dignity and, in a quiet way, a

genuine SENSE OF WONDER. Its final message - THIS IS THE END OF THE BEGINNING in big block letters - can be seen, in retrospect, as an entirely justified claim. [PN]See also: MOON; ROCKETS; SPACE FLIGHT.

SPACE 1999.

DESTINATION SATURN
BUCK ROGERS IN THE 25TH CENTURY.

DESTINIES

US "magazine" in paperback-book format published by ACE BOOKS, ed James BAEN, 11 issues, Nov 1978-Aug 1981, last issue undated. The list of contributors to all sections of the magazine - which could equally be thought of as an original- ANTHOLOGY series - was impressive. Book reviews were by Spider ROBINSON, with Orson Scott CARD and Norman SPINRAD taking over from #6. Science-fact articles came from Jerry POURNELLE, among others, and included a five-part series by Poul ANDERSON on the interaction between sf and science. The fiction was mainly short stories and novelettes, many from well known authors like Gregory BENFORD, Card, Larry NIVEN (with Pournelle), Clifford D. SIMAK and Roger ZELAZNY. "Lost Dorsai" by Gordon R. DICKSON won the 1981 HUGO for Best Novella. The emphasis was on HARD SF. The series died when Baen left Ace. However, some time after Baen formed his publishing company Baen Books in 1983, and having published a very similar paperback magazine series, FAR FRONTIERS (1985-6), he resuscitated Destinies as New Destinies, beginning with New Destinies, Vol I: Spring 1987 ed Baen, apparently current (1992) though irregular, with 8 issues up to New Destinies Vol IX (anth 1990); there was no New Destinies Vol V. The mixture was, as before, of scientific articles and hard-sf stories by authors like Dean ING, Spider Robinson, Charles SHEFFIELD and Harry TURTLEDOVE, as well as pieces from several of the contributors to the original Destinies. [RR/PN]

DESTROY ALL MONSTERS
GOJIRA; RADON.

DESTROY ALL PLANETS
DAIKAIJU GAMERA.

De TARDE, JEAN GABRIEL
[r] Gabriel TARDE.

DETECTIVES
CRIME AND PUNISHMENT.

De TIMMS, GRAEME
A probable pseudonym. GDT's pulp-style paperback sf novels are Three Quarters (1963) and Split (1963). [JC]

DETZER, DIANE
Working name used by US writer Diane Detzer de Reyna (1930-) for some of her sf, though she has also published much material as Adam Lukens, and some as Jorge de Reyna. She began publishing sf with "The Tomb" for Science Fiction Stories in 1958, and soon released a number of novels,

from *The Sea People* (1959) to *Eevalu* (1963), as Adam Lukens. These are varied in subject matter but are generally routine SPACE OPERA. As Jorge de Reyna she published *The Return of the Starships* (1968), and under her own name *The Planet of Fear* (1968). [JC]Other works as Adam Lukens: *Conquest of Life* (1960); *Sons of the Wolf* (1961); *The Glass Cage* (1962); *The World Within* (1962); *Alien World* (1963).

DEVER, JOE

[r] Paul BARNETT; GAMES AND TOYS.

DEVEREUX, EVE

Paul BARNETT.

De VET, CHARLES V(INCENT)

(1911-) US writer, mostly of short stories, of which he has written over 50 for sf magazines, beginning with "The Unexpected Weapon" for AMZ in 1950. In his first sf novel, *Cosmic Checkmate* (1958 ASF as "The Second Game"; exp 1962 chap dos; exp vt *Second Game* 1981) with Katherine MACLEAN, an Earthman is sent to investigate a hostile planet whose inhabitants' social advancement depends on proficiency at the national chess-like game (GAMES AND SPORTS). His second novel, *Special Feature* (1958 ASF; exp 1975), rather flatly depicts media involvement in the filming of the depredations of an ALIEN monster in St Louis. After some years of silence, CVDV became active once again in the late 1980s. [JC]

DEVIL-DOLL, THE

Film (1936). MGM. Dir Tod Browning, starring Lionel Barrymore, Maureen O'Sullivan, Frank Lawton. Screenplay Browning, Garrett Fort, S. Guy ENDORE, Erich von Stroheim, based on *Burn, Witch, Burn!* (1933) by A. MERRITT and "The Witch of Timbuctoo" by Browning. 79 mins. B/w. In this film by the director of *Dracula* (1931) and *Freaks* (1932) a man (Barrymore) wrongly convicted and sent to Devil's Island returns to Paris, where he uses miniaturized people for revenge. He disguises himself as an old-lady toymaker and sends his 6in (15cm) humans as toys to the homes of his enemies; in the middle of the night the "toys" come to life and carry out his telepathic instructions. The illusion of miniaturization is perfectly created by the use of giant sets and skilfully executed travelling mattes - the work of the MGM special-effects department, then headed by A. Arnold Gillespie. Though the original novel used alchemy for miniaturization, this uses a supposedly scientific electrical device. [JB/PN]

DEVLIN, ROY P.

[s] Thomas P. KELLEY.

DEVOLUTION

Sf is usually an optimistic genre, and stories of EVOLUTION on the whole envisage humanity as slowly progressing to higher states. However, a persistent pessimistic note in GENRE SF generally, and to a degree in mainstream sf too, has been to imagine the opposite, the devolution or degeneration of mankind. The note was sounded most famously in H.G. WELLS's *THE TIME MACHINE* (1895), in which humankind evolves into two races, one physically degenerate, the other with few mental resources. At the end of the book humankind is gone, the Sun is cooling, and a solitary

football-shaped creature is seen flopping in the last shallow sea. In George Allan ENGLAND's *Darkness and Dawn* (1914) a couple wake after SUSPENDED ANIMATION to find a desolate Earth peopled by subhuman descendants of the survivors of a natural DISASTER. The rhetoric is lurid. To this day, stories of the HOLOCAUST AND AFTER are often peopled by tribal savages and monstrous MUTANTS, though here the devolution tends to be social rather than biological in emphasis, as in Russell HOBAN's *RIDDLEY WALKER* (1980), which is unusual in its foregrounding of a devolved (but vivid) language (LINGUISTICS). The possibility of biological devolution was mooted in pseudo-scientific circles a good deal in the early part of the century - it was a favourite notion of the Nazis - and H.P. LOVECRAFT often saw the adherents of his various disgusting cults as devolved into froglike or apelike creatures. The idea that humanity could revert to apedom was almost a CLICHE of pulp sf; it is central to, for example, *The Iron Star* (1930) by John TAINÉ, in which rays from a meteor are the mutagenic agent. *La planete des singes* (1963; trans as *Planet of the Apes* 1963 US; vt *Monkey Planet* 1964 UK) by Pierre BOULLE, filmed as *PLANET OF THE APES* (1968), put a later slant on the theme for satirical purposes by having the evolution of apes paralleled by the devolution of humans. The hero of Edmond HAMILTON's "The Man who Evolved" (1931) regresses finally to a blob. Hamilton enjoyed the cosmic pointlessness suggested by ideas of devolution, and often used the theme. On a more serious level, the idea comes up several times in *LAST AND FIRST MEN* (1930) by Olaf STAPLEDON, in which the upwards progression of the evolutionary thrust is several times interrupted by devolutionary sequences, rather like someone climbing a slippery hill and occasionally backsliding. Paddy CHAYEFESKY's *Altered States* (1978) gives a new twist to the idea in its interesting if absurd notion that altered states of consciousness (as in a sensory-deprivation tank) may lead to instant alteration of the way our genetic heritage is manifest, our oldest DNA finding bodily expression to produce, in this case, first an apeman and later a blob. This was filmed as *ALTERED STATES* (1980). Chayefsky admits that his inspiration was Robert Louis STEVENSON's *Strange Case of Dr Jekyll and Mr Hyde* (1886), a novel whose protagonist, after experimenting with chemicals, alternates between two states: the highly evolved doctor and the amoral, bestial Hyde. In Stevenson's book what is a subtext in most earlier devolution stories is almost overt: that devolution is a metaphorical equivalent of the Fall of Man. Social devolution was always a popular theme in genre sf, partly because it gave writers a chance to exploit colourful primitive societies and partly in deference to the cyclic view of HISTORY popularized by Arnold Toynbee (1889-1975). The theme is also common in stories of GALACTIC EMPIRES, where commonly a social breakdown at the centre leads to cultural devolution on the fringes, much as in the Roman Empire. This is the theme of Isaac ASIMOV's *Foundation* trilogy. The theme of ENTROPY became popular in the 1960s, and with it came a new lease of life for devolution stories. Evolution ever upwards is an example of negentropy, or reverse entropy, and is counter to the general running-down of the cosmos, which in obedience to the laws of thermodynamics moves towards ever decreasing order, ever increasing randomness. (The pessimism of the 1950s and 1960s probably had more to do with the Vietnam War and problems of OVERPOPULATION and starvation than

with any revelation from physics, but entropy provided a convenient metaphor for all this.) 1960s writers often envisaged increasing disorder in terms of biological devolution. The theme was touched on by Samuel R. DELANY in *The Ballad of Beta-2* (1965), but an earlier and more substantial work was *The Long Afternoon of Earth* (1962 US; exp vt Hothouse 1962 UK) by Brian W. ALDISS, in which a devolved and jungle-like Earth, whose shrunken humans have taken to the trees again, is given a kind of weird charm; life continues fecund even while INTELLIGENCE is lost and the Galaxy subsides towards its heat-death. Devolution occurs in the work of other writers of FABULATIONS and NEW-WAVE sf, and nowhere are its attractions for the overintellectualized 20th century more clearly shown than in the works of J.G. BALLARD, whose most central and recurring theme this is. Its first clear expression was in his story "The Voices of Time" (1960), in which the countdown to the end of the Universe is accompanied by a series of baroque degenerate mutations and the hero's need for more and more sleep. The tone is as much celebratory as tragic. Ballard's *The Drowned World* (1962) has a hero ever more ready to slough off such human qualities as ambition or even self-preservation as he listens to the insistent call of his bloodstream, whose saltiness recalls a time before life had left the oceans. These inner changes are mirrored in the Earth itself, which has catastrophically reverted to the luxuriance of a new Carboniferous era. Tales of devolution from the 1970s and 1980s are often curiously close in feeling to their apparent opposite: the stories of evolutionary transcendence that we associate with, for example, Greg BEAR and Ian WATSON. Where we envisage an upwards there must necessarily be a downwards, too; this is an idea that has haunted many sf writers, notably Michael BISHOP, sometimes metaphorically and sometimes literally. It is close to the latter in his *NO ENEMY BUT TIME* (1982), in which a modern man travels back in time to find marriage and a home with hominids. Which evolutionary direction is upwards, which downwards, and which better, seems to several contemporary writers to be all a matter of perspective, as can be seen in the main 1980s variant on the theme: a devolution that is deliberately biologically (or psychologically) engineered. Several of the CYBERPUNK writers have envisaged such an operation as a means of simplifying the self to a creature who is less prone, perhaps, to the angst induced by information overload. A similar idea is found in David ZINDELL's *Neverness* (1988), a large part of which deals with the fierce, brave, ice-age Alaloi, a race which "because they wanted to live what they thought of as a natural life . . . back mutated some of their chromosomes, the better to grow strong, primitive children to live on the pristine worlds they hoped to discover". An interesting and even more ferocious devolution, more psychic than physical, is that envisaged in Robert P. HOLDSTOCK's *Mythago Wood* (1984) and its sequels, in which the human hind-brain conspires with the power of an ancient woodland to strip the minds of those who walk there down to the blood and bone of their Neolithic forebears and further, back into the days of ice. Most writers of the last few decades who have like Holdstock dealt with this theme have exhibited a strong if ambiguous attraction to the idea, though to an earlier generation devolution appeared straightforwardly repugnant. The class of stories in which primitive primates confront evolved primates in the present day is discussed under APES AND CAVEMEN; these stories, too,

have a bearing on the devolution theme. [PN]

DEWDNEY, A(LEXANDER) K(EEWATIN)

(1941-) Canadian writer whose sf novel, *The Planiverse: ComputerContact with a Two-Dimensional World* (1984 US), intriguingly updates Edwin A. ABBOTT's *Flatland* (1884); its flatland protagonist, Yndrd, attempts to penetrate from his world of Arde into an epiphanous "reality beyond reality," making contact as he does with a roundworld COMPUTER programmed to simulate 2-dimensional existence. The portrayal of 2-dimensional life provided by AKD is remarkably sustained, and is an education in the understanding of mathematics. [JC]

DeWEESE, GENE

Working name of US technical writer and author Thomas Eugene DeWeese (1934-), who began writing sf with two *Man from U.N.C.L.E.* ties, *The Invisibility Affair* * (1967) and *The Mind-Twisters Affair* * (1967), both with Robert COULSON and signed, collaboratively, Thomas Stratton. Other novels with Coulson, both authors now signing their own names, include a routine sf adventure for LASER BOOKS, *Gates of the Universe* (1975 Canada; rev vt *Nightmare Universe* 1985 US) and two spoof RECURSIVE novels about reporter Joe Karns, who gets into all kinds of trouble at sf CONVENTIONS; the large number of in-group references made it unlikely that either *Now You See It/Him/Them* (1975) and *Charles Fort Never Mentioned Wombats* (1977) would gain many readers outside the genre. In the 1980s, GDW concentrated on lively juveniles (see listing below) and on several equally lively Star Trek ties: for STAR TREK itself, *Chain of Attack* * (1987), its direct sequel *The Final Nexus* * (1988), and *Renegade* * (1991); and, for STAR TREK: THE NEXT GENERATION, *The Peacekeepers* * (1988). [JC/PN] Other works: *Jeremy Case* (1976 Canada); *The Wanting Factor* (1980); *Something Answered* (1983). For children: *Major Corby and the Unidentified Flapping Object* (1979); *Nightmares from Space* (1981); *The Adventures of a Two-Minute Werewolf* (1983); the Calvin Willeford sequence, comprising *Black Suits from Outer Space* (1985; vt *Beepers from Outer Space* 1985), *The Dandelion Caper* (1986) and *The Calvin Nullifier* (1987); *Whatever Became of Aunt Margaret?* (1990). As Jean DeWeese: Various Gothics, of which *The Reimann Curse* (1975; vt *A Different Darkness* 1982 as GDW), *The Moonstone Spirit* (1975), *The Carnelian Cat* (1975) and *Nightmare in Pewter* (1978) have been registered as containing material of genre interest.

DeWEESE, JEAN

Gene DEWEESE.

De WREDER, PAUL

John HEMING.

DEXTER, J.B.

John S. GLASBY.

DEXTER, WILLIAM

Pseudonym of UK writer William Thomas Pritchard (1909-), whose two sf novels make up a short series. In *World of Eclipse* (1954) humans return from internment on the planet of the Vulcanids to repopulate a devastated Earth; *Children of the Void* (1955) brings in a runaway world, nuclear

conflicts in space, and communication with ethereal descendants of humanity. [JC]

DEY, FREDERICK VAN RENSSLAER

Die TAUSEND AUGEN DES DR MABUSE .

DIABOLIC INVENTION, THE

VYNALEZ ZKAZY.

DIABOLIK

(vt Danger: Diabolik) Film (1967). Dino De Laurentiis/Marianne. Dir Mario Bava, starring John Phillip Law, Marisa Mell, Michel Piccoli, Adolfo Celi, Terry-Thomas. Screenplay Bava, Dino Maiuri, Adriano Baracco, Brian Degas, Tudor Gates, based on fumetti by Luciana and Angela Giussani. 105 mins, cut to 88 mins. Colour. This Italian/French coproduction is one of Di Laurentiis's several attempts to film sf COMIC strips, others being BARBARELLA (1967) and FLASH GORDON (1980). Law plays a stylish supercriminal, after the style of Fantomas, the fictional antihero of several thrillers, beginning with Fantomas (1913-14); he attempts to steal the entire gold reserves and destroy all the tax records of his country. He is caught at the denouement in a shower of radioactive molten gold, becoming his own memorial. Directed with visual panache and a sense of fun by Bava, D is futuristic but only marginally sf. [PN]

DIAMOND, JOHN

[s] Barrington J. BAYLEY.

DIANETICS

According to its adherents a science, according to its disbelievers a PSEUDO-SCIENCE, founded by L. Ron HUBBARD, at the time a pulp writer whose main market was the sf magazines. Hubbard's sf had always emphasized the powers of the mind and deployed protagonists who maintained to the end a heroic stance against a corrupt Universe. The former interest was translated into real-life terms in the late 1940s, and the latter vision may be what sustained Hubbard against the widespread execration he and his movement received from some quarters, both outside and inside sf. The editor of ASF, John W. CAMPBELL Jr, began experimenting with Hubbard's ideas in 1949 and believed them valid. In May 1950 ASF (after much prior publicity) published a long article on Dianetics, seen as a form of psychotherapy that could achieve miraculous results in sweeping away the dross that encumbers ordinary minds, to leave uncovered the SUPERMAN latent in us all. Follow-up publicity went well beyond the sf magazines. Hubbard's Dianetics: The Modern Science of Mental Health (1950) was published in the same year, and immediately became a bestseller. The attractions of Dianetics were manifold: it could be practised after mere hours of training, with no formal education necessary; it proposed an apparently simple and coherent model of the mind; it offered an explanation of why so many people feel themselves to be unappreciated failures - and, better than that, it offered a cure. In Dianetics an "auditor" (the therapist) encourages the patient to babble out his/her

fantasies. The E-meter, a form of lie-detector, early on came to be an essential item of equipment. In theory, the needle on the meter swings over whenever a traumatic area of memory is uncovered, and the auditor then disposes of the trauma by revealing its meaning. So far, this is rather like an sf version of conventional psychoanalysis. However, Hubbard also taught that traumas could be pre-natal, and eventually that they could have been suffered during previous incarnations (REINCARNATION) right back to the dawn of time. A "clear" - a person who had successfully rid himself/herself of aberrations - would possess radically increased intelligence, powers of telepathy, the ability to move outside the body and to control such somatic processes as growing new teeth, and a photographic memory. Here was the superman figure of so much contemporary pulp sf made flesh - at least if Dianetics worked (EDISONADE). Film stars took up Dianetics; centres were opened all over the USA; many thousands were converted, including A.E. VAN VOGT, whose own sf had produced many protagonists not unlike Dianetics's "clears". One of Hubbard's assistants was Perry CHAPDELAIN, who later became an sf writer himself. In 1952, after an organizational rift, Hubbard left the Dianetic Foundation and soon advertised his new advance on Dianetics, SCIENTOLOGY, in the entry for which this story is continued. [PN]See also: PARANOIA.

DIBELL, ANSEN

Pseudonym of US writer Ann Dibble (1942-) whose sf sequence, the Strange and Fantastic History of the King of Kantmorie, comprises 3 PLANETARY ROMANCE tales-Pursuit of the Screamer (1978), Circle, Crescent, Star (1981) and Summerfair (1982)-set in a world inhabited by GENETICALLY ENGINEERED races in exile from a forgotten galactic civilization, along with a dying group of CLONES; and intimately affected by an organic COMPUTER named Shai which (or who) eventually offers the protagonist the opportunity of space flight. The outcome of the sequence is unclear, as is its ultimate success as a work of art; the release of its 2 final volumes, Tidestorm Limit and The Sun of Return, might resolve these issues, and help establish the Fantastic History as a significant contribution to the genre. [JC]

DICK, KAY

(1915-) UK writer and editor whose novel, They: A Sequence of Unease (1977), resembles thematically and in its experimental structure much of her previous fiction, but is set in a NEAR-FUTURE England where freedom of travel is restricted and cultural activities are actively persecuted. Constructed as a set of linked stories that mirror one another, They relates ENTROPY and the youth-culture as enemies of creative values (and middle-class individualism); in relating these levels of meaning, KD sets up a very moving, though abstract, model of humanistic response to a straitened future. [JC]Other works as editor: The Mandrake Root (anth 1946) as Jeremy Scott, At Close of Eve (anth 1947) as Scott and The Uncertain Element (anth 1950), all fantasy anthologies.

DICK, PHILIP K(INDRED)

(1928-1982) US writer, one of the two or three most important figures in 20th-century US sf and an author of general significance. He lived most of his life in California, where most of his fiction was set, either

literally or by displacing sf protocols into a nightmare of the Pacific Rim. He attended college for one year at Berkeley, operated a record store and ran a classical-music programme for a local radio station; he was married five times, and had three children. From 1950 to 1970 he was intensely and constantly productive - a circumstance only posthumously made clear by the publication of several mainstream novels written during the first years of his career. The order in which he wrote his many novels is of importance in assessing their interrelation, and so the relevant dates are indicated in the discussion below. He began his career with short magazine fiction-his first published story was "Beyond Lies the Wub" (1952) - and over the next few years came a number of ironic and idiosyncratic short stories, some of which were collected in *A Handful of Darkness* (written 1952-4; coll 1955 UK; with 2 stories cut 1966 UK), *The Variable Man and Other Stories* (written 1952-4; coll 1957) and *The Book of Philip K. Dick* (written 1952-5; coll 1973; vt *The Turning Wheel and Other Stories* 1977 UK). The first three and a half volumes of *THE COLLECTED STORIES OF PHILIP K. DICK* are devoted to these early years. This set, which is definitive, consists of 5 separate titles, all of which suffer from a singularly unhelpful array of vts: *Beyond Lies the Wub* (coll 1987; vt *The Short Happy Life of the Brown Oxford* 1990); *Second Variety* (coll 1987; vt *We Can Remember it for You Wholesale*, with "Second Variety" dropped and the new title story added, 1990); *The Father-Thing* (coll 1987; rev with "Second Variety" added, vt *Second Variety* 1991); *The Days of Perky Pat* (coll 1987; vt *The Minority Report* 1991) and *The Little Black Box* (coll 1987; vt *We Can Remember it for you Wholesale* 1991 UK; vt *The Eye of the Sibyl* 1992 US). PKD's first novels - *The Cosmic Puppets* (written 1953; 1956 Satellite as "A Glass of Darkness"; exp 1957 dos) and *Dr Futurity* (written 1953; 1954 TWS as "Time Pawn"; exp 1959 dos) - were professional expansions of magazine tales and reveal his fingerprints to hindsight; the former interestingly returns a man to his home-town which, overlaid by manufactured illusion, serves as a battleground for two warring forces who bear the aspects of Ormazd and Ahriman (the opposing principles of Zoroastrian cosmology). PKD's *PARANOIA* about godlike manipulations of consensual reality marks a theme he would obsessively repeat in less crude form, just as the confusion of humans and mechanical simulacra adumbrated in the second book might be considered one particular variant of the major theme which runs right through PKD's work: the juxtaposition of two "levels of reality" - one "objectively" determined, the other a world of appearances imposed upon characters by various means and processes. His first published book, *SOLAR LOTTERY* (written 1953-54 1955 dos; rev vt *World of Chance* 1955 UK - each text printing some material the other excludes), has an immediate impact; it is a story belonging to, if not rather dominating, a category prevalent in the early 1950s-the tale in which future society is distorted by some particular set of idiosyncratic priorities: in this case social opportunity is governed by lottery. The plot of the novel is reminiscent of A.E. VAN VOGT, and juxtaposes political intrigues with the utopian quest of the disciples of an eccentric MESSIAH. This interest in messianic figures runs throughout PKD's work as an important subsidiary theme. There are versions of it in *The World Jones Made* (written 1954; 1956 dos), *Vulcan's Hammer* (1956 Future Science Fiction; exp 1960), and in his sf of the 1960s. But, after

writing *The World Jones Made*, a heated authoritarian DYSTOPIA, *Eye in the Sky* (written 1955; 1957), which sophisticates the reality diseases of his first novel, and the routine *The Man who Japed* (written 1955; 1956 dos), PKD began an exceedingly ambitious - and totally unsuccessful - attempt to break into the mainstream-novel market. From this period came *Mary and the Giant* (written 1953-5; 1987), *The Broken Bubble* (written 1956; 1988), *Puttering About in a Small Land* (written 1957; 1985), *In Milton Lumky Territory* (written 1958-9; 1985), *Confessions of a Crap Artist* (written 1959; 1975), *The Man whose Teeth were All Exactly Alike* (written 1960; 1984) and *Humpty Dumpty in Oakland* (written 1960; 1986 UK). Graceful, wry, vulnerable, pessimistic and wise, they are novels less good only than the best of PKD's intense prime, which began immediately. *Time Out of Joint* (written 1958; 1959) is a bridge novel: its central character, who lives in a peaceful POCKET-UNIVERSE enclave created for him by a war-torn society so that it can exploit his precognitive talents, retains the desire and capacity to defeat illusion and regain objective reality. In later books the author became more and more fascinated by the various unreal worlds he created. In the first of these, the HUGO-winning *THE MAN IN THE HIGH CASTLE* (written 1961; 1962), his best-known single book, the characters live in an ALTERNATE WORLD in which the Allies lost WWII (HITLER WINS), but one of them eventually learns from the I-Ching that the real world - manifest in the alternate through the pages of a novel - is one in which the Allies won (though it is not our world). After this major novel came, in close succession, the writing of three further books which together constitute his finest achievement. *Martian Time-Slip* (written 1962; 1963 *Worlds of Tomorrow* as "All We Marsmen"; exp 1964) creates a world irradiated by schizophrenic (PARANOIA) perceptions, and moves with frightening intensity - and hilarity - to an elegant transcendental finale. *Dr Bloodmoney, or How We Got Along After the Bomb* (written 1963; 1965), is built more intricately than any other PKD novel upon a plot-structure whose interconnections and layers themselves work as a portrayal of the world - in this case a post- HOLOCAUST USA. *THE THREE STIGMATA OF PALMER ELDRITCH* (written 1964; 1965), more extremely than any previous PKD book, inhabits the badlands within which the real and the ersatz interpenetrate: suppliers of a hallucinogenic drug which makes life tolerable for Martian colonists face opposition from the sinister Eldritch, whose own new drug (imaged in language which recalls the Communion wafer) pre-empts reality entirely. The complexity and stature of these four books were perhaps muffled in the 1960s through their being outnumbered by the less achieved PKD works that were being composed or released at this same time - *We Can Build You* (written 1962; 1969 AMZ as "A. Lincoln, Simulacrum", with last chapter added by Ted WHITE; text restored 1972), *The Game-Players of Titan* (written 1963; 1963), *The Simulacra* (written 1963; 1964), *Now Wait for Last Year* (written 1963; 1966), *Clans of the Alphane Moon* (written 1963-4; 1964), *The Crack in Space* (written 1963-4; 1966), *The Zap Gun* (written 1964; 1967), *The Penultimate Truth* (written 1964; 1964), *The Unteleported Man* (written 1964-5; first half only 1966 dos; both halves rev 1983; with short inserts by John T. SLADEK rev vt Lies, Inc 1984 UK) and *Counter-Clock World* (written 1965; 1967). None of these stories quite jell in the end - though much happens of considerable interest - and none lack moments of

extraordinary cultural and psychological insight, sometimes presented in a language singularly familiar with the large repertory of mind-states accessible through the use of drugs. It was only with a late novel, *A SCANNER DARKLY* (written 1973; 1977), that he would explore the more negative human implications of drug-taking, though with an almost hallucinated vehemence. In his next major novel, *DO ANDROIDS DREAM OF ELECTRIC SHEEP?* (written 1966; 1968; vt *Blade Runner* 1982), filmed in 1982 by Ridley SCOTT as *BLADE RUNNER*, PKD effectively climaxed the series of novels in which mechanical simulacra of human beings - sometimes eminent - figure as agents of illusion. In this tale, which became much more widely known after the film, android animals are marketed to help expiate the guilt people experience because real ones have been virtually exterminated; simultaneously the protagonist must hunt down androids illegally imported from MARS. In so doing, he learns that the society's new MESSIAH may also be a fake; and that the landscapes of decay and imposture may in fact only mirror his own condition. As with so many of PKD's best books - like *Martian-Time Slip*, *Dr Bloodmoney* and *THE THREE STIGMATA OF PALMER ELDRITCH* - the story takes place in a depleted environment, with a small population existing in a derelict world. This sense of a shrinking world intensifies in PKD's last two "untroubled" works of genius: *Ubik* (written 1966; 1969), which features the creation of a subjective world by a group of people killed in an accident but restored to a kind of consciousness within a preservative machine, though any final determination of what is real in the book is made superbly problematical; and *A Maze of Death* (written 1968; 1970), a bleak poisoned exercise in theology which has been described as his single finest work. From this point in PKD's life, metaphysical questions began to dominate. *GALACTIC POT-HEALER* (written 1967-8; 1969) begins almost as a parody, but soon becomes involved in questions of predetermination and the Dualistic conflict between darkness and light. Theological issues are paramount also in the novelette "Faith of Our Fathers" (1967) and in *Our Friends From Frolix 8* (written 1968-9; 1970), the composition of which is illuminated by *Outline for Our Friends from Frolix 8* (written 1968; 1989 chap). As the 1970s began, theology gradually segued in PKD's own life into episodes of paranoia and epiphany, climaxing in a religious experience in March 1974 which he spent much of the rest of his life analysing in the form of an "Exegesis", of which a small, integral portion has been published as *Cosmogony and Cosmology* (written 1978; 1987 chap UK); a large selection from this material has been assembled as *In Pursuit of VALIS: Selections from the Exegesis* (1991). *The Selected Letters of Philip K. Dick: 1972-1973* (coll 1993), *The Selected Letters of Philip K. Dick: 1974* (coll 1991) and *The Selected Letters of Philip K. Dick: 1975-76* (coll 1992) focus on the same material; further volumes are projected. And, after 20 years, the stream of novels became intermittent. *Flow My Tears, the Policeman Said* (written 1970-73; 1974), which won the JOHN W. CAMPBELL MEMORIAL AWARD, mainly retreads old ground. It was followed by a rather unsatisfactory collaboration with Roger ZELAZNY, *Deus Irae* (written 1964-75; fixup 1976). *Radio Free Albemuth* (written 1976; 1985), which began to deal in "healthy" fictional terms with the Exegesis material, was published only after PKD's death. This latter novel is, in any case, a kind of draft of the finest book of PKD's last years, *VALIS* (written 1978; 1981), a fragile but deeply

valiant self-analysis - he is two characters in the novel, a man who is mad and a man who is not - conducted within the framework of a longing search for the structure of meaning, the Vast Active Living Intelligence System. The Divine Invasion (written 1980; 1981) and The Transmigration of Timothy Archer (written 1981; 1982), which were assembled with their predecessor as The VALIS Trilogy (omni 1989), share obsessional search-patterns but little else. They were the books of a finished writer, in every sense. The earlier PKD often lost control of his material in ideative mazes and, sidetracked, was unable to find any resolution; but, when he found the tale within his grasp, he was brilliantly inventive, gaining access to imaginative realms which no other writer of sf had reached. His sympathy for the plight of his characters - often far-from-heroic, small, ordinary people trapped in difficult existential circumstances - was unflinching, and his work had a human interest absent from that of writers engaged by complexity and convolution for their own sake. Even the most perilous metaphysical terrors of his finest novels wore a complaining, vulnerable, human face. In all his work he was astonishingly intimate, self-exposed, and very dangerous. He was the funniest sf writer of his time, and perhaps the most terrifying. His dreads were our own, spoken as we could not have spoken them. [BS/JC] Other works: The Ganymede Takeover (written 1964-6; 1967) with Ray (R.F.) NELSON; The Preserving Machine (written 1953-66; coll 1969; with 1 story dropped 1971 UK); The Best of Philip K. Dick (written 1952-73; coll 1977) ed John BRUNNER; A Letter from Philip K. Dick (written 1960; 1983 chap); Nazism and the High Castle (written 1964?; 1964 Niekas; 1987 chap dos), published with Schizophrenia and the Book of Changes (written 1965?; 1965 Niekas; 1987 chap dos); We Can Remember it for You Wholesale (written 1965; 1966 FSF; 1990 chap), filmed as TOTAL RECALL (1990); Nick and the Glimmung (written 1966; 1988 UK), for children; Warning: We Are Your Police (written 1967; 1985 chap); The Golden Man (written 1952-73; coll 1980); The Dark-Haired Girl (written 1972-5; coll 1988), mostly nonfiction; Ubik: The Screenplay (written 1974; 1985). About the author: The literature on PKD is enormous and daily growing. Here are a few representative volumes: Philip K. Dick: Electric Shepherd (anth 1975) ed Bruce GILLESPIE; Science-Fiction Studies, Mar 1975 and July 1988, 2 special issues devoted to PKD; The Novels of Philip K. Dick (1984) by Kim Stanley ROBINSON; Only Apparently Real: The World of Philip K. Dick (1986) by Paul WILLIAMS; Mind in Motion: The Science Fiction of Philip K. Dick (1987) by Patricia WARRICK; To the High Castle: Philip K. Dick: A Life 1928-1962 (1989) by Gregg Rickman; Divine Invasions: A Life of Philip K. Dick (1989) by Lawrence Sutin, perhaps the most clear-sighted of the biographical studies; Philip Kindred Dick, Metaphysical Conjurer: A Working Bibliography (latest edn 1990) by Gordon BENSON Jr and Phil STEPHENSEN-PAYNE. See also: ACE BOOKS; ALIENS; ANDROIDS; AUTOMATION; BRITISH SCIENCE FICTION AWARD; CITIES; COLLECTIONS; COLONIZATION OF OTHER WORLDS; COMICS; COMPUTERS; CONCEPTUAL BREAKTHROUGH; CYBERNETICS; CYBORGS; ENTROPY; ESP; FANTASTIC VOYAGES; FRANCE; GAMES AND SPORTS; GENETIC ENGINEERING; GODS AND DEMONS; GOTHIC SF; GREAT AND SMALL; HISTORY OF SF;

DICKENS, CHARLES (JOHN HUFFHAM)

(1812-1870) UK writer, almost certainly the greatest novelist in the English language. CD wrote considerable fantasy - including most famously A Christmas Carol in Prose, Being a Ghost Story of Christmas (1843) - but no sf proper. However, it has been argued, most recently by John CLUTE in Horror: 100 Best Books (anth 1988; rev 1992) ed Stephen Jones and Kim NEWMAN, that the nightmarish, almost futuristic London which figures in several of his later novels, from Bleak House (1853) through Our Mutual Friend (1865), was a central influence - via G.K. CHESTERTON, Robert Louis STEVENSON and others - in the creation of 19th-century urban England as a stamping-ground for STEAMPUNK. Like William MORRIS, Lord DUNSANY and J.R.R. TOLKIEN after him, CD is central to the geography of sf. It is also arguable that Mugby Junction (anth 1866 chap), a self-contained volume published as an extra Christmas number of CD's magazine All the Year Round, may constitute the first SHARED-WORLD anthology of genre interest. [JC] Other works: The Chimes (dated 1845 but 1844); The Cricket on the Hearth (dated 1846 but 1845); The Haunted Man, and The Ghost's Bargain (coll 1848). See also: ENTROPY.

DICKINSON, PETER (MALCOLM de BRISSAC)

(1927-) UK writer, born in Northern Rhodesia (now Zambia), educated at Eton and King's College, Cambridge; for 17 years assistant editor of the humorous magazine Punch. PD is best known for his detective stories, but he has written one adult sf novel, The Green Gene (1973), an amusing SATIRE on many issues including racial prejudice, set in an ALTERNATE-WORLD UK, where all Celts possess a gene that gives them green skin. It was runner-up for the JOHN W. CAMPBELL MEMORIAL AWARD. An adult detective novel, King and Joker (1976), is set in an alternate England where George V's elder brother Clarence did not die of pneumonia but lived to become King Victor I; its belated sequel was Skeleton-in-Waiting (1989). Two other adult thrillers have ambiguously fantastic elements, Sleep and his Brother (1971) and Walking Dead (1977). PD's most important contribution to sf is his Changes trilogy for children: in order of internal chronology the novels are The Devil's Children (1971), Heartsease (1970) and THE WEATHERMONGER (1968; with chapters 10 and 11 rev, 1969 US), all assembled as The Changes (omni 1975; vt The Changes Trilogy 1985; vt The Changes: A Trilogy 1991 US). They deal with an inexplicable change in English life when the population suddenly turns against MACHINES and adopts medieval superstitions. The Devil's Children, where a 12-year-old girl is adopted by a band of travelling Sikhs, is the most sensitive, and THE WEATHERMONGER, which features Merlin, the most fantastic and baroque. There are minor inconsistencies in the world picture from book to book. In 1972 the BBC presented a six-episode sf serial for children, Man Dog, written by PD, and novelized as Mandog * (1972) by Lois LAMPLUGH. Escapees

from the 26th century transfer their leader's mind into a dog belonging to one of a group of children in the present. They are pursued by future police. Many of PD's other juveniles have fantastic elements: Emma Tupper's *Diary* (1971) is a Loch Ness Monster story; *The Dancing Bear* (1972) is a fantasy set in the 5th century; *The Gift* (1973) has a telepathic boy in a thriller with mythic overtones; *The Blue Hawk* (1976), which won the Guardian Award for Best Children's Book of the year, is set in an imaginary ancient kingdom, where the gods are withdrawing their magic from the world; *Chance, Luck and Destiny* (coll 1975) contains an sf story, "Mr Monnow"; *Annerton Pit* (1977) features an ambiguous presence - it may be sciencefictional rather than fantastic - lurking in a mineshaft of ill repute; *Tulku* (1979) has fantastic happenings in Tibet; *Healer* (1983; vt *The Healer* 1985 US) has a girl with special powers; and *Eva* (1988) has a girl's personality transferred to a chimpanzee after a car accident - much social adjustment is necessary. PD's juveniles are uneven, but at their best they are among the finest in the genre: various, nonconformist and vivid, often giving old themes new life by thinking them through afresh from the beginning, rather than accepting them as givens. [PN] Other works (all juveniles): *The Iron Lion* (1972 chap US; rev 1983 chap UK); *The Flight of Dragons* (1979), nonfiction; *The Seventh Raven* (1983); *Giant Cold* (1984 chap); *Hundreds and Hundreds* (anth 1984); *A Box of Nothing* (1985); *Merlin Dreams* (coll of linked stories 1988); *AK* (1990); *A Bone from a Dry Sea* (1992); *Time and the Clockmice, Etcetera* (1993); *Shadow of a Hero* (1994). See also: APES AND CAVEMEN (IN THE HUMAN WORLD); CHILDREN'S SF; MAGIC.

DICK-LAUDER, [Sir] GEORGE (ANDREW)

(1917-1981) British Army officer who began a writing career after his retirement from the service. His two sf novels, *Our Man for Ganymede* (1969) and *A Skull and Two Crystals* (1972), though not innovative, do explore the conventions of SPACE OPERA in a manner both literate and alert. [JC]

DICKSON, CARTER

John Dickson CARR.

DICKSON, GORDON R (UPERT)

(1923-) Canadian-born writer, resident in the USA since age 13 and long a US citizen. He was educated (along with Poul ANDERSON) at the University of Minnesota, taking his BA in English in 1948, and remains in Minnesota. Through the Minneapolis Fantasy Society, which he re-established after WWII, he became friends with Anderson, with whom he later collaborated on the Hoka series - *Earthman's Burden* (coll 1957), *Star Prince Charlie* (1975) and *Hoka!* (coll 1982) - and with Clifford D. SIMAK. Along with these writers, GRD has shown a liking, often indulged, for hinterland settings peopled by solid farming or small-town stock whose ideologies, when expressed, violate any simple, conservative-liberal polarity, though urban readers and critics tend to respond to them as right-wing. As late as *Wolf and Iron* (1974 FSF as "In Iron Years"; much exp 1990) - which embodies a SURVIVALIST plot considerably deepened by the author's detailed and compassionate attachment to the kind of hero who understands and loves the physical world - he was still mining this fertile venue. GRD began

publishing sf in 1950 with "Trespass" for *Fantastic Story Quarterly*, written with Anderson, and he has since been a prolific and consistent short-story author; much of this material was assembled in the 1980s in volumes like *The Man from Earth* (coll 1983), *Dickson!* (coll 1984; rev vt *Steel Brother* 1985) and *Forward!* (coll 1985), the latter ed Sandra MIESEL, long an advocate of his works. GRD's first novel, *Alien from Arcturus* (1956 dos; rev vt *Arcturus Landing* 1979), established from an early date the tone of underlying and rather relentless seriousness which became so marked in later works, while at the same time succumbing to a tendency to displace emotional intensities from human relations between the sexes to those obtaining between human and dependent ALIEN (or, as in *Wolf and Iron*, Terran mammal). The aliens in *Alien from Arcturus* are decidedly cuddly, with shining black noses, and much resemble those who appear in *Space Winners* (1965), a juvenile, and *The Alien Way* (1965), about an Earthman's telepathic rapport with the representative of a species that may invade. But the strong narrative skills deployed in these comparatively rudimentary SPACE-OPERA tales, along with an idiomatic capacity to write novel-length fiction, has ensured the survival of these relatively unambitious works. Some later singletons - like *Sleepwalker's World* (1971), a dystopian vision of OVERPOPULATION, and *The R-Master* (1973; rev vt *The Last Master* 1983), in which a society is ambiguously guided by a saviour whose origins lie more in PULP-MAGAZINE ideas than in philosophy - failed to maintain the elation of the earlier books. While continuing to produce prolifically in the 1950s and 1960s, GRD simultaneously engaged upon a sequence of novels which was to occupy much of his energy for decades. The ongoing Childe Cycle - the sf volumes of which are often known as the Dorsai series - is intended to present an evolutionary blueprint, in highly dramatized fictional terms, for humanity's ultimate expansion through the Galaxy, as an inherently ethical species. "In order to make this type of story work effectively," GRD has said, "I developed by the late 1950s a new fictional pattern that I have called the 'consciously thematic story'. This was specifically designed to create an unconscious involvement of the reader with the philosophical thematic argument that the story action renders and demonstrates. Because this new type of story has represented a pattern hitherto unknown to readers and writers, my work has historically been criticized in terms that do not apply to it - primarily as if it were drama alone." However, though GRD originally planned to present his thesis through a phased publication of the entire sequence - to include at least three historical titles and three contemporary novels as well as the several books set in the future - only the Dorsai books have yet been released, and the full integrity of GRD's argument remains, therefore, undemonstrated. In rough order of internal chronology, the Childe Cycle comprises (1995): *Necromancer* (1962; vt *No Room for Man* 1963), *The Tactics of Mistake* (1971), *Soldier, Ask Not* (1964 Gal; exp 1967), the short form of which won a HUGO for 1964, and *The Genetic General* (1959 ASF as "Dorsai!"; cut 1960 dos; text restored vt *DORSAI!* 1976), all but *Soldier, Ask Not* being assembled as *Three to Dorsai!* (omni 1975); *The Spirit of Dorsai* (coll of linked stories 1979) and *Lost Dorsai* (coll of linked stories 1980; rev 1988 UK), whose title story won a 1981 Hugo, most of both volumes being reassembled with some material preceding *The Genetic General* as *The Dorsai*

Companion (coll of linked stories 1986); and a final grouping of texts, all set about 100 years further into the future: the overlong Young Bleys (1991), Other (1994), The Final Encyclopedia (1984) and The Chantry Guild (1988), the last volume - GRD claimed as early as 1983 - being hived off from a projected final volume to be called Childe. As the sequence develops, human space is divided into four spheres plus Old Earth herself, with her vast genetic pool; Dorsai, whose inhabitants are bred as professional soldiers; the Exotic worlds, whose inhabitants are bred to creative (sometimes sybaritic) mind-arts; the worlds (like Newton) which emphasize physical science; and the God-haunted Friendly worlds, where folk are bred for faith. The task of mankind's genetic elite is somehow to merge these variant strains, and the philosophical burden of the sequence tends to be conveyed through plots whose origins lie unabashedly in the SUPERMAN tales of earlier sf. The Genetic General, which in its restored form remains the most arousing of these, features Donal Graeme, the central incarnation of a triune evolutionary superman whose earlier life is told in Necromancer, and who is reborn as Hal Mayne to climax the series - and the genetic elitism it promulgates - through its final (to date) volumes. The terms GRD uses to describe his superman's capacities - Graeme, for instance, being capable of a potent sort of cognitive intuition - are perhaps best appreciated within the massive, ongoing rhythm of the series; for it is as a novelist, not as a philosopher, that GRD reveals his strength. Very little of GRD's later fiction, however hastily written some of it may seem, fails to pose questions and arguments about humankind's fundamental nature. From 1960 much of his work has specifically reflected his preoccupation with the concept that humankind is inevitably driven to higher evolutionary states, a notion often expressed, however, in tales - like None But Man (1969; with 1 story added, as coll 1989) or Hour of the Horde (1970) - that contrast humankind's indomitable spirit with that of ALIENS whose lack of comparable elan makes them into straw horses for Homo sapiens to defeat. More serious presentations of material - from the fine Timestorm (fixup 1977) on to ponderous later tales like Way of the Pilgrim (1980 ASF as "The Cloak and the Staff"; much exp 1987) - do generally avoid the graver pitfalls of pulp. Though his sometimes unremitting use of genre conventions to provide solutions to serious arguments has undoubtedly retarded full recognition of his talent and seriousness, the later volumes of the Childe Cycle series increasingly enforce a more measured response to his life work. GRD won the NEBULA for Best Novelette with "Call Him Lord" (1966). He was President of the SCIENCE FICTION WRITERS OF AMERICA 1969-71. In 1981, he won Hugos not only for "Lost Dorsai" but also for a short story, "The Cloak and the Staff". [JC] Other works: Mankind on the Run (1956 dos; vt On the Run 1979); Time to Teleport (1955 Science Fiction Stories as "No More Barriers"; 1960 chap dos) and Delusion World (1955 Science Fiction Stories as "Perfectly Adjusted"; exp 1961 dos), both later published in omnibus format (omni 1981); the Dilbia series, comprising Spacial Delivery (1961 dos) and Spacepaw (1969); Naked to the Stars (1961); the Underseas series, later assembled as Secrets of the Deep (omni 1985) and comprising Secret Under the Sea (1960), Secret Under Antarctica (1963) and Secret Under the Caribbean (1964); Mission to Universe (1965; rev 1977); Planet Run (1967; rev as coll with 2 stories added, vt Planet

Run, Plus Two Bonus Stories 1982) with Keith LAUMER; The Space Swimmers (1967), which serves as a sequel to Home from the Shore (1963 Gal; exp 1978); Wolfling (1969); Mutants: A Science Fiction Adventure (coll 1970), in which the stories are linked thematically; Danger-Human (coll 1970; vt The Book of Gordon R. Dickson 1973); The Pritcher Mass (1972); The Outposter (1972); The Day the Sun Stood Still (anth 1972), a common-theme anthology with Poul Anderson and Robert SILVERBERG; The Star Road (coll 1973); Alien Art (1973), a juvenile, later assembled with Arcturus Landing as Alien Art; Arcturus Landing (omni 1978); Ancient, My Enemy (coll 1974); Gremlins, Go Home! (1974), a juvenile with Ben BOVA; The Lifeship (1976; vt Lifeboat 1978 UK) with Harry HARRISON; the Dragon and the George fantasy sequence comprising The Dragon and the George (as "St Dragon and the George" FSF 1957; exp 1976), The Dragon Knight (1990), The Dragon on the Border (1992), The Dragon at War (1993) and The Dragon, the Earl and the Troll (1994) Gordon R. Dickson's SF Best (coll 1978; exp vt In the Bone 1987); The Far Call (1978), a rare NEAR-FUTURE tale of the space programme; Pro (1978); Masters of Everon (1979); In Iron Years (coll 1980); Love Not Human (coll 1981); Survival! (coll 1984); Jamie the Red (1984) with Roland GREEN; Beyond the Dar al-Harb (coll 1985); Invaders! (coll 1985); The Man the Worlds Rejected (coll 1986); The Last Dream (coll 1986); Mindspan (coll 1986) ed Sandra Miesel; The Forever Man (1986); Stranger (coll 1986); Guided Tour (coll 1988); Beginnings (coll 1988); Ends (coll 1988); The Earth Lords (1989).As Editor: Rod Serling's Triple W: Witches, Warlocks and Werewolves (anth 1963); Rod Serling's Devils and Demons (anth 1967); Combat SF (anth 1975); Nebula Winners Twelve (anth 1978); the War and Honor sequence of SHARED-WORLD anthologies, beginning with The Harriers * (anth 1991) and The Harriers #2: Blood and Honor * (anth 1993); Robot Warriors (anth 1991).About the author: Gordon R. Dickson: A Primary and Secondary Bibliography (1983) by Raymond H. Thompson; Gordon Rupert Dickson, First Dorsai: A Working Bibliography (latest edn 1990 chap) by Gordon BENSON Jr and Phil STEPHENSEN-PAYNE. DIETZ, WILLIAM C(OREY)

(1945-) US writer who began to publish sf with War World (1986), the first volume of his Sam McCade sequence of sf adventures about an interstellar bounty hunter, which continued with Imperial Bounty (1988), Alien Bounty (1990) and McCade's Bounty (1990). The galactic venue of the series exhibits some interesting kinks, and McCade himself gradually gains individuality. Singletons include Freehold (1987), military sf; Prison Planet (1989); Cluster Command (1989) with David A. DRAKE, - one of the latter's Crisis of Empire sequence; Matrix Man (1990), a complicated, fast-moving tale set in a NEAR-FUTURE Earth whose seas and population are continuing to rise, and where a nefarious peace foundation (run in fact by a huge corporation) opposes attempts by the Exodus Society to foment emigration; Mars Prime (1992); Legion of the Damned (1993) and Bodyguard

(1994) As in his work in general, the right side wins. As an author of entertainments, WCD stands out for his thorough grasp of the devices of sf. [JC]

DIEUDONNE, FLORENCE (LUCINDA) CARPENTER

(1850-?) US writer. In her *Rondah, or Thirty-Three Years in a Star* (1887) the tale's several protagonists travel through the Solar System in a large ASTEROID (not a star). Transported to this asteroid by a pre-arranged explosion, the central figure of the tale becomes king of the native bird-people, in fact of vegetable origin, who are replaced by ferocious elves when the worldlet cools down. Much happens. In the end, the protagonist, with his woman, seems destined to rule the Universe. The book is a cacophony of irreconcilable elements, but the author's extremely fertile imagination, when harnessed, manages to create a tale which significantly prefigures 20th-century cosmological SPACE OPERA. *Xartella* (1891), self-published, is fantasy. [JC]

Di FATE, VINCENT

(1945-) US sf illustrator (name sometimes rendered DiFate). He was born in Yonkers, New York, and like many other sf illustrators attended the New York-Phoenix Institute. He began his career doing tv animation for Ralph Bakshi; his first professional sf illustration was for *Analog* (Aug 1969) and most of his magazine work has been for ASF. Many of his paintings have been for paperback book covers. His artwork, suprisingly impressionistic for someone who frequently works with technological subjects like spacecraft, is often moody and sombre. He was one of the NASA artists for the Apollo/Soyuz programme in 1975 and has worked for NASA since. He won the HUGO for Best Professional Artist in 1979 and has been nominated many other times. VDF lectures on art and is also well known for his occasional, interesting, long-running column about sf illustration, *Sketches*, from 1976 in the semiprozine *ALGOL* and in its surviving sister magazine *SF CHRONICLE*. A book of his work is *Di Fate's Catalog of Science Fiction Hardware* (1980) by VDF and Ian Summers. [JG/PN] See also: *ASTOUNDING SCIENCE-FICTION*.

DIGEST

A term used to describe a magazine format, in contrast to, for example, *BEDSHEET* and pulp (*PULP MAGAZINES*), which are both larger. The page size of a digest is approximately 5.5 x 7.5in (about 140 x 190mm), though it can vary slightly; for example, *Gal* was normally a little smaller than ASF. ASF was the first important sf magazine to turn digest, in 1943, and by the mid-1950s almost all SF MAGAZINES had followed suit, the pulp-magazine format disappearing. By the 1980s, however, many sf magazines had turned to a small-bedsheet, stapled, "slick" format. The digest format is just a little larger than that of the normal paperback book, which averages 4.5 x 7in (about 115 x 180mm); the paperback format has also been used for some magazines, notably *NW* in the mid-1960s. [PN]

DIKTY, T(HADDEUS MAXIM) E(UGENE)

(1920-1991) US editor and publisher, married from 1953 to Julian MAY, about whose work he compiled *The Work of Julian May: An Annotated Bibliography* ?

an sf checklist on index cards with the collector Frederick Shoyer in 1939, but the cards were lost in WWII. After the war, with Erle Korshak and Mark Reinsberg, he became a bookseller and passed the partially reassembled checklist on to Everett F. BLEILER, who used it to compile The Checklist of Fantastic Literature (1948) - the first comprehensive BIBLIOGRAPHY in the sf field - which TED and Korshak founded SHASTA PUBLISHERS to put into print. TED was also associated with the setting-up of the publishers Carcosa House. With Bleiler, TED edited an annual ANTHOLOGY series - the first "year's-best" series to appear in the field: The Best Science Fiction Stories, 1949 (anth 1949) and The Best Science Fiction Stories, 1950 (anth 1950; cut vt The Best Science Fiction Stories 1951 UK), both assembled as Science Fiction Omnibus (omni 1952); The Best Science Fiction Stories, 1951 (anth 1951; cut vt The Best Science Fiction Stories, Second Series 1952 UK; further cut vt The Mindworm 1967 UK); The Best Science-Fiction Stories, 1952 (anth 1952; cut vt The Best Science Fiction Stories, Third Series 1953 UK); The Best Science-Fiction Stories, 1953 (anth 1953; cut vt The Best Science Fiction Stories, Fourth Series 1955 UK); The Best Science Fiction Stories, 1954 (anth 1954; cut vt The Best Science Fiction Stories, Fifth Series 1956 UK). Frontiers in Space (anth 1955) contains a selection from the second, third and fourth volumes. A second series, Year's Best Science Fiction Novels, presented a selection of longer stories: Year's Best Science Fiction Novels, 1952 (anth 1952; cut vt Year's Best Science Fiction Novels 1953 UK), 1953 (anth 1953; cut vt Category Phoenix 1955 UK) and 1954 (anth 1954; cut vt Year's Best Science Fiction Novels, Second Series 1955 UK). Together they also edited Imagination Unlimited (anth 1952; cut vt Men of Space and Time 1953 UK), which contains stories on each of 15 sciences. After the collaboration with Bleiler ended, TED went on to produce three further "best" volumes as sole editor: The Best Science-Fiction Stories and Novels, 1955 (anth 1955; cut vt 5 Tales from Tomorrow 1957), The Best Science-Fiction Stories and Novels, 1956 (anth 1956; cut vt 6 from Worlds Beyond 1958) and The Best Science-Fiction Stories and Novels, Ninth Series (anth 1958). He also edited Every Boy's Book of Outer Space Stories (anth 1960) and two theme anthologies about MARS and the MOON: Great Science Fiction about Mars (anth 1966) and Great Science Fiction Stories about the Moon (anth 1967). In the 1950s, after Shasta had collapsed in ignominy, TED formed Publication Associates with Julian May, and worked closely with her on various projects for the rest of his life, acting as her agent and editor on all her mature work. In 1972, with Darrell C. Richardson, he founded and, with the added help of Robert E. WEINBERG, ran FAX COLLECTOR'S EDITIONS, a publishing enterprise aimed at reprinting material, often in facsimile, from old magazines; at about the same time (though its first title did not appear until 1976), and also with Weinberg (who dropped out after a year), he founded STARMONT HOUSE to produce monographs on individual sf writers, along with some bibliographies and fiction, anonymously editing for the firm one anthology, Worlds Within Worlds: Four Classic Argosy Tales of Science Fiction (anth 1991). Two of his and Julian May's children carried on with the firm after his death. [JC/MJE] See also: SMALL PRESSES AND LIMITED EDITIONS.

DILLARD, J(EANNE) M.

(1954-) US writer. Most of her works are STAR TREK ties, including Mindshadow * (1986), Demons * (1986), Bloodthirst * (1987), Star Trek V: The Final Frontier * (1989), which novelizes the 1989 film, The Lost Years * (1989), The Undiscovered Country * (1992), which novelizes STAR TREK VI: THE UNDISCOVERED COUNTRY (1991), Star Trek: Deep Space Nine: Emissary * (1993), and the non-fiction Star Trek: Where No Man Has Gone Before: A History in Pictures (1994). JMD has also written War of the Worlds: The Resurrection * (1988), tied to the tv series, and Specters (1991), a horror novel. [JC]

DILLON, LEO

(1933-) and DIANE (1933-) US illustrators, the only team (married in 1957) ever to win a HUGO for Best Professional Artist, which they did in 1971. They have been freelancing since 1958, at first working separately. Together their work has covered many fields: record album covers, advertising art, Christmas cards, children's books and movie posters among them; they are among the most respected commercial artists in the USA. Their sf work for ACE BOOKS in the late 1960s (notably for the Ace Specials) was particularly good, though perhaps their most celebrated work has been for children's books, winning them Caldecott Medals for Why Mosquitoes Buzz in People's Ears (1976) and Ashanti to Zulu (1977). They have designed especially strong covers for books by Harlan ELLISON. Their sf production has been only occasional since about 1972. Their work is often similar to wood-block prints: rough, sometimes semi-abstract shapes powerfully assembled. They are, however, extremely versatile and work in a variety of styles and media, notably an Art Nouveau-derived look reminiscent of Gustav Klimt (1862-1918), as can be seen in The Art of Leo and Diane Dillon (1981) ed Byron PREISS. Richard M. POWERS was one of the first to show that semi-abstract images of some sophistication could sell sf; the Dillons went on to prove the point incontrovertibly. [JG/PN] See also: FANTASY; ILLUSTRATION.

DILOV, LJUBEN

[r] BULGARIA.

DIME-NOVEL SF

Dime-novel sf, which was almost wholly boys' fiction, appeared in two media: serially in such BOYS' PAPERS as Golden Hours, Happy Days, The Boys of New York and Young Men of America, or as complete stories in series publications like The Wide Awake Weekly, The Boy's Star Library, New York Five Cent Library, the FRANK READE LIBRARY and The Nugget Library. The most important publishers were Frank Tousey, Publisher, Norman L. Munro and STREET ?

to 9 x 12 1/2 in (about 230 x 320mm) saddle-wired (saddle-stitched) pamphlets, but from the turn of the century most dime novels were either saddle-wired single-signature pamphlets of around 8 1/2 x 11 in (about 215 x 280mm) or 5 x 7 in (about 125 x 180mm) side-stapled paperbound books of several signatures. (All of these formats are rendered here in the US style; i.e., width followed by height.) It is the 8 1/2 x 11 in pamphlet - similar in dimension to BEDSHEET-format - that is usually, though not very logically, described as "dime-novel format", but then the term "dime novel" itself is inaccurate, since most commonly they cost a nickel

(5cents) or 6cents, rather than a dime (10cents). All dime novels were printed on cheap paper - sometimes very poor indeed - and it is therefore now difficult to locate examples in good condition. Almost all dime-novel sf falls into three basic categories: the invention story (DISCOVERY AND INVENTION), the lost-race story (LOST WORLDS) and the marvel story. These types occasionally overlap in minor ways. The invention story originated with Edward S. ELLIS's The Steam Man of the Prairies (1868), in which Ellis, a prolific and popular writer, adapted the historical Newark Steam Man into a conventional Western story. This first publication seems to have been without influence, but one of the later reprintings (as The Huge Hunter, 1876) came to the attention of Frank Tousey, a rival publisher, who commissioned a similar work, Frank Reade and His Steam Man of the Plains (The Boys of New York 1876 as "The Steam Man of the Plains"; 1892 as by "Noname"), from Harry Enton (pseudonym of Harold Cohen [1854-1927]). This initiated the important series about the Frank Reade family of inventors (FRANK READE LIBRARY). Enton followed this with two sequels about Frank Reade, with steam engines shaped into horses. These stories, together with Ellis's work, set the pattern for future invention stories. The initial model was the dime-novel Western. Stress was on iron technology, with little or no science; narratives contained random, thrilling incidents, often presented in a disjointed and puerile way. Typical social patterns were: a conscious attempt to capitalize on age conflict, with boy inventors outdoing their elders (EDISONADE); aggressive, exploitative capitalism, particularly at the expense of "primitive" peoples; the frontier mentality, with slaughter of "primitives" (in the first Frank Reade, Jr. story Frank kills about 250 Native Americans, to say nothing of destroying an inhabited village); strong elements of sadism; ethnic rancour focused on Native Americans, Blacks, Irish and, later, Mexicans and Jews. After Enton's three stories and a fourth of unknown authorship, the invention dime novel was taken over by Luis SENARENS, who (with anonymous associates) wrote a long series of Frank Reade, Jr. stories 1882-98, culminating in the Frank Reade Library. In this series the type of invention shifted to electric air vessels, land rovers and submarines, all showing the strong influence of Jules VERNE. The narrative more typically became one of (frequently inaccurate) geographical exploration and adventure, sometimes incorporating minor lost-race episodes. The Frank Reade, Jr. stories were historically the most important invention stories, but other story chains existed, as did individual stories about other boy inventors with airships or submarines. When the sales of the Frank Reade Library languished, Tousey issued a companion series, the Jack Wright stories, again by Senarens. Competing boy-inventor series from Street ? doings of Tom Edison, Jr., written mostly by Philip READE, and Electric Bob, written by Robert Toombes. Both series are much superior to the Frank Reade, Jr. stories in content and writing, and both are morally less offensive, but neither of them had the cultural impact of Tousey's Frank Reade Library. The dime-novel lost-race story did not necessarily follow the full pattern of its adult counterpart (colonial exploitation, mythic elements, sacred-vs-secular clashes, exotic sex partners, destruction of the land, etc.), but was often a frank chronicle of smugly justified looting. As Senarens said in Jack Wright and his Prairie Engine (The Boys'

Star Library 1892; 1908), Jack having "liberated" an enormous diamond: "There was no crime in taking it. It was part of an idol, worshipped in lieu of heaven, and wresting such an object from infidels is no crime in the eyes of the Almighty." Typical lost-race dime novels are: Frank Reade, Jr., and His Electric Coach (The Boys of New York 1890-91; 1893) by "Noname", with Ancient Hebrews; The Missing Island (1894) by "Noname", with Aztecs; A Trip to the Center of the Earth (New York Boys' Weekly 1878; 1894) by Howard De Vere (pseudonym of Howard Van Orden), which has acculturated early Americans with interesting speech changes; The Lost Captain (1880; 1906) by Frederick Whittaker, with Old Norse at the North Pole; Lost at the South Pole (The Boys of New York 1888 as by J.G. Bradley; 1899 as by Capt. Thomas H. Wilson), with strange races; Among the Fire Worshipers (The Boys of New York 1880 as by Berton Bertrew; 1902 as by Howard Austin), with Aztecs; "Underground" (Golden Hours May-July 1890) by Thomas P. Montfort, with Toltecs in Australia; and Across the Frozen Sea (1894) by "Noname", again with Old Norse at the North Pole. An unusual dime novel for adults is El Rubio Bravo, King of the Swordsmen (1881) by Col. Thomas Hoyer Monterey, about Aztecs. Lost-race stories turned up unexpectedly elsewhere. The detective stories about Nick CARTER written by Frederic Rensselaer Dey (1861-1922) under the pseudonym Chickering Carter provide several examples. In The Index of Seven Stars (1907) and An Amazonian Queen (1907) Nick has adventures among a lost race of mixed Old Norse and Indian origin, ruled by women, and excels in the gladiatorial arena. A 7-vol series beginning with Facing an Unseen Terror (1907) and ending with The Seven-Headed Monster (1907) describes a supercivilization hidden in the foothills of the Himalayas, with flying machines lofted by a new radioactive element: the hidden race has also mastered electricity, vibration and the life force. This time the mighty Nick meets his superior in the wicked scientist Zanabayah. Lost-race incidents of a more marginal kind frequently occur in invention and geographical-adventure dime novels. In most cases they are concerned with Pre-Columbian American peoples, based loosely on popular American archaeology, and sometimes influenced by the work of H. Rider HAGGARD. In "marvel" dime novels lost-race situations are also common, usually concerning themselves with imaginary peoples possessing high civilizations. This third group of dime novels, stressing "marvel" elements, emerged in the late 1880s and reached its fullest development in the 1890s and the first decade of the 20th century. The "marvel" tale was no longer a Vernean yarn of geographical adventure or one of Wild West thrills and high jinks, but frankly set its protagonist into extremely fantastic circumstances, often seemingly supernatural, which were almost always rationalized. Instead of savage Indians, Western badmen, malicious "Greasers", pirates, bears, giant snakes, sea serpents, frenzied whales and giant octopuses, it utilized dwarfs, giants, strangely teratological races, outlandish customs, mammoths, magical gems and crystals, bobbing and ducking islands, wonderful cavern worlds and mysterious appearances and disappearances. Inventions, when they appeared, were more likely to be the product of alien races than the brainchildren of boy inventors. Instead of operating steam or electric land rovers, flying ship-hulls and Nautilus-like submarines, heroes might encounter bizarre means of transportation: ANTIGRAVITY airships or vehicles powered by fantastic new energies, sometimes suggested by Bulwer LYTTON's "vril".

The purportedly realistic geography of the Vernean dime novel yielded to outlandish ambiances in Antarctica, inside the HOLLOW EARTH or even on other planets. The central theme of the "marvel" story was no longer mechanical exploitation or destruction of the environment (and weaker peoples), as in the Frank Reade, Jr. stories, but encounter with the strange, grotesque, magical and inexplicable. The note of sadism and ethnic rancour that permeated the earlier invention stories was usually lacking, or at least much toned down. Some marvel elements appeared in the later Frank Reade, Jr. stories, but they were found in much finer form in the sometimes very imaginative work of Francis W. DOUGHTY, Fred THORPE and Cornelius SHEA. Other significant marvel stories included Six Weeks in the Moon (1896) by "Noname" (perhaps Senarens), Under the World (Golden Hours as "Into the Maelstrom" 1894; 1906) by John DE MORGAN and "Three Boys from the Moon" (Happy Days Aug-Sep 1901) as by Gaston Garne (a Norman L. Munro house name). Apart from the work of Verne and Haggard, contemporary adult sf had almost no influence on dime-novel sf. Imaginary- WAR stories are rare, the only significant one being "Holland, the Destroyer" (Golden Hours 1900-1) by Hal Harkaway (house name used here by Edward T. STRATEMEYER), in which the USA, at war with almost the entire world, is saved by a supersubmarine. Interplanetary elements enter the last Frank Reade, Jr. stories and Doughty's pseudonymous Two Boys on a Trip to an Unknown Planet (The Boys of New York 1989 as by Albert J. Booth; 1901 as by Richard R. Montgomery), but they are fantastic and show no knowledge of contemporary adult work. Weldon J. COBB, a Chicago author, presumably read a US newspaper adaptation of H.G. WELLS's THE WAR OF THE WORLDS (Pearson's Magazine 1897; 1898): his At War with Mars (Golden Hours Sep-Nov 1897; 1907) reads as near-plagiarism, with Martian cylinders striking in the USA - as an original element, the Martians have fitted out Phobos as an armed space station for the attack on Earth. Cobb's "To Mars with Tesla" (New Golden Hours Mar-May 1901) contains an abortive space flight - the landing point proves to be the Southwest desert, not MARS as planned. The sf dime novel has had a larger influence on later sf than has been generally recognized. The invention story of the Frank Reade, Jr. sort led directly, through the Stratemeyer Syndicate, to such boys' fiction as TOM SWIFT (see also JUVENILE SERIES). Many early PULP-MAGAZINE sf-adventure stories are simply dime novels translated for an older readership, while individual points of influence are common enough. The situations in Edgar Rice BURROUGHS's Opar and A. MERRITT's Muria ("The Conquest of the Moon Pool" 1919) seem to be indebted to dime novels, while Rex STOUT's Under the Andes (All-Story 1914; 1984) is simply a Cornelius Shea sort of story with modifications. A. Conan DOYLE's The Lost World (1912) was probably influenced by "Noname"'s The Island in the Air (1896), and David LINDSAY's A VOYAGE TO ARCTURUS (1920) possibly by Doughty's Two Boys on a Trip to an Unknown Planet. One can also link the episodic structure and strange races in L. Frank BAUM's The Wonderful Wizard of Oz (1900) with "marvel" dime novels. There were European equivalents and near-equivalents of Dime Novels, one of the most interesting being the German periodical Der LUFTPIRAT UND SEIN LENKBARES LUFTSCHIFF, featuring Captain Mors, which was a pure SPACE-OPERA series, the earliest known. (For UK equivalents BOYS' PAPERS.) [EFB]

DIMENSION 5

(vt Dimension Four US) Film (1966). United Pictures and Harold Goldman Associates. Dir Franklin Adreon, starring Jeffrey Hunter, France Nuyen, Harold Sakata, Donald Woods. Screenplay Arthur C. Pierce. 92 mins, cut to 88 mins. Colour. Adreon and Pierce were the team that made *CYBORG 2087* (also 1966). This equally cheap production has Sakata, who played the villain Oddjob in the James Bond movie *Goldfinger* (1964), as one of the Chinese communists who plan to blow up Los Angeles by planting an H-bomb. They are foiled by a US secret agent who can go back and forth in time by pressing a button on his belt. [JB]

DIMENSION FOUR

DIMENSION 5.

DIMENSIONS

We perceive three spatial dimensions, but theoretical MATHEMATICS is easily capable of dealing with many more. Conventional graphical analysis frequently represents time as a dimension, encouraging consideration of it as the "fourth dimension". The possible existence of PARALLEL WORLDS displaced from ours along a fourth spatial dimension (in the same way that a series of two-dimensional universes might lie next to one another like the pages of a book) is a popular hypothesis in sf, and such worlds are frequently referred to as "other dimensions". The COSMOLOGY of Einstein's General Theory of Relativity (1916), which proposes a four-dimensional model of the Universe in which the notions of space and time are collapsed into a single "spacetime continuum", offered considerable encouragement to sf notions of a multidimensional Universe (or "multiverse"). Many modern occultists and pseudoscientists have followed in the tracks of Johann Zollner (1834-1882), author of *Transcendental Physics* (1865), who borrowed mathematical notions to "justify" the idea of the "astral plane" beloved by spiritualists and Theosophists. J.W. DUNNE used the notion to explain prophetic dreams, eventually constructing a theory of the "Serial Universe", and P.D. Ouspensky (1878-1947) built a more complex model of the Universe in which time "moves" in a spiral and there are six spatial dimensions. The possible dimensional limitations of human existence and perception were dramatized by Edwin A. ABBOTT in *Flatland* (1884) as by "A Square", which describes a world of two-dimensional beings, one of whom is challenged to imagine our three-dimensional world - encouraging readers, by analogy, to attempt to imagine a four-dimensional world. The challenge was taken up by C.H. HINTON, whose many essays on the subject attempt to "explain" ghosts and to imagine a four-dimensional God from whom nothing in the human world can be hidden. In his story "An Unfinished Communication" (1895) the afterlife involves freedom to move along the time dimension (TIME TRAVEL) to relive and reassess moments of life; he also wrote a *Flatland* novel, *An Episode of Flatland* (1907). H.G. WELLS borrowed Hintonian arguments to "explain" the working of the device in *THE TIME MACHINE* (1895). The eponymous figure of E.V. ODLE's *The Clockwork Man* (1923) could perceive many dimensions when working properly, but while malfunctioning could do no more than flutter back and forth in time, offering the merest hint of the quality of multidimensional life. Algernon BLACKWOOD's "The Pikestaffe Case" (1924) attempts to evoke the

non-Euclidean geometry of a dimensional trap lurking within a mirror. Early GENRE-SF writers who found the notion of dimensions fascinating included Miles J. BREUER, most notably in "The Appendix and the Spectacles" (1928) and "The Captured Cross-Section" (1929), and Donald WANDREI, notably in "The Monster from Nowhere" (1935) and "Infinity Zero" (1936). In E.E. "Doc" SMITH's *Skylark of Valeron* (1934; 1949) the heroes briefly enter a four-dimensional reality, and in Clifford D. SIMAK's "Hellhounds of the Cosmos" (1932), 99 men enter the fourth dimension in a single grotesque body to fight a four-dimensional monster. Henry KUTTNER's and C.L. MOORE's classic "Mimsy Were the Borogoves" (1943 as by Lewis Padgett) features toys from the future which educate children into four-dimensional habits of thought, but, like most stories of the period, this uses dimensional trickery casually to tie up its plot with a neat knot. The mathematical discipline of topology inspired several dimensional fantasies: Moebius strips feature in Martin GARDNER's "No-Sided Professor" (1946) and "The Island of Five Colours" (1952), Theodore STURGEON's "What Dead Men Tell" (1949), Arthur C. CLARKE's "Wall of Darkness" (1949) and Homer NEARING Jr's "The Hermeneutical Doughnut" (1954); Klein bottles and tesseract feature in "The Last Magician" (1951) by Bruce ELLIOTT, "And He Built a Crooked House" (1941) by Robert A. HEINLEIN and "Star, Bright" (1952) by Mark CLIFTON. Occam's Razor by David DUNCAN (1957) also deploys topological jargon to shore up its dimensional speculations. George GAMOW's popularization of ideas in modern physics, *Mr Tompkins in Wonderland* (coll 1939), dramatizes certain odd situations very well (although its contents are didactic essays rather than stories). The notion that spaceships might make use of a fourth-dimensional HYPERSPACE in order to evade the limiting velocity of light is very common in sf, having been initially popularized by Isaac ASIMOV among others, but few stories actually attempt to describe it; it is usually imagined as a chaotic environment which utterly confuses the senses, as in Frederik POHL's "The Mapmakers" (1955) and Clifford D. Simak's "All the Traps of Earth" (1960). The dimensional chaos that might be associated with BLACK HOLES has received closer attention, though these too are most often used as "wormholes" permitting very long journeys to be taken more or less instantaneously. Among the more effective representations of experience in dimensionally distorted environments are Norman KAGAN's "The Mathenauts" (1964), David I. MASSON's "Traveller's Rest" (1965) and Christopher PRIEST's *INVERTED WORLD* (1974; vt *The Inverted World US*). In recent years C.H. Hinton's ideas have been revived by Rudy RUCKER, who has used dimensional mathematics very extravagantly in a number of his novels and short stories, including the afterlife fantasy *WHITE LIGHT* (1980), the comedy of fourth-dimensional intrusions *The Sex Sphere* (1983) and many of the shorter pieces first published in *The 57th Franz Kafka* (coll 1983) and reprinted, with others, in *Transreal!* (coll 1991). Rucker is the only modern author to have answered "A Square's" challenge with authentic verve and authority, but A.J. Dewdney's *The Planiverse* (1984) is an interesting drama-documentary about a two-dimensional world whose topography recalls Hinton's *Flatland* more than Abbott's. Relevant theme anthologies include *Fantasia Mathematica* (anth 1958) and *The Mathematical Magpie* (anth 1962), both ed Clifton Fadiman, and *Science Fiction Adventures in Dimension* (anth 1953) ed Groff CONKLIN. DIOMEDE, JOHN K.
[s] George Alec EFFINGER.

DIOSCORIDES, Dr
Pieter HARTING.

DIRAC COMMUNICATOR

A device invented by James BLISH for the story "Beep" (1954; exp as The Quincunx of Time 1973), and used by him also in other stories. It is an instantaneous communicator, named after the great theoretical physicist Paul Dirac (1902-1984). Others have since borrowed the device, but more recently Ursula K. LE GUIN's ANSIBLE has been the communicator of preference for sf writers. [PN]See also: FASTER THAN LIGHT.

DISASTER

Cataclysm, natural or manmade, is one of the most popular themes in sf. Tales of future WAR and INVASION belong here, but for convenience are dealt with under those separate headings. Stories which emphasize the nature of the societies which spring up after a great disaster are dealt with under HOLOCAUST AND AFTER. Central to the disaster tradition are stories of vast biospheric changes which drastically affect human life. Tales of universal floods are at least as old as The Epic of Gilgamesh (c2000BC), and other motifs, such as plagues, fires and famines, have an obvious source in the Bible, particularly the Revelation of St John (also known as the Apocalypse, whence the adjective "apocalyptic", frequently applied to this form of sf). Disaster stories appeal because they represent everything we most fear and at the same time, perhaps, secretly desire: a depopulated world, escape from the constraints of a highly organized industrial society, the opportunity to prove one's ability as a survivor. Perhaps because they represent a punishment meted out for the hubris of technological Man, such stories have not been particularly popular in the US sf magazines. The ideology of disaster stories runs counter to the optimistic and expansionist attitudes associated with ASTOUNDING SCIENCE-FICTION and its long-time editor, John W. CAMPBELL Jr. In fact, most examples of the type are from the UK, and it has been suggested that this may be associated with the UK's decline as a world power throughout the 20th century. However, some of the earliest examples were written at the height of Empire. H.G. WELLS's "The Star" (1897) and M.P. SHIEL's The Purple Cloud (1901; rev 1929) are both tales of cataclysm. In the first a runaway star collides with the Earth, and in the second a mysterious gas kills all but two people, a new Adam and Eve. Arthur Conan DOYLE's The Poison Belt (1913) also features a gas, but in this case it turns out not to be fatal. After WWI the disaster theme became more common. J.J. CONNINGTON's Nordenholt's Million (1923) portrays the social chaos following an agricultural blight caused by a mutation in nitrogen-fixing bacteria. S. Fowler WRIGHT's Deluge (1928) and Dawn (1929) depict the destruction of civilization by earthquakes and floods, and subsequent attempts to build a new society. John COLLIER's Tom's A-Cold (1933; vt Full Circle US) and Alun LLEWELLYN's The Strange Invaders (1934) both deal effectively with survival in a post-holocaust world. R.C. SHERRIFF's The Hopkins Manuscript (1939; rev vt The Cataclysm) depicts the

Moon's collision with Earth, and is a SATIRE on UK complacency in the face of impending war. After WWII there was a resurgence, to an even higher level, of the disaster theme. John WYNDHAM's *The Day of the Triffids* (1951) is an enjoyable tale of a world in which all but a few have been blinded and everyone is menaced by huge, poisonous plants. His *The Kraken Wakes* (1953; vt *Out of the Deeps* US) is also a successful blend of invasion and catastrophe themes: sea-dwelling aliens melt Earth's icecaps and cause the inundation of the civilized world. The success of Wyndham's novels inspired many emulators. The most distinguished was John CHRISTOPHER, whose *The Death of Grass* (1956; vt *No Blade of Grass* US) is a fine study of the breakdown of civilized values when a virus kills all crops. The same author's *The World in Winter* (1962; vt *The Long Winter* US) and *A Wrinkle in the Skin* (1965; vt *The Ragged Edge* US) are also above-average works: one concerns a new Ice Age and the other features earthquakes. Many other UK novelists have dealt in similar catastrophes; e.g., J.T. MCINTOSH in *One in Three Hundred* (1954), John BOLAND in *White August* (1955), Charles Eric MAINE in *The Tide Went Out* (1958; rev vt *Thirst!* 1977), Edmund COOPER in *All Fools' Day* (1966), D.F. JONES in *Don't Pick the Flowers* (1971; vt *Denver is Missing* US) and Kit PEDLER and Gerry DAVIS in *Mutant 59: The Plastic Eaters* * (1972). Keith ROBERTS's *The Furies* (1966), D.G. COMPTON's *The Silent Multitude* (1966) and Richard COWPER's *The Twilight of Briareus* (1974) combine disaster and invasion themes in the Wyndham manner. Fred and Geoffrey HOYLE's *The Inferno* (1973) deals with humanity's attempts to survive devastating cosmic radiation. There have been several more personal uses of the disaster theme by UK writers - studies in character and psychology rather than adventure stories. An early example was John BOWEN's *After the Rain* (1958). More impressive are J.G. BALLARD's examinations of human "collaborations" with natural disasters: *The Drowned World* (1962 US), *The Burning World* (1964 US; rev vt *The Drought* UK) and *THE CRYSTAL WORLD* (1966), which concern the psychological attractions of flooded, arid and crystalline landscapes. Brian W. ALDISS's *Greybeard* (1964) is a well written tale of universal sterility and the impending death of the human race. Several younger UK writers, influenced by Aldiss and Ballard, have produced variations on the cataclysmic theme: Charles PLATT in "The Disaster Story" (1966) and *The City Dwellers* (1970), M. John HARRISON in *The Committed Men* (1971) and Christopher PRIEST in *Fugue for a Darkening Island* (1972). John BRUNNER has made strong admonitory use of the form in his novel of ecological catastrophe, *The Sheep Look Up* (1972). Angela CARTER's *HEROES AND VILLAINS* (1969) is a powerful love story set in the aftermath of a disaster, and Doris LESSING's *Memoirs of a Survivor* (1974) is about a passive woman who observes society's collapse from her window. US disaster novels are fewer in number. Oddly enough, where UK writers reveal an obsession with the weather, US writers show a strong concern for disease. Disastrous epidemics feature in Jack LONDON's *The Scarlet Plague* (1915), George R. STEWART's *EARTH ABIDES* (1949), Richard MATHESON's *I Am Legend* (1954), Algis BUDRYS's *Some Will Not Die* (1961), Michael CRICHTON's *The Andromeda Strain* (1969), Chelsea Quinn YARBRO's *Time of the Fourth Horseman* (1976) and Stephen KING's *THE STAND* (cut from manuscript 1978; text largely restored and rev 1990). Of these, Stewart's *EARTH ABIDES* is the outstanding work, containing much sensitive description of landscape and

of the moral problems of the survivors. Other notable disaster stories by US writers include *The Second Deluge* (1912) by Garrett P. SERVISS, *Darkness and Dawn* (1914) by George Allan ENGLAND, *When Worlds Collide* (1933) by Edwin BALMER and Philip WYLIE, *Greener Than You Think* (1947) by Ward MOORE, "The XI Effect" (1950) by Philip LATHAM, *Cat's Cradle* (1963) by Kurt VONNEGUT Jr, *The Genocides* (1965) by Thomas M. DISCH, "And Us, Too, I Guess" (1973) by George Alec EFFINGER, *The Swarm* (1974) by Arthur HERZOG and *Lucifer's Hammer* (1977) by Larry NIVEN and Jerry POURNELLE. Japanese sf seems to have a leaning towards disaster themes. Two notable examples are Kobo ABE's *Dai-Yon Kampyoki* (1959; trans as *Inter Ice Age 4* 1970 US) and Sakyo KOMATSU's *Nippon Chinbotsu* (1973; cut trans as *Japan Sinks* 1976). The latter was filmed in 1973 as *NIPPON CHINBOTSU* (vt *The Submersion of Japan*; vt *Tidal Wave*). Disaster is a popular motif in sf in the CINEMA and on TELEVISION. Examples are the US film *EARTHQUAKE* (1975) and the UK tv series *SURVIVORS* (1975-7). The disaster-movie boom in the US took place in the 1960s and 1970s, and featured disasters both domestic and sciencefictional; a producer associated with films of both kinds was Irwin ALLEN. Another form is the MONSTER MOVIE (which see). Curiously enough, although the 1980s were generally regarded as a pessimistic decade, the disaster theme in sf seemed largely played out, with only occasional books of any consequence. Among them were *The Birth of the People's Republic of Antarctica* (1983) by John Calvin BATCHELOR, which is an ironic account of civilization's collapse, James MORROW's *THIS IS THE WAY THE WORLD ENDS* (1986), which puts survivors of a global holocaust on trial, Greg BEAR's *The Forge of God* (1987), which has Earth destroyed by alien machines, and David BRIN's *Earth* (1990), which has Earth in danger of being swallowed up by a small BLACK HOLE at its core. DISASTER IN TIME

(vt *Grand Tour: Disaster in Time*, vt *Timescape*) Made-for-tv movie (1991). Channel Communications presents a Wild Street Pictures Production. Dir David N. Twohy; prod John A. O'Connor; screenplay by Twohy, based on "Vintage Season" (1946 ASF) by Lawrence O'Donnell (probably C.L. MOORE writing solo); starring Jeff Daniels, Ariana Richards, Emilia Crow, George Murdock. 99 mins (cut to 90). Colour. This is a classy little movie, quite without pretension, based on the famous story of time-travelling tourists from a future suffering from ennui, who stimulate themselves by attending great disasters in the past. Daniels plays an innkeeper (he has lost his wife in tragic circumstances) in a small New England town who is baffled by his unusual guests; disaster (a meteor) strikes the nearby town, his daughter Hilary (Ariana Richards) is subsequently killed, but his access to the tourists' time-travelling device enables a replay of history during which there are two innkeepers in the same time frame, and after which things end well, maybe more than once. Adroit and intelligent, with a pleasant sting in the tail. [PN]

DISCH, THOMAS M(ICHAE)L

(1940-) US writer, raised in Minnesota but for many years intermittently resident in New York where, before becoming a full-time writer in the

mid-1960s, he worked in an advertising agency and in a bank; he has subsequently lived (and set several tales) in the UK, Turkey, Italy and Mexico. He began publishing sf with "The Double-Timer" for *Fantastic* in 1962; much of his early work appears in *One Hundred and Two H Bombs* (coll 1966 UK; with 2 stories omitted and 2 added 1971 USA; with those 2 new stories omitted along with 2 previous stories, and 7 new stories added vt *White Fang Goes Dingo and Other Funny SF Stories* 1971 UK). "White Fang Goes Dingo", which appears only in the first and third versions of the collection, soon became TMD's second (and rather minor) novel, *Mankind Under the Leash* (1965 *Worlds of If* as "White Fang Goes Dingo"; exp 1966 dos; vt *The Puppies of Terra* 1978 UK); in it ALIENS take over Earth and make pets of mankind for aesthetic reasons. The hero, White Fang, eventually drives the aliens off, but his feelings towards his period of effortless slavery as a dancing pet remain ambivalent. The first version of *One Hundred and Two H Bombs*, plus one of the stories added to the second edition, plus *Mankind Under the Leash* under its vt *The Puppies of Terra*, all appear in *The Early Science Fiction Stories of Thomas M. Disch* (coll 1977) ed David G. HARTWELL. TMD's first novel, *The Genocides* (1965), his most formidable early work, also involves alien manipulation of Earth from a perspective indifferent (this time chillingly) to any human values or priorities or conventions of storytelling; this sense of the indifference of society or the Universe pervades his work, helping to distinguish it from US sf in general, which remained fundamentally optimistic about the relevance of human values through the 1960s. In *The Genocides* the aliens seed Earth with enormous plants, in effect transforming the planet into a monoculture agribusiness, an environment in which it gradually becomes impossible for humans to survive. When groups attempt to fight back, the aliens treat them as vermin, worms in the apple of the planet; and, in one of the most chilling conclusions to any sf novel published in the USA, fumigate them. *Echo Round his Bones* (1967) - later assembled with *The Genocides* and *Mankind Under the Leash* as *Triplicity* (omni 1980) - is another minor work, but *CAMP CONCENTRATION* (1967 NW; 1968 UK) is TMD's most sustained sf invention, and represents the highwater mark of his involvement with the UK NEW WAVE (he was one of several Americans, including John T. SLADEK, to be strongly associated with UK rather than US sf in the late 1960s). Told entirely in journal form, *CAMP CONCENTRATION* recounts its narrator's experiences as an inmate in a NEAR-FUTURE US concentration camp where the military has treated him with Pallidine, a wonder drug which heightens human INTELLIGENCE but causes death within months. Along with his fellow-inmates, the narrator understands he is being used as a kind of self-destructing think tank, experiencing the ecstasy of enhanced intelligence and the agonies of "retribution" - the analogies with Thomas Mann's *Doctor Faustus* (1947 Sweden; trans 1948 US) are explicit - but his death is averted by a trope-quoting sf climax which has been sharply criticized as a begging of the issues raised. The next books were less weighty. *Black Alice* (1968) with Sladek, writing together as Thom DEMIJOHN, though not sf is reminiscent of both writers. *The Prisoner ** (1969) is a tie to the tv series *The PRISONER*. Much of TMD's best work in the years around *CAMP CONCENTRATION* is in shorter forms, most of the stories being assembled in *Under Compulsion* (coll 1968 UK; vt *Fun with Your New Head* 1971 US) and

Getting into Death (coll 1973 UK), a title superseded by the superior US edition, Getting into Death and Other Stories (coll 1976), which deletes 5 stories and adds 4. TMD's most famous single story, "The Asian Shore" (1970), which appears in both versions of the collection, renders with gripping verisimilitude the transmutation of a bourgeois Western man into a lower-class urban Turk with family, through a process of possession. Other notable stories from this period include "The Master of the Milford Altarpiece" (1968), "Displaying the Flag" (1973) and "The Jocelyn Shrager Story" (1975). Increasingly, during the 1970s, TMD's best work made use of sf components (if at all) as background to stories of character; in much of this work his protagonists are directly involved, whether or not successfully, in the making of ART, and he increasingly devoted himself to studies of the nature of the artist and of the world s/he attempts to mould but which generally, crushingly, moulds her/him. From this period date his first volumes of poetry (he writes much of his POETRY as "Tom Disch"), the contents of which evince a sharp speculative clarity whose roots are almost certainly generic. After Highway Sandwiches (coll 1970 chap), with Marilyn Hacker (1942-) and Charles PLATT, and The Best Way to Figure Plumbing (coll 1972), further work appeared in ABCDEFGHIJKLMNPOQRST UVWXYZ (coll 1981 chap UK) (the ordering NPOQRST being sic), Burn This (coll 1982 chap UK), Here I Am, There You Are, Where Were We? (coll 1984 chap UK), Yes, Let's: New and Selected Poems (coll 1989), and Dark Verses and Light (coll 1991). Tom Disch is for many readers primarily a poet whose connection with sf, if known, seems secondary. TMD's most enduring single work of the 1970s is, however, sf. 334 (coll of linked stories 1972 UK), possibly his best book, is set in a near-future Manhattan; the stories, whose linkings are so subtle and elaborate that it is possible - and probably desirable - to read the book as a novel, pivot about the apartment building whose address (334 East 11th Street) is the title of the book (the numbers 3,3,4 also serve as an arithmetical base [OULIPO] for the design and proportions of the text). 334 comprises a social portrait of urban life in about AD2025 in a New York where existence has become even more difficult, intense and straitened than it is now, and where the authorities treat humans no better than TMD's aliens do; but the essence of the book lies in the patterns of survival achieved by its numerous characters, whose aspirations and successes and failures in this darkened urban world do not step over the bounds of what we may expect will become normal experience. ON WINGS OF SONG (1979 UK) is likewise set mainly in a near-future New York, and thematically sums up most of the abiding concerns of TMD's career, as well as presenting an exemplary portrait of the pleasures and miseries of art in a world made barbarous by material scarcities and spiritual lassitude; in the final analysis, however, it lacks the complex, energetic denseness of the earlier book. By this point, he had in any case begun significantly to lessen his production of sf. Neither his massive Gothic novel Clara Reeve (1975) as by Leonie Hargrave - earlier, with Sladek, he had collaborated on a more routine Gothic, The House that Fear Built (1966), the two writing together as Cassandra Knye - nor Neighboring Lives (1981) with Charles Naylor (1941-), an historical analysis in fictional terms of mid-19th-century English literary life, has any genre content. There followed two collections of literate but significantly less engaged genre

work - FUNDAMENTAL DISCH (coll 1980; cut 1981 UK) and The Man who Had No Idea (coll 1982 UK) - as well as The Businessman: A Tale of Terror (1984), an intricately metaphysical horror novel. Its thematic partners - The MD: A Horror Story (1991), a massive and ambitious exercise in the supernatural whose conclusion takes place in a complexly devastated near future; and The Priest: A Gothic Romance (1994 UK), which savagely satirizes the sexual hypocrisies and obsessions of the modern Roman Catholic Church through a plot involving pedophilia and doppelgangers - mark only a partial return to the instrumental sf of his early work; however, as a requiem for and an ethical indictment of the US this century, it is as punishing as any of the more conspicuously radical works from the beginning of his career. Amnesia (written and programmed 1986) is an engaging piece of interactive software. He is the author of two plays, Ben Hur (produced 1989) and The Cardinal Detoxes (produced 1990; 1993 chap), the latter being the subject of a controversy instigated by the Roman Catholic Church. TMD has been theatre critic for The Nation for several years, with an intermission in 1991-2. His virtual departure from sf may be not unconnected to the nature of the field's response to him. Because of his intellectual audacity, the chillingly distanced mannerism of his narrative art, the austerity of the pleasures he affords, and the fine cruelty of his wit, TMD has been perhaps the most respected, least trusted, most envied and least read of all modern first-rank sf writers. He received the JOHN W. CAMPBELL MEMORIAL AWARD for ON WINGS OF SONG in 1980, but has otherwise gone relatively unhonoured by a field normally over-generous with its kudos. [JC]Other works: Alfred the Great * (1969) as by Victor Hastings, an associational film tie; Orders of the Retina (coll 1982 chap), poetry; Ringtime: A Story (1983 chap); Torturing Mr Amberwell (1985 chap); The Tale of Dan de Lion (1986 chap), a tale in verse; The Brave Little Toaster (1981 Fantasy Annual IV; 1986 chap) and The Brave Little Toaster Goes to Mars (1988 chap), juveniles; The Silver Pillow: A Tale of Witchcraft (dated 1987 but 1988). As Editor: A series of incisive theme anthologies of unusually high calibre, comprising The Ruins of Earth (anth 1973), Bad Moon Rising (original anth 1973) and The New Improved Sun: An Anthology of Utopian Science Fiction (anth 1975); two additional anthologies with Charles Naylor, New Constellations (anth 1976) and Strangeness (anth 1977). About the author: The American Shore: Meditations on a Tale of Science Fiction by Thomas M. Disch - Angouleme (1978) by Samuel R. DELANY; A Tom Disch Checklist: Notes Toward a Bibliography (1983 chap) by Chris DRUMM. See also: BRITISH SCIENCE FICTION AWARD; CHILDREN IN SF; CITIES; CONCEPTUAL BREAKTHROUGH; CRIME AND PUNISHMENT; CRITICAL AND HISTORICAL WORKS ABOUT SF; DISASTER; DYSTOPIAS; END OF THE WORLD; ENTROPY; ESCHATOLOGY; FANTASY; GOTHIC SF; HORROR IN SF; HUMOUR; INVASION; MATTER TRANSMISSION; MESSIAHS; MUSIC; MYTHOLOGY; NEW WORLDS; OMNI; OPTIMISM AND PESSIMISM; OVERPOPULATION; PHILIP K. DICK AWARD; POLLUTION; PSYCHOLOGY; SEX; SUPERMAN; UTOPIAS; VENUS.

DISCOVERY AND INVENTION

These two topics are dealt with together because it is difficult to

separate them, the discovery of a new principle usually being followed by the invention of a means of exploiting it. The discovery of new places is dealt with in COLONIZATION OF OTHER WORLDS and LOST WORLDS. Invention, too, is discussed in other entries, including IMAGINARY SCIENCE, MACHINES, POWER SOURCES, PREDICTION, TECHNOLOGY and TRANSPORTATION. The invention story was prominent in 19th-century sf, notably in the works of Jules VERNE, who could almost be said to have invented it. Vernean inventions, particularly of new kinds of transport, were a feature of DIME-NOVEL SF. Yankee knowhow and inventiveness were carried into the past with Mark TWAIN's *A Connecticut Yankee in King Arthur's Court* (1889). (A modern version of Twain's story, with a more sophisticated view of HISTORY, is *LEST DARKNESS FALL* [1941] by L. Sprague DE CAMP.) Edward Everett HALE invented orbital satellites in "The Brick Moon" (1869). Later in the century the US inventor Thomas Alva Edison (1847-1931) became a hero figure; his exploits were much imitated in sf, and his name often borrowed (EDISONADE); some of these stories are also described under SCIENTISTS. Rudyard KIPLING invented the transatlantic airmail postal service in "With the Night Mail" (1905). H.G. WELLS invented a huge number of devices - some fantastic, as in *THE TIME MACHINE* (1895), and some realistic, as with the tanks in "The Land Ironclads" (1903) and atomic war in *The World Set Free* (1914). Samuel CHAPMAN's *Doctor Jones' Picnic* (1898) features a busy inventor who creates a huge aluminium BALLOON and a homoeopathic cure for cancer. The index of Everett F. BLEILER's *Science-Fiction: The Early Years* (1990) lists 134 stories and novels according to their particular inventions, those for "g" being "gasoline substitute, ghost condenser, gravity storage apparatus, gunpowder engine"; other letters of the alphabet produce examples just as eccentric. The invention story had an especially strong vogue in the early PULP MAGAZINES, where it was equalled in popularity as an sf subject only by the future- WAR story and the lost-race story. Examples are: George Allan ENGLAND's *The Golden Blight* (1912 *Cavalier*; 1916), in which a gold-disintegrator effects economic revolution; William Wallace COOK's *The Eighth Wonder* (1906-7 *Argosy*; 1925), in which an eccentric inventor threatens to steal the world's electricity supply with a huge electromagnet; and Garrett P. SERVISS's *The Moon Metal* (1900), in which a MATTER TRANSMITTER is invented to obtain artemisium, a rare valuable metal, from the Moon. The years 1900-30 were largely those of scientific OPTIMISM, and in the pulps Hugo GERNSBACH was one of its prophets. Before founding *AMAZING STORIES* he did well with his magazine *SCIENCE AND INVENTION*, which featured much technological fiction. His own *Ralph 124C 41+* (1911-12 *Modern Electrics*; fixup 1925) is one of the most celebrated of those novels whose raison d'etre is to catalogue the inventions of the future; they include tv. The discovery/invention story continued to pop up every now and then outside GENRE SF, as in C.S. FORESTER's *The Peacemaker* (1934), in which a pacifist invents a magnetic disrupter which stops machinery; E.C. LARGE's *Sugar in the Air* (1937), in which a process for artificial photosynthesis is discovered; and William GOLDING's play *The Brass Butterfly* (1956 as "Envoy Extraordinary"; 1958), in which a brilliant inventor in ancient Greece is given short shrift by his ruler, who sees the new inventions as an unpleasing threat to the status quo. But it was inside genre sf that the invention story found its true home, though tending to become more sombre when the central metaphor

of Mary SHELLY's Frankenstein (1818) - the inventor being destroyed by his creation - was given contemporary relevance by the dropping of the atom bomb over Hiroshima. Even before that, stories featuring NUCLEAR POWER, such as Lester DEL REY's "Nerves" (1942), had been very much aware of the dangers of such inventions. John W. CAMPBELL Jr, both as a writer and as editor of ASF, was taking a gloomier view of technological advance by the late 1930s, although his own *The Mightiest Machine* (1934 ASF; 1947) had been a jolly romp, featuring the invention of a SPACESHIP which can take its energy direct from the stars. Campbell's ASF continued through the 1940s to publish a number of invention stories, in which scientific plausibility was emphasized as never before in genre sf. The results included Robert A. HEINLEIN's "Waldo" (1942 ASF as by Anson MacDonald; vt *Waldo: Genius in Orbit* 1958). This is a gripping, optimistic invention story; the term WALDO is still used today for remote-control devices. George O. SMITH's Venus Equilateral stories (ASF 1942-5; coll as *Venus Equilateral* 1947) feature much inventive work in radio COMMUNICATIONS across the Solar System. ASF's invention syndrome was given a boost by James BLISH's Okie stories, which feature the SPINDIZZY, one of the most attractive of all sf inventions; they appeared 1950-54, and in book form as the first 2 vols of the *Cities in Flight* tetralogy: *Earthman, Come Home* (1955) and *They Shall Have Stars* (1956 UK; vt *Year 2018!* US). ASF sometimes struck a lighter note vis-a-vis inventions, notably in the Galloway Gallegher stories (1943-8) by Lewis Padgett (Henry KUTTNER). These feature an inventor whose creative faculties are released by the intake of large quantities of alcohol, and his irritating robot sidekick; they were collected as *Robots Have No Tails* (coll of linked stories 1952) as by Kuttner. Meanwhile ASF's competitors were also featuring lighthearted invention stories alongside the more doom-laden variety. A notable example of the former was the Lancelot Biggs series of SPACE OPERAS by Nelson S. BOND, which appeared mostly in *Fantastic Adventures* (1939-40) and were collected in revised form as *Lancelot Biggs: Spaceman* (coll of linked stories 1950). Biggs, the thin genius who bumbles around but gets there in the end, is typical of sf's more stereotyped inventors. Many other relevant genre-sf stories are collected in *Science Fiction Inventions* (anth 1967) ed Damon KNIGHT. Many famous sf discoveries have been made through a process of CONCEPTUAL BREAKTHROUGH, and about 40 of them are discussed under that rubric. One in particular is worthy of attention here: "Noise Level" (1952) by Raymond F. JONES. In this tale, which in its emphasis on the potential power of the human mind sums up the whole ethos of Campbell's ASF, a counterfeit invention is the occasion of conceptual breakthrough. A group of scientists are shown an apparently bona fide film of an ANTIGRAVITY device, the inventor of which has been killed. In their attempt to duplicate it they break through to a new understanding of physics, only to discover that the original was a fraud, the stratagem having been devised to exert psychological pressure on them to rethink their worldviews. Discovery/invention themes still proliferate in sf, as by the nature of the genre they always will. Important examples from the 1950s onward have been: Fred HOYLE's *Ossian's Ride* (1959), in which a sinister-seeming cartel has cordoned off southwest Ireland as an invention-producing area; Kurt VONNEGUT Jr's *Cat's Cradle* (1963), in which havoc is wreaked by a newly discovered form of ice which freezes

everything it touches; Isaac ASIMOV's *THE GODS THEMSELVES* (1972), in which a new energy source, the positron pump, is invented with a great show of plausibility; and Bob SHAW's *Other Days, Other Eyes* (fixup 1972), based on his short story "Light of Other Days" (1966), which features "slow glass", one of the most convincing and original inventions of sf (it slows down light, thus effectively allowing events to be viewed after a time-lapse; the privacy-invading social consequences are intriguingly explored). Arthur C. CLARKE's *Fountains of Paradise* (1979), a classically optimistic work of technological invention, envisages the building in a NEAR-FUTURE Earth of a 36,000km (22,400 mile) tower to be used as a space elevator. One of the most interesting subthemes, which has persisted strongly into the 1990s, is found in stories relating the discoveries of ALIEN artefacts, very often with a subsequent desire to exploit them. Some, such as A.E. VAN VOGT's "A Can of Paint" (1944) and Robert SHECKLEY's "One Man's Poison" (1953; vt "Untouched by Human Hands") and "Hands Off" (1954), are basically comedies about the dangers of the incomprehensible ("One Man's Poison" contains the line "I don't eat anything that giggles"). But the theme has serious ramifications, too. Such stories often create a tension between the longing and wonder aroused by the thought that we are not alone, together with a sense of despair at the ambiguity of such objects and the doubt whether they will ever be understood. Such is Arthur C. Clarke's "Sentinel of Eternity" (1951; vt "The Sentinel"), the basis for the film *2001: A SPACE ODYSSEY* (1968); the story tells of the discovery of a strange monolith on the Moon. Clarke's *RENDEZVOUS WITH RAMA* (1973) is entirely devoted to the exploration of, and failure to fully comprehend, a vast, apparently unmanned spaceship which enters the Solar System (BIG DUMB OBJECTS). The psychological repercussions of Man's inability to comprehend the alien are well explored in Frederik POHL's *GATEWAY* (1977), where abandoned alien spaceships are discovered and used, but not understood; the reaching out so symbolized is obsessive, seductive and murderous. *GATEWAY* and the subsequent novels in Pohl's Heechee series are sociologically almost the reverse of the ASF stories referred to above, perhaps reflecting the lowering of self-esteem and morale in the West from the late 1960s onward. Whereas ASF published tales of human ingenuity conquering the unknown, Pohl's stories envisage humanity as bewildered by the discovery of superior technology in much the same way as Bushmen in our own world might be baffled by the products of the industrial West. The metaphor for this in Arkady and Boris STRUGATSKI's novella "Piknik na obochine" (1972; trans as "Roadside Picnic" in *Roadside Picnic/Tale of the Troika*, coll 1977) is of humans discovering enigma as they scabble like rats through trash left by alien picnickers. The theme, not always so pessimistically expressed, is common in the sophisticated new wave of 1980s space opera as represented by authors like Greg BEAR and Paul J. MCAULEY, and also by Charles SHEFFIELD's *Divergence* (1991). A GOTHIC-SF variant of the theme appears in the malign consequences of the discovery of a long-buried alien spacecraft on Earth in Stephen KING's *The Tommyknockers* (1987). [PN]

DiSILVESTRO, ROGER L.

(1949-) US writer whose first novel of genre interest was *Ursula's Gift* (1988), a humorous fantasy. His second, *Living with the Reptiles* (1990),

spoofs the ethical tomfooleries of that form of the TIME-TRAVEL tale in which the protagonist changes history to save/destroy/play with the future. In this case the protagonists, after acquiring the necessary equipment in what remains of the Amazon jungle, pass into the 9th century, where shenanigans are soon afoot. [JC]

DISINTEGRATOR

In sf TERMINOLOGY, one of the commonest items of the sf armoury (WEAPONS), especially in SPACE OPERA of the 1930s and 1940s. The device may have been a product of squeamishness-or perhaps just neatness - since it creates a maximum of destruction with a minimum of bleeding pieces left to sweep up afterwards. The disintegrator first reached a wide audience with the COMIC strip BUCK ROGERS IN THE 25TH CENTURY in 1935, as a result of which toy disintegrators were very popular with kids in the late 1930s. [PN]

DISRAELI, BENJAMIN

(1804-1881) UK novelist and statesman, MP from 1837 and, in 1868 and again 1874-80, Prime Minister. He became Lord Beaconsfield. His almost-forgotten youthful novel *The Voyage of Captain Popanilla* (1828; published anon) has an innocent savage from a South Seas UTOPIA voyaging to an imaginary country closely resembling a satirized England. Modern sf normally uses actual ALIENS rather than savages as their innocent observers in books of this kind, but the principle is the same. BD features RECURSIVELY in *THE DIFFERENCE ENGINE* (1990 UK) by Bruce STERLING and William GIBSON. [PN]

DITMAR AWARDS AWARDS.

DIXIE, [Lady] FLORENCE (CAROLINE)

(1855-1905) UK traveller and writer whose nonfiction *Across Patagonia* (1880) captures something of her FEMINIST urgency. In *Gloriana, or The Revolution of 1900* (1890) a woman disguised as a man is elected Prime Minister of the UK and, though unmasked, establishes full equality between the sexes; by 1999, a woman-ruled UK beneficently dominates its Federated Empire. *Isola, or The Disinherited: A Revolt for Women and All the Disinherited* (1903), a play, depicts the coming to UTOPIAN plenitude of the society of Saxoberland on the planet Erth, which is similar but not identical to Earth. [JC]About the author: *Victorian Women Travel Writers* (1982) by Catherine Barnes Stevenson.

DIXON, CHARLES

UK writer, problematically identified as Charles Dixon (1858-1926), an ornithologist of some renown. The sf novel written by him or some other CD is *Fifteen Hundred Miles an Hour* (1895), a boys' tale featuring the interplanetary exploits of some young protagonists who travel to MARS via an electric SPACESHIP. [JC]

DIXON, DOUGAL

(1947-) UK writer whose *After Man: A Zoology of the Future* (1981) and *Man After Man: An Anthropology of the Future* (1990) provide quasifactual views of a FAR-FUTURE Earth in which *Homo sapiens*, having exhausted the

planet, soon becomes extinct, giving way (in a fashion reminiscent of the work of Olaf STAPLEDON) to succeeding forms of life. Similarly couched in a TIME-TRAVEL framework, but less taxing in its assumptions, is a Byron PREISS tie, Time Machine #7: Ice Age Explorer * (1985). [JC]See also: EVOLUTION.

DIXON, FRANKLIN W.
Harriet S. ADAMS.

DIXON, ROGER
(1930-) UK accountant and writer whose epic adventure about humankind's future fate, Noah II (1970 US; rev 1975 UK), is based on a story idea by RD and his agent, Basil Bova, and began the aborted Quest series. A second novel, The Cain Factor (1975) as by Charles Lewis, mixes SEX and apocalypse as a man and a woman escape a post- HOLOCAUST Earth to become the ADAM AND EVE of a new planet. [JC]See also: GENERATION STARSHIPS; SPACESHIPS.

DIXON, THOMAS
(1864-1946) US writer whose The Fall of the Nation (1915-16 National Sunday Magazine; 1916) graphically depicts the conquest of the USA by the Imperial Confederation of Europe, dominated by Germany. After years of occupation, a singularly ferocious US womanhood helps the men of the USA expel the enemy. [JC]See also: INVASION.

DOBLIN, ALFRED
[r] GERMANY.

[r] Dirk WYLIE.

DOC SAVAGE
US PULP MAGAZINE, pulp-size Mar 1933-Dec 1943, DIGEST-size Jan 1944-Sep/Oct 1948, pulp-size Winter 1948-Summer 1949. 181 issues Mar 1933-Summer 1949. Monthly until Feb 1947, then 4 bimonthly issues, then quarterly from Winter 1948. Published by STREET ? ed John NANOVIC 1933-43. DS was perhaps the best of the sf-oriented pulp-hero magazines. Each issue had a novel published under the pseudonym Kenneth Robeson, and many contained short adventure stories as well; a considerable majority of the novels were the work of Lester DENT (whom see, and especially ROBESON for further Doc Savage details). The most usual sf elements were superscientific WEAPONS and visits to LOST WORLDS; TELEPORTATION featured once. A master SCIENTIST, almost superhuman in intelligence and strength, Doc Savage was actually Clark Savage, the "Man of Bronze"- the surname is a Street ? contributor to the firm's journals; the given name is from Clark Gable. The success of the series led to imitations, most notably SUPERMAN, whose debt to DS is evident in his name - Clark Kent, the "Man of Steel".
[FHP/MJE]

DOC SAVAGE: THE MAN OF BRONZE
Film (1975). Warner Bros. Dir Michael Anderson, starring Ron Ely, Paul Wexler. Screenplay George PAL, Joseph Morheim based on "The Man of Bronze" (1933) by Kenneth ROBESON. 100 mins. Colour. There were 181 novels in DOC

SAVAGE MAGAZINE, and at one point producer George Pal announced that he hoped to film them all, but this, based on the first of them, was a flop. Muscular superscientist hero Doc fights with a villain over a fountain of liquid gold owned by a remote tribe in South America. The sf elements are very marginal. The film is treated in a joky manner reminiscent of the 1966-8 Batman tv series, but Anderson, who later made the disappointing LOGAN'S RUN (1976), is too ponderous a director to carry off this sort of camp nostalgia with flair. It was not until Steven SPIELBERG's Raiders of the Lost Ark (1981) that the ambience of the sf/adventure pulps was recreated with the right mixture of respect and amusement. [PN/JB]

DR CYCLOPS

Film (1940). Paramount. Dir Ernest B. Schoedsack, starring Albert Dekker, Janice Logan, Thomas Coley, Charles Halton. Screenplay Tom Kilpatrick. 75 mins. Colour. A mad scientist in the Peruvian jungle is using radioactivity to miniaturize living things, and shrinks some US explorers who find his laboratory to an average height of 12in (30cm). Made by the director of KING KONG (1933), DC is a fast-paced, visually inventive film (though the dialogue is leaden), largely taken up by desperate efforts to survive a series of perils. Dekker's portrayal of the ruthless Dr Thorkel - shaven head, bulky body, thick-lensed glasses - as the "god" toying sadistically with his little creations before casually destroying them is truly menacing; whether by design or accident, he resembles what was to become the caricature of the "beastly Jap" during WWII. The illusion of miniaturization-supervised by Farciot Edouart, one of the innovators in that area of trick photography - is very convincing. The novelization, Dr Cyclops * (1940), was published under the house name Will GARTH, and was probably the work of Alexander SAMALMAN. [JB/PN] See also: GREAT AND SMALL.

DR JEKYLL AND MR HYDE

1. Film (1932). Paramount. Prod and dir Rouben Mamoulian, starring Fredric March, Miriam Hopkins, Rose Hobart. Screenplay Samuel Hoffenstein, Percy Heath, based on Strange Case of Dr. Jekyll and Mr. Hyde (1886) by Robert Louis STEVENSON. 98 mins, cut to 90 mins, cut to 81 mins. B/w. While Stevenson's suggestion is that civilization may be only skin-deep, his tale of a decent, prim society doctor, Dr Jekyll, who transforms himself with a new drug into the brutal libertine, Mr Hyde, does not exactly abandon the religious concept of original sin; it does, however, reconcile it with 19th-century scientific thought, calling on Darwin (humanity's animal heritage) and prefiguring Freud (the id sometimes overwhelming the ego). Silent film versions (made in 1908, 1910, 1912, 1913 and three in 1920) were usually taken from one of the several melodramatic stage productions rather than directly from the original novel, and tended to present Hyde (as in the 1920 version played by John Barrymore) as a caricature of evil - that is, as a victim of his own Original Sin. In Mamoulian's 1932 version, which remains the most interesting, Hyde's appearance is almost that of Neanderthal Man (APES AND CAVEMEN), and his joyfully ferocious behaviour results not from inherent evil but from uncontrollable primitive drives. The most compelling of these is sexual - this is one of the classic loci of the theme of SEX in sf - though as the film progresses it is accompanied by an increasing capacity for cruelty.

All this comments, apparently deliberately, on the repressed society in which Jekyll has been reared. The film, atmospheric and convincing, is an acknowledged classic, especially famous for the heartbeats on the soundtrack and the convincing transformation scenes. When re-released after the Hollywood Production Code was established in 1934, it had 10 minutes cut (sexual censorship), seldom restored since.² Film (1941). MGM. Dir Victor Fleming, starring Spencer Tracy, Ingrid Bergman. Screenplay John Lee Mahin. 127 mins. B/w. Growing pressures of censorship took some of the sexual edge from this glossy remake and, although the film is still gripping - largely because of Bergman's appealing vulnerability as the tart - it seems bland after the raw energy of Mamoulian's version.³ Subsequent film versions - including *The Two Faces of Dr Jekyll* (1960; vt *House of Fright US*), which had a plain Jekyll turning into a handsome Hyde, *The Strange Case of Dr Jekyll and Mr Hyde* (1967), a made-for-tv film, *I, Monster* (1970), *Dr Jekyll and Sister Hyde* (1971), where Martine Beswick plays Hyde as a woman in a film seemingly designed for fetishists, *The Man with Two Heads* (1972; vt *Dr Jekyll and Mr Blood*), *Dr Black and Mr Hyde* (1975) and *Docteur Jekyll et les femmes* (1981; vt *The Blood of Dr Jekyll*), a particularly perverse version dir Walerian Borowczyk - have simply been variations of the formula, some more ingenious than others, but none with the impact of the 1932 production. [PN/JB]

DR. M

Film (1989). NEF Filmproduktion/Ellepi Film/Clea Productions. Dir Claude Chabrol, starring Alan Bates, Jennifer Beals, Jan Niklas, Hanns Zischler. Screenplay Sollace Mitchell from a story by Thomas Bauermeister, inspired by *Doktor Mabuse, der Spieler* (1920 ; trans Lilian A. Clare as Dr. Mabuse, *Master of Mystery* 1923 UK) by Norbert Jacques (1880-1954). 116 mins. Colour. Although in clear homage to Fritz LANG's three *Dr Mabuse* films (*DR MABUSE, DER SPIELER*), this German, Italian and French coproduction is not Langian in style. An epidemic of suicides in a NEAR-FUTURE Berlin, investigated by detectives from both East (Zischler) and West (Niklas), is connected to the Theratos holiday camps whose mysterious owner (the "Mabuse" figure, Marsfeldt, played by Bates) has been conditioning holiday-makers by hypnosis to kill themselves, his thesis being that death is fundamentally what we all crave. Marsfeldt, a perversely charming philosopher surviving thanks to a life-support system, has wide media holdings and intends to brainwash the whole of Berlin into oblivion via a tv broadcast. This sophisticated film focuses on the dream-like quality of a world dominated by media images and on the difficulty of locating any firm reality within it. [PN]

DR MABUSE, DER SPIELER

(vt *Dr Mabuse, the Gambler*) Film (1922). Ullstein/UCO Film/Decla Bioscop/UFA. Dir Fritz LANG, starring Rudolf Klein-Rogge, Alfred Abel, Aud Egede Nissen, Gertrud Welcker, Bernhard Goetzke. Screenplay Thea VON HARBOU, loosely based on *Doktor Mabuse, der Spieler* (1920; trans Lilian A. Clare as Dr. Mabuse, *Master of Mystery*). In 2 parts, 95 mins and 100 mins. B/W. Although on the face of it just a sensational melodrama about a ruthless businessman/scientist intent on world gangsterism, this film

anticipates several 20th-century sf themes, both written and filmed. It pictures a Germany sinking into anarchy and corruption, ready to be exploited by a man-more of an evil genius - to whom chaos is almost an end in itself. Mabuse (Klein-Rogge) has strong hypnotic powers and can summon visions to control the weak. The DYSTOPIA depicted looks forward to any number of sf books and films. The chaos-lover whose weapons are as much psychological as technological seems to anticipate, for example, the novels of Alfred BESTER. The idea of a decaying society controlled and exploited by a secret group - the essence of cultural PARANOIA - appears throughout sf, often in the early novels of C.M. KORNBLUTH and Frederik POHL, for example. The film shows how artistically potent the themes of pulp fiction can be when distilled and concentrated, and imaged with such ferocity. In Part One, Ein Bild der Zeit ["An Image of our Time"], Mabuse and his web of henchmen penetrate and corrupt society at all levels. In Part Two, Inferno - Menschen der Zeit ["Inferno - Men of our Time"], Mabuse becomes wholly mad and is incarcerated in an asylum. Lang, who went on to make the sf films METROPOLIS (1926) and Die FRAU IM MOND (1929; vt The Woman in the Moon), also made two Mabuse sequels, Das Testament des Dr Mabuse (1933; vt The Testament of Dr Mabuse) and Die TAUSEND AUGEN DES DR MABUSE (1960; vt The Thousand Eyes of Dr Mabuse; vt The Diabolical Dr Mabuse). In the early 1960s five further Mabuse films were made in Germany, not by Lang. [PN]See also: DR. M.

DR MABUSE THE GAMBLER
DR MABUSE, DER SPIELER.

DR NO

Film (1962). Eon/United Artists. Dir Terence Young, starring Sean Connery, Ursula Andress, Joseph Wiseman, Jack Lord. Screenplay Richard Maibaum, Johanna Harwood, Berkely Mather, based on Dr No (1958) by Ian FLEMING. 105 mins. Colour. This UK film was the first in the hugely successful James Bond series, at first loosely based on Fleming's novels and later featuring original stories. The villain, whose cinematic forebears include Fu Manchu, Captain Nemo and METROPOLIS's Rotwang - like Rotwang, Dr No possesses mechanical hands - attempts to blackmail the USA, working from a remote Caribbean island, by deflecting its Cape Canaveral rockets off course. UK secret agent Bond brings his plans to an end by boiling him in a pool containing an atomic reactor. DN's mordant humour, its sexism, its visual flashiness and the foiled attempt by a supervillain to rule the world with a superscientific device set the pattern for the entire series, most of which are marginally sf in the pulp-adventure manner of Doc Savage (DOC SAVAGE MAGAZINE). The two most obviously sciencefictional sequels are YOU ONLY LIVE TWICE (1967) and MOONRAKER (1979). [JB]See also: CINEMA.

DOCTOROW, E(DGAR) L(AURENCE)

(1931-) US writer who remains best known for Ragtime (1975), a novel that evokes the past with an hallucinatory power which edges its real-life and fictional characters into a fable-like milieu (FABULATION). His first sf novel, Big as Life (1966), depicts satirically what happens in New York when enormous beings suddenly appear in the city streets; The Waterworks (1994), set in a STEAMPUNK version of the 19th century city, is an

DR STRANGELOVE OR: HOW I LEARNED TO STOP WORRYING...

Full title: Dr. Strangelove: or How I Learned to Stop Worrying and Love the Bomb Film (1963). Hawk/Columbia. Prod and dir Stanley KUBRICK, starring Peter Sellers, George C. Scott, Sterling Hayden, Keenan Wynn, Slim Pickens. Screenplay Kubrick, Terry Southern (1924-), Peter GEORGE, based on Two Hours to Doom (1958; vt Red Alert US) by Peter Bryant (pseudonym of Peter George). 94 mins. B/w. This, the first of Kubrick's three sf films, has worn well, with its curious blend of black comedy, documentary realism and almost poetic homage to the very machines (B-52s and their nuclear cargo) that he shows as destroying the world. The original novel was a serious story about an insane US general who launches a pre-emptive attack on Russia without presidential authority, but Kubrick opted for a grotesquely satirical and very funny treatment, helped by a strong cast including Peter Sellers, who plays three roles: one is Dr Strangelove, a sinister ex-Nazi, generally seen as burlesquing a distinguished real-life SCIENTIST. The appalling point of the film is the way the vision of Armageddon attracts the very protagonists whose job it is to prevent it: Strangelove is sexually aroused by the idea of cleansing HOLOCAUST, and it excites the lunatic general and even the bomber pilot (Pickens), who rides his own bomb down with Texan whoops of triumph. At the end of the movie Vera Lynn's voice rises plangently into "We'll Meet Again" as the screen is covered with mushroom clouds. The novelization is Dr Strangelove or: How I Learned to Stop Worrying and Love the Bomb * (1963) by Peter George. The film received the 1965 HUGO for Best Dramatic Presentation. [PN/JB] See also: CINEMA; PARANOIA.

DOCTOR WHO

UK tv series (1963-). BBC TV. Created by Sydney Newman, Donald Wilson. 1st-season prod Verity Lambert, story editor David Whitaker; the Doctor played by William Hartnell Nov 1963-Oct 1966. 26 seasons to date, 695 episodes to Dec 1989, mostly 25 mins per episode. Seasons 1-6 b/w; subsequent seasons colour. In this longest-running UK sf tv series for children, the Doctor, generally known as Dr Who because of the show's enigmatic title (it is not actually his name), eventually revealed as a Time Lord, travels back and forth in time and space; he is accompanied by various people (sometimes children, sometimes men, usually young women), in his TIME MACHINE, the TARDIS, an acronym for Time and Relative Dimensions in Space. Stories have varied in length from 1 to 14 episodes, the most common length through 1974 being 6 episodes, and subsequently 4. The first episode (Nov 1963) concerned a young girl who puzzles two of her schoolteachers with her unusual knowledge of history. They follow her into what appears to be a police telephone box but is in fact a time machine (whose interior is many times larger than its exterior) owned by her irritable and eccentric grandfather, the Doctor. As the machine cannot be properly controlled they are all whisked off to the Stone Age, where they remain for the following 3 episodes. The series had a modest following at first; it was not until the second story, The Dead Planet, written by Terry NATION, that it achieved mass popularity, mainly because of the introduction of the DALEKS. Until 1990 the series returned to UK tv every

year; it was not introduced to US tv until the Tom Baker episodes that were played there in 1982, when it quickly developed a cult following. (A previous attempt in the 1970s to export the programme to the USA - a package of the Jon Pertwee episodes - had flopped.) Because the Doctor has the ability periodically to regenerate his entire body, the series has been able to outlast its original star, the crusty William Hartnell, and to introduce a succession of new leading men: Patrick Troughton (Nov 1966-June 1969), Jon Pertwee (Jan 1970-June 1974), Tom Baker (Dec 1974-Mar 1981), Peter Davison (Jan 1982-Mar 1984), Colin Baker (Mar 1984-Dec 1986) and Sylvester McCoy (Sep 1987 onwards). Peter Cushing took the role in two films, *DR WHO AND THE DALEKS* (1965) and *DALEKS: INVASION EARTH 2150 A.D.* (1966); Richard Hurndall took the place of the late Hartnell in *The Five Doctors* (1983); and Michael Jayston played the Doctor's evil incarnation from the future in the 14-episode *The Trial of a Time Lord* (1986). While the b/w episodes featuring Hartnell and Troughton are spikier and stranger, the show probably hit its peak between the Pertwee and Davison versions, with Tom Baker's long-lived, Harpo-Marxish Time Lord the most popular of all and the writers of the 1970s gradually revealing more of the secrets of the Time Lords that had been hinted at since the first. In the late 1980s the show lost direction (some say thanks to the tiredness of John Nathan-Turner's regime as producer, begun Aug 1980) and the BBC experimented with it - lengthening it, moving it from its long-established Saturday teatime slot to a weekday, and, finally, putting it on an indefinite suspension where, neither cancelled nor renewed, it remains as of 1994. A 30th anniversary tv programme planned for 1993 was shelved at the last minute, though there was a Doctor Who radio drama in 1993. While early seasons were 10 months long, in the 1970s most seasons were 6-7 months, and from 1982 they were 3 months. Although the programme has long since settled into a pattern, with stories usually featuring at least one monster, there has been plenty of room for experiment. The authors have unblushingly pirated hundreds of ideas from PULP-MAGAZINE sf, but often make intelligent and sometimes quite complex use of them. It seems probable that, certainly in the 1970s, the programme attracted as many adult viewers as children. With the increasing sophistication of the scripts and the expertise of the special effects and make-up - from which many other programmes could learn a great deal about what can be done on a low budget - DW became a notably self-confident series, juggling expertly with many of the great tropes and images of the genre. It is the most successful SPACE OPERA in the history of tv, not excluding STAR TREK. Storylines often feature political SATIRE. At its worst merely silly, at its best it has been spellbinding. Other notable cast members over the years have included Carole Ann Ford (the Doctor's granddaughter), Frazer Hines (Jamie), Anneke Wills (Polly), Michael Craze (Ben), Deborah Watling (Victoria), Wendy Padbury (Zoe), Nicholas Courtney (the Brigadier), Katy Manning (Jo), Roger Delgado (the Doctor's great enemy, the Master), Elizabeth Sladen (Sarah Jane), Louise Jameson (Leela), John Leeson (the voice of K-9, the Doctor's robot dog, one of the most successful of the media's cute ROBOTS), Mary Tamm (Romana), Lalla Ward (the regenerated Romana), Sarah Sutton (Nyssa), Janet Fielding (Tegan), Nicola Bryant (Peri), Anthony Ainley (the Master again), Bonnie Langford (Mel) and Sophie Aldred (Ace). Producers of the series after Verity Lambert (who

lasted into the 3rd season) have included Innes Lloyd, Peter Bryant, Barry Letts, Philip Hinchcliffe, Graham Williams and John Nathan-Turner. Story editors, all of whom have written episodes, have included Dennis Spooner, Gerry DAVIS, Derrick Sherwin, Terrance Dicks (1968-74), Robert Holmes, Anthony Read, Douglas ADAMS, Christopher H. Bidmead, Eric Saward (1982-6) and Andrew Cartmell. Other writers have included Terry Nation, David Whitaker, John Lucarotti, Brian Hayles, Kit PEDLER, Malcolm Hulke, Don Houghton, Robert Sloman, Bob Baker and Dave Martin, Robert Banks Stewart, David Fisher, Stephen GALLAGHER, Johnny Byrne, Terence Dudley, Peter Grimwade, Pip and Jane Baker, and Ben Aaronovitch. There are now very many spin-off books from the series, ranging from episode guides through annuals, encyclopedias, scholarly studies and published scripts to a TARDIS cookbook. There is a magazine, Dr Who Monthly, with more than 160 issues. All but four stories have now been novelized, with 151 titles published from the 1970s through late 1990. (The un-novelized scripts are "The Pirate Planet" by Douglas Adams, "City of Death" by Douglas Adams and Graham Williams writing as David Agnew, "Resurrection of the Daleks" by Eric Saward and "Revelation of the Daleks" by Eric Saward. In 1991, most existing scripts having been novelized, a post-tv sequence of releases, The New Doctor Who Adventures, was instituted, the first sequence being the Timewyrm series: Timewyrm: Genesys * (1991) by John Peel, Exodus * (1991) by Terrance Dicks, Apocalypse * (1991) by Nigel Robinson and Revelation * (1991) by Paul Cornell. A comprehensive Doctor Who bibliography would itself be book-size. [JB/PN/KN] See also: SHARED WORLDS; STEAMPUNK.

DR WHO AND THE DALEKS

Film (1965). AARU. Dir Gordon Flemyng, starring Peter Cushing, Roy Castle, Jenny Linden, Roberta Tovey. Screenplay Milton Subotsky, based on the second DR WHO tv story, 1963-4, the 7-episode The Dead Planet by Terry NATION. 85 mins. Colour. Dr Who - played colourlessly by Cushing as a polite old man - is inadvertently taken to a dying planet with his granddaughters and an accident-prone young man (Castle) as a result of the latter falling onto the controls of the Doctor's time-and-space machine, the Tardis. They find a city occupied by DALEKS about to wipe out their ancient human enemies, the Thals, with a neutron bomb; despite their fierceness the Daleks prove ridiculously easy to immobilize. DWATD shows something about the 1960s in having Dr Who, famous in later incarnations as a crafty expert in nonviolent resolution of conflict, hawkishly urging the pacifist Thals to war. This crudely made children's-film remake of the early tv story in which the Daleks made their debut is of interest mainly to Dr Who completists wishing to see Cushing in the role, which he never played on tv; though inferior to its original, it is at least superior to the even more tepid film sequel, DALEKS: INVASION EARTH 2150 A.D. (1966). [PN]

DOCTOR X

Film (1932). First National/Warner Bros. Dir Michael Curtiz (1888-1962), starring Lionel Atwill, Fay Wray, Lee Tracy, Preston Foster. Screenplay Robert Tasker, Earl Baldwin, based on a play by Howard W. Comstock and Allen C. Miller. 77 mins. Original prints two-strip Technicolor, later

b/w. A series of cannibalistic murders committed when the Moon is full prove, in this blend of sf, HORROR and the whodunnit, to have been committed by a SCIENTIST maddened by the effect of his newly invented synthetic flesh, from which he can grow a temporary artificial arm. Curtiz's customary hard-edged direction enlivens this early, low-budget potboiler. A more sophisticated version of the central idea is found in DARKMAN (1990). [JB/PN]

DR. YEN SIN

US PULP MAGAZINE. 3 bimonthly issues, May/June-Sep/Oct 1936. Published by Popular Publications; ed Rogers Terrill. DYS was a follow-up to an earlier Popular title, The MYSTERIOUS WU FANG, itself intended to capitalize on the popularity of Sax ROHMER's Fu Manchu; in fact the cover of #1 had originally been painted for the previous title. All issues featured lead novels by Donald E. Keyhoe (1897-1988), whose several books on flying saucers later helped foment the UFO craze of the early 1950s. Yen Sin was a conventional yellow-peril supervillain, intent on world conquest with the aid of superscience. His opponent, Michael Traile, had been accidentally deprived of the ability to sleep, so read a lot. The lead novel of #1 was reprinted by Robert E. WEINBERG as Pulp Classics No. 9 (1976). [MJE/PN]

DODD, ANNA BOWMAN

(1855-1929) US writer whose anti-socialist sf novel, The Republic of the Future, or Socialism a Reality (1887), set in AD2050, offers a scathing and comical portrait of egalitarianism brought to the uttermost, resulting in a technologically advanced antlike society. The tale actively deprecates FEMINISM. [JC]

DODDERIDGE, ESME

(1916-) US writer whose The New Gulliver, or The Adventures of Lemuel Gulliver, Jr. in Capovolta (1979) brings its protagonist into a matriarchal society, dystopian to its male visitor, in which by an ironic role reversal all the men, who are subservient to women, carry out the child-rearing and sexual-object functions which in the real USA at the time the book was written were generally the roles of women. [JC/PN]

DOENIM, SUSAN

[s] George Alec EFFINGER.

DOLAN, BILL

Tom WILLARD.

DOLD, DOUGLAS (MERIWETHER)

(c1890-1932/6) US editor and writer, elder brother of Elliott DOLD, with whom in 1915 he joined the Serbian army. As a result of injuries sustained in combat, he gradually became blind, but this affliction did not prevent him from editing The Danger Trail magazine, presiding over Clues, Incorporated (which published Clues: A Magazine of Detective Stories), or publishing several borderline sf/adventure tales. The last of these appears to have been "Valley of Sin" in Miracle Science and Fantasy Stories (which he also helped edit) in 1931. According to Murray LEINSTER, DD died of pneumonia after his house caught fire and the firemen sprayed

him with water. [RB]See also: ASTOUNDING SCIENCE-FICTION.

DOLD, (WILLIAM) ELLIOTT (Jr)

(1892-1957) US illustrator, son of noted psychiatrist William Elliott Dold (1856-1942) and younger brother of Douglas DOLD. ED studied art at the College of William and Mary in Virginia to 1912, and with his brother joined the Serbian army in 1915. Although his 44 Art Deco drawings for Harold HERSEY's Night (1923) are perhaps his finest work, ED is now best remembered for his interior ILLUSTRATIONS for the early sf PULP MAGAZINES, also in an Art Deco idiom. Using only black and white (with virtually no greys), he was a master at depicting looming, massive, superbly detailed and intricate MACHINES that dwarfed their human operators, whom he depicted with relative indifference. ED contributed to ASTOUNDING SCIENCE-FICTION 1934-8, and was one of that magazine's finest interior illustrators; his illustrations for its serialization of E.E. "Doc" SMITH's Skylark of Valeron (1934 ASF; 1949) are considered classics. He edited, did colour covers and wrote a lead story for Hersey's short-lived MIRACLE SCIENCE AND FANTASY STORIES (1931). His last sf appearances were in 1941, when he painted covers for COSMIC STORIES and STIRRING SCIENCE STORIES. [RB/JG]See also: ASTOUNDING SCIENCE-FICTION.

DOLEZAL, ERICH

[r] AUSTRIA.

DOLINSKY, MIKE

Working name used by US screenwriter Meyer Dolinsky (1923-1993?) for his sf novel, Mind One (1972), in which two psychiatrists discover that a drug meant to treat psychosis actually engenders TELEPATHY (see also ESP), and find themselves relating warmly to each other (they are of opposite sexes); as one of them is a Jesuit priest, an element of RELIGION soon enriches the tale. As Meyer Dolinsky, MD wrote 3 episodes for the tv series The OUTER LIMITS . [JC]

DOLPIN, REX

[r] Peter SAXON.

DOMECQ, H. BUSTOS

Adolfo BIOY CASARES; Jorge Luis BORGES.

DOMINIK, HANS

[r] GERMANY.

DONALDSON, STEPHEN R(EEDER)

(1947-) US writer who remains best known for the two formidably ambitious Chronicles of Thomas Covenant the Unbeliever high-fantasy sequences. Although he was a FANTASY writer of central importance in the 1970s and 1980s, and winner of the JOHN W. CAMPBELL AWARD for most promising writer in 1979, and although characters in Mordant's Need (see listing below) shift worlds via gates which arguably work according to sf conventions governing MATTER TRANSMISSION, SRD did not become of strong sf interest until the publication of the first volumes of his ongoing Gap sequence of Galaxy-spanning SPACE OPERAS: The Gap into Conflict: The Real Story (1990 UK), The Gap into Vision: Forbidden Knowledge (1991), The Gap into Power: A Dark and Hungry God Arises (1992) and The Gap into Madness:

Chaos and Order (1994), with at least one further volume, projected. The volumes to date are characterized by a pounding bluntness of prose, a plot-pattern which makes some superficial homage to traditional space opera, and an underlying extremism in the creation of character (both the villain and the seeming hero are almost supernaturally monstrous) and in the expression of sexual violence. It is hard to predict what dark climax is being mounted. [JC]Other works: The Chronicles of Thomas Covenant the Unbeliever, comprising Lord Foul's Bane (1977), The Illearth War (1977) and The Power that Preserves (1977); its sequel, the Second Chronicles of Thomas Covenant the Unbeliever, comprising The Wounded Land (1980), The One Tree (1982) and White Gold Welder (1983); a slim pendant to the sequences, Gilden-Fire (1981 chap); Daughter of Regals and Other Tales (coll 1984), not to be confused with Daughter of Regals (1984), which prints only the title story of the previous volume; Epic Fantasy in the Modern World: A Few Observations (1986 chap), nonfiction; the Mordant's Need books, in effect one novel published in 2 vols as The Mirror of Her Dreams (1986 UK) and A Man Rides Through (1987). As Reed Stephens: An associational detective-novel sequence comprising The Man who Killed his Brother (1980), The Man who Risked his Partner (1984) and The Man who Tried to Get Away (1990). See also: DEL REY BOOKS; SWORD AND SORCERY.

DONNE, MAXIM
Madeline DUKE.

DONNELLY, IGNATIUS
(1831-1901) US writer and politician, famous for his study Atlantis: The Antediluvian World (1882), which was responsible for a considerable resurgence of interest in the legend of ATLANTIS, and for The Great Cryptogram (1888), in which he attempted to prove by cryptographic analysis that Francis BACON wrote Shakespeare's early plays. His most important sf novel was Caesar's Column (1890; early editions under the pseudonym Edmund Boisgilbert), which countered the UTOPIAN optimism of Edward BELLAMY with the argument that society was evolving towards greater inequality and catastrophic WAR rather than towards peace and plenty. ID wrote two other fantasies of social criticism: Doctor Huguet (1891), in which the racist protagonist exchanges bodies with a Black man, and The Golden Bottle (1892), in which a gold-making device is instrumental in the overthrow of capitalism. [BS] See also: CITIES; LOST WORLDS; POLITICS; SOCIAL DARWINISM.

DONOVAN, DICK
J.E. Preston MUDDOCK.

DONOVAN'S BRAIN
Film (1953). Dowling Productions/United Artists. Dir Felix Feist, starring Lew Ayres, Gene Evans, Nancy Davis. Screenplay Feist, based on Donovan's Brain (1943) by Curt SIODMAK. 83 mins. B/w. One of three films based on Siodmak's novel of the same name, the others being The LADY AND THE MONSTER (1944) and VENGEANCE (vt The Brain) (1963). A scientist keeps a dead businessman's brain artificially alive, but it has an evil, telepathic influence over him. Feist, whose previous sf film was DELUGE (1933), directs unspectacularly, but gets a good performance from Ayres,

who accomplishes the transitions from his natural to his possessed state very well. The female lead later married Ronald Reagan. Despite its sf elements, the film is more GOTHIC than scientific - the brain itself is ludicrous. DB was parodied in *The MAN WITH TWO BRAINS* (1983). [JB]

DONSON, CYRIL

[r] ROBERT HALE LIMITED.

DOOMWATCH

1. UK tv series (1970-72). BBC TV. Prod Terence Dudley. Series devised by Kit PEDLER, Gerry DAVIS. Starring John Paul, Simon Oates, Robert Powell, Wendy Hall, Joby Blanchard. Writers included Dudley, Pedler, Davis, Dennis Spooner, Don Shaw, Martin Worth, Brian Hayles, John Gould. Dirs included Dudley, Jonathan Alwyn, David Proudfoot, Lennie Mayne, Eric Hills, Darrol Blake. 3 seasons, 57 50min episodes. Colour. In this drama series, the first about dangers to Earth's ECOLOGY, a group of scientists - aggressively ready to take on the Establishment and headed by caustic Dr Quist (John Paul) - is set up as a watchdog over the rest of the scientific community. Stronger safeguards in the use of everything from chemical weapons and pesticides to new drugs and in vitro fertilization are urged, while some lines of research should be abandoned altogether; the not too deeply hidden subtext appeared to be that scientific research is dangerous per se. Pedler and Davis departed before the 3rd season, repudiating what they claimed was D's increasing lack of seriousness, but in fact from the beginning the hoariest sf CLICHES had appeared beneath the display of social conscience; apart from its overbearingly moralizing tone there was little difference between D and the mad- SCIENTIST movies of the 1930s and 1940s. 2. Film (1972). Tigon. Dir Peter Sasdy, starring Ian Bannen, Judy Geeson, John Paul, Simon Oates, George Sanders. Screenplay Clive Exton, based on the BBC TV series. 92 mins. Colour. A familiar horror-film plot is given a fashionable rationale, in what is effectively a feature-film episode of the tv series. Visitors to a fishing village on a remote offshore island are met with hostility; grossly malformed people are being hidden away. The distortions - in fact, acromegaly - have resulted not from the workings of Hell but from the dumping of pituitary growth hormone (intended as an additive to animal feed) in the sea nearby, although the horror stereotypes suggest the two possible causes are topologically identical. Sasdy directed with style but was handicapped by a banal script. [JB/PN]

DOONER, PIERTON W.

(1844-?1907) US writer whose *Last Days of the Republic* (1880) was the first US Yellow Peril novel, and demonstrates the terribly common dynamic by which a guilty party, or nation, feels compelled to transfer its guilt to the victim or victim-nation: in 1880, the year of the book's publication, the USA had been using Chinese coolies for some time as forced labour, and in terms of this dynamic it was high time to accuse them of being a menace. In the novel, the coolies nefariously gain civil rights from cowardly Whites, and use their ill gotten power to gain control of the Pacific coastal states, from which point the collapse of Washington is only a matter of time. [JC]

DOPPELGANGER

(vt Journey to the Far Side of the Sun) Film (1969). Century 21 Productions/Universal. Prods Gerry and Sylvia ANDERSON. Dir Robert Parrish, starring Ian Hendry, Roy Thinnes, Patrick Wymark, Lyn Loring, Herbert Lom. Screenplay by the Andersons, Donald James. 101 mins, cut to 94 mins (US). Colour. The first live-action feature from the Anderson production team responsible for a number of tv series featuring puppets in sf adventure scenarios, D, though panned by most critics, displays its illogical plot with some style. Scientists discover a counter-Earth, an exact duplicate of Earth that is always hidden on the opposite side of the Sun - a centuries-old idea that popped up occasionally in pulp sf, as in Split Image (1955) by Reed DE ROUEN. An expedition is mounted to reach the counter-Earth, and the confusions of the subsequent story, involving sabotage, characters meeting themselves and apparent conspiracy between the two planets, are compounded by the fact that the story is told in flashbacks by a scientist in a mental asylum, giving a Dr Caligari-like ambiguity to the whole film. [JB/PN]

DORER, FRANCES (CATHERINE)

(? -) US writer, always with Nancy Dorer, who began to publish work of genre interest with When Next I Wake (dated 1978 but 1979) as by Frank Dorn, and whose most ambitious effort was the Eagle sequence of sf adventures, all dated 1979 but published 1980: By Daybreak the Eagle (1980), Wings of the Eagle (1980) and Return of the Eagle (1980). Singletons include Appointment with Yesterday (dated 1978 but 1979) as by Dorn, Sunwatch (1979) as by Dorn, Where No Man has Trod (dated 1979 but 1980) and Two Came Calling (dated 1979 but 1980). [JC]

DORER, NANCY (JANE)

[r] Frances DORER.

DORMAN, SONYA (HESS)

(1924-) US writer who began publishing sf in 1963 with "The Putnam Tradition" for AMZ, and who established a reputation in the field for intensely written, sometimes highly metaphorical stories. They are surprisingly unlike her rather straightforward POETRY, for which she is generally best known; the first of her verse collections was Poems (coll 1970). Planet Patrol (fixup 1978), a juvenile, is sf. [JC]

DORN, FRANK

Frances DORER.

DORRINGTON, ALBERT

(1871-?) UK writer whose death-date is undetermined: he may have been the AD who died in Australia in 1953. He was best known for The Radium Terrors (1912), which combines Yellow Peril fears with the then widespread fascination for the powers of radium. The plot unmemorably details a conspiracy on the part of the former to use the latter. The Half-God (1933) features super-radium. [JC] Other works: Our Lady of the Leopards (1911), a fantasy.

DORSEY, CANDAS JANE

(1952-) Canadian writer, arts journalist and social worker, author of

three early volumes of poetry and co-editor of *Tesseract*(3) (anth 1991) with Gerry Truscott (1955-). CJD began publishing work of genre interest with "Columbus Hits the Shoreline Rag" in *Getting Here* (anth 1977) ed Rudy Weibe; her terse, complex stories, assembled in *Machine Sex* (coll 1988), polemically re-use and rework sf and fantasy tropes from a FEMINIST perspective, engaging most memorably, and fascinatedly, in the title story, "(Learning About) Machine Sex", with the phallocentrism of much CYBERPUNK. The protagonist of the tale, a computer-design prodigy and occasional hooker, debuted in CJD's first novel, the undistinguished *Hardwired Angel* (1987), written with Nora Abercrombie (1960-). [RK]See also: CANADA.

DOS(-a-DOS)

When two books are bound together so that they share one spine, but with their texts printed upside-down in respect to each other, the composite volume is described in the publishing trade as being bound dos-a-dos (literally "back-to-back"). Such a volume has two front covers and two title pages, which the reader can confirm by turning any example upside-down, revealing a second front cover, right way up, and a second text, likewise. Almost always - though not invariably - the format has been used in sf for paperback originals, the two best known mass-market publishers to have done this being ACE BOOKS in their Ace Doubles series and TOR BOOKS in their Tor Doubles series; some SMALL PRESSES have also engaged in the practice. For the convenience of readers and collectors we use the word "dos" in our book ascriptions in this encyclopedia to designate any edition of a title making up one half of a dos-a-dos twin. A problem arises. Towards the end of their existence as a line, Tor Doubles began to appear with the 2 titles presented sequentially; in strict bibliographical terms these late issues were, in fact, anthologies, just as two earlier series - the Belmont Doubles and the Dell Binary Stars - were, strictly speaking, anthologies. If - as was almost never the case - any of the individual titles reprinted in these series had been originally published as books, the resulting volume would have then been technically describable as an omnibus. But readers do not tend to think of the volumes in these series as being either anthologies or omnibuses; readers (and we) tend to think of them as two titles bound together. We have therefore - in deliberate violation of bibliographical protocol - extended the use of the word "dos" in our book ascriptions to include all titles of publishers' series which "feel" "dos"-like. In this encyclopedia we designate as "dos" all genuine dos-a-dos bindings; we also designate as "dos" all other series-linked bindings that contain two but no more than two titles, each title being named on the cover. [JC/PN]

DOUBLEDAY

US general publisher which in the 1950s was one of the first US hardcover houses to institute an sf line, an early title being *Pebble in the Sky* (1950), which was Isaac ASIMOV'S first novel. (The Doubleday imprint, Doubleday ? associated company, Nelson Doubleday, Inc., publishers of the US SCIENCE FICTION BOOK CLUB.) Once the Doubleday line was established it published about 30 titles a year, its authors in due course including many who at

the time were comparatively unknown, such as George Alec EFFINGER, Octavia BUTLER, John CROWLEY, M. John HARRISON, Stephen KING, Josephine SAXTON and Kate WILHELM. D also published many established authors, some of whom had previously published mainly in paperback: they included Avram DAVIDSON, Philip K. DICK, Harry HARRISON, Robert A. HEINLEIN, C.M. KORNBLUTH, Barry MALZBERG, Bob SHAW and Roger ZELAZNY. D's anthology series have included CHRYSALIS, UNIVERSE and Nebula Award Stories (NEBULA). D was both loved and loathed by sf authors: loved because it was a reliable market not afraid to take risks with innovative material that was not obviously commercial, loathed because its advances were small, its book production often cheap, and its book promotion negligible. In 1981 D (whose sf editor for the difficult years 1977-89 was Pat LoBrutto) halved the size of the list. In 1986 it and associated companies, including Dell/Delacorte and the Science Fiction Book Club (but not the New York Mets) were sold for \$475 million to the German company Bertelsmann, which already owned BANTAM BOOKS and which thereby became one of the largest sf/fantasy publishers in the USA, with around 170 titles a year. In 1987 the old Doubleday line was revamped, the imprint now being called Doubleday Foundation after Isaac Asimov's Foundation books (they had not initially been published by Doubleday, but Asimov had treated the firm as his main publisher from 1950, and remained faithful to it until his death). The new list was very much more consciously innovative than its predecessors, and ambitious novels by authors like Dan SIMMONS and Sheri S. TEPPER soon began to appear; books under this imprint often went on to be paperbacked by Bantam Spectra. During 1991, however, Doubleday Foundation was merged into Bantam Spectra, and the Doubleday name ceased to be relevant to sf publishing. [PN]

DOUGHTY, CHARLES M(ONTAGU)

(1843-1926) UK explorer and writer whose *Travels in Arabia Deserta* (1888) profoundly influenced T.E. Lawrence (1888-1935), among others. The difficult, archaic language of CMD's later work, a series of book-length poems, has kept them from wide circulation. Two are of some sf interest: *The Cliffs* (1909) features an airborne "Persanian" invasion of England, which is successfully repelled; in *The Clouds* (1912) a similar invasion is successful, and England occupied. Both poems are designed as warnings to complacent Britons, and share many of the characteristics of the INVASION stories popular before WWI. [JC]

DOUGHTY, FRANCIS W(ORCESTER)

(1850-1917) US numismatist, scholar and miscellaneous writer whose well written, ingenious and original dime novels (DIME-NOVEL SF) have often been considered the finest examples of the category. His better stories present a succession of highly imaginative strokes, often with good historical backgrounds. "I" (1887) describes a double quest, for a beautiful She Who Is Never Seen and for a remarkable manuscript hidden by Saint Cyprian. *The Cavern of Fire* (1888) uses as its departure points (a) the theory that the Mound Builders were ancient Greeks and (b) a HOLLOW EARTH filled with teratological peoples. *Two Boys' Trip to an Unknown Planet* (1889) is an astronomical fantasy, often on a mythic level, set on a planet circling Sirius; it may have been a source of motifs for David

LINDSAY's A VOYAGE TO ARCTURUS (1920). "Where?" (1889-90) takes place in a strange Antarctica filled with grotesque peoples and superscientific devices reminiscent of Bulwer LYTTON's vril. 3,000 Miles through the Clouds (1892), which takes elements from Jules VERNE's The Mysterious Island (trans 1875), puts three comrades into wildly imaginative situations in an Arctic crater. Perhaps also by Doughty is Al and his Air-Ship (1903) as by Gaston Garne, which describes scientifically advanced giants in Antarctica, remarkable flying machines powered by a vril-like source, and other marvels. An adult sf novel, Mirrikh (1892), although highly imaginative, was not especially successful. [EFB]

DOUGLAS, CAROLE NELSON

(1944-) US writer who began her career as a feature writer 1967-84 for the St Paul Pioneer Press. Her first novels, like Amberleigh (1980), were historical romances. She has become best known for energetic, layered high-fantasy tales like Six of Swords (1982), the first volume in her Kendric and Irissa sequence, which continues with Exiles of the Rynth (1984), Keepers of Edanvant (1987), Heir of Rengarath (1988) and Seven of Swords (1989). Though she has been an infrequent author of sf, the Probe sequence - Probe (1985) and Counterprobe (1988) - is of some interest for its slow unfolding of the mystery behind the amnesia afflicting a young woman who has PSI POWERS and who turns out to be what the title says she is: a probe inserted by ALIENS into the human world to gather data. But love intervenes. It may be the case that CND will never wish to shake herself completely free of romance idioms and plotlines; but, if she does so, she might become one of the significant genre writers of the 1990s. [JC]Other works:Fair Wind, Fiery Star (1981; much exp restored text 1994), pirate tale set partly in the Bermuda Triangle; The Crystal books, Crystal Days (1990) and Crystal Nights (coll 1990), associational, with some of the same cast appearing in the Midnight Louie fantasy sequence comprising Catnap: A Midnight Louie Mystery (1992) Pussyfoo (1993) and Cat on a Blue Monday (1994); Good Night, Mr Holmes * (1990), Good Morning, Irene * (1991) and Irene at Large (1993), associational pastiches of Sherlock Holmes; the projected Taliswoman Trilogy, beginning with Cup of Clay (1991) and Seed Upon the Wind (1992).See also: SUPERMAN.

DOUGLAS, GARRY

Garry KILWORTH.

DOUGLAS, IAIN

[r] ROBERT HALE LIMITED.

DOUGLAS, JEFF

Andrew J. OFFUTT.

DOUGLAS, (GEORGE) NORMAN

(1868-1952) UK writer of superb meditative travel books and some fiction, his best known novel being South Wind (1917). Unprofessional Tales (coll 1901), as by Normyx, consists mainly of fantasies; but in two novels of his late maturity he dramatized his strongly misogynist and persuasively "pagan" views in venues familiar to the reader of sf. They Went (1920; rev 1921) subversively promulgates a UTOPIAN aestheticism in a land much like doomed Lyonesse. Through the tale of half-divine Linus and his imposition

of a rigid civilization upon the world, *In the Beginning* (1927 Italy), an example of prehistoric sf, expresses - with a more vigorous loathing than Thomas Burnett SWANN could muster 40 years later - the sense that humanity's rise entailed the destruction of Eden, and of the sentient, pagan, amoral creatures who dwelt there. [JC] Other works: *Nerinda* (1929 Italy).

DOUGLASS, ELLSWORTH

Probably the pseudonym of Elmer Dwiggin (? - ?), about whom little is known. ED wrote "The Wheels of Dr Ginocchio Gyves" (1899 Cassell's Magazine), about a gyroscopically controlled space vessel, with Edwin PALLANDER. His sf novel, *Pharoah's Broker: Being the Very Remarkable Experiences in Another World of Isidor Werner* (Written by Himself) (1899 UK), is an interplanetary romance set on MARS, where parallel EVOLUTION has resulted in a society almost identical to that of Egypt in the time of Joseph. In the end the hero, having been a grain-broker in Chicago, is able to take on Joseph's role. [PN/JC]

DOWDING, HENRY WALLACE

(?1888-?1967) US writer who was most active in the 1920s. His sf novel, *The Man from Mars, or Service, for Service's Sake* (1910), is occupied for much of its length with its protagonist's search for a MCGUFFIN document, but shifts in its later moments to be a long description, on the part of the protagonist's employer, of his time on MARS, which planet is small, quite close to Earth, and UTOPIAN. [JC]

DOWLING, TERRY

(1947-) Australian lecturer in English, tv performer, songwriter and writer. One of the most interesting new voices in local sf, TD is beginning to glean international praise as well. His master's thesis was, unusually for AUSTRALIA, about sf - its topic was J.G. BALLARD and the Surrealists. "The Man who Walks Away behind the Eyes" (1982 OMEGA SCIENCE DIGEST) inaugurated an sf career that has so far been devoted exclusively to short fiction (over 30 stories to date); his work was at first too obviously indebted to Cordwainer SMITH and Jack VANCE, but later developed an individual voice. TD's idiosyncratic but vivid between-the-lines style is perhaps best displayed in his Tyson stories, some of which are collected in *Rynosseros* (coll of linked stories 1990), *Wormwood* (coll of linked stories 1991), *Blue Tyson* (coll 1992) and *Twilight Beach* (coll of linked stories 1993): though many characters are featured, they tell centrally : of Tom Tyson, captain of the sandship *Rynosseros*, in which he roams the strange, high-tech Ab'o societies of a future Australia's outback, occasionally undergoing mystical epiphanies. With Richard DELAP and Gil Lamont (1947-) he edited *The Essential Ellison* (coll 1987) by Harlan ELLISON and with Van Ikin he put together in *Mortal Fire: Best Australian SF* (anth 1993), which presents the sf of his native land as evolving its own characteristic themes and timbre. [PN]

DOWNING, PAULA E.

Working name of US attorney, municipal judge and writer Paula Elaine Downing King (1951-), who writes also as Paula King; she is married to T. Jackson KING. PED began publishing work of genre interest with "Loni's

Promise" for Discoveries in 1989. Her first novel, *Mad Roy's Light* (1990) as Paula King, is an sf adventure featuring a human woman who must come to terms with her life within an interstellar trade guild while at the same time striving to comprehend the ALIEN Li Fawn, who mercilessly use biological engineering (GENETIC ENGINEERING) to modify other species for their own purposes. Her second, *Rinn's Star* (1990), plays something of a game of words with its title, as the telepathic protagonist Rinn, who lives on an interesting planet and travels between the stars, also sees her own personal star wax and wane erratically as she shoots from one culture to another, each having a different attitude towards her background and her gift. In *Flare Star* (1992) a colony planet is devastated when its sun flares; *Fallway* (1993) treated similar material; and *A Whisper of Time* (1994) set up a complex First Contact plot (COMMUNICATIONS) involving an alien orphan who, brought up on Earth, has fantasies about Mayan ruins, which resemble her own deepest memories of some other place. [JC]

DOWNMAN, FRANCIS
Ernest OLDMEADOW.

DOYLE, [Sir] ARTHUR CONAN
(1859-1930) UK writer known primarily for his work outside the sf field and in particular for his Sherlock Holmes stories. Born in Edinburgh and educated by Jesuits, he studied medicine at Edinburgh University and initiated his own practice in Portsmouth in 1882, supplementing his income by writing. The first Holmes novel was *A Study in Scarlet* (1887). His historical novels, *Micah Clarke* (1889) and *The White Company* (1891), were relatively unsuccessful, but the first series of Holmes short stories in *The STRAND MAGAZINE* (1891-2) secured his popularity. His interest in subjects on the borderline between science and mysticism is evident in a potboiler about supernatural vengeance from the mysterious East, *The Mystery of Cloomber* (1889), and in a short novel of telepathic vampirism, *The Parasite* (1895). Although the Holmes stories suggest an incisively analytical and determinedly rationalistic mind, ACD was fascinated by all manner of occult disciplines, including hypnotism, Theosophy and oriental mysticism; following the death of his son he became an ardent convert to Spiritualism. ACD's first SCIENTIFIC ROMANCE, *The Doings of Raffles Haw* (1891), is a hurriedly written account of a gold-maker who becomes disenchanted with the fruits of his philanthropy. His early sf short stories include "The Los Amigos Fiasco" (1892), in which an experimental electric chair "supercharges" a criminal instead of killing him, and the personality-exchange story "The Great Keinplatz Experiment" (1894). ACD abandoned sf during the early decades of his literary success but returned before WWI to make his most important contribution to the genre: following "The Terror of Blue John Gap" (1910) - about a monstrous visitor from an underground world - and a satirical account of "The Great Brown-Pericord Motor" (1911) came *The Lost World* (1912), a classic LOST-WORLD novel in which the redoubtable Professor Challenger leads an expedition to a plateau in South America where dinosaurs still survive. In a sequel, *The Poison Belt* (1913), the Earth faces disaster as a result of atmospheric poisoning. "The Horror of the Heights" (1913) is an account of strange

forms of life inhabiting the upper atmosphere. The novelette "Danger!" (1914; reprinted in *Danger!, and Other Stories*, coll 1918) is Doyle's contribution to the imminent- WAR genre, anticipating submarine attacks on shipping - a prophecy received sceptically by the Admiralty but validated within months. ACD's post-WWI passion for the paranormal, which led him to such excesses as the endorsement of Elsie Wright's and Frances Griffiths's clumsily faked photographs of the "Cottingley fairies" in *The Coming of the Fairies* (1922), strongly infects his later sf. In *The Land of Mist* (1926) Challenger is converted to spiritualism; the remaining stories in the series-which can be found alongside the titular occult romance in *The Maracot Deep and Other Stories* (coll 1929) as well as in *The Professor Challenger Stories* (omni 1952; vt *The Complete Professor Challenger*) - are weak, though "When the World Screamed" (1929) is a striking early LIVING-WORLD tale. ACD's earlier short stories, including numerous fantasies and a few trivial sf stories not mentioned above, exist in many collections, including *The Captain of the Polestar and Other Tales* (coll 1890), *The Great Keinplatz Experiment, and Other Stories* (coll 1894 US; rev vt *The Great Keinplatz Experiment, and Other Tales of Twilight and the Unseen* 1919 US), and *Round the Red Lamp: Being Facts and Fancies of Medical Life* (coll 1894), most of whose contents are reprinted in *The Conan Doyle Stories* (coll 1929). *The Best Science Fiction of Arthur Conan Doyle* (coll 1981), ed Charles G. WAUGH and Martin H. GREENBERG, collects almost all of his shorter sf; one notable exception is an interesting essay in alternative history (ALTERNATE WORLDS), "The Death Voyage" (*The Strand* 1929). Since Sherlock Holmes fell into the public domain the character has been popular in sf stories, appearing in key roles in, among others, *Morlock Night* * (1979) by K.W. JETER, *Sherlock Holmes' War of the Worlds* * (1975) by Manly Wade and Wade WELLMAN, *Exit Sherlock Holmes* * (1977) by Robert Lee HALL, *Dr Jekyll and Mr Holmes* * (1979) by Loren D. Estleman and *Time for Sherlock Holmes* * (1983) by David DVORKIN. *Druid's Blood* (1988) by Esther M. Friesner features Holmes (here called Brihtric Donne) in an alternate world where MAGIC works; ACD himself appears as Arthur Elric Boyle. The first novel of this "revival", *The Seven-Per-Cent Solution* (1974) by Nicholas Meyer is of sf interest in that it involves early psychoanalysis (PSYCHOLOGY) and the father of psychoanalysis himself, Sigmund Freud (1856-1939). A relevant anthology is *Sherlock Holmes through Time and Space* (anth 1984) ed Isaac ASIMOV, Martin H. GREENBERG and Charles G. WAUGH. [BS]Other works: *The Best Supernatural Tales of Arthur Conan Doyle* (coll 1979 US) ed E.F. BLEILER; *The Supernatural Tales of Sir Arthur Conan Doyle* (anth 1987) ed Peter Haining. See also: ATLANTIS; BIOLOGY; CRIME AND PUNISHMENT; DIME-NOVEL SF; DISASTER; ESCHATOLOGY; HISTORY OF SF; HORROR IN SF; MACHINES; MEDICINE; MONEY; PARASITISM AND SYMBIOSIS; POWER SOURCES; PSI POWERS; RADIO; SCIENTISTS; SERIES; UNDER THE SEA.

DOYLE, DEBRA

(1952-) US writer who began publishing work of genre interest with "Bad Blood" in *Werewolves* (anth 1988) ed Jane YOLEN and Martin H. GREENBERG, which was expanded into a novel (see *Bad Blood* below); all her books have been written with James D(ouglas) MacDonald (1954-), and we follow the alphabet-and make no estimate of seniority in this partnership-in treating

all their joint work under DD. Most of this work has been fantasy (see Other Works below), and some has been TIES such as their 2 titles in the Planet Builders sequence, *Night of Ghosts and Lightning* * (1989) and *Zero-Sum Games* * (1989), both as by Robyn Tallis; *Horror High: Pep Rally* * (1991) as by Nicholas Adams; and their 2 titles in the 4th Tom Swift sequence (see TOM SWIFT): *Monster Machine* * (1991) and *Aquatech Warriors* * (1991), both as by Victor APPLETON. Robert Silverberg's *Time Tours #3: Timecrime, Inc* * (1991) and Daniel M. Pinkwater's *Melvinge of the Megaverse #2: Night of the Living Rat* * (1992) are also ties. Their first novel in their own right, *Knight's Wyrld* (1992), is fantasy; but the *Mageworlds* series-comprising *The Price of the Stars* (1992), *Starpilot's Grave* (1993) and *By Honor Betray'd* (1994)-moves into space opera with some flair, though not without recourse to fantasy outcomes when the going gets tough for the exile princess who becomes a space pilot and stirs up trouble, hither and yon, around the galaxy. *Bad Blood* (1993)-which incorporates DD's solo first story-and *Hunter's Moon* (1994) make up a children's series about werewolves and vampires. [JC]Other Works: the Circle of Magic sequence, comprising *School of Wizardry* (1990), *Tournament and Tower* (1990), *City by the Sea* (1990), *The Prince's Players* (1990), *The Prisoners of Bell Castle* (1990) and *The High King's Daughter* (1990).

DOZOIS, GARDNER (RAYMOND)

(1947-) US writer, anthologist and, from 1985 (with the Jan 1986 issue), editor of ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE, winning 5 HUGOS between 1988 and 1992; he is married to Susan CASPER. He began publishing sf in 1966 with "The Empty Man" for *If*, but it was not until after military service (in which he worked as a military journalist) that he began producing such stories as "A Special Kind of Morning" (1971) and "Chains of the Sea" (1972), which made him a figure of some note in the latter-day US NEW WAVE, causing some misapplied criticism of his "pessimism" and general lack of interest in storytelling; both stories are included in *The Visible Man* (coll 1977), which assembles his best early work, and reappear in *Geodesic Dreams: The Best Short Fiction of Gardner Dozois* (coll 1992). His first novel, *Nightmare Blue* (1975) with George Alec EFFINGER, a fast-paced adventure, demonstrates a dangerous facility on both authors' parts. Much more important - and less "professional" - is his first solo novel, *STRANGERS* (1974 *New Dimensions*; exp 1978), an intense and well told love story between a human male and an ALIEN female, set on her home planet, in a Galaxy humans signally do not dominate; her death from bearing his child is biologically inevitable (the plot's derivation from Philip Jose FARMER's *THE LOVERS* [1961] can be seen as homage) and stems from a mutual incomprehension rooted in culture and the intrinsic solitude of beings (see also *SEX*). Never a prolific author, though fluently capable as an editor, GD has collaborated frequently with associates in the writing of stories, many of which are assembled in *Slow Dancing through Time* (coll 1990) with Susan CASPER, Jack DANN, Jack C. HALDEMAN II and Michael SWANWICK. *The Peacemaker* (1983 IASFM; 1991 chap) won a NEBULA for 1983 and "Morning Child" a Nebula for 1984. GD has written considerable sf criticism, and in *The Fiction of James Tiptree, Jr* (1977 chap) he constructed an analysis which was not to be disqualified by Alice Sheldon's revelation that she was TIPTREE. An anthology, *Writing Science*

Fiction and Fantasy: Twenty Dynamic Essays by Today's Top Professionals (anth 1991) co-edited with Tina Lee, Stanley Schmidt, Ian Randal Strock and Sheila Williams, extols dynamic professionalism. His first fiction anthologies, intelligently edited and of continuing interest, are A Day in the Life (anth 1972), Future Power (anth 1976) with Dann, and Another World (anth 1977). Subsequent anthologies, all ed with Dann (except as noted), are Aliens! (anth 1980), Unicorns! (anth 1982), Magicats! (anth 1984), Bestiary! (anth 1985), Mermaids! (anth 1985), Sorcerers! (anth 1986), Demons! (anth 1987), Dogtales! (anth 1988), Ripper! (anth 1988; vt Jack the Ripper 1988 UK) with Casper, Seaserpents! (anth 1989), Dinosaurs! (anth 1990), Magicats II (anth 1991), Little People! (anth 1991) and Horses! (anth 1994). Later singleton anthologies were The Best of Isaac Asimov's Science Fiction Magazine (anth 1988), Time Travelers (anth 1989), Transcendental Tales from Isaac Asimov's Science Fiction Magazine (anth 1989), Isaac Asimov's Aliens (anth 1991), Isaac Asimov's Robots (anth 1991) with Sheila Williams, and The Legend Book of Science Fiction (anth 1991 UK; vt Modern Classics of Science Fiction 1992 US), Isaac Asimov's SF Lite (anth 1993), Isaac Asimov's War (anth 1993), Modern Classic Short Novels of Science Fiction (anth 1994) and Isaac Asimov's Cyberdreams (anth 1994). In 1977 GD took over an ongoing year's-best anthology from Lester DEL REY and edited several Best Science Fiction Stories of the Year ANTHOLOGIES: Sixth Annual Collection (anth 1977), Seventh Annual Collection (anth 1978), Eighth Annual Collection (anth (1979), Ninth Annual Collection (anth 1980) and Tenth Annual Collection (anth 1981). After the termination of this series, he launched a further ongoing sequence, The Year's Best Science Fiction: First Annual Collection (anth 1984), Second Annual Collection (anth 1985), Third Annual Collection (anth 1986), Fourth Annual Collection (anth 1987; vt The Mammoth Book of Best New Science Fiction 1987 UK), Fifth Annual Collection (anth 1988; vt Best New SF 2 1988 UK), Sixth Annual Collection (anth 1989; vt Best New SF 3 1989 UK) Seventh Annual Collection (anth 1990; vt Best New SF 4 1990 UK), Eighth Annual Collection (anth 1991; vt Best New SF 5 1991 UK), Ninth Annual Collection (anth 1992), Tenth Annual Collection (anth 1993; vt Best New SF 7 1993 UK) and Eleventh Annual Collection (anth 1994). [JC]See also: CONCEPTUAL BREAKTHROUGH; CRITICAL AND HISTORICAL WORKS ABOUT SF; CYBERPUNK; HISTORY OF SF; INVISIBILITY; OMNI; PARASITISM AND SYMBIOSIS; POLLUTION; SHARECROP.

DRAKE, DAVID A(LLEN)
(1945-) US lawyer and writer who served as the Assistant Town Attorney

in Chapel Hill, North Carolina, 1972-80. He became a full-time writer in 1981, although his first story, the H.P. LOVECR AFT pastiche "Denkirch", had appeared much earlier, in Travellers by Night (anth 1967) ed August W. DERLETH. Though the wide success of his various military-sf novels and series and SHARED-WORLD enterprises has perhaps had a simplifying effect on his reputation, DAD has, in fact, from the beginning of his career written a wide variety of work, both stories and novels, a range perhaps best encapsulated in his first collection of unconnected stories, From the Heart of Darkness (coll 1983), which assembles sf, fantasy and horror tales written from 1974 onwards and set in the past, present and future. From early in his career, his prose has been spare and telling though occasionally, in some of the more routine sf adventures, seemingly no more than cost-efficient. DAD first came to wide notice with his Hammer's Slammers sequence of military-sf tales set in a SPACE-OPERA Galaxy: Hammer's Slammers (coll 1979; exp 1987), #2: Cross the Stars (1984), #3: At Any Price (1985), #4: Counting the Cost (1987), #5: Rolling Hot (1989), #6: The Warrior (1991), #7: The Sharp End (1993), and The Voyage (1994), set in the Hammer universe and retelling the tale of Jason and the Argonauts. It is very noticeable that the mercenaries involved in this sequence, and in most of DAD's other military sf, are (as it were) soldiers on the ground, and that representatives of the officer class generally merit the suspicion with which they are greeted. Though its general political vision could not be described as anarchist, DAD's work lacks-possibly as a consequence of his indifference to the loquacious cod stoicism ascribed by other writers to officer classes in general - a sense of philosophizing import, gaining much thereby, so that he can concentrate on the moment-to-moment exigencies of honorable mercenary soldiering. The Fleet sequence of SHARED-WORLD anthologies, created and ed by DAD and Bill FAWCETT - The Fleet * (anth 1988), #2: Counter Attack * (anth 1988), #3: Breakthrough * (anth 1989), #4: Sworn Allies * (anth 1990), #5: Total War * (anth 1990) and #6: Crisis * (anth 1991) - does not depart markedly from this mature restraint, which is further manifested in a sequel series, the Battlestation sequence comprising Battlestation * (anth 1992) and Vanguard * (anth 1993). The Crisis of Empire sequence, essentially written as TIES by his collaborators - Crisis of Empire #1: An Honorable Defense * (1988) with Thomas T. THOMAS, #2: Cluster Command * (1989) with William C. DIETZ and #3: The War Machine * (1989) with Roger MacBride ALLEN - rather more flamboyantly follows the plummeting career of a captain who reaches bottom in the third volume but whom we expect, in projected continuations, to save the Empire. The Northworld sequence - Northworld (1990), #2: Vengeance (1991) and #3: Justice (1992) - sets its military operations on a world which operates as a gateway to several ALTERNATE-WORLD settings. The General sequence with S.M. STIRLING - expected to run several volumes beyond The Forge (1991), The Hammer 1992 - features yet another military officer, befriended on his far-off planetary home by a battle COMPUTER planning to re-establish a Galactic Federation. With The Dragon Lord (1979), an exercise in Arthurian SWORD AND SORCERY, DAD began to publish singletons set in various venues and times, and of varying quality. Time Safari (coll of linked stories 1982); exp vt Tyrannosaur 1994 makes one of the hoary CLICHES of TIME-TRAVEL tales -the dinosaur hunt - vividly present to the mind's eye through the well researched verisimilitude of

the telling. *Birds of Prey* (1984) brings Ancient Rome, again through time travel, vividly to life, as does *Killer* (1974 *Midnight Sun* #1; 1985) with Karl Edward Wagner (1945-). *Bridgehead* (1986) combines time travel with interstellar military action and intrigue. *Dagger ** (1988) is a tied contribution to the *Thieves' World* enterprise, and *Explorers in Hell ** (1989) with Janet E. MORRIS is part of the *Heroes in Hell* enterprise. *Old Nathan* (coll of linked stories 1991), set in a traditional USA, nostalgically tells tales of a crabby but lovable ghost-hunter. Today there seems very little to stop DAD from writing exactly what he wishes to write. [JC] Other works: *Skyripper* (1983); *The Forlorn Hope* (1984); *Active Measures* (1985), *Kill Ratio* (1987) and *Target* (1989), all three with Janet E. Morris; *Fortress* (1986); *Lacey and his Friends* (coll of linked stories 1986); the *World of Crystal Walls* fantasy sequence, beginning with *The Sea Hag* (1988), further volumes projected; *Ranks of Bronze* (1986); *Vettius and his Friends* (coll of linked stories 1989); *Surface Action* (1990); *The Hunter Returns* (1991), adapted from *Fire-Hunter* (1951) by Jim Kjelgaard (1910-1959); *The Military Dimension* (coll 1991); *The Jungle ** (1991), based on (and printed with) "Clash by Night" (1943) as by Lawrence O'Donnell, a joint pseudonym of Henry KUTTNER and C.L. MOORE, and here ascribed, some think erroneously, to Kuttner alone; *Starliner* (1992); *Car Warriors TM: The Square Deal ** (1992); *High Strangeness* (1992); *Igniting the Reaches* (1994). As Editor: *The Starhunters* sequence of reprint stories, comprising *Men Hunting Things* (anth 1988), *Things Hunting Men* (anth 1988) and *Bluebloods* (anth 1990); the *Space* sequence, all with Martin H. GREENBERG and Charles G. WAUGH, comprising *Space Gladiators* (anth 1989), *Space Infantry* (anth 1989) and *Space Dreadnoughts* (anth 1990); *A Separate Star* (anth 1989) and *Heads to the Storm* (anth 1989), both with Sandra MIESEL and both constituting a tribute to Rudyard KIPLING; *The Eternal City* (anth 1990) with Greenberg and Waugh. See also: *ALIENS*; *GAMES AND SPORTS*; *VENUS*; *WAR*; *WEAPONS*.

DRAYTON, HENRY S(HIPMAN)

(1840-1923) US writer whose lost-race (*LOST WORLDS*) novel, *In Oudemoon: Reminiscences of an Unknown People* (1900), features a 100-year-old English colony in South America which is technologically advanced, telepathic, socialist and Christian. [JC]

DREAMSCAPE

Film (1984). Bella Productions/Zupnik-Curtis Enterprises. Dir Joseph Ruben, starring Dennis Quaid, Max Von Sydow, Christopher Plummer, Eddie Albert, Kate Capshaw, David Patrick Kelly. Screenplay David Loughery, Chuck Russell, Ruben, based on a story by Loughery. 99 mins. Colour. A gambler with psychic powers (Quaid) is persuaded to take part in experiments in "dreamlinking" at a research centre. He learns how to enter other people's dreams and interact with them. There is a plot to murder the President, who has been having dreams of nuclear holocaust, by using an evil psychic to assassinate him during a nightmare, but the Quaid character intervenes in the dream. The theme can be traced back at least to "Dreams are Sacred" (1948 ASF) by Peter Phillips, and a similar notion would later be the focus of the *Nightmare on Elm Street* movies. In D the penny-dreadful thriller plot is so ludicrous that it is only the dreams

themselves that have much entertainment value. The effects are lively, especially in the climactic vision of Washington in flames after the Bomb. [PN]See also: VIRTUAL REALITY.

DREAM WORLD

US DIGEST-size magazine. 3 quarterly issues, Feb-Aug 1957; published by ZIFF-DAVIS; ed Paul W. FAIRMAN. Subtitled "Stories of Incredible Powers", DW was initiated as a response to the success of similar issues of FANTASTIC, with stories of wish-fulfilment sometimes featuring PSI POWERS. #1 reprinted stories by Thorne Smith and P.G. WODEHOUSE, but the magazine included little fiction of note, although Harlan ELLISON and Robert SILVERBERG contributed amusing stories. [FHP/MJE]

DREW, WAYLAND

(1932-) Canadian teacher and writer who began publishing sf with The Wabeno Feast (1973), a complex tale about HOLOCAUST and its roots, in which three narrative strands all tangibly cohere-the 18th-century journal of an early entrepreneur who confronts the heart of darkness in the pale wabeno (an Indian shaman), the canoe trip of a Canadian couple through the wilderness upon which the earlier visitor has already stamped the seal of the civilized world, and a NEAR-FUTURE flight into the same but now savaged wilderness on the part of escapees from a DISASTER directly tied to the spoliation of the planet. After Dragonslayer * (1981 US), a film tie, WD composed in The Erthring Cycle another post-holocaust narrative - The Memoirs of Alcheringia (1984 US), The Gaian Experiment (1985 US) and The Master of Norriya (1986 US) - which describes the founding of a secret underground society, the Yggdrasil Project, via which it is hoped to surmount inevitable planetary catastrophe. But, as the final volume moves to a quiet, sombre close, the reader will perhaps be reminded of the dying fall which concludes George R. STEWART's EARTH ABIDES (1949). [JC]Other works: * batteries not included * (1987 US), novelizing * BATTERIES NOT INCLUDED (1987); Willow * (1988 US), another film tie; Halfway Man * (1989).

DREXEL, JAY B.

[s] Jerome BIXBY.

DRUERY, CHARLES THOMAS

(1843-1917) UK writer, often on UK flora, whose didactic novel, The New Gulliver, or Travels in Athomia (1897), presents its shrunken narrator with strange new perspectives on the natural world. [JC]

DRUGS

The use of drugs, both real and imaginary, is a common theme in sf, notably in CYBERPUNK. The topic is discussed in detail under PERCEPTION, and a little under NEW WAVE and PSYCHOLOGY. Film and tv treatments of the theme include ALTERED STATES, DOOMWATCH, LIQUID SKY and THX 1138. A small selection of the many sf authors who have used drug themes is: Brian W. ALDISS, Ralph BLUM, Karin BOYE, William S. BURROUGHS, Don DELILLO, Philip K. DICK, Charles DUFF, Mick FARREN, William GIBSON, Evan HUNTER, Aldous HUXLEY, K.W. JETER, Richard KADREY, Irwin LEWIS, Talbot MUNDY, Geoff RYMAN, Lucius SHEPARD, Norman SPINRAD, Bruce STERLING, Robert Louis STEVENSON and Ian WATSON. [PN]

DRUILLET, PHILIPPE

(1944-) Innovative French artist with an epic imagination and an astringent pen-line style who cofounded with Moebius (Jean GIRAUD) and others the publishing company Les Humanoïdes Associées and the imaginative graphic-fiction magazine METAL HURLANT in 1975; much of the content of the latter has been published in English in the US magazine HEAVY METAL. Brought up in Spain, PD was a photographer until the publication of his first strip Lone Sloane (graph coll 1967; intro by Maxim JAKUBOWSKI), a bawdy SPACE OPERA influenced by US CINEMA and HEROIC FANTASY. A unique illustrator, often clumsy in his portrayal of the human face, PD has enlarged the graphic structures of the sf COMIC strip and created a wild, flamboyant, morally ambiguous universe of crazed architectures and monstrous ALIENS. The increasingly obsessive Lone Sloane adventures were continued in Les 6 voyages de Lone Sloane ["The Six Journeys of Lone Sloane"] (graph coll 1972) and, with script by Jacques Lob, Delirius (graph coll 1973) - together collected in English as Lone Sloane - Delirius (graph omni trans 1975 UK) - followed by Yragael (graph coll 1974 with script by Michel Demuth) and Urm le fou (graph coll 1975) - together collected in English as Yragael - Urm (graph omni trans Pauline Tennant 1976 UK). PD tackled SWORD AND SORCERY in his adaptation of Michael MOORCOCK's Elric of Melniboné with script by Jakubowski and Demuth as Elrick (graph 1973; with script by Moorcock as Elric 1973 UK). La nuit ["The Night"] (graph 1977), a sombre panorama of urban warfare, was completed after the traumatic experience of his wife's dying from cancer in 1975. His other works include Vuzz (graph 1974), Retour à Bakaam ["Return to Bakaam"] (graph 1975) with script by François Truchaud, Mirages (graph 1976), Salamambo (graph 1983) and Nosferatu (graph coll 1982; trans 1991 US), the last being a collection of black-and-white strips first published in the magazine Pilote. During the mid-1980s PD was commissioned to create the internal decor for the Paris Metro station at Porte de la Villette; he has also produced sculpture and created a children's sf animated tv series, Bleu (52 26min episodes, 1989-current). [MJ/RT]See also: FANTASY; ILLUSTRATION.

DRUMM, CHRIS

(1949-) US bookseller, publisher and bibliographer who has published under the imprint Chris Drumm Booklets a large number of chapbooks containing stories and other work by R.A. L AFFERTY and others. Beginning in 1983, his BIBLIOGRAPHIES, all arranged with an economic practicality sometimes missing from this field, include works on Algis BUDRYS, Hal CLEMENT, Thomas M. DISCH, James E. GUNN, Lafferty, Larry NIVEN, Mack REYNOLDS, John T. SLADEK and Richard WILSON; in this encyclopedia they are listed under the authors treated (whom see). [JC]

DRUMM, D.B.

House pseudonym used on Dell Books' post- HOLOCAUST Traveler series of SURVIVALIST FICTION, initiated by Ed Naha, with most of the novels thought to be the work of John SHIRLEY. (Ed NAHA for details.) [PN]

DRURY, ALLEN (STUART)

(1918-) US writer of a sequence of novels depicting US political (

POLITICS) life from a point roughly similar to real-life 1960 and growing into a full-fledged history of the NEAR FUTURE. The bent is conservatively anti-communist, and the satirical effects are often telling, though sometimes tendentious. The series comprises *Advise and Consent* (1959), which won a Pulitzer, *A Shade of Difference* (1962), *Capable of Honor* (1966), *Preserve and Protect* (1968), *Come Nineveh, Come Tyre: The Presidency of Edward M. Jason* (1973), in which world communism topples an unready USA into chaos, and *The Promise of Joy (The Presidency of Orrin Knox)* (1975), in which a war between the USSR and China further challenges the pacifist- and liberal-ridden republic. *The Throne of Saturn* (1971), in which the Russians attempt to sabotage the USA's first manned expedition to MARS, is similar in tone but otherwise unconnected to the series. Two later books, *The Hill of Summer: A Novel of the Soviet Conquest* (1981) and its sequel, *The Roads of Earth* (1984), break no new ground. [JC]

DRYASDUST
M.Y. HALIDOM.

DUANE, DIANE E(LIZABETH)
(1952-) US writer, most respected for her work in fantasy. She is married to fantasy author Peter Morwood (1956-), with whom she has collaborated on three books. She began writing fantasies with the Epic Tale of the Five sequence - *The Door into Fire* (1979) and *The Door into Shadow* (1984), later extended with *The Door into Sunset* (1992) - and continued with the Wizard sequence: *So You Want to Be a Wizard?* (1983), *Deep Wizardry* (1985) and *High Wizardry* (1990), all three being assembled as *Support Your Local Wizard* (omni 1990), plus *A Wizard Abroad* (1993). Of more direct sf interest are several successful STAR TREK ties: *The Wounded Sky* * (1983), *My Enemy, My Ally* * (1984), *The Romulan Way* * (1987) with Morwood, *Spock's World* * (1988), *Doctor's Orders* * (1990) and *Star Trek, the Next Generation: Dark Mirror* * (1993). Though the smooth power of her best fantasies does not transmit perfectly to her sf ties, the Star Trek examples are by no means negligible. Other ties include *Guardians of the Three #2: Keeper of the City* * (anth 1989) and *Space Cops: Mindblast* * (1991), both with Morwood, and *Space Cops: Kill Station* * (1992), *seaQuest DSV: The Novel* * (1993) with Morwood, based on the pilot for the seaQuest tv series, and *Spider-Man: The Venom Factor* * (1994). [JC]

Du BOIS, THEODORA (McCORMICK)
(1890-1986) US writer best known for her many detective novels, though *The Devil's Spoon* (1930), featuring visitors from other worlds, and *Sarah Hall's Sea God* (1952) are fantasies. In her sf novel, *Solution T-25* (1951), the USSR wages successful nuclear war against the USA. An underground resistance, faking collaboration with the occupation forces, develops *Solution T-25*, which dissolves the Soviet leadership's authoritarian personality structures, turning them into benign humorists incapable of commanding their forces. [JC] Other works: *Armed with a New Terror* (1936) and *Murder Strikes an Atomic Unit* (1946), both associational.

Du BOIS, WILLIAM PENE
(1916-1993) US writer, illustrator and art editor and designer for Paris

Review. His own novels, which he illustrates himself (he also illustrates other writers' books), are usually juveniles, though the illustrations are of general interest. He began publishing with stories like Elizabeth, the Cow Ghost (1936), Giant Otto (1936), and The Flying Locomotive (1941), and much of his work employs fantasy elements. The ANTIGRAVITY device featured in Peter Graves (1950) verges on sf, and The Twenty-One Balloons (1947) is a full-fledged sf novel: a retired professor, travelling across the Pacific by BALLOON in 1883, is forced down on Krakatoa, where he finds a UTOPIA in full swing, financed by its inhabitants' secret trips to civilization to sell diamonds, which they have in plenty. The famous eruption of that year finishes the experiment, but everyone escapes by balloon. [JC]See also: CHILDREN'S SF.

DUDGEON, ROBERT ELLIS

(1820-1904) UK homeopathic doctor, author of the UTOPIAN novel Colymbia (1873, published anon). Written in a spirit of competition with Erewhon (1872; rev 1903) by Samuel BUTLER, who was RED's patient, it is set on an equatorial archipelago in the Pacific and tells of a lost race (LOST WORLDS) of Englishmen interbred with Oceanic natives; their submarine city is powered by tidal energy. Their remarkably free sexual practices allow RED to satirize those of Victorian England. Colymbia is livelier and more original than most of its kind. [PN]See also: ANONYMOUS SF AUTHORS.

DUDINTSEV, VLADIMIR

(1918-) Russian writer whose novel Not by Bread Alone (1956 Novy Mir; trans 1957 US) seemed at first to proclaim the Soviet thaw, but he was publicly reprimanded for it soon after its publication. Novogodniaia skazka (1956 Novy Mir; trans Gabriella Azrael as A New Year's Tale 1960 chap US; vt A New Year's Fable 1960 chap US; first book publication in USSR 1965) is a kind of sf morality tale in which the protagonist, by composing himself for his expected death, discovers a new source of cheap light and heat. [JC]

DUDLEY-SMITH, TREVOR

[r] Elleston TREVOR.

DUFF

AWARDS.

DUFF, CHARLES (St LAWRENCE)

(1894-1966) Irish translator and writer whose sf play, Mind Products Limited: A Melodrama of the Future in Three Acts and an Epilogue (1932 Netherlands), though breezily deprecatory of the 1960 world it depicts, introduces an inventive range of extrapolatory material, including mind control (and X-ray vision) through drugs, carplanes and tv phones, all contributing to a CAPEK-like vision of totalitarianism in a world gone mad. [JC]

DUFF, DOUGLAS V(ALDER)

(1901-) UK writer, usually of adventure novels for older boys, though several of his titles are clearly addressed to an adult audience. Not all his sf or fantasy has been traced; those that have include The Horned Crescent (1936), Jack Harding's Quest (1939), Peril on the Amazon (1946),

Atomic Valley (1947), The Man from Outer Space (1953) and The Nuclear Castle Story (1958). Of these, perhaps the most interesting in Jack Harding's Quest, a LOST WORLD story set in the Middle East, where a Lost Tribe of Israel has been hoarding the Seven Horns of Joshua; the eponymous young protagonist, with the aid of some scientific boffins, establishes the reality of the Horns, which have the effect of disrupting matter at the molecular level. This effect is acoustically recorded; and the Horns are then unilaterally destroyed by the British, to keep the secret from the German foe. The Lost Tribe knuckles under. [JC]

DUFFY, MAUREEN (PATRICIA)

(1933-) UK writer whose novels tend to explore marginalized figures, many of them women viewed from a FEMINIST angle; typical is the protagonist of Gor Saga (1981) - televised as First Born in 1988 - who is the child of a gorilla mother fertilized by human semen ([Hyperlink to: APES AND CAVEMEN](#)), and who grows into articulate adulthood in an alienating NEAR-FUTURE UK. MD's nonfictional The Erotic World of Faery (1972) takes a determinedly Freudian view of that subject. [JC]See also: ANTHROPOLOGY; GENETIC ENGINEERING; WOMEN SF WRITERS.

DUKA, IVO

Joint pseudonym of emigre Czech writers Ivo Duchac

DUKE, MADELAINE (ELIZABETH)

(1925-) UK writer and physician, born in Switzerland of Dutch parents, active under her own name and at least two pseudonyms in a variety of genres including sf novels (which she describes as "cartoons"). Claret, Sandwiches and Sin: A Cartoon (1964 as by Maxim Donne; 1966 as by MED) depicts a world insecurely amalgamated, after a nuclear conflict, into two political divisions: Africa and the Rest of the World. Any politician who risks war is eliminated by an underground organization. The protagonist of the sequel, This Business of Bomfog: A Cartoon (1967), is "Maxim Donne" - author of Claret, Sandwiches and Sin, a successful novel that has inspired the assassination of a number of world leaders. In 1989, Bomfog (Brotherhood-of-Man-Fatherhood-of-God), the organization responsible, now runs the UK in a fashion MED depicts in somewhat hectic language as DYSTOPIAN. Flashpoint (1982) features a scientist who plans to use a new nuclear power system to enforce global sanity. [JC]

Du MAURIER, DAPHNE

(1907-1989) UK writer, granddaughter of George DU MAURIER, famous for dark-hued romances (like Rebecca [1938]), usually set in Cornwall and often - like her first, The Loving Spirit (1931), a ghost story - tinged with the supernatural; drugs send the protagonist of The House on the Strand (1969) into medieval Cornwall. Her one sf novel, Rule Britannia (1972), subjects a NEAR-FUTURE Cornwall to US INVASION, during which the natives rebel against the tasteless Yankees. Among DDM's short stories are "The Birds", from The Apple Tree: A Short Novel and Some Stories (coll 1952; vt Kiss Me Again, Stranger 1953 US; vt The Birds and Other Stories 1963 UK), which was made by Alfred Hitchcock into The BIRDS (1963), and "Don't Look Now", from Not After Midnight (coll 1971; vt Don't Look Now 1971 US), which Nicholas Roeg filmed as Don't Look Now (1973). [JC]Other

works include: *The Breaking Point: Eight Stories* (coll 1959; vt *The Blue Lenses, and Other Stories* 1970); *Echoes from the Macabre: Selected Stories* (coll 1976); *Classics of the Macabre* (coll 1987; vt *Daphne Du Maurier's Classics of the Macabre* 1987 US).

Du MAURIER, GEORGE (LOUIS PALMELLA BUSSON)

(1834-1896) UK illustrator, cartoonist and writer, known almost exclusively today as the author of *Trilby* (1894), whose famous villain, Svengali, is a preternaturally competent mesmerist. The protagonist of GDM's first novel, *Peter Ibbetson* (1891), share each other's dreams, in which they return to their idyllic childhood. His last novel, *The Martian* (1897 US), lackadaisically tells through hindsight the life story of a sensitive but mysterious Spiritualist who turns out to have been a Martian all her life. [JC]Other works: *A Legend of Camelot* (coll 1898), whose title poem is mildly fantastical. See also: PSI POWERS.

DUNCAN, BRUCE

Irving A. GREENFIELD.

DUNCAN, DAVE

Working name of Scottish-born petroleum geologist and writer David John Duncan (1933-), in Canada from 1955. His singleton novels have divided fairly evenly between fantasy and sf. The first, *A Rose-Red City* (1987 US), complicatedly puts its 20th-century protagonist into a walled UTOPIA, where demons (and the Minotaur) oppose his attempts to extract Ariadne from the world. *Shadow* (1987 US) is a SCIENCE-FANTASY tale of dynasties in trouble on a strange planet "light-years hence". *West of January* (1989 US) is a crowded PLANETARY ROMANCE set on a world whose day and orbit are of approximately the same duration and in which a not particularly attractive hero - his name is Knobil and, as the book is at times comical in intent, the K can be assumed silent - has adventures all day long, some of which carry subtle stings in their tails. *Strings* (1990 US), also sf, features a significantly naive protagonist caught up in events the book's readers understand better than he, as a desperately terminal Earth must be escaped, via superstring transport, and a princess must be succoured. DD's work has all the flamboyance of tales written strictly for escape, but (as has been noted by critics) never for long allows his readers to forget what kind of problems he is inviting them to dodge. His most virtuoso passages seem almost brazenly to dance with despair. [JC]Other works: *The Seventh Sword* fantasy sequence, comprising *The Reluctant Swordsman* (1988 US), *The Coming of Wisdom* (1988 US) and *The Destiny of the Sword* (1988 US); the *Man of his Word* fantasy sequence, comprising *Magic Casement* (1990 US), *Faery Lands Forlorn* (1991 US), *Perilous Seas* (1991 US) and *Emperor and Clown* (1992); *Hero!* (1991 US), an sf juvenile; *The Reaver Road* (1992), a fantasy.

DUNCAN, DAVID

(1913-) US writer of popular fiction in several genres, perhaps as well known for his few sf novels as for any other work, though his first novel with an sf content, *The Shade of Time* (1946), which deals with "atomic displacement", was (as he records) accepted for publication only after Hiroshima. His books of the 1950s, more widely distributed within the sf

markets, have been better remembered, though he also scripted several films, including *The TIME MACHINE* (1960), and wrote a screenplay for *The OUTER LIMITS*. *Dark Dominion* (1954) is a well told melodrama concerning a new element, magellanium, which varies in weight according to the position of the star Sirius, and which is finally used to power a spaceship. *Beyond Eden* (1955; vt *Another Tree in Eden* 1956 UK) contrasts different routes towards fulfilment - materially, through a vast water-making project, and spiritually, via crystals that expand humankind's nature in the direction of gestalt empathy. *Occam's Razor* (1957) explores, within the context of a threatening nuclear war, the impact of the arrival of two humans - though one is horned-from a *PARALLEL WORLD*. DD has since fallen silent. [JC]Other work: *The Madrone Tree* (1949), a fantasy. See also: *DIMENSIONS*; *MATHEMATICS*.

DUNCAN, RONALD (FREDERICK HENRY)

(1914-1982) UK novelist, poet and playwright; Benjamin Britten's librettist for the opera *The Rape of Lucretia* (1946). He was generally best known for works outside the sf field. *The Dull Ass's Hoof* (coll 1941) contains some fantasy plays. Some of the stories in *The Perfect Mistress and Other Stories* (coll 1969), *A Kettle of Fish* (coll 1971), *The Tale of Tails* (coll 1975) and *The Uninvited Guest* (coll 1981) are fables with sf components. RD's sf novella, *The Last Adam* (1952 chap), features a last man who, being something of a misogynist, comes across the last woman and leaves her. [JC]Other works: *This Way to the Tomb* (1946) and *The Death of Satan* (1955), fantasy plays; *Mr and Mrs Mouse* (1977), a fairy tale.

DUNE

Film (1984). Dino De Laurentiis/Universal. Dir David Lynch, starring Kyle MacLachlan, Francesca Annis, Kenneth McMillan, Sting, Sean Young, many others. Screenplay Lynch, based on *DUNE* (fixup 1965) by Frank HERBERT. 137 mins. Colour. Seldom has a big-budget genre film been so execrated by fans and film critics alike. Certainly its narrative is confused to the point of incoherence, showing signs of last-minute, lunatic cutting. Certainly the many-layered story of Herbert's original, with its complex intellectual structure (occasionally also vague), is here largely reduced to melodrama. Certainly the distilled grotesquerie with which Baron Harkonnen and his nephew Feyd Rautha (McMillan and Sting) are envisaged belongs to a world more disgusting than anything invented by Herbert. Certainly the final three-quarters of a long novel is reduced to a ludicrously fast-moving half-hour or so. Yet the film was, after all, made by David Lynch, master of weirdness, whose previous films had been *Eraserhead* (1976) and *The Elephant Man* (1980), and whose subsequent works would include *Blue Velvet* (1986) and the pilot of *Twin Peaks* (1989) - remarkable movies all. It may be time to reappraise D, which Lynch clearly conceived in terms of emblematic tableaux, like scenes from some stately, hieratic pageant. Much of the production design - but not the sandworms - was wonderfully original and exotic; the camerawork (by Freddie Francis) made confident, artistic use of light and shade, glowing golds and deep shadows. However bad the film may have been in some respects, the neo-Baroque of the whole thing, not least in the Harkonnen sequences, is one of the most interesting attempts yet to capture a look and a feeling

for sf that does not simply depend (as Herbert's original did not) on technological gimmickry. Bits of this bad film are close to masterful. [PN]See also: STEAMPUNK.

DUNE DIES

Fans were waiting for the movie version of Frank Herbert's novel, *Dune*, for years. Finally, in 1984, the film opened. It was written and directed by David Lynch. The general consensus of critics and fans - and certainly the studio - was that *Dune* bombed. Why did it fail? Most people blame the film's producer, Dino De Laurentis, better known for his 1976 remake of *King Kong*. De Laurentis insisted that the film be cut from about three hours to two hours and seventeen minutes, making its last half almost incoherent. But many science fiction fans had their doubts about *Dune*'s metamorphosis anyway. Big budget films typically thrive on action and adventure. And Frank Herbert's popular novel may have just been too dark and too complex to translate well into film.

DUNN, J.R.

(? -) US writer who began publishing sf with "Long Knives" for L. Ron Hubbard Presents Writers of the Future (anth 1987) ed A.J. BUDRYS; a later story, "Crux Gammata" (1992) is an interesting HITLER WINS tale. This Side of Judgment (1994), JRD's first novel, posits a CYBERPUNK-colored future America whose pyrrhic military victory over a cabal of South American drug dealers and Leftist dictators has driven the country even further down the road to ENTROPY and social despair. Exploiters and victims of this scenario are the "imps", humans with chip-implants who (while themselves suffering ineradicable information overload) manage (while attempting to take over the government) to scare Federal agencies into a violent showdown. In the end, action dominates; but JRD gives a sense of being prepared to continue speculating. [JC]

DUNN, KATHERINE (KAREN)

(1945-) US writer, teacher and radio personality whose third novel, *Geek Love* (1989), is a densely told tale of a family which breeds its own freaks through a kind of GENETIC ENGINEERING; in the end the book reads, however, not as sf, but as an extremely expert FABULATION on the primordial theme of the family romance. KD's novel is not to be confused with *The Geek* (1969) by Alice Louise Ramirez, which is narrated by a chicken. [JC]

DUNN, PHILIP M.

[r] Saul DUNN.

DUNN, SAUL

Pseudonym used by UK writer and publisher Philip M. Dunn (1946-) for the original publication of his books in the UK, though he used his own name for their US release; he was also the director of Pierrot Publishing, a packaging-cum-publishing firm which became insolvent in 1981, owing large sums. SD was reported to have moved to India for religious reasons. Releases generated by the company included Brian W. ALDISS's *Brothers of the Head* (1977), Peter DICKINSON's *The Flight of Dragons* (1979) and Harry HARRISON's *Great Balls of Fire! A History of Sex in Science Fiction Illustration* (1977); all were heavily illustrated. SD wrote two

SPACE-OPERA sequences, the Steeleye books - *The Coming of Steeleye* (1976), *Steeleye - The Wideways* (1976) and *Steeleye-Waterspace* (1976) - and the Cabal tales - *The Cabal* (1978; 1981 US under his own name), *The Black Moon* (1978; 1982 US under his own name) and *The Evangelist* (1979; 1982 US under his own name). [JC]

DUNNE, J(OHN) W(ILLIAM)

(1875-1949) UK writer and engineer, responsible for designing the first UK military aeroplane c1907. Though his two fantasies-*The Jumping Lions of Borneo* (1937 chap) and the more ambitious *An Experiment with St George* (1939) - are of some mild interest, JWD is now remembered almost exclusively for his theories about the nature of time, which he developed in order to explain his sense that dreams are often precognitive. In *An Experiment with Time* (1927; rev 1929; rev 1934) he began to articulate his appealing thesis that time was not a linear flow but a sort of geography, accessible to the dreaming mind. In later books, such as *The Serial Universe* (1934), *The New Immortality* (1938), *Nothing Dies* (1940) and the posthumous *Intrusions?* (1955), he ludicrously sophisticated the theory, postulating various numbered levels of Time leading by an infinite regress to God; but his early work resonated perfectly with the time-hauntedness of interbellum UK writers from E.F. BENSON to the children's author Alison Uttley (1884-1976) to - most famously - John Buchan (1875-1940), whose time-travel novel, *The Gap in the Curtain* (1932), is clearly argued in JWD's terms; and J.B. PRIESTLEY, whose *Time Plays* are indebted to JWD, and whose nonfictional *Over the Long High Wall: Some Reflections and Speculations on Life, Death and Time* (1972) guardedly advocates JWD's more fruitful intuitions. [JC]See also: DIMENSIONS; TIME TRAVEL.

DUNSANY, LORD

Working name of Edward John Moreton Drax Plunkett (1878-1957), 18th Baron Dunsany, prolific Irish author of stories, novels, essays and plays. Though primarily a writer of FANTASY, he is of sf interest through the widespread influence of his language and imagery. Late in life he wrote one sf novel, *The Last Revolution* (1951), about MACHINES in revolt. His influence, especially on writers of HEROIC FANTASY, was strong from almost the beginning of his long career, when he published a series of FANTASY collections whose contents are linked by imagery and reference: *The Gods of Pegana* (coll of linked stories 1905), *Time and the Gods* (coll 1906), *The Sword of Welleran* (coll 1908), which contains the famous *The Fortress Unvanquishable, Save for Sacnoth* (1910 chap), *A Dreamer's Tales* (coll 1910), *The Book of Wonder: A Chronicle of Little Adventures at the Edge of the World* (coll 1912), *Fifty-One Tales* (coll 1915; vt *The Food of Death: Fifty-One Tales* 1974 US), and *Tales of Wonder* (coll 1916: vt *The Last Book of Wonder* 1916 US). The stories in these intermittently brilliant volumes made creative use of influences from Wilde and Yeats through William MORRIS - along with the very specific effect of the play *The Darling of the Gods* (1902) by David Belasco (1859-1931) and John L. Long (1861-1927), with its misty fake-oriental setting. Through their sustained otherworldliness and their muscular delicacy, these stories in turn exerted a potent influence on later writers. In his second phase as a fantasist - after a rather ostentatious spurning of the genre during WWI -

LD turned to novels like *The Chronicles of Don Rodriguez* (1922; vt *Don Rodriguez: Chronicles of Shadow Valley* 1922 US), *The King of Elfland's Daughter* (1924) and *The Charwoman's Shadow* (1926); the second of these did much to give geographical reality to the secondary universe (J.R.R. TOLKIEN) of high fantasy. His third phase consists of the *Jorkens CLUB STORIES*: *The Travel Tales of Mr Joseph Jorkens* (coll 1931), *Jorkens Remembers Africa* (coll 1934 US; vt *Mr Jorkens Remembers Africa* 1934 UK), *Jorkens Has a Large Whiskey* (coll 1940), *The Fourth Book of Jorkens* (coll 1947) and *Jorkens Borrows Another Whiskey* (coll 1954). Along with works by Robert Louis STEVENSON and G.K. CHESTERTON, these tales focused the attention of sf and fantasy writers upon the late Victorian and Edwardian club story as a suggestive mode for storytelling; Arthur C. CLARKE, Sterling LANIER and Spider ROBINSON are among the many who have written in it. LD's work as a fantasist is of high intrinsic merit, and his influence is pervasive. [JC]Other works: *Tales of War* (coll 1918); *Unhappy Far-Off Things* (coll 1919); *Tales of Three Hemispheres* (coll 1919 US); two macabre novels, *The Blessing of Pan* (1927) and *The Curse of the Wise Woman* (1933); *My Talks with Dean Spanley* (1936), in which the Dean recalls a past life; *The Strange Journeys of Colonel Polders* (1950), in which a man's mind is transferred into an animal's body; *Rory and Bran* (1936), a protagonist of which is a dog; *The Man who Ate the Phoenix* (coll 1949); *The Little Tales of Smethers* (coll 1952); *The Sword of Welleran and Other Tales of Enchantment* (coll 1954; contents differ from the 1908 vol); 3 compilations ed Lin CARTER, *At the Edge of the World* (coll 1970), *Beyond the Fields We Know* (coll 1972) and *Over the Hills and Far Away* (coll 1974); *Gods, Men and Ghosts* (coll 1972) ed E.F. BLEILER; *The Ghosts of the Heaviside Layer and Other Fantasms* (coll 1980 US); also numerous pamphlets and plays. About the author: *Lord Dunsany: A Biography* (1972) by Mark Amory; *Lord Dunsany: King of Dreams* (1959) by Hazel Littlefield; *Literary Swordsmen and Sorcerers* (1976) by L. Sprague DE CAMP; *Pathways to Elfland: The Writings of Lord Dunsany* (1989) by Darrell SCHWEITZER; "Lord Dunsany: The Career of a Fantaisiste" by S.T. Joshi in his *The Weird Tale* (1990); *Pathways to Elfland* (1989) by Darrell SCHWEITZER; *Lord Dunsany: A Bibliography* (1993) by J.T. Joshi and Schweitzer.. See also: *SWORD AND SORCERY*.

DUNSTAN, ANDREW

[s] A. Bertram CHANDLER.

DURRELL, LAWRENCE (GEORGE)

(1912-1990) UK poet and novelist best known for the *Alexandria Quartet* (1957-60). His sf novel sequence, *Tunc* (1968) and *Nunquam* (1970), assembled as *The Revolt of Aphrodite* (omni 1974), subjects sf material to intensely literary scrutiny. In the first volume, *Merlin*, a burgeoning multinational corporation, co-opts the protagonist, *Felix Charlock*, into constructing a super- COMPUTER, which can predict the future and which drives him to madness; in the second volume, *Felix* is cured in order to create an ANDROID lady - echoing an LD obsession - perfectly duplicating a destroyed lover of the boss of *Merlin*; but the android is also destroyed in a NEAR-FUTURE world choked with evil and images of corruption. [JC] See also: MYTHOLOGY.

DUSTY AYRES AND HIS BATTLE BIRDS

US PULP MAGAZINE. 12 issues, July 1934-July 1935; published by Popular Publications; ed Rogers Terrill. Each issue contained a novel by Robert Sidney BOWEN Jr in which Dusty and his sidekicks fought off the menace of the Black Invaders, led by an Asian warlord bent on world domination. The magazine, genuine NEAR-FUTURE sf, was a revival of a more conventional aviation pulp, Battle Birds, in an attempt to pull in the readership of the previous title for what was in fact a brand new magazine with a new hero and a new, futuristic storyline. It continued the numeration of Battle Birds, beginning with vol 5 #4 and ending with vol 8 #3. Five of the stories were reprinted as paperbacks in 1966 (for details BOWEN).
[FHP/MJE]

DVORKIN, DANIEL
[r] David DVORKIN.

DVORKIN, DAVID
(1943-) UK-born author, long in the USA, whose first novel of strong interest, after the unremarkable *The Children of Shiny Mountain* (1977; vt *Shiny Mountain* 1978 UK) and *The Green God* (1979), was *Time for Sherlock Holmes* * (1983). This RECURSIVE tale takes the detective, who has found the secret of eternal youth, through a tortuous plot (much TIME TRAVEL is involved) from the time of H.G. WELLS (concerned at Professor Moriarty's theft of the Time Machine to seesaw through the eons, doing evil) to a Martian future where, after a DYSTOPIAN interlude, he prepares to lead humanity to the stars. Unfortunately, the telling is somewhat flat, an ailment of style which afflicted DD through the next several books. *Budspy* (1987), set in an ALTERNATE WORLD featuring a victorious Germany (HITLER WINS), is greyly half-convincing; and *The Seekers* (1988) and *Central Heat* (1988), both set in the same universe, again lack a sense of full conviction, though much of the detail-work is, as usual, applied with considerable intelligence. *Central Heat* is plotted with all DD's love of intricacy: ALIENS have decided that Earth has failed to breed decent citizens and so abduct the Sun, although ensuring that our planet ricochets into an orbit around Jupiter and Saturn, which have been thrown together; properly instructed as to how to go about igniting the joined gas giants into a tiny new sun, the remnants of humanity begin to learn how to cope. With *Ursus* (1989) and *Insatiable* (1993), DD shifted into horror. [JC]Other works: Three STAR TREK ties: *The Trellisane Confrontation* * (1984), *Timetrap* * (1988) and *Star Trek: The Next Generation #8: The Captain's Honor* * (1989) with Daniel Dvorkin (1969-), his son. See also: CRIME AND PUNISHMENT.

DWIGGINS, W(ILLIAM) A(DDISON)
(1880-1956) US writer on typography and, through his association with the Mergenthaler Linotype Company, designer of several well known typefaces, including *Electra* and *Caledonia*. He is known within the sf field for designing and illustrating the luxurious 1931 edition of H.G. WELLS's *THE TIME MACHINE*. His sf play, *Millennium 1* (1945) - published in an edition he designed and illustrated - depicts an ambiguous UTOPIA in which machines have revolted and humans must fight to recover their hegemony.
[JC]

DWYER, DEANNE
Dean R. KOONTZ.

DWYER, JAMES FRANCIS

(1874-1952) US writer, most of whose books - like *The White Waterfall* (1912), *The Spotted Panther* (1913) and the stories assembled in *"Breath of the Jungle"* (coll 1915) - are Oriental fantasies of little interest, though *Evelyn: Something More than a Story* (1929) translates the prurient primitivism of the earlier books into the future, and *Hespamora* (1935 UK) combines elements of DYSTOPIAN satire with an incursion of pagan deities. The *Spillane* series, *The Lady with Feet of Gold* (1937 UK) and *The City of Cobras* (1938 UK), returned to JFD's old haunts. [JC] Other works: *Cold-Eyes* (1934).

DWYER, K.R.
Dean R. KOONTZ.

DYE, CHARLES

(1927-1955) US writer who began publishing sf with *"The Last Orbit"* for AMZ in 1950. He was active for the next half-decade, soon publishing his only sf novel, *Prisoner in the Skull* (1952), in which ordinary Homo sapiens and a form of SUPERMAN engage in thriller-like confrontations. He was married briefly (1951-3) to Katherine MACLEAN, who wrote *"The Man who Staked the Stars"* (1952) and *"Syndrome Johnny"* (1951) under his name. The latter story contains an amazingly early account of a genetic-recombination technique (gene splicing), in which a "piggyback" virus transports genetic material (a silicon-using gene) into human cells. [JC/PN]

DYER, ALFRED
[r] ROBERT HALE LIMITED.

DYING EARTH

A not uncommon category of sf story which has now developed its own melancholy mythology. FAR FUTURE. [JC]

DYNAMIC SCIENCE FICTION

US PULP MAGAZINE published by Columbia Publications; ed R.A.W. LOWNDES. 6 issues, Dec 1952-Jan 1954. Much of the fiction DSF printed was mediocre, but it published 2 2-part critical articles of some note by James E. GUNN: *"The Philosophy of SF"* (Mar-June 1953) and *"The Plot-Forms of SF"* (Oct 1953-Jan 1954). 3 numbered issues were reprinted in the UK in 1953. [BS]

DYNAMIC SCIENCE STORIES

US PULP MAGAZINE, a short-lived companion to *MARVEL SCIENCE STORIES*. 2 issues, Feb 1939 and Apr/May 1939, published by Western Fiction Publishing Corp.; ed Robert O. Erisman. #1 featured the novel *Lord of Tranerica* (1966) by Stanton A. COBLENTZ; #2 included stories by L. Sprague DE CAMP and Manly Wade WELLMAN. DSS was an average pulp magazine with no distinctive qualities. #1 appeared as a UK reprint in 1939. [MJE]

DYSON, FREEMAN J(OHN)

(1923-) UK-born theoretical physicist and FRS; professor at the Institute for Advanced Study, Princeton, since 1953, and now a US citizen.

FJD's main work has been in quantum field theory, but he is well known in sf for the concept of the DYSON SPHERE, which he introduced in a short paper for Science in 1960 (vol 131 p1667). In this paper, which was concerned with locating and communicating with extraterrestrial civilizations, Dyson argued that any such civilization would probably be millions of years old and that Malthusian pressure would have led to its energy requirements being equal to the total output of radiation from its star. It would therefore reconstruct its solar system so as to form an artificial biosphere completely enclosing its sun. This and related schemes, like the basic notion behind his RINGWORLD (1970), are discussed by Larry NIVEN in his article "Bigger than Worlds" (1974; reprinted in A Hole in Space coll 1974). An sf novel which makes use of an actual Dyson Sphere is Bob SHAW's Orbitville (1975). The "Cuckoo" in Farthest Star (1975) by Frederik POHL and Jack WILLIAMSON is revealed in the sequel, Wall Around a Star (1983), to be a Dyson Sphere. FJD's theorizing has many times gone beyond his own speciality to cover topics as diverse as the Greenhouse Effect, galactic COLONIZATION, GENETIC ENGINEERING and the use of the SOLAR WIND for space-sailing. His many essays are a treasure trove for sf writers, some being collected in Infinite in All Directions (coll 1988 US). His set of autobiographical sketches, Disturbing the Universe (1979 US), tells entertaining tales of intellectual adventure. It was a student of Dyson's who made headlines in 1976 by designing a workable nuclear weapon using only published sources. [TSu/PN] See also: ENTROPY; XENO BIOLOGY.

DYSON SPHERE

Item of sf TERMINOLOGY; named for a concept put forward by the physicist Freeman J. DYSON.

DYSTOPIAS

The word "dystopia" is the commonly used antonym of "eutopia" (UTOPIAS) and denotes that class of hypothetical societies containing images of worlds worse than our own. An early user of the term was John Stuart Mill (1806-1873), in a parliamentary speech in 1868, but its recent fashionableness probably stems from its use in Quest for Utopia (1952) by Glenn Negley (1907-1988) and J. Max Patrick (1908-). Anthony BURGESS argued in 1985 (1978) that "cacotopia" would be a more apt term. Dystopian images are almost invariably images of future society, pointing fearfully at the way the world is supposedly going in order to provide urgent propaganda for a change in direction. As hope for a better future grows, the fear of disappointment inevitably grows with it, and when any vision of a future utopia incorporates a manifesto for political action or belief, opponents of that action or belief will inevitably attempt to show that its consequences are not utopian but horrible. The very first work listed in I.F. CLARKE's bibliography of The Tale of the Future (3rd edn 1978) is a tract of 1644 warning of the terrible disaster which would follow were the monarchy to be restored. Dystopian images began to proliferate in the last decades of the 19th century. Utopian and dystopian images are contrasted in the rival cities of Frankville and Stahlstadt in The Begum's Fortune (1879; trans 1880) by Jules VERNE. The greedy materialism which has created Stahlstadt is also the underlying ideology

of H.C. MARRIOTT-WATSON's Erchomenon (1879). Walter BESANT produced two significant early dystopias in *The Revolt of Man* (1882), in which women (WOMEN AS PORTRAYED IN SCIENCE FICTION) rule with disastrous consequences, and *The Inner House* (1888), in which IMMORTALITY has led to social stagnation. The great utopian H.G. WELLS produced his images of dystopia, too - forecasts of what the world must be like if the forces of socialism did not triumph - in "A Story of the Days to Come" (1897) and *When the Sleeper Wakes* (1899; rev vt *The Sleeper Awakes*, 1910). He also produced the first ALIEN dystopia in his description of Selenite society in *THE FIRST MEN IN THE MOON* (1901). Robert Hugh BENSON's *Lord of the World* (1907) is a hysterical protest against secularism, humanism and socialism which ends with the apocalypse. The single most prolific stimulus to the production of dystopian visions has been the political polarization of capitalism and socialism. Anti-capitalist dystopias include *The Iron Heel* (1907) by Jack LONDON, *The Air Trust* (1915) by George Allan ENGLAND, and *Useless Hands* (1920; trans 1926) by Claude FARRERE. Anti-socialist dystopias, which are more numerous, include *The Unknown Tomorrow* (1910) by William LE QUEUX, *Crucible Island* (1919) by Conde B. PALLEN, *Unborn Tomorrow* (1933) by John KENDALL, *Anthem* (1938) by Ayn RAND and *The Great Idea* (1951; vt *Time Will Run Back*) by Henry HAZLITT. Anti-fascist dystopias include *Land under England* (1935) by Joseph O'NEILL, *The Wild Goose Chase* (1937) by Rex WARNER and *The Lost Traveller* (1943) by Ruthven TODD. Anti-German dystopias from before and after the rise of the Nazi Party include Owen GREGORY's *Meccania* (1918), Milo HASTINGS's *City of Endless Night* (1920) and *Swastika Night* (1937) by Murray Constantine (Katharine BURDEKIN) (see also *HITLER WINS*). Although these works are emotional reactions against ideas which seem various, the basic fears which they express are very similar. The emphasis may differ, but the central features of dystopia are ever present: the oppression of the majority by a ruling elite (which varies only in the manner of its characterization, not in its actions), and the regimentation of society as a whole (which varies only in its declared ends, not in its actual processes). In his attempt to imagine the "rationalized" state of the Selenites, Wells took as his dystopian model the ant-nest (HIVE-MINDS) and this has seemed the epitome of dystopian organization to many other writers. J.D. BERESFORD's and Esme Wynne-Tyson's *The Riddle of the Tower* (1944) suggests that the fundamental danger facing society is "Automatism" - the trend toward the victory of organic society over the individual - whatever political philosophy is invoked to justify it. The most detailed analysis of this anxiety, and perhaps the most impressively ruthless of all dystopias, is *My* (trans as *We* 1924) by Yevgeny ZAMIATIN, and the most luridly horrible development of it is to be found in George ORWELL's *NINETEEN EIGHTY-FOUR* (1949), which in part expressed Orwell's despair of the UK working class and its capacity to revolt (or even be revolted). Because animosity against specific political programmes was the most important force provoking early dystopian visions, the tradition did not immediately engage in contradictory argument the main basis for utopian optimism, which is a more generalized faith in the idea of progress, both social and technological. It was not long, though, before there appeared dystopian images reflecting an emotional reaction against technological advance. The world of E.M. FORSTER's "The Machine Stops"

(1909) is perhaps the first dystopia created by technological sophistication; the story's argument is halfhearted, concentrating on the question of what would happen when the MACHINES broke down rather than on the horrors of living with them while they were still functioning. A confident assertion that scientific progress would make the world a worse place to live in because it would allow society's power groups more effectively to oppress others was made by Bertrand RUSSELL in *Icarus*, or *The Future of Science* (1924), his reply to J.B.S. HALDANE's optimistic *Daedalus* (1924). Aldous HUXLEY's satirical dystopia *BRAVE NEW WORLD* (1932) is also an ideological reply to *Daedalus*, raising awkward questions about the quality of life in a LEISURE society. S. Fowler WRIGHT's *The New Gods Lead* (coll 1932) is a scathing indictment of the values of technocracy and "the utopia of comforts". The general pessimism of the UK SCIENTIFIC ROMANCE in this period was countered mainly by hopes of transcendence (via the evolution of a new and better species of mankind) rather than by faith in political reform. This suspicion of technology, though running directly counter to Hugo GERNSBACH's optimism for an "Age of Power Freedom", is surprisingly widespread in early GENRE SF. In "Paradise and Iron" (1930) by Miles J. BREUER a mechanical brain established to coordinate a mechanistic utopia becomes a tyrant. In "City of the Living Dead" (1930) by Laurence MANNING and Fletcher PRATT, machines that simulate real experience allow people to live in dream worlds, sustained by mechanical "wombs", and thereby bring about the total stagnation of society. Scepticism in regard to technological miracles is a hallmark of the work of David H. KELLER, whose dystopian fantasies include "The Revolt of the Pedestrians" (1928), in which automobilists who have lost the power of self-locomotion rule oppressively over mere pedestrians. Most stories of this kind feature some kind of rebellion against the adverse circumstances described. The reversion to a simpler way of life is celebrated by Keller in "The Metal Doom" (1932) as enthusiastically as it is in the hysterically technophobic *Gay Hunter* (1934) by J. Leslie MITCHELL. Revolution against a dystopian regime was to become a staple plot of GENRE SF, partly because such a formula offered far more melodramatic potential than utopian planning. The standard scenario involves an oppressive totalitarian state which maintains its dominance and stability by means of futuristic technology, but which is in the end toppled by newer technologies exploited by revolutionaries. The standard genre-sf answer to the problem posed by Russell in *Icarus* is, therefore, that elites empowered by technology will lose their interest in further technological progress, and will probably try to suppress it - with the result that its clandestinely developed fruits will become the instruments of their overthrow. Examples from the 1940s of this formula are "If This Goes On ..." (1940) and *Sixth Column* (1941; 1949) by Robert A. HEINLEIN, *GATHER, DARKNESS!* (1943; 1950) by Fritz LEIBER, *Tarnished Utopia* (1943; 1956) by Malcolm JAMESON and *Renaissance* (1944; 1951; vt *Man of Two Worlds*) by Raymond F. JONES. In the SF MAGAZINES of the 1950s this formula became more refined and increasingly stylized. There appeared a whole generation of sf novels in which individual power groups come to dominate society, shaping it to their special interests. Advertising executives run the world in the archetype of this subspecies, *THE SPACE MERCHANTS* (1953) by Frederik POHL and C.M. KORNBLUTH; insurance companies are in charge in

Preferred Risk (1955) by Edson McCann (Pohl and Lester DEL REY); supermarkets in HELL'S PAVEMENT (1955; vt Analogue Men) by Damon KNIGHT; racketeers in The Syndic (1953) by Kornbluth; doctors in Caduceus Wild (1959; rev 1978) by Ward MOORE and Robert Bradford; and a cult of hedonists in The Joy Makers (fixup 1961) by James E. GUNN. All these novels are, in a sense, gaudy fakes that use dystopian images for melodramatic convenience; they select their villains with a vigorous disregard for plausibility and a cheerful animus against some personal bete noire. They tend to be ABSURDIST exaggerations rather than serious political statements. In this period genre sf produced only one genuine dystopian novel, the classic FAHRENHEIT 451 (1953) by Ray BRADBURY, which leaves its ruling elite anonymous in order to concentrate on the means by which oppression and regimentation are facilitated, with the powerful key image of the firemen whose job is to burn books. In many of the lesser genre-sf novels of the 1950s, revolution against an oppressive and stagnant society is seen as a difficult irrelevance, escape by SPACESHIP becoming a key image. Outside the sf magazines the post-WWII period produced a remarkable series of very varied dystopian novels - remarkable not only for their diversity and characteristic intensity but also for a tendency to black comedy. Aldous Huxley's Ape and Essence (1948) is an anti-scientific polemic; Evelyn WAUGH's Love among the Ruins (1953) is a vitriolic political satire; Bernard WOLFE's LIMBO (1952) plays in macabre fashion with the idea of (literal) "disarmament". Even the more earnest works, like Gerald HEARD's enigmatic Doppelgangers (1947), SARBAN's THE SOUND OF HIS HORN (1952), David KARP's One (1953), L.P. HARTLEY's Facial Justice (1960) and Anthony Burgess's A CLOCKWORK ORANGE (1962), possess a curious surreal quality. Many of these novels are neither accusations directed at particular social forces nor attempts to analyse the nature of the dystopian state, but seem to be products of a new kind of incipient despair; only a few - notably Doppelgangers - offer a significant note of hope in their account of rebellion against evil circumstance. This, it appears, was a period of history in which US-UK society lost its faith in the probability of a better future, and the dystopian image was established as an actual pattern of expectation rather than as a literary warning device. Genre sf soon followed this lead - and so prominent was the dystopian image in magazine sf that the transition from fakery to "realism" was very easily achieved. During the 1960s a whole series of reasons for believing in a dystopian future were discovered - to justify rather than to cause the pessimistic outlook typical of the time.

OVERPOPULATION - a theme ignored since the days of Malthus - began to inspire dystopian horror stories, most impressively in MAKE ROOM! MAKE ROOM! (1966) by Harry HARRISON, STAND ON ZANZIBAR (1968) by John BRUNNER and The World Inside (1971) by Robert SILVERBERG. The awful prospects of POLLUTION and the destruction of the environment were extravagantly detailed in Brunner's The Sheep Look Up (1972) and Philip WYLIE's The End of the Dream (1972). When Alvin TOFFLER proposed in Future Shock (1970) that the sheer pace of change threatened to make everyday life unendurable, Brunner was able to complete a kind of "dystopian tetralogy", following the two books cited above and The Jagged Orbit (1969) with THE SHOCKWAVE RIDER (1975). Thomas M. DISCH's 334 (fixup 1972) is a dark vision of the NEAR FUTURE in which human resilience is tested to the limit

by the stresses and strains of everyday life. Perhaps strangely, MAINSTREAM dystopias of the late 1960s and 1970s seem rather weak-kneed compared to those of the preceding decades. Michael FRAYN's *A Very Private Life* (1968), Adrian MITCHELL's *The Bodyguard* (1970), Ira LEVIN's *This Perfect Day* (1970) and Lawrence SANDERS's *The Tomorrow File* (1975) all seem stereotyped. Perhaps there was little scope left for originality once the most all-inclusive and ruthless image of a horrible and degenerate future had been provided by William S. BURROUGHS in *Nova Express* (1964), or perhaps it was simply that dystopian imagery came to be taken for granted to such an extent that it could be deployed only in an almost flippant manner - as by the CYBERPUNK writers of the 1980s. It is arguable that the only new ground broken by literary dystopias of the 1970s and 1980s, whether in the mainstream or in genre sf, related to FEMINIST images of oppressive masculinity; notable examples include *WALK TO THE END OF THE WORLD* (1974) by Suzy McKee CHARNAS, *Woman at the Edge of Time* (1976) by Marge PIERCY, *THE HANDMAID'S TALE* (1985) by Margaret ATWOOD, and *Bulldozer Rising* (1988) by ANNA LIVIA. The significance of the firm establishment of a dystopian image of the future in literature should not be underestimated. Literary images of the future are among the most significant expressions of the beliefs and expectations we apply in real life to the organization of our attitudes and actions. Notable studies of dystopian fiction include *From Utopia to Nightmare* (1962) by Chad Walsh, *The Future as Nightmare* (1967) by Mark R. HILLEGAS, and *Science Fiction and the New Dark Age* by Harold L. Berger (1976). In *New Maps of Hell* (1960) Kingsley AMIS argues that the dystopian tradition is the most important strand in the tapestry of modern sf. A relevant theme anthology is *Bad Moon Rising* (anth 1973) ed Thomas M. Disch. [BS] See also: DISASTER; MEDIA LANDSCAPE; OPTIMISM AND PESSIMISM; SOCIOLOGY.

SF?

EARNSHAW, BRIAN

(1929-) UK author of the fine chase thriller *And Mistress Pursuing* (1966) and a complex sf thriller, *Planet in the Eye of Time* (1968), which encompasses, via TIME TRAVEL, the period of the crucifixion (MESSIAHS; RELIGION) and addresses the problems of a dying Galaxy. His later work within the genre has all been for children. The *Dragonfall* series includes *Dragonfall Five and the Space Cowboys* (1972), *Dragonfall Five and the Royal Beast* (1972), *Dragonfall Five and the Empty Planet* (1973), *Dragonfall Five and the Hijackers* (1974), *Dragonfall Five and the Master Mind* (1975), *Dragonfall Five and the Super Horse* (1977) and *Dragonfall Five and the Haunted World* (1979). The *Star Jam Pack* series, featuring an interstellar rock group, includes *Starclipper and the Song Wars* (1985), *Starclipper and the Snowstone* (1986) and *Starclipper and the Galactic Final* (1987). [JC] Other works: *The Rock Dog Gang* (1987); *Planet of the Jumping Beans* (1990 chap).

EARTH DEFENSE FORCE
CHIKYU BOEIGUN.

EARTH DIES SCREAMING, THE

Film (1964). Lippert/Planet. Dir Terence Fisher, starring Willard Parker, Virginia Field, Dennis Price. Screenplay Henry Cross, from a story by Harry Spalding. 62 mins. B/w. This is the first of three sf films that Terence Fisher (best known for his Hammer Horror films) made during the 1960s; the others were ISLAND OF TERROR (1966) and NIGHT OF THE BIG HEAT (1967). The UK has been invaded by alien-controlled robots. Survivors are besieged by corpses animated by the robots, so that the film is an inferior forerunner to NIGHT OF THE LIVING DEAD (1968). Like the other films in the series, all similar in theme, TEDS is handicapped by a clumsy script, a tiny budget and a director uninterested in sf. [JB]

EARTH GIRLS ARE EASY

Film (1988). De Laurentiis/Kestrel. Dir Julien Temple, starring Geena Davis, Jeff Goldblum, Jim Carrey, Damon Wayans, Julie Brown. Screenplay Brown, Charlie Coffey, Terrence E. McNally. 100 mins. Colour. Three fur-covered humanoid aliens crash their spaceship in a swimming pool in the San Fernando Valley, Los Angeles. They meet a Valley girl (Davis), who arranges for them to be shaved and trendily dressed. They learn about local customs. This very light comedy with songs (good words, so-so tunes) was made by a UK director who downplayed the alienness of the aliens (they are good at dancing, piano playing and sex) in favour of the alienness of the San Fernando Valley, photographed in lurid primary colours and observed with all the astonished voyeurism of some tyro anthropologist confronted by pygmy headhunters. EGAE is slight, but much funnier than MY STEPMOTHER IS AN ALIEN (1988), on a very similar theme. [PN] See also: CINEMA.

EARTHQUAKE

Film (1974). Universal. Dir Mark Robson, starring Charlton Heston, Ava Gardner, George Kennedy, Lorne Greene, Genevieve Bujold. Screenplay George Fox, Mario Puzo. 123 mins. Colour. We include this as a representative member of a class of marginally sf films, DISASTER movies, which normally deal with events that, while they have not yet happened, plausibly might in the NEAR FUTURE. In practice the feeling of most disaster films is not sciencefictional, their point being to generate an emotional thrill through the disaster itself rather than to investigate causes and effects. This example, commercially very successful, shows the destruction of Los Angeles by a major earthquake, and as usual focuses on a small group who struggle to survive. Technically the film is adroit, though the human relationships are stilted and stereotyped. It is a showcase for some of Hollywood's best special-effects men, many of whom were persuaded to come out of retirement to work on it; one of them, Clifford Stine, had created the effects in Universal's series of sf/horror films in the 1950s, including The INCREDIBLE SHRINKING MAN (1957). The film's gimmick was the introduction of "Sensurround", a system intended to disturb audiences with low-frequency vibrations generated by powerful electro-acoustic horns placed at the front and rear of the theatre. [JB]

EARTH VS. THE FLYING SAUCERS

(vt Invasion of the Flying Saucers) Film (1956). Clover/Columbia. Prod Charles H. Schneer. Dir Fred F. Sears, starring Hugh Marlowe, Joan Taylor. Screenplay George Worthing Yates, Raymond T. Marcus, based on a story by

Curt SIODMAK. 83 mins. B/w. This film was suggested by Flying Saucers from Outer Space (1953) by Donald E. Keyhoe (1897-1988), and was made to cash in on the UFO mania of the period. After a simple misunderstanding, there are spectacular scenes of destruction as aliens in saucers attempt to defeat Earth using ray-guns. The militaristic story is ill written and badly paced. Though done on a small budget, Ray HARRYHAUSEN's elegant special effects - the only reason for watching the film - are impressive, particularly in the climactic battle sequence, when flying saucers drop out of the sky and crash into famous Washington landmarks. [JB]

EASTERLEY, ROBERT
Robert POTTER.

EAST GERMANY
GERMANY.

EASTON, EDWARD
Pseudonym of US writer Edward P. Malerich (1940-), author of The Miscast Gentleman (1978), a mildly intriguing TIME-TRAVEL tale, and The Pirate of Hitchfield (1978). [JC]

EASTON, M(ALCOLM) COLEMAN
(1942-) US writer who is also employed in computer science and engineering research. He began publishing sf with "Superflare" as Coleman Brax for FSF in 1980, using that pseudonym for some further magazine stories; with Clare BELL, with whom he lives, both writing as Clare Coleman, he has collaborated in the Ancient Pacific sequence (Clare BELL). His early novels - like the sequence comprising Masters of Glass (1985), Iskiir (1986) and The Fisherman's Curse (1987) - are fantasy. Swimmers Beneath the Night (1987), set on a water-covered planet and critical of the science which has populated it with bioengineered settlers, is sf. With Spirits of Cavern and Hearth (1988) he reverted to fantasy and to his favourite venue, a world vibrant with spirits. [JC]

EASTON, THOMAS A(TWOOD)
(1944-) US critic, writer and biology teacher (he holds a PhD in theoretical biology) who is best known for the Reference Library book-review column he has written for ASF since 1979, where he covers a wide range of titles with strict fairness, though not often granted the room to delve deep. His first story was "Next" for Adam in 1974, and he has since published at least 50 tales in magazines, sometimes as Sam Atwood. His sf novels Sparrowhawk (1990), Greenhouse (1991), Woodsman (1992), A Tower of the Gods (1993) and Seeds of Destiny (1994) all focus on an Earth rather mechanically dominated by a biological revolution, with genimals - genetically engineered animals - replacing cars and indeed almost anything imaginable; by the fifth volume, the bioengineering Gypsies have been driven into space by the Engineers, who are machine-oriented, and a conflict between the two principles - it is one common to late-century sf - begins to wage throughout the galaxy. Reversals of this sort are generally effected for purposes of SATIRE, but it is clear that for TAE the perils and pleasures of the invention have been sufficient. [JC]

EATON COLLECTION

EBIRAH, HORROR OF THE DEEP
GOJIRA.

EC COMICS

Company founded in 1945 by M.C. Gaines (1896-1947), creator of the format of the modern COMIC book and original partner in DC COMICS. The initials stood for both Educational and Entertaining Comics. After Gaines's death the company passed to his son, William M. Gaines (1922-1992), who revamped the line to his own taste. Educational Comics was wound down and Entertaining Comics was transformed into a line of anthology titles that included two sf comic books - Weird Science and Weird Fantasy - which were the poorest sellers, but which survived because of his personal support. Various artists drew the sf stories, which ranged from the cliched and absurd to the surprisingly good; most were written by editor Albert B. Feldstein, though some were by Otto Binder (Eando BINDER). Feldstein also "borrowed" stories from authors such as Anthony BOUCHER, Ray BRADBURY, Fredric BROWN, John COLLIER and Richard MATHESON. In 1952 Bradbury noted the unauthorized adaptations but, enjoying them, simply wrote and requested payment, which Gaines forwarded. This led to official adaptations of Bradbury stories. In 1954 increasing concern about juvenile delinquency and the "harmful influence" of comic books led to the two sf titles combining as Weird Science-Fantasy. Such minor measures failed to stem the flow of criticism, and EC abandoned its entire comic-book line in 1955 to concentrate on MAD Magazine. EC influenced various creators, including the underground comics artists of the 1960s and several writers, notably Stephen KING, but the main influence was from EC's horror titles, not their sf titles. A number of collections of EC material have appeared, including two collections of Bradbury adaptations by Albert B. Feldstein: The Autumn People (coll 1965), horror, and Tomorrow Midnight (coll 1966), sf. Russ Cochran's The Complete EC Library reprints the entire run in large hardcovers, and Gladstone Comics are reissuing most of the titles as monthly reprints. [ZB/BF]

ECKERT, ALLAN W (ESLEY)

(1931-) US writer, mainly of works of natural history, for which he has five times been nominated for the Pulitzer Prize. His sf novel, The HAB Theory (1976), is based on the neo-Velikovskian idea of poleshift (PESUDO-SCIENCE; Immanuel VELIKOVSKY): lay theoreticians realize that the Earth is about to flip over on its axis with the obvious catastrophic consequences, but of course the ivory-tower bastions of Orthodox Science refuse to listen. The HOLOCAUST duly afflicts an underprepared humanity. The Mesmerian Annals - The Dark Green Tunnel (1984) and The Wand (1986) - are juvenile fantasies. [JC/JGr]

ECO, UMBERTO

(1932-) Italian academic and writer, famed for his work in history, philosophy, literary criticism and semiotics. While his novels are not explicitly sf, he shares with much of the best of the genre a central concern with both the nature of ideas and the moral significance of the

methods by which we determine what is true. *Il Nome della Rosa* (1980; trans William Weaver as *The Name of the Rose* 1983 US/UK) is a medieval detective story (and a story about detection), an exploration of the detective's empirical approach to the world and the importance of humour, set against the fanatical certainties of medieval Christianity. *Il Pendolo di Foucault* (1988; trans William Weaver as *Foucault's Pendulum* 1989 US) tells the story of a group of Italian intellectuals who, appalled by the stupidity of the books on mysticism and occult history that they publish for a living, decide to construct their own conspiracy theory of history, and discover that the human PERCEPTION of reality is more subtle than they had anticipated (FABULATION). UE's fiction is remarkably inventive, sophisticated and humorous, expressive of a profound love for life over sterile abstraction. [NT/PhR]Other works: *Travels in Hyperreality* (coll trans William Weaver et al 1987 US), journalism and essays. See also: ITALY.

ECOLOGY

Ecology is the study of organisms in relation to their environment. It is a relatively new discipline, the first notable work on the subject being *Animal Ecology* (1927) by Charles Elton (1900-1990). The complexity of the environmental relationships which determine the success, or even the survival, of populations has been realized only within the last half-century. The same period has seen a dramatic increase in the world's population and the virtual destruction of the natural environment in many populous areas, and such issues as the protection of food chains and increasing the efficiency of ecological systems have become extremely important. As is to be expected with respect to a scientific discipline no older than GENRE SF, there are very few early stories with ecological themes. W.H. HUDSON's fantasies of a mode of human life harmonized with Nature - particularly *A Crystal Age* (1887) - can be seen, with hindsight, as related to the theme, but their inspiration was mystical rather than scientific. An early story on an ecological theme is J.D. BERESFORD's "The Man who Hated Flies" (1929), a parable about a perfect insecticide which precipitates an ecocatastrophe by obliterating the pollinators of many plant species. Early sf writers were often oblivious to the simplest matters of ecology in their pictures of LIFE ON OTHER WORLDS, providing abundant carnivorous species without the herbivore populations required to sustain them; Edgar Rice BURROUGHS's image of Mars is a cardinal example. The only early PULP-MAGAZINE writer whose work showed anything more than a rudimentary consciousness of the subject was Stanley G. WEINBAUM. After WWII, however, writers began to use a good deal more ingenuity in their representations of ALIEN ecology, and produced numerous puzzle stories in which explorers on other worlds have to figure out peculiar relationships in the local fauna and flora. Examples are William TENN's "The Ionian Cycle" (1948), several stories by Clifford D. SIMAK - notably "You'll Never Go Home Again" (1951; vt "Beachhead") and "Drop Dead" (1956) - James H. SCHMITZ's "Grandpa" (1955), Brian W. ALDISS's PEST (Planetary Ecological Survey Team) series (1958-62) and a series by Jack SHARKEY begun with "Arcturus Times Three" (1961). More sophisticated examples are Richard MCKENNA's "Hunter Come Home" (1963), Neal BARRETT's *Highwood* (1972) and John BOYD's *The Pollinators of Eden* (1969). Jack VANCE's

"Winner Loses All" (1951) is an interesting oddity with no human characters. Michael G. CONEY has deployed ecological puzzles in a number of novels, including *Syzygy* (1973) and *Hello Summer, Goodbye* (1975; vt Rex). Inevitably, the COLONIZATION OF OTHER WORLDS has come to be seen more and more in ecological terms. Ecological planning is necessarily of central concern in stories dealing with TERRAFORMING. Thus an elementary strategy of ecological control is the key to the invasion of the land areas of VENUS in *Fury* (1950; vt *Destination Infinity*) by Henry KUTTNER, and in many novels about the colonization of MARS - e.g., Kim Stanley ROBINSON's *RED MARS* (1992 UK). The great majority of ecological-problem stories involving colonization derive their problems through slight distortion of ecological systems on Earth, or through simple analogy. Relatively few authors have been willing to take on the job of attempting to construct an alien ecology in some detail, although Johannes KEPLER made some interesting observations about the ways in which life might adapt to a lunar habitat in his *Somnium* (1634). Notable modern examples include numerous stories by Hal CLEMENT, including *Cycle of Fire* (1957) and *Close to Critical* (1958; 1964), Brian W. Aldiss's *The Long Afternoon of Earth* (fixup 1962 US; exp vt *Hothouse* UK), Poul ANDERSON's *Fire Time* (1974), Alan Dean FOSTER's *Midworld* (1975), Gordon R. DICKSON's *Masters of Everon* (1979), Aldiss's *Helliconia* trilogy (1982-5), Donald KINGSBURY's *COURTSHIP RITE* (1982), Larry NIVEN's *The Integral Trees* (1983) and its sequel *The Smoke Ring* (1987), Paul J. MCAULEY's *FOUR HUNDRED BILLION STARS* (1988) and Sheri S. TEPPER's *Grass* (1989). The precariousness of the human ecological situation has gradually but inevitably become one of the major themes of sf. The possibility of a worldwide DISASTER caused by soil-exhaustion is explored in A.G. Street's *Already Walks Tomorrow* (1938) and Edward S. HYAMS's *The Astrologer* (1950), both of which point out that ecological planning will be made difficult by the tendency of politicians to think about only the short term. Significant cautionary tales about ecological catastrophes include Ward MOORE's *Greener than You Think* (1947), in which a species of grass out-competes all other plant life, and John CHRISTOPHER's *The Death of Grass* (1956; vt *No Blade of Grass*), in which a blight affecting grass species destroys most of the world's crops. Early magazine sf stories which focus on mankind's future ecological problems include Damon KNIGHT's "Natural State" (1954; vt *Masters of Evolution* 1959) and C.M. KORNBLUTH's "Shark Ship" (1958). Ecocatastrophe stories picked up considerable impetus in the 1960s from a number of nonfictional warnings that things could only get worse as a result of OVERPOPULATION and POLLUTION. The alarmist Paul Ehrlich (1932-), author of *The Population Bomb* (1968), used a quasidocumentary fictional framework for a brief summary of his predictions in "Ecocatastrophe" (1969). The greenhouse effect was later added to the list, followed by the decay of the ozone layer, leading to such extreme ecocatastrophe stories as *Ecodeath* (1972) by William Jon WATKINS and E.V. (Gene) SNYDER, *The Nitrogen Fix* (1980) by Hal Clement and *Nature's End* (1986) by Whitley STRIEBER and James Kunetka, and such all-inclusive ones as David BRIN's *Earth* (1990). Many ecocatastrophe stories are notable for their bitter irony - most sf writers who use the theme seem to feel that we will get no more than we deserve if we destroy our environment and poison ourselves - but even writers who are neither angry nor despairing tend to accept that

an ongoing ecological crisis will be one of the most obvious features of the NEAR FUTURE. Intensification of ecological awareness helped to lend a new subtlety and sophistication to the disaster story, which spawned a new subspecies dealing with the delicate aesthetics of corrosive changes in mankind's physiological and psychological relationship with the environment. Gerald HEARD's "The Great Fog" (1944) is an early example; others are *The Year of the Cloud* (1970) by Theodore L. THOMAS and Kate WILHELM, George Alec EFFINGER's "And Us, Too, I Guess" (1973) and George TURNER's *The Sea and Summer* (1987; vt *Drowning Towers*). The most detailed exploration of such possibilities has been carried out by J.G. BALLARD in such novels as *The Wind from Nowhere* (1962), *The Drowned World* (1962), *The Burning World* (1964; vt *The Drought*) and *THE CRYSTAL WORLD* (1966). Stories concerned with the ecology of alien worlds have recently tended to take on a strong element of mysticism. In the real world the word "ecology" has acquired quasicharismatic status, encouraged by vulgarizations of the "Gaia hypothesis" enunciated by James Lovelock (1919-); this points out that the ecosphere has certain built-in homeostatic mechanisms and that evolving earthly life created the atmospheric environment in which it now exists. For many people "ecology" has come to symbolize a lost sense of harmony with the world at large, and various commune movements have tried to make ecological awareness an antidote to alienation. The word "symbiosis" (PARASITISM AND SYMBIOSIS) is often invoked in this context. In sf, ecological mysticism is very obvious in such parables as Robert F. YOUNG's *The Last Yggdrasil* (1959 as "To Fell a Tree"; exp 1982), such evocations of the Eden myth as Mark CLIFTON's *Eight Keys to Eden* (1960) and such curious biological allegories as Jacqueline LICHTENBERG's *Dushau* (1985) and its sequels. It is central to the mystical ritualization of water relations featured in Robert A. HEINLEIN's *STRANGER IN A STRANGE LAND* (1961) and Frank HERBERT's *DUNE* (1965). In Piers ANTHONY's *Omnivore* (1968) ecological relationships themselves are transformed into a mystical pattern. This mysticism is evident also in many stories set on Earth, including Frank Herbert's *The Green Brain* (1966), Hilbert SCHENCK's *At the Eye of the Ocean* (1980), Norman SPINRAD's *Songs from the Stars* (1980), Somtow Sucharitkul's (S.P. SOMTOW) *Starship and Haiku* (1984) and Scott Russell SANDERS's *Terrarium* (1985). Two anthologies featuring ecocatastrophe stories are *Saving Worlds* (anth 1973; vt *The Wounded Planet*) ed Roger ELWOOD and Virginia KIDD, and *The Ruins of Earth* (anth 1971) ed Thomas M. DISCH. [BS]

ECONOMICS

The word "economics" derives from a Greek word signifying the art of household management. Its modern usage has been extended by analogy to pertain to the management of the industry and finances of nations. Medieval economic "theory" was dominated by ethical considerations, and evaluative judgments still remain entangled with the science; economics thus has the capacity to arouse powerful passions in spite of its frequent designation as "the dismal science". This is very evident in fiction dealing with economic systems. Thomas MORE's *Utopia* (1516; trans 1551) is largely a treatise on economic matters, and much subsequent UTOPIAN literature has been concerned with economic theory's relationships with political power and social justice. The idea that economics should attempt

to shed its ethical entanglements and be reformulated in terms of "natural laws" was popularized by "The Grumbling Hive", the poem which formed the headpiece of *The Fable of the Bees, or Private Vices, Publick Benefits* (1714) by Bernard de Mandeville (1670-1733). The poem and the tract advanced the thesis that, if the market were allowed to find its own equilibrium while individuals attempted to maximize their profits in open competition (no matter how greedily), the community as a whole would benefit. This notion was later taken up by Adam Smith (1723-1790) in *The Wealth of Nations* (1776). In the 19th century the rise of various socialist movements, latterly armed with their own Marxist theory of economics, brought a good deal of ideological conflict into economic thought at both academic and popular levels. This conflict is very evident in a great deal of 19th-century utopian fiction. *Voyage en Icarie* (1840) by Etienne Cabet (1788-1856) and *The Happy Colony* (1856) by Robert Pemberton were among the earliest socialist utopias, although their arguments are moral rather than scientific. Theodore HERTZKA's *Freiland* (1890; trans 1891) and its sequel were among several novels exploring the pros and cons of a mixed economy, but there are relatively few 19th-century laissez-faire utopias. By the end of the century the argument was becoming confused by the interest which utopian novelists were taking in AUTOMATION and TECHNOLOGY, but economic egalitarianism remained a central issue in such technological utopias as Edward BELLAMY's *Looking Backward, 2000-1887* (1888) and the many ideological replies produced in its wake. Like many other US socialists, Bellamy took more inspiration from Henry George (1839-1897) - author of *Progress and Poverty* (1879) - than from Marx. (George's influence is also very strong in the works of M. P. SHIEL, and his ideas can still be found echoing in the writings of Barrington J. BAYLEY.) Despite Marx's 20th-century status as a figurehead there are surprisingly few outrightly Marxian utopias; the best example is *Sur la pierre blanche* (1905; trans as *The White Stone* 1910) by Anatole FRANCE. Relatively few 20th-century utopias give more priority to economic considerations than to political or technological issues; notable exceptions are Robert ARDREY's *World's Beginning* (1944) and Henry HAZLITT's *The Great Idea* (1951; vt *Time Will Run Back*). The longest and most extravagant economic tract cast as fiction this century is Ayn RAND's *Atlas Shrugged* (1957), a pioneering work of Libertarian apologetics in which the world's capitalists go on strike in protest against the forces of creeping socialism (LIBERTARIANISM). Marxist economic theory is more prominently featured in DYSTOPIAS like Jack LONDON's *The Iron Heel* (1907) and in SATIRES like Upton SINCLAIR's *The Millennium* (1924). Sharper and more flamboyant economic satire can be found in Archibald MARSHALL's *Upsidonia* (1915), about a world where the profit motive operates in reverse, and in Leon STOVER's *The Shaving of Karl Marx* (1982), which slyly suggests that the policies which Lenin instituted after the Russian Revolution have far more in common with the ideas of H.G. WELLS than with those of Marx. The early PULP-MAGAZINE sf writers were not much concerned with economics, tending to take the historical continuity of the American Dream for granted, although Fred MACISAAC's "World Brigands" (1928) is an interesting story from the nonspecialist pulps in which the burden of WAR debt leads to a war between the USA and its former allies. When John W. CAMPBELL Jr took over ASTOUNDING SCIENCE-FICTION, economic issues were

returned to the sf agenda. They were taken up by Robert A. HEINLEIN, whose "The Roads Must Roll" (1940) is about a strike called by "Functionalists" - proponents of the theory that the greatest economic rewards should go to the people with the most vital jobs. Heinlein's "Let There be Light . . ." (1940 as by Lyle Monroe) includes cynical asides about the suppression of innovations by power groups who have a heavy investment in existing technologies - a notion whose variants include items of modern folklore as well as the themes of stories; "Logic of Empire" (1941) has some similarly cynical comments on the economics of slavery; and "The Man who Sold the Moon" (1950) concerns the struggle to finance the first Moon voyage. Heinlein's economic theorizing was comprehensively updated in THE MOON IS A HARSH MISTRESS (1966), which helped to popularize the acronym tanstaafl ("there ain't no such thing as a free lunch"); his uncompromising Libertarianism - which has echoes of SOCIAL DARWINISM - set an important example within the genre, instituting a tradition vigorously carried forward by Poul ANDERSON, Jerry POURNELLE, G.C. EDMONDSON and L. Neil SMITH, among others, and led to the founding of the Prometheus AWARD. Other pulp stories in which the emphasis on economic considerations is central include "The Iron Standard" (1943) by Lewis Padgett (Henry KUTTNER and C.L. MOORE), in which Earthmen force reluctant aliens to help them by disrupting their economy and threatening the power structure of a static society, and "The Helping Hand" (1950) by Poul Anderson, a neat parable about the economics of "foreign aid". Economic issues are also to the fore in Anderson's series about interstellar trader Nicholas van Rijn and his associates, notably "Margin of Profit" (1956) and the novelettes collected as Trader to the Stars (coll 1964). Oddly enough, the other writer of the 1950s strongly associated with Campbell who showed a very strong interest in economics was Mack REYNOLDS, whose parents were devout socialists and whose ideas were strongly influenced by the three-times socialist candidate for the US Presidency Eugene Debs (1855-1926). Reynolds's efforts range from the wry "Subversive" (1962), the satirical Tomorrow Might Be Different (1960 as "Russkies, Go Home!"; exp 1975) and the melodramatic "Ultima Thule" (1961; in fixup Planetary Agent X 1965) to the fascinating thought-experiment described in The Rival Rigelians (1961 as "Adaptation"; exp 1967), in which visiting Earthmen divide an alien world's nations in order to compare the power of free enterprise and Marxist planning as forces of social evolution. Reynolds went on to write a series of utopian novels cast in a Bellamy-esque mould, beginning with Looking Backward, from the Year 2000 (1973) and Equality in the Year 2000 (1977). A rather different approach to economic issues was manifest in the magazine GALAXY SCIENCE FICTION, where the emphasis was on satirical irony. The author who best embodied the outlook of the magazine - and who eventually became its editor - was Frederik POHL, whose economic fantasies stand in sharp contrast to those of Heinlein, Anderson and Reynolds. In his collaboration with C.M. KORNBLUTH, THE SPACE MERCHANTS (1953), the economy of the USA has been driven to extremes of conspicuous consumption in order to maintain economic growth, and the advertising industry has become the linchpin of government. In "The Midas Plague" (1954) the situation is further exaggerated, every citizen having a burdensome consumption quota as the nation strives to cope with the abundance of machine-produced goods. In "The Tunnel under the World" (1955) an

artificial world exists only to test advertising pitches. In another collaboration with Kornbluth, *Gladiator-at-Law* (1955), the stock market is supreme, manipulated by corporations run by reclusive super-geriatrics. A further notable Gal satire is "Cost of Living" (1952) by Robert SHECKLEY, in which the middle class can maintain its standard of living only by mortgaging the future income of its children. Satirical economic fantasies are seen also in the work of Damon KNIGHT, whose *HELL'S PAVEMENT* (fixup 1955; vt *Analogue Men*) features consumption quotas in a future USA ruled by commercial interests, and whose *The People Maker* (1957 as "A for Anything"; exp 1959; rev vt *A for Anything* 1961 UK) explores the socio-economic consequences of the invention of a matter-duplicator. The latter makes an interesting contrast with two other stories on the same theme: George O. SMITH's "Pandora's Millions" (1945), in which civilization collapses as a result, and Ralph Williams' "Business As Usual, During Alterations" (1958), in which it doesn't. The manipulation of consumers in pursuit of economic stability is investigated also in more impressionistic stories, including Rosel George BROWN's "Signs of the Times" (1959) and J.G. BALLARD's "The Subliminal Man" (1963). Although the satirical tradition has been carried forward by such novels as Pohl's solo sequel to *THE SPACE MERCHANTS*, *The Merchants' War* (1984), the dominant species of economic speculation in contemporary US sf is Libertarian polemic, as seen in such novels as G.C. Edmondson's *The Man who Corrupted Earth* (1980) and Ben BOVA's *Privateers* (1985), both of which imagine entrepreneurs boldly taking charge of the conquest of space after pusillanimous US governments have given up on it. The vulnerability of the modern world to economic catastrophe is a minor theme in several sf novels, including *The Visitors* (1980) by Clifford D. SIMAK, in which generous aliens do the damage, and *Wolf and Iron* (1990) by Gordon R. DICKSON, in which we have done it to ourselves. Stories of ecocatastrophe (ECOLOGY) often include commentaries on the economic problems associated with OVERPOPULATION and "underdevelopment"; *The Sea and Summer* (1987 vt *Drowning Towers*) by George TURNER is a notable example. The evolving economic problems of the Third World have also been brought into sharp focus by Bruce STERLING in "Green Days in Brunei" (1985) and *Islands in the Net* (1988). Now that communism seems on the wane, Libertarian polemics will presumably become less strident and alarmist, and the problems involved in the economic rescue of formerly communist nations may begin to attract as much attention from those writers seriously interested in the NEAR FUTURE as the problems of Third World poverty. A relevant anthology is *Tomorrow, Inc.: SF Stories about Big Business* (anth 1976) ed Martin Harry GREENBERG and Joseph D. OLANDER. [BS] See also: MONEY; POLITICS; SOCIOLOGY.

ECUADOR
LATIN AMERICA.

EDDISON, E(RIC) R(UCKER)
(1882-1945) UK civil servant, writer and scholar of Old Norse. His first work of fiction and most considerable single work, *The Worm Ouroboros* (1922), is an erudite HEROIC FANTASY written in archaic English; the initial protagonist, Lessingham, is transported from Earth to a fantasy MERCURY, where it will be his function to observe mighty conflicts,

heraldic battles and quests, and magical turns of plot, all destined to recur forever, as the title implies. The Zimiamvian trilogy, whose internal chronology reverses that of publication, is made up of *The Mezentian Gate* (1958), posthumously assembled, *A Fish Dinner in Memison* (1941 US) and *Mistress of Mistresses: A Vision of Zimiamvia* (1935). Beyond the presence of Lessingham, who has become (like all the cast) an avatar of the divine, the sequence's main connection with *The Worm Ouroboros* is that it is set in the (Platonic) heaven of the earlier novel. The tales are discursive, metaphysical, learned, linguistically adventurous and engrossing. ERE's influence on the sf genre, as with writers like Lord DUNSANY and J.R.R. TOLKIEN, lies mainly in the powerful example of his language and the sustained "otherness" of his creation. [JC]Other works: *Styrbiorn the Strong* (1926); *Egil's Saga: Done into English Out of the Icelandic with an Introduction, Notes, and an Essay on Some Principles of Translation* (trans 1930).About the author: "Superman in a Bowler: E.R. Eddison" in *Literary Swordsmen and Sorcerers: The Makers of Heroic Fantasy* (1976) by L. Sprague DE CAMP; "The Zimiamvian Trilogy" by Brian Attebery in *Survey of Modern Fantasy Literature* (anth 1983) ed Frank Magill. See also: FANTASY; PLANETARY ROMANCE; SWORD AND SORCERY.

EDISONADE

Daedalus was the first inventor hero, but he was also a bureaucrat; and when he built the labyrinth he did so as a wage-slave or sharecropper, on hire to the king. For that reason this entry, which is about a US dream of freelance heroism, cannot be spent defining the "daedalusade". As used here the term "edisonade"-derived from Thomas Alva Edison (1847-1931) in the same way that "ROBINSONADE" is derived from Robinson Crusoe - can be understood to describe any story which features a young US male inventor hero who uses his ingenuity to extricate himself from tight spots and who, by so doing, saves himself from defeat and corruption and his friends and nation from foreign oppressors. The invention by which he typically accomplishes this feat is not, however, simply a WEAPON, though it will almost certainly prove to be invincible against the foe and may also make the hero's fortune; it is also a means of TRANSPORTATION - for the edisonade is not only about saving the country (or planet) through personal spunk and native wit, it is also about lighting out for the Territory. Once the hero reaches that virgin Territory, he will find yet a further use for his invention: it will serve as a certificate of ownership. Magically, the barefoot boy with cheek of tan will discover that he has been made CEO of a compliant world; for a single, revelatory maxim can be discerned fueling the motor heart of the edisonade: the conviction that to tinker with is to own. Daedalus could never, therefore, have starred in an edisonade. Could Thomas Alva Edison himself have done so? Why should we head this entry with his name, rather than that of Nikola Tesla (1856-1943), who inspired Weldon COBB's *To Mars with Tesla* (1901), or Hiram Maxim (1840-1916), who inspired George GRIFFITH's *The Outlaws of the Air* (1895)? It certainly might be claimed that Edison was no more inventive than either of these figures; and he certainly worked for hire. Edison's life and career, when examined, hardly add up to an appropriate model for E.E. "Doc" SMITH's Richard Seaton, the inventor-hero of the Skylark series, who seems almost definitively to embody the dream

we are attempting to describe. In his early years, true enough, Edison was a practical professional, a tinkerer of genius, and the inventor (or inspired improver) of a wide range of implements, most of them electrical, from the phonograph to the lightbulb. But, beginning in the 1880s, he transformed himself into an advertiser of genius whose main subject was himself, and from this point the mythopoeic power of the Edison name outstripped that of his rivals, no mean publicists themselves. For nearly half a century, the senatorial Sage of Menlo Park waxed ever greater in the public imagination, writing articles, making speeches, chairing commissions, granting oracular interviews whose subject was, very frequently, weapons he claimed to be about to unveil which would make the USA utterly invincible and war impossible. From 1890 he claimed more than once - or those whom he may have hired to ghost some of his articles claimed - that he had invented devices of war which did not, in fact, exist outside his imagination, or which had been created by others (perhaps his employees). It may be of interest to note that the language in which these claims were made bore a strong resemblance to the urgent telegraphese Mark TWAIN fell into whenever he was expounding a technical notion; much of *A Connecticut Yankee at King Arthur's Court* (1889) is so couched, and the resemblance between the Boss protagonist of that novel and the self-image of Edison expressed in his writings is most striking. In his later years Edison was, in short, something of a fraud; he may have served as a model when L. Frank BAUM was creating the Wizard of Oz. But this, one might argue, could be precisely the point. It might be relevant to note that not only are edisonades dreams which come true for the protagonist but they also embody the shaping fantasies of that protagonist, who is not in the end as innocent as he seems. Like Edison himself, the hero of the edisonade is at some level, conscious or unconscious, an impostor or confidence-man. The first proto-edisonade was probably the first dime novel (DIME-NOVEL SF) to feature a boy inventor, Edward S. ELLIS's *The Steam Man of the Prairies* (1868), and the first edisonade proper was the Tom Edison, Jr. sequence of dime novels (1891-2) by Philip READE. Young orphan Tom (ostensibly unrelated to Thomas Alva) responds to the challenge of his enemies by inventing a succession of ever more impressive devices, most of which double as weapons and forms of self-propelling transport. In these and other similar tales, the presence of the US frontier as a barrier to be penetrated is nearly always evident, though sometimes only subliminally; and the topological similarity between penetrating a frontier and penetrating knowledge through CONCEPTUAL BREAKTHROUGH is nowhere more clearly expressed than in the boys' edisonades written at a time when the USA's literal frontiers were only just snapping shut. Oddly enough, however, the first adult novel to make use of Edison was not by a US author at all. VILLIERS DE L'ISLE-ADAM's *L'Eve future* (1886; trans as *The Eve of the Future* 1981 US; new trans as *Tomorrow's Eve* 1982 US) introduces a character, Thomas Alva Edison, who rescues a handsome young lord from despair at his fiancée's crassness by providing an impeccable ANDROID duplicate. It may be that Edison the "electrician" was given so significant a role in this tale because electricity itself had an almost occult significance for late-19th-century romantics like Villiers, who in a sense created a decadent version of the edisonade before any adult edisonades had in fact been written. The first

adult US example did not, in fact, appear for over a decade. It was not until the newspaper publication of Garrett P. SERVISS's *Edison's Conquest of Mars* (1898 *The New York Journal*; 1947), a tale of quite extraordinary thematic clarity, that the native edisonade took on its mature shape - in complete ignorance of Villiers' oblique use of the fabulous inventor. Written as a direct - and consciously US - response to the defeatist implications of H.G. WELLS's *THE WAR OF THE WORLDS* (1898), the tale depicts Edison himself inventing weapons of great power in an unfettered and spunky response to the continuing threat from the external enemies. Armed with a disintegrating weapon and *ANTIGRAVITY*, and accompanied by most of the world's best *SCIENTISTS*, Thomas Alva heads to Mars, where he commits triumphant genocide before granting the survivors colonial status. It should be noted that Edison's inventions and his conquest of Mars are both consequences of the actions of others: he and the USA he represents are innocents; they are forced to respond to a wicked world with the Trickster effrontery of their native genius; and afterwards they are forced to become owners of what their genius has conquered. Between Serviss and E.E. Smith, many edisonades repeated the basic story in plots which often represented a US version of the European future- WAR novel. Three can stand as examples. In J.S. BARNEY's *L.P.M.: The End of the Great War* (1915) a US scientist called Edestone invents enough weapons to defeat the corrupt and aggressive nations of Europe, and to establish a world government; in J.U. GIESY's *All for His Country* (1915) a young US inventor's gravity-defying airplane is sufficient to defeat Japanese aggressors; and in Cleveland Langston MOFFETT's *The Conquest of America* (1916) Edison himself reappears as a repository of anti-socialist US virtue and the creator of an invention sufficient to see off the aggressive Germans. In all cases, the aggression is from without; the weapons are invented by a free spirit who is not on hire to a corrupt government; and in the end the world is passed into the ownership of innocent Americans who had wished only to be left alone to enjoy their virgin paradise. This basic story has been an essential shaper of US realpolitik for more than a century, and its manifestations are far broader than those encompassed by the relatively simple edisonade, whose precarious concentration on a tangibly implausible model hero seemed to guarantee its early death as a literary form, though the most famous juvenile edisonade sequence of all - the Tom Swift stories, extending through four series from 1910 into the 1990s - demonstrates how long-lasting and evocative the model has been. But the 43 *Doctor Hackensaw* stories (1921-5) by Clement FEZANDIE, though amusingly varied in their presentation of the Doctor's scientific feats, seemed more an epilogue than a way forward. As a form suitable for adult reading, the seemingly moribund edisonade was saved by *SPACE OPERA*. E.E. Smith's *Skylark* sequence gave Edison the Galaxy as playground and estate, provided an infinity of frontiers to penetrate, territories to stumble into and to claim, and entrepreneurial empires to build in all innocence. The Smithian edisonade remains central to entertainment space opera to this day. It might seem, however, that *GENRE SF* as a whole outgrew the edisonade by about 1940, when John W. CAMPBELL Jr's *GOLDEN AGE OF SF* was at its height, and for a few years at least it looked as though hillbilly Tricksters with the Touch had become comic turns whose proper place was in the less serious pages of

Unknown and in the light-fingered grasp of such writers as L. Sprague DE CAMP. But a glance at the central male role model promulgated by the core authors of the Golden Age might disabuse readers of this assumption, for the Competent Man is Thomas Alva Edison in sheep's clothing, disguised mainly by his genuine proficiency (because writers like Robert A. HEINLEIN were the first sf authors able actually to convey the feel and describe the process of Higher Tinkering) and by his ability to explain himself. But, in being able to explain himself, the Competent Man of the 1940s, as created by Heinlein and his followers, soon began to advocate his line of thought; as soon as this happened, innocence fled. For, the moment the frank lad of the primitive edisonade begins to have to justify himself, Huck Finn the Trickster becomes a flim-flam man or, even worse, a prophet. L. Ron HUBBARD's Church of Scientology is in truth the Church of Edison. The overbearing protagonist of Heinlein's later novels is in truth the Sage of Menlo Park after one too many interviews. Only the unexamined edisonade is worth reading. Once looked at with an eye to the main chance, it turns sour, self-serving and entrepreneurial, and we find ourselves in the land of some HARD-SF writers of the 1980s, whose protagonists are never poor, and never lose, and never give; nor would it perhaps be stretching the term too far to find in the ruthless protagonists of much SURVIVALIST FICTION ghostly and solipsistic echoes of the edisonades of a more innocent time - when the hero did not have to understand the consequences of his triumphs. Much worse than a Thomas Alva Edison who doesn't know the score is a Thomas Alva Edison who does. [JC]Further reading: War Stars: The Superweapon and the American Imagination (1988) by H. Bruce FRANKLIN.

EDMONDS, HARRY (MORETON SOUTHEY)

(1891-1989) UK writer of several adventure novels and of some NEAR-FUTURE sf novels, beginning with *The North Sea Mystery* (1930), which features land-launched torpedoes which threaten to sink the entire Royal Navy. In *The Riddle of the Straits* (1931), a WAR story set in 1935, the UK and Japan find themselves pitted against the USSR and the USA; a Channel Tunnel saves the UK from embargo. In *Red Invader* (1933), Russia and Germany are once again involved, this time in intrigues against the UK. In *The Professor's Last Experiment* (1935; rev vt *The Secret Voyage* 1946) a vast war is halted when the protagonist broadcasts a "radiation" wave which stops all the engines of conflict. After WWII, HE continued in the same vein with *The Clockmaker of Heidelberg* (1949), featuring a new form of submarine propulsion, as well as a neo-Nazi germ-warfare plot centred in Brazil. A sequel, *The Rockets (Operation Manhattan)* (1951), hints at the violent end of all civilization. [JC]Other works: *Wind in the East* (1933); *The Death Ship, or The Tragedy of the "Valmiera" as Related by Chief Officer James Stanley* (1933).

EDMONDS, PAUL

[s] Henry KUTTNER.

EDMONDSON, G.C.

Working name of Mexican-born US writer and translator Jose Mario Garry Ordonez Edmondson y Cotton (1922-) for all his writing except his Westerns, which are as by Kelly P. Gast, J.B. Masterson and Jake Logan. He

published his first sf, "Blessed are the Meek", in ASF in 1955, and was active in the magazines for the next decade, particularly in FSF, where his Mad Friend stories appeared. Assembled as Stranger than You Think (coll of linked stories 1965 chap dos), they describe the effects their narrator's mad friend manages to elicit from the world about him, and his explanations thereof. GCE's first novel, The Ship that Sailed the Time Stream (1965 dos; rev 1978) and its sequel, To Sail the Century Sea (1981), are amusingly and graphically told FANTASTIC-VOYAGE tales involving a US ship and its inadvertent TIME TRAVELS. They remain his most successful books. Chapayeca (1971; vt Blue Face 1972), set in Mexico, and T.H.E.M. (1974), are both fluently written but less exhilarating to read. More impressively, The Aluminum Man (1975) confronts some Native Americans - depicted with great sympathy, as always in GCE's work - with a crash-landed ALIEN looking for fuel. The Man who Corrupted Earth (1980) fails to carry over the complex cynicism of Mark TWAIN's "The Man that Corrupted Hadleyburg" but is in its own right an amusing presentation of the notion that free enterprise can conquer space when governments falter at the task (ECONOMICS; LIBERTARIANISM). After writing a paranoid singleton, The Takeover (1984) with C.M. Kotlan, in which Russians briefly conquer the USA through nuclear blackmail, GCE produced, also with Kotlan, a complex sf sequence - The Cunningham Equations (1986), The Black Magician (1986) and Maximum Effort (1987). The entangled thriller conventions dominant in this trilogy feverishly pit genetic transformations of the human species against the dubious intercession of AIs in the long process of growth, amid constant references to Yaqui Indian culture. The mix is perhaps too rich for coherence. In the end, it is his constant engagement with the region and the people of his early years that lifts GCE's work above routine entertainment. [JC] Other works: #12 in the Spaceways sequence: Star Slaver (1982) as John CLEVE (with Andrew J. OFFUTT). See also: POLITICS; SPACE FLIGHT.

EDMONDSON, WALLACE
[s] Harlan ELLISON.

EDUCATION
SF IN THE CLASSROOM.

EDUCATION, LACK OF

The Futurians, a group of writers who grew up during the Depression, were mostly poor and few of them went to college. In fact, many SF writers have been self-educated. Frederik Pohl, who never attended college, enjoyed a career as both an editor and an authority on numerous subjects. In fact, he wrote the entry on the Roman Emperor Tiberius for the Encyclopedia Britannica. Jack Dann, as a young writer in the 1970s, appeared more impressive as an SF writer than as a potential student. He was turned down for Cornell's summer school program but ended up teaching there instead. Most publishing companies don't hire non-college graduates for their editorial positions. But Tor Books, one of SF's biggest publishers, has as one of its Senior Editors Patrick Nielsen Hayden, a high-school dropout.

EDWARDS, DAVID

(?1945 -) US writer whose Next Stop - Mars! (1960) sends another first space flight to that planet; the stories assembled in Dreams, Tales, ? Lullabies: Stories from my Grandfather's House (coll 1985) are unremarkable. [JC]

EDWARDS, F.E.
[s] William F. NOLAN.

EDWARDS, GAWAIN
Edward PENDRAY.

EDWARDS, MALCOLM (JOHN)
(1949-) UK editor and critic, educated at Cambridge, where he graduated in anthropology. Long active in UK sf FANDOM, he edited the BRITISH SCIENCE FICTION ASSOCIATION journal VECTOR 1972-4, worked as sf editor for GOLLANCZ 1976-7, and was administrator of the SCIENCE FICTION FOUNDATION 1978-80 and editor of its journal FOUNDATION: THE REVIEW OF SCIENCE FICTION #13-#19; he was a contributing editor to the first (1979) edition of this encyclopedia. He was one of the two principal members of the board which founded and for some time edited INTERZONE; though he became less active after the fourth issue, he remains an Advisory Editor. Constellations (anth 1980) assembled juvenile sf; Gollancz/Sunday Times SF Competition Stories (anth 1985), which he edited anonymously, assembled the best material from that competition. In the early 1980s he returned to Gollancz, whose sf list he improved and where he rose rapidly in influence, becoming Publishing Director. He left Gollancz in 1989 to join Grafton Books, a division of HarperCollins, of which he remains Publishing Director, Trade Fiction, responsible among other things for the sf/fantasy list. MJE was President of WORLD SF in 1990-1991. In the late 1970s MJE began work, always in collaboration, on the text of a series of books - mostly picture-books - about sf and fantasy. With Robert P. HOLDSTOCK he produced a series of sf and fantasy coffee-table books with fairly brief texts: Alien Landscapes (1979), Tour of the Universe: The Journey of a Lifetime - The Recorded Diaries of Leio Scott and Caroline Luranski (1980), Magician: The Lost Journals of the Magus Geoffrey Carlyle (1982), Realms of Fantasy (1983) and Lost Realms (1985). None of these could be taken very seriously, though the first has interesting artwork. Another collaborative illustrated book was Spacecraft in Fact and Fiction (1979) with Harry HARRISON. MJE's most interesting book, a collaboration with Maxim JAKUBOWSKI and this time not a picture-book, is The Complete Book of Science Fiction and Fantasy Lists (1983; rev vt The SF Book of Lists 1983 US), compiled for the trivia buff and often very funny, but also containing - if the reader can cope with the absence of an index - a great deal of solid information about sf not easily found elsewhere. [PN]See also: BRITISH SCIENCE FICTION AWARD; INTERZONE.

EDWARDS, NORMAN
Collaborative pseudonym of Terry CARR and Ted WHITE, used on one minor novel, Invasion from 2500 (1964). [JC]

EDWARDS, PETER
(1946-) UK writer and civil servant whose sf novel, Terminus (1976), rather ponderously sets in motion a political conflict in a 22nd-century,

post- HOLOCAUST Eurafica which a sado-masochist secret society is attempting to dominate. The hero's discovery of an ancient city on MARS confuses all issues. [JC]

EFFINGER, GEORGE ALEC

(1947-) US writer long resident in New Orleans. He entered sf writing via the 1970 CLARION SCIENCE FICTION WRITER'S WORKSHOP, having 3 stories in the workshop's first anthology, Clarion (anth 1971), ed Robin Scott WILSON. His first published story was "The Eight-Thirty to Nine Slot" for Fantastic in 1971. Some early work was written as by John K. Diomedes or Susan Doenim. Within a very short time GAE established himself as a writer of stylish, surrealistic sf stories, becoming a regular contributor to such series anthologies as ORBIT, NEW DIMENSIONS and UNIVERSE as well as the major magazines; and, despite a steady production of novels, he was for at least a decade most admired for this work, much of which was assembled in Mixed Feelings (coll 1974), Irrational Numbers (coll 1976), Dirty Tricks (coll 1978), Idle Pleasures (coll 1983) and The Old Funny Stuff (coll 1989); "Schrodinger's Kitten" (1988), not yet collected, won both HUGO and NEBULA for Best Novelette. At the same time, What Entropy Means to Me (1972), GAE's first novel, did gain praise from Theodore STURGEON and Robert SILVERBERG among others, and was nominated for a Nebula. It is an elaborate, multi-layered work, combining elements of SPACE OPERA, family romance and quest fable within a self-referential discourse about the impulsions and restraints of creation. Relatives (fixup 1973), less well received, fails to unify its disparate parts, which tell of one man in three PARALLEL WORLDS. Nightmare Blue (1975) with Gardner DOZOIS and Those Gentle Voices: A Promethean Romance of the Spaceways (1976) were dithering attempts to disguise a lack of creative impetus through demonstrations of professional skill. For some time, it seemed that he would always remain a better short-story writer than novelist, the knowledgeable, witty master of a sly tone and unlikely subject matter, with a particular interest in various kinds of games (GAMES AND SPORTS), but failing to fulfil his promise. His very considerable capacity to dazzle - and an adroit use of parallel-world conventions, with characters dodging into changed identities with frivolous inevitability - led undoubtedly to a body of work unduly packed with exercises. "Many of my stories interlock," he once said, "and some day I will figure out a kind of chronology and key to the business." Perhaps fortunately, he has never published anything of the sort, and the wise absurdities (FABULATION) of his best work have never been tampered with. After two moderately successful novels - Death in Florence (1978; vt Utopia 3 1980) and Heroics (1979) - he began the 1980s with the darkly DYSTOPIAN The Wolves of Memory (1981), whose surreal mise-en-scene effortlessly draws the book's brooding hero into the depths. In the self-referential dance of motif and character of The Nick of Time (1985) and its sequel, The Bird of Time (1986), he at last successfully manifested at novel length his long-felt need to present TIME TRAVEL as a form of play. Appalling ill health and other disasters severely afflicted him during these years, but When Gravity Fails (1987), A Fire in the Sun (1989) and The Exile Kiss (1991), the first three books of the Marid Audran sequence, are perhaps his most successful books to date. In these

novels, the technological and electronic complexities of the 21st-century Middle East are fully as dazzling as the dervish of alternating realities so dominant in GAE's previous work. In attempting to flourish in this CYBERPUNK hive, the protagonist of the series becomes an Everyman-survivor, an example for those of GAE's readers who expect someday to live there. A career that seemed underachieving has become one of major interest. [JC/DP]Other works: Novelizations of scripts from the tv series PLANET OF THE APES: Man the Fugitive * (1974), Escape to Tomorrow * (1975), Journey into Terror * (1975) and Lord of the Apes * (1976); Felicia (1976) and Shadow Money (1988), both non-genre; Look Away (1990 chap); The Zork Chronicles * (1990), humorous novelization of a fantasy game; The Red Tape War: A Round-Robin Science Fiction Novel (1991) with Jack L. CHALKER and Michael D. RESNICK; Maureen Birnbaum, Barbarian Swordsperson: The Complete Stories (coll 1993). See also: DISASTER; ECOLOGY; ENTROPY; GAME-WORLDS; OMNI; PHYSICS; THEODORE STURGEON MEMORIAL AWARD.

EFREMOV, IVAN ANTONOVICH

[r] Ivan Antonovich YEFREMOV.

EGAN, DORIS

(? -) US writer in whose Ivory sequence - comprising TheGate of Ivory (1989), Two-BitHeroes (1992) and Guilt-Edged Ivory(1992) - various quasi-independent stories, some of them fantasy, take place in the PLANETARY ROMANCE setting provided by the planet Ivory. [JC]

EGAN, GREG

(1961-) Australian writer who began publishing work of genre interest with his first novel, An Unusual Angle (1983), a fantasy, and whose first short stories were also fantasy. From the mid-1980s, however, he has increasingly concentrated on sharply written sf with an emphasis on BIOLOGY and CYBERNETICS, assembled in 2 collections, Axiomatic (coll 1995 UK) and Our Lady of Chernobyl (coll 1995); the best of them - tales like "The Caress" (1990) and "Learning to Be Me" (1990) - raised considerable expectations for his first sf novel, Quarantine (1992 UK), which effectively, and literally, encapsules a near-future private-eye plot, of the sort familiar to readers of CYBERPUNK, within a solar system enclosed by a vast enigmatic Bubble. The unfoldings of the plot, and of its implications about human identity in a world (or worlds) controllable at the quantum level through COMPUTER-augmented brain functions, is extremely intricate; this multifacetedness also marks Permutation City (1994 UK), which searchingly examines the implications - in terms involving mathematics, computer science and cosmology - behind the construction of binding VIRTUAL REALITIES. GE has become a dauntingly successful investigator of the new worlds-microscopic and macrocosmic - with which sf increasingly finds itself required to deal. [JC] See also: INTERZONE.

EGAN, KEVIN

(? -) US writer whose sf novel, The Perseus Breed (1988), features the mysterious disappearance of certain women over a number of years. [JC]

EGBERT, H.M.

Victor ROUSSEAU.

EGGLETON, BOB

(1960-) US illustrator who has worked in the sf field since 1984 when he did his first book cover, for BAEN BOOKS. He has worked for a number of publishers since then. For his paintings he normally uses acrylic. He has quite a wide range - fantasy and horror as well as sf - but is especially known for his space and spaceship paintings, which are at once interestingly detailed and sweepingly romantic. His popularity has been growing since the late 1980s, and he has received several nominations for the Best Professional Artist category of the HUGO AWARDS (beginning in 1988); he won his first Hugo in 1994. He is one of a number of artists now publishing electronically. Event Horizons (1994) is a disk containing 22 images by BE. [PN]

EGLETON, CLIVE (FREDERICK)

(1927-) UK soldier and writer who began to publish novels with the Garnett sequence - A Piece of Resistance (1970), Last Post for a Partisan (1971) and The Judas Mandate (1972) - about UK post-nuclear- HOLOCAUST resistance to the Russians who occupy the islands; in the end, a government-in-exile is formed and the invaders, drained by a China war, retreat. State Visit (1976) is about the assassination of the Queen in order to prevent German reunification. CE specializes in spy thrillers. [JC]

EGREMONT, MICHAEL

Michael HARRISON.

EHRlich, MAX (SIMON)

(1909-1983) US writer initially active as an author of RADIO plays for various series, including The Shadow. His first novel, The Big Eye (1949), which was the first release in DOUBLEDAY's sf line, concerns an attempt by astronomers to terrify humanity into world peace by announcing that a visiting planet is due to hit Earth; the planet misses narrowly. The Edict (1971) is based on ME's own screenplay for the film Z.P.G. and deals with an embargo on births. The Reincarnation of Peter Proud (1974), filmed in 1974 to his own screenplay, is a quest novel whose protagonist attempts to track down information about his former self, the murder of whom recurs in his dreams; his adventures continue in Reincarnation in Venice (1979; vt The Bond 1980 UK). ME was a proficient writer who tended to use sf protocols as much to alarm as to illuminate. [JC] Other works: Dead is the Blue (1964), a borderline-sf nuclear-submarine story; The Savage is Loose * (1974), for which film (1974; dir George C. Scott) he also wrote the screenplay; Shaitan (1981), fantasy.

EIDLITZ, WALTHER

TRANSPORTATION.

EIDOLON

Australian SEMIPROZINE, published from North Perth, Western Australia, by Eidolon Publications, quarterly (but later somewhat irregular) from #1, Autumn 1990 (published in May 1990), current, 16 issues to early 1995, ed Jeremy G. Byrne, Keira McKenzie, Robin Pen, Richard Scriven, Jonathan

Strahan, Chris Stronach to #6 (Oct 1991), thereafter only Byrne, Scriven and Strahan. This elegant, A5 desk-top published perfect-bound magazine has the appearance of an academic critical journal, but in fact publishes mainly sf/fantasy fiction, with some articles and reviews. It is available through subscription rather than from newsstands. E has had surprising success, with fiction on the whole superior to that of its east-coast rival, AUREALIS, and won a 1991 Ditmar (AWARDS) for Best Fanzine/Semiprozine. It has published stories by Harlan ELLISON, George TURNER, Terry DOWLING, Greg EGAN, Leanne Frahm, Rosaleen LOVE, Philippa Maddern and Sean MCMULLEN, among others. [PN]

EINSTEIN, CHARLES

(1926-) US writer who published his first sf story, "Tunnel 1971", in Saturn in 1957. His NEAR-FUTURE novel The Day New York Went Dry (1964) depicts a water shortage in that city which comes to a crisis in the drought of 1967. A hurricane then saves the city and its politicians. [JC]

EISENBERG, LARRY

(1919-) US writer and for many years Co-Director of the Electronics Laboratory at Rockefeller University. He began publishing sf with "The Mynah Matter" as Lawrence Eisenberg for Fantastic Stories in 1962, and became known for his comic sequence of stories about Emmett Duckworth; many of these were assembled in his only collection, The Best Laid Schemes (coll 1971). As an inventor whose devices crucially misfire, Duckworth might seem a cheap target, but LE presents his recurring disasters with winning sympathy. The stories describing the relationship of humans to the ALIEN Sentients were very much darker in import, though never unrelentingly so. After the beginning of the 1980s, LE became relatively inactive. [JC]

EISENSTEIN, ALEX

(1945-) US writer whose work has been exclusively in collaboration with his wife, Phyllis EISENSTEIN, beginning with "The Trouble with the Past" for New Dimensions 1 (anth 1971) ed Robert SILVERBERG; although only about 5 stories are bylined with both names, their collaborative efforts extend throughout her work. [JC]

EISENSTEIN, PHYLLIS (LEAH KLEINSTEIN)

(1946-) US writer, whose first sf was "The Trouble with the Past" (1971), written in collaboration with her husband, Alex EISENSTEIN, in New Dimensions 1 (anth 1971) ed Robert SILVERBERG. She and her husband have written other stories together, and he is influential also on work signed only by PE. Her first novel, Born to Exile (1971-4 FSF; fixup 1978), is a deft, romantic, episodic fantasy about a witch minstrel who can teleport. There followed perhaps her best work, Sorcerer's Son (1979), also fantasy, an oedipal quest involving magical apprenticeship. Her next two books were sf romances, Shadow of Earth (1979) and In the Hands of Glory (1981). The former is a racy ALTERNATE-WORLD story in which the heroine has to cope with the male chauvinism of a US Midwest belonging to a world in which the Spanish Armada won. PE's praiseworthy narrative facility in this productive period may have left her other capacities as a writer somewhat unstretched. She slowed down, for a time publishing only short fiction and

in no great quantity, then returned seven years later with two fantasy sequels: *The Crystal Palace* (1988), sequel to *Sorcerer's Son*, and *In the Red Lord's Reach* (1989), sequel to *Born to Exile*. Both were marked by a change of pace to something almost languid, more reflective and metaphoric than before, with some gain and some loss. [PN]See also: MAGIC.

EISFA

YANDRO.

EISLER, STEVEN

Robert P. HOLDSTOCK.

EKLUND, GORDON

(1945-) US writer, born in Seattle, where he now lives. He published his first sf, "Dear Aunt Annie", a NEBULA nominee, with *Fantastic* in 1970. In the early and productive years of his career he published dozens of stories in sf magazines (none have been collected), writing as Wendell Stewart once; until his work as E.E. SMITH (see below), he published all his books under his own name. His work was initially various though uneven. Both his first novel, *The Eclipse of Dawn* (1971), and his fourth and best solo effort, *All Times Possible* (1974), anatomize with pessimistic force the US political landscape and share an interest in the psychology and tactics of leadership. The sf elements in the first - mainly some intrusive ALIENS - tend to jar, but the PARALLEL-WORLDS structure of *All Times Possible* intensifies and darkens the picture of political realities at work through the second quarter of the 20th century. Although a sometimes careless writing style and a tendency to prolixity mar these books, they are still significant contributions to the theme of POLITICS in sf. *A Trace of Dreams* (1972) is also a novel of some weight, but some other modestly exploratory works are comparatively commonplace: *Inheritors of Earth* (1951 *Future Combined with Science Fiction Stories* as "Incomplete Superman"; exp 1974), with Poul ANDERSON, stumblingly expands the latter's original story; *Beyond the Resurrection* (1973) and *The Grayspace Beast* (1976) lack the eloquence necessary to give full life to the concepts they present. GE collaborated with Gregory BENFORD (whom see for details) on the series of stories which eventually became *If the Stars Are Gods* (fixup 1977), the title story of which, in its original form, won a 1974 Nebula for Best Novelette; it is GE's most sustained work (and one of Benford's finest as well). *Find the Changeling* (1980), also with Benford, less impressively recounts the hunt on a colony-world for a shape-changing alien. Subsequent novels show a lessening of energy. The Lord Tedric series of SPACE OPERAS is not remarkably successful. The first volume, *Lord Tedric* (1954 *Universe Science Fiction*; exp 1978) - was expanded from an original story by E.E. "Doc" Smith and was published as a collaboration, though GE was not credited in the UK edition; *Space Pirates* (1979) and *Black Knight of the Iron Sphere* (1979; vt *The Black Knight of the Iron Sphere* 1979 UK), both entirely by GE, were published as collaborations in the USA and as by Smith alone in the UK; the final volume, *Alien Realms* (1980), appeared under the Smith name in both countries. After *The Garden of Winter* (1980) GE fell silent for some years, returning to the scene with a juvenile, *A Thunder on Neptune* (1989). [JC]Other works: *Serving in Time* (1975 Canada);

Falling toward Forever (1975 Canada); Dance of the Apocalypse (1976 Canada); two Star Trek ties, The Starless World * (1978) and Devil World * (1979); The Twilight River (1979 dos). See also: ALTERNATE WORLDS; GODS AND DEMONS; HITLER WINS; JUPITER; LIVING WORLDS; OUTER PLANETS; RELIGION; ROBOTS; STARS; SUN.

ELDER, MICHAEL (AIKEN)

(1931-) Scottish actor and writer in various genres, some of whose earlier novels, written in the 1950s, deal with theatrical themes. He began writing sf with Paradise is Not Enough (1970) for ROBERT HALE LIMITED, and thereafter produced a number of fairly routine adventures for that firm. Most notable are the Barclay SPACE-OPERA adventures involving COLONIZATION and its perils: Nowhere On Earth (1972), which also deals with problems of OVERPOPULATION, and its sequels The Perfumed Planet (1973; vt Flight to Terror 1973 US), Down to Earth (1973), The Seeds of Frenzy (1974) and The Island of the Dead (1975). His other connected books are Mindslip (1976) and its sequel Mindquest (1978) and Oil-Seeker (1977) and its sequel Oil-Planet (1978). ME's ambitions do not generally extend beyond entertainment, though a dour DYSTOPIAN bent of thought is sometimes allowed to surface. [JC]Other works: The Alien Earth (1971); The Everlasting Man (1972); A Different World (1974); Centaurian Quest (1975); Double Time (1976).

ELDERSHAW, M. BARNARD

Collaborative pseudonym used by Australian writers and critics Marjorie Faith Barnard (1897-1987) and Flora Sydney Patricia Eldershaw (1897-1956) for four well regarded mainstream novels 1929-37; nearly all the writing was done by Barnard - who had published a solo book as early as 1920 - with Eldershaw being the critical editorial eye. A fifth novel, also published as by MBE and the most distinguished work under this pseudonym, was by Barnard alone: Tomorrow and Tomorrow (cut 1947; text restored vt Tomorrow and Tomorrow and Tomorrow 1983 UK) is a political novel whose framing story is set in the 24th century, where a historical novelist living in the Tenth Commune (once the Riverina) has written a book about Australia from 1924 to c1950, the years of Depression and WWII. The novel within a novel, entitled Little World Left Behind, is a striking picture of an Australia well known to Barnard, seen as if from a future perspective. As she had finished writing the book by 1944, the later events of WWII and its supposed aftermath - including the burning of Sydney by its anguished inhabitants - are pure sf, as is the future in which the novelist lives, a blighted, indifferent UTOPIA. Indeed the whole novel is very sophisticated, very unusual sf, part of whose subject is the elusiveness of HISTORY and its relation to fiction. The book's publisher, unknown to Barnard, submitted it before publication to the censor, who saw it as politically subversive and therefore mutilated the latter part, thus bearing witness to the same repressive forces that give the novel its theme; later editions have the text restored. [PN]See also: AUSTRALIA.

ELDRIDGE, PAUL

(1888-1982) US languages teacher and writer, best known for the sf-fantasy trilogy he wrote with George S. VIERECK (whom see for details): My First Two Thousand Years: The Autobiography of the Wandering Jew

(1928), *Salome: The Wandering Jewess* (1930; cut vt *Salome: 2000 Years of Love* 1954) and *The Invincible Adam* (1932). *Prince Pax* (1933 UK), also with Viereck, provides an idealistic RURITANIAN king with a high-tech WEAPON: world peace, on his terms, ensues. [JC] See also: ADAM AND EVE; IMMORTALITY; ORIGIN OF MAN; POCKET UNIVERSE.

ELDRIDGE, ROGER

(? -) UK writer whose first sf book was a juvenile, *The Shadow of the Gloom-World* (1977). His second, *The Fishers of Darksea* (1982), is an ambitious adult tale set in an Eskimo culture with a tradition of shamanism; the visions endured by the protagonist are ironically revealed to be merely circumstantial, for the tribe has been genetically adapted to handle radioactive ore, and the MONSTERS seen in shamanic trance are merely human overseers, suitably shielded. [JC]

ELECTRICAL EXPERIMENTER SCIENCE AND INVENTION.

ELEK, ISTVAN [r] HUNGARY.

ELGIN, SUZETTE HADEN

Working name of US poet, author and teacher Patricia Anne Suzette Wilkins Elgin (1936-) for her sf. She combines writing with a professional specialization in LINGUISTICS, having a PhD in linguistics from the University of California, San Diego; she was a professor of linguistics at San Diego State University 1972-80, now emeritus, and has published widely in her specialist field. Her sf began in 1969 with "For the Sake of Grace" in FSF, which was incorporated into *At the Seventh Level* (1972), part of an ongoing series featuring the interstellar adventures of Trigalactic Intelligence Service agent Coyote Jones; with *The Communipaths* (1970 dos) and *Furthest* (1971), it was assembled as *Communipath Worlds* (omni 1980). Further titles, *Star-Anchored, Star-Angered* (1979) and *Yonder Comes the Other End of Time* (1986), did little to lessen the somewhat distressing discrepancy between the ramshackleness of the Coyote Jones plots and the terse eloquence of their descriptions of the meaning-systems of and COMMUNICATION with alien cultures, in which the condition of women (particularly in *Furthest*) is described with sufficient point that the books are used as FEMINIST texts. A second series, the Ozark trilogy - *Twelve Fair Kingdoms* (1981), *The Grand Jubilee* (1981) and *And then There'll be Fireworks* (1981), assembled as *The Ozark Trilogy* (omni 1982) - cannot be said to solve her inability to find plots of a sufficient knottiness to hold her attention (the young heroine of the series, whose magic secretly rules the planet Ozark, is in a coma for much of the final volume); but SHE's linguistic inventiveness, and her light-hearted detailing of the magic-based Ozark culture, give the books a charm they do not convey in synopsis. (*Yonder Comes the Other End of Time* is also set in this milieu.) Far more interesting, though still fumblingly plotted, is SHE's third series, the Native Tongue trilogy, comprising *Native Tongue* (1984), *The Judas Rose* (1987) and *Earthsong* (1994), which is based on a lame initial premise - a 1991 Amendment to the US Constitution declares women inferior to men on the basis of "scientific" evidence - which fails

to significantly hamstring the heart of the book: tightly narrated tales of the creation of a "womanlanguage" for self-protection (though the tongue itself is only fleetingly presented). The caricatured unpleasantness of almost all men, which both heightens and trivializes the first volume, becomes less significant in the second; superior ALIENS have arrived, and the fragile carapace of male superiority gets short shrift; and in the third volume, women are forced by an alien quarantine - Earth has been sealed off because the human species is so violent - to work out an end to the "hunger" which leads to typical male behaviour. But the pleasures and lessons of SHE's texts continue to lie more in texture than in premise. In 1978, SHE founded the SCIENCE FICTION POETRY ASSOCIATION. [JC] See also: POETRY.

ELIADE, MIRCEA

[r] ROMANIA.

ELIMINATORS

Film (1986). Altar/Empire. Prod Charles BAND. Dir Peter Manoogian, starring Andrew Prine, Denise Crosby, Patrick Reynolds, Conan Lee, Roy Dotrice. Screenplay Paul DeMeo, Danny Bilson. 96 mins, cut to 91 mins. Colour. Enjoyable exploitation frolic whose plot defies precis, but involves a mad SCIENTIST (he wants to be a Roman emperor) in the jungle with a TIME MACHINE, the weary CYBORG Mandroid (his unhappy creation), the tough heroine Colonel Nora, the ROBOT SPOT (a dead ringer for R2D2), the martial artist Kuji, riverboats, prehistoric humans and a FORCE FIELD. Screenwriters Bilson and DeMeo also wrote producer Band's two best films, TRANCERS (1984) and ZONE TROOPERS (1985). [PN]

ELIOTT, E.C.

Pseudonym of UK writer Reginald Alec Martin (1900-), whose Kemlo sequence of CHILDREN'S SF novels had a powerful emotional impact on many of their youthful UK readers, shaping the thoughts towards sf of an entire generation of them. The sequence is: Kemlo and the Crazy Planet (1954), Kemlo and the Zones of Silence (1954), Kemlo and the Sky Horse (1954), Kemlo and the Martian Ghosts (1954), Kemlo and the Craters of the Moon (1955), Kemlo and the Space Lanes (1955), Kemlo and the Star Men (1955), Kemlo and the Gravity Rays (1956), Kemlo and the Purple Dawn (1957), Kemlo and the End of Time (1957), Kemlo and the Zombie Men (1958), Kemlo and the Space Men (1959), Kemlo and the Satellite Builders (1960), Kemlo and the Space Invaders (1961) and Kemlo and the Masters of Space (1963). Kemlo and his friends, living with their parents in SPACE HABITATS, are young adolescents of the first generation to be born in space, and can therefore breathe vacuum. Despite this implausibility, the tales of the children's adventures are surprisingly enjoyable for their type and vintage - the space-station settings, with families and above all children routinely Up There, were innovative (at least in children's sf); the characters seemed real, rather than being grim-jawed adult male heroes or indestructible precocious superbrats; and the books as a whole compare favourably with those being produced at about the same time by, for example, Captain W.E. JOHNS. A second, much shorter series, the Tas books, stopped after Tas and the Space Machine (1955) and Tas and the Postal Rocket (1955). [JC/DRL] See also: JUVENILE SERIES.

ELLERN, WILLIAM B.
[r] E.E. SMITH.

ELLIK, RON(ALD)
(1938-1968) US computer programmer, author and well known sf fan, co-editor with Terry CARR of a HUGO-winning FANZINE, FANAC (1958-61). RE was co-author of The Universes of E.E. Smith (1966) with Bill EVANS (whom see for details). Under the joint pseudonym Fredric Davies he wrote with Steve Tolliver The Man From U.N.C.L.E. #14: The Cross of Gold Affair * (1968). RE died in a car accident the day before he was to have been married. [PN]

ELLIOT, JEFFREY M.
(1947-) US academic-professor of political science at North Carolina Central University - and writer who has published prolifically in several areas. Much of his work in sf has been in collaboration with Robert REGINALD, including the second version of Reginald's The Attempted Assassination of John F. Kennedy (1977 chap) as by Lucas Webb, which JME helped to revise into a format designed to be used in teaching, retitling it If J.F.K. Had Lived: A Political Scenario (exp 1978 chap). Also with Reginald (the latter as Michael Burgess) JME compiled The Work of R. Reginald: An Annotated Bibliography ?
BIBLIOGRAPHIES include The Work of George Zebrowski: An Annotated Bibliography ? exp 1990) with Reginald, The Work of Jack Dann: An Annotated Bibliography ?
Sargent: An Annotated Bibliography ?
Starclimber: The Literary Adventures and Autobiography of Raymond Z. Gallun (1991), and collaborated in Adventures of a Freelancer: The Literary Exploits and Autobiography of Stanton A.Coblentz (1993).
[JC]Other works: A sequence of interview books comprising Science Fiction Voices #2: Interviews with Science Fiction Writers (coll 1979 chap), #3 (coll 1980 chap) and #4 (coll 1982 chap); Literary Voices #1 (coll 1980 chap); The Future of the Space Program: Large Corporations ?
Discussions with 22 Science-Fiction Writers (coll 1981 chap) and Fantasy Voices: Interviews with American Fantasy Writers (coll 1982 chap); also Kindred Spirits: An Anthology of Gay and Lesbian Science Fiction Stories (anth 1984).About the author: The Work of Jeffrey M. Elliot: An Annotated Bibliography ?

ELLIOT, JOHN
(1918-) UK writer, primarily for tv, who collaborated with Fred HOYLE on two serials, A FOR ANDROMEDA and The ANDROMEDA BREAKTHROUGH, and the subsequent novelizations under the same titles (1962 and 1964 respectively). He is not to be confused with the John Elliott (note

spelling) who wrote the anti-Chinese/Soviet political thriller *Dragon's Feast* (1970), itself a work of borderline sf. [JC]

ELLIOT, LEE

House name used for three sf novels published by CURTIS WARREN, one each by William Henry Fleming BIRD and Dennis HUGHES and one - *Overlord* New York (1953) - by an as yet unidentified author. [JC]

ELLIOTT, BRUCE (WALTER GARDNER LIVELY STACY)

(1914-1973) US writer and editor, active mainly in the sf field in the early 1950s, beginning with "Fearsome Fable" for FSF in 1951. His sf novels - *Asylum Earth* (1952 *Startling Stories*; 1968) and *The Rivet in Grandfather's Neck* (1970) - are routine adventures. [JC]See also: DIMENSIONS.

ELLIOTT, DAN

[r] Robert SILVERBERG.

ELLIOTT, ELTON P.

[r] Richard E. GEIS.

ELLIOTT, GEORGE P(AUL)

(1918-1980) US writer and academic, many of whose short stories were sf or fantasy. He is best remembered for the title story in *Among the Dangs* (coll 1960), which deals with an imaginary South American tribe and has been widely reprinted within and outside the genre; his essay "Discovering the Dangs", in *Conversions: Literature and the Modernist Deviation* (coll 1971), discusses, biographically and theoretically, the creation of an sf text. Two other stories from that collection, including the anti-racist parable "The NRACP", and five of those assembled in *An Hour of Last Things* (coll 1968), most notably "Into the Cone of Cold", are also sf. Although it has been listed in sf bibliographies, *David Knudson* (1962) is in fact an associational novel dealing with nuclear guilt and the aftereffects of radiation poisoning. [JC/GF]

ELLIOTT, H(ARRY) CHANDLER

(1910-1978) Canadian-born US physician, university teacher of medicine and writer, in whose sf novel, *Reprieve from Paradise* (1955), Polynesians have established a worldwide culture after an atomic HOLOCAUST. Their civilization is described in sometimes amusing detail, though an enforced breeding plan soon sours the picture. The introduction of an Antarctic UTOPIA then complicates matters further. [JC]See also: GAMES AND SPORTS; TRANSPORTATION.

ELLIOTT, JANICE

(1931-) UK writer since 1962 of sophisticated novels of domestic passion. Her sf novel, *The Summer People* (1980), places in a NEAR-FUTURE world one of her typical casts, who decide it would be a good idea, while society collapses off-stage, to remain ensconced in their holiday resort for the time being. An Arthurian sequence for older children - *The King Awakes* (1987) and *The Empty Throne* (1988) - arouses the once and future king into a post- HOLOCAUST UK. *The Sadness of Witches* (1987) is a tale of the occult. *City of Gates* (1992) is set in a Jerusalem guest-house which exists, via time-loops, in every relevant epoch. [JC]

ELLIOTT, KATE
Alis A. RASMUSSEN.

ELLIOTT, NATHAN
Christopher EVANS.

ELLIOTT, RICHARD
Richard E. GEIS.

ELLIOTT, SUMNER LOCKE
(1917-1991) Australian-born playwright, tv scriptwriter and novelist, resident in the USA from 1948, becoming a US citizen. Several of his novels, many of which have Australian settings, have been televised. His novel Fairyland (1988) is about growing up gay in Australia. His only sf is Going (1975), about life and love in a slightly DYSTOPIAN future in which euthanasia at age 65 is compulsory. The heroine, close to this age, reflects on her life. [PN]

ELLIS, ALBERT C(HARLES)
(1947-) US writer who began publishing sf with "Fire in the Sky" in Vertex in 1974, and who subsequently wrote two modest but readable sf adventures, Death Jag (dated 1979 but 1980) with Jeff Slaten, and Worldmaker (1985). [JC]

ELLIS, CRAIG
House name used 1940-43 in AMZ by David Vern (David V. REED) and Lee Rogow. [JC]

ELLIS, D.E.
(? -) UK writer briefly active in the early 1960s with "Stress" for NW in 1961 and the routine A Thousand Ages (1961). [JC]

ELLIS, EDWARD S(YLVESTER)
(1840-1916) US teacher, editor and author of boys' books, popular history, miscellaneous work and a very large number of US dime novels, mainly Westerns, under his own name and many pseudonyms. His enormous bibliography, though studied exhaustively by Denis Rogers (in various issues of Dime Novel Round-Up), remains unsettled. ESE established the dime novel as a commercial field with Seth Jones (1860), and instigated DIME-NOVEL SF through his adaptation of the historical Newark Steam Man into a Western: The Steam Man of the Prairies (1868; vt The Huge Hunter, or The Steam Man of the Prairies 1876; vt Baldy's Boy Partner, or Young Brainerd's Steam Man 1888); sf soon became one of the popular dime-novel genres. ESE's use of the Steam Man (not a ROBOT, simply a man-shaped mobile steam engine which cannot go into reverse) was uninspired, with little recognition of the potential of the device. The Steam Man has been conveniently reprinted in E.F. BLEILER's Eight Dime Novels (anth 1974) with a full introduction to the field. Of ESE's huge body of work, a few others are of some interest: Land of Mystery (1889), a lost-race (LOST WORLDS) tale, The Monarch of the Air (1907), a fantastic aeronautics story as by Seward D. Lisle (an anagram pseudonym), and The Dragon of the Skies (1915 UK). [EFB/JC]See also: EDISONADE; HISTORY OF SF.

ELLIS, T(HOMAS) MULLETT

(1850-1919) UK poet and writer whose sf novel, *Zalma* (1895), features the protracted NEAR-FUTURE attempts of the eponymous wrong-side-of-the-bed Russian-Spanish princess to revenge herself on the heir to the throne of England, who has for unclear reasons swiftly annulled their morganatic marriage. Anthrax-bearing balloons are brought into play, and the tale closes on a possible Europe-wide socialist upheaval. [JC]See also: WEAPONS.

ELLISON, HARLAN (JAY)

(1934-) US writer, the most controversial and among the finest of those writers associated with sf whose careers began in the 1950s. He was born and raised in Ohio, attending Ohio State University for 18 months before being asked to leave, one of the reasons for his dismissal being rudeness to a creative-writing professor who told him he had no talent. HE had already become deeply involved in Cleveland fandom, producing material for and later taking over the Cleveland SF Society's magazine, *Science-Fantasy Bulletin* (later *Dimensions*). In a profile contributed to the FSF Special Harlan Ellison Issue (July 1977), Robert SILVERBERG, his near contemporary, vividly portrayed the young HE as insecure, physically fearless, extraordinarily ambitious and hyperkinetic, dominating any room he entered. Much the same could be said about the short stories which made him famous (initially in sf circles, later outside them) and won him a remarkable number of awards - 7 HUGOS and 3 NEBULAS - for these tales have almost unfailingly reflected and magnified their author's character and concerns. By 1955 HE was in New York, living in the same rooming house as Silverberg and producing numerous stories. His first professional sf appearance came early in 1956 with "Glowworm" for *Infinity Science Fiction*, and he soon began to publish very prolifically indeed, with well over 150 stories and pieces in a variety of genres by the end of 1958. Much of this initial production is coarse and derivative, mixing strong early influences like Nelson Algren (1909-1981) with models derived from successful magazine writers of the time. In these years, HE used a number of pseudonyms: in fanzines, Nalrah Nosille; for short stories in crime, sex and other genre magazines, Sley Harson (in collaboration with Henry SLESAR), Landon Ellis, Derry Tiger, Price Curtis and Paul Merchant; in sf magazines the house names Lee ARCHER (one story), E.K. JARVIS (one story) and Clyde MITCHELL (one story) and the personal pseudonyms Jay Charby, Wallace Edmondson, Ellis Hart, Jay Solo and, from 1957, Cordwainer Bird, a name which after 1964 he used to designate material that (generally through conflict with tv producers) he partially disclaimed. Not long after reaching New York, HE assumed a false identity and ran as a member of a gang from Red Hook, Brooklyn, called the Barons. This 10-week stint gained him material which he used directly in the first of his infrequent novels, *Rumble* (1958; vt *Web of the City* 1975), which early demonstrated, in the vigour and violence of its urban imagery, the ambivalent hold of the city on his imagination. HE is one of the relatively few writers of his generation to deal constantly and impassionedly with the turbulent complexities of the modern US city (an engagement furthered in sf, decades later, by the CYBERPUNK movement). More material drawn from contemporary urban life may be found in *The Deadly Streets* (coll 1958; exp 1975), *The*

Juivies (coll 1961), Gentleman Junkie and Other Stories of the Hung-up Generation (coll 1961; rev 1975) and Rockabilly (1961; rev vt Spider Kiss 1975), as well as in the autobiographical street-gang study Memos from Purgatory: Two Journeys of Our Times (1961). None of this material is technically sf, but HE has consistently deprecated the making of distinctions between generic and non-generic writing in his own works. After serving in the US Army, HE moved to Chicago in 1959 as editor of Rogue Magazine, where later he was also involved in the creation of Regency Books. By 1962 he was in Los Angeles, where he has remained. During this time, while continuing to write for many markets, he was beginning to establish a maverick reputation within sf, though his first sf books - The Man with Nine Lives (fixup 1960 dos) and A Touch of Infinity (coll 1960 dos) - display an uneasy conformity to the constraints of late-1950s magazine sf. Ellison Wonderland (coll 1962; vt Earthman, Go Home 1964; with new introduction and with "The Forces that Crush" deleted and "Back to the Drawing Boards" added, rev 1974; rev 1984) is likewise uneasy, containing stories whose conventional premises are shaken apart by the violent rhetoric of their telling. HE was still very much feeling his way; of major sf writers, he was among the earliest to find his voice - raw thrusts of emotion rattle even the most "commercial" of his early stories - but among the slowest to find forms and markets through which to project it. After much struggle, by 1963 HE had established himself as a successful tv writer, contributing scripts to such series as Route 66, The Alfred Hitchcock Hour and The Untouchables, with considerable work for Burke's Law as well as two scripts for The OUTER LIMITS in 1964 - one of these, "Demon with a Glass Hand" (1964), won the Writers' Guild of America Award for Outstanding Script - two scripts for The MAN FROM U.N.C.L.E. in 1966-7, and a STAR TREK episode, "The City on the Edge of Forever" (1967), which won a Hugo for Best Dramatic Presentation in 1967 and a Writers' Guild of America Award for Most Outstanding Script, Dramatic Episode, of 1967-8. A later foray into tv - his attempt to create a series based on the concept of a GENERATION STARSHIP - was something of a fiasco. The series, The STARLOST, was Canadian-made and lasted only one season, 1973; and so many changes were made to HE's original concept that he disowned the programme, signing the pilot episode Cordwainer Bird. The original script (not the one filmed) received a Writers' Guild of America Award for Best Dramatic Episode Script (HE is the only scenarist to have won the award three times), and was later novelized as Phoenix without Ashes * (1975) with Edward BRYANT. A thinly disguised account of the whole affair formed the plot of a roman a clef by Ben BOVA, The Starcrossed (1975). More recently, HE served as creative consultant for the first season of the revived The TWILIGHT ZONE. In the introduction and ancillary material appended to I, Robot: The Illustrated Screenplay (1987 IASFM; rev 1994) with Isaac ASIMOV, he recounts in considerable detail a later imbroglio with Hollywood filmmakers, though the screenplay itself makes clear how difficult it would have been to translate Asimov's archaic concepts - including the exploration of the solar system by mannish though obedient robots - onto the contemporary screen. At around the same time that he began his tv career, HE began publishing the short stories that have made his name. Many of them appear in his books of the late 1960s: Paingod and Other Delusions (coll 1965; with "Sleeping Dogs" added exp 1975) and I

Have No Mouth ? rev 1983), both assembled as *The Fantasies of Harlan Ellison* (omni 1979); *From the Land of Fear* (coll 1967); *Love Ain't Nothing but Sex Misspelled* (coll 1968; with 9 stories removed and an intro, 1 story and 2 articles added 1976), which mixes sf and non-sf, though the 2nd edn retains mainly non-genre material; *The Beast that Shouted Love at the Heart of the World* (coll 1969; with "Along the Scenic Route", "The Place with no Name" and "Shattered Like a Glass Goblin" cut 1976 UK), the US edition being a corrupt text; and *Over the Edge: Stories from Somewhere Else* (coll 1970). *Alone Against Tomorrow: Stories of Alienation in Speculative Fiction* (coll 1971; UK edn in 2 vols as *All the Sounds of Fear* 1973 and *The Time of the Eye* 1974, the latter containing new intro) represents HE's first attempt (of several) to re-sort his material, and provides a good summary of his best 1960s work. Further attempts at sorting include *Approaching Oblivion: Road Signs on the Treadmill toward Tomorrow* (coll 1974), which contains a moving autobiographical analysis of the roots of his writing; and the superb *Deathbird Stories: A Pantheon of Modern Gods* (coll 1975; rev 1984), which reassembles many of his best stories into a kind of cycle about Man's relation to the GODS and horrors within and without him. ("Pretty Maggie Moneyeyes", maybe his most moving tale, is again reprinted here, finding at last a fit context. This story of the quasidelusional rapport between a gambler and a female spirit trapped within a slot machine definitively expresses what might be called an Ellisonian pathos about the sadness and rage of men and women, lovers, victims, users: solitaries all, in a gashed world.) But *Deathbird Stories* was not a true retrospective, and the confusion caused by the release of many and frequently revised titles, often with overlapping contents, was cleared up only with the publication of *THE ESSENTIAL ELLISON: A 35-YEAR RETROSPECTIVE* (coll 1987; rev 1991), a huge and gripping overview of his entire career. From the mid-1960s on, HE began to amass a large number of Hugos and Nebulas: both were awarded in 1966 for "Repent, Harlequin!" Said the Ticktockman" (1965), later published with James STERANKO as "Repent, Harlequin!" Said the Ticktockman (graph 1978 chap); a 1968 Hugo (Short Story) for "I Have No Mouth, and I Must Scream" (1967), a most scarifying expression of the true dehumanizing consequences of nuclear war; a 1969 Hugo (Short Story) for "The Beast that Shouted Love at the Heart of the World" (1968); a 1974 Hugo (Best Novelette) for "The Deathbird" (1973); and a 1969 Nebula (Best Novella) for "A Boy and his Dog" (1969). This last was made into a successful film (A BOY AND HIS DOG), itself awarded a 1976 Hugo, shared by HE, for Best Dramatic Presentation. He also won a 1975 Hugo for Best Novelette for "Adrift Just off the Islets of Langerhans, Latitude 38deg 54' N, Longitude 77deg 00' 13" W", an Edgar from the Mystery Writers of America for "The Whimper of Whipped Dogs" (1973), a 1978 Nebula and Hugo for Best Short Story for "Jeffy is Five" and a 1986 Hugo for Best Novelette for "Paladin of the Lost Hour" (1985). It was during these prime years that HE also began editing his famous series of NEW-WAVE sf ANTHOLOGIES with *DANGEROUS VISIONS* (anth 1967; vt in 3 vols *Dangerous Visions* #1 1969, #2 1969 and #3 1969) and *Again, Dangerous Visions* (anth 1972; vt in 2 vols *Again, Dangerous Visions I* 1973 and *II* 1973); these books were striking for the general excellence of their contents and for the extensive, deeply personal annotations supplied by HE. For this success - and self-exposure

- he was to pay. A third volume, *The Last Dangerous Visions*, was announced at the start of the 1970s but still (1995) awaits publication. A series of illnesses impaired HE's fitness for the huge task of annotating what had soon become an enormous project; and an inherent stubbornness seemed to prevent him from closing the enterprise down after its time - the high tide of the 1960s New Wave movement, created in part by the first volume of the series - had inevitably passed. For several years, HE had in addition to his fiction and his screenwriting activities begun to produce a considerable body of nonfiction - essays, reviews, polemics, culture cartoons, memoirs. Much of this material has now been published in book form. *The Glass Teat: Essays of Opinion on the Subject of Television* (coll 1970) and *The Other Glass Teat* (coll 1975) engage trenchantly with their subject; *Sleepless Nights in the Procrustean Bed* (coll 1984) collects general essays, as does *An Edge in My Voice* (coll 1985), both containing severe assaults on hypocrisies of government (and individuals); Harlan Ellison's *Watching* (coll 1989) contains film criticism; and *The Harlan Ellison Hornbook* (coll 1990) is a sequence of sometimes fairly ratty confessional essays. From about 1970, though the quality of his work was by no means inferior, HE began to publish markedly fewer stories; and from about 1980 an understandable inclination to cultural melancholia began to be noticed. New titles, some as distinguished as anything from earlier decades, were assembled in *Strange Wine* (coll 1978), *Shatterday* (coll 1980), *Stalking the Nightmare* (coll 1982), *Angry Candy* (coll 1988) and *Mind Fields: The Art of Jacek Yerka/The Fiction of Harlan Ellison* (coll 1994), generating a sense of the painful maturity of an author passionately engaged not only with himself - an engagement whose dangerous allure he has never denied - but with the essential gestures of rage and love and self-betrayal that mark our species. He has increasingly engaged his large energies as a writer in creating parable after parable - only some of them couched in anything like a conventional sf idiom - that illuminate the late years of the century, sometimes luridly, always with a genuine and redeeming pain. For all the scattershot rawness of his wilder work, at the end of the day - as *All the Lies that Are My Life* (1980) and *Mefisto in Onyx* (1993) tormentedly expose - HE is a representative speaker of the things that count. [JC] Other works: *Sex Gang* (1959) as by Paul Merchant; *Doomsman* (1958 *Imagination Science Fiction* as "The Assassin"; 1967 chap dos); *Partners in Wonder: Harlan Ellison in Collaboration with . . .* (coll 1971), collaborations with various writers; *No Doors, No Windows* (coll 1975); *The City at the Edge of Forever* * (graph 1977), a *Star Trek* fotonovel; *The Illustrated Harlan Ellison* (graph coll 1978); *The Book of Ellison* (anth 1978) with Andrew PORTER, publication of which HE claims was "unauthorized"; *Medea: Harlan's World* (anth 1985), one of the earlier SHARED-WORLD anthologies, and perhaps the best; *Night and the Enemy* (graph 1987) with Ken Steacy; *Eidolons* (1988 chap); *Footsteps* (1989 chap); *Vic and Blood: The Chronicles of a Boy and His Dog* (graph coll of linked stories 1989) with Richard CORBEN; *Run for the Stars* (1957 *Science Fiction Adventures*; rev 1991 chap dos), in a TOR BOOKS Double published in anthology format; *Dreams with Sharp Teeth* (omni 1991) containing *I Have No Mouth and I Must Scream*, *Deathbird Stories* and *Shatterday*, all texts corrected. About the author: *FSF Special Harlan Ellison Issue* (July 1977); *Harlan Ellison: Unrepentant Harlequin* by George Edgar SLUSSER (1977);

Harlan Ellison: A Bibliographical Checklist (1973; 2nd edn in Fantasy Research ?

the latter title is unusually thorough and comprehensive and, given its coverage of HE's intensely productive early years, remains useful. ELMORE, ERNEST (CARPENTER)

(1901-1957) UK actor and writer, author of about 30 detective novels as John Bude. In *The Steel Grubs* (1928) a Dartmoor convict finds some ALIEN eggs, which hatch into ferrophage grubs that eat first the iron bars of his cell and then much of First Industrial Revolution England. *This Siren Song* (1930) features some MCGUFFIN inventions. *The Lumpton Gobelings* (1954), his most famous title, describes an invasion by Little People of the village of Lumpton, scandalizing the villagers. [JC]

ELOUS, MARV

Robert E. VARDEMAN.

ELPHINSTONE, MARGARET

(1948-) Scottish writer of at least two gardening books who began publishing sf with "Spinning the Green" in *Despatches from the Frontiers of the Female Mind* (anth 1985) ed Jen Green and Sarah LEFANU. Her sf sequence, the *Incomer* series - *The Incomer* (1987) and *A Sparrow's Flight* (1989) - applies a FEMINIST perspective to the post- HOLOCAUST story of the arrival of a wandering musician in a far-northern village and his winter-long residence there, and to further examinations of the post-patriarchal, post-technological world that is slowly revealed. [JC] Other Works: *An Apple from a Tree* (coll 1991), fantasies.

EL SALVADOR

LATIN AMERICA.

ELSTAR, DOW

[s] Raymond Z. GALLUN.

ELTON, BEN

Working name of UK tv comedian, playwright and novelist Benjamin Charles Elton (1959-), well known for the contumely of his stand-up verbal SATIRE. His first sf novel, *Stark* (1989), is set in a NEAR-FUTURE Australia threatened by a typical late-20th-century entrepreneur, and by the END OF THE WORLD through POLLUTION, which the industrialists responsible hope to evade by leaving the planet to its victims - us. In "Gasping: the Play" (1990), a UK corporation, after oxygen is privatized,

sells "designer air." Gridlock (1991) less successfully dramatizes a sudden UK-wide traffic jam; This Other Eden (1993), also set in the near future, tends to recapitulate earlier themes. [JC]See also:
TRANSPORTATION.

ELWOOD, ROGER

(1933-) US editor who produced a number of reprint ANTHOLOGIES in the 1960s, mostly in collaboration with Vic Ghidalia (1926-) or Sam MOSKOWITZ, and who burst into prominence in the early 1970s when, with indefatigable salesmanship, he sold a huge number of ORIGINAL ANTHOLOGIES -about 80 in all (including a number of short books for young children), according to his claim - to a variety of publishers. At one time it was estimated that RE alone constituted about a quarter of the total market for sf short stories, and such dominance led to criticism of his restrictions on the free use of SEX and RELIGION as themes. Notable among his many anthologies were: Future City (anth 1973); Saving Worlds (anth 1973; vt The Wounded Planet 1974) with Virginia KIDD; the Continuum sequence, whose 4 vols -Continuum #1 (anth 1974), #2 (anth 1974), #3 (anth 1974) and #4 (anth 1975) - featured 8 different 4-part series; and Epoch (anth 1975) with Robert SILVERBERG. Collections ed RE included The Many Worlds of Poul Anderson (coll 1974) and The Many Worlds of Andre Norton (coll 1974). RE was also responsible for the short-lived magazine ODYSSEY, the LASER BOOKS series of sf adventures from Canada, and Starstream Comics (1976). Later, as the oversaturated anthology market contracted, he diversified into editing the sf lines of various publishers - Bobbs-Merrill, Pinnacle and Pyramid, in addition to Laser. As a devout Christian, RE also wrote evangelical and inspirational works, and in the late 1980s several novels that were similarly inspirational, including the Angelwalk sequence - Angelwalk: A Modern Fable (1988) and Fallen Angel (1990) - and some singletons: The Christening (1989), The Frankenstein Project (1991), Wise One (1991) and Darien: Guardian Angel of Jesus (1994). [MJE/JC]Other works (as editor): Alien Worlds (anth 1964) and Invasion of the Robots (anth 1964), both ghost-edited by Sam Moskowitz; Strange Signposts (anth 1966); The Human Zero (anth 1967) with Moskowitz; The Time Curve (anth 1968); Alien Earth (anth 1969) with Moskowitz; Other Worlds, Other Times (anth 1969) with Moskowitz; The Little Monsters (anth 1969) and More Little Monsters (anth 1973), both with Vic Ghidalia; Beware the Beasts (anth 1970) with Ghidalia; The Horror Hunters (anth 1971) with Ghidalia; Young Demons (anth 1971) with Ghidalia; Signs and Wonders (anth 1972); And Walk Now Gently through the Fire (anth 1972); The Venus Factor (anth 1972) with Ghidalia; Androids, Time Machines and Blue Giraffes (anth 1973) with Ghidalia; Demon Kind (anth 1973); Frontiers I: Tomorrow's Alternatives (anth 1973) and Frontiers II: The New Mind (anth 1973); Monster Tales: Vampires, Werewolves and Things (anth 1973); Omega (anth 1973); The Other Side of Tomorrow (anth 1973); Science Fiction Adventures from Way Out (anth 1973); Science Fiction Tales: Invaders, Creatures and Alien Worlds (anth 1973); Showcase (anth 1973); Strange Things Happening (anth 1973); Children of Infinity (anth 1973); Future Quest (anth 1973); Flame Tree Planet: An Anthology of Religious Science-Fantasy (anth 1973); Ten Tomorrows (anth 1973); The Berserkers (anth 1974); Chronicles of a Comer (anth 1974); Crisis (anth 1974); The Extraterrestrials (anth 1974);

Future Kin (anth 1974); Horror Tales: Spirits, Spells and the Unknown (anth 1974); The Graduated Robot and Other Stories (anth 1974); The Learning Maze (anth 1974); More Science Fiction Tales: Crystal Creatures, Bird-Things and other Weirdies (anth 1974); Survival from Infinity (anth 1974); The Far Side of Time (anth 1974); The Long Night of Waiting (anth 1974); Strange Gods (anth 1974); Vampires, Werewolves, and Other Monsters (anth 1974); Beware More Beasts (anth 1975) with Ghidalia; Dystopian Visions (anth 1975); Future Corruption (anth 1975); The Gifts of Asti (anth 1975); In the Wake of Man (anth 1975); Tomorrow: New Worlds of Science Fiction (anth 1975); The 50-Meter Monsters and Other Horrors (anth 1976); Visions of Tomorrow (anth 1976); Futurelove (anth 1977) ed anon, perhaps because it dealt in part with sexual matters; A World Named Cleopatra (anth 1977); Spine-Chillers: Unforgettable Tales of Terror (anth 1978) with Howard GOLDSMITH For younger children (ed anon): The Graduated Robot (anth 1973 chap); Adrift in Space (anth 1974 chap); Journey to Another Star (anth 1974 chap); The Killer Plants (anth 1974 chap); The Mind Angel (anth 1974 chap); The Missing World (anth 1974 chap); Night of the Sphinx and Other Stories (anth 1974 chap); The Tunnel (anth 1974 chap). See also: CHILDREN IN SF; COMICS; SHARED WORLDS; TABOOS; THEATRE.

ELY, DAVID

Working name of US journalist and writer David Eli Lilienthal (1927-), perhaps best known for such psychological thrillers as *The Tour* (1967). Some of the stories in *Time Out* (coll 1968) contain fantasy elements. His first sf novel, *Seconds* (1963), had some initial success and was made into the John FRANKENHEIMER film *SECONDS* (1966), financed by and starring Rock Hudson (1925-1985). Both book and film revolve around an organization which transforms middle-aged men into young, Rock-Hudson-like he-men. At first the change is exciting, but soon the nightmares start. The protagonist of DE's second sf novel, *A Journal of the Flood Year* (1992), discovers that a huge wall designed to reclaim part of the American continental shelf from the Atlantic has begun to leak, but the rigidly stratified world, of which the wall is a potently rendered symbol, attempts to block any awareness of the oncoming and inevitable *DISASTER*. [JC] See also: *PSYCHOLOGY*.

EMBRYO

Film (1976). Cine Artists. Dir Ralph Nelson, starring Rock Hudson, Diane Ladd, Barbara Carrera, Roddy McDowall. Screenplay Anita Doohan, Jack W. Thomas, based on a story by Thomas. 105 mins. Colour. In this variation on the *FRANKENSTEIN* theme, a scientist (Hudson), while experimenting on a premature foetus with a growth hormone, creates in weeks a fully developed 25-year-old woman (Carrera). She has a virtually blank mind, and the scientist, like *Pygmalion*, moulds her personality and introduces her into society. The result is an intelligent but morally crippled creature whom he ultimately destroys. Despite its modern hardware, the film is really a reworking of the old *GOTHIC* theme - as in the German silent films *HOMUNCULUS* (1916) and *ALRAUNE* (1928) - about the basic evil of beings who are created by unnatural means and are therefore without souls. It is not a good film. The novelization is *Embryo* * (1976) by Louis CHARBONNEAU. [JB/PN]

EMECHETA, (FLORENCE ONYE) BUCHI

(1944-) Nigerian-born writer, in the UK from 1962, author of a number of semi-autobiographical novels which vividly describe the lives of African women in the industrial UK during the years of its decline. *The Rape of Shavi* (1983), set in the NEAR FUTURE, describes the effect upon the African country of Shavi when a horde of refugees from a European nuclear HOLOCAUST descends like locusts. *Kehinde* (1994) is a fantasy. [JC]

EMERSON, WILLIS GEORGE

(1856-1918) US writer, mostly of Westerns, whose lost-race (LOST WORLDS) novel *The Smoky God, or A Voyage to the Inner World* (1908) is set in a HOLLOW-EARTH Eden, on the John Cleves SYMMES model, where a race of long-lived giants worships the interior sun.[JC]

EMPIRE STRIKES BACK, THE

Film (1980). Lucasfilm/20th Century-Fox. Executive prod George LUCAS. Dir Irvin Kershner, starring Mark Hamill, Harrison Ford, Carrie Fisher, Billy Dee Williams, Frank Oz. Screenplay Leigh BRACKETT, Lawrence Kasdan, based on a story by Lucas. 124 mins. Colour. A first viewing of this blockbuster sequel to *STAR WARS* (1977) sweeps the viewer along with the colour and spectacle of its various space-opera venues: frozen and swampy planets, hide-and-seek among asteroids, and a climax in the sky station of Cloud City. A repeated screening reveals its weakly episodic nature, where heroic freedom fighters struggle repetitively against the Galactic Empire. Luke Skywalker (Hamill) is coached in spiritual control by a green puppet, Yoda, operated by Frank Oz of tv's *Muppets*, in a sequence more banal than metaphysical. After too much pointless action and not enough character exploration, a genuine mythic (and Freudian) charge is belatedly evoked when evil Darth Vader reveals himself during a duel with good Luke to be his father, and in one or two scenes we are allowed to recognize in Luke a potential for harm, lending the film a much needed moral complexity. Brackett was dying of cancer as she drafted the script (she received a posthumous HUGO for it), which was heavily revised by Kasdan, but nevertheless and despite its faults *TESB* retains distant echoes of the florid and witty grandeur of her own *SPACE OPERAS*. The Star Wars trilogy was completed with *The RETURN OF THE JEDI* (1983). A book about the film is *Once Upon a Galaxy: A Journal of the Making of The Empire Strikes Back* (1980) by Alan Arnold (1922-). The novelization is *The Empire Strikes Back ** (1980) by Donald F. GLUT. [PN]

EMSH, ED

Ed EMSHWILLER.

EMSHWILLER, CAROL (FRIES)

(1921-) US writer who began to publish sf with "This Thing Called Love" for *Future* in 1955. She was married from 1949 to Ed EMSHWILLER, with whom she occasionally collaborated; but from the beginning of her career the razor-sharp exactness of her language and the subversive power of the themes she expressed with such dangerous precision have marked her as a unique voice. Though she published much of her early work in *FSF*, and later in Damon KNIGHT's *ORBIT* and similar anthologies, she has never been identified as a GENRE-SF writer. Her language is too much in the

foreground for that; and the unrelenting clarity with which she deconstructs the narrative and thematic conventions central to the genre (FABULATION) has disqualified almost all of her stories from being read simply as tales. In her hands, sf conventions become models of our deep estrangement from ourselves (especially women; WOMEN AS PORTRAYED IN SCIENCE FICTION) and from the world. Early stories can be found in Joy in Our Cause (coll 1974). Verging on the Pertinent (coll 1989) assembles corrosively elegant non-genre work. THE START OF THE END OF IT ALL (coll 1990 UK; rev 1991 US) collects stories as close to sf or fantasy as she is likely to compose. CE's first novel, Carmen Dog (1988 UK), is a FEMINIST fable which draws obvious but very deftly pointed lessons from the transformation of women into dogs and dogs into women. [JC]Other works: Venus Rising (1992 chap).

EMSHWILLER, ED

Working name of US illustrator and film-maker Edmund Alexander Emshwiller (1925-1990); he often signed his sf artwork "Emsh". He studied art at the University of Michigan, the Ecole des Beaux Arts in Paris, and the Art Students League in New York. Astonishingly prolific, Emsh did cover and interior art, beginning with Gal in 1951, for more than two dozen magazines including AMZ, FSF (which he dominated through the 1950s) and Startling Stories, along with hundreds of book covers, both hardback and paperback; his work for ACE BOOKS alone would have made his reputation. He and Frank Kelly FREAS were the undisputed rulers of the sf-art realm during the 1950s and early 1960s, and among the few sf artists of the time able to make a decent living from their work. EE shared the first HUGO for Best Cover Artist with Hannes BOK in 1953; he won further Hugos in 1960, 1961, 1962 and 1964; the only other cover artists to win Hugos in that period were Freas and Roy G. KRENKEL. EE also painted abstract expressionist canvases for gallery exhibition and worked in experimental 16mm movie-making. Dance Chromatic (1959), his first film, and Thanatopsis (1962) are still remembered. He turned to full time moviemaking in 1964, thereafter doing only occasional sf artwork as a favour to friends. His 38min Relativity (1966) is regarded by many critics as one of the greatest short films ever made. This second career was notably distinguished, the Museum of Modern Art being one of many bodies to recognize its importance. In 1971 he began working with videotape, then a very new medium; and he was artist-in-residence at the Television Laboratory, WNET/13 in New York, winning yet more awards. He later (1981-6) became provost of the School of Film and Video at the California Institute of the Arts. EE was married to Carol EMSHWILLER. As an sf artist, EE worked fast and skilfully, seeming equally at home in every sf illustrative mode, whether dramatic, symbolic or humorous. His style was vigorous but polished-seeming, though his actual lines (especially in interior artwork) tended to be rough, assured and full of character. While there is no denying his talent, he may have worked too speedily: from the perspective of the 1990s, little of his sf artwork seems especially memorable, and nobody then or now seems to have bothered to produce a book of his work. But in the 1950s he represented a definite step up from the colourful crudeness of most ILLUSTRATION for the PULP MAGAZINES. [JG/PN]See also: ASTOUNDING SCIENCE-FICTION; GALAXY SCIENCE FICTION.

EMTSEV, MIKHAIL (TIKHONOVICH)

(1930-) Russian scientist and writer whose most significant work has been accomplished in collaboration with Eremai PARNOV, also a trained scientist. They began their career with HARD-SF stories in 1961, publishing titles like *Uravneniie s Blednogo Neptuna* (coll 1964; title story trans Helen Saltz Jacobson as "The Pale Neptune Equation" in *New Soviet Sf*, anth 1979 US), *Padeniie Sverkhnovoi* ["The Fall of the Supernova"] (1964), *Zelenaia Krevetka* ["The Green Shrimp"] (1965), *Tri Kvarka* ["Three Quarks"] (1969) and others. "Vozvratite Liubov!" (1966; trans Arthur Shkarovsky as "Bring Back Love" in *Everything but Love* anth 1973 Russia) was a remarkable first (and accurate) prediction of the neutron bomb. In *More Diraka* ["The Dirac Sea"] (1967) the scientist's moral responsibility is discussed, while *Dusha Mira* (1964; trans Antonina W. Bouis as *World Soul* 1978 US) combines Frankensteinian horrors with detailed speculation on the collective consciousness. Their most sophisticated novel, *Klotchia T'my Na Igle Vremeni* ["Turfs of Darkness on the Needle of Time"] (1970), is a TIME-TRAVEL fantasy with, as protagonist, a historian engaged in the study of all "reincarnations" of fascism through the ages. EP and Parnov discontinued their partnership in 1970. [VG]See also: HIVE-MINDS.

ENCINO MAN

Film (1992; vt California Man). Hollywood Pictures/Touchwood Pacific Partners I/Warner Bros. Prod George Zaloom, dir Les Mayfield, starring Sean Astin, Brendan Fraser and Pauly Shore. Screenplay Shawn Schepps, based on a story by Schepps and Zaloom. 88 mins. Colour.Limp version of the old story of the caveman who is dug up and resuscitated, as previously seen in *TROG* (1970), *SCHLOCK* (1973) and *ICEMAN* (1984) among others; see also *APES AND CAVEMEN*. This made-for-teenagers movie, clearly calculated to appeal to the same audience as that for *BILL* ?

ADVENTURE (1989) and *Wayne's World*(1992), portrays two high-school nerds who dig up a frozen cave man (Fraser) after an earthquake disturbs the soil in a swimming-pool excavation, thaw him, and enrol him at their school (after a wash and haircut) as a "Lithuanian" friend. The cave man's simple high spirits win him many friends, and the high-school hard man is publicly humiliated by him. The film's various attempts at satire are uninventive. The second nerd (Shore), however, is always amusing, largely because of the vigour of his esoteric teen vocabulary. [PN]

ENCOUNTER AT RAVEN'S GATE

INCIDENT AT RAVEN'S GATE.

ENDANGERED SPECIES

Film (1982) Alive Enterprises/MGM-UA. Dir Alan Rudolph, starring Robert Urich, JoBeth Williams, Paul Dooley, Hoyt Axton, Peter Coyote. Screenplay Rudolph, John Binder, from a story by Judson Klinger, Richard Woods. 92 mins. Colour.This exploitation movie, made in the wake of sensationalist reports emerging from rural areas of the US Midwest about mutilated cattle, features a vacationing New York detective (Urich) uneasily teaming with a local woman sheriff in Colorado (Williams), first to investigate dead cattle falling from the sky and later to probe the roles of local

conservative extremists and a paramilitary group. The explanation is nerve-gas testing, part of a rightwing conspiracy with implied official backing. This is a post-Watergate PARANOIA movie made by a well regarded director who did rather better in other films. [PN]

END OF AUGUST AT THE HOTEL OZONE, THE KONEC SRPNA V HOTELU OZON.

END OF THE WORLD

Together with UTOPIAS and cautionary tales, apocalyptic visions form one of the three principal traditions of pre-20th-century futuristic fantasy. Visions inspired by the religious imagination go back into antiquity (MYTHOLOGY; RELIGION), but the influence of the scientific imagination did not make itself felt in literature until the late 19th century, and the end-of-the-world theme maintained many of its religious overtones until very recently. The phrase itself has become looser in meaning; once the Comte du Buffon (1707-1788) had in Epochs of Nature (1780) popularized the notion that a whole series of "worlds" had occupied the Earth's surface, the finality of any particular end of the world became dubious. A wide spectrum, within which no firm dividing line can be drawn, extends from authentically apocalyptic visions to accounts of large-scale DISASTER; it would therefore be over-pedantic in this discussion to construe "world" as "planet". The earliest SCIENTIFIC ROMANCES of world's end were the products of Romanticism: the anti-progressive *The Last Man, or Omegarus and Syderia* (1806) by Jean-Baptiste Cousin de Grainville (1746-1805) and Mary SHELLEY's gloomy Great Plague story *The Last Man* (1826). Thomas Campbell (1777-1844) also wrote a poem on the "Last Man" theme, and Thomas Hood (1799-1845) parodied it. Plagues were to remain one of the standard literary means of depopulating the world and destroying society, but the cosmic-disaster story rapidly became a particular favourite of scientific romance. Edgar Allan POE's "The Conversation of Eiros and Charmion" (1839) is an early comet-strike story, but many more followed Camille FLAMMARION's popularization of the idea in various magazine articles of the 1890s. Notable examples include George GRIFFITH's *Olga Romanoff* (1894) and H.G. WELLS's "The Star" (1897). These are NEAR-FUTURE stories, but FAR-FUTURE stories of the ultimate end of life on Earth began to appear in the same period. Flammarion's own apocalyptic fantasy *La fin du monde* (1893-4; trans as *Omega: The Last Days of the World* 1897 US) allows the Earth to survive its brush with a comet, but leaps ahead to describe the freezing of the world when the Sun cools. Wells did likewise in *THE TIME MACHINE* (1895), and Gabriel TARDE's *Underground Man* (1896; trans 1905) imagines a much more rapid cooling. A similarly long-range view is taken in George C. WALLIS's "The Last Days of Earth" (1901). The visionary sequence in William Hope HODGSON's *The House on the Borderland* (1908) makes the death of the Earth a minor incident in a grander scheme - an implication of irrelevance which is also used with telling effect in J.D. BERESFORD's "A Negligible Experiment" (1921) and Olaf STAPLEDON's *STAR MAKER* (1937). End-of-the-world stories are frequently ambivalent, their writers often taking delight in contemplation of the destruction of everything that they hate. Robert CROMIE's *The Crack of Doom* (1895) - one of many tales of threatened apocalypses which are aborted in the nick of

time - gives the scientist who wants to put an end to the human story abundant space to present his case. Wells thought that large-scale destruction was a necessary prelude to utopian regeneration, and M.P. SHIEL's *The Purple Cloud* (1901), in which Earth is depopulated by a cloud of cyanogen gas, contrives nevertheless to end with a triumphant affirmation of the progressiveness of EVOLUTION. John DAVIDSON's "*The Salvation of Nature*" (1887) is far more cynical, as is James Elroy FLECKER's "*The Last Generation*" (1908), in which mankind accepts extinction voluntarily. 20th-century religious apocalyptic fantasies-notable among them R.H. BENSON's *Lord of the World* (1907) - tend to revel in the expectation that an imminent end of the world will put a well deserved end to apostasy and decadence. There was a dramatic resurgence of apocalyptic scientific romance after WWI, among them many bitter parables arguing that modern men and women thoroughly deserved to lose all the gifts of civilization because of their stupid inability to refrain from warfare. Notable examples include Edward SHANKS's *The People of the Ruins* (1920), Cicely HAMILTON's *Theodore Savage* (1922; rev vt *Lest Ye Die* 1928), Neil BELL's *The Seventh Bowl* (1930 as by Miles), John GLOAG's *Tomorrow's Yesterday* (1932) and J. Leslie MITCHELL's *Gay Hunter* (1934). In fictions of this subgenre the impending end of the world is often foreseen (sometimes mistakenly) by the characters involved, and there are many stories in which those armed with foresight set out to make what preparations they can (usually derided by their neighbours - but they laughed at Noah, too). Examples include *The Second Deluge* (1912) by Garrett P. SERVISS, *Nordenholt's Million* (1923) by J.J. CONNINGTON, *When Worlds Collide* (1933) by Philip WYLIE and Edwin BALMER and "*Ark of Fire*" (1937-8) by John Hawkins. There are many stories in which only a few people are able to escape atomic war, in shelters, or to escape into space when the Sun goes nova; examples include *Death of a World* (1948) by J. Jefferson FARJEON and *One in Three Hundred* (1954) by J.T. MCINTOSH. A more subtle version explores the effect on various characters of the knowledge (again sometimes mistaken) that the world will end. Early examples are William MINTO's *The Crack of Doom* (1886) and Hugh KINGSMILL's "*The End of the World*" (1924); more recent ones are "*The Last Night of the World*" (1951) by Ray BRADBURY, "*The Last Day*" (1953) by Richard MATHESON and *On the Beach* (1957) by Nevil SHUTE. The early sf PULP MAGAZINES featured numerous luridly bleak visions of the end of the human race, and of the Earth itself, including Donald WANDREI's "*The Red Brain*" (1927), Amelia Long's "*Omega*" (1932) and L.H. Morrow's "*Omega - The Man*" (1933), but such stories appeared alongside others which were confident that mankind could outlast the Earth, if necessary, and need not be unduly troubled by the prospect of its end - a notion rarely met outside the magazines, although a notable exception is J.B.S. HALDANE's "*The Last Judgment*" (1927). Humanity lives on beyond the death of Earth in John W. CAMPBELL Jr's "*Voice of the Void*" (1930) and Arthur C. CLARKE's supremely smug "*Rescue Party*" (1946) - but Campbell also wrote stories in which mankind became extinct and Clarke's "*The Nine Billion Names of God*" (1953) makes an apocalyptic joke out of the smugness of Western Man. The theme continued to evoke mixed emotions no matter what new twists were given to it. Edmond HAMILTON's "*Requiem*" (1962) is a poignant story which regrets the commercial exploitation of the Earth's death as a spectacular tv show for

a Galaxy-wide audience. The idea that we might easily destroy ourselves and our world as our WEAPONS of war become ever more powerful gained ground steadily throughout the 1920s and 1930s. The atomic bomb in H.G. Wells's *The World Set Free* (1914) is fairly feeble, but the one in Harold NICOLSON's *Public Faces* (1932) is more like the real thing. The "ultimate deterrent" or "Doomsday weapon" was introduced (and used) in *The Last Man* (1940; vt *No Other Man*) by Alfred NOYES. Such anxiety became extreme in Alfred BESTER's "Adam and No Eve" (1941), in which atomic destruction requires evolution to begin all over again in the sea. After Hiroshima the possibility of imminent atomic holocaust was clear to everyone, and lent new pertinence to apocalyptic thinking. It seemed entirely likely that the world would end with a bang and not a whimper after all, despite the broad sexual pun in the title of Damon KNIGHT's last-man-meets-last-woman story, "Not with a Bang" (1950). Notable examples of atomic- HOLOCAUST stories include *Shadow on the Hearth* (1950) by Judith MERRIL, *The Long Loud Silence* (1952) by Wilson TUCKER and *Level 7* (1959) by Mordecai ROSHWALD. The depth of the anxiety is perhaps better reflected by SATIRES and black comedies than by earnest speculation; notable examples of bitterly ironic apocalypses include Ward MOORE's *Greener than You Think* (1947), L. Sprague DE CAMP's "Judgment Day" (1955), Kurt VONNEGUT Jr's *Cat's Cradle* (1963) and Peter GEORGE's *Dr Strangelove* (1963). Fritz LEIBER's ironically despairing vignettes, including "A Pail of Air" (1951), "The Moon is Green" (1952) and "A Bad Day for Sales" (1953), are particularly effective in combining poignancy with irony. The urgency of the anxiety is reflected also in bleakly downbeat stories whose nihilistic temper is most unusual for a pulp-descended genre; examples include Robert A. HEINLEIN's "Year of the Jackpot" (1952), E.C. TUBB's "Tomorrow" (1954) and Robert SILVERBERG's "Road to Nightfall" (1958). The post-WWII decade also produced sf's boldest novel about the end of the Universe: James BLISH's *The Triumph of Time* (1958; vt *A Clash of Cymbals*). This pattern of ironic despair, bitter satire and grimly pessimistic "realism" extended into the 1960s and 1970s, when many more causes for the sense of imminent doom were popularized, including OVERPOPULATION and POLLUTION. Notable apocalyptic black comedies from this period include *The Genocides* (1965) by Thomas M. DISCH and "The Big Flash" (1969) by Norman SPINRAD. "When We Went to See the End of the World" (1972) by Robert Silverberg is more slickly ironic. A savage sense of despair is evident in "We All Die Naked" (1969) by James Blish and in *The End of the Dream* (1972) by Philip Wylie. A note of ironic innovation was struck by Poul ANDERSON's *After Doomsday* (1962), the first ever whodunnit in which the Earth itself is the murder victim; equally ironic in its own way is the ingenious "Inconstant Moon" (1971) by Larry NIVEN, in which a sudden increase in the Moon's brightness reveals to those who can deduce its meaning that the Sun has gone nova and that dawn will bring destruction. The increasing familiarity and plausibility of the idea of an imminent apocalypse has promoted the production of surreal apocalyptic visions both inside and outside the genre. Examples include the title story of *Up and Out* (coll 1957) by John Cowper POWYS, *Ice* (1967) by Anna KAVAN, both stories in *Apocalypses* (coll 1977) by R.A. LAFFERTY, *God's Grace* (1982) by Bernard MALAMUD and *Galapagos* (1985) by Kurt Vonnegut Jr. A similar spirit is detectable in those CYBERPUNK stories which use the obliteration or radical metamorphosis of Earthly civilization almost as a

throwaway idea; examples include Bruce STERLING's SCHISMATRIX (1985) and Michael SWANWICK's Vacuum Flowers (1987). The end of the Universe is similarly relegated to throwaway status in Charles SHEFFIELD's Between the Strokes of Night (1985). An authentic emotional depth is, however, conserved by such poignantly bitter accounts as Hilbert SCHENCK's A ROSE FOR ARMAGEDDON (1982), Frederik POHL's "Fermi and Frost" (1985) and James K. MORROW's heart-rending THIS IS THE WAY THE WORLD ENDS (1986). The end of the Cold War may soothe anxieties about nuclear war, and the anticipated hysteria which forms the basis of such sardonic millenarian fantasies as Russell M. GRIFFIN's Century's End (1981) and John KESSEL's GOOD NEWS FROM OUTER SPACE (1989) is not to be taken seriously, but there has recently been a boom in cosmic-disaster stories occasioned by the fashionability of the celebrated question: "If we're not alone in the Universe, where are they?" Apocalyptic "explanations" of this presumed enigma include Across the Sea of Suns (1984) by Gregory BENFORD and The Forge of God (1987) by Greg BEAR. A theme anthology is The End of the World (anth 1956) ed Donald A. WOLLHEIM. A notable collection of essays on apocalyptic literature is The End of the World (anth 1983) ed Eric S. RABKIN, Martin H. GREENBERG and Joseph D. OLANDER. [BS]See also: ENTROPY; FAR FUTURE.

END OF THE WORLD

Film. PANIC IN YEAR ZERO!

END OF THE WORLD, THE

Film. La FIN DU MONDE.

ENDORE, S(AMUEL) GUY

(1901-1970) US writer and translator, some of whose realistic FANTASY novels can in a marginal sense be considered as sf (PSYCHOLOGY). The best known is The Werewolf of Paris (1933), set in the shambles of 1871 Paris, where a French soldier is succumbing to lycanthropy; this represents on a human scale the civic trauma of the body politic as the Commune falls. Methinks the Lady (1945), a courtroom drama, explains its central female Jekyll-and-Hyde character in Freudian terms. Though having relatively little influence on the sf field, SGE was a highly effective purveyor of sexual fantasies; he did not mince words. He collaborated on the scripts of the films The DEVIL-DOLL and Mad Love (a version of ORLACS HANDE). [JC]Other works: The Man from Limbo (1930).See also: GOTHIC SF; SUPERNATURAL CREATURES.

ENEMY FROM SPACE

QUATERMASS II.

ENEMY MINE

Film (1985). Kings Road Entertainment/20th Century-Fox. Dir Wolfgang Petersen, starring Dennis Quaid, Louis Gossett Jr. Screenplay Edward Khmara, based on Enemy Mine (1979 IASFM; 1989 chap dos) by Barry B. LONGYEAR. 108 mins, cut to 93 mins. Colour. During a space battle between humans and the reptilian (and hermaphroditic) Dracs, two pilots, one from each species, crashland on an inimical planet. The human (Quaid) and the Drac (Gossett) first try to kill one another, but soon reach an uneasy rapprochement, which warms into mutual respect and affection. When the Drac dies giving birth, the man raises the infant. It is later captured by

illegal slaver/miners, its adoptive father being left for dead. However, he returns with assistance, the miners are defeated, and the child is saved. This uneven film works quite well on the intimate level, with excellent small moments of culture clash and mutual education; Gosset's performance is memorably good. On the larger scale, the effects creating the planetary surface and, at the end, the Drac planet are striking. But the film's earnest liberalism is both preachy and slickly sentimental, with too many scenes designed to evoke tearful, kneejerk responses; and overall it seems more selfconscious than the much earlier ROBINSON CRUSOE ON MARS (1964), the Crusoe-Friday parts of which its plot somewhat resembles. The novelization is *Enemy Mine* * (1985) by Barry B. Longyear and David GERROLD. [PN]See also: CINEMA.

ENERGY

COSMOLOGY; ENTROPY; NUCLEAR POWER; POWER SOURCES; PHYSICS; SUN.

ENGDAHL, SYLVIA LOUISE

(1933-) US writer, employed in the field of computer programming 1957-67. Her novels, though marketed as juveniles, appeal as well to adults for their intelligence and humanity. *Enchantress from the Stars* (1970) and its sequel *The Far Side of Evil* (1971) are perhaps her best-known works. The first describes, with suggestive analogues between traditional and technological versions of crucial events (to a savage, all technology is MAGIC), the early career of Elena, who is in the Anthropological Service and must protect the "primitive" culture of one planet from a technologically more advanced culture from a neighbouring world. The second continues her career on another planet, which SLE describes as a totalitarian DYSTOPIA. A second series consists of *This Star Shall Abide* (1972; vt *Heritage of the Star* 1973 UK), *Beyond the Tomorrow Mountains* (1973) and *The Doors of the Universe* (1981). The societal design in these books, set on a planet with an imposed RELIGION, takes, not unusually, the shape of a pyramid, with benign but hidden representatives of an alien race ruling the world; more surprising is SLE's refusal to dismantle - after the time-honoured pattern - this hierarchy. [JC/PN]Other works: *Journey Between Worlds* (1970).As Editor: *The Universe Ahead: Stories of the Future* (anth 1975) with Rick Roberson; *Anywhere, Anywhere: Stories of Tomorrow* (anth 1976).Nonfiction: *The Planet-Girded Suns: Man's View of the Other Solar Systems* (1974); *The Subnuclear Zoo: New Discoveries in High Energy Physics* (1977) with Rick Roberson. See also: CHILDREN'S SF.

ENGEL, LEONARD

(1916-1964) US author, with Emanuel S. PILLER, of one of the very first Cold War dreadful-warning nuclear- WAR novels, *The World Aflame: The Russian-American War of 1950* (1947), in which the USA's monopoly of the A-bomb - and use of it in a first strike - proves insufficient to crush the Red hordes; a despairing humaneness invests the final pages. LE also edited a nonfiction anthology, *New Worlds of Modern Science* (anth 1956). [JC]

ENGEL, LYLE KENYON

(1915-1986) Canadian editor, book packager and writer; he edited UNCANNY

TALES 1940-43 in Canada, and SPACE SCIENCE FICTION MAGAZINE and Tales of the Frightened in 1957. He also produced the Richard Blade SWORD-AND-SORCERY sequence, writing an unknown number of the titles under the house name Jeffrey Lord (most were by Roland J. GREEN). Through his packaging firm, Book Creations Inc., LKE created the Kent Family Chronicles, which made their author, John JAKES, famous. [JC]

ENGELHARDT, FREDERICK

[s] L. Ron HUBBARD.

ENGH, M(ARY) J(ANE)

(1933-) US librarian and writer whose first sf novel, ARSLAN (1976; vt A Wind from Bukhara 1979 UK), established a strong underground reputation in its first incarnation as a paperback original; a hardbound edition has since been released. Arslan, a young warlord from NEAR-FUTURE Turkestan, has enigmatically conquered both the USA and the USSR. He personally occupies the small Illinois town of Kraftsville, mentally and physically seducing a teenage boy while at the same time driving the book's protagonist into a state of powerful ambivalence about the cunning rape of his land. The book is subtle, seductive and very frightening. The House in the Snow (1987) is a juvenile of marginal interest. Wheel of the Winds (1988), a complex tale set on an alien planet and told from an alien perspective, perhaps inevitably lacks the hypnotic grip of ARSLAN, but the deadpan narrative "face" of this superficially cold novel conceals layers of passion. The main CONCEPTUAL BREAKTHROUGHS offered by the novel will be those experienced by the reader. Rainbow Man (1993) incorporates a sharp SATIRE on RELIGION into a tale whose star-hopping female protagonist displays an implausible and incorrigible innocence in the face of extremely clear warnings; but in the end does manage to escape the fundamentalist planet. [JC]

ENGINEERING

DISCOVERY AND INVENTION; MACHINES; TECHNOLOGY; TRANSPORTATION.

ENGLAND, GEORGE ALLAN

(1877-1936) US explorer and author of, inter alia, 5 sf novels and over a dozen magazine serials and short stories from 1905 on; these appeared predominantly in Frank A. MUNSEY's magazines, where he was one of the more popular writers of the pre-1926 period, ranking as the closest rival in sf to Edgar Rice BURROUGHS. His stories were occasionally derivative: his serial "The House of Transformation" (1909) and his short story "The Thing from - Outside" (1923) are reminiscent of, respectively, H.G. WELLS's The Island of Dr Moreau (1896) and Algernon BLACKWOOD's "The Willows" (1907). Several themes recur in his writings. IMMORTALITY and the elixir of youth appear in his LOST-WORLD serial "Beyond White Seas" (1909-10) and in another serial, "The Elixir of Hate" (1911), which presents more sophisticated characterization and ethical analysis than appears elsewhere in his PULP-MAGAZINE work. Socialist thought, in the mode of Jack LONDON, shapes the anticapitalist stances of The Air Trust (1915) and The Golden Blight (1912 Cavalier; 1916); the first centres on a monopoly on air, the second on a ray that temporarily changes gold to ash. The latter has strong racist overtones, as does his most popular work, a long post-

HOLOCAUST novel set in a devastated USA about 1000 years hence, Darkness and Dawn (1912-13 Cavalier as 3 separate serials, "Darkness and Dawn", "Beyond the Great Oblivion" and "The Afterglow"; fixup 1914; rev in 5 vols as Darkness and Dawn 1964, Beyond the Great Oblivion 1965, The People of the Abyss 1966, Out of the Abyss 1967, and The Afterglow 1967). Other works of interest include "The Empire of the Air" (1914), a serialized novel of INVASION by immaterial beings from the fourth DIMENSION, and "June 6, 2016" (1916), a short story with elaborate future gadgetry and a feminist twist. The Flying Legion (1920) is a heist story of the NEAR FUTURE involving advanced weaponry and the theft from Mecca of Islam's most sacred relic. "The Fatal Gift" (1915), a serial, deals with the production of a superwoman by plastic surgery. Lesser works are: "The Time Reflector" (1905), about an invention for viewing the past; "A Message from the Moon" (1907), in which advertising matter is projected onto the Moon; "My Time Annihilator" (1909), ostensibly about TIME TRAVEL to the past but really about madness; "He of the Glass Heart" (1911), featuring an artificial heart; and "Drops of Death" (1922), a scientific detective story. "The Tenth Question" (1916), a mathematical puzzle story (MATHEMATICS), was later rewritten by Stanley G. WEINBAUM as "Brink of Infinity" (1936). [JE/EFB] Other works: Keep Off the Grass (1919). See also: CITIES; DEVOLUTION; DISASTER; DISCOVERY AND INVENTION; DYSTOPIAS; EVOLUTION; HISTORY OF SF; INVISIBILITY; MONEY; MONSTERS; POLITICS; VILLAINS.

ENGLAND, JAMES

[r] ROBERT HALE LIMITED.

ENGLING, RICHARD (DAVID GEORGE PATRICK)

(1952-) US writer whose NEAR-FUTURE sf novel, Body Mortgage (1989), tells in a CYBERPUNK idiom the tale of a Chicago private eye on the track of a body-parts scam in the immediate run-up to the millennium. RE's obvious competence would show more clearly, perhaps, in a more fully original setting. [JC] See also: MEDICINE.

ENGLISH, CHARLES

[s] Charles NUETZEL.

ENSTROM, ROBERT (WILLIAM)

(1946-) US industrial chemist and writer whose first novel, Encounter Program (1977), attempts to deal with a late-century sf problem - how to cope with ALIENS when we encounter them - in the language of SPACE OPERAS published 50 years earlier, when the problem was easier to solve. Beta Colony (1980) commits similar errors of register. [JC]

ENTON, HARRY

[r] DIME-NOVEL SF; FRANK READE LIBRARY; "NONAME".

ENTROPY

In its strict meaning, "entropy" is a thermodynamics term, first used by the German physicist Rudolf Clausius (1822-1888) in 1850 to describe the amount of heat that must be put into a closed system to bring it to a given state. The Second Law of Thermodynamics - often stated in terms of work as "it is impossible to produce work by transferring heat from a cold body to a hot body in any self-sustaining process" - can alternatively be

rendered: "Entropy always increases in any closed system not in equilibrium, and remains constant for a system that is in equilibrium." To put it less technically: whenever there is a flow of energy some is always lost as low-level heat. For example, in a steam engine, the friction of the piston is manifested in non-useful heat, and hence some of the energy put into it is not turned into work. There is no such thing as a friction-free system, and for that reason no such thing as a perfect machine. Entropy is a measure of this loss. In a broader sense we can refer to entropy as a measure of the order of a system: the higher the entropy, the lower the order. There is more energy, for example, tied up in complex molecules than in simple ones (they are more "ordered"); the Second Law can therefore be loosely rephrased as "systems tend to become less complex". Heat flows, so ultimately everything will tend to stabilize at the same temperature. When this happens to literally everything - in what is often called the heat-death of the Universe - entropy will have reached its maximum, with no order left, total randomness, no life, the end. (There is, however, an argument about whether the concept of entropy can properly be related to the Universe as a whole.) Of course, the amount of usable energy in the Universe, primarily supplied by the stars, is unimaginably huge, and the heat-death of the Universe is billions of years away. Isaac ASIMOV's amusing "The Last Question" (1956) has a supercomputer, which for aeons has been worrying about the heat-death, reversing entropy at the last possible moment. The scientist Freeman DYSON, in "Time Without End: Physics and Biology in an Open Universe" (Review of Modern Physics July 1979), confronts the same question with a similar optimism and, one must assume, rather better mathematics. Local images of entropy, like the huge red Sun at the end of H.G. WELLS's THE TIME MACHINE (1895), long antedate the general use of the word; indeed, dying-Earth stories generally (END OF THE WORLD) can be seen as entropy stories, both literally and metaphorically. Although "entropy" has been a technical term for a long time, it is only since the early 1960s that it has, in its extended meaning, become a fashionable concept (although the word sometimes popped up in sf earlier, as in House of Entropy [1953] by H.J. CAMPBELL as Roy SHELDON). Since the 1960s, to the annoyance of some scientifically minded people, the extended concept of increasing entropy includes holes wearing in socks, refrigerators breaking down, coalminers going on strike, and death. These are indeed all examples of increasing disorder in a technical though not necessarily a moral sense. Life itself is a highly ordered state, and in its very existence is an example of negative entropy (negentropy). It is as if, though the Universe is running down, there are whirlpools of local activity where things are winding up. All forms of information, whether in the form of the DNA code or the contents of this encyclopedia, can be seen as examples of negentropy. It is natural, then, that a popular variant on the entropy story is the DEVOLUTION story. Entropy has become a potent metaphor. It is uncertain who first introduced the term into sf, but it is likely that Philip K. DICK, who makes much of the concept in nearly all his work, was the first to popularize it. He spells it out in DO ANDROIDS DREAM OF ELECTRIC SHEEP? (1968), where entropy, or increasing disorder, is imaged as "kipple": "Kipple is useless objects, like junk mail or match folders after you use the last match or gum wrappers or yesterday's homeopape. When nobody's

around, kipple reproduces itself . . . the entire universe is moving towards a final state of total, absolute kippleization."It was, however, in NEW-WAVE writing, especially that associated with the magazine NEW WORLDS, that the concept of entropy made its greatest inroads into sf. J.G. BALLARD has used it a great deal, and did so as early as "The Voices of Time" (1960), in which a count-down to the end of the Universe is accompanied by more localized entropic happenings, including the increasing sleepiness of the protagonist. Pamela ZOLINE's "The Heat Death of the Universe" (1967), about the life of a housewife, is often quoted as an example of the metaphoric use of entropy. Another example is "Running Down" (1975) by M. John HARRISON, whose protagonist, a shabby man who perishes in earthquake and storm, "carried his own entropy around with him". The concept appears in the work of Thomas M. DISCH, Barry N. MALZBERG, Robert SILVERBERG, Norman SPINRAD and James TIPTREE Jr as a leitmotiv, and also in nearly all the work of Brian W. ALDISS, which typically displays a tension between entropy and negentropy, between fecundity and life on the one hand, stasis, decay and death on the other. Outside GENRE SF, Thomas PYNCHON has used images of entropy many times, especially in GRAVITY'S RAINBOW (1973). George Alec EFFINGER's What Entropy Means to Me (1972) is not in fact a hardcore entropy story at all (apart from a tendency for things to go wrong), but Robert Silverberg's "In Entropy's Jaws" (1971) is a real entropy story and a fine one, exploring the metaphysics of the subject with care. Although it was in the 1960s and 1970s that the entropy-story peaked, the image is still used, as in Dan SIMMONS's Entropy's Bed at Midnight (1990 chap). Colin GREENLAND once wrote a critical book called The Entropy Exhibition: Michael Moorcock and the UK "New Wave" (1983), and it is indeed Moorcock who has perhaps made more complex use of entropy and negentropy than any other sf writer, and not just in The Entropy Tango (fixup 1981); the two concepts run right through his Dancers at the End of Time and Jerry Cornelius sequences. Jerry Cornelius seems for a long time proof against entropy, and keeps slipping into alternate realities as if in hope of finding one whose vitality outlives its decay, but like a Typhoid Mary he carries the plague of entropy with him, and ultimately, especially after the death of his formidably vital and vulgar mother, succumbs to it himself, becoming touchingly more human, though diminished. In all of these works, entropy is a symbol or metaphor through which the fate of the macrocosm, the Universe, can be linked to the fate of societies and of the individual - a very proper subject for sf. Negentropy versus entropy is usually seen as an unequal battle, David against Goliath, but sickness, sorrow, rusting, cooling and death contrive to be held at bay, locally and occasionally, by passion and movement and love. Looked at from this perspective, entropy is one of the oldest themes in literature, the central concern, for example, of Shakespeare, Donne, Milton and - especially - Charles DICKENS. [PN]

ERDMAN, PAUL E(MIL)

(1932-) Canadian writer, formerly consulting economist to the European Coal and Steel Community and a senior banker in Switzerland. Some of his thrillers are genuine NEAR-FUTURE sf of an interesting kind. Sf writers usually imagine future changes that are technological or political, seldom ECONOMIC. Like the CYBERPUNK authors, though more "bestseller" than

cyberpunk in style, PEE recognizes the supra-national importance of giant cartels in the world of tomorrow (and today). His thrillers involve the manipulation of financial institutions; they portray a financial world of frightening instability in which economic collapse followed by global disorder and war could be catalysed by the actions of only a few unscrupulous persons. After the success of *The Billion Dollar Killing* (1973) and *The Silver Bears* (1974), both set more or less in the present, PEE wrote three NEAR-FUTURE novels: *The Crash of '79* (1976), *The Last Days of America* (1981) and *The Panic of '89* (1986), in each of which world catastrophe is only a year or two ahead. In the first, oil money destabilizes the US banking system and then the world's, and there are prophetic observations about Iran. [PN]Other works: *The Palace* (1987).See also: HISTORY OF SF.

ERICKSON, STEVE

Working name of US writer Stephen Michael Erickson (1950-), active as a journalist for some years before his first novel, *Days Between Stations* (1985), quickly established his reputation as an author of dark, journey-haunted, surreal FABULATIONS about the USA and the 20th century. Labyrinthine figurations of apocalypse dominate his grey and hyperbolic landscapes; but a powerful sense of geography, notable also in the first Surrealists, gives each of his novels a local habitation. *Days Between Stations*, set mainly on an allegorically split river, features the attempts of two sensually linked people to make sense of their pasts; *Rubicon Beach* (1986) is a more specific allegory of the USA, as are *Tours of the Black Clock* (1989) and the semidocumentary *Leap Year* (1989). *Arc d'X* (1993) traces the consequences of the relationship between Thomas Jefferson and Sally Hemings, a black slave who becomes his mistress, through a variety of ALTERNATE WORLDS, at least one of which is described through scenes set in 1999. Although sf instruments sometime protrude through the texture of these tales, they are in no telling sense works of genre. [JC]

ERIKSEN, INGE

[r] DENMARK.

ERMAN, JACQUES DeFOREST

[s] Forrest J. ACKERMAN.

ERNSBERGER, GEORGE

[r] AVON FANTASY READER.

ERNST, PAUL (FREDERICK)

(1899-1985) US writer, mostly of short fiction for pulp markets, sometimes under his own name and sometimes (once in *Weird Tales*) under the pseudonym Paul Frederick Stern; he should not be confused with the Paul Ernst (1886-?) who wrote 1930s detective novels. His first published story may have been "The Temple of Serpents" for *Weird Tales* in 1928, and he remained extremely active throughout the 1930s, writing for sf, fantasy and hero magazines. In the last capacity, under the house name Kenneth ROBESON, he was responsible for much of the contents of *The Avenger*, writing all 23 novel-length stories for that magazine in 1939, each featuring *The Avenger*, a SUPERHERO who fought a wide range of villains;

the Robeson house name had already been made popular by Lester DENT in DOC SAVAGE MAGAZINE, and it was in an attempt to cash in on the success of the name that it was offered for PE's use. These tales all appeared in book form in the 1970s as Justice, Inc * (1972), The Yellow Hoard * (1972), The Sky Walker * (1972), The Devil's Horns * (1972), The Frosted Death * (1972), The Blood Ring * (1972), Stockholders in Death * (1972), The Glass Mountain * (1973), Tuned for Murder * (1973), The Smiling Dogs * (1973), River of Ice * (1973), The Flame Breathers * (1973), Murder on Wheels * (1973), Three Gold Crowns * (1973), House of Death * (1973), The Hate Master * (1973), Nevlo * (1973), Death in Slow Motion* (1973), Pictures of Death * (1973), The Green Killer * (1974), The Happy Killers * (1974), The Black Death * (1974), The Wilder Curse * (1974) and Midnight Murder * (1974), the last being from 1940. (Subsequent The Avenger novels in the 1970s series were originals written by Ron GOULART, also as Robeson.) PE's Doctor Satan series in Weird Tales is fantasy along conventional hero-villain lines; five of these stories were reprinted as Dr Satan (coll 1974 chap) ed Robert E. WEINBERG. His sf stories - the first of which were "The Black Monarch" (1930 Weird Tales) and "Marooned under the Sea" (1930 ASF)-include "The Microscopic Giants" (1936) and "Nothing Happens on the Moon" (1939). PE was less prolific after the 1930s. [PN/JC] See also: ASTOUNDING SCIENCE-FICTION.

ERNSTING, WALTER

[r] Clark DARLTON; GERMANY.

ERSKINE, GEORGE

[r] Ian CAMERON.

ERSKINE, THOMAS

(1788-1870) UK writer, mostly of religious texts, whose anonymously published SATIRES, Armata: A Fragment (1816 or 1817 - the date is controversial) and The Second Part of Armata(1817) - the two texts are most commonly found bound together in various printings which are, however, all dated 1817 - describes a society on another planet rather similar to Earth and reachable via our South Pole, to which it is attached. [JC]

ERTZ, SUSAN

(1894-1985) UK popular novelist, active for much of the century, whose one sf novel, Woman Alive (1935), flips the more usual last-man-alive theme in a story of the last woman alive, after all other females have died of a post-war plague in 1985. [JC]

ESCAPE FROM ABSALOM

NO ESCAPE.

ESCAPE FROM NEW YORK

Film (1981). Avco Embassy/International Film Investors/Goldcrest. Dir John CARPENTER, prod Larry Franco and Debra Hill, starring Kurt Russell, Lee Van Cleef, Donald Pleasence, Ernest Borgnine, Harry Dean Stanton, Adrienne Barbeau, Isaac Hayes. Screenplay Carpenter, Nick Castle. 99 mins. Colour. The idea is wonderful. In 1997 the whole of Manhattan Island is a penal colony, surrounded by minefields and unscalable walls and inhabited

by criminal scum and crazies. In this inferno lands the US President (a creepy performance from Pleasence) after a plane crash. War-hero and criminal Snake Plissken (Russell), implanted with 24-hour-fused explosives to ensure his voluntary return, is sent in to get the President out.

Looking like an attempt to recapture some of the brilliance of Carpenter's first major thriller, Assault on Precinct 13 (1976), the film instead loses itself in routine though colourful macho confrontations; it is a little reminiscent of the exploitation formula of the MAD MAX sequence, and is not helped by Russell's inexpressive performance. [PN]

ESCAPE FROM THE PLANET OF THE APES

Film (1971). Apjac/20th Century-Fox. Dir Don Taylor, starring Roddy McDowall, Kim Hunter, Bradford Dillman, Natalie Trundy, William Windom. Screenplay Paul Dehn, based on characters created by Pierre BOULLE. 97 mins. Colour. This is the third of the five PLANET OF THE APES films. When the late UK screenwriter Paul Dehn - author of Quake, Quake, Quake (coll 1961), a series of parody verses, illustrated by Edward Gorey, on the aftermaths of the nuclear age - had been working on the second (BENEATH THE PLANET OF THE APES [1970]) he had been told it would be the last, so he decided to end the film by destroying the whole world with an atomic explosion. Four months later he received a telegram from Fox saying: "Apes exist, sequel required." His ingenious answer was to send three of the apes by TIME TRAVEL back to before the world exploded. They arrive in the contemporary USA and immediately become the centre of a violent controversy which results in their deaths, but not before the female who featured in the first two films has given birth to a baby ape. This mixture of SATIRE and action/adventure is much more sentimental than its hard-edged predecessors, but more entertaining than those that followed. The novelization is Escape from the Planet of the Apes * (1974) by Jerry POURNELLE. [JB/PN]

ESCAPE OF MEGAGODZILLA, THE GOJIRA.

ESCAPE TO WITCH MOUNTAIN Alexander KEY.

ESCHATOLOGY

Eschatology is the class of theological doctrine pertaining to death and the subsequent fate of the soul, and to the ultimate fate of the world. Stories of the FAR FUTURE and the END OF THE WORLD can be categorized as eschatological, but are considered separately; this section deals mainly with the idea of personal survival after death. Ancient Egyptian RELIGION included an inordinately complex set of eschatological beliefs (explored in sf in Roger ZELAZNY's Creatures of Light and Darkness [1969]) which influenced most subsequent eschatologies. Christian eschatology is, of course, basically dualistic, contrasting Heaven and Hell, but it has variants which are more complex, incorporating Purgatory and Limbo, and including an involved demonology. A common strategy employed by sf writers writing pure FANTASY (as for instance in the magazine UNKNOWN) is to import a judicious measure of common sense into settings derived from classical MYTHOLOGY or the Christian demonological schema, usually with

comic results - although unorthodox horror stories sometimes result. The growth of the SCIENTIFIC ROMANCE in the late 19th century coincided with the growth of the Spiritualist movement. The Spiritualists popularized an eroded version of Christian eschatology with some added jargon involving the "astral plane" and like concepts. Spiritualist beliefs influenced several early sf writers, including Camille FLAMMARION and Arthur Conan DOYLE; Doyle's later works - particularly *The Land of Mist* (1926) and "The Maracot Deep" (in *The Maracot Deep and Other Stories* coll 1929) - are markedly affected. There is an abundance of Spiritualist fiction, but whether any of this can be considered sf is dubious, despite the pseudo-scientific endeavours of Johann Zollner (1834-1882), author of *Transcendental Physics* (1865), and other psychic theorists. The most heavily sciencefictionalized of these Spiritualist fantasies is Allen UPWARD's *The Discovery of the Dead* (1910), which recounts the revelations of a "necroscope". An early pulp-sf writer who dabbled in Spiritualist fiction was Ralph Milne FARLEY, as in *Dangerous Love* (1931; 1946). More interesting is David LINDSAY's interstellar fantasy *A VOYAGE TO ARCTURUS* (1920), which inverts conventional Spiritualist ideas and routine eschatological aspirations, imagining an intrinsically painful destiny. The idea that scientists might one day prove the existence of the elusive soul and build traps for it is featured in Charles B. STILSON's curious "Liberty or Death!" (1917; vt "The Soul Trap"), and is developed more ambitiously in *The Weigher of Souls* (1931) by Andre MAUROIS. Maurois may have borrowed his inspiration from the fantasy *Spirite* (1865; trans 1877) by Theophile Gautier (1811-1872), and his example inspired in its turn Romain GARY's satirical soul-trapping story *The Gasp* (1973), in which the inexhaustible energy of the soul is quickly exploited as an industrial resource. In all these examples, as in most stories in which people supposedly trespass on divine prerogatives, no good comes of it all. Nor does it in Maurice RENARD's *Le docteur Lerne, sous-dieu* (1908; trans as *New Bodies for Old* 1923 US), when an experiment in metempsychosis ends with the imprisonment of a person's soul in the engine of a motor car. An experiment in communication with the dead ends tragically in *The Edge of Running Water* (1939; vt *The Unquiet Corpse*) by William M. SLOANE. A curious corollary of the conviction that "there are things Man is not meant to know" is the profusion of afterlife fantasies in which characters realize only at the story's end that they have been dead since its beginning; two which transcend the banality of the plot are Ray BRADBURY's "Pillar of Fire" (1948) and Flann O'BRIEN's *The Third Policeman* (1967). C.S. LEWIS's theological fantasy *The Great Divorce* (1945) acknowledges that some of the ideas used in formulating its image of Heaven are borrowed from sf, but sf writers were slow to develop the hypothesis that future TECHNOLOGY might succeed in securing the life after death that God and Nature had failed to provide. Robert SHECKLEY's melodrama of technological REINCARNATION, *Immortality Delivered* (1958; exp vt *Immortality, Inc.* 1959), is an early example which skates lightly over the experience of disembodied existence and the question of ultimate destiny. Thomas M. DISCH's *ON WINGS OF SONG* (1979) features a technology which grants out-of-body experiences to almost everyone, but Disch is likewise coy about the possibility of universal life after death. A similar hesitancy is seen in the many stories which Philip Jose FARMER has

devoted to eschatological matters, including *Inside Outside* (1964), *Traitor to the Living* (1973) and the *Riverworld* series. More ambitious and more convincing stories of technological afterlife include Robert SILVERBERG's "Born with the Dead" (1974), Lisa TUTTLE's "The Hollow Man" (1979) and Lucius SHEPARD's account of biotechnological zombies, *Green Eyes* (1984). Silverberg had earlier written *To Live Again* (1969) on a less interesting eschatological theme; here the personas of living persons are regularly "recorded" so that, after the death of the body, the most recent recording can be introduced into the mind of a host. Similar recording processes are featured - without the consequent overcrowding of skulls on which Silverberg focuses - in other stories of reincarnation, including John VARLEY's *THE OPHIUCHI HOTLINE* (1977) and Michael BERLYN's nasty-minded *Crystal Phoenix* (1980). Some writers have sciencefictionalized the Christian notion of the soul, imagining it as an alien symbiont (*PARASITISM AND SYMBIOSIS*) which invests living beings and survives their deaths. Clifford D. SIMAK, in *Time and Again* (1951; vt *First He Died* 1953), makes no attempt to describe the life led by such symbionts when apart from their hosts, but Bob SHAW, in *The Palace of Eternity* (1969), is more ambitious, equating the pseudoastral plane with the extradimensional *HYPERSPACE* employed by the starships to transcend Einsteinian limitations. In Deane ROMANO's *Flight from Time One* (1972) the astral plane is no sooner discovered by science than exploited, but the novel follows the exploits of "astralnauts" without saying anything about the spirits of the departed. Rudy RUCKER's *WHITE LIGHT* (1980) is much more courageous and ingenious in following the venerable example of C.H. HINTON by recruiting mathematical speculations about infinity (and Cantor's extrapolated hierarchy of infinities on infinities) to construct a metaphysics which includes an afterlife. Harlan ELLISON's "The Region Between" (1970) is a bold surreal melodrama featuring soul-predation. A particularly poignant story in which science ultimately reveals that human personalities do live on after death is Richard COWPER's "The Tithonian Factor" (1983), which considers the plight of those who have already accepted an inferior technology of *IMMORTALITY*. Special eschatologies are sometimes devised for individual characters: death as metamorphosis is often featured in the work of Charles L. HARNESS and the later work of Robert A. HEINLEIN, and is notable in Thomas M. DISCH's *CAMP CONCENTRATION* (1968). *ALIENS* often fare better than humans in this breed of sf, having some kind of afterlife built into their *BIOLOGY*; examples can be found in Poul ANDERSON's "The Martyr" (1960), George R.R. MARTIN's "A Song for Lya" (1974) and Nicholas Yermakov's *The Last Communion* (1981) and its sequels. Some writers have developed this line of thought on a grander scale, moving eschatological speculation to a level which takes in entire species, or even the entire Universe. Arthur C. CLARKE's *CHILDHOOD'S END* (1953) features the transcendent "apotheosis" of mankind's superior descendants, producing an image very similar to that evoked by the heretical Jesuit and evolutionist Pierre Teilhard de Chardin (1881-1955); Teilhard's ideas are overtly invoked in George ZEBROWSKI's *The Omega Point Trilogy* (omni 1983). Although they are not sf, mention must be made of a recent group of quasi-Dantean fantasies by sf writers. *Inferno* (1975) by Larry NIVEN and Jerry POURNELLE was the apparent inspiration for a series of *SHARED-WORLD* anthologies and novels "created" by Janet E. MORRIS, begun with *Heroes in Hell* (anth 1986)

and *The Gates of Hell* (1986); Robert Silverberg's contributions featuring Gilgamesh were subsequently reassembled in *To the Land of the Living* (fixup 1989). A much more earnest and varied theme anthology - one of the best of its kind - is *Afterlives* (anth 1986) ed Pamela SARGENT and Ian WATSON, whose contributions, mostly original to the volume, range over the entire spectrum of eschatological fantasy and sf. Outstanding among the sf stories are Gregory BENFORD's "Of Space-Time and the River", Rudy Rucker's "In Frozen Time" and Watson's own "The Rooms of Paradise"; Watson is also the author of the very eschatological novel *Deathhunter* (1981). ESENWEIN, J(OSEPH) BERG
ANTHOLOGIES.

ESHBACH, LLOYD ARTHUR
(1910-) US writer and publisher, and an sf enthusiast from an early age. Though his work as a publisher has always - and probably rightly - been deemed his main contribution to the field, a splurge of novels in the 1980s, after he had been inactive as a writer for many years, has focused some attention on his auctorial work. He began publishing sf with "The Man with the Silver Disc" for *Scientific Detective* in 1930, and for some years wrote fairly prolifically for the PULP MAGAZINES; the best of this early work was assembled in *The Tyrant of Time* (coll 1955), a volume published by his own FANTASY PRESS, which he had formed in 1946; it was probably the best of the SMALL PRESSES founded after the war to put into book form the novels and stories that had been accumulating in magazines since the founding of AMAZING STORIES in 1926. In 1952 he began a short-lived companion imprint, Polaris Press. For Fantasy Press LAE edited the first published book about modern sf: *Of Worlds Beyond: The Science of Science Fiction Writing* (anth 1947), a symposium of essays by such authors as John W. CAMPBELL Jr, Robert A. HEINLEIN and A.E. VAN VOGT. *Over My Shoulder: Reflections on a Science Fiction Era* (1983), told in memoir form, is a history of the sf specialist presses from the 1930s to the 1950s. In the 1980s LAE turned again to fiction. He edited P. Schuyler MILLER's *Alice in Wonderland* parody, *Alicia in Blunderland* (1933 *Science Fiction Digest* as by Nihil; 1983), and he sorted out and completed a manuscript left by his old friend E.E. "Doc" SMITH, publishing it as *Subspace Encounter* (1983) by Smith, ed LAE. His major work of the decade, the *Gates of Lucifer* sequence - *The Land Beyond the Gate* (1984), *The Armlet of the Gods* (1986), *The Sorceress of Scath* (1988) and *The Scroll of Lucifer* (1990) - does not forge its way into new territory, though the facility which LAE displays in putting his protagonist through various paces in various mythic venues is notable in an author so long inactive. Like Jack WILLIAMSON's, his career has extended throughout almost the entire history of the modern GENRE SF, which he continues to grace in his supporting role. [JC/MJE]See also: CYBORGS; LONGEVITY (IN WRITERS AND PUBLICATIONS); SPECULATIVE FICTION.

ESP

An acronym (for extra-sensory perception) popularized by the pioneering exercise in parapsychology *Extra-Sensory Perception* (1934) by J.B. Rhine (1895-1980), which attempted to repackage folkloristic notions of "second

sight" or a "sixth sense" in scientific jargon. Definitions of the term "ESP" vary, but it may be taken to include clairvoyance, telepathy and precognition; many modern sf stories deal also with a restricted kind of telepathy, empathy, in which only feelings and not thoughts may be perceived. Stories about new senses and eccentric augmentations of existing ones are covered in the article on PERCEPTION. Rhine's investigations of ESP eventually broadened out to take in a fuller spectrum of wild talents; for stories about psychokinesis, teleportation and mental fire-raising PSI POWERS. The late 19th century saw a boom in occult romances featuring various kinds of extra-sensory perceptions; attempts by the Society for Psychical Research and other bodies to account for such phenomena in scientific terms helped bring many such romances close to the sf borderline, and encouraged more thoughtful consideration of the implications of possessing these powers. A Seventh Child (1894) by "John Strange Winter" (Henrietta Stannard [1856-1911]), Kark Grier: The Strange Story of a Man with a Sixth Sense (1906) by Louis TRACY and The Sixth Sense (1915) by Stephen McKenna (1885-1967) are trivial, but they helped pave the way for Muriel JAEGER's The Man with Six Senses (1927), the first attempt to extrapolate such a hypothesis carefully and painstakingly - and to conclude that it might better be reckoned a curse than a blessing. Some early pulp-sf stories were also cautionary tales, including Edmond HAMILTON's "The Man who Saw the Future" (1930) and "The Man with X-Ray Eyes" (1933). The notion that new powers of ESP might be developed in the course of humankind's future EVOLUTION, although treated sceptically by H.G. WELLS, was developed by several of the UK writers he influenced, including J.D. BERESFORD in The Hampdenshire Wonder (1911) and Olaf STAPLEDON in LAST AND FIRST MEN (1930). It also became a standard theme in GENRE SF, where in the late 1930s Rhine's work began to attract interest along with that of Charles FORT, whose Wild Talents (1932) had dealt extensively with ESP. ESP quickly became part of the standard repertoire of the pulp SUPERMAN, much encouraged by A.E. VAN VOGT's SLAN (1940 ASF; 1946), in which a new race of telepaths struggles against the prejudices of ordinary mortals - a theme further explored in such later novels as Henry KUTTNER's MUTANT (1945-52 ASF; fixup 1953) and George O. SMITH's Highways in Hiding (1956). John W. CAMPBELL Jr, the editor of ASTOUNDING SCIENCE-FICTION, was eventually to become a fervent admirer of Rhine, and ESP stories featured very prominently in the post-war "psi-boom" which he engineered. Important products of this boom included James BLISH's Jack of Eagles (1952; vt ESP-er 1958), Wilson TUCKER's Wild Talent (1954) and Frank M. ROBINSON's The Power (1956). The variant title of the first-named is a significant use of the term ESPER (found also in Lloyd BIGGLE Jr's The Angry Espers [1961 dos]), which had first been popularized in THE DEMOLISHED MAN (1953) by Alfred BESTER, a bold pioneering attempt to depict a society into which espers are fully integrated. Because the psi-boom years coincided with the early years of the Cold War, Campbell's writers paid a good deal of attention to the utility of telepathy in espionage - a frequent theme in the solo and collaborative works of Randall GARRETT. Telepaths still occasionally find such employment in such works as Stephen GOLDIN's Mindflight (1978), Daniel Keys MORAN's Emerald Eyes (1988) and especially the Sensitives series by Herbert Burkholz (1932-) - The Sensitives (1987) and Strange

Bedfellows (1988) - but probably do more socially useful work as psychotherapists, like those in John BRUNNER's THE WHOLE MAN (1958-9 Science Fantasy; fixup 1964; vt Telepathist UK) and Roger ZELAZNY's THE DREAM MASTER (1966). ESP is sometimes invoked as a solution to the problem of COMMUNICATION with ALIENS, although the logic of this is somewhat suspect (thought is largely couched in language); one of the more intelligent exercises in this vein is Edward LLEWELLYN's Word-Bringer (1986). Sf writers, ever on the side of progress, usually side with ESP-powered supermen against those who hate and fear them. Theodore STURGEON's work includes many stories in which an ESP-based psychological community is seen as a possible and highly desirable solution to ordinary human alienation; examples include The Dreaming Jewels (1950; vt The Synthetic Man), MORE THAN HUMAN (fixup 1953) and ". . . And My Fear is Great" (1953). Other genre-sf writers who showed a consistently thoughtful and positive interest in ESP-talented characters while the psi-boom gradually lost its impetus included Zenna HENDERSON, in the long-running People series collected in Pilgrimage (coll of linked stories 1961) and The People: No Different Flesh (coll of linked stories 1966), James H. SCHMITZ, in the Telzey Amberdon series and Agent of Vega (coll 1960), Arthur SELLINGS, most notably in Telepath (1962) and The Uncensored Man (1964), Frank HERBERT, especially in the series begun with DUNE (1965), Marion Zimmer BRADLEY in the Darkover series, and Dan MORGAN in the trilogy begun with The New Minds (1967). In Sturgeon's stories ESP often compensates for other inadequacies - a common theme strikingly displayed in such stories as Gene WOLFE's "The Eyeflash Miracles" (1976) and John VARLEY's "The Persistence of Vision" (1978). In more extreme Sturgeon stories, particularly MORE THAN HUMAN and The Cosmic Rape (1958), the acquisition of telepathic powers becomes a kind of transcendental breakthrough. Similarly transcendental ideas of psionic "cosmic community" cropped up occasionally in the work of Clifford D. SIMAK, notably in Time is the Simplest Thing (1961). Not all sf stories, however, place ESP in a positive light. The kind of telepathic "gestalt-mind" featured in MORE THAN HUMAN is given more sceptical treatment in The Inner Wheel (1970) by Keith ROBERTS. The possible embarrassments of telepathy are pointed out in Walter M. MILLER's "Command Performance" (1952; vt "Anybody Else Like Me?"). Such novels as Andra MAUROIS's La machine à lire les pensées (1937; trans as The Thought-Reading Machine 1938 UK) suggest that ESP abilities might be utterly insignificant (though the Emotional Registers in the latter book are purely mechanical devices), but other stories tend to an opposite extreme; even Sturgeon, in his empath story "Need" (1961), recognized that an ability to sense other people's pain might constitute an appalling burden. Numerous tales, notably Lester DEL REY's Pstalemate (1971) and Jack DANN's THE MAN WHO MELTED (1984), propose that people endowed with ESP might very readily become insane, and the well adjusted esper generally has to be credited with an ability to screen out unwanted images, thoughts and feelings lest he or she should lose his or her true self, as the hero of Roger ZELAZNY's Bridge of Ashes (1976) routinely does. Unfortunate consequences of ESP endowment are elaborately described in such novels as Joanna RUSS's AND CHAOS DIED (1970), Mike DOLINSKY's Mind One (1972), Robert SILVERBERG's Dying Inside (1972) and Leigh KENNEDY's The Journal of Nicholas the American (1986). Partly as a result

of these sceptical analyses, the idea that ESP might play a crucial role in future human evolution has lost much of its fashionableness, although it is a subsidiary element in Storm CONSTANTINE's not-altogether-earnest Wraeththu trilogy (1987-9). Sf stories which isolate some aspect of ESP for specific consideration usually deal (as do most of the above examples) with telepathy, but there is also a notable tradition of stories dealing specifically with precognition, and with the apparent paradoxes which arise from having knowledge of the future. Characters whose foresight of the future is perversely impotent extend from the hero of J.D. Beresford's "Young Strickland's Career" (1921) to the heroine of C.J. CHERRYH's aptly titled "Cassandra" (1978); and Philip K. DICK's "precogs", including the one in *The World Jones Made* (1956), rarely get much joy out of their abilities. Brian M. STABLEFORD's "The Oedipus Effect" (1991) borrows Karl Popper's term for the effects which predictions have on the outcome of situations in order to examine the paradoxicality of precognitive talents. Robert Silverberg's *The Stochastic Man* (1975) considers precognition in much the same sceptical way that his *Dying Inside* had examined telepathy. Precognition of a patchy and teasingly perverse kind is a common element in thrillers on the sf borderline; a notable example is Stephen KING's *The Dead Zone* (1979). Despite the inconsistency displayed by supposedly talented subjects and the fact that several of his best performers were ultimately exposed as frauds, Rhine's intellectual descendants have managed to cling to sufficient credibility to support the production of numerous thrillers which deploy ESP without admitting to being sf; examples include *Mind out of Time* (1958) by Angela TONKS and *The Mind Readers* (1965) by Margery Allingham (1904-1966), though the latter uses a mechanical device for mind-reading rather than ESP proper. Parapsychological research labs are a common setting for stories on this borderline. Lifestyle fantasists who pass themselves off as clairvoyants or "psychics" are sometimes avid to help the police solve crimes; their negligible success rate is, of course, much improved by their fictional counterparts. Barry N. MALZBERG's and Bill PRONZINI's *Night Screams* (1979) is an ironic reflection of the phenomenon, which remains a popular theme in the CINEMA and TELEVISION. Two theme anthologies are *14 Great Tales of ESP* (anth 1969) ed Idella Purnell Stone and *Frontiers II: The New Mind* (anth 1973) ed Roger ELWOOD. [PN/BS]

ESPER

In sf TERMINOLOGY, a person who is able to use one or other of the powers of ESP; ESP is usually regarded as including such "passive" powers as telepathy (mind-reading) and perhaps precognition and clairvoyance; and occasionally also the "active" psychic abilities - those that interact with the world of matter, such as TELEKINESIS. However, most sf writers reserve the terms PSIONICS or PSI POWERS for the full spectrum of such abilities, reserving "ESP" for telepathy. James BLISH's novel *Jack of Eagles* (1952) was given the variant title *ESP-er* in a 1958 reprint. [PN]

ESSEX HOUSE

A short-lived (1968-9) Los Angeles publishing imprint, a subsidiary of Milton Luros's Parliament News, Inc., specializing in highbrow erotica. Many Essex House novelists were young serious writers (several of them

poets), and some used scenarios drawn from sf and fantasy, including future DYSTOPIAS, as settings for their pornography. About half the 42 titles published by EH were sf/fantasy; they included novels by Philip Jose FARMER, Richard E. GEIS, David MELTZER (perhaps the most distinguished), Michael Perkins (1942-) and Hank STINE, of which a number were ambitious, some literary, and most somewhat joyless - even emetic-and redolent of 1960s radicalism. The unusual aspirations of this imprint are generally attributed to its young editor, Brian Kirby, who also edited the pornographic books of the sister imprint, Brandon House. [PN]Further reading: "Essex House: The Rise and Fall of Speculative Erotica" by Maxim JAKUBOWSKI in Foundation #14 (1978); The Secret Record: Modern Erotic Literature (1976 US) by Michael Perkins. See also: SEX.

ET

EXTRATERRESTRIAL.

ETCHEMENDY, NANCY H.

(1952-) US writer whose three sf novels - The Watchers of Space (1980), Stranger from the Stars (1983) and The Crystal City (1985) - are juveniles, but whose stories, beginning with "Clotaire's Balloon" (1984), tend to be richly coloured, wry fantasies. She has also written some sf and fantasy POETRY. [JC]

ETERNITY SCIENCE FICTION

US BEDSHEET-size SEMIPROZINE. 4 issues July 1972-1975, 2 issues 1979-80; published and ed Stephen Gregg from South Carolina. ESF was well produced (two covers by Stephen FABIAN) and contributors included David R. BUNCH, Barry N. MALZBERG and Roger ZELAZNY, as well as early work by Ed BRYANT and Glen COOK, with some emphasis on experimental fiction and poetry. Like most such magazines it seems to have been undercapitalized and to have had inadequate distribution. [FHP/PN]

ETRANGE AVENTURE DE LEMMY CAUTION, UNE
ALPHAVILLE.

E.T.: THE EXTRATERRESTRIAL

Film (1982). Universal. Dir and coprod Steven SPIELBERG, starring Dee Wallace, Henry Thomas, Peter Coyote, Robert McNaughton, Drew Barrymore. Screenplay Melissa Mathison. 115 mins. Colour. 10-year-old Elliott (Thomas) meets an alien, "E.T.", who has been accidentally left outside Los Angeles when his spacecraft and its crew - which we infer includes his parents - is forced to depart rapidly to avoid a search party sent out by a human task force. Elliott and E.T., who demonstrates various PSI POWERS, become friends. E.T. wants to "phone home", and builds a communications device out of household objects. But he soon begins to sicken in our fallen world, as does Elliott, now emotionally linked to E.T. As the task force finally targets the alien traces they are searching, and invades Elliott's home (where he lives with his two siblings and his mother: the father has left home for good), E.T. becomes terminally ill. After the apparent death of the alien child, Elliott recovers and discovers that, like Jesus, E.T. is not in fact dead (or is resurrected). With the help of Elliott and his friends, and proving in the nick of time that he can still levitate bicycles, E.T. escapes the adults, returns to the rendezvous, is reunited

with his kind; and leaves. Almost certainly the most commercially successful film ever made, E.T. confidently alternates finely controlled sentiment and humour, the choreography of all this being almost flawless. But for some it is not a film that grows in the memory; for them the loneliness of the lizard-like but soft-eyed E.T., whose parents have left him, and of Elliott (another E...T), remains merely sad in a curiously unreverberant way. Countering this response, however, is the luminosity of the film, and a sense that its presentation of the epiphanies of childhood is truly joyful. The careful structuring of emotional release can be seen in the handling of adult males. They are first seen (only from the waist down) as hulking and affectless, but turn out to be concerned and sympathetic as E.T. sickens drastically; and the most empathetic of them is clearly destined to marry the deserted mother. Elliott's elder brother undergoes a similar transformation earlier in the film. There are echoes throughout of J.M. Barrie's Peter Pan (1904), as envisioned in the Walt Disney film Peter Pan (1953); this was also to be the source of Spielberg's later Hook (1991). [JC] See also: CINEMA; HISTORY OF SF.

EUROPEAN SCIENCE FICTION AWARDS
AWARDS.

EVANS, BILL

Working name of US chemist and writer William Harrington Evans (1921-1985) for his sf studies, which began with bibliographical and other work in the 1940s and 1950s, mostly in The Fanzine Index, a journal he published with Bob Pavlat through 1952, and which was later assembled into a single volume, Fanzine Index: Listing Most Fanzines from the Beginning through 1952, including Titles, Editors' Names, and Data on Each Issue (1965). With Francis T. Laney he published the early Howard Philips Lovecraft (1890-1937): A Tentative Bibliography (1943 chap). BE's work in the sf field culminated in an extensive introduction to E.E. "Doc" SMITH, The Universes of E.E. Smith (1966), on which he collaborated with Ron ELLIK. Most of the book is a concordance of themes and characters, though there is some critical content. BE did the Skylark series, Ellik the Lensman books. [JC]

EVANS, CHRISTOPHER (D.)

(1951-) Welsh-born UK teacher and writer who has published sf and fantasy novels under his own name and as Christopher Carpenter, Nathan Elliott, Robert Knight and John Lyon, and some non-genre fiction as by Evan Christie and Alwyn Davies. His first publications, released more or less simultaneously, were the rather bad Plasmid * (1980) as by Robert Knight, a film tie to an untraceable (and perhaps unmade) movie, and the impressive Capella's Golden Eyes (1980), an extremely English version of a CONCEPTUAL-BREAKTHROUGH tale, set on a colony planet inhabited also by reclusive ALIENS - English because of the mundane detailing of life on Gaia, because the protagonist has no real access to the roots of power or change, and because any chances for conceptual breakthrough are in any case co-opted by a plot in which Gaia's first masters are simply replaced

by a Chinese management team from Earth. *The Insider* (1981), set in a NEAR-FUTURE UK, depicts the plight of an alien symbiont forced to transform its new human host into an "alienated" outcast from society. In *Limbo* (1985) further intensifies CE's characteristic insistence on the isolation of human beings in a world they can neither comprehend nor control, an insistence not significantly modified by the more intensive use of local colour and expansive plotting in *Chimeras* (coll of linked stories 1992), about an artist's complex and ambiguous relationship to the eponymous new art form (ARTS). *Aztec Century* (1993) It remains to be seen whether CE will be able to accommodate his desolate visions within GENRE SF, which is characteristically outward-thrusting, or whether - as seems may be the case - he will find it increasingly uncongenial. With Robert P. HOLDSTOCK, CE has edited *OTHER EDENS*, a strong anthology series comprising *Other Edens* (anth 1987), #II (anth 1988) and #III (anth 1989). He responded to the controversy surrounding the extensive presence of organizations linked to SCIENTOLOGY at the 1987 World Science Fiction Convention (held in Brighton, UK) by editing *Conspiracy Theories* (anth 1987 chap), in which a variety of views were expressed, most of them critical of that presence. [JC] Other works: As Christopher Carpenter: *The Twilight Realm* (1985). As Nathan Elliott: *The Hood Army Trilogy*, comprising *Earth Invaded* (1986), *Slaveworld* (1986) and *The Liberators* (1986), juvenile sf; the *Star Pirates* sequence, also juveniles, comprising *Kidnap in Space* (1987), *Plague Moon* (1987) and *Treasure Planet* (1987). As John Lyon: *The Summoning* (1985). Nonfiction: *Science Fiction as Religion* (1981 chap) with Stan Gooch (1932-); *The Guide to Fantasy Art Techniques* (1984) with Martyn Dean, a picture book; *Lightship* (1985), text to visuals by Jim BURNS; *Writing Science Fiction* (1988 chap US); *Dream Makers: Six Fantasy Artists at Work* (1988) with Martyn Dean, a picture book; *Airshow* (graph coll 1989), text to visuals by Philip Castle. See also: *PARASITISM AND SYMBIOSIS*.

EVANS, E(DWARD) EVERETT

(1893-1958) US sf fan and writer. He began in the latter capacity late in life and had mixed success, though there is no doubt of the affection in which other Californian sf writers and fans held him, as evinced in the many tributes to him from writers such as E.E. "Doc" SMITH and A.E. VAN VOGT included in a compilation of his macabre fantasy stories, *Food for Demons* (coll 1971). This was originally conceived as a homage to the man, and set up and printed, though not bound, as early as 1959; it contains his best work. EEE's novels were digestible but routine. The adventures of ESPER spy George Hanlan in *Man of Many Minds* (1953) and its sequel, *Alien Minds* (1955), are without much bite; and EEE's juvenile, *The Planet Mappers* (1955), is also very mild. He collaborated with E.E. Smith, whom he admired greatly, on one story, which Smith expanded into the novel *Masters of Space* (1961-2 If; 1976). [JC]

EVANS, GERALD

(1910-) UK writer, born in Wales, who began publishing sf with "Pebbles of Dread" for TWS in 1940, and who wrote one sf adventure, *The Black Sphere* (1952) as by Victor LA SALLE. A later collection, *Shadows in Landore* (coll 1979), was self-published. [SH]

EVANS, IAN
Angus WELLS.

EVANS, I(DRISYN) O(LIVER)

(1894-1977) South-African-born UK civil servant and, especially after his retirement in 1956, editor and writer. His first book of sf relevance was the nonfiction *The World of Tomorrow* (1933), about possible future inventions, partly illustrated with reproductions of artwork from sf magazines, and thus - almost accidentally - the first anthology of sf ILLUSTRATION. He later specialized in the works of Jules VERNE, many of which he translated and edited for the Fitzroy edition of Verne's work in translation, beginning in 1958; some of these were reprinted by ACE BOOKS. Unfortunately, in editing Verne IOE occasionally abridged him cruelly, rendering him more of a simple boys'-action writer than was in fact the case. IOE wrote *Jules Verne and his Work* (1965) and edited *Science Fiction through the Ages 1* (anth 1966) and *Science Fiction through the Ages 2* (anth 1966), the first volume of which is restricted to pre-20th-century sf. He also edited *Jules Verne - Master of Science Fiction* (coll 1956), which assembles extracts from Verne's novels. [PN]

EVANS, MORGAN
L.P. DAVIES.

EVE OF DESTRUCTION

Film (1991). Orion. Dir Duncan Gibbons, starring Gregory Hines, Renee Soutendijk. Screenplay Gibbons, Yale Udoff. 98 mins. Colour. Soutendijk is good, both as Eve, a Defense Department scientist, and as Eve VIII, the military ROBOT that she creates in her own image. Armed with endless firepower and a nuclear bomb, the robot destroys the men Eve secretly hates, several male chauvinists and the police who try to stop her. Some critics see Eve VIII as a female "terminator" (*The TERMINATOR* [1984]), but she also recalls the Id Monster of *FORBIDDEN PLANET* (1956). EOD's supposed FEMINISM is unsubtle and suspect: a scene in which Eve VIII first teases and then castrates a loutish man is so extreme that it may in fact be intentionally misogynist. Nevertheless, Eve VIII - beautiful, elegant, stony-faced, murderous and bulletproof - is one of the most effective villains of recent years. Hines's performance as a military troubleshooter is mediocre. [MK]

EVERYTHING YOU ALWAYS WANTED TO KNOW ABOUT SEX...

Full title: *Everything You Always Wanted to Know about Sex (but Were Afraid to Ask)* Film (1972). Jack Rollins and Charles H. Joffe Productions/United Artists. Dir Woody Allen, starring Allen, Gene Wilder, Louise Lasser, John Carradine, Burt Reynolds, Tony Randall. Screenplay Allen, suggested by the nonfiction *Everything You Always Wanted to Know about Sex, but Were Afraid to Ask* by David Reuben. 88 mins. Colour. This engaging collection of filmed anecdotes satirizes various sexual obsessions and movie genres; two episodes can charitably be defined as sf. One involves a giant, mobile female breast that breaks out of a mad SCIENTIST's laboratory and ravages the countryside, in the manner of a 1950s MONSTER MOVIE. The other dramatizes a seduction attempt by comparing the interior processes of the human body to those of a mechanized

production line, with white-suited technocrats running things from the "Brain Room" while brawny, hard-hatted workers cope with the heavy equipment of the penis. Allen plays one of a group of sperm cells nervously waiting to go into action in the manner of paratroopers about to be dropped into enemy territory. Allen soon returned to sf satire with SLEEPER (1973). [JB]

EVIL FORCE, THE 4D MAN.

EVOLUTION

There is, inevitably, an intimate connection between the development of evolutionary philosophy and the history of sf. In a culture without an evolutionary philosophy most of the kinds of fiction we categorize as sf could not develop. Like the idea of progress, evolutionary philosophy flourished in late-18th-century France, and it was first significantly represented in literature by RESTIF DE LA BRETONNE's evolutionary fantasy *La decouverte Australe par un homme volant* ["The Southern-Hemisphere Discovery by a Flying Man"] (1781), an allegorical treatment of ideas partly derived from the Comte du Buffon (1707-1788). In the early-19th-century *Philosophie zoologique* (1809), the Chevalier de Lamarck (1744-1829) developed a more elaborate evolutionary philosophy, introducing the key notion of adaptation, and paved the way for Charles Darwin (1809-1882) and his theory of natural selection, promulgated in *The Origin of Species* (1859). Because we have fallen into the habit of labelling various theoretical heresies "Lamarckian", it is easy to forget that for most of the 19th century Lamarck was the more influential writer, especially in France. In the UK, Darwin was ardently championed by T.H. Huxley (1825-1895) and the sociologist Herbert Spencer (1820-1903), and his ideas took much firmer hold in the UK than elsewhere. Thus there was a sharp divergence of emphasis between French and UK evolutionary sf, and this lasted well into the 20th century. The writers who pioneered the tradition of French evolutionary fantasy were Camille FLAMMARION, most notably in *Lumen* (1887; trans 1897) and *Omega* (trans 1894), and J.H. ROSNY aine in his many prehistoric fantasies, in "Les Xipehuz" (1887; trans as "The Shapes" 1968) and in "La mort de la terre" (1910; trans as "The Death of the Earth" 1978). Jules VERNE's only evolutionary fantasy, *La grande foret, le village aerien* (1901; trans I.O. Evans as *The Village in the Treetops* 1964 UK), is also Lamarckian. Lamarck's successor, Henri Bergson (1859-1941), whose theory of "creative evolution" made much of the notion of the *elan vital* - which Lamarck had rejected - seems to have provided the seed of one of the most important UK evolutionary fantasies, J.D. BERESFORD's *The Hampdenshire Wonder* (1911), but for the most part UK writing was dominated by the implications of Darwinian theory and the catch-phrases by which it was vulgarized: "the survival of the fittest" and "the struggle for existence". H.G. WELLS was taught by T.H. Huxley in the early 1890s, and remained ever-anxious that the qualities which had shaped human nature for survival in the struggle for existence might prevent our ever achieving a just society - a fear powerfully reflected, in different ways, in *THE TIME MACHINE* (1895), *The Island of Dr Moreau* (1896), *The War of the Worlds* (1898) and *The Croquet Player* (1936 chap).

(An interesting antidote to Wellsian pessimism is administered in one of the several sequels to *The Time Machine*: David LAKE's *The Man who Loved Morlocks* * [1981].) The ominous spectres arising from the harsher versions of Darwinian philosophy also feature strongly in *Erewhon* (1872) by Samuel BUTLER (who also wrote several anti-Darwinian tracts) and intrude upon most of the speculative fiction of Grant ALLEN (who wrote several pro-Darwinian tracts). The political implications of the careless transplantation of Darwinian ideas into theories of social evolution (SOCIAL DARWINISM) were such that Wells's one-time fellow-Fabian George Bernard SHAW renounced Darwinism in favour of neo-Lamarckism on political grounds, and his play *Back to Methuselah* (1921) was published with a long introductory essay explaining this renunciation. Similar steps were taken by T.D. Lysenko (1898-1976), in the name of Soviet communism, and Luther Burbank (1849-1926), in the name of US fundamentalism. It was not widely realized that the implications of Darwinism were not necessarily as harsh as vulgar Darwinians tended to assume. An interesting allegorical popularization of a more humane Darwinism is Gerald HEARD's *Gabriel and the Creatures* (1952; vt *Wishing Well* 1953). The influence of Darwinian ideas can be seen in such US works as Edgar FAWCETT's *The Ghost of Guy Thyrle* (1895) and Austin BIERBOWER's *From Monkey to Man* (1894); the latter is an early attempt to present *Genesis* as an allegory of evolution. Human evolution was explored by writers in terms of its probable past (ANTHROPOLOGY; ORIGIN OF MAN) and possible future. Wells's classic essay, "The Man of the Year Million" (1893), imagined mankind as evolution might remake us, with an enormous head and reduced body, eyes enlarged but ears and nose vestigial - an image which became a stereotype adopted by many other writers. It became a cliché in early PULP-MAGAZINE sf, although most writers took a dim view of the "fitness" of such individuals, and usually represented them as effete entities doomed to extinction; "Alas, All Thinking!" (1935) by Harry BATES is a graphic example. Few pulp writers, though, had much idea of the actual implications of Darwinism, and they produced very few extrapolations which could stand up to rigorous examination - a state of affairs which still persists. Most sf writers contemplating the evolutionary future of mankind have been inordinately taken with the idea of sudden, large-scale mutations of a kind in which modern Darwinians do not believe (MUTANTS). Many stories appeared in which mutagenic radiation accelerated evolution to a perceptible pace, including John TAINÉ's *The Iron Star* (1930) and *Seeds of Life* (1931; 1951) and Edmond HAMILTON's "Evolution Island" (1927). Hamilton's fiction also showed a persistent interest in the pseudo-scientific notion of retrograde evolution (DEVOLUTION), which had earlier been luridly featured in George Allan ENGLAND's *Darkness and Dawn* (1914) and which crops up also in Olaf STAPLEDON's curiously un-Darwinian *Last and First Men* (1930). In Hamilton's "The Man who Evolved" (1931) a man who bathes himself in mutagenic radiation first turns into the man-of-the-year-million stereotype and then regresses, ending up as a blob of undifferentiated protoplasm. Equally pseudo-scientific, though more interesting, is Edgar Rice BURROUGHS's "extrapolation" of Haeckel's law ("ontogeny recapitulates phylogeny") in *The Land that Time Forgot* (1918; 1924); in this romance the recapitulation takes place during active life rather than embryonically. Similar schemes are credited to alien life-systems in Theodore STURGEON's

"The Golden Helix" (1954) and James BLISH's A Case of Conscience (1958). Sf of the 1920s and 1930s was frequently pessimistic about the long-term evolutionary prospects of mankind, but bold success stories are featured in J.B.S. HALDANE's "The Last Judgment" (1927) and Laurence MANNING's The Man who Awoke (1933; fixup 1975). The former influenced and the latter was influenced by the most detailed and most extravagant of all evolutionary fantasies, Stapledon's Last and First Men. This extraordinary study of mankind's many descendant species, extending over a timespan of billions of years, exhibits an odd combination of optimism and pessimism further extrapolated on the grander stage of Star Maker (1937), whose experimentally inclined God-figure is working His way through an evolving series of Creations. Those sf stories in which the human evolutionary story does not end with eventual extinction or with the acquisition of a stabilizing IMMORTALITY usually propose, like Shaw in Back to Methuselah, that there will eventually be a transcendence that frees human intelligence from its association with frail flesh, and that our ultimate descendants will be more-or-less godlike entities of "pure thought" - an idea which echoes continually through E.E. "Doc" SMITH's work and crops up briefly but rather disturbingly in Robert A. HEINLEIN's Methuselah's Children (1941; rev 1958). A particularly memorable pulp sf evocation of this sort of motif is Eric Frank RUSSELL's "Metamorphosite" (1946). Even when mankind fails to stay the distance - as in John W. CAMPBELL Jr's "The Last Evolution" (1932), where it is our machines, not their creators, which ultimately achieve the state of "pure consciousness"-this is conventionally seen as the logical end-point of evolution, as it still is in such novels as The Singers of Time (1990) by Frederik POHL and Jack WILLIAMSON and Eternal Light (1991) by Paul J. MCAULEY. Given that images of the next stage in human evolution (SUPERMAN) usually invoke pseudo-scientific notions about mental powers (ESP) based on Cartesian illusions about mental ghosts in bodily machines, the idea that evolution tends towards disembodiment is a natural and psychologically plausible extrapolation, though arguably rather silly. The post-WWII boom in stories of human mental evolution produced a number of stories which invoked the notion of a universal evolutionary schema. The most notable were Arthur C. CLARKE's Childhood's End (1953), which shows a whole generation of Earthly children undergoing a kind of metamorphic apotheosis to fuse with the "cosmic mind", and two stories by Theodore Sturgeon: More than Human (fixup 1953) and The Cosmic Rape (1958), which deploy similar imagery on a smaller scale, using the idea of collective mental gestalts. Another interesting example of such a schema is to be found in the material linking the short stories in Galaxies like Grains of Sand (1959; full text restored 1979) by Brian W. ALDISS, which proposes that the next step in human evolution might be complete somatic awareness and control. A more modest schema of human evolution, past and future, underlies Gordon R. DICKSON's Childe Cycle novels, and is elaborated in some detail in his The Final Encyclopedia (1984). A remarkable philosophical allegory surreally re-examining many ideas about mankind's possible future evolution is Robert SILVERBERG's Son of Man (1971). The most widely seen (but by no means most widely understood) symbolic representation of evolutionary apotheosis is that contained in the final frames of the film 2001: A SPACE ODYSSEY (1968). Last and First Men also includes in its multifaceted

discussion of future human evolution the possibility - first raised in Haldane's essay *Daedalus, or Science and the Future* (1923) - that humans might take charge of their own physical evolution by means of what is nowadays termed GENETIC ENGINEERING, but this line of inquiry was not widely explored until much later. Damon KNIGHT's *Masters of Evolution* (1954 as "Natural State"; exp 1959) features the anti-technological "muckfeet", who have allegedly progressed beyond the need for machines and cities in acquiring biological control of their environment, but stories of this kind, inspired by a growing interest in ECOLOGY and a corollary antipathy towards CITIES (see also DYSTOPIAS; MACHINES), have been heavily outnumbered by those which - following Aldous HUXLEY's example in *Brave New World* (1932) - consider the idea of tampering with human nature implicitly horrific. Examples include Frank HERBERT's *The Eyes of Heisenberg* (1966) and T.J. BASS's *Half Past Human* (1971), the latter featuring a "human hive" - an image invoked in many stories as a highly unfortunate but nevertheless probable destiny for evolving human society (HIVE-MINDS), most notably in J.D. BERESFORD's and Esme Wynne-Tyson's *The Riddle of the Tower* (1944). The idea that our future evolution might involve turning ourselves into CYBORGS - memorably pioneered by E.V. ODLE's remarkable *The Clockwork Man* (1923)-has usually been treated with similar unenthusiasm. The idea of any future metamorphosis of the human species, however modest, is repugnant to many whose aesthetic standards are not unnaturally defined by our present ideals: even to those who abhor anything that might smack of Nazism, the desirable notion of "men like gods" inevitably conjures up an image of serried ranks of Aryan matinee idols. One sf writer who has tried particularly hard to escape this imaginative straitjacket is Ian WATSON, whose exuberant adventures in evolutionary possibility extend to bizarre extremes in *The Gardens of Delight* (1980) and *Converts* (1984). A surprising number of sf stories look forward-often with a curious inverted nostalgia - to the time when mankind's day is done and we must pass on our legacy to the inheritors of Earth (or of the Universe). Usually the inheritors are machines, as in Lester DEL REY's "Though Dreamers Die" (1944) and Edmond Hamilton's "After a Judgment Day" (1963), but sometimes they are animals, as in Del Rey's "The Faithful" (1938), Clifford D. SIMAK's *City* (1944-51; fixup 1952) and Terry BISSON's "Bears Discover Fire" (1990). Olof JOHANESSON, in *The Tale of the Big Computer* (1966; trans 1968; vt *The Great Computer*), plots an evolutionary schema in which the function of mankind is simply to be the means of facilitating machine evolution; while L. Sprague DE CAMP's and P. Schuyler MILLER's ironic *Genus Homo* (1941; 1950), Neal BARRETT Jr's puzzle-story *Aldair in Albion* (1976), Dougal DIXON's fascinating picture-book *After Man: A Zoology of the Future* (1981) and Kurt VONNEGUT Jr's *Jeremiad Galapagos* (1985) all describe new species which take up the torch of evolutionary progress after mankind's demise. Such stories have strong ideative links with extravagant ALTERNATE-WORLD stories which contemplate alternative patterns of earthly evolution, notably Guy DENT's *Emperor of the If* (1926), Harry HARRISON's *West of Eden* (1984) and its sequels - in which primitive men must compete with intelligent descendants of the dinosaurs - and Stephen R. BOYETT's *The Architect of Sleep* (1986), in which it is raccoons rather than apes that have given rise to sentient descendants. Accounts of ALIEN evolution are separately considered in the

section on LIFE ON OTHER WORLDS, but mention must be made here of the frequent recruitment of the ideas of convergent evolution and parallel evolution to excuse the dramatically convenient deployment of humanoid aliens. Writers conscientious enough to construct a jargon of apology for such a situation often argue that the logic of natural selection permits intelligence to arise only in upright bipeds with binocular vision and clever hands, and that, had such bipeds not evolved from lemurs, they might instead have evolved from catlike or even lizardlike ancestors. There are, however, relatively few stories which actually turn on hypotheses of this kind; examples include Philip LATHAM's "Simpson" (1954), one of several stories about humanlike aliens who are not as similar to us as they seem, and Lloyd BIGGLE's *The Light that Never Was* (1972), which addresses the question of whether "animaloid" species are necessarily inferior to "humanoid" ones. Alternative life-systems capable of Lamarckian evolution are featured in a few stories, including Barrington J. BAYLEY's "Mutation Planet" (1973) and Brian M. STABLEFORD's "The Engineer and the Executioner" (1975; rev 1991). The Butlerian idea that machines may eventually begin to evolve independently of their makers has become increasingly popular as real-world COMPUTERS have become more sophisticated; images of such evolutionary sequences have become more complex, as in James P. HOGAN's *Code of the Lifemaker* (1983). Several recent images of universal evolutionary schemas - notably the one featured in Gregory BENFORD's *Across the Sea of Suns* (1984) and the trilogy begun with *Great Sky River* (1988) - imagine a fundamental ongoing struggle for existence between organic and inorganic life-systems. The beginnings of such a division are evident in Bruce STERLING's series of stories featuring the Shapers and the Mechanists, which culminates in *Schismatrix* (1985). A related but somewhat different Universe-wide struggle for existence is revealed in the concluding volume of Stableford's Asgard trilogy, *The Centre Cannot Hold* (1990), and an even stranger one is first glimpsed in *The Angel of Pain* (1991), the second volume of another Stableford trilogy. Mutational miracles still abound in modern sf, in such apocalyptic stories of future evolution as Greg BEAR's *Blood Music* (1985), and there is a strong tendency to mystify evolution-related concepts such as "ECOLOGY" and "symbiosis" (PARASITISM AND SYMBIOSIS) in a fashion which is at best interestingly metaphorical and at worst hazily metaphysical. Patterns of evolution on alien worlds (LIFE ON OTHER WORLDS) are often placed in the service of some kind of Edenic mythology, and this is true even in the work of writers well versed in the biological sciences. Perhaps this is not unduly surprising in an era when religious fundamentalists are still trying to fight the teaching of Darwinism in US schools, and to have equal time given to "Creation Science". Some evolutionary philosophers have not yet given up hope of producing a crucial modification of the Darwinian account of evolution which is more aesthetically appealing; the latest to attempt it has been Rupert Sheldrake in *The Science of Life: The Hypothesis of Formative Causation* (1981), an idea adapted to sf use by Paul H. COOK in *Duende Meadow* (1985). Given the continued success of Darwinism as a source of explanations, however, it is lamentably unfortunate that so few sf stories have deployed the theory in any reasonably rigorous fashion. EWALD, CARL

(1856-1908) Danish writer whose *Two-Legs* (trans Alexander Teixeira de Mattos 1906 US) narrates the rise of Man from the significantly jaundiced viewpoint of the animals over which he would soon have dominion. Two other books of genre interest have not been translated into English. [JC]

EWERS, HANNS HEINZ

(1871-1943) German writer, spy in Mexico and the USA in WWI, and early member of the Nazi Party. SUPERMEN predominate in his fiction, much of which remains untranslated. He is noted mainly for a series of novels about Frank Braun - anthropologist and Ubermensch - some of which are sf. The young hero of *Der Zauberlehrling* (1907; trans Ludwig Lewisohn as *The Sorcerer's Apprentice* 1927 US) hypnotizes his "inferior" Italian mistress into a spurious sainthood - complete with stigmata - which in the end he makes real by helping crucify her. In *Alraune* (1911; trans S. Guy ENDORE 1929 US), which was filmed 5 times 1918-52 (ALRAUNE), Braun uses artificial insemination to breed from the dregs of society - a sex criminal and a prostitute - the soulless eponymous female whose name reflects in German her likeness to a mandrake root, and whose vampirical powers prove almost fatal to him. In *Vampir* (1921; trans Fritz Sallagher as *Vampire* 1934 US; vt *Vampire's Prey* 1937 UK) Braun appears as a macabre alter ego of the author, spying in Mexico during WWI while at the same time becoming a vampire. [JC] Other works: *Blood* (coll trans Erich Posselt and Sinclair Dombrow 1930 US), contes cruels.

EWING, FREDERICK R.

Theodore STURGEON.

EWING, JENNY

F. Yorick BLUMENFELD.

EWOK ADVENTURE, THE

(vt *Caravan of Courage*) Made-for-tv film (1984). Lucasfilm/Korty Films for ABC TV. Executive prod George LUCAS. Dir John Korty, starring Eric Walker, Aubree Miller. Screenplay Lucas. 120 mins, cut to 97 mins. Colour. When the family spaceship crashes on an alien moon, the parents are captured by a monster and their two children cared for by Ewoks, the teddy-bear aliens first seen in *RETURN OF THE JEDI* (1983). After a long trek, the children and Ewoks save the parents. TEA is disappointing by adult standards, but children like it - and it is a children's film. The special effects are surprisingly poor considering Lucasfilm's STAR WARS experience. Lucas's story is vestigial and the Ewoks, though clearly intended to be cute, are charmless; Philip STRICK described their faces as "a fixed, unblinking mask set in a rictus of amiability". TEA was released theatrically overseas as *Caravan of Courage*. A second tv movie, *Ewoks: The Battle for Endor* (1985), though slightly better, had no theatrical release. [PN]

EXPANSE

US SEMIPROZINE, possibly current, pub and ed quarterly from Baltimore by Steven E. Fick, small- BEDSHEET format, three issues published through Summer 1994. E publishes fiction mostly by newer writers, but including some well-known figures such as John BRUNNER, as well as non-fiction features. A professionally produced magazine with eclectic design (each story set in a different font) and an announced print run high for a semiprozine, E began intrepidly, proclaiming in advertisements: "Tired of the liberal bias in the stories you read? Expanse doesn't hug trees, isn't afraid to use a raygun and boldly promotes human imperialism." Despite its energetic debut, its fourth issue had not appeared by April 1995. [GF/PN]

EXPLORERS

Film (1985). Edward S. Feldman/Paramount. Dir Joe DANTE, starring Ethan Hawke, River Phoenix, Jason Presson. Screenplay Eric Luke. 109 mins. Colour. Three schoolboys, tipped off by a dream, employ a computer to help create a sphere that can move very quickly and is impervious to gravity; they use it to power a spacecraft they build out of junk. Far above Earth they find a spaceship with, inside it, two aliens - their view of humanity entirely gleaned from old tv programmes - who turn out likewise to be kids on a joyride. This strange film was apparently aimed at pre-teens, but the grotesque aliens (more like cartoons than extraterrestrials) and their tv/radio obsession seem directed far more at adults. Perhaps because of this uncertainty about the audience, E, the most personal of Dante's films, was a box-office failure. Despite its self-indulgence it has wonderful moments, captures well that sense of dream and yearning in children known to sf fans of whatever age as the SENSE OF WONDER, and deftly pinpoints many points of collision between the child's world and the adult's. EXTRAPOLATION
PREDICTION.

EXTRAPOLATION

Critical magazine, ed Thomas D. CLARESON from its inception in Dec 1959; Clareson was joined by Donald M. HASSLER from the Winter 1987 issue, and Hassler became sole editor from the Spring 1990 issue; 2 numbers a year at first, quarterly since Spring 1979; current. It had reached Vol. 35, no 4, by the Winter 1994 issue. It began as The Newsletter of the Conference on Science-Fiction of the MLA (the MLA being the Modern Languages Association). E was first published from the English Department of the College of Wooster, Ohio, and since Spring 1979 has been published by the

Kent State University Press, Ohio. E was very much the product of one person, Clareson (although it had a large editorial board), without whose enthusiasm it might not have survived. He continued as Emeritus Editor until his death in 1993. It was the first of the academic journals about sf; its successors have included FOUNDATION: THE REVIEW OF SCIENCE FICTION, then SCIENCE-FICTION STUDIES and, much more recently, JOURNAL OF THE FANTASTIC IN THE ARTS. E is a journal more notable for feature articles than for reviews, polemics or ongoing debate. While its standard has been variable - there have certainly been flat spots - the same can be said of the other critical magazines. In its long career it has published articles of all kinds, though generally concentrating more on scholarship than on criticism. A long-running feature (until 1981) was the annual survey, "The Year's Scholarship in Science Fiction and Fantasy", compiled first by Clareson and later by Marshall B. TYMN and Roger C. SCHLOBIN; it continued as a separate publication from Kent State from 1982. E's existence as the earliest public platform for sf studies significantly advanced them; historically important, E continues to be relevant and sometimes stimulating, although too few of its articles are of interest outside a rather narrow academic community. E's rare first 10 years' issues - constituting vols 1-10 - were reprinted in book form by GREGG PRESS as Extrapolation: a Science-Fiction Newsletter, Vols 1-10 (anth 1978) ed Clareson, and vols 11-13, covering 1969-1972, were reprinted by Johnson Reprint Corporation as Extrapolation: A Science-Fiction Newsletter (anth 1973), also ed Clareson. [PN]

EXTRA-SENSORY PERCEPTION

In sf TERMINOLOGY, usually known by its acronym, ESP (which see for details). [PN]

EXTRATERRESTRIAL

In sf TERMINOLOGY, a creature (usually intelligent) from beyond TERRA. When used as a noun, and occasionally in its adjectival mode, the word may be shortened to "et" or "ET" (pronounced "eetee"). ALIENS; LIFE ON OTHER WORLDS. [PN]

EXTRO

Northern Irish magazine, A4 format, Feb-July 1982, 3 issues, published bimonthly by Specifi Publications, ed Paul Campbell. During its brief existence - terminated when its bank manager dishonoured an overdraft arrangement - E published fiction by Brian W. ALDISS, Garry KILWORTH, Christopher PRIEST, Bob SHAW, John T. SLADEK, Ian WATSON, James WHITE and others (notably Ian MCDONALD's first story), along with interviews, essays and book reviews. [RH]

SF?

FABIAN, STEPHEN E.

(1930-) US illustrator who worked in electronics until 1973. Self-trained as a freelance sf illustrator, he worked as a fan artist in the late 1960s. At the age of 43 he graduated to the professional SF MAGAZINES, mostly AMZ and Fantastic, with both cover art and interiors; he was less active in the 1980s than the 1970s. His art is distinctive, with a strong sense of formal design; it is for his dramatic interior black-and-white work, reminiscent of Virgil FINLAY's and prepared on textured coquille board, that he is best known. Book covers and interior illustrations include work for SMALL PRESSES such as Donald M. Grant, Byron PREISS and UNDERWOOD-MILLER. Books devoted to SEF's work include Letters Lovecraftian: An Alphabet of Illuminated Letters Inspired by the Works of the Late Master of the Weird Tale, Howard Phillips Lovecraft (1974), Fantastic Nudes (1976) and Fantastic Nudes: 2nd Series (1976), which are collected with other material in Fantasy by Fabian (1978), The Best of Stephen Fabian (1976), More Fantasy by Fabian (1979) and Fabian in Color (1980). Many of these are ed and published Gerry de la Ree (? -1993), who also published much of Virgil Finlay's work. SEF has seven times been nominated for a HUGO. [PN/JG]See also: FANTASY.

FABULATION

We do not intend to make here - or to quote - any sustained theoretical argument about the nature of fabulation as the term was conceived by Robert SCHOLLES in *The Fabulators* (1967) and amplified in his *Structural Fabulation* (1975). Our starting point must be GENRE SF, our central concern throughout this encyclopedia. In the entry on MAINSTREAM WRITERS OF SF we contrast the writers of genre sf, and the circumstances under which they write, with writers and their circumstances in what has come to be known as the mainstream. Here, we contrast the inherent nature of genre sf with the inherent nature of the central literature of the postmodern world (POSTMODERNISM AND SF for a more sharply focused view of Postmodernism as a movement and a condition of mind). In using the single term "fabulation" instead of several - over and beyond Postmodernism, a critical roster might include ABSURDIST SF, Fictionality, MAGIC REALISM, SLIPSTREAM SF and Surfiction - we know we are offering a grossly oversimplified snapshot of the modern literary environment (or nests of environments). But the alternative would be to make a thousand individual choices, often inevitably controversial, as we attempted to label each non-"realistic" non-genre sf novel according to its precise place in an ever-shifting mosaic of prescriptive definitions. One term will have to do. Over the course of the 20th century, sf readers have grown used to thinking of genre sf as substantially different (in manner, in substance and in intention) from the great stream of realistic novels which increasingly dominated the English-speaking literary since the middle of the 18th century, a dominance which was challenged only in the first decades of our own era. Helped along by critics from within the genre, like Alexei and Cory PANSKIN in their contentious *The World Beyond the Hill* (1989), sf readers have further grown accustomed to thinking that it was genre sf itself that dethroned the mimetic novel from its position of dominance in 1926, and that the continued popularity of "realistic" fiction has been a kind of confidence game. We feel that something like the reverse is true: that genre sf - which we repeat is our central

concern throughout this encyclopedia - is essentially a continuation of the mimetic novel, which it may have streamlined but certainly did not supplant; and that the onslaught of Modernism (and its successors) on the mimetic novel was also an onslaught upon the two essential assumptions governing genre sf. The first assumption is that both the "world" and the human beings who inhabit it can be seen whole, and described accurately, in words. The writers who created the great novels of the 19th century wrote in that assumption, and their novels were written as though they opened omniscient windows into reality. What the novel said and what was true were the same thing. Writers of genre sf have never abandoned this assumption. The explorations of Henry James (1843-1916) in the inherent unreliability of words - and the consequent unreliability of narrators - awoke no appreciative response in the mind of Hugo GERNSBACH, and it was not until the 1970s and 1980s that sf or fantasy was published (by writers like Jonathan Carroll, Samuel R. DELANY and Gene WOLFE) which accepted, 70 years late, the Jamesian intuition. In the world outside, however, after WWI, serious literary critics and readers almost universally granted the case of Modernist writers - nearly all of them the spiritual children of Henry James - that the "real" world could never be grasped whole, but that it was the high and difficult task of writers to forge fallen words into a semblance of the world, and to take an artificer's joy in the task of construction. The second assumption is that the "world"-whether or not it can be seen whole through the distorting glass of words - does in the end have a story which can be told. That story might be the knotty and problematical revelation of the truth of the Christian faith as unfolded in the later work of T.S. Eliot (1888-1965); or the March of Progress that Alexei and Cory Panshin claim to have traced, beginning with the planet-bound storytellers of the 19th century whose descendants bounded ever upwards toward the GOLDEN AGE OF SF, exploring the Galaxy en passant. What underlying story is being told is less important than the fact that, for writers of genre sf, some form of "meta-narrative" lies beneath the tale, ensuring the connectivity of things. The huge proliferation of future HISTORIES and novel sequences in genre sf does not simply reflect market strategies; it also represents a belief that the world is tellable. It is that belief, whether held by Modernists like T.S. Eliot (and Gene Wolfe) or pure genre writers like E.E. "Doc" SMITH, that has been called into question by the various Postmodernist movements, and which lies at the heart of most fabulations. We can now say what we mean in this encyclopedia by a "fabulation": a fabulation is any story which challenges the two main assumptions of genre sf: that the world can be seen; and that it can be told. We have chosen to use the term "fabulation" because it seems to us the best blanket description of the techniques employed by those writers who use sf devices to underline that double challenge, and whose work is thus at heart profoundly antipathetic to genre sf. A typical fabulation, then, is a tale whose telling is foregrounded in a way which emphasizes the inherent arbitrariness of the words we use, the stories we tell (Magic Realism, for instance, can be seen as a subversion of the "official" stories which are told by "rational" means and authorities), the characters whose true nature we can never plumb, the worlds we can never step into. (An unfriendly critic might say that fabulations are all means and no substance; but that is perhaps to miss the Postmodernist

point that all previous stories were likewise, albeit secretly, all means and no "substance".) By foregrounding the means of telling a tale, fabulations articulate what might be called the fableness of things: the fableness of the world itself in some Magic Realism; the fableness of the political and social world in some Absurdist sf; the fableness of the aesthetic object in Postmodernism as a whole; and - finally - the fableness of fables in Fabulation itself. Authors whose works (or some of whose works) are, in our terms, fabulations include Paul ABLEMAN, Paul AUSTER, John BARTH, Donald BARTHELME, Adolfo BIOY CASARES, Michael BLUMLEIN, Jorge Luis BORGES, Bruce BOSTON, Scott BRADFIELD, Richard BRAUTIGAN, Christine BROOKE-ROSE, Ed BRYANT, David R. BUNCH, Anthony BURGESS, William BURROUGHS, Dino BUZZATI, Italo CALVINO, Angela CARTER, Jerome CHARYN, Barbara COMYNS, Robert COOVER, Arthur Byron COVER, Tom DE HAVEN, Don DELILLO, Rick DEMARINIS, Thomas M. DISCH, E.L. DOCTOROW, Katherine DUNN, Umberto ECO, George Alec EFFINGER, Carol EMSHWILLER, Steve ERICKSON, Karen Joy FOWLER, Carlos FUENTES, Felix GOTSCHALK, Alasdair GRAY, MacDonald HARRIS, M. John HARRISON, Carol HILL, William HJORTSBERG, Russell HOBAN, Trevor HOYLE, Harvey JACOBS, Langdon JONES, Franz KAFKA, Robert KELLY, Jerzy KOSINSKI, William KOTZWINKLE, Joseph MCELROY, Sheila MACLEOD, Michael MOORCOCK, Haruki MURAKAMI, Vladimir NABOKOV, Flann O'BRIEN, John Cowper POWYS, Christopher PRIEST, Thomas PYNCHON, Peter REDGROVE, Philip ROTH, Salman RUSHDIE, James SALLIS, Josephine SAXTON, Arno SCHMIDT, Lucius SHEPARD, John T. SLADEK, Norman SPINRAD, Stefan THEMERSON, David THOMSON, Boris VIAN, Gore VIDAL, William T. VOLLMANN, Alice WALKER, Rex WARNER, William WHARTON, Gene WOLFE, Stephen WRIGHT, Rudolf WURLITZER and Pamela ZOLINE. [JC]See also: OULIPO.

FABULOUS WORLD OF JULES VERNE, THE
VYNALEZ ZKAZY.

FACE OF FU MANCHU, THE

Film (1965). Anglo-Amalgamated. Dir Don Sharp, starring Christopher Lee, Nigel Green, Tsai Chin, Howard Marion-Crawford, James Robertson Justice. Screenplay Harry Alan Towers, based on the characters created by Sax ROHMER. 96 mins. Colour. The first of a series of films produced by Harry Alan Towers in which Christopher Lee portrayed the oriental master-fiend, Tsai Chin played Fu's insidious daughter (renamed Lin Tang from Rohmer's Fah Lo Suee) and a succession of square-jawed heroes-Nigel Green, Douglas Wilmer, Richard Greene-played Sir Denis Nayland Smith of Scotland Yard. This first entry is by far the best of the batch, shot imaginatively on Irish locations which stand in for England and Tibet in the 1920s, and with devices reminiscent of the old movie serials, such as a gas which kills an entire village and a superexplosive, both deployed in Fu's scheme to control the world. Sharp's direction is fast-paced, with full rein given to the mild sadomasochism of the originals as victims are whipped or confined to cabinets which slowly fill with Thames water. This is a richly entertaining pastiche of the old style, although less delirious than The MASK OF FU MANCHU (1932), in which Fu was played by Boris Karloff. Sharp stayed with the series for Brides of Fu Manchu (1966), which was almost up to standard, but after the inferior Vengeance of Fu Manchu (1967), dir Jeremy Summers, the series was turned over to international hack Jesus

Franco for the disastrous Castle of Fu Manchu (1968) and Blood of Fu Manchu (1968; vt Kiss and Kill). [KN]

FAGAN, H(ENRY) A(LLAN)

(1889-1963) South African judge and writer, Chief Justice of the Supreme Court of South Africa 1956-9. In his sf novel Ninya (1956 UK) survivors of a crash landing on the Moon encounter many strange adventures. [JC]

FAHRENHEIT 451

Film (1966). Anglo-Enterprise and Vineyard/Universal. Dir Francois Truffaut, starring Julie Christie, Oscar Werner, Cyril Cusack, Anton Diffring. Screenplay Truffaut, Jean-Louis Richard, based on FAHRENHEIT 451 (1953) by Ray BRADBURY. 112 mins. Colour. Bradbury's angry parable is about a future in which all books are banned. The hero (Werner) is a member of the Fire Brigade, whose function is not to put out fires but to burn books. He first questions the regime and then rebels totally, incinerating the fire chief instead of the books, escaping from the city and joining a rural community whose members are each memorizing a book, word for word, in order to preserve it. The film is more ambiguous than the book and, so to speak, lacks its fire; Truffaut seems not altogether to accept Bradbury's moral simplicity. This is particularly evident at the end, with the book people murmuring aloud the words they are committing to memory, while plodding about the snow-covered landscape like zombies. The words may be saved but literature itself seems dead. The film is well photographed by Nicolas Roeg, later the celebrated director of, among others, The MAN WHO FELL TO EARTH (1976). [JB/PN] See also: CINEMA; COMMUNICATIONS.

FAIL SAFE

Film (1964). Max E. Youngstein-Sidney Lumet. Dir Sidney Lumet, starring Henry Fonda, Dan O'Herlihy, Walter Matthau, Frank Overton, Fritz Weaver. Screenplay Walter Bernstein, based on Fail-Safe (1962) by Eugene L. BURDICK and Harvey WHEELER. 111 mins. Colour. A mistaken US nuclear attack on Moscow nearly initiates WWIII, a quandary resolved only by the US President's decision to bomb New York as an apologetic gesture. FS had the misfortune to be released soon after DR STRANGELOVE OR: HOW I LEARNED TO STOP WORRYING AND LOVE THE BOMB (1963), and the public preferred the vigorous black farce of Stanley KUBRICK's film to the wordy, low-key documentary style of Lumet's. The unlikely premise is lent conviction by some good performances, but this "message" film is at once too diagrammatic and too like soap opera in such simplistic portrayals as Hawkish Professor, Liberal President and Conscience-Stricken Air-Force General. [PN]

FAIRBAIRNS, ZOE (ANN)

(1948-) UK writer and FEMINIST whose one sf novel, Benefits (1979), presents a DYSTOPIAN vision of the fate of women in the 21st century, as advances in reproductive technologies permit greater male control, in fear and loathing, over the female half of the race. [JC] See also: WOMEN SF WRITERS.

FAIRMAN, PAUL W.

(1916-1977) US editor and writer in several genres, including crime

stories and erotica. His first published sf story was "No Teeth for the Tiger" for AMZ in 1950, and for some years thereafter he was a regular contributor to the ZIFF-DAVIS magazines under his own name, the pseudonyms Robert Lee and Mallory Storm, and various house pseudonyms, including E.K. JARVIS, Clee GARSON and Paul LOHRMAN; he also published books as by F.W.Paul (see below). He was the first editor of IF, Mar-Nov 1952, but departed after 4 issues to join the Ziff-Davis staff. He left Ziff-Davis in 1954 but returned in Dec 1955 and became editor of AMAZING STORIES and FANTASTIC from May 1956, a position he held until Sep 1958. He launched the short-lived DREAM WORLD in 1957. He was the principal user of the Ivar JORGENSEN pseudonym, publishing under that name Ten from Infinity (1963; vt The Deadly Sky 1970; vt Ten Deadly Men 1975), Rest in Agony (1963; vt rev 1967 as PWF; The Diabolist 1973 as PWF) and Whom the Gods Would Slay (1951 Fantastic Adventures; 1968). Two of his magazine stories were filmed: "Deadly City" (1953 If as Jorgensen) as TARGET EARTH! (1954) and "The Cosmic Frame" (1953 AMZ) as Invasion of the Saucer Men (1955; vt Invasion of the Hell Creatures). Several of his books were novelizations of tv scripts, including The World Grabbers * (1964), based on an episode from One Step Beyond, and City under the Sea * (1965), based on the film City under the Sea (1965; vt War Gods of the Deep). Other books issued under his own name were the sf novel I, the Machine (1968) and the horror-story collection The Doomsday Exhibit (coll 1971). He wrote one pseudonymous novel in collaboration with Milton LESSER, The Golden Ape (1957 AMZ as "Quest of the Golden Ape" as by Adam CHASE and Ivar Jorgensen; 1959 as by Chase). PWF wrote several juvenile novels based on outlines by Lester DEL REY and published under del Rey's byline, including The Runaway Robot (1965), Tunnel through Time (1966), Siege Perilous (1966; vt The Man without a Planet 1969) and Prisoners of Space (1968). Rocket from Infinity (1966), The Infinite Worlds of Maybe (1966) and The Scheme of Things (1966) may also have been by PWF but have not been acknowledged as such. He wrote one juvenile, The Forgetful Robot (1968), under his own name. [BS] Other works: A Study in Terror * (1966; vt Sherlock Holmes Versus Jack the Ripper 1967 UK) as by Ellery Queen; The Frankenstein Wheel (1972); The Girl With Something Extra* (1973), a tv tie. As by F.W.Paul: novels in the Man from S.T.U.D. sequence: The Orgy at Madame Dracula's (1968) (#2), Sock it to me, Zombie! (1968) (#3), Rape is a No-No (1969) (#6), The Planned Planethood Caper (1969) (#7) and The Lay of the Land (1969) (#8), with #s 2,3 and 8 assembled as The Man from S.T.U.D. vs the Mafia (omni 1972). FAMOUS FANTASTIC MYSTERIES

US PULP MAGAZINE which published 81 issues, Sep/Oct 1939 (vol 1 #1)-June 1953 (vol 14 #4). It was originally part of the Frank A. MUNSEY chain but was sold to Popular Publications, which published it from Mar 1943. Mary GNAEDINGER was editor throughout. Although it published a few original stories, FFM was basically a reprint magazine - perhaps the most distinguished; it was originally founded to reprint science fantasy from the Munsey pulps. After the sale to Popular it switched to the reprinting of novels and stories not previously published in magazines. The first few monthly issues used much short material, with novels serialized, but, after going bimonthly in Aug 1940, FFM presented a complete novel in every issue. The early issues featured novels by such Munsey regulars as Ray CUMMINGS, George Allan ENGLAND, A. MERRITT and Francis STEVENS. Novels reprinted from original hardback editions included several by H. Rider HAGGARD, William Hope HODGSON, John TAINE, E. Charles VIVIAN, H.G. WELLS and S. Fowler WRIGHT. Through offering access to such material FFM allowed many pulp-sf fans to broaden their acquaintance with non-pulp material - extending even to such authors as G.K. CHESTERTON and Franz KAFKA. The quality of illustration was also exceptionally high - Virgil FINLAY did much of his best work for the magazine, including 27 covers; 26 covers were by Lawrence Sterne STEVENS. During the WWII years publication was sometimes irregular. A Canadian reprint edition ran Feb 1948-Aug 1952; this was the second Canadian reprinting of FFM, the first being the Canadian SUPER SCIENCE STORIES. [BS]

FAMOUS SCIENCE FICTION

US DIGEST-size magazine. 9 issues, Winter 1966 (vol 1 #1) to Spring 1969 (vol 2 #3). One of the reprint magazines ed R.A.W. LOWNDES for Health Knowledge Inc., it used material from the PULP MAGAZINES of the 1930s plus 16 original short stories by Greg BEAR, Miriam Allen DEFORD, Philip K. DICK and others. The most notable of its reprints was Lawrence MANNING's The Man who Awoke series (1933 Wonder Stories; Summer 1967-Summer 1968). To issues 2-6 Lowndes contributed a series of editorials, Standards in Science Fiction, later reprinted as Three Faces of Science Fiction (1973). [BS]

FANAC

US FANZINE, ed from Berkeley by Terry CARR and Ron ELLIK (1958-61) and subsequently (1961-3) by Walter Breen. Fanac was a small but frequent publication carrying information on sf writers and events and news of sf fans and their activities. Its informal and humorous style was popular and became a model for later fanzines. Contributors included well known fans and professional writers. Fanac won the HUGO for Best Fanzine in 1959. [PR]

FANCHER, JANE S(UZANNE)

(1952-) US writer who began publishing genre material with two GRAPHIC NOVELS based on the work of C.J. CHERRYH: Gate of Ivrel: Claiming Rites * (graph 1987) and Gate of Ivrel: Fever Dreams * (graph 1988). In her own right JSF wrote the Cantrell sequence of SPACE OPERAS set in a Cherryhesque habitat-dominated Galaxy - Groundties (1991), Uplink (1992) and Harmonies of the 'Net (1992) - and featuring the protagonist's attempts to deal with a COMPUTER-generated crisis on a colony planet

inhabited by the descendants of Native Americans. The tales are high-pitched in tone, complex and promising. JSF was credited with artwork on #13-#16 of the Elfquest comic-book series by Wendy and Richard Pini, published by Donning Starblaze; her name was removed from the credits of the revised graphic-novel version issued by Marvel Epic. [JC]

FANCIFUL TALES OF TIME AND SPACE

US DIGEST-size magazine. 1 issue, Fall 1936, published by Shepard ? Wollheim; ed Donald A. WOLLHEIM. FTOTAS contained a mixture of weird, sf and fantasy stories, including work by August DERLETH, David KELLER and H. P. LOVECRAFT, as well as the first publication of Robert E. HOWARD's poem "Solomon Kane's Homecoming". FTOTAS was, strictly speaking, a SEMIPROZINE, rather like the earlier MARVEL TALES - which is to say that, despite the print run being only 200, the magazine was for sale - although it seems to have found no adequate distribution. [FHP/MJE]

FANDOM

The active readership of sf and fantasy, maintaining contacts through FANZINES and CONVENTIONS. Fandom originated in the late 1920s, shortly after the appearance of the first SF MAGAZINES. Readers contacted each other, formed local groups (some of which, notably the SCIENCE FICTION LEAGUE, were professionally sponsored), and soon began publication of APAS and other amateur magazines, which came to be known collectively as fanzines. The first organized convention was held in Leeds, UK, in 1937 and the first World SF Convention in New York in 1939 (although it gained its name from the holding in that year of the World's Fair in New York). From the 1920s to the 1950s, when sf was a minority interest, the number of people in fandom was small, probably no more than 500 at any one time. Since the 1960s, however, the number has steadily increased to over 10,000 - though this figure, of course, represents no more than a tiny fraction of the wider sf readership. Fandom is, like GENRE SF, primarily a US phenomenon, though other English-speaking countries quickly adopted the concept. Continental Europe, Japan and elsewhere followed much later; but increasing translation of and interest in sf has now spread fandom to some 30 countries, from Mexico to Norway. It is made up of both readers and writers of sf; many authors started as fans and many fans have written sf, so there is no absolute distinction between the two groups. Fans themselves are mainly young and male with higher education and a scientific or technical background, but exceptions are numerous and the stereotype is becoming less pronounced. Many more women entered fandom in the 1970s and 1980s. Fandom is not a normal hobbyist group. It has been suggested that, if sf ceased to exist, fandom would continue to function quite happily without it. That is an exaggeration; but it indicates the difference between sf fans and ostensibly similar groups devoted to Westerns, romances, detective fiction, etc. The reason may lie in the fact that sf is a speculative literature and consequently attractive to readers actively interested in new ideas and concepts, in addition to those idly seeking entertainment. Early fans took part in rocketry, radical politics and quasi-utopian experiments; later fans seem to find fanzines, conventions and the interaction of fandom itself a sufficient outlet for their energies and ideas. Though fandom has a tradition and history, even

a FAN LANGUAGE, fans are notably independent; relatively few belong to national organizations such as N3F or the BRITISH SCIENCE FICTION ASSOCIATION, and many publish individual and independent fanzines, a fact that at least one outside sociologist - Fredric Wertham (1895-1981) in *The World of Fanzines* (1973)-has found remarkable and even "unique". There is a fannish word "fiawol", an acronym for "fandom is a way of life": the joke is not altogether untrue. Just as sf is unrestricted in the scope of its interests, so too are fans and fandom. Fandom is thus a collection of people with a common background in sf and a common interest in communication, whether through discussion, chatter, correspondence or fanzine publishing. The result is more nearly a group of friends, or even a subculture, than a simple fan club or a literary society. There have always been divergent interest groups within fandom, and during the 1980s these tended to split more obviously. The most basic division, perhaps, is between those fans whose main love is written sf and the so-called media fans, who prefer sf in the form of CINEMA, TELEVISION or COMICS. Even among fans of written sf, fanzine fans and convention fans have become separate groups, though there is substantial overlap; comics fans have their own conventions, and there are other special-interest groups in media fandom who may be primarily interested in, for example, STAR TREK (the "Trekkies") or DR WHO; there is even a games fandom, with a particular interest in role-playing games (GAMES AND TOYS). Various aspects of US fan history are covered in, among others, *The Immortal Storm* (1954) by Sam MOSKOWITZ, *All our Yesterdays* (1969) and *A Wealth of Fable* (1976 in mimeo form) by Harry WARNER Jr, *The Futurians* (1977) by Damon KNIGHT and *The Way the Future Was: A Memoir* (1978) by Frederik POHL. The fullest history of UK fandom takes the form of a fanzine, *Then*, written and published by Rob Hansen: the 180pp of #1, #2 and #3 (1988-91) cover the story to the end of the 1960s; more are projected. [PR/PN] See also: FAPA; FUTURIANS; OMPA; RATFANDOM.

FANE, BRON
R.L. FANTHORPE.

FANE, JULIAN (CHARLES)
(1927-) UK writer of literary bent whose *DYSTOPIA*, *Revolution Island* (1979), was one of the last UK visions of a union-dominated left-wing future. It was published just before the incoming administration of Margaret Thatcher (1979-90) put an end, for this century, to the relevance of this sort of warning. [JC]

FAN LANGUAGE

Sf enthusiasts, in common with other groups, have evolved their own terminology and usage. This language comprises words and phrases used in the writing of sf itself and also the more arcane and whimsical jargon of FANDOM and FANZINES. Most sf readers are familiar with the shorthand of their literature, and words like "spaceship", "robot", "time-machine" and even "ftl drive", "spacewarp" and "ray-gun" need little or no glossing. These words, however, originated in sf and required explanation when first coined (TERMINOLOGY). Only the growth in popularity of sf has led to the acceptance of such terms as part of everyday English. The language of fandom, however, has a more restricted use and thus is less familiar. Much

of it was initially associated with fanzines, including the specialized art of duplicating them, and much of it resulted from simple contraction: "corflu", for example, was nothing stranger than correcting fluid (for stencils). It is a sign of the march of time - and of the very widespread use of COMPUTER networks in fandom-that terms like "corflu" have gained an air of ancient quaintness; another sign of the times is that contemporary fans tend to accept neologisms from the world of computing rather than to generate their own. Of more general interest are words which describe fan attitudes and behaviour. Examples are: "egoboo" (from "ego-boost"), the satisfaction gained from praise or recognition, such as seeing one's name in print; "mundane", a non-fan; "slash fiction", fan-generated stories about sexual intimacy between famed fictional characters, almost always male, the best known examples being the Kirk/Spock slash tales; and acronym- based terms like "to gafiate"(from Get Away From It All - to leave fandom; the phrase originally meant to get away from mundane reality and to enter fandom). Some of these contractions, acronyms and neologisms fill a linguistic need ("slash fiction" describes a phenomenon not elsewhere comprehended); others simply enrich the sense of affinity that fandom - like any other grouping of this sort - was partly created to foster. In general, fan argot is anything but freemasonical, and never amounts to anything like a secret code to baffle outsiders. For fans, outsiders are identifiable not so much by their failure to use certain terms as by their tendency to misuse others. The best example of this is perhaps "sf", the usual contraction used by sf fans; journalists and other nonsympathetic outsiders can readily be identified by their use of the repugnant "SCI-FI"; older fans sometimes use the contracted adjective stfnal, short for "scientificational" (SCIENTIFUNCTION). Various guides to fan language have been published (by fans) in the USA and UK. Wilson TUCKER's Neofan's Guide (1955; rev 1973; rev 1984) is a useful introduction, and Roberta Rogow's Futurespeak: A Fan's Guide to the Language of Science Fiction (1991), though erratic, covers much new ground. [PR/JC]

FANTAST

The FUTURIAN .

FANTASTIC

US DIGEST-size magazine, companion to AMAZING STORIES; published by ZIFF-DAVIS (Summer 1952-June 1965), Ultimate Publishing Co. (Sep 1965-Oct 1980); ed Howard BROWNE (Summer 1952-Aug 1956), Paul W. FAIRMAN (Oct 1956-Nov 1958), Cele GOLDSMITH (Dec 1958-June 1965; as Cele G. Lalli from July 1964), Joseph ROSS (Sep 1965-Nov 1967), Harry HARRISON (Jan-Oct 1968), Barry N. MALZBERG (Dec 1968-Apr 1969), Ted WHITE (June 1969-Jan 1979), Elinor Mavor (Apr 1979-Oct 1980; initially under the pseudonym Omar Gohagen). From Nov 1980 Fantastic was merged with AMZ. After the title was bought by Sol Cohen's Ultimate Publishing Co. in 1965 it mainly published reprints until mid-1968; the reprint policy was finally phased out completely under White soon after he took over from Malzberg. For much of its early life F was bimonthly, but at its height - in the Goldsmith period - it went monthly, beginning with Feb 1957. The Ultimate Publishing version began in Sep 1965 as a bimonthly, but the magazine went onto a

quarterly schedule in 1976. The title underwent numerous minor changes, appearing as *Fantastic Science Fiction* (Apr 1955-Feb 1958), *Fantastic Science Fiction Stories* (Sep 1959-Sep 1960), *Fantastic Stories of Imagination* (Oct 1960-June 1965) and *Fantastic Stories* at various periods. Browne originally intended F to attract a wider audience than AMZ, and published tales under bylines famous outside the sf field, including Raymond Chandler, Truman Capote, Mickey Spillane and Evelyn WAUGH (the Spillane byline was probably not authentic). After 1953, when it absorbed the much older *FANTASTIC ADVENTURES*, F deteriorated to become a downmarket sf magazine indistinguishable from AMZ. But from 1958, under the more adventurous editorship of Goldsmith, it improved dramatically, becoming arguably the best fantasy magazine existing. Fritz LEIBER revived his *Fafhrd* and *Gray Mouser* for an issue containing only his stories (Nov 1959), and the series remained an irregular feature. Authors whose first published stories appeared in F include Thomas M. DISCH, Ursula K. LE GUIN and Roger ZELAZNY. David BUNCH was a regular (and controversial) contributor. Following a bad period in the mid-1960s after the magazine was sold, F improved again under White, featuring a notable series of articles by Alexei and Cory PANSHIN, *Science Fiction in Dimension* (1970-73), publishing much early work by Gordon EKLUND and some excellent covers by Stephen FABIAN. New Conan stories by L. Sprague DE CAMP and Lin CARTER helped to boost circulation a little, but the magazine's situation remained financially precarious despite the fact that "adult fantasy" had been spectacularly revived as a paperback genre. Its deterioration after White quit was rapid and deservedly terminal. Although the words "science fiction" appeared on the cover at different times for four or five years, F was always mainly known for fantasy, being particularly strong in *SWORD AND SORCERY*. An undated bimonthly UK reprint ran for 8 issues, published by Strato Publications Dec 1953-Feb 1955. An anthology of stories from F is *The Best from Fantastic* (anth 1973) ed Ted White. [BS]

FANTASTIC ADVENTURES

US PULP MAGAZINE published by ZIFF-DAVIS as a companion to *AMAZING STORIES*. 128 issues May 1939-Mar 1953. FA began as a bimonthly, BEDSHEET-size, but maintained a monthly schedule from vol 2 #1 (Jan 1940) for most of its existence, shrinking to PULP-MAGAZINE size in June 1940. To Dec 1949 it was ed Raymond A. PALMER, and from then until May/June 1953 (when it merged with the one-year-old Ziff-Davis *DIGEST* magazine *FANTASTIC*) by Howard V. BROWNE. William L. HAMLING was managing editor Nov 1947-Feb 1951. The bulk of FA's contents were provided by a small stable of Chicago writers using a variety of house pseudonyms, although Palmer did publish several stories by Edgar Rice BURROUGHS 1939-42 and some material by established sf and fantasy writers-Robert BLOCH was a frequent contributor. The magazine was at its best under Browne's editorship in 1950-51, when it published Theodore STURGEON's first novel, *The Dreaming Jewels* (Feb 1950; 1950), and notable long stories by Lester DEL REY, Walter M. MILLER and William TENN. FA hardly bears comparison with its rival ASF's short-lived but excellent companion *UNKNOWN*, but sf writers given carte blanche to write pure fantasy for FA did often produce readable fiction with a distinctive whimsical and ironic flavour. The mass-produced material it published was of quite negligible interest. In

1941-3 and 1948-51 unsold issues were bound up in threes and sold as Fantastic Adventures Quarterly, there being 8 such in the first series, Winter 1941-Fall 1943, and 11 in the second, Summer 1948-Spring 1951. There were 2 UK editions: the first released 2 short (32pp) numbered issues in 1946, the second reprinted 24 numbered issues 1950-54, abridged from US issues dated Mar 1950-Jan 1953. [BS]

FANTASTIC ADVENTURES QUARTERLY FANTASTIC ADVENTURES.

FANTASTIC ADVENTURES YEARBOOK

One of the many reprint DIGEST-size magazines issued by Sol Cohen's Ultimate Publishing Co., which in 1965 had bought rights to the ZIFF-DAVIS sf magazines. Its only issue, containing stories reprinted from FANTASTIC ADVENTURES 1949-52, was released in 1970. [BS/PN]

FANTASTIC JOURNEY, THE

US tv series (1977). Bruce Lansbury Productions/Columbia Pictures TV/NBC. Prod Leonard Katzman. Writers included Michael Michaelian, Kathryn Michaelian Powers and the story editor, D.C. FONTANA. Dirs included Andrew V. McLaglen (pilot episode), Vincent McEveety. Starring Carl Franklin, Roddy McDowall, Jared Martin. One season, pilot episode of 75 mins plus 9 50min episodes. Colour. The pilot episode has explorers entering the Bermuda Triangle, an ocean area in which planes and ships are reputed to disappear; but, after an effectively eerie opening in which their boat is consumed by a pulsating green cloud, it becomes evident that they are still within the borders of tv-formula-land. Reaching an island that "isn't on the map", they meet a 23rd-century human, Varian (Martin), and discover that the landscape consists of segments of past and future time and space, an idea perhaps inspired by Fred HOYLE's October the First is Too Late (1966). This concept allows the protagonists to encounter a new (stereotyped) culture every week, each within walking distance. Silly and somewhat repetitive adventures take place. The series was quickly dropped. [JB/PN]

FANTASTIC NOVELS

US bimonthly reprint PULP MAGAZINE, companion to FAMOUS FANTASTIC MYSTERIES, which it somewhat resembled. 5 issues July 1940-Apr 1941, published by the Frank A. MUNSEY Corp.; it was revived by Popular Publications to publish 20 more issues Mar 1948-June 1951, with the numeration of the second series following directly on from that of the first. It was ed in both incarnations by Mary GNAEDINGER. FN used a great deal of material by A. MERRITT. #1 featured The Blind Spot (1921; 1951) by Austin HALL and Homer Eon FLINT, serialization of which had begun in Famous Fantastic Mysteries, and all subsequent issues except the last featured a complete novel. Other authors whose work was reprinted included Ray CUMMINGS and George Allan ENGLAND. 2 issues of a UK edition appeared in 1950 and 1951, the second (undated) issue confusingly appearing as #1. There were 17 issues of a Canadian reprint, Sep 1948-June 1951, identical to the US issues. [BS/PN]

FANTASTIC PLANET

La PLANETE SAUVAGE .

FANTASTIC SCIENCE FICTION

US BEDSHEET-size magazine, ed Walter B. GIBSON, the prolific pulp writer and creator of *The Shadow*. Only 2 issues appeared, #1 (Aug 1952) published by Super Science Fiction Publications, #2 (Dec 1952) by Capitol Stories, both of Connecticut. This inferior magazine, whose stories featured simplistic and chauvinistic adventure, should not be confused with FANTASTIC, also begun in 1952, which for Apr 1955-Feb 1958 was likewise titled *Fantastic Science Fiction*. [BS/PN]

FANTASTIC SCIENCE FICTION STORIES FANTASTIC.

FANTASTIC SCIENCE THRILLER

UK juvenile pocketbook series published by Stanley Baker Ltd. There were 6 issues, all in 1954. [BS]

FANTASTIC STORIES FANTASTIC.

FANTASTIC STORIES OF IMAGINATION FANTASTIC.

FANTASTIC STORY MAGAZINE FANTASTIC STORY QUARTERLY.

FANTASTIC STORY QUARTERLY

US reprint PULP MAGAZINE, 23 issues Spring 1950-Spring 1955, the title changing after #4 to *Fantastic Story Magazine*; published by Best Books, a subsidiary of Standard Magazines. Sam MERWIN Jr was editor until Fall 1951, being succeeded by Samuel MINES and then by Alexander SAMALMAN for the last 2 issues. Most of the reprints were from *STARTLING STORIES* and *THRILLING WONDER STORIES*; early issues carried a good deal of material from Hugo GERNSBACH's *WONDER STORIES*. FSQ used a few original stories, including Gordon R. DICKSON's first, "Trespass!" (1950), written with Poul ANDERSON, and occasionally went outside the chain for reprints - e.g., publishing A.E. VAN VOGT's *SLAN* (1940 ASF; 1946; rev 1951) in the Summer 1952 issue. Most issues carried a complete novel. There was a Canadian edition of the first 4 numbers. [BS]

FANTASTIC UNIVERSE

US DIGEST-size magazine, last 6 issues PULP-MAGAZINE size. 69 issues June/July 1953-Mar 1960, published by Leo MARGULIES's King-Size Publications to July 1959, then by Great American Publications. FU began as a bimonthly, but went monthly in Sep 1954 and held to that schedule for most of its life except Nov 1958-Sep 1959, when it was again bimonthly. Ed Sam MERWIN Jr June-Nov 1953; Beatrice Jones Jan-Mar 1954; Leo Margulies May 1954-Aug 1956; Hans Stefan SANTESSON Sep 1956-Mar 1960. FU's material spanned the entire fantasy spectrum; in effect it became the poor man's *MAGAZINE OF FANTASY AND SCIENCE FICTION*. There was no interior artwork until July 1959. Two important stories were "Who?" (1955) by Algis BUDRYS, which formed the basis of his *WHO?* (1958), and "Curative Telepath" (1959) by John BRUNNER, which formed the basis of his *THE WHOLE MAN* (1964; vt *Telepathist UK*). 16 of the best stories from its pages were published in

FANTASTIC VOYAGE

Film (1966). 20th Century-Fox. Dir Richard Fleischer, starring Stephen Boyd, Raquel Welch, Edmund O'Brien, Donald Pleasence. Screenplay Harry Kleiner, based on a story by Otto Clement and J. Lewis (i.e., Jerome BIXBY). 100 mins. Colour. A submarine and its crew of medical experts - plus a double-agent saboteur (Pleasence) - are miniaturized and injected into the bloodstream of an important scientist in order to remove by laser a blood-clot from his brain. In the finale - a race to escape before they revert to full size while still inside the body - they exit via a tear duct with only seconds to spare. The special effects by L.B. Abbott, Art Cruickshank and Emil Kosa Jr are impressive, as are the sets - duplicating in giant size various organs of the body, such as the heart, lungs and brain - designed by art director Dale Hennesy with spectacular histological surrealism. This vivid spectacle, however, does not compensate for the ham acting, the irrelevance of Ms Welch's lingered-on breasts, and the puerile melodrama. The novelization was *Fantastic Voyage* * (1966) by Isaac ASIMOV. A film using a very similar theme is Joe DANTE's *INNERSPACE* (1987). [PN/JB] See also: *GREAT AND SMALL*.

FANTASTIC VOYAGES

The fantastic voyage is one of the oldest literary forms, and remains one of the basic frameworks for the casting of literary fantasies. Of the prose forms extant before the development of the novel in the 18th century, the fantastic voyage is the most important in the ancestry of sf (PROTO SCIENCE FICTION). Among others, Johannes KEPLER's *Somnium* (1634), Francis BACON's *New Atlantis* (1627), Tommaso CAMPANELLA's *City of the Sun* (1623) and CYRANO DE BERGERAC's *Other Worlds* (1657-62) all take this form, as do the oldest of all works which can be claimed as ancestors of sf: the Sumerian Epic of Gilgamesh, from the third millennium BC, and HOMER's *Odyssey*, from the first. The fantastic voyage continued to dominate speculative fiction and the SCIENTIFIC ROMANCE long after the rise of the novel, whose basic pretence was the painstaking imitation of experience (what the critic Ian Watt calls "formal realism"). It is partly because of this formal separation of speculative literature from the development of 19th-century social literature that there remains something of a gulf between speculative fiction and the literary MAINSTREAM today. The first sf story cast in the form of a novel was Mary SHELLEY's *Frankenstein* (1818), but there were very few comparable works written in the succeeding century. The bulk of Jules VERNE's imaginative work falls in the category of voyages imaginaires, and many of H.G. WELLS's scientific romances adopt a similar form. Among the important fantastic voyages which today may be classified as sf are: *The Man in the Moone* (1638) by Francis GODWIN, *Gulliver's Travels* (1726) by Jonathan SWIFT, *Nicolai Klimii iter subterraneum* (1741 in Latin; exp 1745; trans as *A Journey to the World Under-Ground* 1742 UK) by Ludwig HOLBERG, *A Short Account of a Remarkable Aerial Voyage and Discovery of a New Planet* (1813) by Willem BILDERDIJK, *Symzonia* (1820) by Adam SEABORN, *A Voyage to the Moon* (1827) by Joseph ATTERLEY, *Voyage au centre de la terre* (1863; exp 1867; trans as *Journey to the Centre of the Earth* 1872 UK) and *Vingt mille lieues sous les mers*

(1870; trans as *Twenty Thousand Leagues under the Sea* 1872 UK) by Jules Verne, and *Across the Zodiac* (1880) by Percy GREG. These voyages took their heroes over the Earth's surface, into worlds underground and beneath the sea, to the Moon and to other planets. Important new scope for the fantastic voyage was revealed in the last few years of the 19th century by H.G. Wells in *THE TIME MACHINE* (1895), which opened up the limitless vistas of the future to planned tourism, and by Robert W. COLE in *The Struggle for Empire* (1900), the first major interstellar adventure story. These new imaginative territories were to prove immensely significant for 20th-century imaginative literature. The fantastic voyage has, of course, also remained central within the literature of the supernatural imagination, much of which was also ill adapted to the form of the novel. As supernatural fantasy has been influenced and infiltrated by the scientific imagination it has been the fantastic voyage, far more than any other narrative form, that has provided a suitable medium for "hybrid" works; thus a considerable number of 20th-century fantastic voyages are difficult to classify by means of the standard genre borderlines. In this no-man's-land within the territories of imaginative literature exist virtually all the works of writers such as William Hope HODGSON, Edgar Rice BURROUGHS and A. MERRITT, and various individual novels of note: Frigyes KARINTHY's *Gulliverian Voyage to Faremido and Capillaria* (1916 and 1922; trans omni 1966), David LINDSAY's *A VOYAGE TO ARCTURUS* (1920), Ruthven TODD's *The Lost Traveller* (1943), the title story of John Cowper POWYS's *Up and Out* (coll 1957), *The Phantom Tollbooth* (1961) by Norton Juster (1929-) and Michel Bernanos's *The Other Side of the Mountain* (1967; trans 1968). When Hugo GERNSBACK first demarcated sf as a genre in the 1920s he co-opted Verne, Wells and Merritt, and also Ray CUMMINGS, author of fantastic voyages into the atomic microcosm (*GREAT AND SMALL*). It was not long before E.E. "Doc" SMITH's *The Skylark of Space* (1928; 1946) took PULP-MAGAZINE sf, at FASTER-THAN-LIGHT speeds, into the greater Universe beyond the limits of the Solar System. Other milieux were quickly introduced. Edmond HAMILTON's "Locked Worlds" (1929) adapted the notion of PARALLEL WORLDS from supernatural fantasy, and the first pulp sf voyages into a future replete with ALTERNATE WORLDS were undertaken in Jack WILLIAMSON's *THE LEGION OF TIME* (1938; 1952). A significant refinement in the interstellar fantastic voyage, the GENERATION STARSHIP, was introduced a few years later, most significantly in Robert A. HEINLEIN's "Universe" (1941). Voyages into the "inner spaces" of the human mind had also long been commonplace in supernatural fantasy, but a sciencefictional jargon of support for such adventures was slow in arriving. Notable early examples are "Dreams are Sacred" (1948) by Peter Phillips and "The Mental Assassins" (1950) by Gregg Conrad (Rog PHILLIPS). Most of these milieux were reachable only by means of literary devices whose practicability was highly dubious if not flatly impossible. Space travel was the one hypothetical variant of the fantastic voyage into which it was possible to introduce rigorous attempts at realism (*SPACESHIPS*), although the technologies involved have inevitably become dated with the passage of time. Notable attempts from various periods include Verne's *De la terre a la lune* (1865) and *Autour de la lune* (1870), Konstantin TSIOLKOVSKY's *Beyond the Planet Earth* (1920 Russia; trans 1960), Laurence MANNING's "Voyage of the Asteroid" (1932) and Arthur C. CLARKE's *Prelude to Space*

(1951). The purely facilitative character of devices like TIME MACHINES and interdimensional portals should not, however, be deemed to disqualify them as means to be deployed in serious speculative fictions; indeed, they are vitally necessary. The opening up of these vast imaginary territories gave sf writers limitless scope for invention. There is no speculation - whether physical, biological, social or metaphysical - that cannot somehow be made incarnate and given a space of its own within the conventions of sf. Voyages into fluid worlds where anything and everything may happen - where the characters become helpless victims of chaos or godlike creators - may be envisaged, as in M.K. JOSEPH's *The Hole in the Zero* (1967), as may voyages into mathematical abstraction like "The Mathenauts" (1964) by Norman KAGAN. Sf has drawn up a framework of conventions and a vocabulary of literary devices which not only makes such adventures conceivable but renders them relatively comfortable. It is a potential that sf writers have, for various reasons, been greatly inhibited from exploiting to the full, but they have - whatever their failings - established significant signposts within all these hypothetical realms. At its simplest the fantastic voyage is a set of episodes whose function is simply to present a series of dramatic encounters, but it is rare to find the form used with no higher ambition than to offer a pleasant distraction. Many voyages which pretend to be doing that - like Lewis CARROLL's Alice books - actually present worlds whose bizarre aspects reflect the real world ironically and subversively. The same is true even of many relatively crude pulp sf stories like Francis STEVENS's *The Heads of Cerberus* (1919; 1952), Garret SMITH's *Between Worlds* (1919; 1929), John TAINE's *The Time Stream* (1931; 1946) and Stanton A. COBLENTZ's *Hidden World* (1935 as "In Caverns Below"; 1957), and in such unconvincing films as *VOYAGE TO THE BOTTOM OF THE SEA* (1961) and *FANTASTIC VOYAGE* (1966). In very many cases the fantastic voyage has allegorical implications, which are most obvious when the voyage is also a quest, as it very often is in modern genre fantasy, which tends to follow the paradigm of J.R.R. TOLKIEN's *The Lord of the Rings* (3 vols 1954-5). The quest may be for a person, an object or a place, but the movement through a hypothetical landscape is usually paralleled by a growth towards some kind of maturity or acceptance in the protagonist's mind. The growth is towards self-knowledge or CONCEPTUAL BREAKTHROUGH in the psychologically oriented variants which lie within or close to the borders of sf; examples include *Rasselas* (1759) by Samuel JOHNSON, *Non-Stop* (1958; vt *Starship US*) by Brian W. ALDISS, *The Drowned World* (1962) by J.G. BALLARD and *INVERTED WORLD* (1974) by Christopher PRIEST. In stories of this kind the relationship between the environment of the story and the inner space of the protagonist's psyche is often complex and subtle; in the work of Philip K. DICK, from *Eye in the Sky* (1957) to *A SCANNER DARKLY* (1977), characters are continually forced to undertake nightmarish journeys into milieux where the distinction between real and unreal is hopelessly blurred and their personal inadequacies are painfully exposed. Any list of notable fantastic voyages in modern sf is necessarily highly selective, but some of the most important and interesting which have appeared since 1926 are as follows: *The World Below* (1929) by S. Fowler WRIGHT, *OUT OF THE SILENT PLANET* (1938) by C.S. LEWIS, *The Voyage of the Space Beagle* (1939-50; fixup 1950) by A.E. VAN VOGT, *Big Planet* (1952; 1957) by Jack VANCE, "Surface Tension" (1952) by James

BLISH, MISSION OF GRAVITY (1954) by Hal CLEMENT, The City and the Stars (1956) by Arthur C. CLARKE, THE EINSTEIN INTERSECTION (1967) and NOVA (1968) by Samuel R. DELANY, Picnic on Paradise (1968) by Joanna RUSS, Space Chantey (1968) by R.A. LAFFERTY, Tau Zero (1970) by Poul ANDERSON, Downward to the Earth (1970) and Son of Man (1971) by Robert SILVERBERG, RINGWORLD (1970) by Larry NIVEN, The Infernal Desire Machines of Dr Hoffman (1972; vt War of Dreams) by Angela CARTER, Hiero's Journey (1973) by Sterling E. LANIER, Orbitville (1975) by Bob SHAW, GALAXIES (1975) by Barry N. MALZBERG, ENGINE SUMMER (1979) by John CROWLEY, The Hitch Hiker's Guide to the Galaxy (1979) and The Restaurant at the End of the Universe (1980) by Douglas ADAMS, The Book of the New Sun (1980-83) by Gene WOLFE, The Void Captain's Tale (1983) and Child of Fortune (1985) by Norman SPINRAD, The Travails of Jane Saint (1986) by Josephine SAXTON and HYPERION (1989) by Dan SIMMONS. [BS]

FANTASY

There is no DEFINITION OF SF that excludes fantasy, other than prescriptive definitions so narrow that, were they applied, this encyclopedia would be reduced to 10 per cent of its present length. We are talking about problems of definition raised by not a minority but a majority of all genre writings. Among the GENRE-SF writers at least some of whose work would be excluded are Terry BISSON, Ray BRADBURY, Orson Scott CARD, John CROWLEY, Avram DAVIDSON, Samuel R. DELANY, Thomas M. DISCH, Harlan ELLISON, Philip Jose FARMER, Ursula K. LE GUIN, Fritz LEIBER, Michael MOORCOCK, Andre NORTON, Tim POWERS, Keith ROBERTS, Geoff RYMAN, Lucius SHEPARD, Dan SIMMONS, Jack VANCE, John VARLEY, Gene WOLFE and Roger ZELAZNY - many of the ablest and most popular writers in the sf field. Most or all of these writers (and several hundred more names could easily be added) have written occasional works that would be accepted by almost all readers as fantasy, but that is not the point; rather it is that any definition of sf that insists upon limiting true sf to scientific or "cognitive" modes of thought, and extrapolation from known realities, would exclude the whole body of their work. It is not that Delany or Le Guin are unscientific; indeed, they are not. But the science is not the whole story; their work is deeply imbued with fantasy motifs, fantastic modes of thought, narrative connections deriving from the logic of myth, metaphors from magical or religious belief, narrative resonances evoking a backward corridor of time long preceding the ages of science and technology. Certainly most of us can and do accept nearly all the above as true sf writers, but that is because most of us are not wedded to prescriptive definitions of sf. In the real world, we recognize that both sf and fantasy, if genres at all, are impure genres. They are not homogeneous. Their fruit may be sf but the roots are fantasy, and the flowers and leaves, perhaps, something else again. It is, of course, quite simple to erect a theoretical system that distinguishes the genres, though in practice it is not especially helpful, for the reasons given above. The usual way is to regard fantasy as a subset of fiction, a circle within a circle. (The bit between inner and outer circles is mimetic fiction, which cleaves to known reality. Mimetic or "realistic" fiction is itself fairly recent; the distinctions being made here could not have been made before the 18th century.) Within the inner circle of fantasy - the fiction of the

presently unreal - is a smaller circle still, a subset of a subset, and this is sf. It shares with fantasy the idea of a novum: some new element, something that distinguishes the fiction from reality as presently constituted. A novum could be a vampire or a colonized planet. The sub-subset that is sf insists that the novum be explicable in terms that adhere to conventionally formulated natural law; the remainder, fantasy, has no such requirement. To cut the definition to an irreducible minimum: mimetic fiction is real, fantasy is unreal (but FABULATION); sf is unreal but natural, as opposed to the remainder of fantasy, which is unreal and supernatural. (Or, simpler still, sf could happen, fantasy couldn't.) Several things follow from this sort of argument. The first is that all sf is fantasy, but not all fantasy is sf. The second is that, because natural law is something we come to understand only gradually, over centuries, and which we continue to rewrite, the sf of one period regularly becomes the fantasy of the next. What we regard as natural or possible depends upon the consensus reality of a given culture; but the idea of consensus reality itself is an ideal, not an absolute: in practice there are as many realities as there are human consciousnesses. A reader who believes in astrology will allow certain fictions to be sf that an astronomer would exclude. Although the point is seldom made, it could be said that the particular consensus reality to which sf aspires is that of the scientific community. In this encyclopedia we do not use the word "fantasy" in the sense suggested in the previous three paragraphs: that is, as a supergenre which includes sf. This is because we have practical problems to contend with: the hardest part in determining which authors should and should not be given entries in this encyclopedia was deciding which fantasy authors were sufficiently sf-like to be included (see Introduction for further discussion). To make any sort of distinction at all, we had to regard "fantasy" as the contents of the middle circle excluding the sf circle, in which the novum is supernatural; in other words, "fantasy", as we use the word throughout this book, is fiction about the impossible. Even then, the distinction is quite extraordinarily difficult; again and again the sf fruit has roots of fantasy; even HARD SF regularly uses fantastic or IMAGINARY SCIENCE. Although academics, especially those specializing in genre studies, have written many volumes attempting to make the sort of distinction we speak of, the sf community has been decidedly pragmatic and has generally ducked the issue. To take two major AWARDS, the HUGO and the NEBULA, and one less known, the PHILIP K. DICK AWARD, it is sometimes not realized that there is nothing in their constitutions to prevent them being given to works of fantasy rather than sf; indeed, they often are. Hugo-winners include Fritz Leiber's "Ill Met in Lankmar" (1970) and Robert BLOCH's "That Hell-Bound Train" (1958); Nebula-winners include Pat MURPHY's *The Falling Woman* (1986) and Ursula K. Le Guin's *Tehanu: The Last Book of Earthsea* (1990); Philip K. Dick award-winners include Tim Powers' *THE ANUBIS GATES* (1983) and Patricia Geary's *Strange Toys* (1987). There are many more such. Or take the genre magazines, and consider how many have titles deliberately including both genres: *FANTASTIC SCIENCE FICTION STORIES*, *The MAGAZINE OF FANTASY AND SCIENCE FICTION*, *SCIENCE FANTASY*, and a number of others. Or consider that the genre newspaper *LOCUS*, along with the annual bibliographies it publishes, gives full coverage to sf, fantasy and horror and makes no

clear distinction between them. Consider that the most recent academic journal about sf deliberately titles itself to include fantasy also: JOURNAL OF THE FANTASTIC IN THE ARTS. (We do not wish to start any hares about whatever differences may be discernible between Fantasy and the Fantastic.) Or consider the Italian word for sf, "fantascienza", which combines the two genres in the word itself; the Russian word is "fantastika". Indeed, consider that the general thrust of the European (though not UK) literary tradition is to regard fantasy and sf as two aspects of the same phenomenon; it is notable that several European authors of such entries in this encyclopedia as ROMANIA are more inclusive about what constitutes sf than this encyclopedia is as a whole. (European theoretical critics, however, can be very exclusive in their definitions; Tzvetan TODOROV muddied the waters in Introduction a la litterature fantastique [1970; trans as The Fantastic: A Structural Approach to a Literary Genre 1973], which sees the fantastic, not very helpfully, as occupying the area where the reader hesitates between imputing a rational or a supernatural explanation to the events described, which would exclude most fantasy from "the fantastic"; and another celebrated European critic, Darko SUVIN, has claimed that the commercial linking of sf and fantasy, whether in marketing or in critical terms, is "a rampantly pathological phenomenon". Suvin is the best known of those critics who have offered the kind of prescriptive definition of sf noted above.) In the face of this widespread conspiracy to ignore generic boundaries wherever possible (a conspiracy to which most bookshops belong) it may seem quixotic to attempt distinctions at all. Yet we feel that a book calling itself The Encyclopedia of Science Fiction must make at least some attempt to prevent "sf proper" from being wholly swamped by the necessarily much larger number of entries (especially author entries) that a wholly inclusive policy about fantasy would entail. The task is not impossible, though necessarily subjective. The most important thing perhaps - difficult to pin down because it involves style as well as content - is to regard fantasy as sf-like when it adopts a cognitive approach to its subject matter, even if that subject matter is MAGIC. Although both are given entries in this book, most people would agree that Ursula Le Guin's Earthsea books are more sciencefictional in tone - even though set in worlds where magic works and where dragons exist - than, say, H.P. LOVECRAFT's stories of the Cthulhu Mythos, though the latter are in fact explicable in sf terms where the former are not; that is, Lovecraft's Elder Gods, spawned in space or in other worlds, can be seen as enormously powerful ALIEN invaders. In practice, though, Lovecraft's readers seldom give his work an sf reading of this sort, because his tone is fundamentally and unmistakably GOTHIC and anti-rational: Le Guin is an explainer, Lovecraft prefers the weird, the sinister and the inexplicable. In other words, supernatural fantasy approaches the condition of science fiction when its narrative voice implies a post-scientific consciousness. Conversely, sf (like, for example, much of that by Andre Norton or, in a different way, by Ray Bradbury) approaches the condition of fantasy when its narrative voice implies a mystical or even anti-scientific consciousness. Authors who use fantasy elements in sf regularly rationalize their fundamentally GOTHIC motifs, Anne MCCAFFREY's dragons being an excellent example: many further examples are given in the entries on GODS

AND DEMONS, GOLEM, MAGIC, MONSTERS, MYTHOLOGY and SUPERNATURAL CREATURES,

these all being areas where sf and fantasy commonly collide. Conversely, when writers of HARD SF like Robert A. HEINLEIN, Poul ANDERSON and Larry NIVEN write fantasy, as they often have done, it is amusing to note how the old habits persist; they regard the marvellous and the magical with a rationalist scrutiny, treating MAGIC (which see) rather as Le Guin does, as if it were a science. The distinction between magic and science is not wholly clear at the best of times; Arthur C. CLARKE has commented that any sufficiently advanced technology is indistinguishable from magic". Larry Niven and David " GERROLD's *The Flying Sorcerers* (1971) is constructed around this precept. A story parodying the transmutation of fantasy into sf by use of scientific jargon is Isaac ASIMOV's "Pate de Foie Gras" (1956), an sf version of "The Goose that Laid the Golden Eggs". When the rationalization of fantasy elements is merely cursory (substituting, say, an ALTERNATE WORLD reached through a Dimensional Gate for something resembling what Alice found down the rabbit burrow) we would be inclined to call the result fantasy still, though others would call it sf. This kind of fiction perhaps began with Edgar Rice BURROUGHS's *Barsoom* books in the early decades of this century, in which an unexplained superscience tends to stand in for magic. A convenient term for these stories is SCIENCE FANTASY, and they are discussed under that rubric; many "science fantasy" stories are also PLANETARY ROMANCES (which see). One reason why so much fantasy rather resembles sf is its use of many sciencefictional motifs (though it has to be said that the range of motifs is much narrower than that found in sf proper, since not much fantasy contains anything other than occult technology; there are few ROBOTS and CYBORGS and SPACESHIPS). Theme entries in this book representing the most notable sf and borderline-sf motifs of this sort are ALTERNATE WORLDS, ATLANTIS, DIMENSIONS, ESP, FANTASTIC VOYAGES, IMMORTALITY, PSI POWERS, REINCARNATION, SUSPENDED ANIMATION and TIME TRAVEL. All of these are commonplace in fantasy, most of them commonplace in sf also. Indeed, sf set in worlds where psi powers work can often be read as if it were fantasy; such, towards the sf end of the spectrum, are Marion Zimmer BRADLEY's *Darkover* novels and, towards the fantasy end, Christopher STASHEFF's *The Warlock in Spite of Himself* (1969) and its sequels. A sophisticated variant is *The Deep* (1975) by John CROWLEY, which adroitly plays upon the generic expectations of the reader in such a way that what appears to be HEROIC FANTASY comes to seem, retrospectively, pure sf. Fantasy itself is not homogeneous; various terms are used, often not very precisely, to characterize its various kinds. An interesting distinction, made by Marshall B. TYMN, Kenneth J. Zahorski and Robert H. Boyer in the introduction to *Fantasy Literature: A Core Collection and Reference Guide* (1979), is between high fantasy, set in a fully realized secondary world, and low fantasy, which features supernatural intrusions into our own world. Most HORROR fiction takes the latter form; most SWORD AND SORCERY (or HEROIC FANTASY) takes the former. Although this encyclopedia contains many examples of both high and low fantasy, it is probably high fantasy (in this definition) that is the closest to sf: high fantasy and sf typically create imaginary worlds (alternate to our own). Thus Frank HERBERT's *DUNE* (1965) and J.R.R. TOLKIEN's *The Lord of the*

Rings (1954-5), though the one is sf and the other high fantasy, have in the imaginative intensity of their detailed world-creation a great deal in common (but PLANETARY ROMANCE for an argument that the two styles of fiction differ essentially in that one is set on a planet, the other in a landscape). The kind of fantasy which creates such detailed, self-consistent alternate worlds, whatever we call it, is certainly the kind most written by sf writers "on vacation". Such is Poul Anderson's Three Hearts and Three Lions (1953; exp 1961) and Jack Vance's THE DYING EARTH (coll 1950). Such worlds were never peculiar to sf writers, however. Further back, many of the works of Lord DUNSANY are effectively set in a coherent, alternate universe, as are those of E.R. EDDISON and James Branch CABELL, all three being quite unconnected to genre sf when they wrote, though all three have since had repercussions in sf that go beyond the merely stylistic. An even more notable work of fantasy is the Gormenghast sequence (1946-59) by Mervyn PEAKE; this may not be set in a fully fledged alternate world, but it does contain all the conceptual creativity that another writer might have lavished on an entire planet focused upon one emblematic building and its occupants. In its marketing, sword-and-sorcery fiction was for some time sold very much as if it were a form of sf - perhaps in part because many of the same writers have been involved in both genres, like L. Sprague DE CAMP, C.L. MOORE, Henry KUTTNER, Leigh BRACKETT, Jack Vance and Fritz Leiber; the term "sword and sorcery" is said to have been coined by Leiber. The archetypal sword-and-sorcery writer at the pulp end of the spectrum was Robert E. HOWARD in his Conan series of the 1930s, mostly in Weird Tales (1932-6); while not sf, these stories were set in a coherent and quite carefully imagined world (presented as an enormously archaic version of our own). Sword and sorcery (the term is often used in a derogatory manner, which partly explains its gradual displacement by the term HEROIC FANTASY) is generally a form of high fantasy. The overlap of supernatural-horror fiction with sf is rather smaller than the overlap of high fantasy with sf, though still very substantial indeed; this area of overlap is discussed under the rubrics GOTHIC SF and HORROR IN SF. In children's fiction (CHILDREN'S SF) the interweaving of sf with fantasy motifs is intrinsic and can seldom be untwined, as is especially obvious in UK and Australian work, such as that of Alan GARNER, Diana Wynne JONES, Victor KELLEHER, William MAYNE and Robert WESTALL. So far we have stressed the ways in which sf and fantasy get mixed up together. In fact the position of the genre analyst is by no means hopeless, for distinctions between high fantasy (or even fantasy generally) and sf are quite real, however elusive, and they extend very much further than fantasy-equals-impossible versus sf-equals-possible. Such distinctions always work better, of course, at the ends of the spectrum rather than at its centre, where apparent opposites become merged (or balanced) together. At the extreme fantasy end of the spectrum the imaginary worlds tend, strongly, to be conceptually static; history is cyclical; the narrative form is almost always the quest for an emblematic object or person; the characters are emblematic too, most commonly of a dualistic (even Manichean) system where good confronts evil; most fundamentally of all, the protagonists are trapped in pattern. They live in a determinist world, they fulfil destiny, they move through the steps of an ancient dance. At the extreme sf end of

the spectrum the stories are set in kinetic venues that register the existence of change, history is evolutionary and free will operates in a possibly arbitrary universe whose patterns, if they exist at all, may be only those imposed upon it (or, according to some quantum theorists, created in it) by its human observers. If there is truth in this argument, then it follows that the important distinction between fantasy and sf is more philosophical than technological, a matter of METAPHYSICS. There is one final group of fantasists, the fabulators (FABULATION), who create fantastic changes (often quite minor) in everyday reality, often ironically or for purposes of SATIRE, rather than for the creation of frissons of horror or romantic adventure. Such a work is Franz KAFKA's *Die Verwandlung* (1916; trans as *The Metamorphosis* 1937), in which a man is turned into a beetle. Many such works stem from traditions of fable and ABSURDIST literature, sometimes taking the form of MAGIC REALISM. John BARTH, Angela CARTER, Richard CONDON and Thomas PYNCHON are only four of the several hundred such writers who receive entries in this encyclopedia, including some whose associations with genre sf have been rather closer, like Barry N. MALZBERG, Kurt VONNEGUT Jr, and Robert SHEA and Robert Anton WILSON, whose *Illuminatus* trilogy (1975) puts a range of fantasy and sf devices to absurdist ends in a black comedy proposing PARANOIA as the most fully appropriate response to modern life. In the 1970s fantasy (and its variant labels like Epic Fantasy, Heroic Fantasy and so forth) became an important area of book marketing. Some alarmist observers believed that the density of fantasy publication was such that sf as a viable, separate marketing category was doomed. In fact, sf has proved able to weather the storm, but fantasy publishing continues strongly into the 1990s, only slightly abated, especially in the area of trilogies and series whose points of reference (sometimes approaching plagiarism) continue in the main to be Robert E. Howard and, especially, J.R.R. Tolkien. One effect of fantasy's publishing success (and to a lesser degree that of horror) may have been to make genre-crossing, which was always common, even more popular. K.W. JETER and George R.R. MARTIN move from sf to horror; Terry PRATCHETT, Michael Scott ROHAN, Robert HOLDSTOCK and others from sf to fantasy; Stephen KING, contrariwise, moves sometimes from horror to sf; James P. BLAYLOCK contrives, dizzyingly, to occupy all such worlds simultaneously, as do John Crowley and arguably Gene Wolfe; fantasy writers like John M. FORD or Barbara HAMBLY or David GEMMELL invent sf-like worlds; supposedly hard-sf writer Orson Scott Card is repeatedly drawn to PASTORAL fantasy; William GIBSON, Elizabeth HAND, even Greg BEAR, put GODS AND DEMONS into CYBERPUNK worlds; R.A. MACAVOY, Patricia MCKILLIP and Sheri S. TEPPER turn from high fantasy to sf; Brian M. STABLEFORD turns to SCIENTIFIC ROMANCES about vampires and werewolves. In the face of this insouciance on the part of the makers of sf and fantasy, the wise critic will eschew rigid prescription. Beyond the very various distinctions already suggested, no consistent demarcation-line between sf and fantasy should be extractable from a reading of this encyclopedia. Certainly none was intended. [PN]

FANTASY

Title used on two early UK sf magazines. The first was a PULP magazine published by George Newnes Ltd., ed T. Stanhope Sprigg. It produced 3

issues 1938-9. The second, subtitled "The Magazine of Science Fiction", was a saddle-stapled DIGEST issued by the Temple Bar Publishing Co., ed Walter GILLINGS. It too lasted 3 issues, Dec 1946 and Apr and Aug 1947. Eric Frank RUSSELL and John Russell FEARN were featured in both series, and the second magazine featured 3 early stories by Arthur C. CLARKE (2 pseudonymous, as by E.G. O'Brien and Charles Willis). The second magazine was killed by paper restrictions, but Gillings was able to use some of his backlog of stories when he became the first editor of SCIENCE FANTASY in 1950. [BS/PN]

FANTASY AMATEUR PRESS ASSOCIATION
FAPA.

FANTASY AND SCIENCE FICTION

The often-used short form of the title of The MAGAZINE OF FANTASY AND SCIENCE FICTION, often referred to, in this encyclopedia and elsewhere, as FSF. [PN]

FANTASY BOOK

1. Magazine, BEDSHEET-format for 2 issues, then various DIGEST-size formats. 8 issues July 1947-Jan 1951; irregular. Published by FANTASY PUBLISHING COMPANY INC.; ed Garrett Ford (pseudonym of William L. CRAWFORD). FB was generally an undistinguished and erratic magazine. Some issues appeared in three different editions with different covers. FB is best remembered for publishing in #1 "The People of the Crater", the first sf story by Andre "NORTON" (as Andrew North) and, in #6 (Jan 1950), Paul Linebarger's first story as Cordwainer SMITH, "Scanners Live in Vain". When it ceased publication it left incomplete a Murray LEINSTER serial, "Journey to Barkut"; this later appeared in full in STARTLING STORIES (Jan 1952), and in book form as Gateway to Elsewhere (1954). 2. US SEMIPROZINE, BEDSHEET-format. 23 issues Oct 1981-Mar 1987, ed Dennis Mallonee and Nick Smith from California, bimonthly, then quarterly from #4. Unlike the first FB, to which it was unconnected, this published almost no sf, concentrating on fantasy and horror. Its authors included R.A. L AFFERTY, Alan Dean FOSTER and Ian WATSON. Circulation seldom rose above 3000. [MJE/PN]

FANTASY COMMENTATOR

US FANZINE (1943-current), ed from New York by A. Langley SEARLES The Winter 1993-94 issue, no 45/46, was called "50th Anniversary Double Issue". The original run of 26 issues, 1943-53 - quarterly before 1950 and then irregular - featured well written, scholarly articles about contemporary fantasy writers and an impressive series of bibliographies. FC was notable at this time for publishing the series of articles about FANDOM by Sam MOSKOWITZ that later became The Immortal Storm (1954) and for the original material it carried by A. MERRITT, Henry KUTTNER, David H. KELLER, H.P. LOVECRAFT and William Hope HODGSON. FC was suspended in 1953 but revived in 1978 with #29 (facsimiles of #27-#28, which had been set up in 1953 but not published, were released in 1986). Up to 1950 FC appeared quarterly, thereafter irregularly. Its current incarnation was annual to 1990, semiannual thereafter. Regular contributors to the current version include Moskowitz and Mike ASHLEY. FC remains strong in

scholarship about early sf and fantasy. [RH]

FANTASY FICTION/FANTASY STORIES

US DIGEST-size magazine. 2 issues, May and Nov 1950, published by Magabook, ed Curtis Mitchell. "Old and New Fantasy Stories but Always the Best" was the slogan of this shortlived magazine, whose stories were largely reprinted from general PULP MAGAZINES of the 1930s and early 1940s. It also offered prizes for reports of true fantastic experiences and of haunted houses. #2 was retitled Fantasy Stories, carried a lengthy UFO feature ("Flying Saucer Secrets Blabbed by Mad Pilot", as the cover put it), and was three months late. #3 never materialized. The final 3 issues of the 1950s FANTASY MAGAZINE, an unconnected publication, were also titled Fantasy Fiction. [MJE]

FANTASY HOUSE

VENTURE SCIENCE FICTION.

FANTASY MAGAZINE/FANTASY FICTION

1. US DIGEST-size magazine. 4 issues, Feb, June, Aug, Nov 1953, all but #1 under the latter title, published by Future Publications, New York, ed Lester DEL REY, under his own name for #1-#3 and under the house name Cameron Hall for #4. All issues had covers by Hannes BOK. #1 featured a Conan novelette revised by L. Sprague DE CAMP from Robert E. HOWARD's unpublished "The Black Stranger". The contents, of quite good quality, were almost exclusively fantasy, much of it rather in the style of UNKNOWN. 2. Fantasy Magazine was a vt 1934-7 of a celebrated FANZINE, Science Fiction Digest, founded 1932, of which Julius SCHWARTZ was one of the editors. This in turn had incorporated The Time Traveller, often regarded as the first true fanzine (#1, Jan 1932), which Schwartz had published with Mort WEISINGER. FM published original fiction, factual articles, reviews, gossip and biographical pieces. [BS/PN]

FANTASY NEWSLETTER

FANTASY REVIEW.

FANTASY PRESS

An early US SMALL PRESS specializing in sf/fantasy, historically important in the growth of genre-sf PUBLISHING before sf was discovered by mass-market book houses. It was founded by Lloyd Arthur ESHBACH in 1946, based in Reading, Pennsylvania. It published a number of works in hardcover by such authors as John W. CAMPBELL Jr, L. Sprague DE CAMP, E.E. "Doc" SMITH, Stanley G. WEINBAUM and Jack WILLIAMSON. It folded in 1958 at a time when small-press publishing was in crisis. Eshbach sold the company and its stock to Donald M. Grant Publisher. [MJE/PN]

FANTASY PUBLISHING COMPANY INC.

US SMALL PRESS based in Los Angeles and specializing in sf/fantasy, generally known by its initials FPCI. One of the many semiprofessional publishing enterprises of William L. CRAWFORD, FPCI was one of the less notable companies to start issuing magazine sf in book form in the late 1940s and the 1950s. Its authors included L. Sprague DE CAMP, L. Ron HUBBARD, Olaf STAPLEDON, John TAINÉ and A.E. VAN VOGT, but only lesser works of theirs. Crawford also published the magazines FANTASY BOOK and

later SPACEWAY and Witchcraft and Sorcery (formerly Coven 13) under the FPCI imprint, in addition to various occult titles and books by Emil PETAJA and others. The pre-WWII incarnation of the company, then known just as Fantasy Publishers, had brought out the magazines MARVEL TALES and UNUSUAL STORIES; and an associated company, Visionary Publishing Co., had published The Shadow over Innsmouth (1936) by H.P. LOVECRAFT. [MJE/PN]

FANTASY REVIEW

1. UK FANZINE, ed Walter GILLINGS. 18 issues 1947-50. Gillings, previously editor of several UK SF MAGAZINES - TALES OF WONDER (1937-42), STRANGE TALES (1946) and FANTASY (1946-7) - found himself needing an outlet for his energies after the demise of the latter title and began FR, which was almost identical in format and content to his earlier fanzine Scientifiction (7 issues 1937-8) and later fanzine Cosmos (3 issues 1969). It carried reviews and sf news items, and was professional in appearance. For its last 3 numbers the title changed to Science-Fantasy Review. When in 1950 Gillings was given the editorship of SCIENCE FANTASY, the new sister magazine to Nova Publications' NEW WORLDS, he incorporated Science-Fantasy Review into its first 2 issues as a news-chat section; this disappeared when John CARNELL assumed the editorship of Science Fantasy with #3.2. US monthly critical SEMIPROZINE, founded as Fantasy Newsletter by Paul C. Allen in Rochester, NY, as, literally, an 8pp newsletter in June 1978, but becoming a magazine in Jan 1980, ceasing publication in Oct 1981. It was revived at once, however, by Robert Collins, director of the International Conference on the Fantastic in the Arts at Florida Atlantic University. The magazine, which had always published interesting features, gained much strength when amalgamated at the beginning of 1984 with SCIENCE FICTION AND FANTASY BOOK REVIEW (Neil BARRON, editor of the latter, becoming review editor) with a new title, Fantasy Review, but a continuation of the previous numeration. (The logo showed SF ? it was soon dropped.) FR had the widest (though not necessarily deepest) sf-book-review coverage in the US and probably the world, covering fantasy and horror as well as sf. Later review editors were Carol McGuirk and Rob Latham. Quite handsomely produced, FR had the usual difficulty in finding a commercially viable market for a magazine of the standard desired by the editor, and folded with #103, July/Aug 1987. The review section lives on less usefully in annual form, beginning 1988, as SCIENCE FICTION AND FANTASY BOOK REVIEW ANNUAL, with Collins and Latham co-editors. [PN]

FANTASY STORIES

FANTASY FICTION.

FANTASY TIMES

US FANZINE (1941-69) ed James V. Taurasi Sr (1917-1991), briefly by Sam MOSKOWITZ during WWII, Taurasi again, and Frank Prieto Jr from 1966. Published erratically until 1946, FT thereafter established itself as a straightforward sf and fantasy newsletter containing news, notes and reviews. In 1957 its title changed to Science Fiction Times, and publication continued under this title until #465, in 1969. Though its contents were mostly routine records of events, the magazine did attract some attention from publishers and authors; James BLISH was its book

reviewer for a time (c1956). FT won the HUGO for Best Fanzine in 1955 and 1957. Its news-reporting function was effectively taken over by LOCUS. A short-lived Spanish edition, Tiempo de Fantasia, was published in 1949, and a successful German version, SF Times, began publication in 1958, at first as a straight translation, later - especially under the editorship of Hans Joachim ALPERS - as a serious German fanzine in its own right (GERMANY). [PR/PN]

FANTAZIA 2000
ISRAEL.

FANTHORPE, R(OBERT) L(IONEL)

(1935-) UK writer who became a schoolteacher and preacher. From 1954 to 1965 RLF was an sf writer of remarkable productivity, towards the end of that period producing novels on a weekly schedule for BADGER BOOKS and associated imprints, for which he was paid ps25 a volume, dictating his tales into a battery of tape-recorders for transcription by members of his family or by friends. The rushed endings of many of his novels were a result of this practice, as he often did not know how close he was to his allotted word-length until batches of typing had been completed; if a tale had reached its length while still in mid-plot, it would be truncated forthwith. It has been claimed of RLF that he was the world's most prolific writer in the genre. His first story, written at the age of 16, was "Worlds without End" as by Lionel Roberts for FUTURISTIC SCIENCE STORIES in 1952. His first novel, Menace from Mercury (1954), was published under the house name Victor LA SALLE; other house names under which he would work were John E. MULLER and Karl ZEIGFREID. Within a few years he was responsible for the vast majority of Badger's sf and supernatural output, both novels and collections of stories, some of the former and all of the latter being included in the numbered series Supernatural Stories. (RLF's practice with stories was generally to provide all the contents of a particular issue, using several pseudonyms in addition to his own name, creating in effect a series of collections. It is as collections that these titles are listed in this entry, under the title and name story listed on the cover, though in fact this title might not actually appear within, and pseudonymous work by other authors occasionally appears in collections otherwise by RLF; we have here violated our normal practice of designating such books as anthologies.) After Badger Books folded, RLF fell silent, though he made a brief comeback as a fiction writer with The Black Lion (1979), written in collaboration with his wife, Patricia Fanthorpe (1938-); it is a not-unsuccessful fantasy, the first of a projected (but still incomplete) trilogy. One series of some interest, published under the Bron Fane pseudonym, chronicles the adventures of the Bulldog Drummond-like Val Stearman and the immortal La Noire: "The Seance" (1958), "The Secret Room" (1958), "Valley of the Vampire" (1958), "The Silent Stranger" (1959), "The Other Line" (1959), "The Green Cloud" (1959), "Pursuit" (1959), "Jungle of Death" (1959), "The Crawling Fiend" (1960), "Curtain Up" (1960), "The Secret of the Lake" (1960), "The Loch Ness Terror" (1961), "The Deathless Wings" (1961), "The Green Sarcophagus" (1961), "Black Abyss" (1961), "Forbidden City" (1961), "The Secret of the Pyramid" (1961), "Something at

the Door" (1961), "Forbidden Island" (1962), "Storm God's Fury" (1962), "Vengeance of the Poltergeist" (1962), "The Persian Cavern" (1962), "The Chasm of Time" (1962), "The Voice in the Wall" (1962), "Cry in the Night" (1962), "The Nine Green Men" (1963), "The Man who Never Smiled" (1963), "Return Ticket" (1963), "The Room that Never Was" (1963), "The Walker" (1963), Softly By Moonlight (1963), "The Thing from Sheol" (1963), "The Man who Knew" (1963), Unknown Destiny (1964), "The Warlock" (1964), The Macabre Ones (1964), "The Troll" (1964), "The Walking Shadow" (1964), "The Lake Thing" (as Pel Torro, 1964), "The Accursed" (1965), "The Prodigy" (1965), U.F.O. 517 (1965), "Girdle of Fear" (1965), "Repeat Programme" (1966) and "The Resurrected Enemy" (1966). Apart from those listed below in connection with book titles, RLF's pseudonyms included Neil Balfort, Othello Baron, Oben Lerteth, Elton T. Neef, Peter O'Flinn, Rene Rolant, Robin Tate and Deutero Spartacus. All but the last are partial anagrams of his name. [MJE] Other works: As R.L. Fanthorpe: Resurgam (coll 1957); Secret of the Snows (coll 1957); The Flight of the Valkyries (coll 1958); The Waiting World (1958); Watchers of the Forest (coll 1958); Call of the Werewolf (coll 1958); The Death Note (coll 1958); Mermaid Reef (coll 1959); Alien from the Stars (1959); Fiends (1959); Space-Borne (1959); The Ghost Rider (coll 1959); Hyperspace (1959); Doomed World (1960); The Man who Couldn't Die (coll 1960); Out of the Darkness (1960); Satellite (1960); Asteroid Man (1960); Werewolf at Large (coll 1960); Hand of Doom (1960); Whirlwind of Death (coll 1960); Flame Mass (1961); Fingers of Darkness (coll 1961); Face in the Dark (coll 1961); Devil from the Depths (coll 1961); Centurion's Vengeance (coll 1961); The Golden Chalice (1961); The Grip of Fear (coll 1961); Chariot of Apollo (coll 1962); Hell has Wings (coll 1962); Graveyard of the Damned (coll 1962); The Darker Drink (coll 1962); Curse of the Totem (coll 1962); Space Fury (1962); Goddess of the Night (coll 1963); Moon Wolf (coll 1963); Avenging Goddess (coll 1964); Death has Two Faces (coll 1964); The Shrouded Abbot (coll 1964); Bitter Reflection (coll 1965); Neuron World (1965); The Triple Man (1965); Call of the Wild (coll 1965); Vision of the Damned (coll 1965); The Sealed Sarcophagus (coll 1965); The Unconfined (1966); Stranger in the Shadow (coll 1966); Curse of the Khan (coll 1966); Watching World (1966); The Story of St Francis of Assisi (1989), nonfiction; Three of the Earliest SF Stories by Lionel Fanthorpe (coll 1991 chap); Collection of Documents Referring to Lionel Fanthorpe's Early Writings (coll 1991 chap). As Erle Barton: The Planet Seekers (1964). As Lee Barton: The Unseen (1963); The Shadow Man (1966). As Thornton Bell: Space Trap (1964); Chaos (1964). As Leo Brett: The Drud (coll 1959); The Return (coll 1959); Exit Humanity (1960); The Microscopic Ones (1960); The Faceless Planet (1960); March of the Robots (1961); Black Infinity (1961); Mind Force (1961); Nightmare (1962); Face in the Night (1962); The Immortals (1962); The Frozen Tomb (coll 1962); They Never Come Back (1963); The Forbidden (1963); From Realms Beyond (1963); Phantom Crusader (coll 1963); The Alien Ones (1963); Power Sphere (1963). As Bron Fane: The Crawling Fiend (coll 1960); Juggernaut (1960; vt Blue Juggernaut 1965 US); Last Man on Earth (1960); Rodent Mutation (1961); Storm God's Fury (coll 1962); The Intruders (1963); Somewhere Out There (1963); The Thing from Sheol (coll 1963); Nemesis (1964); Suspension (1964); The Walking Shadow (coll 1964). As L.P. Kenton: Destination Moon (1959). As Victor La Salle (house name): Victor LA

SALLE.As John E. Muller (house name): A 1000 Years On (1961); The Mind Makers (1961); The Ultimate Man (1961); Forbidden Planet (1961); The Uninvited (1961); Crimson Planet (1961); The Venus Venture (1961; 1965 US as by Marston Johns); The Return of Zeus (1962); Perilous Galaxy (1962); The Eye of Karnak (1962); Infinity Machine (1962); Uranium 235 (1962); The Man who Conquered Time (1962); Orbit One (1962; 1966 US as by Mel Jay); Micro Infinity (1962); Beyond Time (1962; 1966 US as by Marston Johns); Vengeance of Siva (1962); The Day the World Died (1962); The X-Machine (1962); Reactor XK9 (1963); Special Mission (1963); Dark Continuum (1964); Mark of the Beast (1964); The Exorcists (1965); The Negative Ones (1965); The Man from Beyond (1965); Spectre of Darkness (1965); Beyond the Void (1965); Out of the Night (1965); Phenomena X (1966) and Survival Project (1966).As Phil Nobel: The Hand from Gehenna (coll 1964).As Lionel Roberts: The Incredulist (coll 1954); Guardians of the Tomb (coll 1958); The Golden Warrior (coll 1958); Dawn of the Mutants (1959); Time Echo (1959; 1964 US as by Robert Lionel); Cyclops in the Sky (1960); The In-World (1960); The Face of X (1960; 1965 US as by Robert Lionel); The Last Valkyrie (1961); The Synthetic Ones (1961); Flame Goddess (1961).As Neil Thanet: Beyond the Veil (1964); The Man who Came Back (1964).As Trebor Thorpe: The Haunted Pool (coll 1958); Five Faces of Fear (1960); Lightning World (1960); Voodoo Hell Drums (coll 1961).As Pel Torro: Frozen Planet (1960); World of the Gods (1960); The Phantom Ones (1961); Legion of the Lost (1962); The Strange Ones (1963); Galaxy 666 (1963); Formula 29X (1963; vt Beyond the Barrier of Space 1969 US); The Timeless Ones (1963); Through the Barrier (1963); The Last Astronaut (1963); The Face of Fear (1963); The Return (1964; vt Exiled in Space 1969 US); Space No Barrier (1964; vt Man of Metal 1969 US); Force 97X (1965).As Olaf Trent: Roman Twilight (coll 1963).As Karl Zeigfreid (house name): Gods of Darkness (1962); Walk through Tomorrow (1963); Android (1962); Atomic Nemesis (1962); Zero Minus X (1962); Escape to Infinity (1963); Radar Alert (1963); World of Tomorrow (1963; vt World of the Future 1964 US); The World that Never Was (1963); Projection Infinity (1964); No Way Back (1964); Barrier 346 (1965); The Girl from Tomorrow (1965).

FANZINE

A fanzine is an amateur magazine produced by sf fans. The term "fanzine", coined by Russ Chauvenet in 1941, has been borrowed and used by comics collectors, wargamers, "underground" publishers and other non-sf enthusiasts. The fastest-growing category in the mid-1980s was the soccer fanzine. The first known fanzine was The Comet (May 1930) ed Raymond A. PALMER for the Science Correspondence Club, followed by The Planet (July 1930) ed Allen Glasser for the New York Scienceers. However, both of these were mainly about science, although the second did include reviews of the professional sf magazines. Some regard the first true fanzine-certainly the first major one - as The Time Traveller (#1, Jan 1932) ed Julius SCHWARTZ and Mort WEISINGER. Schwartz, with others, went on to publish Science Fiction Digest (FANTASY MAGAZINE). These and other early fanzines were straightforward publications dealing exclusively with sf or amateur science, and were produced by local fan groups founded in the USA by the more active readers of contemporary professional SF MAGAZINES. However, as interest grew and sf fans formed closer contacts and friendships,

individual fans began publishing for their own amusement, so that fanzines became more diverse and their contents more capricious; fan editors also began to exchange fanzines and to send out free copies to contributors and letter-writers. Thus fanzines abandoned any professional aspirations in exchange for informality and an active readership-characteristics that persist to the present and distinguish fanzines from conventional hobbyist publications. From the USA the idea spread to the UK, where Maurice Hanson and Dennis Jacques started NOVAE TERRAE (later ed E.J. CARNELL as the forerunner of NEW WORLDS) in 1936. Since then fanzine publishing has proliferated and many thousands of titles have appeared. Probably 500-600 fanzines are currently in production, the majority in North America but with substantial numbers from the UK, Australia and Western Europe, and occasional items from Japan, South America, South Africa, New Zealand, Turkey and Eastern Europe. Many modern sf writers started their careers in FANDOM and published their own fanzines; Ray BRADBURY, for example, produced 4 issues of Futuria Fantasia (1939-41), which contained inter alia his first published stories. Other former fanzine editors include James BLISH, Kenneth BULMER, John CHRISTOPHER, Harlan ELLISON, Damon KNIGHT, C.M. KORNBLUTH, Charles Eric MAINE, Michael MOORCOCK, Frederik POHL, Robert SILVERBERG and Ted WHITE. Some still find time to publish: Wilson TUCKER, for example, has continued to produce Le Zombie since 1938. Fan editors are of course free to produce whatever they like, and so fanzines vary dramatically in production, style and content. Normally they are duplicated, photocopied or printed, consisting of anything from a single sheet to 100+ pages, and with a circulation of from 5 to 5000 copies, though the tendency in the 1980s has been to call fanzines with a circulation of over 1000 SEMIPROZINES. The smaller fanzines are often written entirely by the editor and serve simply as letter substitutes sent out to friends; others have limited distribution within amateur press associations such as FAPA and OMPA. The larger fanzines, with an average circulation of 200-500, fall into three main categories, with considerable overlap: those dealing with sf (containing reviews, interviews, articles and discussions); those dealing with sf fans and fandom (containing esoteric humour); and those dealing with general material (containing anything from sf to Biblical engineering). (A further category consists of fanzines exclusively publishing amateur fiction; these are not listed in this volume unless widely enough circulated to be regarded as semiprozines.) On the fringe there are specialist fanzines catering for FANTASY and SWORD-AND-SORCERY fans, others devoted to cult authors such as J.R.R. TOLKIEN, H.P. LOVECRAFT and Robert E. HOWARD, and yet others which deal with sf films or tv series such as STAR TREK. Since 1955 there has been a Best Fanzine category in the HUGO Awards, and since 1984 a Best Semiprozine category also. A selection of 36 important fanzines - some now regarded as semiprozines - from different periods of fandom receive full entries in this volume: ALGOL, The ALIEN CRITIC, ANSIBLE, AUSTRALIAN SF REVIEW, AUSTRALIAN SF REVIEW: SECOND SERIES, BIZARRE, CRITICAL WAVE, FANAC, FANTASY COMMENTATOR, FANTASY MAGAZINE, FANTASY REVIEW, FANTASY TIMES, FILE 770, The FUTURIAN, HYPHEN, JANUS/AURORA, LOCUS, LUNA MONTHLY, NIEKAS, NOVAE TERRAE, PSYCHOTIC, QUANDRY, QUARBER MERKUR, RIVERSIDE QUARTERLY, SCIENCE FICTION: A REVIEW OF SPECULATIVE FICTION, SF

CHRONICLE,
SF COMMENTARY, SCIENCE FICTION EYE, SLANT, SPECULATION, THRUST, VECTOR,
The VORTEX, WARHOON, XERO and YANDRO. Data on another dozen or so fanzine
titles are available by following up cross-references. The majority of the
above are critical magazines, and many are listed again under CRITICAL AND
HISTORICAL WORKS ABOUT SF. [PR/PN]

FAPA

The commonly used acronym for the Fantasy Amateur Press Association,
formed in 1937 in the USA by Donald A. WOLLHEIM to facilitate distribution
on an APA basis of FANZINES published by and for members; it was the first
of many such groups. Early contributors included E.J. CARNELL, Robert A.W.
LOWNDES, Sam MOSKOWITZ, Frederik POHL, Wilson TUCKER and Richard WILSON.
Current members include Moskowitz, F.M. BUSBY and Robert SILVERBERG. [PR]

FARCA, MARIE C.

(1935-) US writer whose first sf novel, *Earth* (1972), is a competent
adventure. Her second, *Complex Man* (1973), is a sequel set on another
planet. [JC]

FAR FRONTIERS

US "magazine" in paperback-book format; it could also be regarded as an
original anthology series. Quarterly, published by Baen Books, ed Jerry
POURNELLE and Jim BAEN and (uncredited) John F. CARR; 7 issues, from *Far
Frontiers* (anth 1985) at the very beginning of that year to *Far Frontiers
Vol VII* (anth Winter 1986). At this point Baen revived (as solo editor)
his very similar *Destinies* series of magazines/anthologies as *New
Destinies* with #1 in Spring 1987 (*DESTINIES*), and *Far Frontiers* came to
an end. Something of a shop-window for upcoming Baen Book publications, FF
featured several book excerpts. Its emphasis was on HARD SF, sometimes
militaristic, and on good science-fact articles; authors of the latter
included Robert L. FORWARD, John GRIBBIN, Pournelle and G. Harry STINE.
Authors of stories included Greg BEAR, David BRIN, John DALMAS, Dean ING,
Vernor VINCE and Timothy ZAHN. [PN]

FAR FUTURE

Fred Polak's *The Image of the Future* (1973) identifies two distinct
categories of images of the distant future, which he called the "future of
prophecy" and the "future of destiny". Prophets, although they refer to
the future, are primarily concerned with the present: they issue warnings
about the consequences of present actions and demand that other courses of
action be adopted. Their images are images of the historical future which
will grow out of human action in the present day (NEAR FUTURE). To the
second category of images, however, present concerns are usually
irrelevant; these are images of the ultimate future, taking the
imagination as far as it can reach. Such visions are related to
ESCHATOLOGY and often feature the END OF THE WORLD; others depict a world
where everything has so changed as to have become virtually
incomprehensible, or a world which has attained some ultimate UTOPIAN
state of perfection. Scientifically inspired images of the far future could
not come into being until the true age of the Earth and therefore the
scope of possible change were understood - an understanding first

popularized by Sir Charles Lyell (1797-1875) in *Principles of Geology* (1830). Even then it was not until the establishment of the theory of EVOLUTION that writers found a conceptual tool which made it possible for them to imagine the kinds of changes which might plausibly take place. W.H. HUDSON's *A Crystal Age* (1887), which belongs to the utopian school, embraces an evolutionary philosophy of a curiously mystical kind, and such traces of mysticism are retained by very many representations of the far future. Most early images of the far future accepted estimates of the likely age of the Sun based on the tacit, natural but false assumption that its heat was produced by combustion; the far-future Earth is thus represented as a cold, dark and desolate place from which life is slowly disappearing. We find such imagery in H.G. WELLS's *THE TIME MACHINE* (1895), George C. WALLIS's "The Last Days of Earth" (1901) and William Hope HODGSON's *The House on the Borderland* (1908). Hodgson's *The Night Land* (1912) is bizarre as well as bleak, offering a phantasmagorical vision of a decaying world inherited by frightful monsters. The optimistic far-future vision which concludes George Bernard SHAW's *Back to Methuselah* (1921) is predicated on the assumption that mind can and will cast off the confining shackles of matter. More elaborate but no less striking imagery is featured in the concluding section of Guy DENT's *Emperor of the If* (1926), in which our insane descendants are no longer human in form or ability but remain all too human in psychological terms. S. Fowler WRIGHT's *The World Below* (incorporating *The Amphibians* [1924]; 1929) is equally ambitious, and contrives to transcend the images of decay and desolation associated with so many other visions. These works were quickly followed by Olaf STAPLEDON's monumental attempt to track the entire evolutionary future of mankind, *LAST AND FIRST MEN* (1930), partly based on a blueprint provided by J.B.S. HALDANE in "The Last Judgment" (1927). Other than millenarian fantasies, which claim that the future of destiny is imminent, very few novels link the two images of the future defined by Polak within a coherent historical narrative; *LAST AND FIRST MEN* is by far the most outstanding example, although Camille FLAMMARION's *Omega* (trans 1894) had earlier brought the two into rather awkward juxtaposition. The early sf PULP MAGAZINES featured several far-future visions of the end of the world, but had little to compare with the imagery of the UK SCIENTIFIC ROMANCES. One notable story that presents the extinction of mankind's remote descendants as one more stage in a continuing process of change is "Seeds of the Dusk" (1938) by Raymond Z. GALLUN, in which a much-changed Earth is "invaded" and "conquered" by spores from another world. Gallun's "When Earth is Old" (1951) has time travellers negotiating with sentient plants to assure the rebirth of the species. The quest for some such rebirth is a common motif in far-future stories, and time travellers from the present frequently contrive to turn the evolutionary tide that is sweeping humanity towards extinction, as in such stories as John W. CAMPBELL Jr's "Twilight" (1934 as by Don A. Stuart). The idea of reigniting a senescent Sun in order to give Earth and mankind a new lease of life is poignantly deployed in Clark Ashton SMITH's "Phoenix" (1954) and extravagantly developed in Gene WOLFE's *Book of the New Sun* tetralogy (1980-83). Such notions arise from false analogies drawn between the life of an individual and that of a species, alleging that species may "age" and become "senescent". The popularity of such ideas in sf is not

surprising, given the influence of similar analogies between individuals and cultures in the work of philosophers of history like Oswald Spengler (1880-1936). Spengler's ideas were a strong influence on James BLISH, whose most memorable accounts of the far future are "Watershed" (1957) and *Midsummer Century* (1972). Images of an aged world that has returned to its "second childhood" are sometimes as affectionate as rose-tinted images of human retirement; the classic example is John CROWLEY's *ENGINE SUMMER* (1979). Clark Ashton Smith set the most lushly exotic of all his series in *Zothique*, the "last continent" - a bizarre and decadent world in which magic flourishes. The stories, all written in the 1930s, were eventually collected in *Zothique* (coll 1970). *Zothique* offered Smith more imaginative freedom than his distant-past scenario *Hyperborea* precisely because it was irredeemably decadent. A similar but less fervent series of fantasies is Jack VANCE's *THE DYING EARTH* (coll 1950), whose later sequels include *The Eyes of the Overworld* (fixup 1966), which contains a stronger strain of picaresque comedy. A. MERRITT never used the far future as a setting, but his lavish descriptions of exotic landscapes influenced a number of far-future fantasies; Henry KUTTNER and C.L. MOORE, who wrote a series of Merritt-influenced novels in the 1940s, offered a Merrittesque far future in *Earth's Last Citadel* (1943; 1964). The classic pulp sf story of the far future is Arthur C. CLARKE's Stapledon-influenced *Against the Fall of Night* (1948; 1953; rev vt *The City and the Stars* 1956). Its imagery is stereotyped - a bleak, derelict Earth with cities whose handsome, incurious inhabitants are parasitic upon their machines - but its perspectives widen dramatically to take in the whole cosmos, where mankind may yet seek a further and more glorious destiny. This was to become a central myth of sf, and many images of *GALACTIC EMPIRE* include nostalgic portraits of stagnant backwater Earth. These are not, of course, images of the future of destiny but rather attempts to perpetuate and magnify the historical image - as is obvious in the many epics which construct galactic history by analogy with Earthly history. Images of far-future Earth became more varied in the sf of the 1950s; notable examples include a number of highly stylized and semi-allegorical vignettes by Fritz LEIBER, including "When the Last Gods Die" (1951) and "The Big Trek" (1957), as well as many fine stories by Brian W. ALDISS, including the later items in *The Canopy of Time* (coll 1959; rev vt *Galaxies Like Grains of Sand*), "Old Hundredth" (1960), the stories making up *The Long Afternoon of Earth* (fixup 1962 US; exp vt *Hothouse* UK), "A Kind of Artistry" (1962) and "The Worm that Flies" (1968). As with all the stories in this category, these tend towards FANTASY, and some controversy was stirred up by a particularly memorable image in *The Long Afternoon of Earth*, in which gigantic cobwebs stretch between the Earth and the Moon, whose faces are now perpetually turned to one another. Other innovative uses of far-future settings can be seen in John BRUNNER's elegiac adventure story *The 100th Millennium* (1959; rev vt *Catch a Falling Star* 1968), Samuel R. DELANY's exotic romance *The Jewels of Apor* (1962), Jack Vance's elegant political allegory *THE LAST CASTLE* (1966), Michael MOORCOCK's angst-ridden *The Twilight Man* (1966; vt *The Shores of Death*) and Crawford KILIAN's exotic romance of maturation *Eyas* (1982). Michael Moorcock's fondness for far-future settings encouraged him to break new ground in his *Dancers at the End of Time* trilogy (1972-6) and various other works associated with

it. In this series, whose tone ranges from extravagant SATIRE to perverse sentimentality, the ultimate future is inhabited by humans with godlike powers who must perpetually seek diversion from the tedium of their limitless existence. Other writers who have made frequent and significant use of far-future imagery in recent times include Robert SILVERBERG, in such works as the surreal Son of Man (1971) and "This is the Road" (1973), Doris PISERCHIA, in such works as A Billion Days of Earth (1976) and Earth in Twilight (1981), and Michael G. CONEY in The Celestial Steam Locomotive (1983), Gods of the Greataway (1984) and other associated works. There are no anthologies dealing specifically with this theme, and it is worth noting that Harry HARRISON's attempt to compile a companion volume to his near-future anthology The Year 2000 (anth 1970), to be entitled The Year 2,000,000, failed to attract sufficient suitable submissions. The theme does not lend itself readily to conventional plot and character development. [BS]See also: DEVOLUTION; ENTROPY; MYTHOLOGY.

FARJEON, J(OSEPH) JEFFERSON

(1883-1955) UK writer, prolific (often as Anthony Swift) in the detective genre and as a playwright. The RURITANIAN Mountain Mystery (1935) depicts the small country of Weldheim, which loses itself to history after WWI, becoming a kind of LOST WORLD. Death of a World (1948) depicts the arrival of aliens on a dead Earth and their reading of the diary (which makes up the bulk of the text) kept by a last survivor of the nuclear DISASTER that ended all life (END OF THE WORLD). [JC]Other works: The Invisible Companion and Other Stories (coll 1946 chap), fantasies.

FARLEY, RALPH MILNE

Pseudonym of US writer and teacher Roger Sherman Hoar (1887-1963) for all his sf work except two 1938 stories published in AMZ as by Lt John Pease. He was educated at Harvard and had a remarkably varied career, which included teaching such subjects as mathematics and engineering, inventing a system of aiming large guns by the stars, and serving as a Massachusetts state senator. His early work in the pulp-sf field was written in obvious imitation of Edgar Rice BURROUGHS and was contributed to The ARGOSY - notably his most famous series, the Radio Man series, featuring Miles Cabot, which began with The Radio Man (1924 Argosy; 1948; vt An Earthman on Venus 1950) and continued with The Radio Beasts (1925 Argosy; 1964), The Radio Planet (1926 Argosy; 1964), "The Radio Man Returns" (1939 AMZ) and "The Radio Minds of Mars" (1955 Spaceway, part 1 only; part 2 in Spaceway 1969). Other "radio" stories - including novels which did not reach book form, such as "The Radio Flyers" (1929 Argosy) and "The Radio Gun-Runners" (1930 Argosy) - are out of series. The tales, at first absurdly boosted by The Argosy as scientifically accurate, are devoted to the adventures of Cabot, mostly on VENUS, the Radio Planet, and still have admirers. Along with another novel, The Hidden Universe (1939 AMZ; with "We, the Mist" as coll 1950), The Radio Man was later assembled as Strange Worlds (omni 1953). RMF was a rough-hewn, traditional SENSE-OF-WONDER writer, and as a consequence became relatively inactive with the greater sophistication of the genre after WWII. [JC/PN]Other works: Dangerous Love (fixup 1946 chap UK); The Immortals (1934 Argosy; 1947 chap UK); The Omnibus of Time (coll 1950).See also: ALIENS; COMICS; ESCHATOLOGY; HISTORY

FARMER, PHILIP JOSE

(1918-) US writer. Although a voracious reader of sf in his youth, PJF was a comparatively late starter as an author, and his first story, "O'Brien and Obrenov" for *Adventure* in 1946, promised little. A part-time student at Bradley University, he gained a BA in English in 1950, and two years later burst onto the sf scene with his novella *THE LOVERS* (1952 *Startling Stories*; exp 1961; rev 1979). Although originally rejected by John W. CAMPBELL Jr of *ASTOUNDING SCIENCE-FICTION* and H.L. GOLD of *GALAXY SCIENCE FICTION*, it gained instant acclaim and won PJF a 1953 HUGO for Most Promising New Author. It concerned XENO BIOLOGY, PARASITISM and SEX, an explosive mixture which was to feature repeatedly in PJF's best work. After writing such excellent short stories as "Sail On! Sail On!" (1952) and "Mother" (1953), PJF became a full-time writer. His second short novel, *A Woman a Day* (1953 *Startling Stories*; rev 1960; vt *The Day of Timestop* 1968; vt *Timestop!* 1970), was billed as a sequel to *THE LOVERS* but bore little relation to the earlier story. "Rastignac the Devil" (1954) was a further sequel. PJF then produced two novels, both of which were accepted for publication but neither of which actually saw print at the time, the first due to the folding of *STARTLING STORIES* (it eventually appeared as *Dare* [1965]). The second, *I Owe for the Flesh*, won a contest held by SHASTA PRESS and Pocket Books, but the Pocket Books prize money was used by Shasta founder Melvin Korshak to pay bills, Shasta foundered, and the manuscript was lost (the idea eventually formed the basis of the *Riverworld* series; see below). This double disaster forced PJF to abandon full-time authorship, a status to which he did not return until 1969. Nevertheless, he produced many interesting stories over the next few years, such as the Father Carmody series in *The MAGAZINE OF FANTASY AND SCIENCE FICTION*, published in book form as *Night of Light* (1957 FSF; exp 1966) and *Father to the Stars* (coll of linked stories 1981), featuring a murderous priest who becomes ambiguously involved in various theological puzzles on several planets. The best of the sequence is *Night of Light*, a nightmarish story of a world where the figments of the unconscious become tangible. Other notable stories of this period include "The God Business" (1954), "The Alley Man" (1959) and "Open to Me, My Sister" (1960; vt "My Sister's Brother"). The last named is the best of PJF's biological fantasies (BIOLOGY); like *THE LOVERS*, it was repeatedly rejected as "disgusting" before its acceptance by FSF. PJF's first novel in book form was *The Green Odyssey* (1957), a picaresque tale of an Earthman escaping from captivity on an alien planet; the intricately colourful medieval culture of this planet, the high libido of its women, the mysteries buried within the sands of the desert over which the hero must flee, and the admixture of rapture and disgust with which the hero treats the venue - all go to make this novel, along with Jack VANCE's *Big Planet* (1952 *Startling Stories*; cut 1957; full text 1978), a model for the flowering of the PLANETARY ROMANCE from the 1960s on. It was the first of many entertainments PJF has written over the years. Later novels in a not dissimilar vein include *The Gate of Time* (1966; exp vt *Two Hawks* from

Earth 1979), *The Stone God Awakens* (1970) and *The Wind Whales of Ishmael* (1971), the last-named being an sf sequel to Herman MELVILLE's *Moby-Dick* (1851). *Flesh* (1960; rev 1968) is more ambitious: a dramatization of the ideas which Robert GRAVES put forward in *The White Goddess* (1947 US), it presents a matriarchal, orgiastic society of the future. Rather heavy-handed in its humour, it was considered a "shocking" novel on first publication. *Inside Outside* (1964), a novel about a scientifically sustained afterlife, also contains some extraordinary images and grotesque ideas which resonate in the mind, though the book suffers from a lack of resolution. The novella "Riders of the Purple Wage" (1967) - later collected in *The Purple Book* (coll 1982) and *Riders of the Purple Wage* (coll 1992) - won PJF a 1968 Hugo; written in a wild and punning style, it is one of his most original works. It concerns the tribulations of a young artist in a UTOPIAN society, and has a more explicit sexual and scatological content than anything PJF had written before. "The Oogenesis of Bird City" (1970) is a related story. The novels assembled as *The World of Tiers* (omni in 2 vols 1981; vt *World of Tiers #1* 1986 UK and *#2* 1986 UK) show PJF in a lighter vein, though the architectural elaborateness of the universe in which they are set prefigures *Riverworld*. The original volumes are *The Maker of Universes* (1965; rev 1980), *The Gates of Creation* (1966; rev 1981), *A Private Cosmos* (1968; rev 1981), *Behind the Walls of Terra* (1970; rev 1982) and *The Lavalite World* (1977; rev 1983). The sequence unfolds within a series of POCKET UNIVERSES, playgrounds built by the masters - who are perhaps gods, originally humanoid - whose technology is unimaginable. The most notable character is the present-day Earthman Paul Janus Finnegan (his initials, PJF, show that this ironic observer serves as a stand-in for the author: it is a signal repeated often in later work); he is also called Kickaha, under which significantly Native American name he acts out the role of a trickster hero indulging in merry, if bloodthirsty, exploits. The books sag in places, but have moments of high invention; and the Jungian models upon which the main characters are constructed supply one key to the understanding of *Red Orc's Rage* (1991), a novel which RECURSIVELY dramatizes the use of the previous titles in the series as tools in role-playing therapy for disturbed adolescents. In a late addition to the primary sequence, *More Than Fire* (1993), some of the cosmological puzzles are resolved, and the conflict between Kickaha and Red Orc takes on an increasingly Jungian air, with each being seen as the other's shadow. At about the same time, ESSEX HOUSE, publishers of pornography, commissioned PJF to write three erotic fantasy novels, taking full advantage of the new freedoms of the late 1960s. *The Image of the Beast* (1968), the first of the Exorcism trilogy, is an effective parody of the private eye and Gothic horror genres. It was followed by a perfunctory sequel, *Blown, or Sketches Among the Ruins of my Mind* (1969), both being run together into one novel as *The Image of the Beast* (omni 1979); the third Exorcism volume, *Traitor to the Living* (1973), was not published by Essex House. The Essex House contract was completed with *A Feast Unknown: Volume IX of the Memoirs of Lord Grandrith* (1969), the first volume of the Lord Grandrith/Doc Caliban series, followed by *Lord of the Trees* (1970 dos) and *The Mad Goblin* (1970; vt *Keepers of the Secrets* 1985 UK), the latter two being assembled as *The Empire of the Nine* (omni 1988 UK). *A Feast Unknown* is a brilliant exploration of the sado-masochistic fantasies

latent in much heroic fiction, and succeeds as SATIRE, as sf and as a tribute to the creations of Edgar Rice BURROUGHS and Lester DENT. It concerns the struggle of Lord Grandrith (Tarzan) and Doc Caliban (Doc Savage) against the Nine, a secret society of immortals. It is a narrative tour de force. All three books point to an abiding concern (or game) that would occupy much of P.J.F.'s later career: the tying of his own fiction (and that of many other authors) into one vast, playful mythology. Much of this is worked out in the loose conglomeration of works which has been termed the Wold Newton Family series, all united under the premise that a meteorite which landed near Wold Newton in 18th-century Yorkshire irradiated a number of pregnant women and thus gave rise to a family of mutant SUPERMEN. This family includes the characters involved in the Lord Grandrith/Doc Caliban books, as well as several other texts devoted to Tarzan, though excluding Lord Tyger (1970), which is about a millionaire's attempt to create his own ape-man and is possibly the best written of P.J.F.'s novels (APES AND CAVEMEN). Central to Wold Newton is Tarzan Alive: A Definitive Biography of Lord Greystoke (1972), a spoof biography in which P.J.F. uses Joseph Campbell's ideas (from The Hero With a Thousand Faces [1949]) to explore the nature of the HERO's appeal. The appendices and genealogy, which link Tarzan with many other heroes of popular fiction, are at once a satire on scholarship and a serious exercise in "creative mythography". Tarzan appears again in Time's Last Gift (1972; rev 1977), a preliminary novel for a subseries about Ancient Africa, employing settings from Burroughs and H. Rider HAGGARD. Hadon of Ancient Opar (1974) and Flight to Opar (1976) continue the series. Other works which contain Wold Newton material include "Tarzan Lives: An Exclusive Interview with Lord Greystoke" (1972), "The Obscure Life and Hard Times of Kilgore Trout" (1973), Doc Savage: His Apocalyptic Life (1973; rev 1975), The Other Log of Phileas Fogg (1973), "Extracts from the Memoirs of 'Lord Greystoke'" (1974), "After King Kong Fell" (1974), The Adventure of the Peerless Peer (1974), Ironcastle (1976), a liberally rewritten version of J.H. ROSNY aine's L'etonnant voyage de Hareton Ironcastle (1922), and Doc Savage: Escape from Loki: Doc Savage's First Adventure (1991). Other characters incorporated into the sequence include Sherlock Holmes, Jack the Ripper, James Bond and Kilgore Trout, a Kurt VONNEGUT character under whose name P.J.F. also published Venus on the Half-Shell (1975). As a whole, the series parlays its conventions of "explanation" into something close to chaos. Though these various books perhaps best express his playfully serious manipulations of popular material to express a sense of the Universe as chaotically fable-like, P.J.F. gained greatest popular acclaim with his Riverworld series, set on a planet where a godlike race has resurrected the whole of humanity along the banks of a multi-million-mile river. The series is made up of TO YOUR SCATTERED BODIES GO (1965-6 Worlds of Tomorrow; fixup 1971), The Fabulous Riverboat (1967-71 If; fixup 1971), The Dark Design (1977), Riverworld and Other Stories (coll 1979), The Magic Labyrinth (1980), Riverworld War: The Suppressed Fiction of Philip Jose Farmer (coll 1980), The Gods of Riverworld (1983) and River of Eternity (1983), the last being a rediscovered rewrite of the lost I Owe for the Flesh. The first of these won a 1972 Hugo. Such historical personages as Sir Richard Burton (1821-1890), Samuel Clemens (Mark TWAIN) and Jack LONDON explore the terrain and relate to one another in their

search to understand, in terms mundane and metaphysical, the new universe which has tied them together. As surviving characters begin to overdose on the freedoms (or powers) they have discovered in themselves, the plots of the later volumes become increasingly chaotic, perhaps deliberately, a tendency not reversed in two late anthologies of work by other authors set in the Riverworld universe: *Tales of Riverworld* *(anth 1992) and *Quest to Riverworld** (anth 1993), both ed PJF. After *The Unreasoning Mask* (1981), an extremely well constructed SPACE OPERA about a search for God, who comprises the Universe but is still a vulnerable child, PJF embarked on the Dayworld series, whose premise derives from "The Sliced-Crossways Only-on-Tuesday World" (1971): in a vastly overcrowded world, the population is divided into seven, each cohort spending one day of the week awake and the rest of the time in "stoned" immobility. In *Dayworld* (1985), *Dayworld Rebel* (1987) and *Dayworld Breakup* (1990), this premise becomes increasingly peripheral in a tale whose complications invoke A.E. VAN VOGT. Here, as in all his work, PJF is governed by an instinct for extremity. Of all sf writers of the first or second rank, he is perhaps the most threateningly impish, and the most anarchic. [DP/JC] Other works: *Strange Relations* (coll 1960); *The Alley God* (coll 1962); *Fire and the Night* (1962), associational; *Cache from Outer Space* (1962 dos; rev as coll with "Rastignac the Devil" and "They Twinkled like Angels" vt *The Cache* 1981); *The Celestial Blueprint and Other Stories* (coll 1962 dos); *Tongues of the Moon* (1961 AMZ; exp 1964); *Reap: The Baycon Guest-of-Honor Speech* (1968 chap); *Love Song* (1970), associational; *Down in the Black Gang, and Others* (coll 1971); *The Book of Philip Jose Farmer, or The Wares of Simple Simon's Custard Pie and Space Man* (coll 1973; rev 1982); *Dark is the Sun* (1979); *Jesus on Mars* (1979); *Flesh, and Lord Tyger* (omni 1981); *Greatheart Silver* (coll of linked stories 1982); *A Barnstormer in Oz* (1982); *Stations of the Nightmare* (1974-5 in *Continuum* #1-#4 ed Roger ELWOOD; coll of linked stories 1982); *The Classic Philip Jose Farmer* (coll 1984 in 2 vols); *The Grand Adventure* (coll 1984). As Editor: *Mother Was a Lovely Beast: A Feral Man Anthology of Fiction and Fact about Humans Raised by Animals* (anth 1974). About the author: "Philip Jose Farmer" by Sam MOSKOWITZ, in *Seekers of Tomorrow* (1966); "Thanks for the Feast" by Leslie A. Fiedler, in *The Book of Philip Jose Farmer* (1973); *Philip Jose Farmer* (1980) by Mary T. Brizzi; *Magic Labyrinth of Philip Jose Farmer* (1984 chap) by E.L. Chapman; *Philip Jose Farmer: Good-Natured Ground Breaker: A Working Bibliography* (2nd edn 1990 chap) by Gordon BENSON Jr and Phil STEPHENSEN-PAYNE. FARNSWORTH, DUNCAN

[s] David Wright O'BRIEN.

FAR OUT!

Australian sf magazine (1985), DIGEST-format, 3 issues, published from

Western Australia by Far Out Enterprises, ed anon Pamela Klacar. Subtitled "Australia's own sf/fantasy magazine", FO! published fiction of an amateurish nature by unknown writers. Though (astonishingly) given national distribution, it soon silently disappeared. [PN]

FARRELL, JOHN WADE

[s] John D. MACDONALD.

FARREN, MICK

(1943-) UK writer and ex-rock musician, first active in a band, the Deviants, 1967-70; he then edited the underground paper IT 1970-73 and founded the underground comic Nasty Tales-prosecuted for obscenity in a well known trial - in which, with Chris Rowley and Chris Welch, he produced a comic strip with sf content, Ogoth the Wasted. His first sf novel was The Texts of Festival (1973), set in a surrealistic post-HOLOCAUST England; this novel and his subsequent Jeb Stuart Ho trilogy - The Quest of the DNA Cowboys (1976), Synaptic Manhunt (1976) and The Neural Atrocity (1977)-radiate a late-1960s aura of apocalyptic, hip hyperbole, sometimes effectively. The Last Stand of the DNA Cowboys (1989) is a loose sequel. The world of the trilogy especially is almost deliriously polymorphic, full of images out of Westerns and other genres and references to dope, rock and the hippy subculture generally, and can be seen as a clear precursor of CYBERPUNK, though without COMPUTERS, and laced throughout with the kind of drug use which later writers like William GIBSON were able to avoid through the various delights of CYBERSPACE.MF's next novels were similar in texture. Both The Feelies (1978; rev 1990 US), a left-oriented SATIRE whose premise resembles that of John D. MACDONALD's "Spectator Sport" (1950), and the dithery The Song of Phaid the Gambler (1981; rev vt in 2 vols as Phaid the Gambler 1986 US and Citizen Phaid 1987 US) seemed paralysed by their 1960s provenance. After Protectorate (1984) his work began to seem derivative of the cyberpunk writers who had followed him. Corpse (1986; vt Vickers 1988 US), The Long Orbit (1988 US; vt Exit Funtopia 1989 UK) and Armageddon Crazy (1989 US) have in common violent action, desolate NEAR-FUTURE venues and spiritual malaise. Their Master's War (1988 US) concerns the ruthless use of helpless species in an unending interstellar conflict. [JC]Other works: Mars - The Red Planet (1990 US); Necrom (1991).

FARRERE, CLAUDE

Pseudonym of French writer Frederic Charles Pierre Edouard Bargone (1876-1957), author mainly of "colonial" novels after the model of Pierre Loti (1850-1923). His sf books are La maison des hommes vivants (1911; trans Arthur Livingston as The House of the Secret 1923 US) and, more notably, Les condammés à mort (1920; trans Elisabeth Abbott as Useless Hands 1926 US; 1973 US as by Charles Bargone), whose harsh social-Darwinist terms render a 1990s workers' revolt as bleakly pathetic: when the "useless hands" go on strike, they are disintegrated by a new weapon and machines take over their jobs. [JC]Other works: Black Opium (coll trans Samuel Putnam 1929 US), tales linked by reference to opium. See also: AUTOMATION; DYSTOPIAS; SOCIAL DARWINISM.

FAST, HOWARD (MELVIN)

(1914-) US writer best known for his work outside the sf field: historical novels under his own name and detective novels and thrillers as E.V. Cunningham. The Unvanquished (1942) and Spartacus (1951), both as HF, are perhaps his most familiar titles. He began publishing sf with "Wrath of the Purple" for AMZ in 1932, but did not actively produce sf until the later 1950s, when he started a long association with FSF. His sf and fantasy stories have been collected in The Edge of Tomorrow (coll 1961), The General Zapped an Angel (coll 1970) and A Touch of Infinity (coll 1973); all the stories in the latter two volumes were reassembled as Time and the Riddle: Thirty-One Zen Stories (coll 1975). His work is sharply political in implication - he was a member of the Communist Party 1943-56, being imprisoned for contempt of Congress in 1947 - and eschews most of the cruder satisfactions of genre fiction. Harlan ELLISON, among others, has expressed high praise for HF's stories, but admiration, though widespread, is not universal. Some critics have seen their occasionally religious moralizing as cloying and their ideative content as trite. Phyllis (1962), as by E.V. Cunningham, is a borderline novel in which a US and a Soviet scientist come together to try to force their governments to ban the bomb by threatening to explode two themselves. In "The Trap", a novel-length tale which occupies most of The Hunter and The Trap (coll 1967), the US Government secretly attempts to raise exceptional children in a monitored environment; when the Department of Defense attempts to view the results the children, now telepathic, close themselves off from the world to breed Homo superior. [JC]Other works: Tony and the Wonderful Door (1968; vt The Magic Door 1980), a juvenile. See also: SATIRE.

FAST, JONATHAN (DAVID)

(1948-) US composer and writer, son of Howard FAST, who wrote music before coming to sf with "Decay" for FSF in 1975. His first novel, The Secrets of Synchronicity (1977; vt Prisoner of the Planets 1980 UK), is a complex SPACE OPERA which, unusually for the form, treats an expanding capitalism as inherently repressive of true freedom. In Mortal Gods (1978) a similar enemy maintains control over a culture shaped by the possibilities of GENETIC ENGINEERING. The tone of his writing, which is generally light, and his plotting, which is contrived, tend to obscure the political arguments underlying his work. [JC]Other works: The Inner Circle (1979); The Beast (1981), a fantasy.

FASTER THAN LIGHT

According to Relativity the velocity of light is limiting: no matter how objects alter their velocity relative to one another, the sum of their velocities can never exceed the ultimate constant c (the velocity of light in a vacuum); moreover, the measurement of c is unaffected by the velocity of the measurer. The apparently paradoxical implications of this statement are avoided because objects travelling at high velocities relative to one another are subject to different frames of measurement, by which each appears to the other to be subject to a distortion of time. As a consequence, SPACESHIPS which make interstellar journeys at velocities close to light-speed relative to their points of origin are subject to a time-dilatation whereby the travellers age more slowly than the people they left at home. A good popularization of such ideas can be found in

George GAMOW's book of scientific fables *Mr Tompkins in Wonderland* (coll 1939 chap). Some "relativistic" effects of FTL travel are described in Camille FLAMMARION's pre-Einsteinian cosmic fantasy *Lumen* (1887; trans 1897), but other early sf writers, including the pioneers of pulp SPACE-OPERA, ignored such matters, even after Relativity theory had come into being. As the intellectual respectability of such ignorance declined, however, the limiting velocity of light increasingly became an awkward inconvenience to writers of interstellar adventure stories, necessitating the development of a series of facilitating devices - often involving "space-warps", interdimensional dodges into HYPERSPACE or "subspace", or, more recently, TACHYON drives or BLACK-HOLE-related "wormholes" - to enable the sciencefictional imagination to retain GALACTIC EMPIRES and their effectively infinite supply of earthlike ALIEN worlds ripe for COLONIZATION. Faster-than-light communication systems like James BLISH's DIRAC transmitter and Ursula K. LE GUIN's ANSIBLE require similar justificatory fudges. Such literary devices cannot, in fact, succeed in setting aside the logical difficulties which arise if Einstein's theory is true, but FTL drives of various kinds are so very useful in avoiding the inconveniences of GENERATION STARSHIPS that many writers of HARD SF insist on clinging to the hope that the theory may be imperfect in such a way as to permit an exploitable loophole. *Faster than Light* (anth 1976), a theme anthology ed Jack DANN and George ZEBROWSKI, includes, as well as the stories, several essays combatively arguing the case. Other writers, however, have found the time-dilatation effects associated with relativistic star-travel a rich source of plot ideas. John W. CAMPBELL Jr was the writer who laid the groundwork for such facilitating devices as the space-warp (in *Islands of Space*, 1931; 1957) and hyperspace (in *The Mightiest Machine*, 1934; 1947), where the term made its debut; where he led legions followed. Stories which work harder than most to make such notions plausible include Robert A. HEINLEIN's *Starman Jones* (1953), Murray LEINSTER's *The Other Side of Nowhere* (1964), A. Bertram CHANDLER's *Catch the Star Winds* (1969) and David ZINDELL's *Neverness* (1988). Memorable imagery relating to hypothetical means of FTL travel can be found in James Blish's tales of cities-become-starships by courtesy of the SPINDIZZY, *CITIES IN FLIGHT* (omni 1970), and in Kenneth BULMER's "Strange Highway" (1960) and Bob SHAW's *The Palace of Eternity* (1969). Some memorable imagery attempting (mistakenly, as it later turned out) to envisage real relativistic visual effects can be found in Frederik POHL's "The Gold at the Starbow's End" (1972; exp as *Starburst* 1982). Many sf stories suggest that the pilots of FTL spaceships may have to be specially adapted to the task, sometimes by cyborgization (CYBORGS), becoming more-or-less alienated from their own kind; notable examples include Cordwainer SMITH's "Scanners Live in Vain" (1950), Gerard F. CONWAY's *Mindship* (1974), Joan COX's *Star Web* (1980), Vonda MCINTYRE's *Superluminal* (1984), Melissa SCOTT's trilogy begun with *Five Twelfths of Heaven* (1985), and Emma BULL's *Falcon* (1989). Norman SPINRAD's *The Void-Captain's Tale* (1983) deals ironically with sf symbolism of this general kind, featuring a phallic spaceship powered by a libidinous "psychological drive". Sf stories which play with time-dilatation effects include Fredric BROWN's flippant "Placet is a Crazy Place" (1946), L. Ron HUBBARD's earnest *Return to Tomorrow* (1950; 1954), Blish's "Common Time" (1953), Heinlein's *Time*

for the Stars (1956), which deploys, literally, the celebrated "twins paradox", Vladislav Krapivin's "Meeting my Brother" (trans 1966), Joe HALDEMAN's THE FOREVER WAR (fixup 1975), Larry NIVEN's A World Out of Time (fixup 1976), Tom Allen's "Not Absolute" (1978) and George TURNER's Beloved Son (1978). Such effects are taken to spectacular extremes in Poul ANDERSON's Tau Zero (1970), whose protagonists are permitted to outlive the Universe, and in Pohl's and Jack WILLIAMSON's even more expansive The Singers of Time (1991). The elementary changes have now been rung, but there is probably further scope for intriguing time-dilatation plots. One such is Redshift Rendezvous (1990) by John E. STITH, set on a starship in a version of hyperspace in which the velocity of light is so low (22mph/35kph) that its passage is visible, and relativistic phenomena are obvious at walking speed. In the mean time, FTL facilitating devices will undoubtedly continue to do sterling work for the extravagantly inclined sf writer. [BS]

FATHERLAND

Made-for-tv film (1994). Home Box Office. Prod Frederick Muller and Ilene Kahn, dir Christopher Menaul, screenplay Stanley Weiser and Ron Hutchinson, based on the novel Fatherland (1992) by Robert Harris, Staring Rutger Hauer and Miranda Richardson. 106 mins. Colour. The year is 1964, the place Berlin, in an ALTERNATE WORLD in which HITLER WINS the Second World War. The USA, which stayed out of the war against Germany and is now led by President Joseph Kennedy senior, is holding talks about detente with Adolf Hitler on the day of Hitler's 75th birthday, April 20th. Hitler needs American friendship, because Germania's (sic) guerilla war with Russia (still led by Stalin) is dragging on. The SS now act as a police force. SS officer March (Hauer) and German-born American journalist Charlie (Richardson) have separately stumbled across a series of murders designed to keep a dreadful wartime secret concealed, and after a time they work together to solve the mystery, in constant danger from the virulent Gestapo. The secret turns out to be the Holocaust. If the mass murder of the Jews (and Gypsies) is revealed, detente will crumble. Apart from the fundamental (and perhaps tasteless) absurdity of the film supposing that so abominable a happening, known to many thousands, should have remained a secret for more than twenty years, this is a well-staged and well-performed political thriller, interesting in its examination of the ways in which a police state can contrive to show the world an apparently acceptable face. The film was shot in Prague. [PN]

FAUCETTE, JOHN M(ATTHEW) Jr

(1943-) US writer whose sf novels, including Crown of Infinity (1968) and The Age of Ruin (1968), are routine works, the first a SPACE OPERA, the second a post- DISASTER odyssey. The Peacemakers series, in which alien invaders are fought to a negotiated truce, comprises The Warriors of Terra (1970) and Siege of Earth (1971). [JC]

FAULCON, ROBERT

Robert P. HOLDSTOCK.

FAUST, JOE CLIFFORD

(1957-) US copywriter and author who began publishing sf with "The

Jackalope's Tale" for Wyoming Rural Electric News in 1983. His first novel, *A Death of Honor* (1987), is an sf mystery set in a 21st century moderately displaced in the direction of CYBERPUNK, where a Constitutional Amendment has entitled victims of crime to pursue the perpetrators; the mystery itself is worked out with extremely satisfying care. His second novel, *The Company Man* (1988), enters even more familiar cyberpunk territory by featuring a protagonist who steals data for a large corporation which partially runs the decaying world, and who soon faces a moral crisis. In the Angel's Luck trilogy - *Desperate Measures* (1989), *Precious Cargo* (1990) and *The Essence of Evil* (1990) - JCF created a romping SPACE OPERA whose spiralling intricacies of plot, as the freelance protagonists who run the starship Angel's Luck get into deeper and deeper waters, are recounted with the rigorous plot-control for which he has become known and with a sly sustaining humour. As a professing Christian, JCF has an avowed allegiance to what he has called "old-fashioned virtues"; so far, however, his tales show no signs of doctrinal purpose. [JC]See also: CRIME AND PUNISHMENT.

FAWCETT, BILL

Working name of US anthologist, packager and writer William Brian Fawcett (1947-). His fiction has generally been collaborative: examples include *Cold Cash Warrior* (1989) with Robert ASPRIN and *Lord of Cragshaw* * (1989) with Neil Randall, a novel tied to the Guardians of the Three sequence, *Lord of Cragshaw* * (1989) (for details of books with David A. DRAKE and Christopher STASHEFF, see their entries). Solo, BF has been responsible for the SwordQuest fantasy sequence: *Quest for the Unicorn's Horn* (1985), *Quest for the Dragon's Eye* (1985), *Quest for the Demon Gate* (1986) and *Quest for the Elf King* (1987). As anthologist, he created the War Years sequence of ties, including *War Years #1: The Far Stars War* * (anth 1990), *#2: The Siege of Arista* * (anth 1991) with Stasheff, and *#3: The Jupiter War* * (anth 1991). Also with Stasheff, he ed *The Crafters* (anth 1991) and *The Crafters #2: Bellsings and Curses* (anth 1992), and with Robert SILVERBERG he ed *Time Gate* (anth 1989) Further solo anthologies include *Cats in Space* (anth 1992) and the Bolo sequence set in the universe created by Keith LAUMER: *Bolos: Honor of the Regiment* * (anth 1993) and *Bolos #2: The Unconquerable* (anth 1994). [JC]See also: SHARED WORLDS.

FAWCETT, EDGAR

(1847-1904) US writer, known primarily for his work outside the sf field. Most of his 40 or so novels belong to the realist school associated with his contemporary William Dean HOWELLS, but (like Howells) BF also wrote imaginative works. He provided a manifesto for a species of fiction which he called "realistic romance", which is very similar to some DEFINITIONS OF SF: "Stories where the astonishing and peculiar are blent with the possible and accountable. They may be as wonderful as you will, but they must not touch on the mere flimsiness of miracle. They can be excessively improbable, but their improbability must be based upon scientific fact, and not upon fantastic, emotional and purely imaginative groundwork." This statement is from the introduction to *The Ghost of Guy Thyrlle* (1895), a novel whose hero discovers a drug which separates his soul from his body and must undertake a voyage into the further reaches of the cosmos when

his uninhabited body is cremated. Earlier and more modest works in the same vein are Douglas Duane (1887), a personality-exchange story, Solarion (1889), a novel about a dog with artificially augmented intelligence, and The Romance of Two Brothers (1891), which features a problematic elixir of life. The New Nero (1893), a study in abnormal psychology concerning a man who believes himself to be a mass murderer, is of borderline interest. Some of EF's POETRY is also relevant, most notably "In the Year Ten Thousand" in Songs of Doubt and Dream (coll 1891). An early supernatural story of some note is "He, She and It" (1871). He copyrighted several unpublished manuscripts, some of which appear to have been sf. [BS]About the author: "The Realistic Romances of Edgar Fawcett" by Brian M. STABLEFORD, Foundation #24 (Feb 1982). See also: COSMOLOGY; EVOLUTION; MOON; RELIGION.

FAWCETT, E(DWARD) DOUGLAS

(1866-1960) UK writer and mystical thinker, long resident in Switzerland. His first (and best-known) sf novel, Hartmann the Anarchist, or The Doom of the Great City (1893), illustrated by Fred T. JANE, features a 1920s anarchist revolution against a wicked, capitalist UK, with London being destroyed by airships; but, in the face of opposition and gripped by guilt, the rebel Hartmann eventually destroys himself and the Attila, his fearsome airship, and all is well. The HOLLOW EARTH featured in Swallowed by an Earthquake (1894), a juvenile, is non-Symmesian (John Cleves SYMMES) and unconvincingly cluttered with prehistoric reptiles. The Secret of the Desert, or How We Crossed Arabia in the "Antelope" (1895) is about a secret amphibious tank which crosses Arabia, finding there a lost race (LOST WORLDS) of Phoenicians. [JC]

FAWCETT, FAUSTO

[r] LATIN AMERICA.

FAWCETT, F(RANK) DUBREZ

(1891-1968) UK writer active in various genres under his own name and several others from 1923; non-sf pseudonyms included Cass Borelli, Henri Dupres, Madame E. Farra, "GRIFF", Eugene Glen, Duke Linton, Coolidge McCann, Elmer Eliot Saks, Ben Sarto and Hank Spencer. Much of his output consisted of such thrillers as Miss Otis Comes to Piccadilly (1946), as by Ben Sarto, and its many quite popular successors. The Wonderful Isle of Ulla-Gapoo (1946) is a mild fantasy. FDF's only known sf novel proper is Hole in Heaven (1954), about a human body possessed by an other-dimensional ALIEN. Air-Gods' Parade (1935), as by Simpson Stokes, and The Dubious Adventures of Baron Munchhausen (1948) may be of some interest. [JC]

FAX COLLECTOR'S EDITIONS

US SMALL PRESS established by T.E. DIKTY with Darrell C. Richardson in 1972, and devoted to publishing material from and about PULP MAGAZINES. Its publications include several collections of obscure Robert E. HOWARD stories, two anthology series in facsimile under the titles Famous Fantastic Classics and Famous Pulp Classics, and The Weird Tales Story (1977), a large volume written and ed Robert E. WEINBERG. An associated and more prolific company, also founded by Dikty, is STARMONT HOUSE. [MJE]

FAYETTE, J.B.

JUPITER; OUTER PLANETS.

FEARING, KENNETH

(1902-1961) US poet and novelist, known mainly for mysteries like *The Big Clock* (1946), a tale whose atmosphere adumbrates the film-noir tonality of later US fantasy. Within a mystery frame, *The Loneliest Girl in the World* (1951) is borderline sf. KG's only sf novel proper is *Clark Gifford's Body* (1942), which gravely and literately portrays a future US civil war. [JC]

FEARN, JOHN (FRANCIS) RUSSELL

(1908-1960) UK writer; extremely prolific, he used many pseudonyms. During the 1930s he wrote for magazines, including the US PULP MAGAZINES, but during WWII he switched to books. He became a central figure in the post-WWII paperback boom, writing numerous Westerns, crime stories and probably some romances as well as his sf, most of which appeared under the names Vargo Statten and Volsted GRIDBAN (the latter pseudonym being taken over from E.C. TUBB). In the pulps he wrote many stories as Thornton Ayre and Polton Cross, and also used the names Geoffrey Armstrong, Dennis Clive, John Cotton and Ephriam Winiki; his sf books and crime stories with sf elements include items signed with the personal pseudonyms Spike Gordon, Conrad G. Holt, Laurence F. Rose, John Russell and Earl Titan, and the house names Astron DEL MARTIA, "GRIFF", Paul LORRAINE and Brian SHAW. JRF's first GENRE-SF work was the early SUPERMAN story *The Intelligence Gigantic* (1933 AMZ; 1943). It was followed by the extravagant *Liners of Time* (1935 AMZ; 1947) and its sequel "*Zagribud*" (1937 AMZ; cut vt *Science Metropolis* by Vargo Statten 1952); he subsequently wrote a good deal for ASTOUNDING SCIENCE-FICTION while it was edited by F. Orlin TREMAINE, contributing numerous "thought-variant" stories, some of which he later expanded into Vargo Statten novels, including *Nebula X* (1946 as "The Multillionth Chance" by JRF; rev 1950), *The Sun Makers* (1937 as "Metamorphosis" by JRF; rev 1950), *The Avenging Martian* (1938 as "Red Heritage" by JRF; rev 1951), *The Renegade Star* (1935 as "The Blue Infinity" by JRF; rev 1951), *The Inner Cosmos* (1937 as "Worlds Within" by JRF; rev 1952), *To the Ultimate* (1936 as "Mathematica" and "Mathematica Plus" by JRF; rev 1952) and *The Dust Destroyer* (1934 as "The Man who Stopped the Dust" by JRF; rev 1953). Four Thornton Ayre novelettes in FANTASTIC ADVENTURES featuring the superwoman - or Golden Amazon - Violet Ray were extensively revised into the novel *The Golden Amazon* (1939-43; 1944), which was reprinted in the *Toronto Star Weekly* to such acclaim that 23 sequels followed, the last appearing posthumously there in 1961. Those which have subsequently appeared in book form are: *The Golden Amazon Returns* (1945; 1949; vt *The Deathless Amazon* 1953 Canada), *The Golden Amazon's Triumph* (1946; 1953), *The Amazon's Diamond Quest* (1947 as "Diamond Quest"; 1953), *The Amazon Strikes Again* (1948; 1954), *Twin of the Amazon* (1948; 1954), *Conquest of the Amazon* (1949; 1973 chap) and *Lord of Atlantis* (1949; 1991 chap). Two other series are Edgar Rice BURROUGHS imitations: the Clayton Drew interplanetary romances *Emperor of Mars* (1950), *Warrior of Mars* (1950), *Red Men of Mars* (1950) and *Goddess of Mars* (1950); and the Anjani sequence of Tarzan imitations signed Earl Titan: *The Gold of Akada* (1951) and *Anjani, the Mighty* (1951). JFR also wrote the

book of the notable 1954 schlock-horror film *The CREATURE FROM THE BLACK LAGOON*, *The Creature from the Black Lagoon* * (1954) as Vargo Statten. Scion, publishers of Vargo Statten, created the *VARGO STATTEEN SCIENCE FICTION MAGAZINE*, although JRF did not become its editor immediately; it underwent several title changes in the course of its short life. JRF's writing was unpolished and his use of ideas imaginatively reckless, but his best work is vigorous and occasionally vivid. His works have sometimes proved popular in translation; he enjoyed something of a boom in Italy in the 1970s. [BS] Other works as JRF: *Slaves of Ijax* (1947 chap); *Operation Venus* (1950); *From Afar* (1982 chap); *No Grave Need I* (1984 chap); *The Slitherers* (1984 chap). As Hugo Blayn: *What Happened to Hammond?* (1951). As Dennis Clive: *Valley of Pretenders* (c1942 chap US); *The Voice Commands* (c1942 chap US). As Polton Cross: *Other Eyes Watching* (1946). As Astron del Martia (house name): *The Trembling World* (1949). As Spike Gordon: *Don't Touch Me* (1953). As Volsted Gridban: *The Dyno-Depressant* (1953); *Magnetic Brain* (1953); *Moons for Sale* (1953); *Scourge of the Atom* (1948 as "After the Atom" by JRF; rev 1953); the Herbert sequence, comprising *A Thing of the Past* (1953) and *The Genial Dinosaur* (1954); *Exit Life* (1941 as "The World in Wilderness" by Thornton Ayre; rev 1953); the Adam Quirke sequence, comprising *The Master Must Die* (1953) and *The Lonely Astronomer* (partly based on "Death at the Observatory" 1938 by JRF; 1954); *The Purple Wizard* (1953); *The Frozen Limit* (1954); *I Came - I Saw - I Wondered* (1954). As "Griff" (house name): *Liquid Death* (1953). As Conrad G. Holt: *Cosmic Exodus* (1953 chap). As Paul Lorraine (house name): *Dark Boundaries* (1953). As Laurence F. Rose: *The Hell-Fruit* (1953 chap). As John Russell: *Account Settled* (1949). As Brian Shaw (house name): *Z-Formations* (1953). As Vargo Statten: *Annihilation* (1950); *The Micro-Men* (1950); *Wanderer of Space* (1950); *2000 Years On* (1950); *Inferno!* (1950); *The Cosmic Flame* (1950); *Cataclysm* (1944 as "The Devouring Tide" by Polton Cross; rev 1951); *The Red Insects* (1951); *The New Satellite* (1951); *Deadline to Pluto* (1951); *The Petrified Planet* (1951); *Born of Luna* (1951); *The Devouring Fire* (1951); *The Catalyst* (1951); *The Space Warp* (1952); *The Eclipse Express* (1952); *The Time Bridge* (1942 as "Prisoner of Time" by Polton Cross; rev 1952); *The Man from Tomorrow* (1950 as "Stranger in our Midst" by JRF; rev 1952); *The G-Bomb* (1941 as "The Last Secret Weapon" by Polton Cross; rev 1952); *Laughter in Space* (1939 as "Laughter out of Space" by Dennis Clive; rev 1952); *Across the Ages* (1952 as "Glimpse" by JRF; 1952 chap); *The Last Martian* (1952 chap); *Worlds to Conquer* (1952 chap); *De-Creation* (1952 chap); *The Time Trap* (1952 chap); *Ultra Spectrum* (1953); *Black-Wing of Mars* (1953 as "Winged Pestilence" by JRF; 1953); *Man in Duplicate* (1953); *Zero Hour* (1952 as "Deadline" by JRF; 1953); *The Black Avengers* (1953); *Odyssey of Nine* (1953); *Pioneer 1990* (1940 as "He Conquered Venus" by JRF; rev 1953); *The Interloper* (1953); *Man of Two Worlds* (1953); *The Lie Destroyer* (1953); *Black Bargain* (1953); *The Grand Illusion* (1953); *Wealth of the Void* (1954); *A Time Appointed* (1954); *I Spy* (1954); *The Multi-Man* (1954); *1,000 Year Voyage* (1954); *Earth 2* (1955). About the author: *The Multi-Man* (1968 chap) by Philip HARBOTTLE. See also: *BOYS' PAPERS*; *CLONES*; *TIME TRAVEL*.

FEELEY, GREGORY

(1955-) US critic and writer whose essays and book reviews have appeared

throughout the 1980s in various journals from the Washington Post to FOUNDATION. Sometimes adversarial, unfailingly intelligent, they represent a cold-eyed view of a genre he loves by a critic immersed in its material. Although he began publishing sf with "The Light at the End of the Penumbra" in *Ascents of Wonder* (anth 1977) ed David GERROLD, GF did not become active as an author of fiction for about a decade. His first novel, *The Oxygen Barons* (1990), served therefore as a sort of debut, surprising some by turning out to be a HARD-SF tale of a terraformed Moon (TERRAFORMING). In what seems a perfectly standard fashion, colonists and a giant corporation are at loggerheads; it is only the labyrinth of the plot that exposes the novel as other than orthodox. [JC]

FEGHOOTS

Reginald BRETNOR; *The MAGAZINE OF FANTASY AND SCIENCE FICTION* .

FEINTUCH, DAVID

(? -) US writer whose Nick Seafort series, beginning with *Midshipman's Hope* (1994), depicts the life and adventures of a young cadet on a spaceship whose rituals are extremely like that of a planet-bound, even 19th century, navy: specifically the navy in which C.S. FORESTER's Horatio Hornblower serves. Three further volumes are expected. [JC]

FEKETE, GYULA

[r] HUNGARY.

FELDSTEIN, ALBERT B.

[r] EC COMICS.

FELICE, CYNTHIA (LINDGREN)

(1942-) US writer who began publishing sf with "Longshanks" for *Galileo 2* in 1976. Her first novel, *Godsfire* (1978), depicts an ALIEN planet inhabited by felines who dominate the local humans but who have never seen their sun because of the unending rain. Almost too well constructed - almost facile in its zestful plotting - the book demonstrated CF's technical skill, her romantic inclinations and a tendency to slough off hard solutions. Her next book, *The Sunbound* (1981), for instance, failed to produce a protagonist capable of hewing to CF's intricate plot demands without seeming an arbitrary creation, yet the family romance at the tale's heart required characters who could be intrinsically believed in. Of her later solo singletons, *Downtime* (1985) interestingly combined a longevity intrigue in a distant solar system, aliens, and romance, but *The Khan's Persuasion* (1991) once again demonstrated a gap between the quality of her sf perceptions and the easy flow of the plotty romance idiom through which she presents characters. CF's two collaborations with Connie WILLIS, *Water Witch* (1982) and *Light Raid* (1989), benefit from Willis's significantly harsher mind but are still somewhat heavily plotted. [JC]Other works: *Eclipses* (1983); *Double Nocturne* (1986); *Iceman* (1991). See also: WEAPONS.

FEMINISM

Although a genre defined and long dominated by men, sf has a particular affinity with feminism. This became clear in the 1970s with the publication of such challenging books as *THE FEMALE MAN* (1975) by Joanna

RUSS, WALK TO THE END OF THE WORLD (1974) and Motherlines (1978) by Suzy McKee CHARNAS and WOMAN ON THE EDGE OF TIME (1976) by Marge PIERCY. One of the most obvious attractions of sf to women writers - feminist or not - is the possibilities it offers for the creation of a female HERO. The demands of realism in the contemporary or historical novel set limits which do not bind the universes available to sf. Although the history of sf reveals few heroic, realistic, or even original images of women (WOMEN AS PORTRAYED IN SCIENCE FICTION), the genre had a potential recognized by the women writers drawn to it in the 1960s and 1970s. The desire to write (or read) about women who wield swords, pilot spaceships or simply lead lives from which the threat of male violence is absent might be seen as escapist, but such imaginings can also be read as part of a political agenda. As Pamela SARGENT wrote in a letter to *Frontiers: A Journal of Women Studies*, Fall 1977, "Science-fiction writers are limited only by human potential, not human actualities. Sf can serve to show women, and men, how large that potential can be." And Suzy McKee Charnas remarked in the same journal: "Women's realities are still highly circumscribed by various forms of oppression . . . One place for us to imagine new strengths, goals, and ways of being human is in the world of fantasy, where we can work around our present limitations in ways that may help to point us . . . out of and beyond those limitations." Despite the reputation sf has as a mind-expanding, possibly subversive, always questioning form, these strengths were seldom brought to bear on the subject of male/female relationships, sexual roles or the idea of "woman's place" prior to the rise of the Women's Liberation Movement. As Kingsley AMIS pointed out in *New Maps of Hell* (1960 US), "Though it may go against the grain to admit it, science-fiction writers are evidently satisfied with the sexual status quo." He was referring, of course, to male sf writers. With a very few exceptions (e.g., Philip WYLIE's *The Disappearance* [1951], Theodore STURGEON's *Venus Plus X* [1960] and John WYNDHAM's "Consider Her Ways" [1956]), the men who tried to imagine alternatives to patriarchy did so only to "prove" how nasty and impossible life would be without the "natural" dominance of woman by man. (For more novels featuring women-ruled societies SOCIOLOGY.) One of the major challenges of modern feminism has been to the idea that gender roles and relations are in some way permanent, arising from a natural and immutable law. In *The Dialectic of Sex: The Case for Feminist Revolution* (1970) Shulamith Firestone located the site of women's oppression in their role as child-bearers and -rearers, and argued that feminist revolution would not be possible until women were freed not only from the sole responsibility for child-rearing (which should be taken by society as a whole) but also, by technology, from the tyranny of reproduction. Although the idea that women might have to give up the physical act of child-bearing in order to achieve a truly egalitarian society has never achieved wide popularity, the force of Firestone's argument is powerfully illustrated in Marge Piercy's *WOMAN ON THE EDGE OF TIME*, and its influence can be traced also in the writings of Charnas, Russ and Sally Miller GEARHART. Not all work by women writers is feminist - not even when it concentrates on the "woman question" - and there are different interpretations of what comprises feminist sf. The only specifically labelled feminist sf list from any publisher is the one established by The Women's Press in the UK under the direction of Sarah

LEFANU in 1985. Anything published by The Women's Press, sf included, is considered, by definition, feminist, and is often ghettoized in bookshops. Yet many of the books on this list were first published in the USA and even in the UK by nonfeminist houses either as straightforward sf, as for example *A Door into Ocean* (1986) by Joan SLONCZEWSKI, or as mainstream literature, like *The Book of the Night* (1984) by Rhoda Lerman (1936-). The Women's Press list also includes books by writers who had not previously been seen as, and would not define themselves as, feminist writers, such as Josephine SAXTON and Tanith LEE. Diane Martin, an editor of the fanzine *Aurora* (where sf stands for "speculative feminism" - JANUS/AURORA), in 1990 proposed, with tongue slightly in cheek, "The Martin Scale" as a tool for measuring the feminist content of a work of sf or fantasy:

Level One: Doubts about patriarchy/women escaping victimization (e.g., most Andre NORTON novels)

Level Two: Men and women as equals (e.g., *DREAMSNAKE* [1978] by Vonda MCINTYRE)

Level Three: Women are better than men on some levels (e.g., *FrostFlower and Thorn* [1980] by Phyllis Ann Karr)

Level Four: Women are uniformly better than men (e.g., Jessica Amanda Salmonson's *Tomoe Gozen* saga)

Level Five: Can't live with 'em/can't live without 'em (e.g., "The Women Men Don't See" [1973] by James TIPTREE Jr)

Level Six: Men are tragically flawed and pitiable (e.g., *Native Tongue* [1984] by Suzette Haden ELGIN)

Level Seven: Men as slaves (e.g., B-movies like *Amazon Women on the Moon* [1987]; Joe DANTE)

Level Eight: Separatism is necessary for survival (e.g., *THE GATE TO WOMEN'S COUNTRY* [1988] by Sheri S. TEPPER)

Level Nine: Positive depiction of lesbian/feminist utopias (e.g., *The Shore of Women* [1986] by Pamela Sargent)

Level Ten: Parthenogenesis and/or scenes of actual castration (e.g., *Motherlines* [1978] by Suzy McKee Charnas)

In what is probably the most thoughtful and accessible survey of the topic, *In the Chinks of the World Machine: Feminism and Science Fiction* (1988; vt *Feminism and Science Fiction* 1989 US) by Sarah Lefanu, the author makes a distinction between feminist sf and "feminized sf". The latter, she argues, while it challenges established sexism by valuing women and feminine values over men and masculinity, and has been an important influence on the development of sf as a whole, does not dispute the man/woman paradigm or question the construction of gender as more radical feminist writings do. Feminist ideas are able to flourish within sf despite reader resistance because, she claims, sf at its best "deploys a sceptical rationalism as its subtext" and "feminism is based upon a profound scepticism: of the 'naturalness' of the patriarchal world and the belief in male superiority on which it is founded". A forerunner to modern feminist sf can be seen in the spate of utopian stories written by women as part of the movement for women's rights which began in the 19th century. Unlike the utopias of male writers, these fictions always question the sexual status quo and foreground the position of women, sometimes - as in Mary E. Bradley LANE's *Mizora* (1890) and Charlotte Perkins GILMAN's *Herland* (1914; 1979) - by depicting an all-women society and showing its superiority to societies in which men rule. The utopian tradition in women's writing was forgotten in subsequent decades until its rediscovery by feminist scholars in the 1970s, and there is some worry that, however well established women writers may seem now, the same fate may befall feminist sf. Russ has described many of the ways in which women's work is discounted in *How to Suppress Women's Writing* (1983); and,

in "An Open Letter to Joanna Russ" in *Aurora* 25 (1987), Jeanne Gomoll expressed her feeling that her own experiences of FANDOM and sf in the 1970s were being rewritten by men choosing to ignore the impact of feminism and characterize a whole decade as "boring" because their personal interests were not always given priority. To many, women as well as men, the revolution is over, equality has been won, and we are living in a post-feminist age. In addition, the label "feminist" has never been either safe or comfortable; while it had in the 1970s - particularly in the USA - a certain novelty value, by the mid-1980s to be called a feminist writer was to be announced as writing for a limited audience of like-minded readers. On the positive side, the impact of feminism can be seen even in much nonfeminist sf. Men as well as women writers are more interested in creating believable female characters; and, as a ground for "thought experiments" relating to gender, social relations and new ways of being human - topics central to feminism - sf is extremely fertile.

FENDALL, PERCY

(? -?) UK author known solely for his sf novel *Lady Ermytrude and the Plumber: A Love Tale of MCMXX* (1912). After the passage of the Great Compulsory Work Act and the suppression of the House of Lords, everybody must work to live. [JC]

FENN, LIONEL

Charles L. GRANT.

FERGUSON, BRAD

Working name of US writer Bradley Michael Ferguson (1953-). His two Star Trek ties are *Crisis on Centaurus* * (1986) and *A Flag Full of Stars* * (1991). He has also written one independent title, *The World Next Door* (1990), in which a post- HOLOCAUST Earth is set as an ALTERNATE WORLD to our own. [JC]

FERGUSON, HELEN

Anna KAVAN.

FERGUSON, NEIL

(1947-) UK writer who began publishing sf with "The Monroe Doctrine" for *Interzone* in 1983, and through the 1980s released several sharply conceived tales, revealing more than once a deep interest in US life. His first book, *Bars of America* (coll 1986), not sf, is a collection of tales and musings set in the heart of that country. His first sf novel, *Putting Out* (1988), presents a NEAR-FUTURE US political race in terms of the semiotics of dressing, with all the sensitivity to signs so often found in exiles, voluntary or forced. *Double Helix Fall* (1990), also linguistically inventive and darkly obsessed with the USA's visions of its own demise, presents - in the guise of a homage to the world and style of Philip K.

DICK - an original rendering of that sense of demise, for in the USA of this novel it has become a matter of political and religious orthodoxy that to be born is to die, and that the world into which one dies is a stratified Hell. A ROBOT detective helps, in the nick of time, to loosen the death-grip. [JC]

FERMAN, EDWARD L(EWIS)

(1937-) US editor, son of Joseph W. FERMAN; ELF formally took over the editorship of The MAGAZINE OF FANTASY AND SCIENCE FICTION in Jan 1966, a post in which he remained until June 1991, having previously been managing editor since Apr 1962 under Avram DAVIDSON and then his father. Under ELF's editorship FSF generally prospered: for many years it was one of only two sf magazines - ASF being the other, with both now being joined by ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE - to have maintained a regular schedule, and its circulation has remained fairly stable. FSF won the HUGO for Best Magazine five years in succession (1969-72) under ELF and, after that category was dropped, ELF won the replacement Hugo for Best Editor in 1981, 1982 and 1983. It would be fair to say that, although the magazine has lost much of its distinctive flavour of the 1950s, larger market forces and changes in the nature of the genre have had much to do with that diminution of specialness. In 1991 ELF appointed Kristine Kathryn RUSCH as editor, retaining the post of publisher. During his long stay at the helm, ELF edited various anthologies drawn from the magazine, including several volumes of the Best from Fantasy and Science Fiction series (see listing below). There were also four anniversary volumes: Twenty Years of the Magazine of Fantasy and Science Fiction (anth 1970) with Robert P. MILLS, The Best from Fantasy and Science Fiction: A Special 25th Anniversary Anthology (anth 1974), The Magazine of Fantasy and Science Fiction: A 30-Year Retrospective (anth 1980) ,The Best from Fantasy ?

The Best from Fantasy ?

(anth 1994), the last with Rusch. With Barry N. MALZBERG ELF collaborated on a notable original anthology, Final Stage (anth 1974; rev 1975), a reprint collection, Arena: Sports SF (anth 1976) and Graven Images: Three Original Novellas of Science Fiction (anth 1977). [MJE/JC]Other works: Once and Future Tales from the Magazine of Fantasy and Science Fiction (anth 1968); The Magazine of Fantasy and Science Fiction, April 1965 (anth 1981) with Martin H. GREENBERG; The Best Fantasy Stories from the Magazine of Fantasy ? The Best Horror Stories from the Magazine of Fantasy and Science Fiction (anth 1988; in 2 vols US 1989; vt The Best of Modern Horror: Twenty-Four Tales from the Magazine of Fantasy and Science Fiction 1989 UK) ed with Anne Devereaux Jordan. The Best from Fantasy and Science Fiction: The Best from Fantasy and Science Fiction: 15th Series (anth 1966); 16th Series (anth 1967); 17th Series (anth 1968); 18th Series (anth 1969); 19th Series (anth 1971); 20th Series (anth 1973); 22nd Series (anth 1977); 23th Series (anth 1980); 24th Series (anth 1982).

FERMAN, JOSEPH W(OLFE)

(1906-1974) US publisher and editor, born in Lithuania. After a long career with the magazine American Mercury, JWF became involved with The MAGAZINE OF FANTASY AND SCIENCE FICTION from its inception, was listed Aug

1954-Oct 1970 as Publisher and Dec 1964-Dec 1965 as Editor, a position to which his son, Edward L. FERMAN, succeeded him. He also founded VENTURE SCIENCE FICTION as a companion to FSF; it ran 1957-8 under the editorship of Robert P. MILLS, with a second series being published 1969-70 under the editorship of Edward L. Ferman. JWF edited an anthology of stories from Venture: No Limits (anth 1964). [MJE/PN]

FERRING, DAVID
David S. GARNETT.

FEZANDIE, (ERNEST) CLEMENT
(1865-1959) US writer and playwright based initially in New York, though he lived and travelled in the Middle East in later life, and died in Belgium. His sf novel, Through the Earth (1898), is about a transportation-tube through the planet from New York to Australia, which gives its first passenger an experience in free fall but suffers from melting at the Earth's core and must be abandoned. The sequel, A Trip to Venus, still awaits publication. It is likely that CF's early work, with its didactic bias, was appreciated by Hugo GERNSBACK, and his Dr Hackensaw series (EDISONADE) appeared first in Gernsback's SCIENCE AND INVENTION in 43 instalments, from "The Secret of Artificial Respiration" (1921) to the novel "A Journey to the Center of the Earth" (1925), with two concluding stories published the next year in AMZ. [JC]See also: APES AND CAVEMEN (IN THE HUMAN WORLD); HOLLOW EARTH; MATTER TRANSMISSION; SERIES.

FIALKO, NATHAN
(1881-?) Soviet writer, resident in the USA, who translated his own uneven sf novel into English as The New City: A Story of the Future (1925; trans and rev 1937). It depicts first Soviet then US society with strongly DYSTOPIAN views of both. [JC]

FICHMAN, FRED(ERICK)
(? -) US writer whose SETI (1990) pits its teenaged hero against both US and Soviet governments in the race to make First Contact. He does surprisingly well. [JC]See also: ALIENS.

FICKS, R. SNOWDEN
[r] ROBERT HALE LIMITED.

FICTIONEERS, INC.
ASTONISHING STORIES; SUPER SCIENCE STORIES.

FIEDLER, LESLIE A(ARON)
(1917-) US critic whose piercing and mythopoeic views on the relationship between US culture and literature were first expressed in Love and Death in the American Novel (1960), where he describes sf as a "typically Anglo-Saxon" form, although later, in Waiting for the End (coll 1964), he states that "Even in its particulars, the universe of science fiction is Jewish". He has long espoused the work of such sf writers as Samuel R. DELANY. In Dreams Awake (anth 1975) assembles material of interest, and Olaf Stapledon: A Man Divided (1983) is an invigorating if sometimes eccentric examination of STAPLEDON. His fiction, like The Messengers will Come no More (1974), tends to FABULATION. [JC]See also: DEFINITIONS OF SF.

FIELD, GANS T.

Manly Wade WELLMAN.

FIEND WITHOUT A FACE

Film (1957). Amalgamated/MGM. Dir Arthur Crabtree, starring Marshall Thompson, Terence Kilburn, Kim Parker, Peter Madden, Kynaston Reeves. Screenplay Herbert J. Leder, based on "The Thought-Monster" (Weird Tales 1930) by Amelia Reynolds Long. 74 mins. B/w. This is one of the two sf/HORROR films made by Amalgamated in the UK (the other was FIRST MAN INTO SPACE [1958], also starring Marshall Thompson) but set in North America. FWF is much more interesting than the other, despite the absurdity of its basic premise. An elderly SCIENTIST (Reeves) accidentally creates, with his new thought-wave amplifier, a number of creatures consisting of pure energy. Invisible at first, they commit a series of murders by sucking out their victim's brains through holes made at the base of the neck; but in the final sequences, when the creatures have trapped the protagonists in a remote house, they gradually materialize as disembodied brains with trailing spinal cords and twitching tendrils. The lunatic climax has a quality of genuine nightmare, with the brains - animated in imaginative stop-motion photography by Florenz von Nordhoff and K.L. Ruppel - leaping and plopping about like demonic frogs. This is the ultimate in anti-intellectual movies. [JB/PN] See also: MONSTER MOVIES.

FIGGIS, N.P.

(1939-) Irish archaeologist and writer whose fourth novel, The Fourth Mode (1989), sensitively depicts a small town and the natural life surrounding it as a nuclear holocaust first threatens, then arrives. [JC]

FILE 770

US FANZINE of the 1980s, ed from Los Angeles by Mike Glycer, bimonthly for most of its life. A newsletter covering FANDOM, with emphasis on North America, it was begun when the previous US "newszine" (fanzine devoted to items of news), Karass, ed Linda Bushyager, folded. The focus of F770, much of whose contents are written in Glycer's no-nonsense style, is convention news and reports. It won HUGOS for Best Fanzine in 1984, 1985 and 1989, and Glycer won the Hugo for Best Fan Writer in 1984, 1986 and 1988. [RH]

FILM

CINEMA.

FINAL COUNTDOWN, THE

Film (1980). Bryna Company/United Artists. Dir Don Taylor, starring Kirk Douglas, Martin Sheen, Katharine Ross, James Farentino. Screenplay David Ambrose, Gerry DAVIS, Thomas Hunter, Peter Powell, based on a story by Hunter, Powell, Ambrose. 105 mins. Colour. An aircraft carrier on manoeuvres off Hawaii in 1980 is caught in a strange storm which turns out to be a time-warp. The vessel is deposited in the same spot in 1941, just before the attack on Pearl Harbor. Action is eschewed for interminable ethical debate about altering history, as the captain (Douglas) agonizes whether or not to shoot down the Japanese planes which will shortly bomb the US naval base; a second time-warp renders decision unnecessary. The

film is wholly pointless, ill acted, and a complete waste of a perfectly good ship, the Nimitz, which the US Navy had allowed the production company (Kirk Douglas and family) to use. [PN]

FINAL PROGRAMME, THE

(vt The Last Days of Man on Earth) Film (1973). Goodtimes Enterprises/Gladiole Films/MGM-EMI. Dir Robert Fuest, starring Jon Finch, Jenny Runacre, Sterling Hayden, Harry Andrews, Hugh Griffith, Julie Ege, Patrick Magee, Derrick O'Connor. Screenplay Fuest, based on The Final Programme (1968) by Michael MOORCOCK. 89 mins. Colour. In this first film to feature Moorcock's polymorph protagonist, Jerry Cornelius, style triumphs over content. Originally a set-designer, Fuest is best known for The Abominable Dr Phibes (1971), an extravagantly theatrical horror-film spoof, and for the many episodes that he directed of The AVENGERS. TFP looks impressive, but not much of Moorcock's creation remains. Cornelius's father has died, leaving a hidden microfilm on which is the final (computer) programme of the title. Those involved in the hunt for the film include Jerry (Finch), his evil brother (O'Connor), and the awesome Miss Brunner (Runacre), who has a tendency to consume her lovers, bones and all. The Moorcock original was not as strong as the other three books of his Jerry Cornelius tetralogy, but none the less was sophisticated in its ironies, which Fuest here reduces (literally in one case) to a series of knowing winks. When Moorcock defines his characters in terms of their personal style, this is often a form of criticism; for Fuest, by contrast, strong style is apparently to be admired. The apotheosis of the book is rendered farcical in the film, which substitutes a grinning Neanderthal for Moorcock's original hermaphroditic MESSIAH. [PN/JB]

FINCH, SHEILA (ROSEMARY)

(1935-) UK-born writer, in the USA from 1962 or earlier, who began publishing sf with "The Confession of Melakos" for Sou-wester in 1977. Her first novel, Infinity's Web (1985), rather confusedly describes the lives of five versions of one protagonist who live in various ALTERNATE WORLDS, and who gradually gain a sense of the mutual web they inhabit. Though far more devoted to generic pleasures than Joanna RUSS in THE FEMALE MAN (1975), whose structure is superficially similar, the novel still generates a clear and telling FEMINIST perspective. Her professional training in linguistics permeates her second novel, Triad (1986), another very full story, involving a woman-run Earth government, a female mission to a planet where several ALIEN races seem to congregate, and pirates. She is now, perhaps unfairly, best known for the Shaper Exile sequence - The Garden of the Shaped (1987), Shaper's Legacy (1989) and Shaping the Dawn (1989) - as the first volume at least of this PLANETARY ROMANCE is awkwardly written, dumping three separate genetic versions of human stock upon a new planet, and sorting them out in terms of an unconvincing biological determinism. The second volume is more toughly argued, but the third moves too easily into the plot arabesques common to this subgenre. SF is still (1992) in the wings, but gives the impression she is capable of stepping into full view at any time. [JC] See also: GENETIC ENGINEERING.

FIN DU MONDE, LA

(vt The End of the World) Film (1931). L'Ecran d'Art. Dir Abel Gance,

starring Gance, Victor Francen, Colette Darfeuil, Sylvie Grenade, Jeanne Brindeau, Samson Fainsilber. Screenplay Gance, suggested by a story by Camille FLAMMARION. 105 mins, cut to 91 mins, cut to 54 mins. B/w. This tells of a comet's approach to Earth and of the upheavals (natural and cultural) that ensue. There are orgies, and the rise of a totalitarian leader (Francen), obviously approved by the director, who would soon prove sympathetic to fascism. As with most of Gance's films, which were usually independently produced, it took many years to complete. LFDN was made as a silent film, but sound effects were later added by the producers, who sacked Gance and cut the film's length. (Gance was still working on one version in 1949.) A shortened 54min English version, repudiated by Gance, was released in 1934; it was supervised by V. Ivanoff and the script was adapted by H.S. Kraft. The film is extravagant, and fits one description of Gance's work as hovering "between the ludicrous and the majestic"; a more unkind critic might see it as somewhere between the grandiose and the banal. [PN/JB]

FINE, STEPHEN

(1949-) US author whose first novel, *Molly Dear: The Autobiography of an Android, or How I Came to my Senses, Was Repaired, Escaped my Master, and Was Educated in the Ways of the World* (1988), rewrites Daniel DEFOE's *Moll Flanders* (1722) as the memoirs of a 21st-century ANDROID to satirical effect. Her innocence - assisted by memory wipes - resembles that of VOLTAIRE's *Candide*, or almost any of John T. SLADEK's child ROBOTS in a cruel world. Some of the points about Molly's legal enslavement are sharply made. [JC]

FINE PRESSES

SMALL PRESSES AND LIMITED EDITIONS.

FINLAND

Sf in Finland, now over a century old, has been diverse, with few clear-cut lines of development. The earliest story was the serial "Muistelmia matkaltani Ruskealan pappilaan uuden vuoden aikoina vuonna 1983" ["Memoirs of My Trip to the Vicarage of Ruskeala around New Year 1983"] (1883, in the newspaper *Aura*) by Evald Ferdinand Jahnsson. Apart from a few children's stories, early Finnish sf took the form of future, sometimes socialist, UTOPIAS. The Moon was reached by an icy ball in "Matka kuuhun" ["Voyage to the Moon"] (1887) by Tyko Hagman, but the first true sf was the novella "Tahtien tarhoissa" ["Among the Stars"] (1912) by Arvid Lydecken, which was about Helsinki in AD2140, a Martian attack, a voyage to Mars and the beginning of peaceful coexistence on Earth after Mars has been destroyed by impacting asteroids. Fear of Bolshevism during WWI produced several imaginary- WAR novels, the first being the excellent *Ylös helvetistä* ["Up from Hell"] (1917) by Konrad Lehtimäki. In *Suur-Isänmaa* ["The Great Fatherland"] (1918) by Kapteeni Ter-s, Finland defeats Russia, forces the UK's surrender and becomes a superpower. *Kohtalon kolmas hetki* ["Fate's Third Moment"] (1926) by Aarno Karimo tells about a war in 1967-8 between Finland and the Soviet Union, which nation (in a defence union with the Mongols) is totally devastated by strange Finnish inventions. A typical hero of the period would be a scientist-inventor. The most curious of these "engineer novels" is

Neljannen ulottuvuuden mies ["Man of the Fourth Dimension"] (1919) by H.R. Halli, in which a new chemical substance enables its users to see and walk through solid objects. The best book of this period, Viimeisella hetkellä ["At the Last Moment"] (1922), also by Halli, creates a daring time perspective into Earth's distant future. There were fewer sf books in the 1930s. Among the more notable are The Diamondking of Sahara (1935), written in English by Sigurd Wettenhovi-Aspa, and Undred från krateron ["The Wonder of Crater Island"] (1939), written in Swedish by Ole Eklund. There were 30 sf books published in the 1940s. The most popular were the Atorox series by Outsider (pseudonym of Aarne Haapakoski) whose eponymous character was a ROBOT: Atorox, ihmisten valtias ["Atorox, Lord of Humans"] (1947), Atorox kuussa ["Atorox on the Moon"] (1947), Atorox Marsissa ["Atorox on Mars"] (1947), Atorox Venuksessa ["Atorox on Venus"] (1947), Atorox Merkuriuksessa ["Atorox on Mercury"] (1948) and Atoroxin paluu v. 2948 ["The Return of Atorox in AD2948"] (1948). The most remarkable book of the period, however, was Volter Kilpi's Gulliverin matka Fantomimian mantereelle ["Gulliver's Travel to the Continent of Fantomimia"] (1944), where Gulliver leaves the 18th century for the 20th. The term "science fiction" itself came to Finland in 1953 with translations of US books, and the 1950s saw growing enthusiasm for sf; the publisher Otava held a competition, "Adventures in the World of Technology", whose winner was Armas J. Pulla with Lentavalautanen sieppasi pojat ["The Boys Were Snatched by a Flying Saucer"] (1954), in which antlike Martians intend to invade Earth. Other books of the decade were juvenile adventures. Sf writers of the 1950s, each with several books, include Osmo Ilmari and Antero Harju, and Ralf Parland (who wrote in Swedish). The 1960s were poor years for Finnish sf. The only notable novel of the period was Paikka nimeltä Plaston ["A Place Called Plaston"] (1968) by Erkki Ahonen, set on a planet whose devolved inhabitants live in herds, controlled by COMPUTERS. Ahonen's subsequent books, Tietokonelapsi ["The Computer Child"] (1972), about a human embryo's excised brain interfaced with a computer, and Syvä matka ["Deep Voyage"] (1976), about the evolution of consciousness on another planet, are Finland's most important sf novels. Further books worth mentioning from the 1970s are: Viimeinen uutinen ["The Last News"] (1970) by Risto Kavanne, about NEAR-FUTURE power politics; Rosterna i den sena timmen ["Voices in the Late Hours"] (1971) by Bo Carpelan, about the feelings of people under the threat of nuclear war; and Aurinkotuuli ["Wind from the Sun"] (1975) by Kullervo Kukkasjärvi (1938-). The first Finnish sf magazine, Spin, began as a FANZINE in 1977. It was followed by Aikakone ["Time Machine"] (1981), Portti ["The Gate"] (1982), Tahtivaeltaja ["Star Wanderer"] (1982) and Ikaros (1986). Besides translations, these magazines publish short fiction by Finnish writers, who before had had to be content with occasional publication in mainstream periodicals. Aikakone has grown to the point that it singlehandedly supports its own fandom and sf milieu, with new young authors appearing. Of these Portti is the largest, followed by Tahtivaeltaja and then by Aikakone. Recent Finnish sf is represented by Auruksen tapaus ["The Case of Aurus"] (1980) by Jukka Pakkanen, a vision of the future; Amos ja saarelaiset ["Amos and the Island People"] (1987) by the well known MAINSTREAM writer Hannu Salama, telling in a stylistically compact way of the world after a nuclear WAR; Katajanukke ["The Juniper Doll"] (1988), a

first novel by Pekka Virtanen; and *Messias* ["Messiah"] (1989) by Kari Nenonen, the story of Christ's cloning from the Shroud of Turin and of the consequences. The anthologies *Jainen vaeltaja* ["The Ice Wanderer"] (anth 1986), *Atoroxin perilliset* ["The Heirs of Atorox"] (anth 1988) and *Tahtipuu* ["Startree"] (anth 1990) contain mainly short stories by new Finnish writers - among the best of whom are Johanna Sinisalo, Ari Tervonen and Eeva-Liisa Tenhunen - selected from magazines and writing competitions. The annual Finnish award for best short story is the Atorox . AWARD, whose winners up to 1993 included four wins by Johanna Sinisalo. Finnish FANDOM is quite active; there have been four national conventions, known as "Finncons", all in Helsinki, held in 1986, 1989, 1991 and 1993. Tales from Finnish mythology, as collected from legends and ballads to form the epic poem *Kalevala* from 1828 to 1849, have not only nourished Finnish writers - as in Pekka Virtanen's *Kanavat* ["Canals"] (1985), Veikko Rekunen's *Viimeinen laulaja* ["The Last Singer"] (1985) and Ernst Lampen's *Taivaallisia tarinoita* ["Heavenly Stories"] (coll 1918) - but have also influenced the works of writers abroad, as for example Emil PETAJA's four-novel *Kalevala* sequence - *Saga of Lost Earths* (1966), *The Star Mill* (1966), *The Stolen Sun* (1967) and *Tramontane* (1967) - as well as his *The Time Twister* (1968) and, by L. Sprague DE CAMP and Fletcher PRATT, *Wall of Serpents* (1953-4; 1960). [JI]See also: SCANDINAVIA.

FINLAY, VIRGIL (WARDEN)

(1914-1971) US illustrator. VF worked in both colour and black-and-white, but is best known for the latter, where his unique, painstaking stippling gained him fame although, because of the slow process involved, not fortune. Nonetheless he was prolific. His earliest work was an interior illustration for *Weird Tales* in 1935. Though it was in black-and-white interior work that he excelled - several thousand pieces - he also painted many covers, including 16 for *Weird Tales* and 24 for *Famous Fantastic Mysteries*. His work appeared also in *A. Merritt's Fantasy Magazine*, *Fantastic Novels*, *Fantastic Story Quarterly* and about 27 other sf/fantasy magazines. He often added sparkling bubbles to his illustrations, partly as a decorative device and partly to modestly conceal parts of naked women. He was stronger in fantasy than sf, excelling (it was a common paradox) in the two extremes of the glamorous and the macabre, both meticulously executed. His early work was more abstractly stylized than the later, and suggested a toughness which later became smoothed under an expert commercial veneer. Possibly the greatest craftsman in the history of sf ILLUSTRATION, VF revolutionized its quality. The HUGO system arrived a little late for VF; though he was nominated 7 times, he won only once, in the very first year, 1953 - the only award ever given for Best Interior Illustration. He had only small success doing book covers, mostly 1949-58, which his style did not really suit. Sadly, the collapse in SF-MAGAZINE publishing in the mid-1950s - with the surviving magazines being DIGESTS rather than PULP MAGAZINES and so having fewer illustrations - forced VF away from sf as his main market, and through the late 1950s and the 1960s he worked largely on astrological illustrations. Many portfolios and books of his work have been published, the first being *A Portfolio of Illustrations by Virgil Finlay* (coll 1941) published by *Famous Fantastic Mysteries*. Books include *Virgil Finlay* (1971) ed Donald M. GRANT, and *The*

Book of Virgil Finlay (1975) and Virgil Finlay Remembered (1981) ed Gerry de la Ree (1924 -1993), these latter being 2 out of 12 books of and about Finlay's art ed de la Ree. [JG/PN]See also: COMICS; FANTASY; SEX; SPACESHIPS.

FINN, RALPH L(ESLIE)

(1912-) UK novelist and journalist who published widely. Of some sf interest are three novels based on the time theories of J.W. DUNNE: The Lunatic, the Lover, and the Poet (1948), Twenty-Seven Stairs (1949) and Time Marches Sideways (1950), the latter a love story set in London. Captive on the Flying Saucers (c1950) and Freaks against Supermen (c1951), both conventional sf stories, gain some interest from their mild erotic content. [JC]See also: TIME TRAVEL.

FINNEY, CHARLES G(RANDISON)

(1905-1984) US newspaperman and writer, based in Arizona, who spent the years 1927-9 with the US infantry in Tientsin, China; an oriental influence pervades most of his work. His novels and stories, though FANTASY rather than sf, have been influential throughout the field, especially his famous The Circus of Dr Lao (1935), filmed insensitively as The Seven Faces of Dr Lao (1963). CGF's work was a strong influence on Ray BRADBURY in particular, as the latter's anthology, The Circus of Dr Lao and Other Improbable Stories (anth 1956), demonstrates. The novel depicts the effect upon a small Arizona town of Dr Lao's circus, which is full of mythical beasts and demigods, all of whom actually live within his tents: they are simultaneously pathetic and awe-inspiring, and the townspeople soon find themselves acquiring unwanted self-knowledge as they confront the caged GODS. The erotic intensity of these confrontations is remarkable. The Magician out of Manchuria (1976 UK) - which first appeared under that title in The Unholy City (omni 1968) along with a revised version of The Unholy City (1937) - is set in China, and agreeably lightens the message of Lao. The Unholy City itself is a somewhat unwieldy allegory. The Ghosts of Manacle (coll 1964) assembles much of CGF's short fiction. [JC]Other works: Past the End of the Pavement (1939), associational. See also: MYTHOLOGY.

FINNEY, JACK

Working name of US author Walter Braden Finney (1911-), whose career began when he was 35; he published his first work in the genre, "Such Interesting Neighbors" for COLLIER'S WEEKLY, in 1951. Although he is as well known for sf as for anything else, he did not specialize in the field, adapting his highly professional skills to mysteries and general fiction as well. Stories from his first years as a writer of sf can be found in The Third Level (coll 1957; vt The Clock of Time 1958 UK) and later ones in I Love Galesburg in the Springtime: Fantasy and Time Stories (coll 1963) - both assembled as About Time: Twelve Stories (omni 1986) - and Forgotten News: The Crime of the Century and Other Lost Stories (coll 1983). Many are evocative tales of escape from an ugly present into a tranquil past, or into a PARALLEL WORLD, or wistful variants of the theme when the escape fails. His best-known work is The Body Snatchers (1955; vt Invasion of the Body Snatchers 1973; rev 1978), twice filmed as INVASION OF THE BODY SNATCHERS: in 1956 by Don Siegel and in 1978 by Philip

Kaufman. The book - perhaps less plausibly than the film versions-horrifyingly depicts the **INVASION** of a small town by interstellar spores that duplicate human beings, reducing them to dust in the process. The menacing spore-people who remain symbolize, it has been argued, the loss of freedom in a 1950s USA obsessed by the problems of "conformism". JF's further books were smoothly told, more involving, perhaps less pertinent. The Woodrow Wilson Dime (1960 Saturday Evening Post; exp 1968) is a **PARALLEL-WORLDS** novel. Time and Again (1970) sets a time traveller in the New York of 1882, which is meticulously evoked. Marion's Wall (1973) movingly displaces the ghost of a 1926 film star into the present day. Generally, in a JF story, sf or fantasy devices open the door into new worlds and are then forgotten. The worlds thus made available are, all the same, engrossing. [JC]Other works: Both The Woodrow Wilson Dime and Marion's Wall appear with The Night People (1977) in 3 by Finney (omni 1987).See also: **TIME TRAVEL**; **UTOPIAS**.

FIREBALL XL5

UK tv series (1962-3). AP Films for ATV/ITC. Created by Gerry and Sylvia **ANDERSON**; prod Gerry Anderson. Dirs included Alan Pattillo, John Kelly, Bill Harris. Writers included the Andersons, Alan Fennell, Anthony Marriott, Dennis Spooner. 1 full season and 1 part season. 39 25min episodes. B/w.This was the second of the Andersons' "SuperMarionation" animated-puppet sf series for children, the first being **SUPERCAR** and the third being **STINGRAY**; it was the last made in black-and-white and the first to be networked in full in the USA (on NBC). Steve Zodiac is a space pilot, part of World Space Fleet (based in the Pacific Ocean); his spacecraft **XL5** patrols other star systems. This is a true **SPACE OPERA**, in its way a predecessor of **STAR TREK**. Sidekicks include Venus, a glamorous blonde space doctor, Professor Mat Matic, a Genius, and Robert the Robot. Stories involved, inter alia, space pirates, a glass-surfaced planet and Ice Men. Planetary transport was by jetmobile. Derek Meddings's special effects, mostly achieved through use of clever models, are good. [PN]

FIREFOX

Film (1982). Warner Bros. Dir Clint Eastwood, starring Eastwood, Freddie Jones, Nigel Hawthorne, Warren Clarke. Screenplay Alex Lasker, Wendell Wellman, based on Firefox (1977) by Craig **THOMAS**. 136 mins. Colour.The sf aspect of the film is a new Russian fighter, the **MIG 31** or "Firefox", which can fly at Mach-5 and operates through electronic translation of the pilot's brain patterns (thought control). Eastwood is the US pilot smuggled into the USSR to steal it and fly it out. The movie is split in two, the difficult voyage in disguise to the Soviet air base being tense and well accomplished, the flight back out (with a **STAR WARS**-style dogfight) merely silly, especially since the much-discussed thought control turns out to have no real plot function at all. The film never even considers that such a raid might precipitate **WWIII**. [PN]

FIRE IN THE SKY

Film (1993). Paramount. Dir Robert Lieberman, screenplay Tracy Torme based on The Walton Experience by Travis Walton, starring D.B. Sweeney, Robert Patrick, Craig Sheffer and James Garner. 109 mins. Colour.Based on a supposedly non-fictional account of the abduction by aliens of one

member of a six-man forest-clearing team in Arizona, the film concentrates on local suspicions that the other five may have murdered him, and the inability of anyone to believe their fantastic story. When the kidnapped man is found a week later, naked and traumatised, it is now generally believed that a hoax has taken place. A lie-detector test proves inconclusive. However, by showing staccato flash-back memories of the partly-amnesiac victim, the film removes any ambiguity: aliens were indeed involved, we are given to believe. The flash-back scenes set on the alien spacecraft are well achieved, and in their way as good as those in COMMUNION (1989), an earlier abduction movie of which this is a sort of blue-collar reprise. The film's low-key documentary style gives an impression of honesty, despite the implausibility of the basic premise. [PN]

FIRESTARTER

Film (1984). Universal. Dir Mark L. Lester, starring David Keith, Drew Barrymore, Freddie Jones, Heather Locklear, Martin Sheen, George C. Scott. Screenplay Stanley Mann, based on Firestarter (1980) by Stephen KING. 114 mins. Colour. The novel is not one of King's best, but it hardly deserved this messy adaptation. A young girl, Charlie (Barrymore), has pyrotic powers and can start fires by mental concentration alone. Naturally, a CIA-like organization ("the Shop") wishes to exploit her powers as a new WEAPON, and just as naturally she incinerates them in a final (rather small) holocaust. Scott plays the evil Native-American assassin who wishes to absorb Charlie's powers. The film is pure CLICHE from beginning to end, and not very competent at that level. Far superior in the teenage PSI POWERS line is the very similar The FURY (1978) and, of course, CARRIE (1976), both dir Brian De Palma, and the latter also based on a King novel. [PN]

FIRST COMICS COMICS.

FIRST CONTACT COMMUNICATIONS.

FIRST FANDOM AWARDS AWARDS.

FIRST MAN INTO SPACE

Film (1958). Amalgamated/MGM. Dir Robert Day, starring Marshall Thompson, Marla Landi, Robert Ayres, Bill Edwards. Screenplay John C. Cooper, Lance Z. Hargreaves, from "Satellite of Blood" by Wyott Ordung. 77 mins. B/w. This is the second of two sf films made by Amalgamated in the UK that pretend to be set in the USA (the other was FIEND WITHOUT A FACE [1957]). FMIS seems to imitate The QUATERMASS XPERIMENT (1955; vt The Creeping Unknown): a test pilot ejects from his high-flying aeroplane and returns to Earth enveloped in a repulsive, crusty substance that turns him into an inhuman, blood-drinking monster (the blood giving him the oxygen he needs!). As in the Quatermass film, there are moments of pathos, but FMIS is generally derivative and routine. Released around the time of the first orbital satellites, FMIS, with its deceptive title, must have lured audiences expecting something scientific and quasidocumentary; indeed,

despite its lurid content, it is soberly and stiffly directed. [JB/PN]

FIRST MEN IN THE MOON

Film (1964). Columbia. Prod Charles H. Schneer. Dir Nathan Juran, starring Edward Judd, Martha Hyer, Lionel Jeffries. Screenplay Nigel KNEALE, Jan Read, from THE FIRST MEN IN THE MOON (1901) by H.G. WELLS. 107 mins, cut to 103 mins. Colour. This watered-down version of Wells's classic novel is for the most part low farce, with too much random slaughtering of Selenite aliens, but still contrives to be entertaining. An eccentric Victorian inventor who has developed an ANTIGRAVITY material flies to the Moon in a spherical "spaceship". He and his companions are captured by insect-like Moon people but eventually escape, inadvertently leaving behind cold-germs which destroy the Moon's population. Ray HARRYHAUSEN's Moon creatures are rather good, as are the sets. A previous version of FMITM was made in 1919 by British Gaumont, dir J.V. Leigh. [JB/PN]

FIRST ROCKETS

When early writers wanted their characters to explore space, the idea of rockets just never came up. Even Jules Verne had his heroes blasted out of giant cannons, the sudden acceleration of which would have flattened them into jelly. It was the Russian scientist and science fiction writer Konstantin Tsiolkovsky who first realized how space flight would actually work. The year was 1883 and Tsiolkovsky was 26 years old when he first proposed the radical idea that jet propulsion could send a vehicle into space. Tsiolkovsky also came up with the concept of liquid propulsion. Until then, rockets had been filled with gunpowder. He even imagined the multiple stages of a rocket's liftoff. Way ahead of his time, Tsiolkovsky's SF work is virtually unknown today. But his importance to the history of spacetravel - and to science fiction - is clear.

FIRTH, N. WESLEY

Working name of UK writer Norman Firth (1920-1949), who began his career during WWII writing pulp Westerns and thrillers. He wrote stories variously as Rice Ackman, Earl Ellison, Leslie Halward and perhaps other names; his first sf publication was almost certainly "Obscene Parade" (1946 Weird Story Magazine). His first novel, Terror Strikes (1946 chap), is of some interest through its extremely close resemblance to H.G. WELLS's The Invisible Man (1897). Spawn of the Vampire (1946 chap) is a hastily concocted horror tale. NF wrote the entire contents of FUTURISTIC STORIES (1946) and STRANGE ADVENTURES (1946-7). He was a writer of potential worth, but died (of TB) at the age of 29 before proving it. [SH]

FISCHER, LEONARD

(?1903-?1974) Canadian writer whose Let Out the Beast (1950) is a post-HOLOCAUST-reversion-to-savagery book in which it is the protagonist who - unusually - becomes the feared enemy of those engaged in trying to rebuild civilization. [JC]

FISH, LEONARD G.

(1923? -) UK author of some short fiction under his own name and as by David Campbell, and of several minor sf adventures: Planet War (1952) as by Fysh, After the Atom (1953) as by Victor LA SALLE, and Beyond the Solar System (1954) as by Claude Haley. [SH]

FISHER, JAMES P.

(? -) US writer whose sf novel *The Great Brain Robbery* (1970) is a rather lightweight adventure in which an ALIEN tries to steal a student's unusual brain. [JC]

FISHER, LOU

(1940-) US writer. During a 20 year career writing IBM computer manuals, he began publishing sf with "Triggerman" for Gal in 1973. His first novel, *Sunstop 8* (1978), is a SPACE OPERA; his second, *The Blue Ice Pilot* (1986), features a space war made possible by developments in CRYONICS. [JC]

FISHER, VARDIS (ALVERO)

(1895-1968) US writer, raised in a Mormon family; his best-known single novel, *Children of God* (1939), is about the Mormons. His Testament of Man sequence covers the whole of human history, extending into many volumes the basic strategy which shapes several novels by F. Britten AUSTIN, the 6 vols of Johannes V. JENSEN's *The Long Journey* (1922-4) and other early-20th-century celebrations of the drama of EVOLUTION. Of sf interest in the Testament are the first 5 titles, which deal with prehistory: *Darkness and the Deep* (1943), *The Golden Rooms* (1944), *Intimations of Eve* (1946), *Adam and the Serpent* (1947) and *The Divine Passion* (1948), which comprise a formidable attempt at sustained anthropological sf. [JC] See also: ADAM AND EVE; ORIGIN OF MAN.

FISK, NICHOLAS

Pseudonym of UK author David Higginbottom (1923-), who writes exclusively for children. His first sf tale was *Space Hostages* (1967), in which his tastes for HARD-SF backgrounds and realistically flawed protagonists were competently expressed. The former reaches full expression in tales like *Trillions* (1971) and *Antigrav* (1978). *A Rag, a Bone, and a Hank of Hair* (1980), on the other hand, gravely and movingly concentrates on its emotionally torn protagonist, a young genius in an arid far-future DYSTOPIA commanded to observe a small family of reconstructed "primitives", who have been drugged into repeating the same fake 1940 day over and over again, so that he may garner experimental data about raw humans. In the end, both family and protagonist are killed by the masters of the terrible world. NF is a smooth writer, but the world he envisages - as demonstrated in *A Hole in the Head* (1991), a harrowing tale of the Earth at the brink of ecological catastrophe - is fraught. [JC] Other works: *Grinny* (1973); *High Way Home* (1973); *Little Green Spacemen* (1974 chap); *The Witches of Wimmering* (1976); *Wheelie in the Stars* (1976 chap); *Time Trap* (1976); *Escape from Splatterbang* (1978 chap); *vt Flamers* 1979 chap); *Monster Maker* (1979); the *Starstormers* sequence, comprising *Starstormers* (1980), *Sunburst* (1980), *Catfang* (1981), *Evil Eye* (1982) and *Volcano* (1983); *Robot Revolt* (1981); *Sweets from a Stranger* (coll 1982); *On the Flip Side* (1983); *You Remember Me!* (1984); *Dark Sun, Bright Sun* (1986); *Living Fire* (coll 1987); *Mindbenders* (1987); *Backlash* (1988); *The Talking Car* (1988 chap); *The Telly is Watching You* (1989); *The Worm Charmers* (1989); *The Back-Yard War* (1990 chap); *The Model Village* (1990); *Extraterrestrial Tales* (omni 1991) assembling *Space Hostages*, *Trillions* and *On the Flip Side*; *Pig Ignorant* (1991); *The Puffin Book of*

Science Fiction (anth 1993). See also: CHILDREN'S SF; RADIO.

FISKE, TARLETON

[s] Robert BLOCH.

FITZGERALD, HUGH

L. Frank BAUM.

FITZGERALD, WILLIAM

[s] Murray LEINSTER.

FITZGIBBON, (ROBERT LOUIS) CONSTANTINE (LEE-DILLON)

(1919-1983) US writer of politically oriented fiction and other works who became a naturalized Irish citizen. His first sf novel, *The Iron Hoop* (1949), describes an occupied city in WWII. *When the Kissing Had to Stop* (1960) depicts in Anglophobe terms the self-destruction of a UK dominated by a Communist-inspired government. Less known but more remarkable, *The Golden Age* (1975) treats the post- HOLOCAUST recuperation of the UK in terms of the myth of Orpheus. [JC] Other works: *The Rat Report* (1980).

FITZ-GIBBON, RALPH EDGERTON

(c1904-) US writer, long active as a journalist. His sf novel, *The Man with Two Bodies* (1952), offers parapsychological explanations for the mysteries suggested by the title. [JC]

FIVE

Film (1951). Columbia. Prod, written, dir Arch Oboler, starring Susan Douglas, William Phipps, James Anderson, Charles Lampkin, Earl Lee. 93 mins, cut to 89 mins (UK). B/w. The first "after the bomb" film, F concerns five US survivors - a mountaineer, a pregnant girl, a token Black, a cashier and an adventurer. This is a gloomy art film with low-budget, grainy photography, a scientifically bogus explanation for the five's survival, much talking, a racial murder and two deaths from radiation, but the theme itself retains some power. Oboler had worked extensively in radio before entering the film industry in 1945 with *Strange Holiday* and *Bewitched*, both based on his own radio plays. F is basically a sermon against the prejudices and insanities that may lead to atomic war. [JB/PN]

FIVE MILLION YEARS TO EARTH

QUATERMASS AND THE PIT.

FIXUP

A term first used by A.E. VAN VOGT to describe a book made up of previously published stories fitted together - usually with the addition of newly written or published cementing material - so that they read as a novel. Aware that fixups are immensely more common in GENRE SF than in any other literature in the world, we borrowed the term for the 1979 edition of this encyclopedia, and continue to use it now; an example is van Vogt's own *THE WEAPON SHOPS OF ISHER* (fixup 1951). We do, however, recognize that it is not always an easy description to apply with accuracy. It is, for instance, sometimes impossible to know whether or not a series of connected stories has in fact been extracted from an already-written book, which for some would make it impossible to describe that book as a fixup; some readers and authors, in other words, feel that the term can be

applied only to novels assembled from previously existing work. We disagree. A book which is written so as to be broken up for prior magazine publication may well, in our view, constitute a perfectly legitimate example of the form, though we do recognize that when we call such a text a fixup we are making a critical judgment as to the internal nature - the feel - of that text. We should perhaps emphasize, therefore, that the term is not, for us, derogatory. In fact, the fixup form may arguably be ideal for tales of epic sweep through time and space. It is perhaps no accident that Robert A HEINLEIN's seminal GENERATION-STARSHIP tale, "Universe" (1941), ultimately became part of Orphans of the Sky (fixup 1963 UK). [JC]

FLACKES, B

Working name of Irish writer William David Flackes (1921-1993), who spent much of his career as a journalist reporting on Irish matters; he won an OBE (Order of the British Empire) in 1981. His sf was a sideline, and not of much interest. It includes (almost certainly) 2 novels as by Clem Macartney: Ten Years of Oblivion (1951) and Dark Side of Venus (1951). Under his own name, he wrote Duel in Nightmare Worlds (1952). [JC]

FLAGG, FRANCIS

Pseudonym of US writer George Henry Weiss (?1898-1946), who appeared in Weird Tales and then began publishing sf with "The Machine Man of Ardathia" for AMZ in 1927. He published 20 or so typical pulp-sf stories over the next decade, some of his later work being in collaboration with Forrest J. ACKERMAN. He was a comparatively careful writer. In his posthumously published sf tale, The Night People (1947 chap), an escaped convict takes a drug-induced trip to another planet. [JC] See also: ASTOUNDING SCIENCE-FICTION; CANADA.

FLAMMARION, (NICHOLAS) CAMILLE

(1842-1925) French astronomer and writer. One of the first major popularizers of ASTRONOMY, he took great delight in the flights of imagination to which his studies in COSMOLOGY inspired him. In 1858, the year he entered the Paris Observatory as a student, he wrote an unpublished scientific romance, Voyage extatique aux reegions lunaires, correspondence d'un philosophe adolescent. His two major fascinations were the possibilities of LIFE ON OTHER WORLDS and of life after death, and these interests are reflected by his earliest major works: La pluralite des mondes habites ["The Plurality of Inhabited Worlds"] (1862) and Les habitants de l'autre monde ["The Inhabitants of the Other World"] (1862), the latter being "revelations" transmitted by the medium Mlle Huet. His most important work in the popularization of science was Astronomie populaire (1880; trans as Popular Astronomy 1894). He dramatized ideas from his earlier nonfiction book Les mondes imaginaires et les mondes reels (1864; trans as Real and Imaginary Worlds 1865 US) in three of his Recits de l'infini (coll 1872; trans S.R. Crocker as Stories of Infinity 1874 US): "The History of a Comet", "Lumen" and "In Infinity". The second, consisting of a series of dialogues between a man and a disembodied spirit which is free to roam the Universe at will, includes observations about the implications of the finite velocity of light and many images of otherworldly life adapted to ALIEN circumstances. These stories were revised and expanded for separate publication as Lumen (1887; trans A.M.

and R.M., with some new material, 1897 US). Notions taken from these dialogues were embodied in the REINCARNATION romances Stella (1877 France) and Uranie (1889; trans Mary Serrano as Uranie 1890 US; new trans Augusta Rice Stetson as Urania 1891 US). CF's boldest SCIENTIFIC ROMANCE, however, is *La fin du monde* (1893-4; trans anon as Omega: The Last Days of the World 1897 US), an epic of the future. Although it is as much essay as story, this is a notable work, akin to H.G. WELLS's THE TIME MACHINE (1895) and William Hope HODGSON's The House on the Borderland (1908) in presenting a striking vision of the END OF THE WORLD. CF's scientific reputation was injured by his passionate interest in Spiritualism (in later life he was an intimate of Arthur Conan DOYLE), but his was a major contribution to the popularization of science and to the literature of the scientific imagination. [BS]See also: ESCHATOLOGY; EVOLUTION; FAR FUTURE; FASTER THAN LIGHT; FRANCE; HISTORY OF SF; MARS; RELIGION; STARS; SUN.

FLASH GORDON

1. US COMIC strip created by artist Alex RAYMOND for King Features Syndicate. FG appeared in 1934, at first in Sunday, later in daily newspapers. Its elaborately shaded style and exotic storyline made it one of the most influential sf strips. It was taken over in 1944 by Austin Briggs, then in 1948 by Mac Raboy, and since then has been drawn by Dan Barry (with contributions from artists Harvey Kurtzman and Wally WOOD and writer Harry HARRISON) and Al Williamson, and more recently written by Bruce Jones and illustrated by Gray MORROW. Various episodes have been released in comic-book form - including a 9-part series from DC COMICS written and drawn by Dan Jurgens (1988) - and also in book form. It continues today. The scenario of FG is archetypal SPACE OPERA. Most episodes feature Flash locked in combat with the villain, Ming the Merciless of the planet Mongo. Flash's perpetual fiancée, Dale Arden, and the mad SCIENTIST Hans Zarkov play prominent roles. (In later episodes Zarkov's craziness was played down and he became a straightforward sidekick to Flash.) The decor shifts between the futuristic (DEATH RAYS, rocketships) and the archaic (dinosaurs, jungles, swordplay) with a fine contempt for plausibility, rather in the manner of Edgar Rice BURROUGHS's romances. Although begun quite cynically in conscious opposition to the earlier BUCK ROGERS IN THE 25TH CENTURY, FG quickly developed its own individuality, emphasizing a romantic baroque against the cool technological classicism of its predecessor, to which it is artistically very much superior. The strip was widely syndicated in Europe. When, during WWII, the arrival of various episodes was delayed, the strip was often written and drawn by Europeans. One such writer was Federico Fellini (1920-). The FG comic strip has had many repercussions in other media. It led to a popular radio serial, to a short-lived pulp magazine (FLASH GORDON STRANGE ADVENTURE MAGAZINE), and in the late 1930s to several film serials starring Buster Crabbe; later came a tv series and a film (see below). A full-length film parody, FLESH GORDON, appeared in 1974. The radio serial exactly paralleled the Sunday comic strip, so you could see in the paper the monsters you'd heard on the radio. An early FG novel was Flash Gordon in the Caverns of Mongo (1937) by Raymond. A paperback series of five FG short novels, based on the original strips, with Alex Raymond credited, consisted of Flash Gordon 1: The Lion Men of Mongo * (1974),

Flash Gordon 2: The Plague of Sound * (1974), Flash Gordon 3: The Space Circus * (1974), Flash Gordon 4: The Time Trap of Ming XIII * (1974) and Flash Gordon 5: The Witch Queen of Mongo * (1974). The first four were "adapted by Con Steffanson", a house name; #1-#3 were the work of Ron GOULART; #4 was by Carson Bingham (Bruce Bingham CASSIDAY) and #5, also by Bingham, was published under his name.

2. Serial film. 13 2-reel episodes (1936). Universal. Dir Frederick Stephani, starring Buster Crabbe, Jean Rogers, Charles Middleton, Frank Shannon, Priscilla Lawson. Screenplay Stephani, George Plympton, Basil Dickey, Ella O'Neill, based on the comic strip. B/w. The film FG was the nearest thing to PULP-MAGAZINE space opera to appear on the screen during the 1930s. Flash, Dale and Zarkov go to the planet Mongo in Zarkov's backyard-built spaceship to find the cause of an outbreak of volcanic activity on Earth. Ming the Merciless (a wonderfully hammy performance from Middleton) is behind it all and plans to invade Earth. Our heroes spend the next 12 episodes surviving various exotic hazards before outwitting Ming in the final reel. Though more lavish than the average serial (the budget was a record \$350,000), FG has the cheap appearance of most: unconvincing special effects, sets and costumes borrowed from a variety of other films, and plenty of stock footage. However, it remains great fun, romantic and fantastical. Ill edited versions of the first and second halves were released theatrically as Spaceship to the Unknown (1936) (97 mins) and Perils from the Planet Mongo (1936) (91 mins). The follow-up was Flash Gordon's Trip to Mars (1938), dirs Ford Beebe, Robert F. Hill, with the same leading actors - Ming is back again - and Beatrice Roberts as the evil queen who turns humans to "clay people". 15 two-reel episodes. Screenplay Ray Trampe, Norman S. Hall, Wyndham Gittens, Herbert Dolmas. The setting is changed from Mongo to Mars. The 99min edited-down version was The Deadly Ray from Mars (1938). The final FG movie serial was Flash Gordon Conquers the Universe (1940; vt Flash Gordon: Space Soldiers Conquer the Universe), dir Ford Beebe, Ray Taylor, with the same leading actors except that Carol Hughes replaced Jean Rogers as Dale Arden. 12 two-reel episodes. Screenplay George H. Plympton, Basil Dickey, Barry Shipman. This, the weakest of the three, kills off Ming (again) at the end. According to one account the true title shown on the original episodes was Flash Gordon: Space Soldiers Conquer the Universe; the soldiers would have been Ming's, and Flash is trying to stop him. This would explain the oddity of the usually accepted title, since Flash was not a universe-conqueror by disposition. The 87min edited-down version was Purple Death From Outer Space (1940). The three FG film serials continue to have a cult following and are regularly revived on tv and in the cinema.

3. US tv series (1951) from DuMont, starring Steve Holland. It was low-budget and universally execrated, lasting only one season.

4. Film (1980). Columbia/EMI/Warner. Prod Dino De Laurentiis. Dir Michael Hodges, starring Sam J. Jones, Melody Anderson, Topol, Max Von Sydow, Brian Blessed, Timothy Dalton. Screenplay Lorenzo Semple Jr, based on the early episodes of the comic strip by Raymond. 115 mins. Colour. As a producer, De Laurentiis has always had a weakness for over-the-top, fantastic parodies (sometimes successful, as in DIABOLIK [1967] and BARBARELLA [1967]) but here his instincts let him down badly. Apart from the fetishistic costumes (leather, spikes, etc.) there is little of interest in this tongue-in-cheek, lurid fantasy, which tries to make a

comic-strip virtue of wooden acting. The plot is largely derived from the 1936 film serial, and the rushed special effects similarly recall the ludicrousness of that film. The romantic elements are subjugated to a rather listless kinkiness. [PN/JB]See also: CINEMA.

FLASH GORDON CONQUERS THE UNIVERSE
FLASH GORDON.

FLASH GORDON STRANGE ADVENTURE MAGAZINE
US BEDSHEET-size PULP MAGAZINE. 1 issue, Dec 1936, published by C.J.H. Publications; ed Harold HERSEY. The featured novel was "The Master of Mars" by James E. Northfield. FGSAM, intended to be a monthly juvenile magazine, was notable for its coloured interior illustrations in a comic-strip format. A failed attempt to cash in on the popularity of the comic strip FLASH GORDON, its sole issue is now a rare collector's item. [FHP/MJE]

FLASH GORDON'S TRIP TO MARS
FLASH GORDON.

FLECKER, (HERMAN) JAMES ELROY
(1884-1915) UK poet, playwright and novelist best known for Hassan (1922), a fantasy play with an Arabian Nights flavour. His only novel, The King of Alsander (1914), was also a fantasy. He is of sf interest for The Last Generation: A Story of the Future (1908 chap), whose narrator is spirited into times moderately close to the present where he witnesses the self-willed extinction of the human race through a refusal to breed more children into this vale of tears. The narrator is then taken much further forward, where he discovers that apes (see APES AND CAVEMEN) are destined to become the masters of the planet and "try again". This tale was later collected along with some fantasies in Collected Prose (coll 1920). [JC]See also: END OF THE WORLD.

FLEHR, PAUL
[s] Frederik POHL.

FLEMING, HARRY
William Henry Fleming BIRD.

FLEMING, IAN (LANCASTER)
(1908-1964) UK writer, brother of Peter FLEMING. Neither the use of advanced technological gadgetry nor the fantastic plots of his enormously successful James Bond sequence of thrillers makes them genuine sf. The closest any of them comes to an sf plot is Moonraker (1955), whose eponymous rocket is rather ahead of its time. Many of IF's novels have been filmed, usually with additional sf-like gadgetry and completely reworked plots. The first of these films was DR NO (1962); YOU ONLY LIVE TWICE (1967) featured Bond crushing an attempt at world domination which involved the kidnapping of orbital satellites. MOONRAKER (1979) involves an orbital satellite and the Space Shuttle. [JC/PN]See also: ISLANDS; TECHNOTHRILLER; VILLAINS.

FLEMING, (ROBERT) PETER
(1907-1971) UK travel writer and novelist, brother of Ian FLEMING. He is

known mainly for such travel books as *Brazilian Adventure* (1933). In his spoof sf novel, *The Flying Visit* (1940), Adolf Hitler parachutes into the UK with amusing results. The tale was reprinted, along with a fantasy, "The Man with Two Hands", in *With the Guards to Mexico! and Other Excursions* (coll 1957). *The Sixth Column: A Singular Tale of our Time* (1951), a satirical political thriller set in an implied NEAR FUTURE, verges on sf. [JC]Other works: Some of the tales in *A Story to Tell* (coll 1942) are fantasies; *Invasion 1940* (1957; vt *Operation Sea Lion 1957 US*), a nonfiction study of German preparations to invade the UK, speculatively presents a successful assault (*HITLER WINS*).

FLEMING, STUART

[s] Damon KNIGHT.

FLESCH, HANS

[r] GERMANY.

FLESH FOR FRANKENSTEIN
FRANKENSTEIN.

FLESH GORDON

Film (1974). Mammoth/Graffiti. Dir Michael Benveniste, Howard Ziehm, starring Jason Williams, Suzanne Fields, John Hoyt. Screenplay Benveniste, William Hunt. 90 mins, cut to 84 mins, cut to 78 mins. Colour. This burlesque of *FLASH GORDON* began as a cheap soft-porn film, but became relatively expensive as the special effects became more elaborate. Work on it continued for nearly two years and many special-effects technicians were involved, some uncredited; they included Jim Danforth, Dave Allen, Rick Baker, Greg Jein, George Barr and Dennis Muren. Several of the effects sequences include model animation of a high standard, in particular the climax, when a monster, the Great God Porno, clutching the heroine, scales a building in the manner of *KING KONG* while muttering a series of surly asides. A duel with an animated insect-creature rivals the best of Ray HARRYHAUSEN's work. The makers were so pleased with the effects that they cleaned it up a bit, and it was released without the feared X-rating. Most of the jokes are variants on the undergraduate ploy of inserting sexual references - e.g., there is a penisaurus - into a context that was originally downright puritanical. [JB]

FLETCHER, GEORGE U.

Fletcher PRATT.

FLETCHER, JOSEPH SMITH

(1863-1935) UK writer of popular fiction, much of it for boys. *The Wonderful City* (1894), for instance, carries its youthful protagonist to a doomed lost race (*LOST WORLDS*) in Central America. *Morrison's Machine* (1900), an adult tale, analyses the relationship of scientific Man to the MACHINES he was creating at the turn of the century (*SCIENTISTS*). *The Three Days' Terror* (1901), like *The Ransom for London* (1914), deals with NEAR-FUTURE threats to the stability of the UK. [JC]Other works: *The Air-Ship, and Other Stories* (coll 1903); *The Wheatstack, and Other Stories* (coll 1909); *Many Engagements* (coll 1923); *The Matheson Formula* (1929 US); *The House in Tuesday Market* (1930); *The Man in No. 3, and Other Stories of*

FLIGHT OF THE NAVIGATOR

Film (1986). Producers Sales/New Star Entertainment/Walt Disney. Dir Randal Kleiser, starring Joey Cramer, Veronica Cartwright, Cliff De Young, Howard Hesseman, Paul Mall. Screenplay Michael Burton, Matt MacManus, based on a story by Mark H. Baker. 89 mins. Colour. Made for children, this might - one would think - be rather disturbing for them. A 12-year-old (Cramer) returns home after a fall and finds the wrong people living there. The police take him to where his family now live, where he learns that it is eight years later, that he has been missing, presumed dead, and that his kid brother has become his post-pubertal big brother. Tests reveal that our hero has strange brainwaves, some of which are read by a computer as a picture of a flying saucer, just like one that has recently been found but has proved unopenable. The boy locates the saucer and meets inside it the robotic alien Max (Mall), who clearly recognizes him, addressing him as The Navigator, an aspect of his recent past which is news to him, since he lost his memory after the saucer's crashlanding. Because he has been travelling at FASTER-THAN-LIGHT speeds to the alien's planet and back, the boy has not grown noticeably older. Unhappy at his role in this unnerving future, he persuades Max to return him (normality comfortingly restored) back through time to 1978. This film presents what is actually rather a nightmare scenario, and carries it off with considerable aplomb for the first half; but it sinks quickly into routine post- E.T.: THE EXTRATERRESTRIAL scenes once the flying saucer and alien have been introduced. [PN]

FLIGHT UNLIMITED SHAYOL.

FLINT, HOMER EON

(1892-1924) US writer (born Flindt) whose work appeared mainly in the Frank A. MUNSEY magazines from the teens of the century. His first sf story was "The Planeteer" for All-Story Weekly in 1918; it deals with sexual rivalry and personal ambition in a Bellamistic (Edward BELLAMY) society. Its sequel, "The King of Conserve Island" (1918), describes the corruption and collapse of the socialist world under the propaganda attacks of a reactionary, capitalist society. The Dr Kinney stories examine the implications of various political ideas: "The Lord of Death" (1919) describes the ultimate Spencerian survival of the fittest on MERCURY; "The Queen of Life" (1919) is based on the opposite point of view, preservation of life for its own sake and Malthusianism on a VENUS characterized by superscience; "The Devolutionist" (1921) covers the ambivalences of an efficient, more or less benevolent dictatorship and a bumblingly anarchistic or democratic underground; and the final story, "The Emancipatrix" (1921), contrasts a hive world and primitive humans on a ring-shaped planet. In the last two stories, the alien contact takes place by means of an apparatus acquired from Venus. HEF's writing style and PULP-MAGAZINE habits did not always adequately express his deep interest in the emergence of behavioural and historical patterns from various political and social philosophies. The series was much later assembled as The Devolutionist and The Emancipatrix (1921 Argosy; coll of

linked stories 1965) and *The Lord of Death and The Queen of Life* (1919 *All-Story Weekly*; coll of linked stories 1965). HEF is remembered in part for the mystery of his death (having picked up a hitchhiker - who turned out to have had a criminal record - he was found dead in his crashed car) and rather more for his sf novel with Austin HALL (whom see for details), *The Blind Spot* (1921 *Argosy*; 1951). However, the Dr Kinney stories are his real legacy. [EFB/JC] See also: HISTORY OF SF; PARALLEL WORLDS; PLANETARY ROMANCE.

FLIPSIDE OF DOMINICK HIDE, THE

Made-for-tv film (1980). BBC TV. Dir Alan Gibson, starring Peter Firth, Caroline Langrishe, Pippa Guard, Patrick Magee. Teleplay Gibson, Jeremy Paul. 95 mins. Colour. This was an unexpected success, winning several awards. Hide (Firth) travels back in a flying saucer (UFOS) from the somewhat austere AD2130 to contemporary London to do historical research. A *Candide*-figure, he is confused but cheerful about what he finds, falls in love, and (of course) becomes his own great-great-great-grandfather. This film is unusual in not being pessimistic about modern life, and uses its future perspective cleverly to provide a sort of instant nostalgia for the present day. The sequel, *Another Flip for Dominick* (1982), 85 mins, made by and starring the same people, has Hide revisiting the past in search of a missing colleague; it is less memorable. [PN]

FLOOD, ELOISE

Bill MCCAY.

FLUTE, MOLLY

Eileen LOTTMAN.

FLY, THE

1. Film (1958). 20th Century-Fox. Dir Kurt Neumann, starring Al (David) Hedison, Patricia Owens, Vincent Price. Screenplay James Clavell, based on "The Fly" (1957) by George LANGELAAN. 94 mins. Colour. A scientist experimenting with MATTER TRANSMISSION accidentally gets mixed with a fly and ends up with its head and arm (or leg). He has retained his own brain, however, and with the help of his wife tries to reverse the procedure. But the complementarily deformed fly refuses to be caught, and the scientist is driven to commit suicide by putting his head in a steam press. The final sequence shows the fly, with tiny scientist's head and arm, trapped in a spider's web and screaming "Help me!" (which makes one wonder where the fly's brain ended up). An absurd film whose ludicrous excesses are amusing, and lavishly produced for a horror/ MONSTER movie, it was a financial success and spawned two low-budget sequels, *RETURN OF THE FLY* (1959) and *CURSE OF THE FLY* (1965). [JB] 2. Film (1986). Brooksfilm/20th Century-Fox. Dir David CRONENBERG, starring Jeff Goldblum, Geena Davis, John Getz. Screenplay Charles Edward Pogue, Cronenberg, based on the Langelaan story. 100 mins, cut to 96 mins. Colour. This blackly comic remake is radically more sophisticated and more horrific than its original. In this version the (this time unmarried) scientist's accident leads to a melding of genetic material, and his transformation into fly is gradual and protracted. With it comes a sexual and creative potency and a capacity for destruction hitherto only latent in the idealistic, repressed

Seth Brundle, movingly acted by Goldblum. As usual Cronenberg confronts the vulnerable and ephemeral nature of the human body by imagining it metamorphosed; where other people use words to create metaphor, Cronenberg uses the flesh, ambiguously evoking exultation and disgust, the grotesque and the beautiful. [PN]See also: CINEMA; SEX.

FLY II, THE

Film (1989). Brookfilms/20th Century-Fox. Dir Chris Walas, starring Eric Stoltz, Daphne Zuniga, Lee Richardson. Screenplay Mick Garris, Jim Wheat, Ken Wheat, Frank Darabont, based on a story by Garris. 104 mins. Colour. This is a genuine sequel to the 1986 remake of *The Fly*, not just a lame excuse for more horrific "fly" effects. Chris Walas, the skilled technician who created those effects for the earlier film, here made his directorial debut, and surprised many by doing so assured a job of it. Seth Brundle's girlfriend, made pregnant by him in the previous film, dies after giving birth to a "monster"; beneath the larva-like casing is an apparently normal baby. At age 5, however, the child has a near-adult appearance and superintelligence. His adoptive father, head of Bartok Industries, is secretly determined to exploit both Brundle's son and his MATTER-TRANSMISSION device, realizing that the genetic melding the device allows gives him a handle for controlling "the form and function of all life". The subtext is more reassuring than in CRONENBERG's earlier film, and *TFII* becomes a retelling of *Beauty and the Beast*, with a crude but satisfying comeuppance for Bartok at the end. Though Cronenberg is the one popularly supposed to show disgust for the flesh, it is Walas whose more conventional affection for normality has the effect of reducing the son's metamorphosis to a mere occasion for horror. This deeply conservative film is less subtle than its predecessor, though it has interesting Freudian reverberations, and many people will prefer Walas's emphasis on the corruption of an external agency (Industry) to Cronenberg's emphasis on the tragic divisions of the Self. [PN]See also: CINEMA; MONSTER MOVIES.

FLYING SAUCERS UFOS.

FLYING SAUCERS

In 1947, U.S. businessman Kenneth Arnold was flying his plane near Mt. Rainier in Washington when he reported a strange sight - nine "discs" in the sky. He described their pattern as being "like a saucer would be if you skipped it across the water." And that's how the term "flying saucer" was born. The flying saucer craze was to become a part of 1950s culture. More recently, tales of Unidentified Flying Objects, or UFOs, pop up everywhere. Some viewers have claimed that they were prodded and poked by the aliens within. SF writers, for the most part, find such stories unbelievable. What interests them is the public's obsession with the phenomenon of spaceship sightings and first contact experiences.

FLYING SAUCERS FROM OTHER WORLDS OTHER WORLDS.

FLYNN, MICHAEL F(RANCIS)

(1947-) US writer who began publishing sf with "Slan Libh" in ASF in 1984, and who soon became identified as one of the most sophisticated and

stylistically acute 1980s Analog regulars, some of his work appearing as by Rowland Shew. His first novel, *In the Country of the Blind* (1990), is an alternate-history thriller based on the premise that Charles BABBAGE's early-19th-century COMPUTER did in fact work, and is being used by a secret society to predict (and therefore to control) events. A 20th-century woman hacker discovers the conspiracy and exposes its databases by use of a computer worm. Babbage's computer, by coincidence, features similarly in *THE DIFFERENCE ENGINE* (1990 UK) by William GIBSON and Bruce STERLING. MFF's second novel was *Fallen Angels* (1991) with Larry NIVEN (whom see for details) and Jerry POURNELLE. His third, *The Nanotech Chronicles* (1991), presents, with all MFF's engagingly lurid competence, a tale which exploits current speculations about the future of molecular engineering. MFF is on the verge of becoming a central creator of HARD SF. [JC] See also: ASTOUNDING SCIENCE-FICTION; MACHINES; STEAMPUNK.

FOLDES, PETER
[r] HUNGARY.

FOLINGSBY, KENNETH
A possible pseudonym of a probable Scotsman whose *Meda: A Tale of the Future* (1891), though the events it recounts turn out to be a dream, remains of interest for the imaginative scope of the AD5575 depicted, in which large-headed brainy "Scotonians" are fed by ambient electricity, possess ANTIGRAVITY, and represent the end of a long (and detailed) world-history, including a comet HOLOCAUST. The protagonist begins to have erotic longings, and awakens. [JC]

FOLLETT, JAMES
(1939-) UK writer of fiction and technical material; most of his sf work has been for BBC TV or BBC RADIO. His sf work, which is not remarkable, includes: *The Doomsday Ultimatum* (1976); *Ice* (1978); *Earth Search* (1981), based on his BBC radio serial; *Torus* (1990); *Trojan* (1991), about a computer virus from Mars. [JC]

FOLLETT, KEN
Working name of UK writer Kenneth Martin Follett (1949-), most famous for thrillers like *Storm Island* (1978; vt *The Eye of the Needle* 1978 US), but who, under pseudonyms, has also written some sf. *The Power Twins* and *The Worm Puzzle: A Science Fantasy for Young People* (1976) as by Martin Martinsen was a juvenile; *Amok: King of Legend* (1976) as by Bernard L. Ross was marginal fantasy; *Capricorn One* * (1978) as by Ross was one of two novelizations - the other being by Ron GOULART - of the film *CAPRICORN ONE* (1978). [JC]

FONTANA, D(OROTHY) C(ATHERINE)
(1939-) US writer, primarily for tv; she was associated with *STAR TREK* as its story editor, eventually writing *Vulcan's Glory* * (1989) for the series of novelizations. She was later involved with the two tv series *The FANTASTIC JOURNEY* and *LOGAN'S RUN*. *The Questor Tapes* * (1974) is based on a series pilot written by Gene RODDENBERRY and Gene L. Coon, who created *Star Trek*, and released as *The QUESTOR TAPES*. It tells of the creation of an ANDROID who eventually plans to combat evil in secret. The pilot did not lead to a series. DCF has written a number of tv episodes in addition

to her work as a story editor. [JC]See also: WAR OF THE WORLDS.

FONTENAY, CHARLES L(OUIS)

(1917-) US newspaperman and writer, born in Brazil and raised in Tennessee, spending his life there. He was a member of the If stable from the publication of his first story, "Disqualified", in 1954, and wrote three somewhat routine sf novels: Twice Upon a Time (1958 dos), Rebels of the Red Planet (1961 dos), an intrigue set on Mars, and The Day the Oceans Overflowed (1964), in which the manner of their doing so is scientifically ill motivated. Epistle to the Babylonians (1969), nonfiction, deals in part with the philosophy of science. [JC]

FONTENELLE, BERNARD LE BOVYER DE

(1657-1757) French man of letters whose work pointed forward to the Age of Reason; nephew of the dramatist Corneille. He wrote much, and one of his most important books became a seminal influence on PROTO SCIENCE FICTION: Entretiens sur la pluralite des mondes habites (1686; trans J. Glanvill as The Plurality of Worlds 1929). This is one of the earliest works ever written popularizing science, notably ASTRONOMY, for the layman, which it does by wittily presenting its speculations - many about the possibility of LIFE ON OTHER WORLDS - in the form of conversations after dinner between the author and a marquise. In 1697 he became permanent secretary of the the Academie des Sciences, a post he held for 44 years. [PN]See also: COSMOLOGY; FRANCE; STARS; VENUS.

FOOD OF THE GODS

Film (1976). AIP. Prod and dir Bert I. Gordon, starring Marjoe Gortner, Pamela Franklin, Ralph Meeker, Ida Lupino. Screenplay Gordon, based on a "portion" of The Food of the Gods and How it Came to Earth (1904) by H.G. WELLS. 88 mins. Colour.Set on an island off the coast of British Columbia, FOTG tells of a miraculous foodstuff which oozes from the ground and causes gigantism in all infant creatures that eat it (GREAT AND SMALL). Animated wasps, plastic caterpillars and out-of-focus chickens (all huge) are wholly unconvincing, but the giant rats (ordinary rats shot in miniature sets) are marginally plausible - which is more than can be said for most of the actors and all of the script, though Meeker is effectively creepy as the wicked industrialist out to exploit the Food. Nothing of the Wells novel survives in this rat-drowning epic, which purports to be a revenge-of-Nature film - like so many from its ECOLOGY-conscious period. [PN]

FORBES, ALEXANDER

(1882-?) US writer whose sf novel, The Radio Gunner (1924), depicts a future WAR set in 1937 between Northern Europe, in alliance with the USA, and the Constantinople Coalition. AF's predictive powers were poor and his eponymous hero, who knows how to locate radios, fails to enthrall. [JC]

FORBIDDEN PLANET

Film (1956). MGM. Dir Fred McLeod Wilcox, starring Walter Pidgeon, Anne Francis, Leslie Nielsen, Warren Stevens. Screenplay Cyril Hume, based on a story by Irving Block and Allen ADLER. 98 mins. Colour.Although Wilcox was new to sf cinema (his best-known film was Lassie Come Home, [1943]), FP is one of the most attractive movies in the genre. Some of the more

interesting resonances of FP stem from its being an updated version of Shakespeare's *The Tempest* (c1611). Prospero is Morbius, an obsessive scientist living alone with his daughter Altaira (the virginal Miranda figure) on the planet Altair IV. Ariel is a charming metal creature, Robby the Robot (who became so popular - the first ROBOT star since *METROPOLIS* - that another film, *The INVISIBLE BOY* [1957], was made as a special vehicle for him). The film opens with a spaceship landing to investigate the fate of a colony whose sole survivors are Morbius and Altaira. The crew is menaced by an invisible Caliban, which proves to be a "Monster from the Id" and eventually destroys its unwitting creator, Morbius; holocaust follows. Altaira is saved. The plot, mixing the tawdry and the potent, is very sophisticated for the time - astonishingly so for a film originally designed for a juvenile audience, especially in the intimations of incestuous feelings of the father for the daughter. The dialogue is slick and unmemorable. The best sequences involve a tour of the still-functioning artefacts, spectacular and mysterious, dwarfing the humans passing among them, of an awesomely powerful vanished race, the Krel. The visual treatment of FP was unsurpassed until *2001: A SPACE ODYSSEY*, made 12 years later. Despite its flaws, it remains one of the few masterpieces of sf cinema. *Forbidden Planet* * (1956), based on the film, was by W. J. Stuart (Philip MACDONALD). [PN] See also: *INTELLIGENCE*; *MONSTER MOVIES*; *MUSIC*; *PARANOIA*; *VILLAINS*.

FORBIDDEN WORLD

(vt *MUTANT*) Film (1982). New World. Dir Allan Holzman, starring Jesse Vint, June Chadwick, Dawn Dunlap, Linden Chiles, Fox Harris, Raymond Oliver. Screenplay Tim Curnen. 86 mins. Colour. This cheap imitation of *ALIEN* (1979), from Roger CORMAN's New World exploitation factory, is distinguished by its gleefully sleazy nature and amusing cynicism. An outer-space troubleshooter (Vint) is awakened from cryo-sleep (*CRYONICS*), casually informed that he is now younger than his son, and despatched to a remote planet where a genetically engineered organism has run amok. Although generally predictable, this is fast-paced and does produce one astonishing coup by having its *MONSTER*, which replicates the cell structure of anything it devours, defeated when a terminally ill scientist feeds it his own cancerous liver, an organ he has removed during anaesthetic-free self-surgery. Vint's grimy hero imports a bit of welcome humour, and the film makes good use of the generically required exploitation elements, intercutting a formulaic sex scene with oddly poignant vignettes of the space-station staff whiling away the time at the end of the Universe. Some of FW's sets and effects crop up again in *ANDROID* (1982). [KN]

FORBIN PROJECT, THE COLOSSUS, THE FORBIN PROJECT.

FORCE FIELD

In sf *TERMINOLOGY* - unlike physics, where it has a different meaning - a force field (sometimes a force shield) is usually an invisible protective sphere or wall of force. Throughout the 1930s and 1940s the force field performed sterling service, notably in E.E. "Doc" SMITH's *Skylark* and *Lensmen* series, where force fields under attack glow red and orange and

then all the way up through the spectrum until they reach violet and black and break down. Force fields are also a sovereign remedy against DEATH RAYS and usually bullets, too, though not against swords in Charles L. HARNESS's *Flight into Yesterday* (1953; vt *The Paradox Men dos*), in which the efficacy of the shield is directly proportional to the momentum of the object it resists; this property of force fields gives Harness a good excuse to introduce swordplay (where the momentums are relatively small) into a technologically advanced society - an example that other writers were not slow to follow. Robert SHECKLEY's "Early Model" (1956) tells of a force field so efficient that it renders its wearer almost incapable of carrying out any action at all that might conceivably endanger him. The eponymous device in Poul ANDERSON's *Shield* (1963) can recharge its batteries by soaking up the kinetic energy of the bullets it stops. But these are comparatively late examples, when the concept was sufficiently familiar in sf to allow parody and sophisticated variations. It is the essence of an sf force field that by a kind of judo it converts the energy of an attacking force and repels it back on itself. Few writers, however, were able to give - or concerned to try to give - a convincing rationale for forces being conveniently able to curve themselves around an object and to take on some of the properties of hard, resistant matter. A well ground mirror might more plausibly carry out the same function, at least against death rays. The true rationale for the force field and for its close relations, the tractor beam (which pulls objects towards the beamer) and the pressor beam (which pushes them away), is that - like FASTER THAN LIGHT travel - they help tell stories. [PN]

FORD, ASHTON
Don PENDLETON.

FORD, DOUGLAS MORET
(? -?) UK writer whose *A Time of Terror: The Story of a Great Revenge* (A.D. 1910) (1906; vt *A Time of Terror: The Story of a Great Revenge* (A.D. 1912) 1908) pits the UK, aided by a valiant underground organization, against the Kaiser's invading forces. *The Raid of Dover: A Romance of the Reign of Woman*, A.D. 1940 (1910) was fairly mild-mannered. [JC]

FORD, FORD MADOX
(1873-1939) UK writer and editor, born (Joseph Leonard) Ford (Hermann) Madox Hueffer into a literary family of German descent. In protest at German behaviour in WWI he changed his name to FMF, though typically he refrained from doing so until hostilities had ended; both original books and reprints after 1919 are signed FMF. A versatile man of letters, founder/editor of the *English Review* and the *Transatlantic Review*, he is best known for *The Good Soldier* (1915) and the four Tietjens novels assembled as *Parade's End* (omni 1950 US). His first book, *The Brown Owl* (1892), was a children's fantasy. *The Inheritors: An Extravagant Story* (1901) with Joseph CONRAD (whom see for details) is sf. Fantasies include *Mr Apollo* (1908), *The "Half Moon": A Romance of the Old World and the New* (1909), a complex story of 17th-century witchcraft, and *Ladies whose Bright Eyes* (1911), a TIME-TRAVEL tale. *The Simple Life Limited* (1911), as by Daniel Chaucer, attacks utopianism. FMF inserted into the murkily RURITANIAN *The New Humpty-Dumpty* (1912), also as by Daniel Chaucer, a

rather savage caricature of H.G. WELLS, who appears as Herbert Pett, a "cockney" Great Thinker and philanderer, with a high-pitched voice, who fatally intermixes sex and revolution. *Vive le Roy* (1936 US) delineates a struggle for power in a future monarchical France. [JC]

FORD, GARRETT

William L. CRAWFORD.

FORD, JOHN M(ILO)

(1957-) US writer. He is author of some children's fiction under an unrevealed pseudonym. He began publishing sf under his own name with "This, Too, We Reconcile" for ASF in 1976. His Alternities Corporation sequence appeared in magazines 1979-81. His first novel, *Web of Angels* (1980), can be seen in retrospect as a quite remarkable rendering of the basic venues exploited by CYBERPUNK some years later, though its traditional rite-of-passage plot bears little resemblance to the quest-for-Nirvana structure given definitive form by William GIBSON in *NEUROMANCER* (1984). Beyond that basic distinction in dynamic thrust, however, and beyond JMF's failure (or disinclination) to make use of film-noir icons and the hegemony of corporate Japan, the eponymous communication/data web much resembles CYBERSPACE, though intergalactic in scope; the cowboy hacker protagonist hired out to a merchant prince is also familiar, as are the Web's automatic defence systems - Geisthounds - which hunt him remorselessly. JMF's second novel, *The Princes of the Air* (1982), is a florid SPACE OPERA whose detail is more enthralling than its span. *The Dragon Waiting* (1983) is an ALTERNATE-WORLD fantasy set in an unChristianized (and dragonless) medieval Europe; it won the 1984 World Fantasy AWARD. *The Final Reflection* * (1984), *Star Trek: Voyage to Adventure* * (1984) (as Michael J. Dodge) and *How Much for Just the Planet?* * (1987) are STAR TREK ties; *The Scholars of Night* (1988) is an associational thriller; *Casting Fortune* * (coll 1989), set in the Liavek SHARED-WORLD enterprise, contains in "The Illusionist" a book-length tale of theatrical MAGIC; and *Fugue State* (1987 in *Under the Wheel* ed Elizabeth Mitchell; rev1990 dos) is a complex sf exploration of an imprisoned psyche. *GROWING UP WEIGHTLESS* (1993) - which tied for the 1994 PHILIP K. DICK AWARD with Jack WOMACK's *Elvissey* (1993) - depicts life on the Moon in terms that seem realistic, for the human settlement there lives under strait conditions, and has a difficult relationship with Earth; but the rite of passage into adulthood at the tale's centre is not innovative. Two decades into his career, there remains some sense that JMF remains unwilling or unable to create a definitive style or mode; but his originality is evident, a shifting feisty energy informs almost everything he writes, and that career is still young. [JC] Other works: *On Writing Science Fiction* (*The Editors Strike Back!*) (anth 1981) with Darrell SCHWEITZER and George H. SCITHERS. See also: FANTASY; GAMES AND TOYS; POETRY; TIMESCAPE BOOKS.

FOREST, JEAN-CLAUDE

[r] BARBARELLA.

FORESTER, C(ECIL) S(COTT)

(1899-1966) UK writer best known for his work outside the sf field,

especially the Horatio Hornblower novels (from 1937). In addition to several sf stories - including the substantial HITLER-WINS novella, "If Hitler had Invaded England" (1960), which was posthumously collected in Gold from Crete (coll 1971) - he published a novel, The Peacemaker (1934 US), about a pacifist mathematician and schoolteacher who tries to force peace on the world through his invention of a magnetic disruptor that stops machinery. He fails. [JC]Other works: Poo-Poo and the Dragons (1942 US), a juvenile fantasy. See also: CRIME AND PUNISHMENT; DISCOVERY AND INVENTION.

FOREVER YOUNG

Film (1992). Warner Bros. Exec prods Edward S. Feldman and Jeffrey Abrams, prod Bruce Davey, dir Steve Miner, starring Mel Gibson, Jamie Lee Curtis, Elijah Wood, Isabel Glasser and George Wendt. Screenplay Abrams. 101 mins. Colour. In 1939, when his girl friend (Glasser) lapses into apparently terminal coma after being hit by a car, grief-stricken test pilot McCormick (Gibson) volunteers for a one-year experiment in CRYONICS conducted, conveniently, by his best friend (Wendt). The friend dies, and the secret experiment sits unnoticed in a military warehouse until 1992, when two small boys accidentally open the cryonic chamber, and McCormick revives, apparently still a sexy youngish man. He copes well with life 53 years on, and while being pursued by federal agents he forms a relationship with a feisty but somewhat depressed nurse (Curtis). Soon, however, it becomes clear that McCormick is ageing very rapidly. Fortunately he has previously taught the nurse's small son (Wood) to fly old bombers, since he becomes too old to operate the one he steals to elude the feds. The boy lands them safely at the house of his one-time girl friend, who, it transpires, has recovered from her coma but is now aged around eighty. The two wrinkled old persons embrace, in a culminating scene that elicits embarrassment rather than the intended tears. A romantic weepie, a thriller, a comedy, a boys' adventure film: the mix is ill judged. The sf elements are among the better things, especially the reversal of the usual stereotype, where McCormick is able, quite plausibly, to adjust rapidly to a much changed world. [PN]

FORGOTTEN FANTASY

US DIGEST-size magazine. 5 issues Oct 1970-June 1971, published by Nectar Press, Hollywood, ed Douglas MENVILLE. FF reprinted some ancient fantasy stories, but the long novel serialized in #1-#4, The Goddess of Atvatabar (1892) by William R. BRADSHAW, was probably too dated to be successful even in the nostalgia market. A second serial, Hartmann, the Anarchist (1893), by E. Douglas FAWCETT, began in #5. With his associate editor, R. REGINALD, Menville went on to publish in book form the Forgotten Fantasy Library (1973-80), 24 vols of reprint material. [FHP/PN]

FORMAN, JAMES D(UGLAS)

(1932-) US writer whose sf novels are for a young-adult audience. They began with Call Back Yesterday (1981) and its sequel, Doomsday Plus Twelve (1984), a studiedly and effectively admonitory presentation of nuclear HOLOCAUST as an event having little to do - contra much wish-fulfilment SURVIVALIST FICTION - with post-Bomb opportunities for self-fulfilment. In the first volume, a teenaged US girl's flirtation in the Middle East sets

off, through a chain of stupidities, the final war; in the second, 12 years later, a young girl persuades the remnants of the US Army not to try to attack a benevolent Japan, which has had nothing to do with the war. Cry Havoc (1988), somewhat less interestingly, features the creation of killer dogs through GENETIC ENGINEERING gone awry. [JC]

FORREST, HENRY J.

(? -?) UK writer known only for the early sf UTOPIA, A Dream of Reform (1848), which tamely introduces the usual visitor to a mildly socialist planet designed on anti-industrial lines. The book is thus a vague precursor to the work of William MORRIS. [JC]

FORREST, MARYANN

Pseudonym of an unidentified Australian writer in whose Here (Away from it All) (1969 UK; vt Here 1970 US) the residents of a Mediterranean island must deal with the consequences of the HOLOCAUST. [JC]

FORSTCHEN, WILLIAM R.

(1950-) US writer who has generally concentrated on series, beginning with the Ice Prophet sequence - Ice Prophet (1983), The Flame upon the Ice (1984) and A Darkness upon the Ice (1985) - set on Earth at some point in the future after an ecological disaster has caused the planet to become icebound. In this world technology has, according to the orthodox sf assumptions, been foolishly banned, and the eponymous prophet heralds a revival of science; but the intricacies of the realpolitik which doom him personally, and the beauties of the ice world itself, go some way to keep the sequence from being unduly familiar. The Gamester War novels - The Alexandrian Ring (1987), The Assassin Gambit (1988) and The Napoleon Wager (1993) - show a similar competence and a whole-hearted involvement in the most far-reaching dictates that SPACE OPERA can demand on those who treat its premises seriously, featuring a race of intergalactic overlords who permit the citizens of Earth and many other planets to engage in vast GAME-WORLD-like conflicts and to import, through TIME TRAVEL, figures like Alexander the Great to fight waged wars on the enormous ringworld that serves as arena. The Crystal series, written with Greg Morrison - The Crystal Warriors (1988) and The Crystal Sorcerers (1991) - is fantasy. The Lost Regiment sequence - Rally Cry! (1990), Union Forever (1991), Terrible Swift Sword (1992) and Fateful Lightning (1993) - reworks the basic structure of the Gamester War books, this time from the perspective of a Civil War Union troop transported through time to a medieval planet secretly dominated by remote aliens. Into the Sea of Stars (1986) is a singleton, as is Star Voyager Academy (1994); Wing Commander III: Fleet Action* (1994) is part of a multi-author series tied to a computer game, and Magic: The Gathering Arena* (1994) is tied to a trading-card game. WRF is a genre writer of shining efficiency, and is technically capable of the most ambitious work. [JC] See also: GAMES AND SPORTS.

FORSTER, E(DWARD) M(ORGAN)

(1879-1970) UK writer of essays and novels, the best known being A Passage to India (1924). The Celestial Omnibus, and Other Stories (coll 1911) assembles several fantasies of interest, but EMF's importance to sf lies wholly in his short story "The Machine Stops" (1909), collected in

The Eternal Moment (coll 1928), which includes further fantasies. Both books were assembled as Collected Short Stories (coll 1947; vt Collected Tales 1974 US). Cast in the form of a warning look at the distant future, rather in the mode of H.G. WELLS's THE TIME MACHINE (1895), "The Machine Stops" directly attacks, as many critics noted and as EMF himself acknowledged, the rational World State that Wells promulgated in A Modern Utopia (1905). In the hivelike underground society EMF envisions, freedom and (paramountly) the value of the individual human's personal relations with others of his kind have been eliminated. When the state collapses - when the machine stops - the depersonalized ciphers underground perish, while above, on the surface, a few genuine humans survive. In any study of the relation of DYSTOPIA to UTOPIA, the story is of vital interest. [JC]See also: AUTOMATION; CITIES; HISTORY OF SF; LEISURE; TECHNOLOGY; VIRTUAL REALITY.

FORSYTH, FREDERICK

(1938-) UK writer who gained fame with his first novel, The Day of the Jackal (1971), and whose books are generally political thrillers. The Shepherd (1975 chap), however, is a sentimental timeslip fantasy about a WWII pilot, and both The Devil's Alternative (1979) and The Negotiator (1989) are NEAR-FUTURE thrillers, the first predicting the failure of the Russian harvest, the second predicting (wrongly) a Soviet-generated crisis. [JC]

FORT, CHARLES (HOY)

(1874-1932) US journalist and author. Working from extensive notes collected mainly from newspapers, magazines and scientific journals, CF compiled a series of books containing information on "inexplicable" incidents and phenomena. Though characterized as an anti-scientist, CF reserved his attacks for the "scientific priestcraft" and their dogmatic "damning" of unconventional or unwanted observations. CF's own belief was simply a monistic faith in the unity of all things, and this forms the principal connection between his apparently unrelated groups of data. His books are written in an eccentric style and are interspersed with wilfully absurd theories and ideas. The first two, both still (1992) unpublished, were called simply X and Y; X proposes that Earth is controlled from MARS and Y supports the HOLLOW-EARTH hypothesis. The Book of the Damned (1919) and New Lands (1923) are largely concerned with astronomical and meteorological events, while Lo! (1931) and Wild Talents (1932) are more interested in human and animal phenomena. The four published books are crammed with data, and the sheer bulk of information is impressive; however, there is no attempt to evaluate the numerous reports cited, so that silly-season urban legends and hoax stories are jumbled in with a too-sparse leavening of more reliable accounts. Reading CF therefore feels much like eating a stew of dubious provenance: the taste is good but one worries about what went into it. CF himself was perfectly aware that much of his data was, to say the least, doubtful; of The Book of the Damned he wrote: "This book is fiction, like Gulliver's Travels, The Origin of Species, Newton's Principia, and every history of the United States." Moreover, he was reluctant to invent theories (other than whimsical ones) to account for his data - a humility that distances his books from the

sketchy fantasies of later writers such as Erich VON DANIKEN. After CF's death, compilation of data was continued by the Fortean Society, founded in 1931 by a group that included Ben HECHT, John Cowper POWYS, Alexander Woollcott (1887-1943) and Theodore Dreiser (1871-1945), and in the journals *Doubt* (US) and *Lo!* (UK). Information is currently collected by the International Fortean Organization, who publish *INFO Journal*, and by the UK publication *Fortean Times*. Prominent modern Forteans include William F. Corliss, John Michell and Robert J.M. Rickard. CF's list of bizarre observations and events (from astronomical heresies to teleportation cases), together with his demand for original and undogmatic interpretation, influenced and stimulated many sf writers. CF's most enthusiastic sf follower was Eric Frank RUSSELL, who considered him "the only real genius sf ever had"; Russell's *Sinister Barrier* (1943) and *Dreadful Sanctuary* (1951) are based on Fortean ideas. Damon KNIGHT, another author influenced by CF, published a standard biography, *Charles Fort, Prophet of the Unexplained* (1970). The influence of CF's ideas on sf was particularly strong in the magazines ed John W. CAMPBELL Jr, *Unknown* and *ASF*. Fortean elements rarely appear in more recent written sf, though Patrick TILLEY's *Fade-Out* (1975) is one exception, and films such as *CLOSE ENCOUNTERS OF THE THIRD KIND* (1977), with its discovery of the famous "lost" Flight 19, maintain the tradition. FORTRESS

Film (1992, but released 1993). Fortress Films/Village Roadshow Pictures/Davis Entertainment Production. Dir Stuart Gordon; screenplay Steve Feinberg, Troy Neighbors; starring Christopher Lambert, Kurtwood Smith, Loryn Locklin, Lincoln Kilpatrick, Clifton Gonzalez Gonzalez, Jeffrey Combs, Tom Towles, Vernon Wells. 95 mins. Colour. In a near-future and apparently semi-fascist USA it is illegal to have more than one child, and ex "Black Beret" soldier John Brennick (Lambert) and his pregnant wife (Locklin), having lost one child, get caught attempting to cross the border into Mexico. Both are imprisoned (in different areas) in the Fortress, a privately run 30-storey, futuristic, underground prison in the desert. The director is a demented cyborg, the gaolers are androids grown from redundant babies, the prisoners carry explosive balls in their stomach which explode during escape attempts and things look bad. In an escalating series of exploitation-movie over-the-top lunacies, a breakout is achieved, but not before pregnant Mrs Brennick is threatened with fatal Caesarean by circular saw. The film has only one redeeming feature, a sense that exploitation sf-cinema is fun, and its various unpleasantnesses are achieved with commendable vigour and bad taste. Lambert's performance is dire. This Australian/American co-production was the first of two sf future-prison break-out movies with military heroes to be made in Australia within two years, the other being *No Escape*, a more humane but less watchable film. [PN]

FORWARD, ROBERT L(ULL)

(1932-) US physicist and writer, senior scientist at Hughes Research Laboratories and one of the most devoted HARD-SF authors of the 1980s. He

began publishing sf with "The Singing Diamond" in Omni (1979), and made a very considerable impact with his first novel, DRAGON'S EGG (1980), which, along with its sequel Starquake! (1985), is set in a most intriguing venue - a NEUTRON STAR whose surface GRAVITY is 67,000,000,000 gees - and concentrates on the immensely enjoyable ALIEN cheela who inhabit this venue, living and evolving at an enormous rate (a generation passes in 37 minutes). The human scientists who visit the cheela of Dragon's Egg inadvertently civilize them over a 24-hour period. In the sequel the cheela, now evolved far beyond their glacial human teachers, very quickly explore the entire Galaxy, though the catastrophe of the title soon complicates the plot, leading to further rapid-fire EVOLUTION, invention and mind-play. RLF's second successful novel, The Flight of the Dragonfly (1982-3 ASF as "Rocheworld"; exp 1984; exp 1985; orig full version restored, vt Rocheworld 1990), posited a second world of almost equal fascination. On the eponymous dumb-bell-shaped double-planet is placed an alien race whose individuals are characterized more strongly than are the humans involved in an exploratory mission there. (Despite the striking resemblance in storylines and the titles, this novel is unrelated to the earlier series.) Once again the self-confident articulacy of RLF's scientific mind dominates proceedings, and the novel concludes (as did his first) with a symposium which analyses the ideas underlying the book. However, the unfortunate corollary to this style of novel-writing is that, when no scientific conceit governs the structure of the tale, character and plot can prove, as in RLF's case, a poor substitute. Martian Rainbow (1991), which has no such central world-building conceit to govern it, consequently fails to convince in its simplistic rendering of a Russian-US conflict on Mars, or in the cardboard triumphalism of its human cast. More than almost any other hard-sf writer, RLF dazzles within his bailiwick and embarrasses outside it. [JC] Other works: Timemaster (1992), a LIBERTARIAN tale. Nonfiction: Future Magic (1988); Mirror Matter: Pioneering Antimatter Physics (1988) with Joel Davis. See also: ASTRONOMY; PLANETARY ROMANCE; SCIENTISTS; STARS.

FOSS, CHRIS(TOPHER)

(1946-) UK illustrator. CF studied architecture at Cambridge University, and has worked in sf ILLUSTRATION since 1970, primarily as a cover artist; he uses brush and airbrush to excellent effect. He is best known in sf circles for his hardware, particularly his SPACESHIPS: intricate, asymmetrical, almost Gothic, these have been deeply influential not only on other UK illustrators but also on film designers. Ever since STAR WARS (1977), most movie spacecraft look as if they have been designed by CF, even though they have not - although he did work as a concept artist on ALIEN (1979). (Paradoxically, outside sf, CF is better known in commercial illustration for his detailed figure studies; he did the many romantically erotic drawings for Alex COMFORT's The Joy of Sex [1972] and More Joy of Sex [1973].) CF's smooth, airbrushed, representational style, demonstrated on hundreds of covers, spearheaded a revolution in UK sf paperback design in the 1970s, and had many imitators. It was what the market wanted, and after a decade had become almost tedious in its predictability - though that was the publishers' fault, not CF's. His sf work is often a celebration of technology - monstrous spaceships or vast robots, beautiful

and deadily, rear up over landscapes and skyscapes where humans are absent or tiny - yet the effect is bracing. *Science Fiction Art* (1976), with an introduction by Brian W. ALDISS, is a portfolio of his work; others are *21st Century Foss* (1978) and *The Chris Foss Portfolio* (1990). *Diary of a Spaceperson* (1990) is unusual and not wholly successful in combining the erotic with the scientific in what purports to be the illustrated diary (written by CF) of a spacewoman who has sexual congress with an alien plant. [PN] See also: TECHNOLOGY.

FOSTER, ALAN DEAN

(1946-) US writer, raised in Los Angeles; interestingly, he has listed Carl Barks (1901-), the long-unacknowledged creator of the best COMIC strips and books in the Disney stable, as one of his formative influences (on his depiction of older characters). ADF began publishing sf with "Some Notes Concerning a Green Box" for *The Arkham Collector* in 1971, and has collected short stories in *With Friends Like These . . .* (coll 1977), its companion, . . . *Who Needs Enemies?* (coll 1984), and *The Metrognome and Other Stories* (coll 1990). ADF is best known, however, for a prolific and generally competent output of novels and novelizations. Several of his best books fit into a loose double sequence of novels set in a multifarious Galaxy dominated by the Humanx Commonwealth, a venue well suited as an arena for SPACE OPERAS and encounters with ALIEN races. The central sequence follows the life of young Flinx, an orphan with PSI POWERS and the friendship of a highly potent pet alien named Pip, and comprises (in order of internal chronology): *For Love of Mother-Not* (1983); a connected trilogy made up of ADF's first novel, *The Tar-Aiyem Krang* (1972), *Orphan Star* (1977) and *The End of the Matter* (1977); *Bloodhype* (1973); and *Flinx in Flux* (1988). A second, looser sequence consists of *Nor Crystal Tears* (1982); *Midworld* (1975); a connected trilogy made up of *Icerigger* (1974), *Mission to Moulokin* (1979) and *The Deluge Drivers* (1987), the three comprising his best work to date; *Voyage to the City of the Dead* (1984); and *Sentenced to Prism* (1985). Sometimes reminiscent of the earlier work of Poul ANDERSON, the sequence is expansive and colourful, though tending to melodrama and prone to the fable-like use of such sf and fantasy elements as ESP and dragons. Individual novels have tended more to a clear-headed commercial exploitation of various genre categories, though *Cachalot* (1980), whose whale-like aliens are of interest, *The Man who Used the Universe* (1983) and *Cyber Way* (1990) perhaps stand out. Of ADF's numerous novelizations, the most notable are possibly *Dark Star* * (1974), based on *DARK STAR* (1974), *Star Wars* * (1976), as by George LUCAS, the director of *STAR WARS* (1977), *Alien* * (1979), based on *ALIEN* (1979), *Aliens: A Novelization* * (1986), based on *ALIENS* (1986), and *Alien*

FOSTER, GEORGE C(ECIL)

(1893-?) UK writer whose first novel of genre interest, *The Lost Garden* (1930), is a fantasy in which survivors of ATLANTIS experience world history up to the present. In *Full Fathom Five* (1930) prehistoric episodes are linked by REINCARNATION to scenes set in the present. *Awakening* (1932) subjects the contemporary (and the future) world to the perspective of a soldier awakening from suspended animation. *Cats in the Coffee* (1938), under the nom de plume Seaforth, presents through reincarnation a

retrospective vision of prehistory, and *We Band of Brothers* (1939), also as by Seaforth, combines future- WAR events and elucidatory conversations between a man of the deep future and a man of the deep past. *The Change* (1963) is routine. In almost all his work, conventional plots are twisted to make room for perspectives on the nature of human history; in this sense, GCF illuminates a central strategy of the UK SCIENTIFIC ROMANCE. [JC/PN]See also: IMMORTALITY.

FOSTER, M(ICHAE) A(NTHONY)

(1939-) US writer, former data-systems analyst and sequentially a Russian linguist and ICBM launch-crew commander to the US Air Force; he is also a semiprofessional photographer. After some poetry, published privately as *Shards from Byzantium* (coll 1969 chap) and *The Vaseline Dreams of Hundifer Jones* (coll 1970 chap), he began to publish sf with the ambitious *Ler* trilogy about a race of genetically created SUPERMEN. *The Gameplayers of Zan* (1977), a very long novel formally constructed on the model of an Elizabethan tragedy, describes a period of climactic tension between the *ler* and the rest of humanity, and is set on Earth. *The Warriors of Dawn* (1975), published first but set later, is a more conventional SPACE OPERA in which a human male and a *ler* female are forced to team up to try to solve a complexly ramifying problem of interstellar piracy. *The Day of the Klesh* (1979) brings the *ler* and the eponymous race of humans together on a planet where they must solve their differences. The books are slow in the telling, but impressively detailed in their construction of *ler* culture and language. The *Morphodite* sequence which followed comprises *The Morphodite* (1981), *Transformer* (1983) and *Preserver* (1985), and similarly uses devices of genetic manipulation to buttress complex plots, though in this case the shape-changing, revolution-fomenting protagonist dominates the tale as trickster and superman. *Waves* (1980) rather sluggishly recalls Stanislaw LEM's *SOLARIS* (1961) in a tale of political intrigue on a planet whose ocean is intelligent. The four novellas collected in *Owl Time* (coll 1985) are told in challengingly various modes, and derive strength from their mutual contrast. MAF's career to date could be seen as a prelude to the major book which should bring him the acclaim he merits. [JC]See also: GENETIC ENGINEERING; LIVING WORLDS; PLANETARY ROMANCE.

FOSTER, RICHARD

Kendell Foster CROSSEN.

FOSTER, W(ALTER) BERT(RAM)

(1869-1929) US author of two borderline sf novels, *The Eve of War* (1904) and *The Lost Expedition* (1905). [JC]

FOUNDATION: THE REVIEW OF SCIENCE FICTION

UK semi-academic journal, published by the SCIENCE FICTION FOUNDATION of North East London Polytechnic (now known as the University of East London) from Mar 1972, and more recently, since 1993 when the SFF moved, of the University of Liverpool, current, 61 numbers to summer 1994, 3 numbers a year. #1-#4 ed Charles BARREN, #5-#13 ed Peter NICHOLLS, #14-#19 ed Malcolm EDWARDS, #20-#36 ed David PRINGLE, #37 onwards ed Edward JAMES. Much of the journal's flavour has resulted from the work of long-running

features editor Ian WATSON, who held that position from #10 (1976) to #51 (1991). The most influential reviews editors have perhaps been John CLUTE (#20-#47) followed by Colin GREENLAND (from #47). Other members of the editorial board have included Kenneth BULMER, George HAY and Christopher PRIEST. Under James's editorship the editorial address has been the University of York, where he teaches. F:TROSF has a distinctive flavour regarded by US readers as typically UK, though in fact some of its editors have been foreigners. After a shaky beginning, it soon became perhaps the liveliest and indeed the most critical of the big three critical journals - the others being EXTRAPOLATION in the USA and SCIENCE FICTION STUDIES in Canada - though lacking the academic authority of at least the latter. Since there is very little formal use of sf in UK universities, there is no academic base to provide a rigidly scholarly features section. The real strengths of F:TROSF have always been its book reviews and its willingness to publish articles about current sf; it has been weaker in theoretical and historical studies. Nevertheless, it has provided a platform for serious sf criticism in the UK. Its contributors - often professional writers of fiction rather than academics - have tended to be more aggressively judgmental, and more intent upon defining a critical canon for sf, than their politer US colleagues. All of this may explain why its readership appears to be less academic than that of the other scholarly journals, consisting more of fans and sf writers. The US scholar Gary K. WOLFE sees F:TROSF, not wholly unadmiringly (and only in part incorrectly), as partaking of "certain traditions of fan scholarship". From the beginning a feature of F:TROSF has been the Profession of Science Fiction series (45 to date) of autobiographical pieces by sf writers; a selection of Profession essays appeared later as The Profession of Science Fiction (anth 1992) ed Edward James and Maxim JAKUBOWSKI. The first 8 issues of F:TROSF were republished in book form as Foundation, Numbers 1 to 8: March 1972-March 1975 (1978) with intro by Peter Nicholls. [PN]

4D MAN

(vt The Evil Force UK; vt Master of Terror US) Film (1959). Fairview/Universal. Coproduced and dir Irwin Shortess Yeaworth Jr, starring Robert Lansing, Lee Meriwether, James Congdon. Screenplay Theodore Simonson, Cy Chermak, from an idea by Jack H. Harris. 85 mins. Colour. A small, interesting film made by the same producer/director team, Jack H. Harris and Yeaworth, that had already made The BLOB (1958). Lansing plays a scientist who uses his brother's research on the amplification of brainwaves and finds that as a result he can interpenetrate with solid matter - walk through walls, etc. The unfortunate side-effect is that he draws on the life force of others (an idea used again in LIFEFORCE [1985]), which renders them instantly dead of old age. There is a love triangle, and some brooding angst from Lansing, who oscillates between delight in his new power and guilt. [PN]

FOUR-SIDED TRIANGLE

Film (1952). Hammer. Dir Terence Fisher, starring Barbara Payton, Stephen Murray, John Van Eyssen. Screenplay Paul TABORI, Fisher, based on The Four-Sided Triangle (1939 AMZ; exp 1949) by William F. TEMPLE. 81 mins, cut to 71 mins. B/w. A scientist builds a machine capable of duplicating

human beings. He duplicates the woman he loves but who is in love with another man, only to have the duplicate, too, fall in love with that other man. This is a low-budget film and suffers from it; there appear to be no prints now in circulation. [JB]

FOURTH DIMENSION DIMENSIONS.

FOWLER, KAREN JOY

(1950-) US writer with degrees in political science and north Asian studies. She began publishing sf with "Recalling Cinderella" in L. Ron Hubbard Presents Writers of the Future, Vol I (anth 1985) ed Algis BUDRYS, and caused considerable stir in the sf field with the quality of the work assembled in her first collection, ARTIFICIAL THINGS (coll 1986), which helped gain her the 1987 JOHN W. CAMPBELL AWARD for Best New Writer. Her short stories - later collections are Peripheral Vision (coll 1990 chap) and Letters from Home (anth 1991 UK), which contains separate tales by her, Pat CADIGAN and Pat MURPHY - gave a first and entirely deceptive appearance of reticence, but soon revealed steely ironies, an insistence on the essential solitude of her protagonists (which evoked FEMINIST arguments about alienation but did not dwell upon the specifics of oppression or male-female discord) and an urgent hilarity. Some stories, like "Face Values", are pure sf; others shift into fantasy or FABULATION, giving ambiguous cues as to any "proper" reading. This sure-footed refusal to give her readers much epistemological security - much sense that her worlds could be firmly apprehended - also governed the telling of KJF's first novel, the remarkable SARAH CANARY (1991), which - along with John FOWLES's A Maggot (1985) - may be the finest First Contact novel (COMMUNICATIONS) yet written. A strange female figure - woman or alien, no one knows, or can even formulate the question - arrives in the state of Washington in 1873 and is dubbed Sarah Canary, because of the birdlike sounds she makes. In attempting to deal with her, the Chinese worker to whom she has attached herself is exposed to a long array of those living beings that the sciences of the 19th century have attempted to control through "knowledge": Indians, Blacks, the insane, immigrants, women, animals, artists, confidence men. Sarah Canary, who stands for them all in the indescribable melody of her Being, finally disappears, never having said a word. As an emblem of the enigma behind the idea of First Contact she is perhaps definitive. As a dramatization of the self-deluding imperialisms of knowledge, SARAH CANARY is equally convincing. [JC]Other work: The War of the Roses (1985 IASFM; 1991 chap). See also: INTERZONE; SOCIOLOGY; WRITERS OF THE FUTURE CONTEST.

FOWLER, SYDNEY

S. Fowler WRIGHT.

FOWLES, JOHN (ROBERT)

(1926-) UK writer who remains perhaps most famous for his first novel, The Collector (1963), but whose second novel, The Magus (1965 US; rev 1977 UK), especially in the conciser revised version, more powerfully explores the labyrinths of obsession and manipulation underlying, in all of JF's work, the rigmaroles of daylight reality. In this novel a series of

seemingly supernatural contrivances separates the unpleasant protagonist from his love and from any security, causing him to learn something about himself before happiness is allowed to reign; rational explanations in the end from the Daedalus-like magus do little to attenuate a sense of magic-realist entrapment. Of JF's other novels, *A Maggot* (1985) is sf. Set in the 18th century, it superlatively explores the epistemology of First Contact - the study of the possible nature of human PERCEPTIONS of something genuinely ALIEN, genuinely Other - by telling a version of the life-story of the mother of Ann Lee (1736-1784), historical founder of the Shaker religion; the woman's response to the insoluble knot of PERCEPTIONS visited upon her when she inadvertently stumbles upon some time travellers, possibly from Earth's future, is a literal seed-bed (she is pregnant at the time) for Enthusiasm. [JC]Other works: *Mantissa* (1982).

FOX, GARDNER F(RANCIS)

(1911-1986) US lawyer and author, who began writing in 1937 for DC COMICS, including SUPERMAN. Arguably his most important work was for COMICS: though it is claimed that he published at least 160 books under various names, this pales beside his 4000 or more comic-book stories; he created The Flash as well as the first SUPERHERO team, the Justice Society of America, in 1940. In the 1960s he was one of those responsible for reviving many of the superheroes from the 1940s and also created new characters, like The Atom and Adam Strange. He began publishing sf/fantasy in non-graphic form with "The Weirds of the Woodcarver" for *Weird Tales* in 1944. He used several pseudonyms at this time, including Jefferson Cooper, Jeffrey Gardner and James Kendricks, though not for sf. He was an active contributor to *Planet Stories* from 1945, and soon established a reputation for historical romances like *The Borgia Blade* (1953), not beginning to publish sf novels, either under his own name or under his later pseudonyms Rod Gray, Simon Majors and Bart Somers, until *Five Weeks in a Balloon** ** (1962), which novelizes the film of the Jules VERNE novel. GFF's first sf novel proper is *Escape Across the Cosmos* (1964), in which a man fights a menace from another DIMENSION; it was plagiarized as *Titans of the Universe* in various 1978 editions, variously as by Brian James Royal, James Harvey and Moonchild. His best is probably *The Arsenal of Miracles* (1964 dos), which combines SPACE OPERA, GALACTIC EMPIRES and a romantically conceived hero who prefigures the interest in HEROIC FANTASY which dominated GFF's later output. His sf series are the two fantasy-like Alan Morgan adventures - *Warrior of Llarn* (1964) and *Thief of Llarn* (1966) - and, as by Bart Somers, the Commander Craig space operas: *Beyond the Black Enigma* (1965) and *Abandon Galaxy!* (1967). GFF was an efficient storyteller with no visible pretensions to significance or thematic originality. [JC/PN]Other works: *The Hunter out of Time* (1965); *The Druid Stone* (1967), as by Simon Majors; the Kothar series of heroic-fantasy novels, comprising *Kothar - Barbarian Swordsman* (coll of linked stories 1969), *Kothar of the Magic Sword!* (1969), *Kothar and the Demon Queen* (1969), *Kothar and the Conjuror's Curse* (1970) and *Kothar and the Wizard Slayer* (1970); *Conehead* (1973); the Kyrik heroic-fantasy series, comprising *Kyrik: Warlock Warrior* (1975), *Kyrik Fights the Demon World* (1975), *Kyrik and the Wizard's Sword* (1976) and *Kyrik and the Lost Queen* (1976); *Carty* (1977).As Rod Gray (house name): *Of the soft-porn Lady* from

L.U.S.T. sequence, those by GFF and of some sf interest are *The Poisoned Pussy* (1969), *Laid in the Future* (1969), *Blow my Mind* (1970) and *The Copulation Explosion* (1970).

FOX, SAMUEL MIDDLETON

(1856-1941) UK writer whose sf novel, *Our Own Pompeii: A Romance of Tomorrow* (1887), a fairly mild-mannered SATIRE of high society, features a pleasure city on the Riviera which proves too expensive to run. [JC]

FPCI

FANTASY PUBLISHING COMPANY INC.

F.P.1 ANTWORTET NICHT

Film (1932). UFA. Dir Karl Hartl, starring Hans Albers, Sybille Schmitz, Paul Hartmann, Peter Lorre. Screenplay Walter Reisch, Kurt SIODMAK, based on F.P.1 *Antwortet Nicht* (1932) by Siodmak. 111 mins. B/w.F.P.1 has been described as being in the tradition of *METROPOLIS* (1926) and *Die FRAU IM MOND* (1929), but Karl Hartl was no Fritz LANG. It is a slow-moving film about the construction of a giant floating runway (*Flugzeug Platform 1*) to be moored in mid-Atlantic for refuelling transatlantic flights, but is actually more concerned with a tedious love triangle. The story is about an intrepid aviator who sees flight as a near-mystical experience, and about sabotage and noble renunciations - all pulp materials, but with none of the slickness or verve of similar Hollywood films of the period. At great expense a flying platform was actually built for the film, on the island of Oie. The same production team made *GOLD* (1934).An English version (*FP1 DOESN'T ANSWER*) and a French one, starring Charles Boyer, were made of F.P.1 at the same time as the German version. [JB/PN]

F.P.1 DOESN'T ANSWER

Film (1932). UFA. Technical credits as for *FP1 ANTWORTET NICHT*, but starring Conrad Veidt, Jill Esmond and Leslie Fenton. 90 mins. B/w.This is the shorter English-language version of the German film, and was shot at the same time. The acting is better than in the German version. [PN]

FRAME, JANET (PATTERSON)

(1924-) New Zealand writer , some of whose stories - especially those assembled in *Snowman*, *Snowman: Fables and Fantasies* (coll 1963 US) and *You Are Entering the Human Heart* (coll 1983) - are fantasy. The most intense of her several novels explore the world through the telling perceptions of protagonists categorized as psychiatrically disturbed, situations frequently described in terms that utilize the languages of the fantastic. *Intensive Care* (1970 US) is told in part through the eyes of a young woman defined as mentally deficient in a post- HOLOCAUST world where those so described are killed after being experimented upon. *The Carpathians* (1988 UK) is a fantasy set in an imaginary country. [JC]

FRANCE

The history of France's relationship with sf is one of long flirtation, marked through the centuries by episodic outbursts of passion and, in recent times, by an increasing shift from authorship to readership, from the active to the passive role, as more and more people become avid consumers of the US/UK sf tradition. A few remarkable French writers of sf

have emerged, but, although the 1970s were an active period for French sf, no truly indigenous school of writing has yet taken shape. A quest for "great ancestors" in the corpus of French literature would be endless. Many texts - some vintage classics, some long-forgotten oddities - show that FANTASTIC VOYAGES, the search for UTOPIA, and speculation about other worlds and alien forms of society were constant preoccupations. People tend to overlook the fact that the last parts of Francois RABELAIS's Gargantua and Pantagruel (1532-64; trans 1653-94), especially L'isle sonante ["The Ringing Island"] (1562), are clearly set in the future and almost constitute an early style of SPACE OPERA with their processing of foreign languages, customs and landscapes. One century later, interest in the otherworldly asserted itself in works such as CYRANO DE BERGERAC's Histoire comique contenant les etats et empires de la lune (1657; trans as A Voyage to the Moon 1659) and Bernard le Bovyer de FONTENELLE's Entretiens sur la pluralite des mondes habites (1686; trans J. Glanvill as The Plurality of Worlds 1929), but it is in the 18th century that we encounter the most direct forerunner of sf in its modern sense, in the form of the conte philosophique, or philosophical tale. Conditions were then ideal for the emergence of something akin to sf: the Siecle des Lumieres was one of universal curiosity, of philosophical audacity and political revolution; it gave birth to all-encompassing spirits such as that of Denis Diderot (1713-1784) and saw the writing of the Encyclopedie (1751-2), which merged the two aspects of culture, literary and scientific, the divorce of which would be one of the main sources of the decline of French sf in our time. The conventions of the conte philosophique - which generally takes the shape of a fantastic voyage - are predecessors to those of sf: the voyage to the far island symbolizes what we now imagine in interplanetary travel, and the islanders themselves stand for what are now aliens, while the study of their civilizations serves as a mirror/criticism of our institutions. Conversely, the satire of French (= European) society as seen through foreign eyes was a device that had already been used by Charles Montesquieu (1689-1755) in his Lettres persanes ["Persian Letters"] (1721). The genre could be illustrated by numerous stories (Pierre VERSINS states that "at the beginning of the 18th century, at least one speculative work was published each year"), but among its landmarks were VOLTAIRE's Micromegas (Berlin 1750; France 1752), Louis-Sebastien MERCIER's L'an deux mille quatre cent quarante (1771; trans as Memoirs of the Year Two Thousand Five Hundred 1772), RESTIF DE LA BRETONNE's La decouverte australe ["The Southern-Hemisphere Discovery"] (1781) and Giacomo CASANOVA di Seingalt's Isocameron (1788), an early story of travel to the centre of the Earth. Such was the vogue of speculation that in 1787 a publisher started a list of Voyages imaginaires which ran to 36 volumes and may be considered the first sf series ever. Perhaps the most significant sf figure of the early 19th century was Felix Bodin, whose Le Roman de l'avenir ["The Romance of the Future"] (1834) consists of a long theoretical discussion of the nature of futuristic fiction, this being a preface to a fragmentary or unfinished novel about a future, in which mechanized warfare appears. As Paul K. ALKON demonstrates in Origins of Futuristic Fiction (1987), Bodin's book presents an aesthetic which - significantly for sf - refers not only to a genre which takes the future as its subject but to one that itself will

exist only in the future. The remainder of the 19th century would seem to be entirely dominated by the formidable silhouette of Jules VERNE, but it was a very active period in other respects too, carrying on the elan of the preceding era. Scientific achievements and the Industrial Revolution gave birth to popular novels in the same way that philosophical turmoil had produced its share of contes. Verne himself stands apart because he was the first writer to be systematic about it and build his whole work according to a vast design, as described by his publisher Hetzel in 1867: "His aim is to sum up all knowledge gathered by modern science in the fields of geography, geology, physics, astronomy, and to remake, in his own attractive and picturesque way, the history of our Universe." From then to his death in 1905, Verne gave Hetzel the 64 books which make up his *Voyages extraordinaires*, subtitled "*Voyages dans les mondes connus et inconnus*" ["*Voyages into the Known and Unknown Worlds*"]. Jacques Van Herp (1923-), who himself wrote a large number of works of CHILDREN'S SF as Michel Jansen, has argued that the huge success Verne enjoyed, basically among adolescents, drove serious critics and historians away from him, so that - in France anyway - one may trace back to Verne the lame academic quarrel about whether sf, or "anticipation", is high literature or not. Indeed, that question had never been raised before; it took a bourgeois system of education (see below) to institute class-struggle among books. Verne's work went the way of Robinson Crusoe or Treasure Island: that of a sort of universal reputation which does not preclude underestimation or misunderstanding. Until recently, Verne was ignored by the universities, but fascinated such diverse minds as those of Raymond Roussel (who called him "le plus grand genie litteraire de tous les siecles" ["the greatest literary genius of all time"]), Michel BUTOR and Michel Foucault (1926-1984). Among Verne's contemporaries in the field, one should at least mention the astronomer Camille FLAMMARION and his *Recits de l'infini* (1872; trans as *Stories of Infinity: Lumen - History of a Comet in Infinity* 1874) and the novelist cum draftsman Albert ROBIDA, who was no less prolific than Verne, whom he parodied in his *Voyages tres extraordinaires de Saturnin Farandoul* (1879; for book publication ROBIDA) which purportedly took their hero "into all the countries known and even unknown to Mr Jules Verne". Robida proved himself a visionary as well as a humorist in his *Le vingtieme siecle* ["*The Twentieth Century*"] (1882), *La vie electrique* ["*The Electric Life*"] (1883) and "*La guerre au vingtieme siecle*" ["*War in the 20th Century*"] (La caricature 1883). By the turn of the century, however, the one name Verne had to contend with was that of J.H. ROSNY aine, a writer who possibly deserves as much consideration. The Rosnys, two brothers of Belgian extraction, started together a writing career that was eventually to win them seats in the Academie Goncourt, but we are concerned only with the numerous stories and the 17 novels of Rosny aine (the elder brother), which run from the prehistoric, such as *La guerre du feu* ["*The War of Fire*"] (1909), through the cataclysmic *La mort de la terre* ["*Death of the Earth*"] (1910) to the futuristic *Les navigateurs de l'infini* ["*Navigators of the Infinite*"] (1925). Rosny aine consistently brought to the field, besides a solid scientific culture, a breadth of vision at times worthy of Olaf STAPLEDON. The period ranging from the 1880s to the 1930s, largely predating the US boom of the 1920s, was the true golden age of French sf: we might call it France's pulp era.

Not that there ever existed any specific sf magazines, but wide-circulation periodicals such as *Journal des voyages* and *La science illustree* - and, later, *Je sais tout*, *L'Intrepide* and the very important *Sciences et voyages* - regularly ran stories and serialized novels of "anticipation". Sf was thus lent a degree of respectability by being introduced as an extension of travel and adventure stories. In the general title given to his work, Jules Verne had proceeded similarly from "known" to "unknown" worlds. Apart from isolated works by nonspecialists such as *L'Eve future* (1886; trans as *The Eve of the Future* 1981 US; new trans as *Tomorrow's Eve* 1982 US) by VILLIERS DE L'ISLE-ADAM, *L'île des pingouins* (1908; trans as *Penguin Island* 1909) by Anatole FRANCE and *Le Napus, fleau de l'an 2227* ["The 'Disappearance': Scourge of the Year 2227"] (1927) by Leon Daudet (1868-1942), this period gave birth to a host of popular writers: Paul d'Ivoi, Louis BOUSSENARD, then Gustave Le Rouge, Jean de La Hire, Andre Couvreur, Jose Moselli, Rene Thevenin, etc. All were not of equal worth, but three names are outstanding: Maurice RENARD, author of the amazing *Le docteur Lerne* (1908; trans as *New Bodies for Old* 1923), which he dedicated to H.G. WELLS; Jacques SPITZ, whose best novel was *L'oeil du purgatoire* ["The Eye of Purgatory"] (1945) and whose earlier *L'agonie du globe* (1935; trans as *Save the Earth* 1936) was given a UK edition; and Regis Messac (1893-1943), whose *Quinzinzinzili* (1935) and *La cite des asphyxies* ["City of the Suffocated"] (1934) exhibit a sinister mood and grim humour that deserve to gain him a new audience today. WWII put an end to this thriving period, and during the 1940s only one writer of note appeared: Rene BARJAVEL, with *Ravage* (1943; trans as *Ashes, Ashes* 1967) and *Le voyageur imprudent* (1944; trans as *Future Times Three* 1971). At the end of WWII two factors were to bear heavily on the future of sf in France. The first was the growing separation, at school, in the universities and in all thinking circles, between *les litteraires* and *les scientifiques*. This made for a lack of curiosity on the part of aspiring novelists about science and its possible effects on the shapes of our lives, and drove many talents away from the genre, which was definitely viewed as teenager-fodder. France had, as it were, ceased to dream about its own future - and about the future generally. Second, whatever interest in these matters existed was satisfied from another source, the USA. In the years following WWII the French public discovered all at once jazz, US films, thrillers and the US GOLDEN AGE OF SF. One key personality of the period was Boris VIAN, novelist, songwriter, film buff and jazz musician, who translated both Raymond Chandler and A.E. VAN VOGT. This was the time of the creation of *Le club des savanturiers* by Michel Pilotin, Vian, Raymond Queneau and Audiberti. In 1951, Queneau wrote an introductory essay in *Critique*: "Un nouveau genre litteraire: les sciences-fictions" ["A New Literary Genre: SF"], followed two years later by Michel Butor, with "La crise de croissance de la science-fiction" (1953 *Cahiers du Sud*; trans as "SF: The Crisis of its Growth", *Partisan Review* 1967; reprinted in *SF: The Other Side of Realism* [anth 1971] ed T. CLARESON). Sf was again fashionable but mainly in translated form. Between 1951 and 1964, the *Rayon fantastique* series published 119 titles, mostly US; it was followed in 1954 by *Presence du Futur*, which still exists today. By the end of the decade some French names were appearing on the list of the former (Francis Carsac [pseudonym of Francois Bordes (1919-1977)], Philippe CURVAL and

Albert Higon, pseudonym of Michel Jeury [1934-] and the latter (Jacques STERNBERG, Jean Hougron), but for the most part French authors were published, often under pseudonyms, in the less prestigious Fleuve noir series, created in 1951. The best of these were Stefan WUL, B.R. Bruss (Roger Blondel), Kurt Steiner (Andre Ruellan) and Gilles d'Argyre (Gerard KLEIN). In 1953 Editions Opta launched the French editions of Gal and FSF, Galaxie and Fiction, whose contents differ notably from those of their US models. These two would remain for many years the principal outlet for US stories and a springboard for new French talents, including critics. But such were few and far between. The initial impetus given by the discovery of US sf in the 1950s slowed down during the following decade. One magazine which devoted more space to indigenous authors, Satellite, had a brief life. Among the new writers, Michel Demuth, Alain Doremieux and Gerard Klein were soon absorbed by editorial responsibilities and their output consequently became irregular. The most personal voice during this period and the succeeding years has been that of Philippe Curval who, from *Le ressac de l'espace* ["The Breakers of Space"] (1962) through *Cette chère humanité* ["This Dear Humanity"] (1976), has consistently maintained a high standard while never imitating the US model. Beside him we should again mention Michel Jeury, who resumed writing (under his own name) with *Le temps incertain* (1973; trans Maxim Jakubowski as *Chronolysis* 1980 US), and Daniel Drode (1932-1984), whose only novel was *Surface de la planète* ["Surface of the Planet"] (1959). Mainstream writers occasionally tackled sf: Pierre BOULLE with *La planète des singes* (1963; trans as *Planet of the Apes* 1963; vt *Monkey Planet* UK); Robert MERLE with *Un animal doué de raison* (1967; trans as *The Day of the Dolphin* 1969) and *Malevil* (1972; trans 1974); and Claude Ollier, an adept of the *nouveau roman*, with *La vie sur Epsilon* ["Life on Epsilon"] (1972). In the 1970s the situation underwent new changes, once more due to a definite influence: that of the UK NEW WAVE and in particular post- NEW-WORLDS sf. J.G. BALLARD's later work, along with that of such US writers as Thomas M. DISCH, Harlan ELLISON, Norman SPINRAD and, above all, Philip K. DICK, had a tremendous impact on the new generation of readers who lived through the 1968 student uprising and saw the possibilities of making powerful political statements in speculative form. Several young authors who began writing in the mid-1960s (Daniel WALTHER, Jean-Pierre Andrevon, Jean-Pierre Hubert) readily took that route, and were followed by a batch of newcomers, with Dominique Douay, Pierre Pelot and Philippe Goy the best among them. Nevertheless, the effervescence of the late 1970s did not survive into the 1980s. Lack of enthusiasm on the part of the public? Overabundance of books? Difficulties linked to general publishing problems? It was the beginning of a critical period in which the number of sf imprints, about 40 during the late 1970s, diminished to a half-dozen. The so-called "New French SF", sometimes inordinately politicized, was the first victim of this crisis. Partly because of its excesses, readers and editors grew weary of French sf authors, who then tried to explore different paths and attract recognition through other means. Some, mostly newcomers, reacted by turning to a form-oriented sf - that is, to a greater preoccupation with style, poetry and experimental writing (Emmanuel Jouanne, Antoine Volodine) - to the point where they sometimes forgot the true nature of the genre. Others were tempted into expressing

their personal universes, often powerfully fantastic in kind. Among these were Jean-Marc Ligny, Jacques Barberi, Francis Berthelot and particularly Serge Brussolo who, in less than 10 years, made his mark with some 40 novels - including such definite masterpieces as *Aussi lourd que le vent* ["As Heavy as the Wind"] (1981), *Carnaval de fer* ["Iron Carnival"] (1983) and *La nuit du bombardier* ["Night of the Bomber"] (1989) - and became the most original and most popular sf writer of his generation. Finally, a third category of authors put their craft into the service of a "neo-classical" sf which invited the reader to reflect upon contemporary issues (ECOLOGY, the media, COMPUTERS, genetics, cultural intermingling) though without giving up the traditional lures of exoticism and adventure. They include G.-J. Arnaud and his long series *La compagnie des glaces* ["The Ice Company"], which has run since 1981, Bernard Simonay with *Phenix* (1986) and Joel Houssin with *Les Vautours* ["The Vultures"] (1986) and *Argentine* (1989), all books which have found a large audience and won awards. Today French sf shows a paradoxical face: it includes many talented writers, usually well detached from the UK-US influence, whether long-established authors or newcomers to the genre such as Richard Canal, Pierre Stolze, Raymond Milesi and Colette Fayard. But, on the other hand, the dwindling of publishing imprints, magazines and columns - or their outright disappearance (Fiction ceased in 1989) - gives the unfortunate impression that the domain is definitely in peril. Thus, the best French authors - notably those with a long career behind them - are now inclined to abandon sf and turn to horror (HORROR IN SF) which, courtesy of Stephen KING, has become increasingly popular (Andrevon, Brussolo), or to mainstream literature (Sternberg, Jeury, Pelot, Andrevon, Curval, Volodine), or to screenplays (Ruellan, Pelot, Houssin), a far more lucrative field. One would think that the existence of an active, passionate FANDOM - thanks to which the French sf milieu has been holding its own CONVENTIONS since 1974 - would have given a boost to the national production, but such is not the case. French fandom remains self-centred, and is more devoted to its own byzantine arguments than to the task of working efficiently to enlarge sf's public recognition. In other words, fans complain about their preferred literature being locked up in a ghetto, but never do anything really helpful to change that. Only a handful of critics - sometimes translators, editors or writers themselves (Curval, Jeury, Klein) - have tried and are still trying to publish in mainstream magazines or newspapers regular columns or interviews meant to defend and exemplify sf (French or not) to the general public, who are often ill informed about the genre. [RL/JCh] Further reading: *Encyclopedie de l'utopie, des voyages extraordinaires et de la science-fiction* (1972 Switzerland) by Pierre Versins; *Histoire de la science-fiction moderne* (1973) by Jacques SADOUL; *Panorama de la science-fiction* (1973 Belgium) by Jacques Van Herp; the preface by Gerard KLEIN to *Sur l'autre face du monde* ? Valerie; *Malaise dans la science-fiction* (1977) by Klein; also useful are 4 anthologies of French sf short stories, *Les Mondes francs*, *L'Hexagone hallucine*, *La Frontiere eclatee* and *Les Mosaïques du temps* (1988-90) ed Klein, Ellen Herzfeld and Dominique Martel.

Working name of Anatole-Francois Thibault (1844-1924), French writer active from the early 1860s until his death. His essayistic "pagan" SATIRES seem perhaps less relevant now than formerly, their amused rationality failing to bite with sufficient savagery into targets like official religion and sexual prudery. Of sf interest are *Sur la pierre blanche* (1905; trans Charles E. Roche as *The White Stone* 1910), in which a group of intellectuals prognosticates a White Peril (the Yellow races being at risk) and the rise of Socialism; and *L'île des pingouins* (1908; trans A.W. Evans as *Penguin Island* 1909 UK), in which humanity's evolutionary course is allegorized satirically through the transformation into humans - after they have been baptised in error - of a race of penguins, who repeat human history. In *La revolte des anges* (1914; trans Mrs Wilfrid Jackson as *The Revolt of the Angels* 1914 UK), a fantasy and AF's finest novel, an angel - corrupted by the world of books - realizes that his fallen brethren were in the right. AF won the Nobel Prize for Literature in 1921. [JC]Other works: *Thais* (1890; trans, almost certainly by Charles Carrington, 1901 France); *L'Etui de Nacre* (coll 1892; trans Henry Pene du Bois as *Tales from a Mother-of-Pearl Casket* 1896 US; vt *Mother of Pearl* 1908 UK); *Le Puits de Sainte Clare* (coll 1895; trans, almost certainly by Charles Carrington, as *The Well of St Clare* 1903 France); *Honey-Bee* (trans Mrs John Lane 1911 UK), a tale first published with other fantasies in *Balthazar* (coll 1889; trans Mrs John Lane 1909 UK); *Les Sept Femmes de la Barbe-Bleu, et autres contes merveilleux* (coll 1909; trans Mrs D.B. Stewart as *The Seven Wives of Bluebeard, and Other Marvellous Tales* 1920 UK). See also: ECONOMICS; FRANCE; UTOPIAS.

FRANCES, STEPHEN (DANIEL)

(1917-1989) UK publisher and pulp writer who lived in Spain from the early 1950s. In the mid-1940s he founded his own publishing company, Pendulum Publications, which released a variety of genre fiction, including sf. The editor of his sf line, Frank ARNOLD, introduced SDF to John CARNELL, a meeting that led to the birth of NEW WORLDS in 1946; but after only 3 issues the company was sold (and liquidated). SDF then founded his own self-named company. For it he penned a series of fast-moving US-style thrillers as by Hank JANSON; they achieved remarkable success at the time. Also for it he created the house name Astron DEL MARTIA (which see), but soon sold the name to Gaywood Press to help finance his move to Spain. Later he wrote three sf novels as by Hank Janson: *The Unseen Assassin* (1953), a routine tale in which an alien disease threatens to wipe out humanity, *Tomorrow and a Day* (1955), a stronger post- HOLOCAUST tale, and *One Against Time* (1956 as by Janson; 1969 as by Del Martia), a TIME-TRAVEL tale pitting a mathematician against the World Council from a future threatened by his genius. SDF's later novel, *The Disorientated Man* (1966; vt *Scream and Scream Again* 1967 US) as by Peter SAXON, a mad-SCIENTIST tale filmed in 1969 as *SCREAM AND SCREAM AGAIN*, was heavily revised by W. Howard BAKER. [SH]About the author: *The Trials of Hank Janson* (1991) by Stephen HOLLAND.

FRANCHISE SHARECROP.

FRANCIS, RICHARD H.

Working name of UK author and academic Richard Francis (1945-), who added a fictitious "H" to distinguish himself from Dick Francis, the thriller writer. RHF's first novel, *Blackpool Vanishes* (1979), tells the quirky, extremely English story of what happens when microscopic ALIENS kidnap the town of Blackpool. In *Whispering Gallery* (1984) the discovery of a "missing link" between bacteria and viruses becomes complicated when it turns out that the new strain can serve - defectively - as a weapon, and - all too efficiently - as a fuel. *Swansong* (1986) is a mildly fantastic SATIRE on Margaret Thatcher's UK, the Falklands War and the brutally unexpected disasters of both personal and political history. [NT]See also: UFOS.

FRANK, PAT (HARRY HART)

(1907-1964) US journalist and author; a government official during WWII, he later served with the UN. Though his three sf novels are well known within the field, PF was not generally identified as an sf author. His first novel, *Mr Adam* (1946), exploits the fears of contamination felt in the USA after Hiroshima. All men but one are sterilized by a nuclear DISASTER; the experiences of the sole fertile male are rather feebly rendered as comical, providing grounds for a SATIRE on government procedures. *Forbidden Area* (1956; vt *Seven Days to Never* 1957 UK) also deals - more grimly - with the atomic question, in a thriller plot involving sabotage and near- HOLOCAUST. In his most famous novel, *Alas, Babylon* (1959), the disaster is again nuclear, but this time it is not averted. In a part of Florida that has survived the holocaust, the inhabitants of a small town manage, perhaps rather implausibly, to cope (PASTORAL; ROBINSONADE) and modestly to flourish; domestic verisimilitude and apocalypse mingle here attractively, and the book was both made into a play and televised. PF's work draws its clear emotional force from the deep fears of nuclear devastation many Americans suffered, with some cause, during the 1950s. [JC]

FRANKAU, GILBERT

(1884-1952) UK writer known mainly for his work outside the sf field, most notably his Byronesque verse novel *One of Us* (1912) and dozens of popular romances. *The Seeds of Enchantment* (1921) is a lost-race (LOST WORLDS) fantasy which features contrasting UTOPIAS in the wilds of Indochina. His posthumous sf novel, *Unborn Tomorrow: A Last Story* (1953), depicts a 50th-century Roman Catholic world where a beam which destroys all explosives has enforced a happy return to a pre-industrial lifestyle. [JC]Other work: *Son of the Morning* (1949).

FRANKE, HERBERT W(ERNER)

(1927-) Austrian-born writer and scientist who, after receiving a doctorate in Vienna in 1950, moved to Munich, where he taught cybernetic aesthetics at the University of Munich. After publishing considerable nonfiction in the 1950s, mostly on either speleology or computer graphics, he also began publishing sf, at first speculative short stories like those assembled in *Der grüne Komet* ["The Green Comet"] (coll 1960), *Fahrt zum Licht: Utopische Kurzgeschichten* ["Journey to Light: Utopian Short Stories"] (coll 1963), *Einsteins Erben* ["Einstein's Heirs"] (coll 1972) and *Zarathustra kehrt zurück* ["Zarathustra Returns"] (coll 1977). He has

also published several novels beginning with *Das Gedankennetz* (1961; trans Christine Priest as *The Mind Net* 1974 US). *Der Orchideenkafig* (1961; trans Christine Priest as *The Orchid Cage* 1973 US) complexly depicts, in HWF's typically speculative, somewhat dry manner, the profound transformative effects of a mysterious planet on its human explorers. *Zone Null* (1970; trans 1974 US) sets up between a future Free World and an apparently defeated and deserted Zone Null a metaphysical questioning of the true aims of society and of the intermingled values of both opposed sides. In *Transpluto* (1982), which is typical of his later work, a mysterious planet hornswoggles a team of Earthmen, keeping them from leaving the Solar System. HWF is one of the first contemporary German sf writers whose work ranks with that in English and other European languages. [JC]Other works: *Die Glasfalle* ["The Glass Trap"] (1961); *Die Stahlwüste* ["The Steel Desert"] (1962); *Planet der Verlorenen* ["Planet of the Lost"] (1963) as by Sergius Both; *Der Elfenbeinturm* ["The Ivory Tower"] (1965); *Ypsilon Minus* (1976); *Ein Kyborg namens Joe* ["A Cyborg Named Joe"] (coll 1978); *Sirius Transit* (1979) as by Sergius Both; *Schule für Übermenschen* ["School for Supermen"] (1980); *Paradies 3000* ["Paradise 3000"] (coll 1981); *Keine Spur vom Leben* ["No Trace of Life"] (coll 1982), collecting radio plays; *Die Kalte des Weltraums* ["The Coldness of Space"] (1982); *Tod eines Unsterblichen* ["Death of an Immortal"] (1982); *Endzeit* ["End of Time"] (1985); *Der Atem der Sonne* ["The Breath of the Sun"] (1986); *Zentrum der Milchstrasse* ["The Centre of the Milky Way"] (1990); *Spiegel der Gedanken* ["Mirror of Thought"] (coll 1990). FRANKENHEIMER, JOHN

(1930-) US film director. A graduate of the 1950s school of live tv drama, JF first attracted attention as a film-maker with melodramas centred on youth and social issues: *The Young Stranger* (1956), *The Young Savages* (1961), *All Fall Down* (1961) and *The Birdman of Alcatraz* (1962). However, in his direction of *The MANCHURIAN CANDIDATE* (1962), *Seven Days in May* (1964) and *SECONDS* (1966), all based on successful novels, JF revealed a distinctive fantastic vision, rooted in the realities of the USA of the 1950s and 1960s, which would be a great influence on the 1970s run of post-Watergate conspiracy movies, like Alan J. Pakula's *The Parallax View* (1974) and William Richert's *Winter Kills* (1979). *Seven Days in May*, in which the USA is threatened by a military coup, and *The Manchurian Candidate* are political fantasies focusing on the precariousness of the presidency, while *Seconds*, one of the scariest films of the 1960s, is a nightmare about rejuvenation. These exercises in unease are confidently shot in black-and-white with the Expressionist imagination of a top-drawer TWILIGHT ZONE episode, and feature a brilliant oddball casting of his stars. JF's films at this stage are a vision of a grey-suited corporate USA gone wrong, with recurrent themes of brainwashing, surveillance, assassination and Kafkaesque bureaucracies, many of which returned in his still-underrated comic-book gangster fantasy *99 ? vt Call Harry Crown*) and the large-scale terrorist thriller *Black Sunday* (1977). He had a commercial success with *The French Connection II* (1975), but his return to sf with *PROPHECY* (1979), a hokey, expensive MONSTER MOVIE, was a major disappointment, and his more recent films have tended to be bland adaptations of best-selling

thrillers. [KN]See also: CINEMA; PARANOIA.

FRANKENSTEIN

Film (1931). Universal. Dir James Whale, starring Boris Karloff, Colin Clive, Mae Clarke, Edward van Sloan, Dwight Frye. Screenplay Garrett Fort, Robert Florey, Francis Edward Faragoh, based on an adaptation by Florey and John L. Balderston of the play by Peggy Webling, based in turn on *Frankenstein, or The Modern Prometheus* (1818) by Mary SHELLEY. 71 mins. B/w. This remains the most famous of the Frankenstein films, although it was not the first. (The Edison Company made a 16min version in 1910; it was dir J. Searle Dawley and starred Charles Ogle as the Monster. A second version, also US, was the 70min *Life without Soul* in 1915, dir Joseph W. Smiley.) Dr Frankenstein is a SCIENTIST who builds an artificial man using parts from stolen bodies. He succeeds, with the aid of an electrical storm, in bringing the creature to life but, because his assistant has provided the brain of a criminal rather than that of a "normal" man (a clumsy plot device which has nothing to do with Shelley's novel), the creation proves difficult to control. Eventually the FRANKENSTEIN MONSTER escapes, accidentally kills a small girl, and is pursued and apparently slain by angry villagers (originally the Monster killed Frankenstein, too, but the studio substituted a happy ending). The film remains a semi-classic today. With his atmospheric lighting, smooth tracking shots and numerous low-angle shots that were never obtrusive but made effective use of the high-ceilinged sets - particularly Frankenstein's laboratory - Whale succeeded in making a HORROR film of some grandeur, with an undertone of ironic humour. Much of the credit must go to Karloff for his fine (unspeaking) performance as the pathetic Monster, considerably helped by Jack Pierce's famous make-up; Karloff's success here doomed him to horror roles for the rest of his life. There have been numerous sequels and remakes. The sequel *BRIDE OF FRANKENSTEIN* (1935), also dir Whale, is the best film he ever made. Other, increasingly awful, sequels from Universal were *Son of Frankenstein* (1939), *Ghost of Frankenstein* (1942), *Frankenstein Meets the Wolfman* (1943), *House of Frankenstein* (1945) and *Abbott and Costello Meet Frankenstein* (1948). In 1957 the UK company Hammer Films remade the original, calling it *Curse of Frankenstein* (vt *Birth of Frankenstein*), and then made *The Revenge of Frankenstein* (1958), *The Evil of Frankenstein* (1964), *Frankenstein Created Woman* (1966), *Frankenstein Must Be Destroyed* (1969) and *The Horror of Frankenstein* (1970), ending with *Frankenstein and the Monster from Hell* (1973). Five of these were dir Terence Fisher, and nearly all featured Peter Cushing's interestingly tense and upright performance as Baron von Frankenstein. Andy Warhol produced in Italy a 3-D SPLATTER-MOVIE pornographic version (remarkably tasteless on all counts) dir Paul Morrissey (or possibly an uncredited Antonio Margheriti): *Carne per Frankenstein* (1973; vt *Flesh for Frankenstein*; vt Andy Warhol's *Frankenstein*). A successful parody/homage movie was *Young Frankenstein* (1974), dir Mel Brooks. Other versions of the story, mostly exploitation films, were made in Italy and Spain. Two more US titles are *Frankenstein 1970* (1958), dir Howard W. Koch and starring an ageing Boris Karloff, and *Frankenstein Meets the Space Monster* (1965; vt *Mars Invades Puerto Rico*), which is not about Frankenstein at all. There are many more. An interesting attempt to recreate Mary Shelley's original

novel, including its finale in the Arctic (all previous films had changed the story), is the 3-hour made-for-tv film *Frankenstein: The True Story* (1973), Universal/NBC, dir Jack Smight, from a script by Christopher Isherwood and Don Bachardy, starring James Mason, David McCallum and Michael Sarrazin. It was theatrically released, cut to 123 mins. The teleplay was published as *Frankenstein: The True Story* * (1973), by Isherwood and Bachardy. *FRANKENSTEIN UNBOUND* (1990) is based on the 1973 *RECURSIVE SF* book by Brian ALDISS, but it does incorporate much of Shelley's original, including interesting Arctic scenes. Another tv movie version, made for cable tv, and moderately true to the book, though not very interestingly so, is *Frankenstein* (1993), 150 mins, dir David Wickes, with Randy Quaid as the creature. By far the most distinguished of any version from the last two decades of the 20th century is *MARY SHELLEY'S FRANKENSTEIN* (1994), dir Kenneth Branagh, which is sensitive to the nature of the original yet prepared to use somewhat more modern metaphors to illuminate it, but even this is an uneven work. A book about versions of the story is *Hideous Progenies: Dramatizations of Frankenstein from Mary Shelley to the Present* (1990) by Steven Earl Forry. [JB/PN] See also: *GOTHIC SF*; *MONSTER MOVIES*; *SEX*.

FRANKENSTEIN MONSTER

The term is in general use, not only in *sf TERMINOLOGY* but in common parlance, to mean a *MONSTER* that ultimately turns and rends its irresponsible creator. Note that in the original novel *Frankenstein* was the name of the creator and not of the monster, though in popular usage it is often assumed that the monster itself is *Frankenstein*. In critical talk, *Frankenstein* is often equated with *Prometheus* and *Dr Faustus*, two other legendary figures who were guilty of hubris in their quest for knowledge, and struck down. [PN] See also: *FRANKENSTEIN*; *HORROR IN SF*; *MONSTER MOVIES*; *Mary SHELLEY*.

FRANKENSTEIN: THE TRUE STORY FRANKENSTEIN.

FRANKENSTEIN UNBOUND

(vt Roger Corman's *Frankenstein Unbound*) Film (1990). Warner Brothers. Dir Roger CORMAN, starring John Hurt, Raul Julia, Bridget Fonda, Nick Brimble, Katherine Rabett, Jason Patric, Michael Hutchence. Screenplay Corman, F.X. Feeney, based on *Frankenstein Unbound* (1973) by Brian W. ALDISS. 85 mins. Colour. This philosophical (about the dangers of the Promethean impulse) *TIME-TRAVEL* horror/fantasy was the first film directed by Corman for 20 years. A 21st-century scientist (Hurt) is time-warped into 19th-century Switzerland. On one side of Lake Geneva the Byron/Shelley menage is living; on the other the plot of *Mary SHELLEY's Frankenstein, or The Modern Prometheus* (1818) is being played out. Hurt gets involved with both sets of characters and winds up whisking *MONSTER* and maker off to an ice-age future for a splattery plot resolution, laced with conservative lectures about the evils of science. Some of the plentiful laughs may be intended, given that Aldiss's playful novel is in part a comedy, though Fonda is ridiculous as the dainty but promiscuous *Mary*. There are some cheap effects, but Raul Julia is good as the mad visionary; the angry-at-the-world *FRANKENSTEIN MONSTER* (Brimble) comes

with impressive details like scarred eyeballs; and the GOTHIC horror set-pieces are directed with unselfconscious panache. [KN]

FRANKLIN, EDGAR

Working name used for his publications by US writer Edgar Franklin Stearns (1879-1958), whose Mr Hawkins' Humorous Inventions (coll of linked stories 1904), all reprinted from The ARGOSY, features the eponymous inventor/scientist comically failing to make a series of devices, such as the pumpless pump, work properly; the series continued to 1915 in various of the Frank A. MUNSEY magazines. [JC]See also: HUMOUR.

FRANKLIN, H(OWARD) BRUCE

(1934-) US critic, John Cotton Dana Professor of English and American Studies at Rutgers. In 1961 HBF gave at Stanford one of the earliest university courses in sf in the USA. In 1972 he was dismissed by Stanford for giving speeches protesting the university's involvement in the Vietnam War - a case well known to those interested in questions of academic freedom. His Future Perfect: American Science Fiction of the Nineteenth Century (anth 1966; rev 1968; exp and rev 1978) has been one of the most influential of sf ANTHOLOGIES, in drawing attention to the sheer volume of 19th-century sf. A later HBF anthology, containing sf about nuclear weapons, is Countdown to Midnight (anth 1984). HBF's two other books about sf are Robert A. Heinlein: America as Science Fiction (1980) and War Stars: The Superweapon and the American Imagination (1988). The former relates HEINLEIN's career to contemporary US history from a Marxist perspective; the latter is a pungent and important study about the US preoccupation with super- WEAPONS in fact and fiction, and the way in which the fact has been influenced by the fiction. HBF has published many other critical articles on sf and is among the genre's most respected commentators. He received the PILGRIM AWARD in 1983. He has been a consulting editor of SCIENCE-FICTION STUDIES since its inception. [PN]See also: CRITICAL AND HISTORICAL WORKS ABOUT SF; SF IN THE CLASSROOM; WAR.

FRANKOWSKI, LEO A.

(1943-) US writer known principally for his ALTERNATE-WORLD series, the Adventures of Conrad Stargard: The Cross-Time Engineer (1986), The High-Tech Knight (1989), The Radiant Warrior (1989), The Flying Warlord (1989) and Lord Conrad's Lady (1990), with further volumes projected. The series features a Polish-US engineer, Stargard, who in the first volume is transported to medieval Poland via TIME TRAVEL. He settles down quite happily to the task of reshaping his native land into a country capable of surviving the next perilous decades, being overseen all the while by the time-travellers who have mistakenly conveyed him there. By changing the technology of medieval Poland, Stargard is of course changing timelines - in perfectly orthodox sf-adventure fashion - but the author's clear indifference to the plotting rigours expected in tales of this sort increasingly detracts from the flow of the story. Copernick's Rebellion (1987) deals with GENETIC ENGINEERING in a NEAR-FUTURE Polish setting, where LAF's inability to create women (though he is strong on breasts) is seriously irritating. [JC]

FRANK READE LIBRARY

US DIME-NOVEL SF series, BEDSHEET size. 191 issues (#188-#191 are reprints of #1-#4) 24 Sep 1892-8 Aug 1898, weekly to 8 June 1894 (#82), biweekly from then on. Cost 5cents. Published by Frank Tousey, Publisher, New York. (Partial reissue 1902-4, partial UK reprint.) All issues were printed on very poor paper and seldom survive in good condition; the 1902-4 reissue, with coloured covers, is sometimes considered more desirable than the first printing. This was the earliest serial publication devoted solely to sf, with more issues than all of Hugo GERNSBACH's sf magazines put together, each containing a single or a half story about Frank Reade (4 stories) or Frank Reade, Jr. (179 stories). All but the last were attributed to "NONAME" on their appearance in the FRL. About one-quarter of the stories were reprints from other Tousey BOYS' PAPERS (The Boys of New York, The Five Cent Wide Awake Library, Happy Days); the remainder were originals. As a whole, they comprise the most significant US dime-novel series, and in their exuberance (and stereotyped action), their humour (and their racism), their inventiveness (and the merciless repetition of similar inventions and WEAPONS), they represent the best and worst of the tradition. It is impossible to attain final bibliographical certainty about a series of this sort, but E.F. BLEILER's The Frank Reade Library (omni 10 vols 1979-86), which reprints the entire sequence, casts as much light as can ever be hoped for. It is not known, for instance, how many authors wrote as "Noname", a house pseudonym used for mysteries and Westerns as well as sf, though it is certain that the first Frank Reade story - Frank Reade and his Steam Man of the Plains (1876 The Boys of New York as by Harry Enton; 1892 as Frank Reade Library #12 as by "Noname") - was by Harold Cohen (1854-1927), who normally wrote as Enton. The tale was almost certainly commissioned by Frank Tousey in emulation of Edward S. ELLIS's The Steam Man of the Prairies (1868). Three more Frank Reade episodes followed (the first two written by Cohen), all involving steam-driven TRANSPORTATION devices whose main use (it is one of the less attractive features of the sequence, many of whose episodes were set in the US West) seemed to be that of slaughtering large numbers of Native Americans. In 1882, Frank Reade, Jr., son of Frank Reade, took over the action, beginning with Frank Reade, Jr., and his Steam Wonder (1882 The Boys of New York; 1893 as Frank Reade Library #20). The popularity of these stories presumably inspired Tousey to institute The Frank Reade Library itself in 1892. The first 50 issues or so generally reprinted tales from 1880s Tousey magazines; the remaining issues, beginning 1893, were mostly original titles. It is probable that most of the Frank Reade, Jr. stories were written by Luis SENARENS, and en masse they suffered visibly from this hugely prolific author's carelessness, cheap jingoism, racist stereotyping and lackadaisical plotting. But, tedious or not, the sequence managed to make use of most of the sf venues and devices available at the close of the 19th century; in particular, airships and submarines and various other means of TRANSPORTATION - which served simultaneously as devastating weapons and means of near-magical travel (EDISONADE) - almost always featured prominently in the adventures of the indefatigable boy inventor. Significant issues include #48, Frank Reade, Jr., Exploring a River of Mystery (1890 Five Cent Wide Awake Library; 1893), not by Senarens, which has fantastic geography and travels in Africa and is based on Henry Stanley's books or newspaper dispatches, and #133: The Island in

the Air (1896), probably by Senarens, perhaps the first consideration of Roraima (in British Guiana) as a LOST WORLD, almost certainly a source for The Lost World (1912) by A. Conan DOYLE. More typical, however, is the long episodic novel Frank Reade, Jr., and his Queen Clipper of the Clouds (1889 The Boys of New York; 1893) by Senarens. The Frank Reade Library, however, does not contain all the adventures of the inventive Reade family. There are at least two uncollected stories about Frank Reade, Jr. and one about Frank Reade (Sr.). The last, Franke Reade, the Inventor, Chasing the James Boys with his Steam Team (1890), stands apart from the series and is the only Frank Reade story not attributed to "Noname". The third member of the Reade family, Frank Reade, III, stars in Young Frank Reade and his Electric Air Ship (1899) and perhaps in other unlocated stories. [EFB/JC]

FRASER, Sir RONALD (ARTHUR)

(1888-1974) UK writer and civil servant. Most of his work, like his first novel, The Flying Draper (1924; rev 1931), utilizes fantasy or sf devices - in the initial case self-levitation - to create allegorical or philosophical arguments; the unmistakably Wellsian draper, for instance, finds that the ability to fly enforces "higher" thoughts. In Flower Phantoms (1926) an orchid responds to the protagonist's nubility by showing her the secrets of sex. In Beetle's Career (1951), which is sf, a super-weapon is shown to have beneficial side-effects. In the Venus quartet - A Visit from Venus (1958), Jupiter in the Chair (1958), Trout's Testament (1960) and City of the Sun (1961) - various inhabitants of the Solar System confer about a number of mildly pressing topics. In an elegant, generally painless manner, RF concentrated throughout his career on novels of controlled wit, mild SATIRE and admissible sentiment; only occasionally would these entertainments move into the darker regions. [JC] Other works: Landscape with Figures (1925), an oriental fantasy; Miss Lucifer (1939); The Fiery Gate (1943); Sun in Scorpio (1949); A Work of Imagination: (The Pen - the Brush - the Well) (1974), a novel of occultism. See also: PSYCHOLOGY.

FRATZ, DONALD DOUGLAS

(1952-) US editor who founded the energetic sf news and reviews journal THRUST in 1973, renaming it Quantum with #36 (1990), and remaining its editor and (from #5) its publisher until the double issue #43/44, when he voluntarily terminated the journal by merging it with SCIENCE FICTION EYE. [JC]

FRAU IM MOND, DIE

(vt By Rocket to the Moon; vt The Girl in the Moon; vt The Woman in the Moon) Film (1929). UFA. Dir Fritz LANG, starring Gerda Maurus, Willy Fritsch, Gustav von Wangenheim, Fritz Rasp, Klaus Pohl. Screenplay Lang, Thea VON HARBOU, based on Frau im Mond (1928; trans as The Girl in the Moon 1930 UK; cut vt The Rocket to the Moon 1930 US) by von Harbou. 156 mins, cut to 107 mins, cut to 97 mins. B/w. After the success of METROPOLIS, Fritz Lang's next sf film was a disappointment. Overlong (in its original form) and melodramatic, it concerns an ill matched group of people travelling to a MOON which seems little different from the Swiss Alps, airlessness and low gravity being ignored: the explorers are able to

amble about picking up chunks of precious metal and jewels (the trip having been arranged by industrialists who believe, correctly, that the Moon is rich in gold). The build-up to the take-off, however, is much more convincing; Lang used rocket experts Hermann Oberth (1894-1989) and Willy LEY as technical advisers, and the model rocket they produced was prophetic in its design - it was even constructed in two stages. The blast-off itself was also impressive, with good camera-work by Oskar Fischinger and effects by Konstantin Tschetwerikoff. Later the Nazis withdrew the film from distribution and destroyed the rocket model, afraid that its accuracy would give away secrets about their own development of military ROCKETS. [JB/PN]See also: CINEMA; GERMANY.

FRAYN, MICHAEL

(1933-) UK novelist, journalist and playwright, best known for such work outside the sf field as the novel *Towards the End of the Morning* (1967; vt *Against Entropy* 1967 US), which despite its vt is not sf. *The Tin Men* (1965) is a SATIRE on the computerization of human consciousness. *A Very Private Life* (1968) describes a sanitized Earth with mankind divided into those who live inside germ-free enclaves and those who live outdoors; some ambivalence is expressed throughout as to whether what is being described is a DYSTOPIA or simply a *mise en scene*: MF lacks, in other words, the ready animus so often found in MAINSTREAM WRITERS when they appropriate sf tropes - almost always imprudently - for satirical purposes. [JC]Other works: *Sweet Dreams* (1973), an afterlife fantasy. See also: AUTOMATION; LINGUISTICS.

FRAZER, SHAMUS

Pseudonym of UK writer James Ian Arbuthnot Frazer (1912-1966), whose first sf novel, *Acorned Hog* (1933), satirizes a socialist NEAR FUTURE United Kingdom, and whose second, *A Shroud as Well as a Shirt* (1935), describes a succession of political conflicts which lead finally to a world war. *Blow, Blow Your Trumpets* (1945) is a comic satirical fantasy set in the time of Noah, and explains the necessity of the Flood. [JC]

FRAZETTA, FRANK

(1928-) US illustrator, born Frank Frazzetta. A *New Yorker*, he studied at the Brooklyn Academy of Fine Arts and was then active almost exclusively in COMICS 1944-63, working on both *BUCK ROGERS IN THE 25TH CENTURY* and *FLASH GORDON* and spending 9 years on *Li'l Abner*. By the time he came to prominence as a comics illustrator, working on *Creepy* for Warren Publications (from 1965) and later *Vampirella*, he had already been introduced (in 1964) to paperback-book-cover ILLUSTRATION by his friend Roy G. KRENKEL, first for ACE BOOKS and then for Lancer Books. He quickly became known (like Krenkel) for HEROIC-FANTASY illustrations, especially (from 1966) for his covers for Lancer's reissue of Robert E. HOWARD's Conan books. Some of his work was sf. He won his only HUGO for Best Professional Artist in 1966, but the lack of further Hugos did not imply a diminution in popularity - on the contrary, although his following was largely, presumably, among FANTASY rather than sf fans. Around this time FF set up, with his wife, a company to sell posters he had designed; later he also painted for a number of calendars. Portfolios produced at this time included the two volumes entitled *Burroughs Artist Frank Frazetta*

(portfolio 1968 and 1973). A further breakthrough was the publication of *The Fantastic Art of Frank Frazetta* (1975), which was followed by *Frank Frazetta Book Two* (1977) and then *Three* (1978), *Four* (1980) and *Five* (1985). Later volumes include *Small Wonders: the Funny Animal Art of Frank Frazetta* (1992) and *Illustrations Arcanum* (1994). By the 1980s, however, FF's fame extended well beyond narrow genres: his work was spread over many commercial areas, and his output of specifically fantasy/sf illustration became very small - although it did include the *Death Dealer* novels by James R. Silke with FF, from 1988, based on an idea (and covers) by FF, as well as covers for the *L. RON HUBBARD PRESENTS WRITERS OF THE FUTURE* series of original anthologies. Film work by FF includes *Fire and Ice* (1982), an animated *SWORD-AND-SORCERY* feature film, produced by Ralph Bakshi and FF, partly designed by FF. FF's vigorous paintings of heavily muscled heroes, often fighting, are notable for their dynamic sense of movement (in contrast, perhaps, to work by Boris VALLEJO and other later, smoother illustrators who are often referred to as having inherited FF's mantle); he is famous, too, for his lush wide-hipped women, often chained or menaced but equally often shown as threatening Amazon Queens. His work has been accused of sexism and criticized as cheaply melodramatic, but at its best it is undeniably spirited and powerful. In the heroic-fantasy mode, FF has been one of the most influential illustrators of the century. [PN]See also: SEX.

FRAZIER, ROBERT (ALEXANDER)

(1951-) US editor and writer, most active as a poet, whose several published volumes include *Peregrine* (coll 1978), *Perception Barriers* (coll 1987), *Co-Orbital Moons* (coll 1988) and, perhaps most notably, *Chronicles of the Mutant Rain Forest* (coll 1992 chap) with Bruce BOSTON. He has edited 2 vols of sf POETRY, *The Rhysling Anthology: Best Science Fiction Poetry of 1982* (anth 1983 chap) and *Burning with a Vision: Poetry of Science and the Fantastic* (anth 1984), and is a past editor of *Star*Line*, the newsletter of the SCIENCE FICTION POETRY ASSOCIATION. As an author of fiction, he began relatively late, his first sf story, "Across Those Endless Skies", appearing in *In the Field of Fire* (anth 1987) ed Jack DANN and Jeanne Dann. He is perhaps most noted for the extended "The Summer People", his contribution to *Nantucket Slayrides* (coll 1989), the other stories in which are by Lucius SHEPARD. RF wrote the POETRY entry in this encyclopedia. [JC]See also: ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE; SF IN THE CLASSROOM.

FREAS, (FRANK) KELLY

(1922-) US illustrator, the most popular sf artist in the history of the field; the list of his accomplishments is staggering. Since he entered the field in 1950 he has painted hundreds of covers for 28 magazines, most famously for ASF from 1953 (interior work also) but including also FSF, *Planet Stories* and *If*, as well as for many book publishers, including ACE BOOKS, GNOME PRESS, DAW BOOKS and all the covers for LASER BOOKS. The gritty realism of his and Ed EMSWILLER's work in the 1950s redefined sf art during that period. He also painted many covers for *Mad Magazine* and designed the astronauts' shoulder patch for the Skylab 1 mission. His art has been collected in a portfolio from *ADVENT: PUBLISHERS*, Frank Kelly

Freas (portfolio 1957), and in 3 books, Frank Kelly Freas: The Art of Science Fiction (1977), Frank Kelly Freas: A Separate Star (1984) and The Astounding Fifties (1971) (1990). Much of his work, sometimes reminiscent of that of Edd CARTIER, is relaxedly humorous, featuring vigorous vagabonds, amiable aliens and a selection of jaunty scoundrels. He has won numerous awards, including 10 HUGOS for Best Professional Artist. [JG/PN]See also: ASTOUNDING SCIENCE-FICTION; ILLUSTRATION.

FREEDMAN, NANCY

(1920-) US actress and writer whose sf novel, Joshua Son of None (1973), one of the earliest novels to deal with cloning (CLONES), depicts the intrigue surrounding the childhood and adolescence of Joshua Francis Kellogg, cloned in 1963 from the body of John F. Kennedy. [JC]Other works: The Immortals (1976), borderline sf.

FREEDOM: THE VOICE FROM EIN HAROD ISRAEL.

FREEJACK

Film (1992). Morgan Creek/Ronald Shusett/Warner Bros. Dir Geoff Murphy, starring Emilio Estevez, Mick Jagger, Rene Russo, Anthony Hopkins, Jonathan Banks. Screenplay Steven Pressfield, Ronald Shusett, Dan Gilroy, based on Immortality, Inc. (1958; exp 1959) by Robert SHECKLEY. 108 mins. Colour.From the producers of TOTAL RECALL (1990) and the New Zealand director of The QUIET EARTH (1985), this disappointing adaptation jettisons much that was interesting in the original book, including the metaphysical speculation about the relation of mind to body and the "scientific" explanations of ghosts, zombies and a technological IMMORTALITY. This is a thriller set 20 years in the future, when rich people with ailing bodies transfer their personalities into healthy bodies hijacked from the past (including our present). Jagger is rather good as the sinister and ubiquitous bodysnatcher who grabs a racing-car driver (Estevez) just as he is about to die violently. Joe Alves's mildly CYBERPUNK production design owes a lot to BLADE RUNNER (1982). [PN]

FREKSA, FRIEDRICH

[r] GERMANY.

FRENCH, PAUL

Isaac ASIMOV.

FRENKEL, JAMES R.

(1948-) US editor, married to Joan D. VINGE since 1980. In the late 1970s and early 1980s he was with Dell Books, where he ed anon the Binary Star books, each comprising two titles bound sequentially (DOS): Binary Star #1 containing Destiny Times Three (1978 dos) by Fritz LEIBER and Riding the Torch (1978 dos) by Norman SPINRAD, #2 containing The Twilight River (1979 dos) by Gordon EKLUND and The Tery (1979 dos) by F. Paul WILSON, #3 containing Dr Scofflaw (1979 dos) by Ron GOULART and Outerworld (1979 dos) by Isidore HAIBLUM, #4 containing Legacy (1980 dos) by Joan D. VINGE and The Janus Equation (1980 dos) by Steven G. SPRUILL, and #5 containing Nightflyers (1981 dos) by George R.R. MARTIN and TRUE NAMES (1981 dos) by Vernor VINGE. In 1983 he founded BLUEJAY BOOKS, whose strong

but underfunded list was forced to cease trading in 1986. [JC]

FREWIN, ANTHONY

(1947-) UK publisher and writer, who also worked for five years as an assistant to the film director Stanley KUBRICK. His *One Hundred Years of Science Fiction Illustration: 1840-1940* (1974) has a well chosen selection of sf ILLUSTRATIONS, many - unusually - from the 19th century, with a full chapter on Albert ROBIDA. [PN]

FREY, JAMES N(ORBERT)

(1943-) US writer whose *The Elixir* (1986) was a GOTHIC-SF/fantasy story of Nazi Germany, where Hitler's secret weapon is the eponymous aid to IMMORTALITY. His *U.S.S.A.: a Novel* (1987) is unrelated to the shared-world sequence with the same overall title. [JC] Other works: *Circle of Death* (1988). [JC]

FREZZA, ROBERT

(1956-) US writer who began publishing sf with "Max Weber's War" for AMZ in 1987. His sf novel, *A Small Colonial War* (1990) which, along with its sequel, *Fire in a Faraway Place* (1993), replays the Boer War on a colony planet, although without Kaffirs. The Imperial military forces, predictably, find the transplanted post- HOLOCAUST Afrikaners tough meat. *McLendon's Syndrome* (1994) is a space opera featuring a vampire whose allergies - sunlight, for instance - replicate the conventions of supernatural fictions about vampires. [JC]

FRIEDBERG, GERTRUDE (TONKONOGY)

(1908-1989) US writer who also taught. Her career as a playwright began early, with *Three Cornered Moon* (1933), which was later filmed, but she began publishing sf only in 1963, with "The Short and Happy Death of George Frumkin" for FSF. Her fine sf novel *The Revolving Boy* (1966) strikingly tells the story of a child sensitive from his unique birth in free fall to signals, possibly intelligent in origin, from beyond the Solar System. He reveals his sensitivity by being forced to adjust himself - revolving balletically - so that his body is aligned in the direction from which the signals come. [JC]

FRIEDEL, EGON

(1878-1938) Austrian writer best known for his seminal *Cultural History of Modern Times* (1927-32), a text which effectively inaugurated the discipline of cultural history. As a Jew, his position became intolerable when the Nazis invaded Austria, and he committed suicide. His wry homage to H.G. WELLS, *Die Ruckkehr mit der Zeitmaschine* (apparently written c1935; 1946 Germany; trans Eddy C. Bertin as *The Return of the Time Machine* 1972 US), complete with a spoof correspondence between himself as narrator and Wells's secretary, purports to reprint the Time Traveller's narrative of his later journeys. The story, told with a literate wit reminiscent of some of Karel CAPEK's lighter work, depends on complex mathematical doubletalk for its demonstration of the ultimate futility of TIME TRAVEL. [JC]

FRIEDMAN, MICHAEL JAN

(1955-) US writer, mostly notably of STAR TREK and STAR TREK: THE NEXT

GENERATION ties, though he has also written a singleton, *The Glove of Maiden's Hair* (1987), a fantasy set in contemporary New York, and the Vidar fantasy sequence about a son of Odin: *The Hammer and the Horn* (1985), *The Seekers and the Sword* (1985) and *The Fortress and the Fire* (1988). MJF's Star Trek novels are *Double, Double ** (1989), *Legacy ** (1991), *Faces of Fire ** (1992), *The Disinherited ** (1992) with Robert GREENBERGER and Peter DAVID, and *Shadows on the Sun ** (1993). His Star Trek: *The Next Generation* novels are *A Call to Darkness ** (1989), *Doomsday World ** (1990) with Carmen CARTER, Peter DAVID and Robert Greenberger, *Fortune's Light ** (1991), *Reunion ** (1991) *Relics**(1992), *All Things Good . . **(1994) and *Requiem ** (1994). [JC]

FRIEL, ARTHUR O(LNEY)

(1885-1959) US writer and explorer, most of whose work appeared in PULP MAGAZINES, including the McKay, Knoulton and Ryan sequence of lost-race (see LOST WORLD) tales set in South America and featuring the exploits of Americans, who eventually establish a kingdom somewhere close to Peru. Those published as books - *The Pathless Trail* (1922), *Tiger River* (1923), in which men are transformed into beasts by a strange Circean wine, *The King of No Man's Land* (1924) and *Mountains of Mystery* (1925) - were marginal as sf; but "In the Year 2000" (1928 Adventure), which never reached book form, is set after a world war in which White men have triumphed. [JC]

FRIEND, ED

Richard WORMSER.

FRIEND, OSCAR J(EROME)

(1897-1963) US writer and editor who worked for the Standard Magazine chain on CAPTAIN FUTURE, STARTLING STORIES and THRILLING WONDER STORIES during 1941-4, a period when these magazines were most specifically aimed at adolescents. The editorial director at the time was Leo MARGULIES, with whom OJF later edited 3 anthologies (see below). After the death of Otis Adelbert KLINE in 1946, OJF became head of Kline's literary agency. He was intermittently active as a writer from before 1920, concentrating on horror, Western and detective tales, sometimes as Owen Fox Jerome, his first sf story proper being "Of Jovian Build" for *Thrilling Wonder Stories* in 1938. His first novel, *The Hand of Horror* (1927) as by Jerome, was a horror tale involving hynotism. His sf books - *The Kid from Mars* (1940 *Startling Stories*; 1949), *Roar of the Rocket* (1940 TWS; 1950 chap Australia) and *The Star Men* (1963) - are unremarkable but entertaining. [MJE/JC]Other works: *From Off this World* (anth 1949), *My Best Science Fiction Story* (anth 1949) and *The Giant Anthology of Science Fiction* (anth 1954; cut vt *Race to the Stars* 1958), all with Leo Margulies. See also: ALIENS.

FRIGGENS, A.

[r] Eric BURGESS.

FRITCH, CHARLES E(DWARD)

(1927-) US writer and editor who began publishing sf with "The Wallpaper" for *Other Worlds* in 1951. He edited the magazine GAMMA 1963-5. His stories, written for a variety of markets but sharing a certain

glibness and snappiness of effect, are collected in *Crazy Mixed-Up Planet* (coll 1969) and *Horses' Asteroid* (coll 1970). Many are spoofs. [JC]

FROESE, ROBERT

(1945-) US academic and writer whose sf novel, *The Hour of Blue* (1990), presents the strangely consoling notion that Gaia herself is beginning to respond defensively to humanity's rape of the planet, and that the forests in Maine (the state where RF himself teaches) are transforming themselves. [JC]

FROGS

Film (1972). American International. Dir George McCowan, starring Ray Milland, Sam Elliott, Joan van Ark, Lynn Borden. Screenplay Robert Hutchison, Robert Blees. 90 mins. Colour. A cheerful exploitation movie, its director's debut and part of the 1970s Revenge-of-Nature boom (**MONSTER MOVIES**), F is a rather well made ecological fable in which upper-crust layabouts living on a bayou are disposed of by frogs, spiders, leeches, snakes and snapping turtles (all normal size, but in large numbers), apparently as a payback for Mankind's ill treatment of Nature: a sort of amphibian *The BIRDS* (1963). [PN]

FROM BEYOND

Film (1986). Taryn/Empire. Executive prod Charles BAND. Dir Stuart Gordon, starring Jeffrey Combs, Barbara Crampton, Ken Foree, Ted Sorel, Carolyn Purdy-Gordon. Screenplay Dennis Paoli, based on "From Beyond" (1934) by H.P. LOVECRAFT. 85 mins. Colour. With three of the same leading players, the same production team, and one of Lovecraft's fringe sf stories as its original, this is effectively a sequel to *RE-ANIMATOR* (1985), and was made as a direct result of that film's success. Lovecraft's idea was that stimulating the pineal gland might open a window to another **DIMENSION** peopled by **MONSTERS**. The film adds an element of sexual stimulation to that (psychiatrists in bondage gear, etc.), a not unreasonable reading of Lovecraft's lurid but repressed imaginings, but the main variation is the glee and (occasional) wit with which the disgusting monsters from beyond are set into action. Though an undergraduate-style exercise in **SPLATTER-MOVIE** bad taste, FB is less gory than *Re-Animator*. [PN]

FROM THE EARTH TO THE MOON

Film (1958). Waverly/RKO. Dir Byron HASKIN, starring Joseph Cotton, George Sanders, Deborah Paget. Screenplay Robert Blees, James Leicester, adapted from Jules VERNE's *De la terre a la lune* (1865) and *Autour de la lune* (1870), the two published together in English translation as *From the Earth to the Moon* (1873). 100 mins. Colour. Using a new explosive, a projectile carrying human passengers is fired at the Moon from a huge cannon. Paget plays a pretty stowaway. The film, shot in Mexico, is slow-moving and has painful dialogue; it is perhaps the dullest sf movie ever made. There are no scenes on the Moon. A comic version, bearing no relation to Verne's novel, was the UK Jules Verne's *Rocket to the Moon* (1967; vt *Those Fantastic Flying Fools*) dir Don Sharp, in which a series of farcical misadventures - the rocket lands in Russia, not on the Moon - keeps the story effectively Earthbound. [PN/JB]

FROST, GREGORY (DEE)

(1951-) US writer who began publishing sf with "Rubbish" for FSF in 1984, and most of whose work for a decade was governed by its fantasy tone, including his first novel, *Lyrec* (1984), which does evoke PARALLEL WORLDS but within a structure of story that does not permit an sf reading; his later sequence, based on Celtic mythology and comprising *Tain* (1986) and *Remscela* (1988), is pure fantasy. *The Pure Cold Light* (1993), on the other hand, is sf, though its plot does play on after-death experiences in a manner peculiarly stretching of the sf frame; overall, though, the book is a remarkably ingenious tale of government and corporation conspiracies involving possible ALIENS, CYBERPUNK riffs in the wastes of NEAR-FUTURE Philadelphia, a female private investigator, and a drug - Orbitol - whose reality-challenging effects are reminiscent of some passages in the work of Philip K. DICK. Literary allusions abound, and wit, and excesses of narrative energy; but because the basic tale veers into the incredible and the camp, it seems clear that what GF needs in future is a premise capable of taxing his inventiveness. [JC]

FROST, JASON

Zebra Books house name, used almost exclusively by US writer Raymond Obstfeld (1952-) for the Warlord sequence of post- HOLOCAUST sf adventures with a survivalist message: *The Warlord* (1983), *The Warlord #2: The Cutthroat* (1984), #3: *Badland* (1984), #4: *Prisonland* (1985) and #5: *Terminal Island* (1985). #6: *Killer's Keep* (1987) was written as JF by Rich Rainey. A singleton film tie, *Invasion U.S.A. ** (1985), was by Obstfeld. [JC]

FTL

Acronym, often used in sf TERMINOLOGY, for FASTER THAN LIGHT.

FUENTES, CARLOS

(1929-) Mexican diplomat and writer whose acerbic MAGIC REALISM - a more worldly version of that idiom than found in the works of his coeval, Gabriel Garcia Marquez (1928-) - has featured in stories and novels from the 1950s on. They include: *Aura* (1962; trans Lysander Kemp 1965 chap US), a ghost story which incorporates elements of vampirism; *La Cabeza de la Hidra* (1978; trans Margaret Sayers Peden as *The Hydra Head* 1978 US), set just before the outbreak of WWII in Mexico; *Terra Nostra* (1975; trans Margaret Sayers Peden 1976 US), a vast FABULATION about the entire Earth (though centred in an ALTERNATE-WORLD Paris); *Cristobal nonato* (1987; trans Alfred MacAdam and CF as *Christopher Unborn* 1989 US), a NEAR-FUTURE lament for Mexico and the world narrated by a child still in the womb; and *Constancia y otras novelas para virgenes* (coll 1989; trans Thomas Christensen as *Costancia*; and *Other Stories for Virgins* 1990 UK/US), a series of complexly elaborate fables. [JC] See also: LATIN AMERICA.

FUENTES, ROBERTO

[r] Piers ANTHONY.

FUGA DAL BRONX

1990: I GUERRIERI DAL BRONX.

FUKKATSO NO HI

(vt Virus) Film (1981). Haruki Kadokawa Films. Dir Kinji Fukasaku, starring Masao Kusakari, Chuck Connors, Glenn Ford, Olivia Hussey, George Kennedy, Henry Silva, Robert Vaughn. Screenplay Koji Takada, Gregory Knapp, Fukasaku, from Fukkatsu No Hi (1964) by Sakyō KOMATSU. 155 mins, cut to 108 mins. Colour. It is difficult to judge this reputedly expensive Japanese DISASTER film, which was very successful in Japan, because the export version was severely cut - but one cannot believe it was ever very good. A germ-warfare virus is stolen and accidentally released; only those in very cold areas survive. Then the crazed US Chief of Staff (Silva) sets off a nuclear strike. In the Antarctic, 864 shivering male survivors share 8 women. The story is told as flashback, with a Japanese (Kusakari) looking like a bearded scarecrow about to walk, implausibly, from Washington DC to the Antarctic. (In the Japanese version he makes it.) The characters are appallingly stereotyped. This is a simplistic melodrama with nothing serious to say. [PN]

FULLER, ALVARADO M(ORTIMER)

(1851-?) US writer whose sf novel, A.D. 2000 (1890; vt Back to Life A.D. 2000 1911), wakes its protagonist (SLEEPER AWAKES) in the UTOPIAN culture of AD2000. A single party rules North America, and electrical inventions (after a great disaster with "aluminum bronze", electricity has become the chief source of power) dominate the exiguous storyline. [JC]

FULL SPECTRUM

US ORIGINAL-ANTHOLOGY series published by BANTAM BOOKS since 1988, created by Lou ARONICA, 3 issues to date (Spring 1992): Full Spectrum (anth 1988), ed Aronica with Shawna MCCARTHY, #2 (anth 1989), ed Aronica with Pat Lobrutto, McCarthy and Amy Stout, and #3 (anth 1991), ed Aronica with Betsy Mitchell and Stout. These are fat, prestigious volumes - an unusual publishing ploy at a time when conventional wisdom says sf ANTHOLOGIES sell badly - presumably designed to publicize the Bantam Spectra sf line and to announce that Bantam remains a leader in the sf market. To date their only major award-winner has been "Bible Stories for Adults, No. 17: The Deluge" (1988) by James MORROW, which won a NEBULA, but a high count of FS stories have been shortlisted for awards, and FS itself won a Locus Award for Best Anthology in its first year. FS publishes a fairly high proportion of "literary" stories and a low proportion of HARD SF, and mixes well known authors with promising unknowns. [PN]

FU MANCHU

For a listing of some of the films in which Sax ROHMER's oriental supervillain, armed with the weapons of superscience, appeared, The FACE OF FU MANCHU . [PN]

FUNNELL, AUGUSTINE

(1952-) Canadian writer whose two sf novels, Brandyjack (1976) and its sequel, Rebels of Merka (1976) - the only titles published by LASER BOOKS actually to have been written by a Canadian - were unremarkable SPACE OPERAS. In the 1980s AF began to publish short fiction in US magazines. [JC]

FUQUA, ROBERT

Pseudonym of Chicago-based US illustrator Joseph Wirt Tillotson (? -), used by him on sf cover paintings (although some of his black-and-white work appeared under his own name). For some time a staff artist for ZIFF-DAVIS magazines, RF painted 25 covers for AMZ 1938-44 and 7 for Fantastic Adventures. In the 1950s, away from Ziff-Davis, he contributed to the Chicago magazines Imagination and Other Worlds. He might have been better known had he worked also for New York-based publishers, but he always restricted himself to Chicago. One of the more prominent sf illustrators of the 1930s and 1940s, RF used very bright colours to compensate for poor reproduction processes. His melodramatic style - the very essence of PULP-MAGAZINE sf - perfectly complemented the lurid Ziff-Davis fiction. [JG/PN]

FUREY, MICHAEL

Sax ROHMER.

FURTINGER, ZVONIMIR

[r] YUGOSLAVIA.

FURY, THE

Film (1978). Frank Yablans Presentations/20th Century-Fox. Dir Brian De Palma, starring Kirk Douglas, John Cassavetes, Charles Durning, Amy Irving, Fiona Lewis, Andrew Stevens. Screenplay John Farris, based on his The Fury (1976). 118 mins. Colour. After his success with CARRIE (1976), it seems cynical of director De Palma to have made another film about destructive teenage PSI POWERS so quickly. This one has an intricate plot with standard ingredients: the secret government agency experimenting with WEAPONS (in this case, human weapons), the paranoid (PARANOIA) sense that everything is manipulated by this agency, the FRANKENSTEIN theme of the monster that turns on its creator, and (a Frankenstein subtheme) Freudian hostility between children and parents. The two teenagers who can telekinetically cause blood to spurt from every available orifice of those they attack (or even to explode them) are both corrupted by their power, one deeply, one mildly. The film is a vivid string of fireworks, with De Palma as usual manipulating audience response with bravura, but not creating anything that is more than the sum of its exploitative parts.

[PN]

FUTRELLE, JACQUES

(1875-1912) US writer and theatrical manager, on the editorial staff of the Boston American; he went down with the Titanic. The stories assembled in his Thinking Machine books about the scientific detective Augustus S.F. X. Van Dusen - The Thinking Machine (coll 1907; vt The Problem of Cell 13 1917) and The Thinking Machine on the Case (coll 1908) - are properly detections, though Van Dusen's methods verge on sf. The Thinking Machine (coll 1959) ed Tony Simon contains "The Problem of Cell 13" and 2 other stories. Larger selections have been ed E.F. BLEILER as Best "Thinking Machine" Detective Stories (coll 1973) and Great Cases of the Thinking Machine (coll 1976). The Diamond Master (1909; exp with "The Haunted Bell" as coll c1912), which is sf, revolves melodramatically around the artificial manufacture of diamonds; the added novella is a supernatural tale involving Van Dusen. [JC]

FUTURE FICTION; SWAN AMERICAN MAGAZINE.

FUTURE FICTION

US magazine. 17 issues Nov 1939-July 1943, 48 further issues May/June 1950-Apr 1960. Published by Blue Ribbon Magazines, later Double Action Magazines and (from Apr 1941) Columbia Publications; ed Charles D. HORNIG (Nov 1939-Nov 1940) and Robert A.W. LOWNDES (Apr 1941-Apr 1960). FF began as a companion magazine to SCIENCE FICTION, with similar editorial policies. It absorbed its parent magazine in Oct 1941, changing its title to Future Combined with Science Fiction. Under Lowndes's editorship it began to feature stories by such fellow FUTURIANS as James BLISH, C.M. KORNBLUTH and Donald A. WOLLHEIM, often under pseudonyms. It also carried some of the earliest magazine covers done by Hannes BOK. The title changed again to Future Fantasy and Science Fiction in Oct 1942, and finally to Science Fiction Stories in Apr 1943. The 2 issues of this final wartime incarnation are virtually identical in appearance to Science Fiction, but as they continue the numbering of FF they are considered part of its run. FF was one of the many magazines to fall victim to wartime paper shortages, but it was revived under the same editor in 1950 as Future Combined with Science Fiction Stories, which became Future Science Fiction Stories in Jan 1952 and, finally, Future Science Fiction in May 1952. It changed from PULP to DIGEST size in June 1954. It was one of several respectable but mediocre magazines edited on shoestring budgets by Lowndes during the 1950s. The volume numbering was taken over by The ORIGINAL SCIENCE FICTION STORIES with its Jan 1955 issue (vol 5 #4), suggesting the death of Future Science Fiction; however, the latter reappeared a little later in 1955, apparently unhurt, with #28. (The numeration of Columbia's magazines has baffled generations of collectors.) There were 2 UK reprint runs of FF, 14 issues 1951-4 in pulp format, and 11 digest issues 1957-60.

[MJE/PN]

FUTURE HISTORIES

especially GALACTIC EMPIRES; HISTORY IN SF; NEAR FUTURE; PREDICTION; WAR.

FUTURE PUBLICATIONS

FANTASY MAGAZINE/FANTASY FICTION; SCIENCE FICTION ADVENTURES.

FUTURE SCIENCE FICTION

1. Variant title of FUTURE FICTION in its 1950s incarnation. 2. Australian DIGEST-size magazine. 6 numbered, undated issues (2 in 1953, 3 in 1954, 1 in 1955) published by Frew Publications, Sydney, plus 2 (1967) published by Page Publications, NSW; ed anon. The Frew series used a mixture of US reprints, 13 new US stories and 4 new Australasian stories; the Page series reprinted #4 and #6 from the Frew publications, renumbering them #1 and #2. A companion magazine to both versions was POPULAR SCIENCE FICTION. [FHP/PN]

FUTURE SCIENCE FICTION STORIES FUTURE FICTION.

FUTURE WAR HISTORY OF SF; INVASION; WAR.

FUTURES PAST

US historical SEMIPROZINE, three issues in 1992, ed Jim Emerson, pub Jim Mladenovic from Convoy, Ohio, small- BEDSHEET format, saddle-stapled. This ambitious venture was sadly soon aborted. Subtitled "A Visual Guidebook To Science Fiction History", each issue was to cover the history of one year in sf; this began in the first issue with 1926, and ended in the third with 1928. Thus about 65 issues never came out. Articles, bios, checklists, movie lists, chronologies - all well researched - were interspersed with magazine illos and photographs somewhat smudgily reproduced. [PN]

FUTUREWORLD

Film (1976). AIP. Dir Richard T. Heffron, starring Peter Fonda, Blythe Danner, Arthur Hill. Screenplay Mayo Simon, George Schenck. 104 mins. Colour. An inferior sequel to WESTWORLD (1973), set in the same theme park, Delos, F lacks the unity and impact of Michael CRICHTON's original film. In a newly built area of Delos, devoted to dramatizing the future, there are several diverting scenes irrelevant to the main plot, which is one of PULP-MAGAZINE sf's oldest: a mad SCIENTIST (revealed at the end to be himself a ROBOT) creates robot duplicates of influential people to enable him to rule the world. His plan is uncovered by two journalists reporting the grand opening. F is rather ill organized and crude. The novel Futureworld * (1976) was adapted by John Ryder Hall (William ROTSLER) from the screenplay. [JB]

FUTURIAN, THE

UK FANZINE (1938-40), ed from Leeds by J. Michael Rosenblum. A continuation of the Leeds SCIENCE FICTION LEAGUE's Bulletin (1937), The Futurian was a small printed publication featuring fiction, poems and articles by leading sf fans of the day, including Arthur C. CLARKE, Ralph Milne FARLEY, John Russell FEARN, David H. KELLER, Frederik POHL and William F. TEMPLE. Other important pre-WWII UK fanzines were John CHRISTOPHER's The Fantast, Jonathan BURKE's and Charles Eric MAINE's Satellite, Donald Mayer's Tomorrow (incorporating Walter GILLINGS's SCIENTIFUNCTION) and Maurice K. Hanson's NOVAE TERRAE (later NEW WORLDS). Under the title Futurian War Digest (1940-45), Rosenblum's fanzine became a focal point for UK fandom during the WWII years when sf and amateur

publishing faced considerable difficulties. It was revived as The New Futurian 1954-8. [PR]

FUTURIANS

A New York sf group active 1938-45, notable for radical politics and the conviction that sf fans should be forward-looking and constructive; the name came from J. Michael Rosenblum's UK fanzine, The FUTURIAN . Though deeply involved in FANZINE publishing and internal fan politics, The Futurians also brought together many young fans who hoped to become sf writers. Members included Isaac ASIMOV, James BLISH, C.M. KORNBLUTH, David KYLE, Robert A.W. LOWNDES, Frederik POHL - who describes this period in The Way the Future Was: A Memoir (1978) - Richard WILSON and Donald A. WOLLHEIM; also associated with the group were Hannes BOK, Damon KNIGHT - who in The Futurians (1977) published an informal history of the group - Judith MERRIL and Larry T. SHAW. [PR/PN]

FUTURIANS, THE

The Futurians sounds like a group of aliens who were transmitted through Time. But, in fact, they were teenagers who shared a house in 1939 and who also shared a love of science fiction. Their ranks eventually included Isaac Asimov, Frederik Pohl, Damon Knight, and James Blish. The Secret Service raided their Brooklyn home one night after neighbors, suspicious of their mimeograph machines and strange visitors, reported them as counterfeiters. What they found were law-abiding, if slightly obsessed, SF fans.

FUTURIAN WAR DIGEST

The FUTURIAN .

FUTURISTIC SCIENCE STORIES

UK pocketbook-size magazine. 16 issues, numbered, undated, 1950-58, published by John Spencer, London; ed John S. Manning (pseudonym of publishers Sol Assael and Michael Nahum). FSS was one of 4 almost identical low-quality juvenile sf magazines - all of minimal interest - published by Spencer; the others were TALES OF TOMORROW, WONDERS OF THE SPACEWAYS and WORLDS OF FANTASY. #1-#15 appeared 1950-54; #16 did not appear until 1958. (For more information on Spencer's publications BADGER BOOKS.) [FHP]

FUTURISTIC STORIES

UK pulp-size magazine. 2 undated issues, 1946, published by Hamilton ? Co., Stafford; ed anon. FS was poor-quality, juvenile, and of little interest. As with its companion magazine, STRANGE ADVENTURES, the Entire contents were written by Norman FIRTH. [FHP]

FUTUROLOGY

The word "futurology" is a neologism coined in 1943 by a refugee German professor of sociology, Ossip K. Flechtheim, then teaching in a US college. He argued for a concerted effort by sociologists, historians, psychologists, economists and political scientists to examine social and technological trends as a means of learning the true shape of coming things. He sent his proposals to Aldous HUXLEY, who took them up with enthusiasm, and thereby conveyed the word into the language. Now

futurologists are everywhere except perhaps in the very poorest countries. History shows that human beings are ab origine future-directed animals. Ever since Homo erectus began the long trek out of Africa and into Eurasia, the horizon-watchers have known that their survival might well depend on what they found over the hill, in the no-man's time of the day after. But the literature of proposals and projections about future things appears as a mere blip at the end of civilization's 10,000-year record. It is strange, too, that UTOPIAS, DYSTOPIAS, forecasts, projections and sf are in origin, and still largely, a Western intellectual activity. All these future-oriented activities may have begun with the first modern utopias to present the other-history of the better society. Thomas MORE's Utopia (Part Two 1516 in Latin; trans Ralph Robynson with the later Part One 1551) and Francis BACON's New Atlantis (1627; 1629) contained ideologies which had already worked their benign effects in the could-be of imagined lands, and might serve as guides for achieving a more perfect way of life in the real world of a reformed England. In the beginning, then, the future was another place, and the VIRTUAL REALITY of word-generated social systems and behaviour patterns in the utopias made for a most effective connection between today and tomorrow. There was still a long way to go before considered forecasts. The world had to wait for the new ideas about the progress of mankind that, in the mid-18th century, were to mark out the base for a calculus of probabilities. In his very influential Philosophical Review of the Successive Advances of the Human Mind (1750) Anne Robert Jacques Turgot (1727-1781), then a student at the Sorbonne, provided the historical evidence that allowed him to indicate the main lines of human progress. Since, he argued, mankind had advanced from primitive beginnings to the glorious days of Louis XV, it followed that the human race would "go on advancing, although at a slow pace, towards greater perfection". The details of this march forward awaited the work of men like Adam Smith (1723-1790), who in his Wealth of Nations (1776) reduced the entirety of ECONOMICS, industry and commerce to a Newtonian universe of actions and reactions. At around this time the great divide between fiction and prediction began to narrow, as the first tales of the future spread their message of the centuries ahead. The most important was Louis-Sebastien MERCIER's L'an 2440 (1771; trans as Memoirs of the Year Two Thousand Five Hundred 1772), which described a better future world in which the social ideals of the Enlightenment had prevailed: constitutional monarchs, deism the universal religion, education for all. The most telling register of expected change was in the technology of the future: a Suez Canal, rapid BALLOON transportation between continents, and "all sorts of machines for the relief of Man in laborious works". Still the would-be predictors awaited the theories and techniques that would help them provide for the whole of society what Adam Smith had provided for a part. New means of assessment and measurement swiftly arrived. In 1798 Thomas Malthus (1766-1834) published his notorious Essay on the Principle of Population, in which he pessimistically linked the future of humanity to the potentially geometrical growth of population and the merely arithmetical growth of the rations that sustained it, a situation that could be balanced only if vast numbers died. A tremendous debate about humankind's future followed, partly because this early example of Future Shock had coincided with the

publication by Edward Jenner (1749-1823) of his paper on the Causes and Effects of the Variolae Vaccinae, which provided the first marvellous promise that the future would be different. By that time James Watt's steam engine was providing power on an unprecedented scale, and the Industrial Revolution was on the point of transforming the world. It seems strange, with change so rapidly manifesting itself, that it was almost a century before straightforward forecasts like *Dans cent ans* ["In 100 Years"] (1892) by Charles Richet (1850-1935) came to be published. But in the 19th century the "certainty factor" persuaded everyone that change and technological development could be accommodated within the known social system. The same, but better, was the slogan - or, in the Tennysonian phrase, the great world would "spin for ever down the ringing grooves of change". So people invented new methods to measure the changes they considered most important. The first decennial census of 1801 began the continuing measure of population; the Belgian mathematician Lambert Quetelet (1796-1874) adopted the Laplace probability theory to produce the crucial concept of the Average Man. Also significant was the first attempt to analyse the new literature of the future in *Le roman de l'avenir* ["The Novel of the Future"] (1834) by Felix Bodin (FRANCE). Another sign was the inauguration of the British Association for the Advancement of Science in 1831. The flood of forecasting literature did not take place until around 1890, beginning with sustained discussion about the next great WAR (a discussion catalysed by the War of 1870). Its first major prediction was the work of Polish banker and statistician Ivan Gottlieb de Bloch (1836-1902), who produced the classic analysis in *The War of the Future in its Technical, Economic and Political Relations* (1897). His findings, ignored by the generals, led him to forecast a great war of entrenchment. Soon forecasts became part of popular writing: weekly magazines occasionally featured articles with illustrations of flying machines, motor cars and television. Some two dozen books were published at this time about the future, including George Ermann on the imperial German future in *Deutschland im Jahre 2000* ["Germany in the Year 2000"] (1891), the influential *Esquisse de l'organisation politique et economique de la societe future* (1899; trans P.H. Lee Warner as *The Society of To-Morrow* 1904) by Gustave de Molinari (1819-1911), and the collection by Edward Carpenter (1844-1929) of the expectations of 10 eminent socialists in *Forecasts of the Coming Century* (coll 1897). The most widely read of them all in the Anglo-Saxon world was the series of articles by H.G. WELLS in *Fortnightly Review* in 1900, published as *Anticipations* (1901). The next advances in the investigation of the future followed two major innovations between the two world wars. In the 1920s the publishing house Kegan Paul, Trench ?

Tomorrow series, in which scientists, sociologists, philosophers, theologians and others set down their expectations of the future. One was J.B.S. HALDANE's *Daedalus, or Science and the Future* (1924), which accurately forecast advances in biology that gave Aldous Huxley important ideas for *BRAVE NEW WORLD* (1932). The series was widely reported and did much to publicize thinking about the future. More important, however, was the first major state initiative in this regard. The US President, Herbert Hoover, in 1930 appointed a National Resources Committee "to examine and report upon recent social trends in the United States with a view to

providing such a review as might supply a basis for the formulation of large national policies looking to the next phase in the nation's development". The committee, drawing on the resources of field-survey techniques formulated at the University of Chicago, presented their conclusions in their report *Recent Social Trends* (1932), which provided a model for the USA and an example to the rest of the world. The development of techniques for investigating the future accelerated during WWII, especially the Operational Research procedures borrowed from the UK by the US Army Air Force. These proved so successful in the air war that General Henry Arnold established a research centre to investigate possible developments in warfare. This had the codename RAND (Research and Development), and in 1948 the project team set up an independent non-profit organization known as the RAND Corporation. It had immense influence on military planning and on presidential decisions about the manufacture of nuclear weapons; it was the first "think tank", and from it came the System Development Institute and the Hudson Institute. The latter gained world notoriety when Herman Kahn (1922-1983) published books such as *On Escalation* (1968) that took the hardest of looks into the future. Indeed, this was a period of rapid growth in futurology, with a great many books and journals published on the subject. Kahn's books were among the best-known, but futurology's limitations as a science can be seen very clearly in his *Things to Come* (1972), a book about what to expect in the 1970s and 1980s. The index has no entries for oil, gasoline, energy, resources or power; Kahn's only remark about the Arabs is to say that, because the West is their only market, we need expect no problems of supply. Sf writers, too, were unsuccessful in predicting the energy crisis, but few as blandly and so close to the time when it happened as this. A very influential, albeit flawed, work of futurology was the report of the Club of Rome on OVERPOPULATION and diminishing resources, excerpts from which were published as *The Limits to Growth* (1972). Alvin TOFFLER's book *Future Shock* (1970) was a bestselling work of SOCIOLOGY rather than futurology; it documented the increasing rate of change in the 20th century, but was comparatively cautious in making specific predictions about the future. At the other extreme were books of popularization like *The Next Ten Thousand Years* (1974) by Adrian BERRY, a work of technological optimism packed with "what-ifs" and predictions rather than futurology per se. There are many of these. The modern "science" of futurology is the forecasting of the future (usually the NEAR FUTURE) by projection and extrapolation from current trends, statistics, population figures, political groupings, availability of resources, economic data, etc. It cannot be called a science proper, since too many of the factors involved are imponderable (and often unknown), but its tools are statistical analysis and the computer simulation of various models. It may seem that the futurologist and the sf writer are involved in the same trade, but they share a certain unease about one another. Futurologists work primarily on what can be quantified, and to a large degree their projections depend on the future being the same as the past. Population projections for the UK, for example, were for a long time too high because demographers were unable to quantify the factors that persuade people to have fewer children. Sf writers are not actually in the prediction business, but when they deal with the near future they normally write a

"what-if?" scenario, which may involve discontinuities with the past. In practice, this is only to say that the factors sf writers deal with include a good deal of guesswork and invention. What makes sf writers unreliable as predictors is the nature of that "what if?". It may appeal to the writer because of its intrinsic interest or its function as a warning symbol, rather than for its likelihood. Writers often do not believe in it themselves; they are writing stories, not prophecies. Also, the sf writer is often ignorant of the mechanisms, such as those of ECONOMICS, which must play an important role in any realistic story of future cause and effect. Where sf writers have an advantage is in the ability to adopt a multidisciplinary approach; they are often good at what is sometimes known as lateral thinking. In a sense the advantage sf writers have is their very irresponsibility: they cannot be held accountable for the nature of their scenarios; the details do not have to be justified. This allows sf writers to survey a far greater range of possibility than the comparatively restricted futurologist. The writer can take the unexpected into account, and history tells us that the unexpected does indeed often happen. Sf itself may give direction to change, through a process of self-fulfilling prophecy, by presenting images of the future which grip people's minds; e.g., the US space programme, which could not have been funded without popular support, or the multistorey apartment blocks that were built by local authorities in such disastrously great numbers in the UK after WWII, designed by a generation of architects reared on the utopian-sf visual imagery of the 1920s. Neither futurologists nor sf writers have done very well at PREDICTION, though perhaps the writers' emphasis on the lives of individuals seems more humane than the futurologists' statistical projections about the masses. Many examples of sf about the general area also covered by futurology can be found under TECHNOLOGY, ECOLOGY, NEAR FUTURE, OVERPOPULATION and WAR. John BRUNNER is

one notable writer who has written novels of this kind. Often, of course, Brunner and others are not so much predicting as trying to avert; they hope their ghastly scenarios will be influential as a kind of early-warning system. Arthur C. CLARKE, on the other hand, has used much optimistic futurological speculation in both his factual books and his fiction. Sf itself has also produced futurologists as characters, the best known being the exponents of PSYCHOHISTORY in Isaac ASIMOV's Foundation series. [IFC/PN]

FYFE, H(ORACE) B(OWNE)

(1918-) US writer whose first sf story, "Locked Out", appeared in ASF in 1940 but who became active, mainly with stories in ASF, only after WWII army service. By 1967, when he became inactive, he had published nearly 60 stories. His Bureau of Slick Tricks tales (ASF 1948-52) are typical of John W. CAMPBELL's need for stories in which humans inevitably outwit thick-skulled (often bureaucratic) ALIENS. In his novel, D-99 (fixup 1962), which continues the series, Department 99 of the Terran government has the job of finagling citizens out of jams on other planets and flummoxing thicker species. The tone is fortunately light. [JC]

FYSH

Leonard G. FISH.

SF?

GADALLAH, LESLIE

(1939-) Canadian writer best known for her Cat's Pawn sequence - Cat's Pawn (1987 US) and Cat's Gambit (1990 US) - in which a human protagonist becomes involved with the eponymous catlike alien Orioni, themselves involved in a desperate war against the invading Kazi, who dominate much of the Galaxy by the end of the second volume, which ends on an unusual downbeat, suggesting that further volumes may be projected. The Loremasters (1988 US), a singleton, less impressively pits a civilized enclave against a horde of barbarians on an energy-starved future Earth.

[JC]

GADE, HENRY

[s] Raymond A. PALMER.

GAIL, OTTO WILLI

(1896-1956) German writer of popular fiction, two of whose astronomical novels were published in Hugo GERNSBACK's Science Wonder Quarterly: Der Schuss ins All (1925; trans Francis Currier 1929 as The Shot into Infinity; 1975 US) and its sequel, Der Stein vom Mond (1926 trans Francis Currier 1930 as "The Stone from the Moon"). Hans Hardts Mondfahrt: Eines abenteuerliche Erzählung (1928; trans anon as By Rocket to the Moon: The Story of Hans Hardt's Miraculous Flight 1931 US) is a juvenile. All three aim at a technical realism unusual for the time. [JC]See also: GERMANY; SPACESHIPS.

GAIMAN, NEIL (RICHARD)

(1960-) UK writer, in the USA from 1992, who has specialized in the scripting of fantasy and sf comics and GRAPHIC NOVELS, but who began publishing work of genre interest with a story, "Featherquest", for Imagine in 1984. His first book, Ghastly Beyond Belief (anth 1985) with Kim NEWMAN, presents various kinds of bad writing to be found in sf and fantasy. His first visual book was Violent Cases (graph 1987) with Dave MCKEAN, a dark urban fantasy in graphic-novel form. He then began to write comics in earnest, with extended stints as scripter for The Sandman (1988-current) and Miracle Man (1990-current), the latter being a genuine sf comic with a UTOPIAN turn (CAPTAIN MARVEL). The Sandman stories - one of which, "A Midsummer Night's Dream" (1990), won a 1991 World Fantasy Award for Best Short Story-have been published in book form as The Sandman: The Doll's House (graph coll 1990) with Mike Dringenberg and Malcolm Jones III, The Sandman: Preludes and Nocturnes (graph coll 1991) with Dringenberg, Jones and Sam Kieth, and The Sandman: Dream Country (graph coll 1991) with various artists; a long tale, which transmutes dark-fantasy material evocative of the work of Jonathan Carroll (1949-), was contained in 6 further issues (1991-2) of the comic and is projected for book release as A Game of You (graph 1992) with Shawn McManus and Colleen Doran. His further graphic novels are Black Orchid (graph 1991) and Signal to Noise (1989-90 The Face; rev as graph 1992), both with Dave McKean, and The Books of Magic (graph coll 1993 US) with various artists.

Good Omens: The Nice and Accurate Prophecies of Agnes Nutter, Witch (1990; rev 1991 US) with Terry PRATCHETT is a comic fantasy novel about the Four Horsemen, who do not quite end the world. Unlike graphic novelists such as Alan MOORE, NG has tended to combine draconian verbal economy with an ample romanticism, so that his tales carry, sometimes effortlessly, a burden of half-uttered resonances. He cowrote the entry on the GRAPHIC NOVEL for this encyclopedia. [JC]Other works: Don't Panic: The Official Hitch Hiker's Guide to the Galaxy Companion (1988; rev 1992); Now We Are Sick: A Sampler (anth 1986 chap) ed with Stephen Jones (1953-), booklet produced to publicize and sell rights in the next book; Now We Are Sick (anth 1991 chap) ed with Stephen Jones, assembling original poems; Temps Volume 1 (anth 1991) ed with Alex Stewart (1958-).See also: CRIME AND PUNISHMENT; SHARED WORLDS; SUPERMAN.

GAKOV, VLADIMIR

Originally the collective pseudonym of Russian writers Vladimir Gopman, Andrei Gavrilov and Mikhail Kovalchuk (VLADIMIR Gopman, Andrei GAVrilov, and Mikhail KOValchuk). For the purposes of this encyclopedia, in which he has revised or written many of the entries on Russian sf, including RUSSIA, this is the pseudonym of Kovalchuk writing solo. Russian critic and editor Mikhail (Andreevich) Kovalchuk (1951-) is a trained physicist who began publishing sf criticism in 1976, soon giving up his science career for professional journalism. His three critical works on sf are Vitok Spirali["The Curve of a Spiral"] (1980) which was written by all three authors, Tchetyre Puteshestviia Na Mashine Vremeni ["Four Trips in the Time Machine"] (1983) and Ultimatum ["The Ultimatum"] (1989), the last being an historical study of the relationship between fact and fiction in the nuclear arms race. Among his various anthologies, of interest to English-speaking readers is World's Spring (anth 1979 Sweden). A contributor to various English-language reference editions, he has revised or written many of the entries on Russian sf in this encyclopedia. [VG/JC]See also: CRITICAL AND HISTORICAL WORKS ABOUT SF; RUSSIA.

GALACTICA: 1980

US tv series (1980). Universal MCA/ABC-TV. Creator, executive prod Glen A. LARSON. Most episodes written by Larson. Regular cast included Lorne Greene, Kent McCord, Barry Van Dyke, Robyn Douglass. 3 pilot 50min episodes followed by 7 50min episodes. The pilot, Galactica Discovers Earth, a three-part made-for-tv film sequel to the tv series BATTLESTAR GALACTICA, was successful enough to convince ABC-TV to commission a new series. Rushed into production, aimed at an early-evening time slot where special rules applied about what children can watch, and underrehearsed, it flopped badly and was soon jettisoned. In the pilot, Galactica finds Earth too undeveloped to fight off the Cylons and attempts are made via TIME TRAVEL to improve the situation. The remaining episodes are all set on Earth and feature Cylon attacks. The pilot, dir Sidney Hayers, with sections of 2 further episodes, was theatrically released as Conquest of the Earth (1980). Generally the series was shown on tv abroad as if part of Battlestar Galactica. [PN]

GALACTIC EMPIRES

In The Universe Makers (1971) Donald A. WOLLHEIM attempts to distil from

the range of futuristic visions presented by magazine sf a basic pattern - a "cosmogony of the future" - in which stages 3-5 (there are 8 in all) describe "the rise and fall of the Galactic Empire", which is thus enshrined as the central myth of GENRE SF. ("Empire" is here used with a general, almost metaphorical meaning, rather than in its politically definitive sense.) The galactic empire was a necessary invention: an imaginative framework which could accommodate any number of "Earth-clone" worlds on which writers might deploy ordinary human characters in confrontation with any imaginable social and biological system. Very many modern sf stories are designed to fit into such a framework, taking advantage of the fact that it has become established as a convention which needs no explanation. Much of the credit for the establishment of the convention must go to Isaac ASIMOV, whose Foundation series (1942-50; fixups 1951-3) set the most influential example, although it is possible to trace the idea back to earlier roots. As long ago as 1900 Robert W. COLE had imagined Victoria's glorious British Empire extending its dominion to the stars, so that ours should not be the only sun never to set upon it. Confederations of worlds within the Solar System were common in pulp sf from its inception, and these were extended into the Galaxy in such novels as Galactic Patrol (1937-8; 1950) by E.E. "Doc" SMITH. Asimov, however, was the writer who provided the essential historical framework for such a concept. He did so by relatively straightforward analogy with past empires, reversing the analytical historical perspective of such works as The History of the Decline and Fall of the Roman Empire (1776-88) by Edward Gibbon (1737-1794) to produce the predictive science of PSYCHOHISTORY. With a single flourish, a whole prospectus for the future of the human race - allowing virtually limitless possibilities so far as events on a finer scale were concerned - was established. Asimov used the convenient historical pattern himself as a background for other works, including The Stars Like Dust (1951) and The Currents of Space (1952). Robert A. HEINLEIN's painstaking attempt to develop a future HISTORY step by step became an empty endeavour after the Foundation series, and later efforts seem distinctly half-hearted. James BLISH's Cities in Flight (1955-62) succeeds more through its key image of the star-travelling CITIES than through its framework, derived from the philosophy of cyclic history developed by Oswald Spengler (1880-1936). Poul ANDERSON, who developed his own scheme for use in his Technic History series and many other stories and novels, was able to take a great deal for granted because Asimov had prepared the way. Writers of the 1940s who employed the galactic-empire framework include C.L. MOORE, in Judgment Night (1943; 1952), Edmond HAMILTON, in The Star Kings (1947; 1949 vt Beyond the Moon) and - most extravagantly - A.E. VAN VOGT in such stories as "Recruiting Station" (1942; in Masters of Time coll 1950). Van Vogt was not at all hesitant about borrowing the entire apparatus of historical empires, and replayed the most melodramatic phase of Roman history - presumably borrowed via Robert GRAVES's I, Claudius (1934) - in his Linn series, Empire of the Atom (1946-7; fixup 1957) and The Wizard of Linn (1950; 1962). The background proved particularly useful in the colourful brand of adventure sf featured by PLANET STORIES, and it was very extensively used therein, notably by Leigh BRACKETT, Alfred COPPEL and Poul Anderson (in his early SPACE OPERAS). During the 1950s SCIENCE FICTION ADVENTURES, the

magazine closest in editorial philosophy to Planet Stories, likewise made extensive use of it, particularly in stories written for the US version by Robert SILVERBERG and for the UK version by Kenneth BULMER. In addition to Anderson, several other post-WWII writers have made consistent and elaborate use of a galactic civilization as a reservoir for unusual worlds. These include Jack VANCE, notably in *The Languages of Pao* (1958), *THE DRAGON MASTERS* (1963) and in virtually all of his work during the 1960s and 1970s, John BRUNNER, notably in *Endless Shadow* (1964) and *The World Swappers* (1959), Cordwainer SMITH, in his Instrumentality series, and E.C. TUBB, in his Dumarest series. Few writers have, however, concerned themselves in any but the most superficial way with the sociopolitical structure of the galactic community. Anderson has done significant work in this vein, and so has Gordon R. DICKSON, notably in the Dorsai series, but most are prepared to leave the community in a state of disorganization or nebulous harmony. Only rarely do works appear in which there actually is a powerful, autocratic, imperial system of government - the most conspicuous modern example is the film *STAR WARS* (1977) and its sequels - and the word "empire" is often substituted by "league", "federation" or some other such variant. Most works of this kind are either US or (like the German PERRY RHODAN series) products of cultural coca-colonization, and the political model employed for galactic civilization is very often the US system writ large - an ideal summed up by the final line of Asimov's *The Stars Like Dust* and conscientiously supported by innumerable episodes of *STAR TREK*. It is interesting to note the relative unwillingness of genre-sf writers, even when they take the entire Galaxy for their setting, to create new political or economic modes, although Iain M. BANKS's galactic culture in *Consider Phlebas* (1987), *The Player of Games* (1988) and *USE OF WEAPONS* (1990) is refreshingly alien to the US model. Galactic empires are almost always ruled by humans, and human empires are often at war with ALIEN empires. An amusing antidote to this conventional human chauvinism is *The Zen Gun* (1983) by Barrington J. BAYLEY, in which men become so effete decadent that their erstwhile underlings, the pigs, take over. It is more or less taken for granted in post-WWII works that any galactic federation will have a relatively untamed frontier, almost always called "the rim" (*GALACTIC LENS*). First popularized by A. Bertram CHANDLER's long-running *Rim Worlds* series, the galactic empire's equivalent of the Wild West features fairly prominently in modern *SPACE OPERA*, notably in C.J. CHERRYH's relatively sophisticated stories of that type, which include *Merchanter's Luck* (1982) and *Rimrunners* (1989). In such stories freelance starship pilots take the place of cowboy gunfighters; in recent years such roles have very frequently been filled by female characters, partly as a result of the influence of *Star Trek* in recruiting female readers and writers into the sf community. Any list of post-WWII sf novels using the galactic-empire framework is bound to be highly selective, but some of the more notable stories which actually deal with issues relating to the community rather than to specific worlds within it are: *Star Bridge* (1955) by Jack WILLIAMSON and James E. GUNN, *CITIZEN OF THE GALAXY* (1957) by Heinlein, *Starmaster's Gambit* (1957 France; trans 1973) by Gerard KLEIN, *WAY STATION* (1963) by Clifford D. SIMAK, *Empire Star* (1966) by Samuel R. DELANY, *THE RING OF RITORNEL* (1968) by Charles L. HARNESS, *RITE OF PASSAGE*

(1968) by Alexei PANSHIN, Voyage to Dari (1974) by Ian WALLACE, Beyond Heaven's River (1980) by Greg BEAR, Light on the Sound (1982) by S.P. SOMTOW, Star of Gypsies (1986) by Silverberg, and the Hyperion books (1989-90) by Dan SIMMONS. The definitive theme anthology is Galactic Empires (anth 2 vols 1976) ed Brian W. ALDISS. [BS] See also: COLONIZATION OF OTHER WORLDS; COMMUNICATIONS; SOCIOLOGY.

GALACTIC LENS

This term, from ASTRONOMY, makes frequent appearance in sf. It refers to the fact that our Galaxy is (like many others) approximately lens-shaped - it is a disc containing spiral arms, but like a lens it has a central bulge. Our own position in the Galaxy is quite a long way from the core; when we look towards the centre of the "lens", the direction in which the stars are clustered most thickly, we see the so-called Milky Way. Towards the outer rim of the "lens", stars are comparatively sparse, not only in terms of the numbers lying in our line of sight but also in fact. Many sf writers have set stories on planets circling such stars. Such worlds were dubbed Rim Worlds by A. Bertram CHANDLER, and the term (often as "Rimworld") has since become commonplace in sf. GALAXY SCIENCE FICTION

US DIGEST-size magazine, Oct 1950 to a single undated issue in 1980. Published by World Editions (Oct 1950-Sep 1951), Galaxy Publishing Corp. (Oct 1951-May 1969), Universal Publishing and Distributing Corp. (July 1969-Sep/Oct 1979), Avenue Victor Hugo (1980); ed H.L. GOLD (Oct 1950-Oct 1961), Frederik POHL (Dec 1961-May 1969), Ejler JAKOBSSON (July 1969-May 1974), James BAEN (June 1974-Oct 1977), John J. PIERCE (Nov 1977-Mar/Apr 1979), Hank STINE (June/July-Sep/Oct 1979), Floyd Kemske (1980). The monthly schedule from the beginning to Dec 1958 was broken only by the omission of Dec 1955. It was bimonthly Feb 1959-Apr 1968. June 1968-Apr 1971 the schedule was monthly, except that June 1969 and Jan 1970 were omitted, and Aug/Sep 1970 and Oct/Nov 1970 were single issues. May/June 1971-July/Aug 1973 the schedule was bimonthly, returning to a shaky monthly schedule Sep 1973-June 1978, the issues for May, Nov and Dec 1975 being omitted, as were those for Apr, June, Aug 1976; Dec 1977-Jan 1978 was a single issue. After June 1978, the final issues were Sep 1978,

Nov/Dec 1978, Mar/Apr 1979, June/July 1979, Sep/Oct 1979 and one 1980 issue released in summer. Curiously, the title was revived in 1994 by E.J. Gold, son of the original editor. The new Galaxy, ed Gold, published by the Institute for the Development of the Harmonious Being, Inc., Nevada City, California, published six bimonthly issues in 1994 in small-bedsheet (A4) format, and two more to Mar/Apr 1995. Volume numeration started again at the beginning. The first publisher of Gal was an Italian company which, having incurred heavy losses trying to launch another magazine in the USA, approached H.L. Gold for alternative suggestions. He proposed an sf magazine, and Gal came into existence. From the outset, Gal's payment rates equalled the best in the field - a minimum of three cents a word - and it adopted the digest format already taken by its most successful contemporaries, ASTOUNDING SCIENCE-FICTION and The MAGAZINE OF FANTASY AND SCIENCE FICTION. These two with Gal were the most important sf magazines of the 1950s through to the mid-1970s. The new magazine was an immediate success. ASF was at this time following John W. CAMPBELL Jr's new-found obsession with DIANETICS and was otherwise more oriented towards TECHNOLOGY. Gold's editorial policy was comparatively free-ranging: he was interested in PSYCHOLOGY, SOCIOLOGY and SATIRE and other HUMOUR, and the magazine reflected this. Like Campbell, he worked closely with his writers (mostly by telephone, as he was confined to his apartment by acute agoraphobia) and is said to have had a hand in the conception of many of the famous stories he published, notably Alfred BESTER's THE DEMOLISHED MAN (Jan-Mar 1952; 1953). In its first year Gal included such stories as: Clifford D. SIMAK's "Time Quarry" (Oct-Dec 1950), in book form Time and Again (1951); Fritz LEIBER's "Coming Attraction" (Nov 1950); Damon KNIGHT's "To Serve Man" (Nov 1950); Isaac ASIMOV's "Tyrann" (Jan-Mar 1951), in book form The Stars Like Dust (1951); Ray BRADBURY's "The Fireman" (Feb 1951), in book form FAHRENHEIT 451 (exp 1953); C.M. KORNBLUTH's "The Marching Morons" (Apr 1951); Edgar PANGBORN's "Angel's Egg" (June 1951); Wyman GUIN's "Beyond Bedlam" (Aug 1951); and Robert A. HEINLEIN's The Puppet Masters (Sep-Nov 1951; 1951). The magazine maintained a comparable quality through its early years, and in 1953 shared the first HUGO for Best Magazine with ASF, while Bester's THE DEMOLISHED MAN, in its Gal version, won the first Hugo for Best Novel. Although the magazine's fiction encompassed a considerable variety of styles and preoccupations, the approach most identified with Gold's magazine is the irony and social satire of such authors as Knight, Leiber, Pohl and Robert SHECKLEY. With the Mar 1952 issue, Willy LEY began his science column, For Your Information, which he continued until his death in 1969. Groff CONKLIN was book reviewer from the beginning to Oct 1955. A weakness of the early Gal was that the cover art was mainly crude and undistinguished. The June 1951 issue, however, featured the first cover by Emsch (Ed EMSHWILLER), whose humorous approach was well suited to the magazine's contents and became identified with it. Further stories which appeared in Gold's Gal included: Pohl and Kornbluth's "Gravy Planet" (June-Aug 1952), in book form THE SPACE MERCHANTS (1953); Theodore STURGEON's "Baby is Three" (Oct 1952), part of MORE THAN HUMAN (fixup 1953); Asimov's The Caves of Steel (Oct-Dec 1953; 1954); Pohl and Kornbluth's Gladiator-at-Law (June-Aug 1954; 1955); Bester's The Stars My Destination (Oct 1956-Jan 1957; 1956; vt Tiger! Tiger! UK); Pohl and Kornbluth's Wolfbane (Oct-Nov 1957; 1959); Leiber's

Hugo-winning THE BIG TIME (Mar-Apr 1958; 1961); Avram DAVIDSON's Hugo-winning "Or All the Sea with Oysters" (May 1958); and Sheckley's "Time-Killer" (Oct 1958-Feb 1959), in book form Immortality Delivered (1958; exp vt Immortality, Inc. 1959). A prize contest sponsored by Gal drew no worthwhile entries, so Frederik Pohl and Lester DEL REY were prevailed upon to collaborate on a "prize-winning" novel, which appeared as Preferred Risk (June-Sep 1955; 1955:) by Edson MCCANN. Gal had a short-lived fantasy companion, BEYOND FANTASY FICTION, in 1953-5, and in 1959 its publishers acquired IF, which Gold also edited. In Sep 1958 the title changed to Galaxy Magazine, after which it varied between the two (with a period when it was called simply Galaxy). Beginning with the Feb 1959 issue it changed to bimonthly publication, with more pages per issue. In 1961 Gold was forced to retire following a car accident. He was succeeded as editor of Gal and If by Frederik Pohl. Pohl widened the magazine's policy still further, to include more fantasy-oriented material. Jack VANCE and Cordwainer SMITH became regular contributors, Vance with such stories as THE DRAGON MASTERS (Aug 1962; 1963), which won a Hugo, The Star King (Dec 1963-Feb 1964; 1964) and THE LAST CASTLE (Apr 1966; 1966), which also won a Hugo, and Smith with "The Boy who Bought Old Earth" (Apr 1964; exp vt The Planet Buyer 1964), "The Dead Lady of Clown Town" (Aug 1964) and many others. Larry NIVEN was one of Pohl's discoveries, and Frank HERBERT and Robert SILVERBERG became further regular contributors. Other notable stories from his editorship include: Simak's "Here Gather the Stars" (June-Aug 1963), in book form Way Station (1963); Gordon R. DICKSON's "Soldier, Ask Not" (Oct 1964), which won a Hugo; Harlan ELLISON's "'Repent, Harlequin,' Said the Ticktockman" (Dec 1965) and "The Beast that Shouted Love at the Heart of the World" (June 1968), both of which won Hugos and the former also a NEBULA; Poul ANDERSON's "To Outlive Eternity" (June-Aug 1967), in book form Tau Zero (1970); and Silverberg's "Hawksbill Station" (Aug 1967) and "Nightwings" (Sep 1968), which won a Hugo. As Gold was notorious for unnecessary editorial tampering with the stories he published, so was Pohl famed for indiscriminately altering their titles. Algis BUDRYS began a notable book-review column in 1965. Pohl's Gal was consistently an interesting magazine, but it was less successful, with sf fans at least, than his If, which under Pohl won three consecutive Hugos. Pohl also commenced three companion magazines: WORLDS OF FANTASY and INTERNATIONAL SCIENCE FICTION came and went swiftly; WORLDS OF TOMORROW was more durable. In June 1968 Gal resumed monthly publication. The following year it changed ownership and editorship again. Ejler Jakobsson gave Gal the subtitle "The Best in Pertinent Science Fiction", and the appearance was revamped in a seeming attempt to give the magazine more contemporary appeal; for a time it included a comic strip, Sunpot, by Vaughn BODE. One notable occurrence during Jakobsson's editorship was the featuring of two consecutive serials by Robert Silverberg: Downward to the Earth (Nov 1969-Mar 1970; 1970) and Tower of Glass (Apr-June 1970; 1970). Theodore Sturgeon took over as book reviewer (Jan 1972-July 1975), his column proving less lively than might have been expected. On the whole, the magazine failed to develop under Jakobsson's editorship, and it reverted to a bimonthly schedule with the May/June 1971 issue, though a patchy monthly schedule began again Sep 1973. In June 1974 he was succeeded by James Baen. In Jan 1975, Gal

absorbed If. After a period in the doldrums, 1976 saw a revival in the magazine's fortunes. Contributors included Niven, John VARLEY and Roger ZELAZNY. Pohl's Gateway (Nov 1976-Mar 1977; 1977) was a notable serial which won both Hugo and Nebula. The magazine featured book reviews by Spider ROBINSON (from Aug 1975) and a science column by Jerry POURNELLE. However, despite the strength of the fiction, distribution faltered, and the monthly schedule was adhered to only patchily in 1975, 1976 and 1977. Baen left in 1977 to become sf editor of ACE BOOKS, and was succeeded by John J. Pierce, who sadly presided over Gal's slow collapse - payment rate dropping, good authors hard to find except for the ever-loyal Pohl - to be followed briefly by Hank Stine (2 issues). Then Gal was sold to the publishers of GALILEO; ed Floyd Kemske, it lasted for only 1 more issue (in large format). The mess is witnessed by the fact that Pohl's serialized novel Jem (Nov-Dec 1978-1980; 1979) took two years to serialize, under three editors, finishing long after the book had been published. The new Galaxy Magazine founded in 1994 by E.J. Gold, son of the original editor, and published by a SMALL PRESS, publishes New Age non-fiction material, reprint sf stories and new sf stories in what may be a commercial mix. There is reprint artwork, and most of the fiction is very short; much of the new fiction by little-known writers. There have been numerous anthologies of stories from Gal, for details of which see the entries for its first four editors. Galaxy Magazine: The Dark and the Light Years (1986) by David L. Rosheim is good on hard facts about the magazine but very restricted on interpretation and context. A UK edition, from Strato Publications, began in Jan 1953 (reprinting the Oct 1952 US edition). It was labelled vol 3 #1. #2 reprinted the preceding US issue (Sep 1952). The UK edition continued to follow the original, erratically at first, and from #7 began to shorten the US edition. It continued to be numbered continuously (dropping the "vol 3" after #12) until #94 (Feb 1961). From #72 (Feb 1959) it was an exact reprint of the US edition with a different title page. From Dec 1961 only the cover was different, and from Dec 1962 the US edition was imported. A second UK edition, published by Gold Star Publications, ran for 5 issues in 1967, reprinting six months after the US original (Jan/Feb 1967 UK was June 1966 US), printing US editions complete apart from the changed date. Then, again, the US edition was distributed. In 1972 a third UK edition began, from Universal-Tandem Publishing Co., who overprinted the US edition with price and issue number: the May/Jun 1972 issue was #1, and a total of 25 numbered issues were published, ending with #25, Jan 1975. However, the numbering was not continuous; it ran #1-#10, #11, #11, #12, #12, #12, #12, #14, #17-#25. Thereafter the US edition was distributed. [MJE/PN] See also: GOLDEN AGE OF SF.

GALAXY SCIENCE FICTION NOVELS

A companion series to GALAXY SCIENCE FICTION. The first 31 issues of these numbered books, which resembled magazines, were published irregularly, 1950-57, in DIGEST format, and a further 4, 1957-9, were issued in standard paperback format. #1-#7 (1950-51) were published by World Editions, #9-#35 (1952-9) by Galaxy Publishing Corp. The series was then taken over by Beacon Books, a publisher specializing in mild pornography, which brought out 11 further issues, #36-#46 (1959-61), still

in paperback format, usually with lurid covers and suggestive titles. The original series featured several classics of magazine sf, including Sinister Barrier (1939 Unknown; 1943) by Eric Frank RUSSELL (#1), Legion of Space (1934 ASF; 1947) by Jack WILLIAMSON (#2) and LEST DARKNESS FALL (1939 Unknown; 1941) by L. Sprague DE CAMP (#24). Notable novels from outside the genre, often abridged, included The Amphibians (1924) and The World Below (1929) by S. Fowler WRIGHT (#4 and #5) and Odd John (1935) by Olaf STAPLEDON (#8). There were also some original novels, including Prelude to Space (1951) by Arthur C. CLARKE (#3) and Empire (1951) by Clifford D. SIMAK (#7). Original novels with a sexy slant published in the Beacon Books series include Flesh (1960) by Philip Jose FARMER (#41) and The Male Response (1961) by Brian W. ALDISS (#45), while such innocuous works as A.E. VAN VOGT's The House that Stood Still (1950) and Cyril JUDD's Outpost Mars (1952) were retitled, respectively, The Mating Cry (rev vt 1960) (#44) and Sin in Space (rev vt 1961) (#46). In 1963 there appeared a second companion series to Gal, Galaxy Magabooks, each volume consisting of two short novels by a single author. There were only 3 issues: #1 and #2 came in 1963; the later #3 was And My Fear is Great/Baby is Three (1965 dos) by Theodore STURGEON. Award Books issued a number of paperbacks as "Galaxy Science Fiction Novels" in the early 1970s, but these did not constitute a series. [BS]

GALILEO

US BEDSHEET-size magazine. 16 issues Sep 1976-Jan 1980, with #11/12, May 1979, being a double issue. Planned as quarterly, but bimonthly to Sep 1978, then irregular, with the last 4 issues bimonthly. Published by Avenue Victor Hugo, Boston, Massachusetts; ed Charles C. RYAN. Published on a small budget, G hoped to survive through subscription sales rather than newsstand distribution. 8000 copies of #1 were printed and sold. In magazine terms this is small, but the circulation steadily increased, at least initially. Printed on cheap newsprint, and using a number of stories by little-known writers, G began quietly but showed signs of improvement by #3. The great Renaissance scientist was evoked in the title because G was planned to emulate his "indomitable spirit . . . [and] undying quest for knowledge". Almost half of G, like most 1970s sf magazines, was devoted to science-fact articles, reviews, interviews etc. Contributors included Brian W. ALDISS, Ray BRADBURY (poetry), Robert CHILSON, Hal CLEMENT (science fact), John KESSEL, Connie WILLIS and Larry NIVEN, the latter with a serialization of The Ringworld Engineers (1979; 1980). G became quite a good magazine, but perished because of distribution problems. [PN]

GALLAGHER, STEPHEN

(1954-) UK scriptwriter and author who first came to prominence with sf scripts, notably the RADIO series "The Last Rose of Summer", which he adapted as his first novel, The Last Rose of Summer (1978) - from which derived Dying of Paradise (1982) and its sequel, The Ice Belt (1983), both as by Stephen Couper - and episodes for DR WHO, two of which he novelized: Doctor Who and Warrior's Gate * (1982) and Doctor Who - Terminus * (1983), both as by John Lydecker. In the 1980s SG began to establish a reputation as one of the UK's most successful HORROR writers, though some of his

books have strong sf overtones. Chimera (1982) is a variation on the Frankenstein myth in which the monster is a hybrid apeman (APES AND CAVEMEN) created by a government research project in DNA manipulation (GENETIC ENGINEERING); it was serialized on UK tv in 1991. Oktober (1988) is about an experimental drug that allows the protagonist to control other people's nightmares. While often lacking originality of ideas, SG's work is marked by strong characterization, good plotting and extensive background detail, particularly when police-procedural material is being presented. [AC/PR]Other works: Saturn 3 * (1980), novelizing the movie SATURN 3 (1980), and based on its screenplay by Martin AMIS; Follower (1984); Valley of Lights (1987); Down River (1989); Rain (1990); The Boat House (1991) and Nightmare, With Angel (1992).

GALLICO, PAUL (WILLIAM)

(1897-1976) US journalist, screenwriter and novelist, sports editor of the New York Daily News for 12 years, known mainly for such works outside the sf field as The Snow Goose (1941 chap), a sentimental novella extremely popular in the wartime UK. The Foolish Immortals (1953) is an eternal-youth novel. [JC]Other works: The Abandoned (1950); Love of Seven Dolls (1954); Ludmila: A Story of Liechstenstein (1954 chap Liechtenstein); Thomasina: The Cat who Thought She was God (1957); The Silent Miao (1964); The Man who was Magic: A Tale of Innocence (1967); The Manxmouse (1968);The House that Wouldn't Go Away (1979 UK); The Best of Paul Gallico (coll 1988).

GALLUN, RAYMOND Z(INKE)

(1911-1994) US author and technical writer, now retired. He was born and educated in Wisconsin, and has been a considerable traveller since. He began publishing sf stories at the age of 19 in 1929 with "The Space Dwellers" in Science Wonder Stories and "The Crystal Ray" in Air Wonder Stories. In the 1930s he published frequently in F. Orlin TREMAINE's ASF, his most famous contributions being the Old Faithful series: "Old Faithful" (1934), "The Son of Old Faithful" (1935) and "Child of the Stars" (1936), the first of these novelettes featuring a sympathetically conceived Martian - much in contrast to the then dominant sf convention that ALIENS were to be depicted as monstrous - and the other two featuring that Martian's descendants. Along with other stories, the three were collected in The Best of Raymond Z. Gallun (coll 1978). During his prolific years - he published most of his 120 plus stories during 1929-42 - RZG also used the pseudonyms Arthur Allport, Dow Elstar, E. V. Raymond and William Callahan in his magazine fiction, publishing his first book, The Machine that Thought (1939 Science Fiction Stories; c1940-42 chap) as Callahan. His style was rough-hewn, but he plotted his work with vigour and packed it with ideas, often decidedly original: from a very early date, many of his stories show an interest in BIOLOGY and GENETIC ENGINEERING not widely shared by his contemporaries. He became inactive in the 1940s and, though he has published again since about 1950, he has never regained the popularity of his early years, although one of his finest stories, reprinted in the Best volume, was "The Restless Tide" (1951 Marvel Science Fiction). He published nothing 1961-74, but remained intermittently active through the 1980s. RZG's first novel, "Passport to

Jupiter" (1950 Startling Stories), never appeared as a book. The style of the first to do so, People Minus X (roughly based on "Avalanche", 1935 ASF as by Dow Elstar; 1957), continued to reflect his many years of writing in a four-square idea-oriented style for the PULP MAGAZINES, and unsurprisingly derives its energy from the concepts which flood it, including body-miniaturization, body-recording, the transfiguration of human volunteers into space-resistant ANDROIDS, and much more. The Planet Strappers (1961) is more routine, but The Eden Cycle (1974) is a carefully written, slow-moving study of humans who, having received from aliens the gift of IMMORTALITY and a capacity to reinhabit imaginatively - through a kind of VIRTUAL REALITY - various epochs of world history (HISTORY IN SF), find themselves less and less capable of responding to their experiences. RZG is a writer - along with Edmond HAMILTON and Stanley G. WEINBAUM - whose writing reflected the expectations of magazine readers of the early 1930s; and like Hamilton (Weinbaum died early) his development after 1945 was tied, for good and for ill, to those early days. Late novels, like Skyclimber (1981), set on MARS, and Bioblast (1985), about the early years of a mutant SUPERMAN, may therefore lack some essential degree of appeal to today's audiences because they are crude, because they avoid sex, because their protagonists are unsubtle. But the sense of purpose persists, as does a humane vigour - as a late memoir, Starclimber: The Literary Adventures and Autobiography of Raymond Z. Gallun (1991) ed Jeffrey M. ELLIOT, amply conveys. RZG is the best of those pre-1939 sf writers who failed to remain well known into the current nostalgic period. [JC]About the author: The Work of Raymond Z. Gallun: An Annotated Bibliography ?
SCIENCE-FICTION; FAR FUTURE; JUPITER; LONGEVITY (IN WRITERS AND PUBLICATIONS); OUTER PLANETS; SOCIAL DARWINISM.

GALOUYE, DANIEL F(RANCIS)

(1920-1976) US writer who was born and died in New Orleans, Louisiana; a naval test pilot during WWII, he subsequently worked as a journalist, though the delayed effect of war injuries forced him to retire in 1965. He began to publish sf with "Rebirth" for Imagination in 1952, and appeared frequently in the magazines for about a decade with such tales as "Tonight the Sky Will Fall" (1952) and "The City of Force" (1959), characterized by a combination of a strong HARD-SF structure and a treatment of psychological concerns that was sometimes a touch uneasy. Twice he wrote (1953-4) as Louis G. Daniels. Stories from this period are collected in The Last Leap and Other Stories of the Super-Mind (coll 1964 UK) and Project Barrier (coll 1968 UK); neither volume appeared in the USA. DFG's first novel, Dark Universe (1961), a POCKET-UNIVERSE tale (see also CONCEPTUAL BREAKTHROUGH), remains his most popular and is probably his best (it was nominated for a HUGO). Long after a nuclear HOLOCAUST, the survivors' descendants live sightless far underground. Their culture - from daily routine through cosmological concerns - is grippingly and originally conceived, though the book closes with a somewhat anticlimactic escape from darkness into a new age of "enlightenment". His next novels, Lords of the Psychon (1963), based roughly on "City of Force" (1959), Counterfeit World (1964 UK; vt Simulacron-3 1964 US) and The Lost Perception (1966 UK; vt A Scourge of Screamers 1968 US), share the same

technical ingenuity and a continuing interest in worlds where the PERCEPTION of reality is controlled and restricted, where indeed the worlds themselves are arbitrary constructs, Counterfeit World being particularly interesting in this respect. In a sense it is a novel-length reworking of Frederik POHL's "The Tunnel Under the World" (1954), both being about construct-worlds designed for market research; it was filmed for tv in Germany in 1973 by Rainer Werner Fassbinder as WELT AM DRAHT (1973; vt World on a Wire). DFG's last novel, The Infinite Man (1973), was less successful. DPG was never really able to capitalize on the promising beginning he had made as an sf writer. It may be that his war injuries kept him from a longer and more fruitful career. [JC] See also: GREAT AND SMALL; MEDIA LANDSCAPE; PSYCHOLOGY; VIRTUAL REALITY.

GAMBI PUBLICATIONS ODYSSEY.

GAMERA

A giant prehistoric turtle who starred in a number of MONSTER MOVIES from the Daiei Studios. The first of these was DAIKAIJU GAMERA (1966), in the entry for which are detailed also the other Gamera films. [JGr]

GAMES AND SPORTS

This entry deals with games as a theme within sf. Games based on sf are treated under GAMES AND TOYS. Just as sf's concern with the ARTS has been dominated by stories about the decline of artistry in a mechanized mass society, so its concern with sports has been much involved with representing the decline of sportsmanship. There is a marked tendency in contemporary sf to assume that the audience-appeal of futuristic sports will be measured by their rendering of violence in terms of spectacle: the film ROLLERBALL (1975) is perhaps the clearest expression of this notion. There are two forms of stereotyped competitive violence which are common in sf: the gladiatorial circus and the hunt. The arena is part of the standard apparatus of romances in the Edgar Rice BURROUGHS tradition, and extends throughout the history of sf to such modern variants as that found in the Dumarest series by E.C. TUBB (1967 onwards). Combat between human and ALIEN is the basis of Fredric BROWN's popular "Arena" (1944) and a host of similar stories, while many visions of a corrupt future society foresee the return of bloody games in the Roman tradition-Frederik POHL's and C.M. KORNBLUTH's Gladiator-at-Law (1955) is a notable example. The BattleTech SHARED-WORLD series (see also Robert THURSTON) moves the formula on to a galactic stage. Ordinary hunting is extrapolated to take in alien prey in such stories as the Gerry Carlyle series by Arthur K. BARNES (1937-46; coll 1956 as Interplanetary Hunter), and a familiar variant has mankind as the victim rather than the hunter; examples include THE SOUND OF HIS HORN (1952) by SARBAN, Come, Hunt an Earthman (1973) by Philip E. HIGH and many works by Robert SHECKLEY, ranging from "Seventh Victim" (1953) and "The Prize of Peril" (1958) to such recent novels as Victim Prime (1986 UK) and Hunter/Victim (1987 UK). A notable series of relevant theme anthologies is the 3-vol Starhunters series (1988-90) ed David A. DRAKE. The oft-presumed equivalence between the spectator-appeal of sport and that of dramatized violence reached its peak in Norman SPINRAD's "The National Pastime" (1973) and the film DEATH RACE 2000

(1975). An opposing trend is one which suggests that the people of the future might substitute rule-bound war games for actual wars, thus avoiding large-scale slaughter of civilians. The idea was first mooted by George T. CHESNEY in *The New Ordeal* (1879); sf versions of it include "Mercenary" (1962; exp vt *Mercenary from Tomorrow* 1968) and its sequel *The Earth War* (1963) by Mack REYNOLDS and the *Gamester War* series begun with *The Alexandrian Ring* (1987) by William R. FORSTCHEN, and also a number of films, including *GLADIATORERNA* (1968) and *ROBOT JOX* (1990). The sf sports story is almost entirely a post-WWII phenomenon, although the pre-WWII pulps did feature Clifford D. SIMAK's "Rule 18" (1938) - in which one of the ever-popular "all-time great" teams is actually assembled - and one or two rocket-racing stories, such as Lester DEL REY's "Habit" (1939); and much earlier van Tassel SUTPHEN had included a couple of golfing-sf stories in his *The Nineteenth Hole: Second Series* (coll 1901). Many early post-WWII stories are accounts of man/machine confrontation (MACHINES; ROBOTS). Examples include the golf story "Open Warfare" (1954) by James E. GUNN, the boxing stories "Title Fight" (1956) by William Campbell Gault and "Steel" (1956) by Richard MATHESON, the chess story "The 64-Square Madhouse" (1962) by Fritz LEIBER, and the motor-racing story "The Ultimate Racer" (1964) by Gary Wright, who also wrote a fine bobsled-racing sf story in "Mirror of Ice" (1967). The changing role of the automobile in post-WWII society provoked a number of bizarre extrapolations, including H. Chandler ELLIOTT's violent "A Day on Death Highway" (1963), Roger ZELAZNY's story about a car-fighting matador, "Auto-da-Fe" (1967), and Harlan ELLISON's "Along the Scenic Route" (1969). Other popular sf themes are often combined with sf sports stories. Gambling of various kinds appears in many ESP stories, for obvious reasons, and superhuman powers are occasionally employed on the sports field, as in Irwin Shaw's "Whispers in Bedlam" (1973) and George Alec EFFINGER's "Naked to the Invisible Eye" (1975). Stories which examine the possible impact of biotechnology on future sports include Howard V. Hendrix's "The Farm System" (1988) and Ian MCDONALD's "Winning" (1990). Full-length novels about future sport are relatively rare; examples include *The Mind-Riders* (1976) by Brian M. STABLEFORD, about boxing, and *The New Atoms Bombshell* (1980) by Robert Browne (Marvin Karlins [1941-]), about baseball. Games are used as a key to social advancement and control in a number of stories, including *The Heads of Cerberus* (1919; 1952) by Francis STEVENS, *World out of Mind* (1953) by J.T. MCINTOSH, *SOLAR LOTTERY* (1955; vt *World of Chance*) by Philip K. DICK and *Cosmic Checkmate* (1962) by Katherine MACLEAN and Charles V. DE VET. Some sf stories produce future or alternate worlds where games are fundamental to the social fabric, as in Hermann HESSE's *Das Glasperlenspiel* (1943; trans M. Savill as *Magister Ludi* 1949 US; preferred trans Richard and Clara Winston as *The Glass Bead Game* 1969 US) and Gerald MURNANE's *The Plains* (1982); a vicious games-based culture is successfully attacked by the protagonist of Iain M. BANKS's space opera *The Player of Games* (1988). In other novels by Philip K. Dick, including *The Game-Players of Titan* (1963) and *THE THREE STIGMATA OF PALMER ELDRITCH* (1965), games function as levels of pseudo-reality. Sf writers who have shown a particular and continuing interest in games or sports include Barry N. MALZBERG, who often uses surreal games to symbolize frustrating and ultimately unbeatable alienating forces - as in the apocalyptic

Overlay (1972) and Tactics of Conquest (1974), and in the quasi-allegorical *The Gamesman* (1975) - George Alec EFFINGER, who also uses game situations as symbols of the limitations of rationality and freedom, notably in "Lydectes: On the Nature of Sport" (1975) and "25 Crunch Split Right on Two" (1975), and Piers ANTHONY, who often uses games to reflect the structures of his plots, notably in *MACROSCOPE* (1969), *Ox* (1976), *Steppe* (1976) and *Ghost* (1988). The game which has most frequently fascinated sf writers is chess, featured in Charles L. HARNESS's "The Chessplayers" (1953) and Poul ANDERSON's "The Immortal Game" (1954) as well as Malzberg's *Tactics of Conquest*. John BRUNNER's *The Squares of the City* (1965) has a plot based on a real chess game, and Ian WATSON's *Queenmagic, Kingmagic* (1986) includes a world structured as one (as well as worlds structured according to other games, including Snakes and Ladders!). Gerard KLEIN built the mystique of the game into *Starmaster's Gambit* (1958; trans 1973). A version of chess crops up in the work of Edgar Rice Burroughs - in *The Chessmen of Mars* (1922) - and a rather more exotic variant plays an important role in *The Fairy Chessmen* (1951; vt *Chessboard Planet*; vt *The Far Reality*) by Lewis Padgett (Henry KUTTNER and C.L. MOORE). An anthology of chess stories is *Pawn to Infinity* (anth 1982) ed Fred SABERHAGEN. In recent years the rapid real-world evolution of electronic arcade games and home-computer games has sparked off a boom in stories where such games become too real for comfort. Notable examples include "Dogfight" (1985) by Michael SWANWICK and William GIBSON, *Octagon* (1981) by Saberhagen, *TRUE NAMES* (1981; 1984) by Vernor VINCE, *ENDER'S GAME* (1978; exp 1985) by Orson Scott CARD, *God Game* (1986) by Andrew M. GREELEY and *Only You Can Save Mankind* (1992) by Terry PRATCHETT (see also *VIRTUAL REALITY*). Stories of space battles whose protagonists are revealed in the last line to be icons in a computer-game "shoot 'em up" may have succeeded Shaggy God stories (*ADAM AND EVE*) as the archetypal folly perpetrated by novice writers (although Fredric Brown's similarly plotted "Recessional" [1960], where the protagonists are chessmen, has been much anthologized). Many computer-game scenarios are, of course, sciencefictional, as are many of the scenarios used in fantasy role-playing games (*GAMES AND TOYS*; *GAME-WORLDS*). When it comes to inventing new games, sf writers have had very limited success. There have been one or two interesting descriptions of sports played in gravity-free conditions, but these are usually incidental to the real concerns of the stories in which they occur; stories set in *SPACE HABITATS* frequently include descriptions of "flying" games played in the vicinity of the rotational axis. Sling-gliding, in which glides are accelerated by massive steel whips, is a plausible and dangerous sport featured in *The Jaws that Bite, the Claws that Catch* (1975; vt *The Girl with a Symphony in her Fingers*) by Michael G. CONEY. The sport of hussade, which plays a major part in Jack VANCE's *Trullion: Alastor 2262* (1973), is unconvincing. The board-game vlet in Samuel R. DELANY's *Triton* (1976) is cleverly presented, but the details of play are necessarily vague. This game was first written about by Joanna RUSS in "A Game of Vlet" (1974). Games and sports are also very common in *FANTASY* and *SCIENCE FANTASY*, especially that set in post-HOLOCAUST or primitive worlds, as in Piers Anthony's early trilogy (1968-75) collected as *Battle Circle* (omni 1977), or *Eclipse of the Kai* * (1989) by Joe Dever and John Grant (Paul BARNETT), which features

vtovlry, a rugby analogue played triangularly and with throwing-axes. Indeed, the metaphoric nuances of games enliven fantasy of all sorts, from the croquet and card games in Lewis CARROLL's Alice books to Sheri S. TEPPER's True Game series; in both cases the arbitrary and obsessive nature of games-playing becomes an image of life itself. A relevant theme anthology is *Arena: Sports SF* (anth 1976) ed Barry N. Malzberg and Ed FERMAN. [BS/PN] See also: LEISURE.

GAMES AND TOYS

For games as a theme within sf GAMES AND SPORTS. This entry deals with games and toys based on sf. Sf games have quite a long history. The first, fairly quiet, phase comprised board games or card games based on a successful film, tv series or comic strip. The second phase, the commercial explosion in sf and fantasy games (and toys), dates back only to the 1970s, and came about as a consequence of three factors: the introduction in 1974 of *Dungeons and Dragons* (D? role-playing game (RPG)); the introduction of the home computer, which only at the very end of the 1970s developed any real market penetration (though an early sf computer strategy game, *Star Trek*, was on display at the Worldcon in Australia in 1975) and the increasing realization by business people of the fortunes to be made by marketing products associated with successful films and tv shows, everything from bars of soap through books and comics to games and toys. The first massive campaign of this sort in the sf field was associated with the film *STAR WARS* (1977). (However, sf computer games played on the huge, old, cumbersome mainframes of the period, antedate by a decade or more the sf games played on home computers. The game *Spacewar* was invented at MIT - Massachusetts Institute of Technology - in the 1960s, and was the subject of an article by Albert W. Kuhfeld in *ASF*, July 1971.)

The first phase. Sf scenarios lend themselves readily to strategy games or war games (the latter being a specialized case of the former), often played on boards marked out in various grid patterns. Board games of this sort can be traced back to chess and *Wei-ch'i*, but miniature wargaming effectively began with H.G. WELLS, as described in his books *Floor Games* (1911) and *Little Wars: A Game for Boys* (1913); he was probably, despite his denials, influenced by *Kriegspiel*, a military training tool then used in Germany. The immediate ancestor of sf games is *Gettysburg* (1958), designed by Charles Roberts, the first board game dedicated to simulating a single military event. It led to a plethora of such games, including simulations of imaginary events. Once speculative warfare was admitted by gamers to be legitimate, the field was open to games like *Lensman* (1971), based on E.E. "Doc" SMITH's series of novels. Featuring space combat, it was largely a variant on existing naval simulations, with the addition of such sf tropes as *FORCE FIELDS* and tractor beams. Later games include: Robert Heinlein's *Starship Troopers* (1976), a clever and complex development from Robert A. HEINLEIN's original scenario, *John Carter of Mars* (1979), based on Edgar Rice BURROUGHS's *Barsoom* books, and *DUNE* (1979), based on Frank HERBERT's novel. One of the earlier sf games - though probably not the first - with an original scenario (that is, not based on a book or film) was *Cosmic Encounter* (1977), a strategy card game in which players, as alien species with differing powers, competed to extend their "sphere of influence". An

early fantasy board game was War of the Ring (1978), based on J.R.R. TOLKIEN's The Lord of the Rings (1954-5). The second phase. Until the mid-1970s most games inspired by sf and fantasy were essentially glosses on existing forms, substituting Mars for Mayfair or Nazgul for Nazis. Then new game-forms appeared, notably role-playing games, which took their inspiration from fantasy and sf at a much more fundamental level. Dungeons and Dragons (1974), the first published RPG, inspired by Tolkien's books and other fantasy sources, was created by Gary Gygax (1938-) and Dave Arneson. D?

company, TSR Inc., was earning \$20 million a year. In RPGs a referee (or "dungeon master") acts as story-teller, prepares - or describes according to parameters set out by the games company - an environment through which the players move, and presents the players with a series of problems such as monsters, booby traps and complicated puzzles. The players control "characters", defined in terms of various ratings, and roll dice to see whether they have succeeded or failed. Players tend to feel intense identification with their characters. Other companies saw the potential of the market and launched their own fantasy RPGs, but the earliest were little more than variations on the D?

by Chaosium, was the first really innovative successor, providing a detailed and consistent fantasy GAME-WORLD, complete with history, human and nonhuman races, religions and politics. Meanwhile sf RPGs were being launched, such as Traveller (1977), published by GDW Inc., and it too later added its own detailed background; its predecessors were Metamorphosis: Alpha, Flying Buffalo's Starfaring, Space Quest and Space Patrol. Set in a SPACE-OPERA universe, Traveller would feel familiar to readers of such writers of HARD SF as Poul ANDERSON and Jerry POURNELLE. By now it was clear that game referees were prepared to buy accessory materials, such as rules supplements, prepared adventures, pads for recording details of characters, etc., and would buy more material for an existing game in preference to a new game. Games not supported by such accessories soon stopped selling. An early RPG trend was increasing complexity of rules. Chivalry and Sorcery (1977), published by Fantasy Games Unlimited, tried to simulate every detail of medieval life, and play slowed to a crawl under the burden of dice rolling and rules consultation needed for every action. Advanced Dungeons and Dragons (1978-9), published by TSR, much more successfully added several hundred thousand words to the D?

backgrounds vague, but in the 1980s many RPGs were licensed from popular sf and fantasy works. Among these were Call of Cthulhu (1981), published by Chaosium, based on H.P. LOVECRAFT's horror stories, Stormbringer (1981), published by Chaosium, based on Michael MOORCOCK's novels, Star Trek (1983), published by FASA, based on the tv series, Marvel Super Heroes (1984), published by TSR, based on MARVEL COMICS, RINGWORLD (1984), published by Chaosium, based on Larry NIVEN's novel, Star Wars (1987), published by West End Games, based on STAR WARS, Buck Rogers XXVc: The 25th Century (1988), published by TSR, based on the comic strip BUCK ROGERS IN THE 25TH CENTURY, Humanx Commonwealth (1989), published by Steve Jackson Games, based on the series of books by Alan Dean FOSTER, Uplift (1990), published by Steve Jackson Games, based on the novel by David BRIN, and Aliens (1991), published by Leading Edge Games, based on the

film ALIENS. Sf games in original settings range from the Wellsian STEAMPUNK Space 1889 (1989), published by GDW, through the humorously DYSTOPIAN Paranoia (1984), published by West End Games, through space opera such as Spacemaster (1986), published by Iron Crown Enterprises, to the increasingly popular CYBERPUNK setting: Shadowrun (1989), published by FASA, Dark Conspiracy (1991), published by GDW, and Cyberpunk (1991), published by R. Talsorian. The first mass-market UK RPGs also appeared in the 1980s, all from GAMES WORKSHOP. Golden Heroes (1984) was an unsuccessful SUPERHERO RPG. Judge Dredd (1985), based on JUDGE DREDD, did better, as did Warhammer Fantasy (1986). No other UK RPG manufacturer has achieved much success. All the most important RPG companies are US, notably TSR, Chaosium, FASA, Steve Jackson Games, GDW and West End Games. TSR probably sells more RPG material than all the others combined. Some RPGs are PBM (play by mail); these may be administered and refereed by commercial organizations, which charge a fee and often use a computer database. However, PBM is not well suited to role-playing games; most PBM games are strategic war games. Many RPG manufacturers use a core game system for several genres, so that players need learn only one set of rules. By far the most prolific is GURPS (1988; Generic Universal Role Playing System), from Steve Jackson Games, which has supplements in every genre from fantasy, sf and horror to Wild West, pirates and modern warfare, and leases rights from a range of sources, including Witch World (1988), based on the novels by Andre NORTON, Riverworld (1989), based on the novels by Philip Jose FARMER, Wild Cards (1989), based on the WILD CARDS original anthologies, themselves inspired by an RPG played by several of the authors, and The Prisoner (1991), based on The PRISONER. (This company gained considerable notoriety when computers, manuscripts and materials for Cyberpunk were seized by the FBI, who believed that the company was preparing "a handbook for computer crime".) Similarly Chaosium's Runequest system was modified for Call of Cthulhu, Stormbringer, RINGWORLD and other RPGs. GDW's near-future war RPG Twilight 2000 (1987) was the basis for their hard-sf 2300 AD (1989) and other games. West End Games also have a generic system, TORG (1990). It seems likely that the early 1990s will see a major shake-out of RPG manufacturers, since there are too many games chasing too few customers; there are currently at least 10 horror RPGs and six cyberpunk variants. At any given time there are likely to be several RPG magazines in production, but they tend to be short-lived. The oldest and most regular are Dragon from TSR, White Dwarf from Games Workshop and Challenge from GDW. Dragon and Challenge often publish fiction. An important RPG variant is the Live Role-Playing Game, in which players dress as their characters, fight with blunt or padded weapons, and explore real caves or fake ruins. Numerous groups are involved in these activities. A growing branch of publishing, especially for children, is the role-playing gamebook, the book itself being the game. Such books, often part of series like the Fighting Fantasy Gamebook series, offer branching narratives where at various points the reader is invited to make a choice, as between, say, "Go left" and "Go right", with a different scenario following according to the choice made. Usually the reader has first defined, by rolling dice or otherwise, the various attributes (skill, stamina, good fortune, etc.) that s/he carries to the game. Successful authors in the field include Steve Jackson (1951-

; not the US Steve Jackson of Steve Jackson Games), Ian Livingstone and Joe Dever (1956-). Although most such books are fantasy, some are sf, as for example Dever's Freeway Warrior series. In the 1970s, at the same time as the rise of RPGs, the COMPUTER game Adventure (vt Colossal Cave), designed by Crowther and Wood, was the prototype for computer games that used simple typed commands to explore the secrets and eliminate the obstacles of a "world" described in lively detail by the computer. At first the only players were computer professionals and students who had access to the mainframe computers then required for play, but the games became much more widely popular in the early 1980s as the first mass-market personal computers appeared. The original Adventure was easily converted to most machines, and soon new games added larger vocabularies, better parsing (conversion of typed input into game instructions) and more complicated worlds. Zork (1982), published by Infocom, typified these adventures early on, but more recent "adventure games" of this sort are very much more sophisticated. In the USA, Infocom produced a number of good adventure games with sf scenarios, including Planetfall (1984), Starcross (1984), the dystopian A Mind Forever Voyaging (1985) and-based on Douglas ADAMS's best-selling novel - THE HITCHHIKER'S GUIDE TO THE GALAXY (1984). Also notable was the sf Silicon Dream trilogy from Level 9 in the UK, beginning with Snowball (1983). Several multiple-player games appeared, the most successful being MUD (Multi-User Dungeon) (1982), played over computer networks or via modem. By the late 1980s many of the concepts used in RPGs had found their way into computer adventures, which were beginning to use animated graphics, sound and more flexible control methods. Several RPGs were converted to computer form, notably Advanced Dungeons and Dragons, in Pool of Radiance (1989) published by SST, and later games. Computer adventures of the late 1980s and the 1990s often involve as many as 4-6 characters, much like those in RPGs, and these sometimes act independently of the player's instructions. While most RPGs stay in production for several years, the shelf life of most computer games is measured in months, and they become obsolete as systems evolve. Despite complaints from the minority of players who had enjoyed the language-oriented input and output of earlier computer adventure games, almost all computer adventures now rely on highly detailed graphics, and often include music and electronically generated speech. Unfortunately, these embellishments mean that a game which runs on one type of computer must be completely rewritten to run on another. Conversion is usually expensive and difficult, and a game which is famous on one or two systems may be unknown elsewhere. A new trend is rapid growth in the sheer size of programs: some adventures are supplied on seven or more floppy disks. The huge King's Quest 5 (1990), published by Sierra, is most conveniently purchased as a CD-ROM disk. While sf scenarios are at their most interesting (and their closest to written sf) in these so-called "adventure" games, they are even more common in "arcade" games. Where adventure games require skill at problem-solving (and sometimes language skills), arcade games put a premium on the dexterity of the player or players with joystick or pushbutton controls, and often involve manoeuvring small screen figures on moving platforms or around various moving threats, and shooting down moving obstacles (which in early arcade classics were space invaders or asteroids). Such scenarios - though

visually much more elaborate - are still common in the arcade games produced, for example, by the Japanese computer-games company Nintendo. A classic game mixing strategy (trading between planetary systems) and arcade skills (space combat) is *Elite* (1984 UK), originally published by Acornsoft and now available in diverse versions, including Nintendo. The modern computer adventure game commonly contains elements of play (requiring timing and dexterity) taken from arcade games; sometimes these games are known as "arcade adventures". Games presently under development will present their players with a VIRTUAL-REALITY scenario; their players will wear helmets, gloves, etc., in which visual display units and WALDO sensors will be incorporated. The subjective experience approximates the feeling of being placed in and able to interact with a real alternate world. Such developments are still at comparatively early stages (although of course they have been commonplace in sf since the 1940s). There has naturally been considerable cross-fertilization between RPGs and computer adventures on the one hand, and sf and fantasy in other media on the other. While many RPGs are based either on literary sources or on tv or film, it is now not unusual for the fiction to be based on the game. Several sf games have appeared with novels set in the worlds they present as part of the games package. TSR's games have spawned numerous novels, comics and a tv cartoon series. Novel *TIES* have been based on RPGs, especially *D?*

authors have emerged from hobby writing, including John M. FORD. For more on this aspect of publishing GAME-WORLDS, themselves a specialized aspect of SHARED WORLDS. Games playing itself has become a common activity in sf scenarios in films and books (it is used to conscript a space pilot in *The LAST STARFIGHTER* [1984], for example), especially those directed at adolescents. *Space Demons* (1986) by Gillian RUBINSTEIN is not untypical in sucking its protagonists into a ruthless computer-games world, much as in the film *TRON* (1982). (See also *CYBERSPACE*.) There are many active RPG fans, and this group has a considerable overlap with sf and fantasy FANDOM generally. Annual CONVENTIONS include *Origins* and *Gencon*, in the USA, and the UK's *Gamesfair*, and are usually commercially organized (unlike most sf conventions). FANZINES tend to be short-lived and irregular. There is not nearly so much fan activity among computer-games enthusiasts. RPGs have frequently come under fire from religious fundamentalists and other pressure groups, who appear to believe that their depictions of MAGIC and SUPERNATURAL CREATURES are likely to deprave and corrupt. Any suicide by an RPG player may be blamed on the genre, despite evidence suggesting that suicide rates among RPG players are lower than average. It can be argued that such games are psychologically disruptive, sometimes distracting their players from education and other matters which should take a higher priority, but this is true of most hobbies. It can equally be argued, especially with some of the sf games (which may require, for example, a good working knowledge of physics and chemistry), that games-playing can be educational. From a commercial point of view, sf toys are more important than sf games, and they have at least as long a history. Wind-up toy robots had become popular by the mid-1950s, but they can be regarded as simply the latest incarnation of the "automata" that were being built as toys as early as the 18th century and celebrated in PROTO-SCIENCE-FICTION stories such as "*Der Sandmann*" (1816; trans as "*The Sandman*") by E.T.A.

HOFFMANN and "The Artist of the Beautiful" (1844) by Nathaniel HAWTHORNE. Marketing campaigns for toys connected to hit movies like Star Wars made many millions of dollars and became the target of angry opposition from parents and educators when, in the 1980s, they became connected to the sort of tv shows often viewed by children on a Saturday morning - usually animated cartoons or animated puppet programmes. Three notable offenders were the sf tv programmes Transformers, He-Man and Teenage Mutant Ninja Turtles, all of which, whatever their virtues as entertainment, could be seen as 25-minute advertisements designed to encourage children to put pressure on their parents to buy toys which would enable them, in play, to reproduce the on-screen adventures (see also The TRANSFORMERS - THE MOVIE, MASTERS OF THE UNIVERSE and TEENAGE MUTANT NINJA TURTLES). An additional criticism, perhaps less securely based, is that many such programmes, including these three, encourage children to indulge in fantasies of violence. The commercial clout of these product-advertising programmes - not all of them sf (Care Bears is a non-sf example) - can be enormous, spawning major industries. The USA and Australia are among the worst offenders; the UK has some regulations designed to minimize this sort of advertising-masquerading-as-entertainment to a captive audience of children, and some European countries have banned such programmes altogether. [MR/BF/ZB/PN] Further reading: On games, Heroic Worlds: A History and Guide to Role-Playing Games (1991) by Lawrence Schick, and Adventure Games for Microcomputers: An Annotated Directory of Interactive Fiction (1991) by Patrick R. Dewey; on toys, Zap! Ray Gun Classics (1991) by Leslie Singer.

GAMES WORKSHOP

UK company specializing in fantasy-adventure role-playing games and models (GAMES AND TOYS) whose subsidiary, GW Books, under the editorship of David PRINGLE (with Neil Jones 1990-91), between 1989 and 1991 produced a range of novels and story collections in three series relating to three of the company's games: Warhammer (HEROIC FANTASY), Warhammer 40,000 (heroic fantasy/ SPACE OPERA) and Dark Future(ALTERNATE-WORLD/ CYBERPUNK/car action). Writers who contributed novels included Brian Craig (Brian M. STABLEFORD), David Ferring (David S. GARNETT), Ian WATSON and Jack Yeovil (Kim NEWMAN), while the collections, ed Pringle (one with Neil Jones), featured work by these authors and, among others, S.M. Baxter, Myles Burnham (Eugene Byrne), Ralph T. Castle (Charles PLATT), Storm CONSTANTINE, Charles Davidson (Charles Stross), Sean Flynn (Paul J. MCAULEY), Nicola Griffith, Neil Jones and William King. Ranging from the conventional to the very offbeat, GW Books' output was superior to the highly successful stream of games-related fictions from the TSR stable (GAME-WORLDS), perhaps because Pringle, editor of INTERZONE, drew on the contributors to that magazine. In 1992 it was announced that rights in these works had been bought by Box Tree Books. GW has also published many games manuals and two art books, one featuring Les Edwards, the other John Blanche and Ian MILLER. [KN]

GAME-WORLDS

These are worlds designed by the manufacturers of games, almost always

role-playing games (or gamebooks) or computer adventure games (GAMES AND TOYS). In the case of RPGs the parameters of the "world" (the fictional setting in which the game takes place) will be set out in the handbooks which form the central part of the game package; in the latter, much of the world's setting is described on screen by the computer program itself, and additional information may be given in the associated printed material. Since the mid-1980s it has been common for the more successful games of either sort to generate associational material, which may include stories, novels and COMIC books set in the world of the game. Thus George Alec EFFINGER's *The Zork Chronicles* * (1990) is set in a world first described in the computer adventure game *Zork* (1982 US), published by Infocom, and subsequently the setting for several other Infocom games. The US games company TSR Inc. has been especially prolific in commissioning books associated with their role-playing games, though these are usually fantasy rather than sf - as books set in game-worlds tend generally to be. An example is TSR's *Forgotten Realms Fantasy Adventure: Pool of Radiance* * (1989) by James M. Ward and Jane Cooper Hong. The role-playing game *Shadowrun* (1989 US), published by FASA, has generated a game-worlds series, set in a world where fantasy and CYBERPUNK elements are uneasily married, of which one is *Secrets of Power: Volume 2: Shadowrun: Choose Your Enemies Carefully* * (1991) by Robert N. Charrette. The *BattleTech* novels by Robert THURSTON are more straightforwardly sf, specifically SPACE OPERA. These are merely arbitrary examples of what is now a widespread phenomenon: it constitutes, for example, a sizeable proportion of the Roc sf/fantasy list of Penguin Books. Since game-worlds series books are often written by a variety of authors who are seldom the same people who invented the world in the first place, the game-world can be seen as a special case of the SHARED WORLD. Authors whose book publications are solely set in game-worlds do not necessarily receive entries in this volume; many are absent. Nonetheless, though much fiction set in game-worlds is hack work, some is not. For example, the novels in the *Demon Download* subseries by Jack Yeovil (Kim NEWMAN), set in GAMES WORKSHOP's *Dark Future* world, are good, original works in the CYBERPUNK mode. Many games are set in worlds previously established in book form, as with *Riverworld* (1989), published by Steve Jackson Games, based on the novels by Philip Jose FARMER. This volume does not accept such settings as true game-worlds, which must have originated in a games format. [PN]

GAMMA

US DIGEST-size magazine. 5 issues 1963-5, published by Star Press, N. Hollywood; ed William F. NOLAN for 3 issues, then Jack Matcha and Charles E. FRITCH. The fiction in this magazine - a blend of sf and fantasy - was of good quality, many stories being by Californian writers with film connections, like Charles BEAUMONT and Richard MATHESON, and there were some fine covers by Morris Scott Dollens and John Healey. Its irregularity of publication sped its demise. [FHP/PN]

GAMOW, GEORGE

(1904-1968) Russian-born physicist involved in the development of quantum theory at Gottingen and later a colleague of Niels Bohr (1885-1962) and Ernest Rutherford (1871-1937). After 1935 he lived in the USA, holding the

chair of theoretical physics at George Washington University. After important work on stellar evolution, he turned to investigating the Big Bang, becoming the most ardent proselytizer for that theory of the Universe's origins, in contradiction to the then important Steady State theory advocated by, notably, Fred HOYLE. Beyond his technical work, GG is known for his 10 or more scientific popularizations, beginning with *The Birth and Death of the Sun* (1940) and including *One Two Three . . . Infinity* (1947; rev 1960). His three books about Mr Tompkins are particularly attractive: *Mr Tompkins in Wonderland* (coll 1939 chap UK) and *Mr Tompkins Explores the Atom* (coll 1944 chap UK), both being assembled as *Mr Tompkins in Paperback* (omni 1965 UK), and *Mr Tompkins Learns the Facts of Life* (coll 1953 chap UK; exp with Martynas Ycas vt *Mr Tompkins inside Himself* 1967). Couched in narrative form, these books gracefully and intelligently explore the wonders of science, with Tompkins magically visiting embodied demonstrations of the scientific world, and even exploring his own body. Though technically juvenile, the books have a wide appeal. GG also wrote at least one sf story for adults, "The Heart on the Other Side" (1931), written to celebrate Bohr's 70th birthday and later published in *The Expert Dreamers* (anth 1963) ed Frederik POHL. [JC]See also: ALTERNATE WORLDS; COSMOLOGY; DIMENSIONS; FASTER THAN LIGHT; GREAT AND SMALL.

GANICK, NICHOLAS

[r] ROBERT HALE LIMITED.

GANDON, YVES

(1899-?) French novelist. His *Le dernier Blanc* (1945; trans A.M. as *The Last White Man* 1948 UK) depicts, on familiar lines, the chemical warfare of the future featuring a toxin deadly only to whites. Other borderline sf works include *Après les hommes* ["After Men"] (1963), involving an ethical ferromagnetic race, and *La ville invisible* ["The Invisible Town"] (1953). *En pays singulier* ["In a Remarkable Country"] (coll 1949) contains some sf. [JC/PN]

GANN, ERNEST K(ELLOGG)

(1910-1991) US writer, usually of thrillers, whose *Brain 2000* (1980) is an sf spoof in which the extraction of oil from parts of the world causes gravitational and orbital disturbances. A smart child solves all our problems. [JC]

GANN, WILLIAM D.

(1878-1955) US businessman and writer whose sf novel, *The Tunnel Thru the Air, or Looking Back from 1940* (1927), features a protagonist whose Fundamentalist belief in the Bible gives him sufficient predictive prowess to dodge a great depression (which WDG dates 1928-32), while at the same time impelling him to invent various superweapons, which are used to defend the USA against her external enemies. New York is then renamed the City of the Lord. All ends happily. [JC]

GANSOVSKY, SEVER (FELIKSOVICH)

(1918-1990) Russian writer, a dominant figure of the 1960s and 1970s, well known for his radio plays, some of them sf, and also well regarded for his HARD-SF short stories and novellas, which were assembled in *Shagi*

V Neizvestnoie ["Steps into the Unknown"] (coll 1963), Shest' Geniev ["Six Geniuses"] (coll 1965), Tri Shaga K Opasnosti ["Three Steps towards Danger"] (coll 1969), Idyot Tchelovek ["Man is Coming"] (coll 1971) and Tchelovek, Kotoryi Sdelal Baltiiskoie More ["The Man who Made the Baltic Sea"] (coll 1981). Some of his better stories appear in World's Spring (anth 1979 Sweden) ed Vladimir GAKOV, and further stories were assembled as The Day of Wrath (coll trans Alexander Repyev 1989 Russia). A novel, Vinsent Van-Gog ["Vincent Van Gogh"] (1971) is a TIME-TRAVEL tale raising general philosophical questions about the artist's destiny. [VG]

GANTZ, KENNETH F(RANKLIN)

(1908-1980) US writer, mostly of nonfiction, and USAF editor. His sf novel, Not in Solitude (1959; rev 1961), fictionalizes a first voyage to MARS and describes the probable environment faced by the travellers. [JC]

GARBO, NORMAN

(1919-) US writer in whose borderline sf novel, The Movement (1969), exaggerated late-1960s-style confrontations between US students and police lead to a full-scale uprising with retaliatory bombing by the government. [JC]

GARBY, Mrs LEE HAWKINS

(1890-?) The wife of a school-friend of E.E. "Doc" SMITH, with whom she collaborated on The Skylark of Space: The Tale of the First Inter-Stellar Cruise (written 1915-20; 1928 AMZ; 1946; cut rev 1958), for which she was credited. The 1958 abridgement of this famous SPACE OPERA may have eliminated most and perhaps all of her contribution, as she was no longer listed as co-author. [JC]

GARDEN, DONALD J.

[r] ROBERT HALE LIMITED.

GARDNER, ERLE STANLEY

(1889-1970) US lawyer and writer, most famous for the Perry Mason detective novels, beginning with The Case of the Velvet Claws (1933). He was extremely prolific and, although he spent almost no time at all on sf, managed to produce enough fiction to fill The Human Zero: The Science Fiction Stories of Erle Stanley Gardner (coll 1981) ed Martin H. GREENBERG and Charles G. WAUGH. The tales, which first appeared in The Argosy around 1930, are efficient but unmemorable pulp sf, and now seem both dim and mechanical. [JC]See also: APES AND CAVEMEN (IN THE HUMAN WORLD).

GARDNER, JEROME

ROBERT HALE LIMITED.

GARDNER, JOHN

1. (1926-) UK writer who was a minister for several years before becoming an agnostic, a drama critic, and the creator of the Boysie Oakes sequence of spy thrillers spoofing Ian FLEMING's James Bond books, most famously in The Liquidator (1964); one Boysie Oakes tale, Founder Member (1969), involves its hero in a SEX experiment in space. More recently, JG has written a number of novels continuing the James Bond saga itself. Among his many other novels, mostly thrillers, Golgotha (1980; vt The Last Trump 1980 US), is a NEAR-FUTURE thriller whose apocalyptic imagery may

owe something to JG's early theological training. [JC]2. Full name John Champlin Gardner (1933-1982), US writer and academic who achieved popularity with his large contemporary novel, *The Sunlight Dialogues* (1972). His third work of fiction, *Grendel* (1971), is a mordant retelling of the Beowulf legend from the MONSTER's point of view, and renders - more pointedly than Thomas Burnett SWANN's similar elegies - Anglo-Saxon Man's triumphs as allegorical of the rise of the cruel, modern, industrial world. Further works that contain fantastic elements include *Jason and Medeia* (1973), a fantasy novel in verse, several tales assembled in *The King's Indian: Stories and Tales* (coll 1974), *In the Suicide Mountains* (1977), a juvenile based on Russian folk themes, and *Freddy's Book* (1980). Mickelsson's *Ghosts* (1982) attempts to subsume the ghost story and other narrative conventions into a mundane frame. Though clearly attracted to various supernatural and classical traditions, JG had little apparent interest in the sf or fantasy genres, which are scantily treated in *On Moral Fiction* (1978), in which he argued for a traditional viewpoint, abjuring what he saw as POSTMODERNIST nihilism. He died in a motorcycle accident. [GF/JC]About 2: *World of Order and Light: The Fiction of John Gardner* (1984) by G.L. Morris. See also: MYTHOLOGY.

GARDNER, MARTIN

(1914-) US mathematician, conjurer, journalist and author; his BA is in philosophy from the University of Chicago. His *In the Name of Science* (1952; rev vt *Fads and Fallacies in the Name of Science* 1957) is an iconoclastic and amusing nonfiction book about PSEUDO-SCIENCE: cults, fads and hoaxes existing on the fringes of science, with chapters on HOLLOW-EARTH and flat-Earth theories, pyramidology, UFOS and other subjects. Of particular interest to sf readers may be its references to Sir Arthur Conan DOYLE, Charles FORT, L. Ron HUBBARD, Richard SHAVER. More recent works in the same debunking line are *Science: Good, Bad and Bogus* (coll 1981) and *Notes of a Fringe-Watcher* (1988). MG's *The Ambidextrous Universe* (1964; exp 1979; rev 1982), on the other hand, concerns serious science; moving from simple questions of symmetry to profound problems of physical philosophy, it is one of the finest works of scientific popularization. From 1956 until 1981 MG wrote the *Mathematical Games* column in *Scientific American*, and a number of collections of these pieces have been published in book form, including *The Unexpected Hanging and Other Mathematical Diversions* (1969) and *Mathematical Carnival* (1975). His *The Numerology of Dr Matrix* (coll 197?; exp vt *The Incredible Dr Matrix* 1976; exp vt *The Magic Numbers of Dr Matrix* 1985) brings together a number of spoof stories from that column about the eponymous numerologist and rogue, a practitioner of several of the shady cults described in MG's earlier book. Also of note are his *The Annotated Alice* (1960), a densely glossed edition of Lewis CARROLL's two Alice books - it is supplemented by *More Annotated Alice* (1990) - and *The Annotated Snark* (1962), a similar treatment of Carroll's *The Hunting of the Snark* (1876 chap). From the launching of ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE (1977) MG had a MATHEMATICS column there, with puzzles often posed in the form of sf stories; many of these have been collected as *Science Fiction Puzzle Tales* (coll 1981) and *Puzzles from Other Worlds* (coll 1984). A further volume collecting sf, fantasy and other stories (not simply puzzle stories) is

The No-Sided Professor (coll 1987). Collections of essays, some with an sf connection, are Order and Surprise (coll 1983) and Gardner's Whys and Wherefores (coll 1989). Logic Machines and Diagrams (1958; rev 1982) also refers to sf. [PN/JE]See also: DIMENSIONS; PARANOIA.

GARDNER, NOEL
[s] Henry KUTTNER.

GARIS, HOWARD R(OGER)
(1873-1962) US writer known mainly for such work outside the sf field as his Uncle Wiggily series, whose 15,000 episodes were widely syndicated. For the Edward STRATEMEYER Syndicate he wrote, under the house pseudonym Roy ROCKWOOD and according to plot outlines from Stratemeyer, the first 6 vols of the Great Marvel series: Through the Air to the North Pole (1906), Under the Ocean to the South Pole (1907), Five Thousand Miles Underground (1908), Through Space to Mars (1910), Lost on the Moon (1911) and On a Torn-Away World (1913); 3 later volumes are of unknown authorship. These tales were of considerable imaginative power, not emulated by his contributions to the TOM SWIFT series, for which he wrote - again to Stratemeyer synopses - the first 35 (of 38) episodes under the house name Victor APPLETON, from Tom Swift and his Motor-Cycle, or Fun and Adventure on the Road (1910) to HRG's last, Tom Swift and his Giant Magnet, or Bringing up the Lost Submarine (1932). (R. REGINALD's Science Fiction and Fantasy Literature: A Checklist, 1700-1974 [1979] gives all 35 titles.) [JC/EFB]Other works: Many juveniles, including Tom of the Fire Cave (1927); the Rocket Riders books, Rocket Riders Across the Ice, or Racing against Time (1933), Rocket Riders over the Desert, or Seeking the Lost City (1933), Rocket Riders in Stormy Seas, or Trailing the Treasure Divers (1933) and Rocket Riders in the Air, or A Chase in the Clouds (1934).

GARLAND
Garland Publishing, Inc., New York, is a US specialist publisher of a wide range of reference works and facsimile reprints, only some of which are related to sf. In 1975 G published the Garland Library of Science Fiction: 45 titles, selected by Lester DEL REY, issued in durable editions. The series was criticized, partly for some idiosyncratic choices-unexceptional novels by Stanton A. COBLENTZ, H. Beam PIPER and George O. SMITH - but chiefly for choosing inferior versions of the books to reproduce. Intended as an accompanying critical history by Del Rey was The World of Science Fiction: 1926-1976: The History of a Subculture (1979), which in the event appeared from DEL REY BOOKS first and then from G in 1980. Among G's very occasional books of genre interest since that time have been The Literature of Fantasy: A Comprehensive, Annotated Bibliography of Modern Fantasy Fiction (1979) by Roger C. SCHLOBIN, Science Fiction and Fantasy Series and Sequels: A Bibliography, Volume 1: Books (1986) by Tim Cottrill, Martin H. GREENBERG and Charles D. WAUGH, and Horror Literature: A Reader's Guide (1990) and Fantasy Literature: A Reader's Guide (1990), both ed Neil BARRON. [MJE/PN]

GARNE, GASTON
Francis W. DOUGHTY.

GARNER, ALAN

(1934-) UK writer, primarily for children; he has lived all his life near Alderley Edge, Cheshire, the setting for nearly all his fiction. AG is widely thought one of the finest, though most difficult, children's writers of his generation. Most of his work is FANTASY, rooted in his knowledge of local archaeology and MYTHOLOGY. His first two books form a short series for younger children: *The Weirdstone of Brisingamen* (1960; vt *The Weirdstone* 1961 US) and *The Moon of Gomrath* (1963); his third, *Elidor* (1965), which has been assembled with the first two as *Alan Garner Omnibus* (omni 1994), can be read as borderline sf. The mood here darkens in a story of teenagers faced with a threat (and a quest) from an ALTERNATE WORLD, which impinges menacingly on their own. AG's first fully mature work is *The Owl Service* (1967), in which a bitter Welsh legend re-enacts itself among modern children, faced with fully adult problems of love, jealousy and death. AG's theme has always been a kind of TIME TRAVEL, but the time is inner and psychic; his stories rework archetypal patterns, usually involving pain, loss, desire, rage and the need for an almost unattainable courage. AG's next book, *Red Shift* (1973), is in no conventional sense a children's book (see also CHILDREN'S SF). In compressed, elliptical prose, primarily dialogue, he reverts to the theme of the past working out its problems in the present, as a time shift, focused on a Neolithic axe-head, moves the protagonist backwards and forwards in a choppy and wrenching way between alter egos in the twilight of the Roman Empire in Britain, the Civil War of the 17th century and now. AG's last fiction of note is a sparsely written, quasi-autobiographical tetralogy for rather younger children: *The Stone Book* (1976 chap), *Tom Fobble's Day* (1977 chap), *Granny Reardun* (1977 chap) and *The Aimer Gate* (1978 chap), later published together as *The Stone Book Quartet* (omni 1983; vt *The Stone Quartet* US). Though these books are neither sf nor fantasy, the old themes recur. [PN]Other works: *The Breadhorse* (1975 chap), for younger children; *The Lad of the Gad* (1981). Retold folktales: *The Hamish Hamilton Book of Goblins* (coll 1969); *Alan Garner's Fairy Tales of Gold* (coll 1980; rev vt *Fairytales of Gold* 1989 illus Michael Foreman); *Alan Garner's Book of British Fairy Tales* (coll 1984); *A Bag of Moonshine* (coll 1986). As Editor: *The Guizer: A Book of Fools* (anth 1975), which in addition to tales by others contains many folktales retold by AG. About the author: *A Fine Anger: A Critical Introduction to the Work of Alan Garner* (1981) by Neil Philip; "Inner Time" by Alan Garner in *Science Fiction at Large* (anth 1976; vt *Explorations of the Marvellous*) ed Peter NICHOLLS. See also: FANTASY; RADIO.

GARNER, GRAHAM

Donald Sydney ROWLAND.

GARNER, ROLF

Bryan BERRY.

GARNETT, DAVID

(1892-1981) UK writer, member of the famous Garnett family which includes his grandfather, Richard GARNETT, his father, Edward GARNETT, and his mother, the translator Constance Garnett (1862-1946); DG was also an intimate member of the Bloomsbury Group. His first novel under his own name is also his most famous, the fantasy *Lady into Fox* (1922 chap); like

its inferior successor, *VERCORS' Sylva* (1961; trans 1962), this is an allegory of metamorphosis, in this instance from demure wife into vixen, with tragic results. A FEMINIST reading of the book is both elucidating and inescapable; it was famously parodied by Christopher Ward (1868-1943) in *Gentleman into Goose* (1924 chap). *A Man in the Zoo* (1924) is also fantasy. *The Grasshoppers Come* (1931) fascinatingly combines aviation and allegory in a borderline-sf tale. *Two by Two: A Story of Survival* (1963) retells the story of Noah (quite possibly a portrait of DG's friend T.H. WHITE) and the Flood. DG translated Andre MAUROIS's *A Voyage to the Island of the Articoles* (1927; trans 1928 UK). The *White/Garnett Letters* (coll 1968), which he edited, are of great value to students of both his work and White's. [JC]Other works: *A Terrible Day* (1932); *Purl and Plain*, and *Other Stories* (coll 1973); *The Master Cat: The True and Unexpurgated Story of Puss in Boots* (1974).

GARNETT, DAVID S.

(1947-) UK writer with a BSc in economics, author of more than 50 books, many of them novels, in various genres and under various names. To differentiate himself from the elder David GARNETT he created a middle initial, and in the USA signed his early books Dav Garnett; he has published novels also as David Lee and David Ferring. Though his sf has always been action-oriented and dominated by SPACE-OPERA conventions, his first book, *Mirror in the Sky* (1969 US), guys those traditions with disillusioned but moderate spite; *Stargonauts* (1994) enjoyably broadens the assault into slapstick. His third novel, *Time in Eclipse* (1974) - written like its 1970s successors for ROBERT HALE LIMITED - is a comparatively ambitious effort set on a war-torn Earth whose guardian is an amnesiac obscurely bound to a vast COMPUTER. Much of his work is marred by haste, so that the anarchic subtexts pervading his most routine tales can seem unintended. Their subversiveness, however, is certainly deliberate. As editor, DSG was responsible for an original story anthology series, *Zenith: The Best in New British Science Fiction* (anth 1989) and *Zenith 2: The Best in New British Science Fiction* (anth 1990); when the sequence was terminated, he initiated - with the approval of Michael MOORCOCK - a new incarnation of NEW WORLDS, this time in anthology form, the sequence comprising *New Worlds* (anth 1991), *New Worlds 2* (anth 1992), #3 (anth 1993) and #4 (anth 1994); further installments are unlikely. DSG also ed *The Orbit Science Fiction Yearbook 1* (anth 1988), #2 (anth 1989) and #3 (anth 1990), distinguished from other year's-best anthologies by its smaller size and greater concentration on critical material, each volume including essays on the sf scene by Brian W. ALDISS, John CLUTE and DSG himself. [JC]Other works: *The Starseekers* (1971 US); *The Forgotten Dimension* (1975); *Phantom Universe* (1975); *Cosmic Carousel* (coll 1976).As David Lee: *Destiny Past* (1974).As David Ferring: *The Hills Have Eyes Part 2* * (1984), novelizing a horror film; the Konrad trilogy set in the Warhammer fantasy gaming world (*GAMES WORKSHOP*), comprising *Konrad* * (1990), *Shadowbreed* * (1991) and *Warblade* *(1993).See also: ANTHOLOGIES; GAME-WORLDS.

GARNETT, EDWARD

(1868-1936) UK writer and man of letters, son of Richard GARNETT, husband

of Constance Garnett, father of David GARNETT. His greatest fame was as an enormously influential publishers' reader for several UK firms; among the writers whose careers he significantly helped were Joseph CONRAD, E.M. FORSTER and W.H. HUDSON. The sf SATIRES assembled in Papa's War (coll dated 1918 but probably 1919) reveal a freethinking, controversial, clear-headed teller of tales and allegories. [JC]

GARNETT, RICHARD

(1835-1906) UK librarian and writer, Chief Keeper at the British Museum, father of Edward GARNETT, grandfather of David GARNETT. His *The Twilight of the Gods and Other Tales* (coll 1888; exp 1903) is a well known collection of fables and other fantasies, some of which touch on sf themes. [JC]

GARON, MARCO

Marco GARRON; Dennis HUGHES.

GARRETT, (GORDON) RANDALL (PHILLIP DAVID)

(1927-1987) US writer whose first publication was a Probability Zero vignette in *ASTOUNDING SCIENCE-FICTION* in 1944. He went on to become a prolific writer for that magazine in the 1950s and early 1960s. He was at one time part of the ZIFF-DAVIS stable writing for *AMAZING STORIES* and *FANTASTIC*, when he and his sometime collaborator Robert SILVERBERG ran a "fiction factory" together. He used the pseudonyms David Gordon and Darrel T. Langart as well as numerous house names; he has frequently been listed as having written the ASF stories signed Walter Bupp, although these are now known to have been by John BERRYMAN. His most notable collaborations with Silverberg were the Nidor series, *The Shrouded Planet* (fixup 1957) and *The Dawning Light* (1958), which appeared as by Robert Randall; other collaborations were signed Gordon Aghill and Ralph BURKE, and some stories signed under house names Alexander BLADE, Richard GREER, Ivar JORGENSEN, Clyde MITCHELL, Leonard G. SPENCER, S.M. TENNESHAW and Gerald VANCE may be further RG/Silverberg collaborations. He also collaborated with Laurence M. JANIFER, usually as Mark PHILLIPS, under which name they produced a trilogy of PSI-POWER stories: *Brain Twister* (1959 ASF as "That Sweet Little Old Lady"; 1962), *The Impossibles* (1960 ASF as "Out Like a Light"; 1963), and *Supermind* (1960-61 ASF as "Occasion for Disaster"; 1963). RG's most impressive solo work is the series of stories first published in ASF between 1964 and 1976 - reprinted in *Too Many Magicians* (1967), *Murder and Magic* (coll 1979) and *Lord Darcy Investigates* (coll 1981), and finally assembled in *Lord Darcy* (omni 1983) - featuring the exploits of the detective Darcy in an ALTERNATE WORLD where MAGIC works according to Frazerian laws whose implications are being gradually unravelled by the scientific method. RG's earlier sf books were *Unwise Child* (1962; vt *Starship Death* 1982), about a sentient machine, and *Anything You Can Do* . . . (1963) as by Darrel T. Langart, about a battle between a superhuman and an ALIEN. RG was fond of producing parodies in verse and prose: he wrote comic verse for *The MAGAZINE OF FANTASY AND SCIENCE FICTION* and "Parodies Tossed" (1956) for *SCIENCE FICTION QUARTERLY*, and he guyed the Feghoot shaggy-dog stories (written for FSF by Reginald BRETNOR as Grendel Briarton) in the adventures of Benedict Breadfruit, written for AMZ as Grandall Barretton. With Janifer he wrote a bawdy comic fantasy in which

the deities of Classical MYTHOLOGY return to preside over a high-tech future, *Pagan Passions* (1959). His best humorous work was collected in *Takeoff!* (coll 1980) and *Takeoff Too* (coll 1987); a more eclectic selection was assembled in *The Best of Randall Garrett* (coll 1982) ed Silverberg. Always a devout man - despite the occasional wildness of his lifestyle - RG virtually dropped out of sf writing for a long period in the 1970s, and took Holy Orders for a while. He eventually abandoned the priesthood and married his third wife, Vicki Ann Heydron, with whom he plotted the Gandalara series of heroic fantasies; these appeared as collaborations, although in fact Heydron wrote them while RG was hospitalized in the wake of a serious attack of viral meningitis. The series comprises *The Steel of Raithskar* (1981), *The Glass of Dyskornis* (1982), *The Bronze of Eddarta* (1983), *The Well of Darkness* (1983), *The Search for Ka* (1984), *Return to Eddarta* (1985) and *The River Wall* (1986). The first 3 were assembled as *The Gandalara Cycle, Volume 1* (omni 1986) and the second 3 as *The Gandalara Cycle, Volume 2* (omni 1986). [BS] See also: CRIME AND PUNISHMENT; ESP.

GARRON, MARCO

A CURTIS WARREN house name used exclusively for jungle novels derived from Edgar Rice BURROUGHS's Tarzan of the Apes sequence; most were sf or fantasy. Under the spelling Marco Garron appeared the Azan the Apeman series - *The Lost City* (1950), *The Missing Safari* (1950), *Tribal War* (1951), *White Fangs* (1951), *King Hunters* (1951) and *Jungle Fever* (1951) - which so closely mimicked Tarzan that after the first 6 releases the Burroughs estate was able to gain an injunction banning any further publications; it is possible they were written by D.A. GRIFFITHS. Writing as Marco Garon (note spelling), Dennis HUGHES (whom see for details) published a second series, the Rex Brandon novels, sufficiently remote from Tarzan to avoid further legal action. [JC]

GARSON, CLEE

House name used on the ZIFF-DAVIS magazines by Paul W. FAIRMAN (1 story, "Nine Worlds West", *Fantastic Adventures* Apr 1951), David Wright O'BRIEN and perhaps others. In all, there were 13 CG stories 1942-55. [PN]

GARSON, PAUL

(1946-) US teacher and writer whose *The Great Quill* (1973) is set in a baroquely degenerate post- HOLOCAUST England; there are satirical effects. [JC]

GARTH

Blond, square-jawed, musclebound, time-travelling COMIC-strip character created for the London Daily Mirror by artist Steve Dowling (1904-1986) and BBC producer Gordon Boshell as the UK's answer to FLASH GORDON. Scripted by Don Freeman, G first appeared, floating ashore on a raft, on 24 July 1943, and soon became a kind of fantasy troubleshooter. In *The Seven Ages of Garth* (Sep 1944-Jan 1946) Freeman introduced G's Doctor-Zarkov equivalent, Professor Lumiere, whose magic word "karma" allowed G to jump bodies (and episodes) at the point of death. The finest scripts were written 1953-66 by Peter O'Donnell (1920-), who introduced G's eternal lover Astra in *The Last Goddess* (1965). Jim Edgar provided

moderately imaginative scripts throughout the next two decades on three basic themes: TIME TRAVEL, journeys to distant planets, and earthbound adventures that usually had sf elements. Angus Allan provided a few scripts in the late 1980s. Steve Dowling retired in 1969 and his assistant, John Allard, took over as artist. In 1971 the Daily Mirror secured the services of Frank Bellamy (1919-1976), one of the finest strip illustrators of his day, whose beautifully rendered drawings made G the most attractive-looking UK newspaper strip then published. On Bellamy's sudden death the art chores were taken on by Martin Asbury; for some years Asbury's art was polished, enthusiastic and inventive, but it suddenly deteriorated in the mid-1980s and today seems hurried and shoddy. Tim Quinn has recently started to do the scripting. The Daily Mirror published several collections, including *The Last Goddess* (graph coll 1966), *The "Daily Mirror" Book of Garth 1975* (graph coll 1975) and 1976 (graph coll 1976). Other early books were *Garth - Man of Mystery* (graph 1946) and *Garth* (1958 graph dos). Single-story collections were published by John Dakin/The Newspaper Strip Society: *Bride of Jenghiz Khan* (graph 1979), *The Spanish Lady* (graph 1980), *Sapphire* (graph 1980), *Night of the Knives* (graph 1980), *The Doomsmen* (graph 1981) and *Mr Rubio Calls* (graph 1981). 2 collections of Bellamy stories were published by Titan: *The Cloud of Balthus* (graph coll 1985) and *The Women of Galba* (graph coll 1985). [RT/SW]

GARTH, WILL

House name used on *Thrilling Wonder Stories*, *Startling Stories* and *CAPTAIN FUTURE* 1937-41 by Otto BINDER, Edmond HAMILTON, Henry KUTTNER, Mort WEISINGER and possibly others. The film novelization of *DR CYCLOPS*, *Dr Cyclops* * (1940) as by WG, has been attributed to Kuttner, who confusingly wrote a TWS short story of that title in the same year, and to Manly Wade WELLMAN, who did not write it. It was almost certainly by Alexander SAMALMAN. [PN/JC]

GARVIN, RICHARD M(cCLELLAN)

(1934-1980) US writer whose career has been in advertising. His two sf novels with Edmond G. Addeo (1907-1980) are *The FORTEC Conspiracy* (1968) and *The Talbot Agreement* (1968). In the former, a crashlanded alien ship infects Earth with a deadly disease; the latter novel is borderline sf with espionage elements. *The Crystal Skull* (1974) is a non-fiction work about the occult. [JC]

GARY, ROMAIN

Pseudonym of French writer and diplomat Romain Kacewgari (later changed to Kassevgari) (1914-1980) born in Tiflis, Georgia, of Polish parents. In WWII he was active in the French Resistance. RG was much praised for such novels outside the sf field as *Les racines du ciel* (1956; trans Jonathan Griffin as *The Roots of Heaven* 1958 US), for which he was awarded the Prix Goncourt. An early and untranslated sf novel, *Tulipe* (1946), is about the Blacks taking over Earth. In his later work he utilizes generic material usually to point up ethical issues, and *La danse de Gengis Cohn* (1967; trans by RG as *The Dance of Genghis Cohn* 1968 US), with its sequel, *La tete coupable* (1968 trans by RG as *The Guilty Head* 1969 US), are certainly FABULATIONS. Rather similar to the inferior *On A Dark Night* (1949) by

Anthony WEST, they depict a supernatural transference of a victim's personality into the body of a Nazi. In *Genghis Cohn* it is Cohn himself, a Yiddish comedian, who, as a dybbuk, enters the mind of the SS officer who ordered the massacre in which Cohn was shot. The novel takes place in the late 1960s, with the former officer, now a police superintendent, obsessed by his dybbuk, who torments him, and with Germany itself tormented by an incursion of allegorical figures representative of her spiritual plight. *Gloire a nos illustres pionniers* (coll 1962; trans Richard Howard as *Hissing Tales* 1964 US) contains some sf, notably the title story. In *The Gasp* (1973 US; in French as *Charge d'ame* 1978 France) it turns out that the *elan vital* which escapes from the body at the moment of death can be used in warfare. RG was a sharp, clear-headed and passionate novelist of considerable stature. [JC] Other work: *The Talent Scout* (ms? trans John Markham Beach 1961 US). See also: **ESCHATOLOGY; HISTORY OF SF; POWER SOURCES; RELIGION.**

GAS GIANT

Item of sf **TERMINOLOGY** invented by James BLISH; it proved so useful that it is now often used by astronomers. It refers to the fact that four of the planets of our Solar System are not comparatively small and dense, like Earth and MARS, but extremely large, and consist mainly of substances like hydrogen, helium, methane and ammonia. Even in the cold at the outer edge of our Solar System, these planets are of low density, being essentially globes of gas and liquid. The four gas giants - often called the Jovian Planets - in our Solar System are JUPITER, Saturn, Uranus and Neptune (**OUTER PLANETS**). The fact that there are two kinds of planet in the Solar System is of great interest to scientists constructing theories of its evolution; it is believed that gas-giant planets have been detected orbiting a few nearby stars. [PN]

GASKELL, JANE

Working name of UK writer Jane Gaskell Lynch (1941-), whose dozen books include *Strange Evil* (1957), her first, written when she was 14; it features fairies from another world, claustrophobic conflicts in that world, and an aura of Gothic pubescence throughout. *King's Daughter* (1958) is set in ancient ATLANTIS, where a cache of even more ancient nerve gas is discovered; the book is remotely connected, through a shared character, with the Cija sequence of Atlantean tales - *The Serpent* (1963; vt in 2 vols *The Serpent* 1975 and *The Dragon* 1975), *Atlan* (1965), *The City* (1966) and *Some Summer Lands* (1977). The non-Atlantean Princess Cija is involved, via forced marriage, in complex conflicts between northern forces and the quasihuman dwellers of the island state. As things fall apart, sex and sorcery abound, but the princess eventually reaches home again. In genre terms the series uneasily marries sf and the popular romance; it is full of vigorous and exuberant invention and occasionally overheated prose. *The Shiny Narrow Grin* (1964) is a comedy about vampires. *A Sweet Sweet Summer* (1969) scathingly exposes an anarchic NEAR-FUTURE England to the gaze of invading extraterrestrials. *Sun Bubble* (1990) has elements of fantasy. [JC]

GASPAR, LASZLO

[r] **HITLER WINS; HUNGARY.**

GAS-S-S-S, OR IT BECAME NECESSARY TO DESTROY THE WORLD...

Full title: Gas-s-s, or It Became Necessary to Destroy the World in Order to Save It(vt Gas! or It Became Necessary to Destroy the World in Order to Save It) Film (1970). San Jacinto/AIP. Prod and dir Roger CORMAN, starring Robert Corff, Elaine Giftos, Bud Cort, Talia Coppola. Screenplay George Armitage. 79 mins cut to 77 mins. Colour.In Corman's belated attempt to cash in on the hippy/counterculture movements of the 1960s, a poison gas makes everyone over 25 die of old age and the young inherit the USA. There is topsy-turvy chaos in this black comedy, with conservative Middle Americans going on a rampage of destruction while Hell's Angels attempt to protect the old way of life (golf links, etc.), but a cheerfully workable society begins to emerge. Edgar Allan POE occasionally appears on a motorcycle, with the Raven perched on his shoulder and Lenore on pillion. The film was made with Corman's legendary speed and cheapness, and with a general sense of expansive euphoria. AIP disliked it, re-editing it drastically without Corman's knowledge, so he went on to set up his own production/distribution company, New World. [JB]See also: CINEMA.

GATE, THE

UK SEMIPROZINE, irregular, 3 issues to date, published by Richard Newcombe, #1 1989 in paperback book format ed Maureen Porter, subsequent issues (1990 and 1991) A4 format ed Paul Cox, no publication dates given. TG is primarily a fiction magazine (stories by son and father Sean and Barrington J. BAYLEY, Storm CONSTANTINE, Kim NEWMAN, Andy Sawyer, Brian M. STABLEFORD, Ian WATSON, James WHITE and others), but carries a regular film column by Newman. [RH]

GAUGER, RICK

Working name of US writer Richard C. Gauger (? -), who began publishing sf with "The Vacuum-Packed Picnic" for Omni in 1979. His sf novel, Charon's Ark (1987), pleasingly depicts the hijacking of a 747 full of students, who are taken to the moon of Pluto. Charon turns out to be an Ark, its function being to carry life across the Galaxy: it needs new crew members. [JC]

GAUGHAN, JACK

Working name of US illustrator John Brian Francis Gaughan (1930-1985). JG made his first professional sale while still in school at the Dayton Art Institute; he went full-time in the mid-1950s. Prolific in both covers and interior art, he was most closely associated with GALAXY SCIENCE FICTION, for which he was Art Editor 1969-72 and painted 38 covers over the years; he also did 29 covers for If, 11 covers for FSF, 7 for IASFM and others for many other magazines. But, although his cover work was more than competent, it was his spare, often nearly abstract black-and-white interior ILLUSTRATIONS that dominated the field in the 1960s. He worked for paperback and hardcover book publishers, too, most notably ACE BOOKS. Famous for his generosity in donating artwork to FANZINES, he is the only illustrator to have won HUGOS for both Best Fan Artist and Best Professional Artist in the same year (1967); he won the Professional Artist award again in 1968 and 1969. Throughout the 1970s and 1980s his work became less in demand and he was in increasingly poor health, as a

result producing very little sf work. [JG]See also: ASTOUNDING SCIENCE-FICTION.

GAWRON, JEAN MARK

(1953-) French-born US writer whose first sf novel, *An Apology for Rain* (1974), traces the travels of a woman in search of her brother through a surreal USA. It was followed by *Algorithm* (1978), a further linguistic allegorizing of quest motifs, and the more conventionally framed *Dream of Glass* (1993). [JC]

GAWSWORTH, JOHN

Pseudonym of UK editor and writer (Terence Ian) Fytton Armstrong (1912-1970) for most of his work of genre interest, though he signed some work with his real name. He was a close colleague of M.P. SHIEL, creating a Shiel checklist in the bibliographical *Ten Contemporaries* (1932) and editing *The Best Short Stories of M.P. Shiel* (coll 1948; a John COLLIER checklist appears in *Ten Contemporaries (Second Series)* (1933). His poetry was traditional, and his occasional stories are of relatively little interest; his importance to sf and fantasy lies primarily in the large anthologies he assembled in the 1930s, including *Strange Assembly* (anth 1932), *Full Score* (anth 1933) as Fytton Armstrong, *New Tales of Horror by Eminent Authors* (anth 1934), *Thrills, Crimes and Mysteries* (anth 1935), *Thrills* (anth 1936), *Crimes, Creeps and Thrills* (anth 1936) and *Masterpiece of Thrills* (anth 1936). [JC]

GAY, ANNE

(1952-) UK teacher and writer who began publishing sf with "Wishbone" in *Gollancz-Sunday Times Best SF Stories* (anth 1987) ed anon. Her first novel, *Mindsail* (1990), very promisingly describes an alien planet to which the passengers of a crashed human starship have had to adjust, gradually evolving into fragmented and warring societies in the process. Romance elements - the female protagonist's rather prolonged search for a husband - interfere to some extent with the revelations, but the book leaves a vivid memory trace. *The Brooch of Azure Midnight* (1991), an sf tale with some of the tone of the "gate romance" common to FANTASY from the time of H.P. LOVECRAFT, confronts an expanding Terran culture with the challenge and opportunity of wormhole access to the stars. *Dancing on the Volcano* (1993) less successfully. [JC]

GAY, J. DREW

L. Edgar WELCH.

GAYLE, HENRY K.

(1910-) Canadian writer and civil servant whose horror/sf novel, *Spawn of the Vortex* (1957), plays on the nuclear-testing PARANOIA of the 1950s. Underwater tests activate a horde of MONSTERS who advance upon the USA. [JC]

GAYTON, BERTRAM

(? -?) UK writer whose sf novel, *The Gland Stealers* (1922), deals lightly with physical rejuvenation achieved - apparently - by transplanting glands from apes into the bodies of elderly humans. [JC]See also: MEDICINE.

GEAR, KATHLEEN O'NEAL

(1954-) US writer with extensive training in American prehistory; married to W. Michael GEAR. Her first sf, the Powers of Light trilogy - An Abyss of Light (1990), Treasure of Light (1991) and Redemption of Light (1991) - was published as by Kathleen M. O'Neal. With an occasionally oppressive relentlessness about the moral and theological issues involved, it presents an intergalactic conflict between humans and the ALIEN Magistrates who have established a coercive "peace" in terms inescapably evocative of the Jewish experience during the 20th century; moments of awkwardness failed to muffle the impressive intensity of the long tale. With W. Michael Gear (whom see for details), and writing now as KONG, she has begun the Ancient Americans sequence, projected to cover the entire prehistory of North America. Sand in the Wind (1990), solo, is an historical novel. [JC]

GEAR, W. MICHAEL

(1955-) US writer with extensive training in American archaeology; married to Kathleen O'Neal GEAR. He began publishing sf with the competent Spider sequence - The Warriors of Spider (1988), The Way of Spider (1989) and The Web of Spider (1989), plus The Artifact (1990), which serves as a prequel - about the conflict between a newly discovered lost-colony offshoot of humanity and the reactionary Directorate which attempts to control human space. The former, who are of Native American stock and worship a god called Spider, are sexually and culturally irresistible to the women who first discover them, but WMG fortunately has too many complex interstellar doings to present for sentimental romancing to dominate the proceedings. The Ancient Americans sequence, all written with Kathleen O'Neal Gear - People of the Wolf (1990), People of the Fire (1991), People of the Earth (1992), People of the River (1992), People of the Sea (1993) and People of the Lakes (1994), with 4 further volumes planned - has, because of its carefully plausible venue, little fantasy or sf content beyond occasional reference to true visions derived from proper shamanistic practice; but of course the prehistoric-sf subgenre was always likely, as our knowledge of the past gained definition, to be transformed into fictionalized history. Other sf novels include Starstrike (1990) and the Forbidden Borders sequence - Forbidden Borders: Requiem for the Conqueror (1991), #2: Relic of Empire (1992) and Countermeasures (1993) - about an Earth prevented by a GRAVITY barrier from reaching more than a few nearby star systems. [JC]

GEARHART, SALLY MILLER

(1931-) US author of lesbian- FEMINIST works - including A Feminist Tarot (1976) with Susan Rennie - and Professor of Speech and Communication Studies at San Francisco State University. Her sf book, one of the most extreme of those that envisage men and women as effectively different races, is The Wanderground: Stories of the Hill Women (coll of linked stories 1980). It is set in the outlaw, all-women, UTOPIAN hill communities of a future when men are restricted to the CITIES and dependent on TECHNOLOGY, while women (in a somewhat New Age manner) have developed PSI POWERS through harmony with Nature. Even the Gentles, men no longer driven by violence, know that "maleness touched women only with the

accumulated hatred of centuries". [PN]See also: PASTORAL.

GEE, MAGGIE

(1948-) UK writer whose first published novel, *Dying in Other Words* (1981), is a morbid experimental work which could be interpreted as having ghostly elements. In *The Burning Book* (1983) an ordinary contemporary family's problems are overshadowed by auctorial asides reminding the reader of the fragility of human life, as demonstrated by Hiroshima, Nagasaki and the HOLOCAUST that will occur at the end of the novel. *Where are the Snows?* (1991) takes her protagonists from the early 1980s through to a pessimistically drawn 21st century. [PH]Other works: *Light Years* (1985); *Grace* (1989).

GEE, MAURICE (GOUGH)

(1931-) NEW ZEALAND writer best known for a trilogy of non-genre novels: *Plumb* (1978 UK), *Meg* (1981 UK) and *Sole Survivor* (1983 UK). His juvenile fantasies - *Under the Mountain* (1979), later a tv series, and *The World Around the Corner* (1980) - are routine quests. More complex is the *World of O* trilogy - *The Halfmen of O* (1982), *The Priests of Ferris* (1984) and *Motherstone* (1985) - which moves from unquestioning use of sf/fantasy conventions to a less certain view of morality: the human saviours of the ALTERNATE WORLD of O realize that its inhabitants must discover their own solution to the problem of good and evil, even at the price of their sentence. MG's virtues include a strong sense of character and place. [MMacL]

GEIER, CHESTER S.

(1921-1991) US writer and editor, very active in the ZIFF-DAVIS stable (for AMZ and *Fantastic Adventures*) in the 1940s, where he published a large amount of routine material under his own name and pseudonyms including Guy Archette and the house names Alexander BLADE, P.F. COSTELLO, Warren KASTEL, S.M. TENNESHAW, Gerald VANCE and Peter WORTH. "Forever is too Long" (1947 *Fantastic Adventures*) is book-length, as is "Outlaw in the Sky" (1953 AMZ) as by Archette, which is essentially a Western with a few sf transpositions. CSG was an advocate of the Richard SHAVER "mystery" and founded a club in his honour, editing the *Shaver Mystery Magazine* on its behalf. Although he was one of the most prolific of PULP-MAGAZINE writers, his stories have never been collected in book form, and only one, "Environment" (1944), has been anthologized. [JC]See also: COLONIZATION OF OTHER WORLDS.

G-8 AND HIS BATTLE ACES

US PULP MAGAZINE. 110 issues Oct 1933-June 1944. Monthly to Apr 1941, bimonthly thereafter. Published by Popular Publications; ed Rogers Terrill and, later, Alden H. Norton (1903-1987). All the novels were the work of one of the most prolific of all pulp authors, Robert J. Hogan (1897-1963), who also wrote under pseudonyms the short stories which filled out each issue. Hogan, who wrote *The MYSTERIOUS WU FANG* and other magazines as well, was under editorial instruction to send in his material as he wrote it, without any revision; the amount of editing subsequently necessary is described by Damon KNIGHT in *Hell's Cartographers* (anth 1975), ed Brian W. ALDISS and Harry HARRISON. G-8 is the leader of a US fighter squadron in

WWI, which combats a wide variety of fantastic enemy menaces. Only some of the novels were sf, and the magazine was not as futuristic as its companion, DUSTY AYRES AND HIS BATTLE BIRDS. [MJE/PN]

GEIS, RICHARD E(RWIN)

(1927-) US writer, editor and sf fan, best known since 1953 for producing and contributing significantly to a fanzine, PSYCHOTIC, and later a semiprozine, The ALIEN CRITIC, both of which were, confusingly, at different times known as Science Fiction Review. He has published other FANZINES. His vigorously anti-highbrow judgements were for a long time influential in the sf field; between 1969 and 1983 he 6 times won a HUGO for Best Fanzine and a further 7 times for Best Fan Writer. His first published story was "Flight Game" for Adam in 1959. He concentrated thereafter on pornographic fiction, with well over 100 titles, both soft and hardcore. Not many had sf or fantastic themes. Exceptions are the Roi Kunzer books - The Sex Machine (1967) and The Endless Orgy (1968) - and the singletons Raw Meat (1969), The Arena Women (1972) and, as by Peggy Swenson, A Girl Possessed (1973). Three further erotic sf novels by REG were self-published, mimeographed limited editions: Canned Meat (1978), Star Whores (1980) and The Corporation Strikes Back (1981). More recently, writing with Elton P. Elliott as Richard Elliott, he wrote the John Norris thrillers set on a NEAR-FUTURE Earth suffering from sun-flares caused by a star-wars snafu - Sword of Allah (1984) and The Burnt Lands (1985) - as well as the singletons The Master File (1986) and The Einstein Legacy (1987). [JC/PN]See also: SEX.

GEMINI MAN

The INVISIBLE MAN .

GEMMELL, DAVID A.

(1948-) UK journalist and then full-time author, primarily of HEROIC FANTASY. His first FANTASY series, The Drenai Saga, consists of Legend (1984; vt Against the Horde 1988 US), The King Beyond the Gate (1985), Waylander (1986), Quest for Lost Heroes (1990), Waylander II: In the Realm of the Wolf (1992) and The First Chronicles of Druss the Legend (coll 1993), the first 3 being collected, along with an additional story, as The Drenai Tales (omni 1991). DAG's inclusion in this volume is largely due to his second series, the Sipstrassi novels, which are SCIENCE FANTASY: Wolf in Shadow (1987; vt The Jerusalem Man 1988 US), Ghost King (1988), Last Sword of Power (1988) and The Last Guardian (1989), all 4 being assembled as Stones of Power: The Sipstrassi Omnibus (omni 1992). The components of the series are linked by the Sipstrassi stones of healing and/or destruction, whose source is ATLANTIS. The middle two volumes, which have Arthurian resonances, are set in Britain during and after the Roman occupation, but the framing works are set in a post- HOLOCAUST venue 300 years after Earth's axis has been tilted by an Immanuel VELIKOVSKY-style DISASTER; echoes of Erich VON DANIKEN's PSEUDO-SCIENCE books also abound. The Dying Earth setting (FAR FUTURE) is well achieved; there is TIME TRAVEL between Atlantis and its future; ESP, GENETIC ENGINEERING and IMMORTALITY are other themes. DAG's subsequent works have been: Knights of Dark Renown (1989), featuring PARALLEL WORLDS; the Macedon sequence of historical fantasies set in an ALTERNATE-WORLD Greece at the time of

Alexander, to date comprising *Lion of Macedon* (1990) and *Dark Prince* (1991), in the second of which Aristotle (who else?) knows the secret of portals through time and space that lead to parallel worlds; *Morningstar* (1992), which introduces a bard and an ambiguous hero faced with necromancy and *Vampyre Kings*; and *Bloodstone* (1994). DAG is accomplished and tough-minded, and interestingly varies (but not too much) stereotypical generic situations. [PN]See also: HISTORY OF SF; MAGIC.

GENERAL SEMANTICS

A quasiphilosophical movement founded in Chicago in 1938 by Count Alfred KORZYBSKI, whose *Science and Sanity* (1933) was the basic handbook of the movement. GS had a surprising success, peaking in the 1940s and 1950s. It teaches that first unsanity and later insanity are caused by adherence to an Aristotelian worldview, by which is meant the use of the two-valued either-or logic which Korzybski saw as being built into Indo-European language structures. From this simple beginning - with much of which linguistic philosophers, including Ludwig Wittgenstein (1889-1951), would be unlikely to differ very profoundly - was developed a confused and confusing psychotherapeutic system which, like L. Ron HUBBARD's DIANETICS, promised to focus the latent abilities of the mind. It may have seemed to its more naive adherents that GS held out the promise of turning Man into SUPERMAN by teaching non-Aristotelian (null-A or A) habits of thought. The movement, whose critics saw it as a PSEUDO-SCIENCE, probably had some influence on the development of Dianetics, but its best-known repercussion in sf was the composition of two novels by A.E. VAN VOGT featuring a non-Aristotelian superman hero, Gilbert Gosseyn (often read as a pun on "go sane"): *The World of A* (1945 ASF; rev 1948; rev with intro 1970; vt *The World of Null-A*) and *The Pawns of Null-A* (1948-9 ASF as "The Players of A"; 1956; vt *The Players of Null-A* UK). [PN]

GENERATION STARSHIPS

For writers unwilling to power their starships with FASTER-THAN-LIGHT drives or to make use of a relativistic time contraction, there is a real problem in sending ships between the stars: the length of the voyage, which would normally span many human lifetimes. The usual answers are to put the crew into SUSPENDED ANIMATION, as in James WHITE's *The Dream Millennium* (1974), to send germ cells only, as in Kurt VONNEGUT Jr's "The Big Space Fuck" (1972), or to use a generation starship, whereby the human beings who reached the destination would be the remote descendants of the original, long-dead crew, intervening generations having lived and died aboard the journeying vessel. It was probably Konstantin TSIOLKOVSKY who first saw the necessity for using generation starships in the COLONIZATION OF OTHER WORLDS; he presented the idea in "The Future of Earth and Mankind", which was published in a Russian anthology of scientific essays in 1928 but may have been conceived even earlier. Tsiolkovsky here argued for the construction in the future of space-going "Noah's Arks": he envisaged such journeys as taking many thousands of years. The first GENRE-SF use of the notion was probably Don WILCOX's "The Voyage that Lasted 600 Years" (1940) in AMZ. Here the captain of the ship is in hibernation, but wakes every 100 years to check on progress. Each time he wakes he finds great social changes among the successive descendants of

the crew, and a sinking into brutality accompanied by plague. His successive appearances render him an object of superstitious awe to the tribesmen on board. The theme of social change and degeneration inaugurated by Wilcox was to become the dominant motif of such stories. (In *Seekers of Tomorrow* [1966] Sam MOSKOWITZ claims the first generation-starship story to be Laurence MANNING's "The Living Galaxy" [1934], which is set in a small, self-powered world and so does not fully embody the concept.) The other dominant theme was presented in the following year in an altogether more famous story, "Universe" (1941) by Robert A. HEINLEIN, and in its sequel in *ASF* the following month, "Common Sense" (1941); the two were published in book form as *Orphans of the Sky* (fixup 1963 UK). In this classic generation-starship story the crew have forgotten that they are on a ship and have descended to a state of rigidly stratified and superstitious social organization; the unusually intelligent hero discovers the truth in a traumatic CONCEPTUAL BREAKTHROUGH. Indeed generation-starship stories remained paradigmatic for the conceptual-breakthrough theme, and are important, too, in rite-of-passage stories showing the growth from puberty to adulthood (POCKET UNIVERSES). Brian W. ALDISS, who loved the idea but thought it crudely developed by Heinlein, devoted his first novel, *Non-Stop* (1958; vt *Starship US*), to a very successful reworking of the same theme. Other stories in which surviving generations think of the ship as a world and not a mode of transport are "Spacebred Generations" (1953; vt "Target Generation") by Clifford D. SIMAK, "Ship of Shadows" (1969) by Fritz LEIBER, in which the ship is not strictly a starship, though the degenerated society is similar, and Harry HARRISON's amazing *Captive Universe* (1969), in which the crew and colonists have been transformed, in an act of insane CULTURAL ENGINEERING, into medieval monks and Aztec peasants. Some stories begin at the outset of or after the end of a generation-starship voyage. Arthur C. CLARKE's early story "Rescue Party" (1946) has Earth evacuated in the face of a coming nova, the evacuees heading confidently towards the stars in a giant fleet of primitive generation rocketships. Brian M. STABLEFORD's *Promised Land* (1974) tells of a society of colonists whose social structure is based on that developed over generations in the starship on which they arrived. An interesting variant which appears in several stories, most notably John BRUNNER's "Lungfish" (1957; vt "Rendezvous with Destiny" USA), has the ship itself taking on the role in its occupants' minds of surrogate mother; even on reaching their destination they will not leave the womb. This theme is also prominent in the Simak story mentioned above. The generation-starship idea has been used little outside genre sf, though a spectacular exception is the epic poem *Aniara* (1956; trans 1963) by the Nobel Prize-winning Swedish poet Harry MARTINSON. An opera by Karl-Birger Blomdahl (1916-1968), *Aniara*, based on the poem, was performed in 1959. The story pits human values against inhuman technology on a generation starship. Among the more interesting stories about social changes on generation starships are the Aldiss, Harrison, Heinlein, Leiber and Simak tales already cited, along with: *The Space-Born* (1956) by E.C. TUBB; *RITE OF PASSAGE* (1968) by Alexei PANSHIN (though, since the starship in question can travel also through HYPERSPACE, this is not a pure example of the subgenre); *The Ballad of Beta-2* (1965) by Samuel R. DELANY; *Rogue Ship*

(1947-63; fixup 1965) by A.E. VAN VOGT; Seed of Light (1959) by Edmund COOPER; The Star Seekers (1953) by Milton LESSER, which features a four-way division of society in a hollowed-out asteroid; Alpha Centauri - or Die! (1953 Planet Stories as "Ark of Mars"; fixup 1963 dos) by Leigh BRACKETT; 200 Years to Christmas (1961) by J.T. MCINTOSH, which features a competently thought-out but conventional cyclic history within the ship; "Bliss" (1962) by David ROME; and Noah II (1970 US; rev 1975 UK) by Roger DIXON. Some enterprising variants on the theme are found. In Arthur SELLINGS's "A Start in Life" (1951) a plague decimates the ship, leaving two 5-year-old survivors to be raised by ROBOTS. Judith MERRIL's "Wish Upon a Star" (1958) features a ship originally crewed by 20 women and four men, with a resultant matriarchal society. Chad OLIVER's "The Wind Blows Free" (1957) takes the birth-trauma theme to its logical conclusion with a story about a man who, goaded to near-madness by the claustrophobic society of the ship, opens an airlock only to find that the ship landed on a planet some centuries back. Harlan ELLISON wrote the script for a generation-starship tv series, The STARLOST, made in Canada, disastrously, in 1973. Ellison repudiated the series as it stood, and used his derisive pseudonym Cordwainer Bird in the credits; his original script for the pilot episode appears as "Phoenix without Ashes" in Faster than Light (anth 1976) ed Jack DANN and George ZEBROWSKI, and was also novelized as Phoenix without Ashes * (1975) with Edward BRYANT. From the mid-1970s the theme has been used only sparsely. An interesting variation is found in Damien BRODERICK's idea-packed The Dreaming Dragons (1980), in which a generation TIME MACHINE is uncovered beneath Ayers Rock in the Australian desert. In Pamela SARGENT's juvenile novel Earthseed (1983) the generation starship is a hollowed-out asteroid occupied by teenagers. In Kevin O'DONNELL Jr's Mayflies (1979) the lives of humans seem ephemeral (hence the title) by contrast with the near-immortal human brain, embedded in the ship's computer, which (only partially) controls those lives; and the voyage accomplished in Frank M. ROBINSON's The Dark Beyond the Stars (1991) is ultimately circular. The most ambitious recent attempt to invest the theme with new energy is contained in Gene WOLFE's Book of the Long Sun, whose first 3 vols - Nightside the Long Sun (1993), Lake of the Long Sun (1994) and Calde of the Long Sun (1994) - are set entirely within a generation starship called the Whorl. [PN]

GENESIS II

Made-for-tv film (1973). CBS-TV. Dir John Llewellyn Moxey, starring Alex Cord, Mariette Hartley, Percy Rodriguez, Ted Cassidy. Screenplay Gene RODDENBERRY. 90 mins. Colour. Produced by Roddenberry, the creator of STAR TREK, this was a pilot for a tv series that was never made. After a SUSPENDED-ANIMATION experiment goes wrong, a scientist wakes in a future world which is suffering from the aftermath of a nuclear HOLOCAUST. Ordinary humans are ruled tyrannously by MUTANTS. Aided by his primitive vitality, the hero helps overcome the rulers. A similar format was used by Roddenberry in two further attempts to launch series; these were released as PLANET EARTH and STRANGE NEW WORLD. [JB]

GENETIC ENGINEERING

In his remarkable prophetic essay Daedalus, or Science and the Future

(1924) J.B.S. HALDANE looked forward optimistically to a day when biologists have "invented" a new species of alga to solve the world's food problem, and in which "ectogenetic" children born from artificial wombs can be strategically modified by eugenic selection. Nothing was known in 1924 about the biochemistry of genetics, so Haldane spoke mainly in terms of "selective breeding", but he nevertheless anticipated not merely some of the possible practical applications of direct genetic manipulation but also the likely response of the popular imagination. He observed that there is always extreme resistance against "biological inventions" because they are initially perceived as blasphemous perversions. Following the decipherment, in the late 1950s, of the genetic code carried by DNA molecules, the genetic engineering of bacteria has become commonplace, and contemporary sf reflects the strength of this resistance in no uncertain terms. Despite the strong tradition of technophilia which exists in HARD SF, there is still relatively little sf championing the cause of genetic engineering. The careful "engineering" of living creatures by surgery is featured in a few early sf stories, most notably H.G. WELLS's *The Island of Dr Moreau* (1896), but it was not until Haldane wrote his essay that more ambitious projects of human engineering were featured - in Olaf STAPLEDON's *LAST AND FIRST MEN* (1930), and in Aldous HUXLEY's satirical development of ideas from *Daedalus* in *BRAVE NEW WORLD* (1932), in which ectogenetic embryos are nutritionally and environmentally controlled to fit them for life as "alphas", "betas" or "gammas". Julian Huxley (1887-1975), brother of Aldous and friend of Haldane and Wells, wrote a notable horror-sf story along the same lines: "The Tissue-Culture King" (1927). Haldane's sister, Naomi MITCHISON, later extrapolated ideas from *Daedalus* in a sceptical way in *Not by Bread Alone* (1983). In the early sf PULP MAGAZINES David H. KELLER wrote several stories about quasiblasphemous tampering with human form and nature, most notably "Stenographer's Hands" (1928), about a eugenic experiment to breed the perfect typist, with reduced initiative and a wasted body but jolly capable hands. An early pulp-sf story involving true genetic engineering was "Proteus Island" (1936) by Stanley G. WEINBAUM, which echoes its model, *The Island of Dr Moreau*, in presuming that "the nature of the beast" cannot be changed as easily as its physical form. Artificial organisms designed for particular purposes appear in minor roles in several stories, a notable example being the "familiar" employed by the fake witches in Fritz LEIBER's *GATHER, DARKNESS!* (1943 ASF; 1950), and, once A.E. VAN VOGT had used "gene transformation" to create superhumans in *SLAN* (1940 ASF; 1946), vague and unspecified forms of genetic engineering became standard methods of creating the pulp-sf SUPERMAN. The most adventurous use of genetic engineering in 1940s sf was in Robert A. HEINLEIN's *BEYOND THIS HORIZON* (1942 ASF as by Anson MacDonald; 1948), the first story to describe (not altogether convincingly) a society which routinely uses eugenics and genetic engineering to ensure the physical and mental fitness of the population, and to address the moral questions thus raised. The first sf writer to cultivate a more accurate understanding of possible genetic engineering techniques, and the first to confront these possibilities with a far-reaching but disciplined imagination, was James BLISH. *Titan's Daughter* (1952 in *Future Tense* as "Beanstalk"; exp 1961) features a race of giant humans created by stimulated polyploidy

(spontaneous polyploidy - doubling of the chromosome complement - is not uncommon in plants, and usually results in gigantism) and echoes Wells's *The Food of the Gods* (1904). Blish moved on to consider the possible utility of genetic engineering in adapting humans for the COLONIZATION OF OTHER WORLDS in his PANTROPY series, written around the novelette "Surface Tension" (1952) - about microscopic humans engineered for life in small pools of water - and collected in *THE SEEDLING STARS* (fixup 1956). The final section of the book looks forward to the day when Earth, much changed by time, will itself become an alien environment to be re-seeded with "adapted men". This idea, of specially engineering individuals to "conquer" alien worlds, was taken up by other writers of the period, including Philip K. DICK in *The World Jones Made* (1956) and Poul ANDERSON in "Call me Joe" (1957). The idea that an engineered race might be necessary to undertake SPACE FLIGHT itself was later developed by Samuel R. DELANY in "Aye, and Gomorrah . . ." (1967). Other stories from the 1950s dealing with experiments in genetic engineering are *Masters of Evolution* (1954 as "Natural State"; exp 1959) by Damon KNIGHT and "They Shall Inherit" (1958) by Brian W. ALDISS. The notion of modifying animals into human form was developed extensively by Cordwainer SMITH in his stories of the Underpeople, who cannot breed true, having been modified by somatic engineering - a modification of the genes in the specialized cells of a differentiated embryo or an adult organism which does not affect the germ plasm. (The different implications of somatic engineering and the engineering of egg cells are not always appreciated by users of the theme.) Interest in genetic engineering was inevitably renewed in the 1960s, although many early stories concentrated on the very modest notion of producing CLONES. Alarmism was rife: the UK tv series DOOMWATCH, whose purpose was overtly propagandistic, helped to awaken many people to some of the implications of biological engineering. Its first episode became the basis for the novel *Mutant-59* * (1972) by Kit PEDLER and Gerry DAVIS, about the "escape" of a bacterium engineered to metabolize plastic, and many other episodes also featured biological engineering of various kinds. The idiosyncratic note of horror struck by many of the scripts recurs in many subsequent tv plays, including two about the possibility of creating "transgenic" hybrids of human and ape (*APES AND CAVEMEN*): *First Born* (1989), notionally based on Maureen DUFFY's satire *Gor Saga* 1981), and *Chimera* (1991), adapted by Stephen GALLAGHER from his own novel *Chimera* (1982). The first attempts to use genetic-engineering techniques to cure genetic deficiency diseases have already been made, and the possibility of eliminating such diseases has become a commonplace background element in sf. The notion that a radiation-affected world might desperately require such processes of repair is ironically developed in David J. SKAL's *When We were Good* (1981) and Christopher HODDER-WILLIAMS's post- HOLOCAUST *The Chromosome Game* (1984). The use of somatic engineering for cosmetic purposes is the focus of such stories as "Cinderella's Sisters" (1989) and "Skin Deep" (1991) by Brian M. STABLEFORD. The possibility of further altering the human condition by genetic engineering remains much more controversial. The plight of ordinary humans growing old in a world already inherited by their engineered superchildren is explored in *Anvil of the Heart* (1983) by Bruce T. HOLMES. Other alarmist tales in a similar vein include Robin COOK's *Mutation* (1989) and Geoff RYMAN's *The Child*

Garden (1989), which feature very different developments of the assumption that programmes of improvement involving genetic-engineering techniques might have unforeseen and unfortunate side-effects. Relatively modest functional modifications of humans include adaptation for aquatic life and for life in low gravity: *Inter Ice Age 4* (1959; trans 1970) by Kobo ABE is the most notable novel dealing with the former theme, Lois McMaster Bujold's *FALLING FREE* (1988) the most notable dealing with the latter (and also raises interesting questions about the obsolescence of functional modifications). Frank Herbert was consistently interested in the more bizarre variations of the theme, as displayed in *The Eyes of Heisenberg* (1966) and *Hellstrom's Hive* (1973), although the superman-breeding programme in *DUNE* (1965) is a pedestrian affair of long-range eugenics. Genetic-engineering techniques are fundamental to the Protean futures of many stories by John Varley, including *THE OPHIUCHI HOTLINE* (1977) and "Options" (1979), a story of promiscuous sex-changes. The widespread use of such techniques is also a premise of Bruce Sterling's *Shaper ?* Mechanist stories, culminating in the novel *Schismatrix* (1985), and of C.J. Cherryh's monumental *Cyteen* (1988). Charles Sheffield's series begun with *Sight of Proteus* (1978) is more extravagant, and the technology involved is highly fanciful. Exotically engineered human societies established on other worlds are featured in several sf novels, the most notable being the hermaphrodite society in Ursula K. Le Guin's *THE LEFT HAND OF DARKNESS* (1969). More recent *COLONIZATION* stories involving genetic engineering include *The Warriors of Dawn* (1975) and *The Gameplayers of Zant* (1977) by M.A. Foster, *Manseed* (1982) by Jack Williamson, and *The Garden of the Shaped* (1987) by Sheila Finch. As real-world genetic engineering makes rapid progress, sf writers have acquired a better sense of what actually goes on in the laboratory, reflected in such stories as Richard S. Weinstein's "Oceans Away" (1976), which deals with the creation of intelligent cephalopods, and John Grubbin's *Father to the Man* (1989), one of the most intelligent stories about an artificial half-human being. There is still, however, a marked tendency for the strategic endeavours of scientists to be unceremoniously set aside in favour of the miracles of *MUTATION*, as they are in Greg Bear's *BLOOD MUSIC* (1985). It cannot be said that sf writers have as yet explored the real potential which genetic-engineering technologies hold for the radical remaking of the human world, but a beginning of sorts is made by the speculative future history *The Third Millennium* (1985) by Brian Stableford and David Langford, and by Stableford's various spinoff short stories, some of which are collected in *Sexual Chemistry: Sardonic Tales of the Genetic Revolution* (coll 1991). [BS] See also: *BIOLOGY*; *MEDICINE*.

GENONE, HUDOR

Pseudonym of US writer William James Roe (1843-1915) for his sf and fantasy; he also produced some non-genre work under his own name and as G. I. Cervus. He was a freethinker - a disposition of mind found with surprising infrequency among 19th-century sf writers - and in *Inquirendo Island* (1886) he dramatized in unmistakable terms his negative feelings about Christianity. The protagonist, shipwrecked on the eponymous mid-Atlantic *ISLAND*, discovers that its inhabitants have constructed a

topsy-turvy RELIGION, which they follow with pious zeal, out of their ancestors' bad memories of their own shipwreck and out of idolatry directed towards the arithmetic text which is the only printed book to have survived. Bellona's Husband (1887) takes its protagonists via spaceship to MARS, where they find a humanlike society distinguished from ours mainly by the fact that Martians live backwards in time; this may be the earliest example of the notion of time reversal being given full-fledged narrative form. Both novels stand out by virtue of the pungency of their thought and their story-telling clarity. [JC]Other works: The Last Tenet Imposed upon the Khan of Thomathoz (1892), a fantasy.

GENRE SF

By this term, used widely in this encyclopedia, we mean sf that is either labelled science fiction or is instantly recognized by its readership as belonging to that category - or (usually) both. The implication is that any author of genre sf is conscious of working within a genre with certain habits of thought, certain "conventions" - some might even say "rules" - of storytelling. These conventions are embedded primarily in a set of texts which are generally agreed to contain them. This might seem to be a circular definition, as though one were saying that genre sf is a set of conventions located in genre-sf stories; but it is in fact a spiral. A text published in 1930 may describe something - say a form of MATTER TRANSMISSION - so well that in 1935 the description has become recognized as a model or convention; and in 1940 a second text may be published which shows its agreement with the convention by repeating it, with variations which themselves enrich it. Partly this spiral is created by sf readers, and partly it governs the expectations of those who so define themselves, and who establish their sense of the true nature of genre sf from many sources: from the spiral of books and stories certainly, but also from film, tv and personal interactions (FANDOM; CONVENTIONS), and finally from an abiding sense shared by most members of the sf "community" that genre sf is an intrinsic part of US history and literature. In its narrowest sense, then, a genre-sf tale will be a story written after 1926, published (or theoretically publishable) in a US SF MAGAZINE or specialist sf press (PUBLISHING; SMALL PRESSES AND LIMITED EDITIONS), and conspicuous for its signals that it is honouring the compact between writers and readers to respect the protocols embedded in the texts which make up the canon. (The term "protocols" has been used in this way by several scholars of sf, notably Samuel R. DELANY and Mark ROSE.) To work variations on these protocols is clever (and indeed required); but to abandon them is to leave home. For many years, leaving home in this fashion (as, for instance, Kurt VONNEGUT Jr was deemed to have done) was considered a form of treason; for some writers and readers, this attitude remains. Similarly, works of fiction which use sf themes in seeming ignorance or contempt of the protocols - often works from so-called MAINSTREAM WRITERS OF SF - frequently go unread by those immersed in genre sf; and, if they are read, tend to be treated as invasive and alien . . . and incompetent. This snobbery (which reverses that very frequently expressed about genre sf by the mainstream) is perhaps unfortunate as a general rule, though in many particular instances it is fully justified. Though this encyclopedia focuses primarily

on genre sf, and though genre sf is central to our sense of the nature of sf as a whole, we also conceive non-genre sf as an essential part of the picture. This encyclopedia therefore includes much of it; other works, such as *The New Encyclopedia of Science Fiction* (1988) ed James E. GUNN, have been unwilling to trespass far in this direction, and have proved in practice (and occasionally by precept) unwilling to accord genuine sf status to work written outside the protocols and outside North America. The question as to whether or not international non-genre-based sf is true sf has, moreover, become inflamed and politicized; and to discuss non-genre sf in an encyclopedia of sf has at times been regarded by some critics, especially in the USA, as a radical ideological decision. The editors of this volume are content to pay as much attention to these views as they warrant, and agree that if it is ideological to regard, say, Murray Constantine (Katharine BURDEKIN) and George R. STEWART (non-genre sf) as being just as important to the HISTORY OF SF as, for example, Arthur Leo ZAGAT and Miles J. BREUER (genre sf), then this is indeed an ideological encyclopedia. In the 1960s, 1970s and 1980s literary academics have very often talked about genre. By "genre" they almost invariably refer, as Gary K. WOLFE puts it in *Critical Terms for Science Fiction and Fantasy* (1986), to "a group of literary works with common defining characteristics" and "major formal, technical or even thematic elements that unite groups of works". This academic approach, which rightly tends to draw very heavily upon genre sf for examples, is likely to generate formal DEFINITIONS OF SF which fairly closely resemble the sets of protocols for writing genre sf. It is almost certainly right that this is so. But it seems no partially satisfactory definition of sf (there is no fully satisfactory definition of sf) has yet been written so as to include only genre sf. Some critics - like, famously, Darko SUVIN - have attempted to define the genre of sf in terms which would in fact logically exclude most genre sf from serious consideration. The point we would make here is this: when we use the term "genre sf" in this encyclopedia, we are not making a short-cut definition of the genre of sf; we are referring to those sf works which honour the contract. This topic is raised, directly and by implication, at many points in this volume, including the entries mentioned above, and in the article on PULP MAGAZINES. [PN/JC]

GENTLE, MARY

(1956-) UK writer who began publishing with a fantasy for young adults, *A Hawk in Silver* (1977; rev 1985 US), and who came to general notice with her Orthe sequence - *GOLDEN WITCHBREED* (1983) and *Ancient Light* (1987) - which, despite the fantasy ring of the first title, is sf. The protagonist of both volumes, a woman diplomat/entrepreneur in the complexly defined employ of an Earth dominated by vast corporations, comes to Orthe in an attempt to open the planet to exploitation, but discovers the densely described humanoid Orthean culture a seeming match for the desires of her masters. Her trek across Orthe, which takes much of *GOLDEN WITCHBREED* and which is replicated in feel in *Ancient Light*, gives the sequence the typical plot-structure and landscape of PLANETARY ROMANCE, though MG is, in fact, far less entranced by scene-setting than are the creators of the modern form (e.g., Jack VANCE). The final import of the sequence - despite the sf pleasures entailed in the discovery of an ancient race whose

technological hubris once seared the world, and of a huge ancient artifact (BIG DUMB OBJECTS) - is anything but conducive to any sense that Orthe is a planetary Secret Garden. The protagonist is older in the second volume, Orthean culture has been fatally touched by the allure of human TECHNOLOGY, disturbances transform the old comity, which is now torn by ethnic conflicts, and the revanchist descendants of the ancient Golden Witchbreed do finally use the secret weapon which gives that second volume its title. The Secret Garden - which lies at the heart of the true planetary romance - becomes, in MG's hands, the Third World. Some of the stories assembled in *Scholars and Soldiers* (coll 1989) are sf, but in the late 1980s MG turned to FANTASY, and in the White Crow sequence - *Rats and Gargoyles* (1990), *The Architecture of Desire* (1991) and *Left to his own Devices* (coll 1994) - created an ALTERNATE WORLD or multiverse whose scenery and idiom were superficially reminiscent of Michael MOORCOCK's metaphysical romances; but MG was far more interested than Moorcock in the arguments that might sustain such a universe, deriving a rationale to sustain them - like John CROWLEY before her - from Renaissance Neoplatonism. In the first novel, it is seen that the world is sustained in the memory of a cabal of gods. In the second, set in an alternate England which mirrors Cromwellian times, the female protagonist begins, at great cost to herself and others, to outgrow the toys of MAGIC; MG has always been an author of FEMINIST inclinations, and she presents the sins committed by the White Crow in this novel as non-gender hubris and complacency. Less urgently, the third volume - whose long title story is set in a NEAR FUTURE but decidedly alternate London - expands the scope but comes fairly close to treating the Temporal Adventuress exploits of the heroine as self-justifying. It still may be hoped that the harsh, flexible urgency of MG's fantasies will shape an equally complex new sf vision. [JC] Other works: *The Weerde #1* * (anth 1992) ed with Roz KAVENEY; *Villains!* * (anth 1992) ed with Kaveney; *Grunts!* (1992), a parodic sf/fantasy. See also: *GODS AND DEMONS*; *MILFORD SCIENCE FICTION WRITERS' CONFERENCE*; *PSEUDO-SCIENCE*; *SHARED WORLDS*.

GENTRY, CURT

(1931-) US writer whose NEAR-FUTURE sf novel, *The Last Days of the Late, Great State of California* (1968), vividly depicts a San Andreas Fault DISASTER, though its ecological arguments, blaming Man for the destruction of the state, are somewhat laboured. [JC]

GEORGE, EDWARD E.

Robert E. VARDEMAN.

GEORGE, F. FREDERICK

Neal STEPHENSON.

GEORGE, PETER (BRYAN)

(1924-1966) UK writer and ex-RAF officer whose life and career seem to have been obsessed by nuclear WAR and its consequences. His best-known sf novel, *Two Hours to Doom* (1958; vt *Red Alert* 1958 US) as by Peter Bryant, was a straightforward story in which a preventive war, inaugurated by a general, almost leads to worldwide HOLOCAUST, and he may have had some mixed feelings about its satirical transmogrification into Stanley

KUBRICK's brilliant DR STRANGELOVE: OR, HOW I LEARNED TO STOP WORRYING AND LOVE THE BOMB (1963), in which doomsday is neither averted at the last moment nor entirely unwelcomed. Dr Strangelove: or, How I Learned to Stop Worrying and Love the Bomb * (1963) was credited solely to PG, though the influence of Terry Southern (1924-), who co-wrote the film script, is everywhere evident. A further sf novel, Commander-1 (1965), follows the desperate struggles of survivors after a nuclear war. PG's suicide followed soon after, during the composition of yet another novel on the same theme, to have been entitled Nuclear Survivors. [JC] See also: END OF THE WORLD; SCIENTISTS.

GERGELY, MIHALY
[r] HUNGARY.

GERHARDI, WILLIAM
Legal name during his publishing career of UK writer William Gaerhardie (1895-1977); he partially reverted to Gaerhardie in his later, inactive years. He is best known for works outside the sf field like Futility (1922). His END-OF-THE-WORLD novel Jazz and Jasper: The Story of Adam and Eva (1928; vt Eva's Apple: A Story of Jazz and Jasper 1928 US; vt My Sinful Earth 1947 UK; vt Doom 1974) depicts a Lord Beaverbrook figure and his entourage in their complex lives and later, after a huge cataclysm, hurtling through space on a chip of rock which is all that remains of Earth. The Memoirs of Satan (1932) with Brian Lunn (Hugh KINGSMILL's brother) is fantasy. [JC]

GERMANO, PETER B.
[r] Jack BERTIN.

GERMANY
This entry covers the whole of Germany, including the former GDR (East Germany). There is a separate entry for AUSTRIA, with which there is a small and inevitable overlap: many books by Austrian writers were in fact published in Germany, and many Austrians have lived in Germany - some, indeed, working in the German publishing industry. The roots of German sf can be traced back to the 17th century, when the astronomer Johannes KEPLER's Somnium (1634 in Latin; trans into German as Traum von Mond 1898; trans E. Rosen as Kepler's "Somnium" 1967) reflected, in semifictional form, on life on the Moon. Considered a masterpiece of its time is the picaresque novel Der abenteuerliche Simplicissimus (1669; trans A.T.S. Goodricke as The Adventurous Simplicissimus 1912 UK; retrans H. Weissenborn and L. Macdonald 1963 UK) by Johann Jakob Christoffel von Grimmelshausen (1622-1676), which contains, inter alia, episodes about utopian societies and plans as well as a journey to the Moon. The 18th century saw publication of Wunderliche Fata einiger Seefahrer (4 parts 1741-43), usually known as Insel Felsenburg ["Felsenburg Island"], by Johann Gottfried Schnabel (1692-1752). This book, very popular at the time, combined elements of the UTOPIA, the ROBINSONADE and the episodic adventure novel, and could be regarded as the earliest German forerunner of adventure sf. Further utopian novels of the 18th and early 19th century are Dreyerley Wirkungen: Eine Geschichte aus der Planetenwelt ["Triple Effects: A Story from the World of Planets"] (1789) and Urani: Konigin von

Sardanopalien im Planneten Sirius ["Urania: Queen of Sardanopolis in the Planet Sirius"] (1790) - both by Johann Friedrich Ernst Albrecht (1752-1814), who normally wrote "knight-and-robber" novels - and Die schwarzen Bruder ["The Black Brotherhood"] (1791-5) by Heinrich Zschokke (1771-1848), a sensationalist trilogy about a secret society; its third novel is set in the 24th century, when humanity is used as a kind of livestock for ALIENS. Another early work is Ini: Ein Roman aus dem 21. Jahrhundert ["Ini: A Novel from the 21st Century"] (1810) by Julius von Voss (1768-1832). Important to the development of German sf is the story "Der Sandmann" (1816; trans as "The Sandman") by E.T.A. HOFFMANN, the most important author of the Schwarze Romantik ["Black Romantic"] movement in Germany. The story, which has been reprinted innumerable times, tells of Dr Coppelius, who constructs an automaton in the shape of a human being; it is one of the first ROBOT stories. But the real pioneer of German sf was Kurd LASSWITZ, a teacher at the Gymnasium Ernestinum in Gotha, who wrote the most important classical German sf novel, Auf zwei Planeten (1897; cut 1948; cut again 1969; trans Hans J. Rudnick, much cut, as Two Planets 1971 US). It is the story of a confrontation of human and Martian cultures, the latter being technically and ethically superior. Lasswitz, who regarded ethical development as dependent on scientific and technological development, included impressive technical predictions: a spoked-wheel-shaped space station, rolling roadways, synthetic materials, solar cells and much more. Influenced by the German idealist philosopher Immanuel Kant (1724-1804), his work was didactic and focused on philosophical conceptions for the future. He published a number of short stories and novellas, several of which have been translated into English, and two further sf novels, less popular, which remain untranslated. These are Aspira (1906) and Sternentau ["Star Dew"] (1909). Wholly different, but no less remarkable, are the many works of sf by the scurrilous visionary Paul Scheerbart (1863-1915), who in Lesabendio (1913) and the story collection Astrale Noveletten ["Astral Novelettes"] (coll 1912), for example, populated the cosmos with grotesque and tremendously imaginative beings reminiscent of the creations of the later writer Olaf STAPLEDON. Much of Scheerbart's work has been reissued in Germany. This is not the case with the interesting In Purpurner Finsternis ["In Purple Darkness"] (1895) by M(ichael) G(eorg) Conrad (1846-1927), an sf utopia mainly set in a labyrinth of caves, and critical of Germany under Kaiser Wilhelm. German FANTASTIC VOYAGES and adventures of the Jules VERNE type arrived with the novels of Robert Kraft (1869-1916) and F.W. MADER. Kraft, touted by his publishers as "the German Jules Verne", wrote in addition to countless adventure novels and sea novels the 10-issue dime-novel series Aus dem Reiche der Phantasie ["From the Realms of Imagination"] (1901), whose protagonist's adventures include trips to the Stone Age and the Moon. (It was probably the first DIME-NOVEL SF series in Germany. This form of publication, Groschenhefte, saddle-stapled booklets very similar to one of the several popular dime-novel formats in the USA, continued very much longer in Germany than it did in the USA - see below.) Typical of Kraft's book publications are Im Panzermobil um die Erde ["Round the World in a Tank"] (1906), Im Aeroplan um die Erde ["Round the World in a Plane"] (1908), Der Herr der Luft ["Lord of the Air"] (1909), Die Nihil-Expedition ["The Nihil Expedition"] (1909) - a lost-race (LOST

WORLDS) novel - and Die neue Erde ["The New Earth"] (1910), a post-HOLOCAUST novel. F.W. Mader wrote juvenile adventure novels, often set in Africa and reminiscent of H. Rider HAGGARD, and sometimes, as in Die Messingstadt ["City of Brass"] (1924), with utopian as well as fantastic elements. His space adventure Wunderwelten (1911; trans Max Shachtman as Distant Worlds: The Story of a Voyage to the Planets 1932 US) is one of the most important sf novels of the Kaiser's period. Other German sf writers popular in the first two decades of the 20th century include: Carl Grunert (1865-1918), author of Der Marsspion und andere Novellen ["The Martian Spy and Other Novelettes"] (coll 1908); Albert Daiber, author of Vom Mars zur Erde ["From Mars to Earth"] (1910); Oskar Hoffmann (1866-?), whose many works included the dime-novel series MacMilfords Reisen im Universum ["MacMilford's Voyages into the Universe"] (1902-3); and Robert Heymann (1879-?), author of Der unsichtbare Mensch vom Jahr 2111 ["The Invisible Man of the Year 2111"] (1909). Finally, there was the classic novel Der Tunnel (1913; trans anon as The Tunnel 1915) by Bernhard KELLERMANN (rendered Bernard Kellerman in the English translation), about the building of a tunnel between England and the Continent; it was filmed as Der TUNNEL (1933). One of the most successful sf series of the time in the field of dime novels/pulp adventures, and one of the earliest purely sf periodicals anywhere, was Der LUFTPIRAT UND SEIN LENKBARES LUFTSCHIFF (1908-11), totalling 165 adventures. Between the two World Wars an especially German type of sf came into being, namely the scientific-technical Zukunftsroman (future novel), a term which gave its name to the genre, being only gradually replaced, from the early 1950s onward, by the foreign designation "science fiction", which was eventually naturalized. By far the most popular author of the Zukunftsroman - the spectrum of whose themes was fixed much more strictly than that of US-UK "science fiction" - was unquestionably Hans Dominik (1872-1945), whose nearly 20 books - his first novel was Die Macht der Drei ["The Power of the Three"] (1922)-sold several million copies in total. Dominik's books are clumsy and badly written, but they survive on the frisson given by their technically oriented adventure, and were probably also successful because their distinctly nationalistic overtones - the German engineer being seen as superior to all others in the world - suited the spirit of a Germany in which National Socialism was on the rise. Other representatives of the Zukunftsroman were Rudolf H(einrich) Daumann (1896-1957), St(anislaw) Bialkowski (1897-?), Karl August von Laffert (1872-1938), Hans Richter (1889-1941) and Walther Kegel (1907-1945). A further popular author in this line was Freder van Holk, a pseudonym of Paul Alfred Muller (1901-1970), who also published as Lok Myler; under these pseudonyms he wrote the successful dime-novel series Sun Koh, der Erbe von Atlantis ["Sun Koh: Heir of Atlantis"] (1933-6), with 150 issues, and Jan Mayen (1935-9), with 120 issues. The former deals with an Atlantean in modern London, planning, with supertechnology, to control ATLANTIS when it reappears. Sf of this type had great influence on the first postwar generation of German sf authors. Among the more interesting novels of prewar German sf are those of Otto Willi GAIL, whose works include Hans Hardts Mondfahrt (1928; trans anon as By Rocket to the Moon: The Story of Hans Hardt's Miraculous Flight 1931). Before writing, he consulted the German rocket pioneer Max Valier and was able to give a technically exact

(according to the knowledge of the time) description of a flight to the Moon and of other space plans since realized. Another writer who like Gail had some of his work translated into English and published in Hugo GERNSBACH's sf magazines was Otfried von Hanstein (1869-1959). The five novels concerned included *Mond-Rak 1: Eine Fahrt in den Weltall* (1929; trans Francis Currier as "Between Earth and Moon" 1930 *Wonder Stories Quarterly*). But perhaps the sf writer of the period best known abroad was Thea VON HARBOU, who had collaborated with her husband, film director Fritz LANG, on the screenplays of several sf films including the great classic *METROPOLIS* (1926) and also *Die FRAU IM MOND* (1929). Von Harbou's turgid novelizations were *Metropolis ** (1926; trans anon 1927 UK) and *Frau im Mond ** (1928; trans Baroness von Hutten as *The Girl in the Moon* 1930 UK; cut vt *The Rocket to the Moon*, from the Novel, *The Girl in the Moon* 1930 US), the latter being published in Germany before the film was released. An unusual theme is dealt with in *Druso: Oder die gestohlene Menschheit* ["*Druso, or The Stolen Mankind*"] (1931; trans Fletcher PRATT as "*Druso*" 1934 *Wonder Stories*) by Friedrich Freksa (1882-1955), a novel about superhumans that reaches far into the future, but which is sadly marred by racist and fascist undertones. This is almost opposite, politically, to *Utopolis* (1930) by Werner Illing (1895-1979), which is a socialist utopia in which workers defeat rebellious capitalists. *Utopolis*, however, is at the more literary end of the spectrum. It was one of several impressive sf novels published by non-genre authors between the wars. Among the others were *Tuzub 37* (1935) by Paul Gurk (1880-1953), a strange "green" dystopia in which a flayed and totally concreted Nature rises up against the mankind who did this, and *Balthasar Tiphon* (1919) by Hans Flesch (1895-1981), a strong apocalyptic novel. The most celebrated of the writers who occasionally experimented with sf themes was Alfred Doblin (1878-1957), who went into exile in France in 1933 and then the USA in 1941. Two of his books are surreal, metamorphic sf of very considerable power: *Wadzek's Kampf mit der Dampfturbine* ["*Wadzek's Struggle with the Steam-Machine*"] (1918) and *Berge, Meere und Giganten* ["*Mountains, Seas and Giants*"] (1924; rev vt *Giganten* ["*Giants*"] 1931). In the latter, somewhat earlier than Olaf Stapledon, with whom he has been compared, Doblin deals with GENETIC ENGINEERING as a means of evolving the capacities of a future race of humans. His work was a potent influence on Cordwainer SMITH's sf. All of these works, however, stand somewhat outside what most readers would regard as sf proper. There were further stories of the future from more "literary" German writers after WWII, though the one best known in the English-speaking world was in fact by an Austrian, Franz WERFEL: *Stern der Ungeborenen* (1946 Austria; trans Gustave O. Arlt as *Star of the Unborn* 1946). Others were *Die Stadt hinter dem Strom* (1947; trans P. de Mendelssohn as *The City Beyond the River* 1953) by Hermann Kasack (1896-1966), a political satire with futuristic sequences, which was made into an opera; *Heliopolis* (1949) by Ernst JUNGGER; and *Nein: Die Welt der Angeklagten* ["*No: The World of the Accused*"] (1950) by Walter Jens (1923-), set in a totalitarian DYSTOPIA reminiscent of George ORWELL's *NINETEEN EIGHTY-FOUR* (1939). In a much less solemn vein is *Die Gelehrtenrepublik* (1957; trans Michael Horowitz as *The Egghead Republic: A Short Novel from the Horse Latitudes* 1979 UK) by Arno SCHMIDT, with its MUTANTS and its language games. Several German writers, much affected by the horrors of

WWII and especially the shock of the atomic bombing of Hiroshima, wrote post- HOLOCAUST novels; these included *Wir fanden Menschen* ["We Found Men"] (1948) by Hans Wörner (1903-), *Blumen wachsen im Himmel* ["Flowers Grow in the Heavens"] (1948) by Hellmuth Lange (1903-), *Helium* (1949) by Ernst von Kluon (1915-) and *Die Kinder des Saturn* ["The Children of Saturn"] (1959) by Jens Rehn, whose real name was Otto Jens Luther (1918-1983). The world of GENRE SF began changing after WWII. The first US sf in translation was issued from 1951 onwards by the publishers Gebrüder Weiss in their hardcover line, *Die Welt von Morgen*, whose first publications, from 1949 on, had been reprints of Hans Dominik; later on, and importantly, they published the juveniles of Robert A. HEINLEIN and Arthur C. CLARKE. The first adult HARD SF bound in hard covers was in the short-lived *Rauchs Weltraum-Bücher* series, all 1953, from Karl Rauch publishers, ed Gotthard Gunther (1900-1985), one being an anthology ed Gunther, *Überwindung von Raum und Zeit* ["Conquest of Space and Time"] (anth 1953), and the other three being books by John W. CAMPBELL Jr, Jack WILLIAMSON and Isaac ASIMOV. Each had a long, critical afterword by Gunther. This line made the term "science fiction" known to German readers for the first time, and is now legendary to fans and collectors. In terms of copies sold at the time, it was a flop. The division of Germany into East and West after WWII also influenced the development of genre sf. While in the GDR literature generally, and therefore sf, had to serve socialism, in the FRG sf publishing at first saw itself in terms of the traditional *Zukunftsroman*. Thus reprints were issued of Dominik's work and of dime-novel series by Freder van Holk/Lok Myler. A specialized form of publishing turned out to be significant for sf: cheaply produced hardbacks with millboard covers, issued in small print runs for commercial circulating libraries. Before the circulating libraries fell victim in the late 1950s and early 1960s to the altered leisure-time behaviour of the readership, more than 500 sf novels were published in this format. Even though most of them were trash, they nevertheless prepared the way for a growing generation of native German authors, as well as publishing translations into German for the first time of books by E.E. "Doc" SMITH, A.E. VAN VOGT, Philip K. DICK, Clifford D. SIMAK and others. The second and more important pathway into postwar German sf writing was provided by the publishers of pulp adventures. The long and continuous German tradition of publishing dime-novel booklets is only now, in the 1990s, fading away. Some reprints of prewar sf of this kind have already been mentioned, but it was above all the three publishers Pabel, Lehning and Moewig who dominated in this field. In 1953 Pabel started the pulp line *Utopia-Zukunftsromane*, later supplemented by *Utopia-Grossband*, *Utopia-Kriminal* and the first German sf magazine, *Utopia-Magazin*. In 1956 Lehning followed up with reprints of circulating-library titles in its pulp line *Luna-Utopia-Roman*, and in 1957 Moewig joined the scene with *Terra*, followed by *Terra-Sonderband* and *Galaxis*, a German edition of *GALAXY SCIENCE FICTION*. It was Pabel which succeeded in popularizing the term "science fiction" in Germany. At the beginning of the *Utopia-Zukunftsromane* line the stories consisted of serial adventures in the Jim Parker series, but later they shifted to novels independent of series, and from 1955 on also translations (mostly short novels) of Murray LEINSTER, Eric Frank RUSSELL and many others. Quite a number of the best

and most popular US sf novels and novellas appeared amid all this material published by Pabel and the other companies, but most were translated rather badly and, as the format was limited to a fixed number of pages, often drastically cut, a practice that continued in German sf translations for a long time, since early paperbacks, too, had a rigidly restricted page count. It was Walter Ernsting (1920-), first at Pabel and later at Moewig, who could be regarded as the engine that propelled the growing sf industry. He wrote sf adventures under the pseudonym Clark DARLTON; along with K.H. SCHEER he soon became the most popular author of German adventure sf, and as an editor he was responsible for altering publishers' policies (in part towards the publication of more of the UK-US type of sf), editing both Utopia-Magazin and the pulp publishing lines (the immediate predecessors of paperback publishing as understood in the English-speaking world) Utopia-Grossband and Terra-Sonderband, the latter continuing as the paperback line Terra-Taschenbuch. Ernsting is, of course, most famous for founding Perry Rhodan with Scheer in 1961. It is the most popular pulp-adventure sf series in the HISTORY OF SF; to 1991 more than 1600 short novels had been published in it, not to mention numerous reprints, paperbacks, hardcovers and the spin-off Atlan series, which itself has published a massive number of titles. The Perry Rhodan print-run - it is published weekly - is around 200,000 copies for the first edition. The series was and still is written by a team (PERRY RHODAN for further details). Another important editor was Gunther M. Schelwokat (1929-1992), who edited much of the sf production of Moewig and (after they had both come under the same ownership) Pabel. Because of the power he had in selecting new authors for the various lines and series, he has been called the John W. Campbell of the German pulps. Further pulp series include Mark Powers, Ad Astra, Ren Dhark, Rex Corda, Raumschiff Promet, Die Terranauten and Zeitkugel, all coming and going in the past few decades, most of them trying (and failing) to repeat the success of Perry Rhodan with similar concepts. However, on a smaller scale, the Orion series is still thriving, originally in the pulp format but now in paperback reprints; its novelizations and ongoing novels, about 145 of them, many by Hans Kneifel (1936-), are based on the successful German tv SPACE OPERA series Raumpatrouille - Die phantastischen Abenteuer des Raumschiffes Orion ["Space Patrol - The Fantastic Adventures of the Space Ship Orion"], which began, like STAR TREK, in 1966, and which, also like Star Trek, slowly built up a considerable fan following. Until the 1960s, paperbacks were the exception rather than the rule in German publishing, being brought out only by smaller publishers. Genre sf mainly remained a feature of the pulp scene and seemed to be unsaleable outside that milieu. This changed when, in 1960, the publishing house Goldmann began a hardcover sf line (with the Austrian-born Herbert W. FRANKE as consulting editor) and then, from 1962, a paperback line that continues today. In 1960, too, the publisher Heyne began, at first sporadically but then vigorously, to publish sf. Heyne developed into one of the bestselling publishers of paperbacks generally, not just in sf; but sf remained a central part of its publishing programme and today, with Wolfgang JESCHKE as editor, it is undisputed leader of the sf market, publishing over 100 paperbacks a year, mostly translations. Just as Ernsting and Schelwokat forced the pace of sf pulp-adventure publishing in Germany, so Jeschke was

the person most responsible for sf's development as a paperback literature in Germany. With his line of sf paperbacks, including sub-lines like Classics and Bibliothek der Science Fiction, and his ability to select the best work, Jeschke fulfilled his intention of presenting the whole spectrum of sf from all over the world. Another notable paperback line was Fischer Orbit (1972-4), based on Damon KNIGHT's ORBIT anthologies and extended to include novels and collections, mainly of US origin, but including the first collection of new and classic German sf stories, Science Fiction aus Deutschland ["Science Fiction from Germany"] (anth 1974), ed H.J. ALPERS and Ronald M. Hahn (1948-). In the late 1960s and the 1970s, publishers like Marion von Schroder, Lichtenberg, Insel and Hohenheim began hardcover or quality paperback sf lines, but all were finally cancelled, including Hohenheim's project to publish a 15-vol hardcover series, ed H.J. Alpers and Werner Fuchs (1949-), to chronicle sf history with the best stories of the best authors; only 6 vols appeared. Indeed, after the boom that lasted from the late 1970s to the early 1980s, during which Bastei-Lubbe, Knaur, Moewig, Pabel and Ullstein all began new paperback lines or extended existing ones, there was a severe contraction. Today only Heyne, Goldmann and Bastei-Lubbe remain competitive. Unlike the English-language countries, Germany has no magazine-based tradition of short-story publication. There had been a magazine of the fantastic, Der Orchideengarten ["The Garden of Orchids"] (1919-21), but it was only in the 1950s, with Utopia-Magazin (1955-9; 26 issues) and Galaxis (1958-59; 15 issues), that the first sf magazines were published. Later attempts to establish magazines, mostly from smaller publishers, failed. Perry Rhodan did not successfully make the transition from pulp weekly booklet to magazine in Perry Rhodan Magazin. Other publications in magazine format were Comet, 2001, Star SF and a German edition of OMNI, but all finally failed. However, forums for short stories do remain, mainly occasional anthologies from Heyne, ed Wolfgang Jeschke. Earlier there had been the Kopernikus series, a kind of magazine in paperback (1980-88; 15 vols) ed H.J. Alpers from Moewig; the Polaris series from Insel/Suhrkamp (1973-85; 8 vols) ed Franz ROTTENSTEINER; and a series of paperbacks (1980-84) from Goldmann, ed Thomas LeBlanc (1951-). Let us turn from publishing to writing, and look at the major German sf authors since WWII. We can start in the 1950s in the field of pulp adventure with the work of Walter Ernsting (writing as Clark Darlton) and K.H. Scheer. The former reached Erich VON DANIKEN territory before von D-niken did with his tales of past extraterrestrial visits to Earth, and was best known for his TIME-TRAVEL stories. Scheer specialized in military-technological space opera. In the 1960s Herbert FRANKE came to prominence as the first German-language sf writer to tackle really ambitious themes. Later, in the 1960s and 1970s, he was joined (at first just in the field of short stories) by Jeschke. Also of interest is Otto BASIL, who like Franke was an Austrian, with his ALTERNATE-WORLD novel Wenn das der Fuhrer wuste (1966; cut trans Thomas Weyr as The Twilight Man 1968 US). This story of Nazi Germany's victory in WWII, followed by a postwar decay of the Third Reich after Hitler's death as his heirs struggle for power, can be compared to The Man in the High Castle (1962) by Philip K. DICK. In the 1970s Carl Amery (1922-), a leading German MAINSTREAM WRITER, turned his attention to sf themes, inspired by Walter

M. MILLER's *A Canticle for Leibowitz* (1960). With 3 excellent books, original in both their idiom (Bavarian) and their concepts, he played variations on the themes of time travel, the fall of Western culture, and alternate worlds; these were *Das Königsprojekt* ["The King Project"] (1974), the short novel *Der Untergang der Stadt Passau* ["The Fall of the City of Passau"] (1975), and *An den Feuern der Leyermark* ["At the Fires of the Leyermark"] (1979), Leyermark being an old name for Bavaria. Franke wrote further remarkable novels, notably *Zone Null* (1970; trans 1974 US) and *Ypsilon Minus* (1976). In the 1980s Wolfgang Jeschke raised his profile, proving himself an excellent novelist with *Der letzte Tag der Schöpfung* (1981; trans Gertrud Mander as *The Last Day of Creation* 1981 US) and *Midas* (1989; trans 1990 US). Thomas R.P. Mielke (1940-), up to then an almost unnoticed pulp writer, surprised everybody with the thematically bizarre novel *Das Sakriversum* ["The Vestryverse"] (1983), in which he described how two mutated tribes, who for centuries have kept themselves hidden in the roof-vault of a cathedral, survive a war waged with neutron bombs. With *Die Parzelle* ["The Piece of Land"] (1984) Werner Zillig (1949-) wrote a remarkable novel about countercultures which realize their utopian and radical ideas in protected areas. *Die Enkel der Raketenbauer* ["Grandchildren of the Rocket-Builders"] (1980) by Georg Zauner (1920-) is a cutting, ironic novel about a postnuclear Bavaria. A notable dystopian novel is *Erwins Badezimmer oder Die Gefährlichkeit der Sprache* ["Erwin's Bathroom, or The Perilousness of Language"] (1984) by Hans Bemmann (1922-); and Richard Hey (1926-) published in *Im Jahr 95 nach Hiroshima* ["In the Year 95 after Hiroshima"] (1982) an outstanding post-holocaust novel dealing with a new ice age and the vanishing of European culture. Other authors worth notice include Rainer Erlen (1933), mainly a tv screenwriter and director, Reinmar Cunis (1933-1989) and Michael Weisser (1948-). Known primarily for short stories are Thomas Ziegler (the pen-name of Rainer Zubeil [1956-]), Karl Michael Armer (1950-), Horst Pukallus (1949-), Gerd Maximovic (1944-), Peter Schattschneider (1950-) (AUSTRIA) and Ronald M. Hahn, the latter mostly with SATIRES. In the postwar GDR, sf was expected to serve socialism and to be subordinate to the concepts of party functionaries, and was anyway for a long time regarded with suspicion. The first East German sf novel was *Die goldene Kugel* ["The Golden Ball"] (1949) by Ludwig Turek (1898-1975). During the whole of the 1950s in the GDR only 11 sf books, plus 50 or so short stories scattered here and there, were published. In the 1950s and 1960s authors like Eberhard Del'Antonio (1926-), the Brazilian-born Carlos Rasch (1932-), Gunther Krupkat (1905-) and Karl-Heinz Tuschel (1928-), and in the 1970s and 1980s Klaus Fruhauf (1933-), Rainer Fuhrmann (1940-), Peter Lorenz (1944-), Michael Szameit (1950-) and others wrote an upright, arid, often didactic sf that was miles away, thematically and in literary quality, from all international standards. But from the 1970s onward the GDR also began to produce weightier voices, with Heiner Rank (1931-), Gerhard Branstner (1927-), Gert Prokop (1932-), Erik Simon (1950-) and several collaborative teams: Alfred Leman (1925-) and Hans Taubert (1928-); Johanna (1929-) and Gunter (1928-) Braun; and Karlheinz (1950-) and Angela (1941-) Steinmüller. *Die Ohnmacht der Allmächtigen* ["The Impotence of the Omnipotent Ones"] (1973) by Heiner Rank, *Der Irrtum des Grossen Zauberers* ["The Error of the Great

Sorcerer"] (1972) and Unheimliche Erscheinungsformen auf Omega XI ["Strangely Shaped Apparitions on Omega XI"] (1974), both by Johanna and Gunter Braun, and Andymon (1982) and Pulaster (1986), both by Karlheinz and Angela Steinmuller, are examples of sf books that are full of ideas and well written, and need not fear international comparison. In the GDR, translated sf was very largely from RUSSIA and other socialist countries; Western sf was seldom published and Western adult fantasy never. There were few East German sf paperbacks; most books were hardcovers from Das Neue Berlin and Neues Leben, as well as pulp booklets from the Das neue Abenteuer and kap lines. Only in recent years has the term "science fiction" been used, and it appeared on only one line of books, a short-running paperback series. Ekkehard Redlin (1919-), as editor of Das Neue Berlin, was an important influence on East German sf, and later both Olaf R. Spittel (1953-) and especially Erik Simon had a huge influence on the scene. With Die Science-fiction der DDR: Autoren und Werke: Ein Lexicon ["Sf in the GDR: Authors and Works: A Dictionary"] (1988), these two wrote what is effectively a small encyclopedia of East German sf (a shorter version had appeared earlier, in 1982). Simon, who also edits for Das Neue Berlin, has edited an annual, with stories and critical essays, entitled Lichtjahr ["Lightyear"] (5 vols 1980-86). Sf publishing in the united Germany of today has few book lines, is dominated by Heyne, and is in general the domain of US-UK authors. Outside the Perry Rhodan pulps, no German sf author is able to earn his or her living from sf alone; the one marginal exception is Wolfgang E. Hohlbein (1953-), a bestselling author of, primarily, fantasy. In recent years some SMALL PRESSES have published sf, either in limited editions or in attempts to break into the upmarket area of hardcovers and quality paperbacks. Among them are Corian, Fantasy Productions, Fabyon, Laurin and Edition Phantasia. Besides the book market, sf writers can look to a small market for high-quality radio plays, which has been supported over the years by radio editors and directors like Horst Krautkr-mer, Andreas Weber-Sch-fer and, above all, Dieter Hasselblatt (1926-). There has been quite a lot of critical and scholarly literature about sf in Germany. The SEMIPROZINE Science Fiction Times, which began in 1958 as a straight translation of the US Science Fiction Times, itself a variant title of FANTASY TIMES, began to publish original German material in the early 1960s. It is now the longest-lasting critical journal in Germany; also important in this respect is Franz Rottensteiner's QUARBER MERKUR. There have been several academic studies of sf, sometimes written from a sociological or political viewpoint. Begun in 1985, Phantastischen Literatur, ed Joachim Korber, is a continuously updated bibliographical resource for both sf and fantasy from Corian. Standard references include Lexicon der Science Fiction Literatur (1980; rev 1988; new edn projected for 1992) and Reclams Science Fiction Fuhrer (1982), the former from Heyne, the latter from Reclam, both ed Hans Joachim Alpers, Werner Fuchs and Ronald M. Hahn, with Wolfgang Jeschke as a further editor of the Heyne books. Sf cinema had a good start in Germany in the silent period with the serial HOMUNCULUS (1916), Fritz LANG's DR MABUSE, DER SPIELER (1922) and METROPOLIS (1926), and Robert Wiene's ORLACS HANDE (1925). Indeed, the German film industry continued strongly into the early 1930s, with sf and fantastic themes quite popular. Other sf films of this period are ALRAUNE (1928), Die FRAU IM MOND (1929), F.P.1

ANTWORTET NICHT (1932), Die HERRIN VON ATLANTIS (1932; vt Lost Atlantis), Der TUNNEL (1933), and GOLD (1934). German sf cinema in the postwar period has been, on the whole, disappointing, and the films deserving of entries are comparatively few: Die TAUSEND AUGEN DES DR MABUSE (1960), Der GROSSE VERHAU (1970; vt The Big Mess), Rainer Erler's OPERATION GANYMED (1977), and KAMIKAZE 1989 (1982). Fassbinder's made-for-tv movie WELT AM DRAHT (1973; vt World on a Wire) is also of substantial interest. [HJA]

GERNSBACK, HUGO

(1884-1967) Luxembourg-born writer and editor who emigrated to the USA in 1904. Intensely interested in electricity and radio, he designed batteries and by 1906 was marketing a home radio set. In 1908 he launched his first magazine, Modern Electrics, where he later published his novel Ralph 124C 41+ (1911-12 Modern Electrics; fixup 1925). While deficient as fiction, the tale clearly shows his overriding interest in sf as a vehicle of PREDICTION, being a catalogue of the marvellous TECHNOLOGY of the 27th century. Modern Electrics later became Electrical Experimenter, for which he wrote a series of apocryphal scientific adventures of Baron Munchausen (sic): "How to Make a Wireless Acquaintance" (1915), "How Munchausen and the Allies Took Berlin" (1915), "Munchausen on the Moon" (1915), "The Earth as Viewed from the Moon" (1915), "Munchausen Departs for the Planet Mars" (1915), "Munchausen Lands on Mars" (1915), "Munchausen is Taught Martian" (1915), "Thought Transmission on Mars" (1916), "Cities of Mars" (1916), "The Planets at Close Range" (1916), "Martian Amusements" (1916), "How the Martian Canals are Built" (1916) and "Martian Atmosphere Plants" (1917). The series was reprinted in AMZ in 1928. In 1920 another title-change brought into being SCIENCE AND INVENTION, in which HG regularly printed sf. The Aug 1923 issue was devoted to what he then termed "scientific fiction". The following year HG solicited subscriptions for an sf magazine to be called Scientifiction; but it was not until April 1926 that there appeared the first issue of AMAZING STORIES, the first true sf magazine in English. HG was publisher and editor, although much of the actual editorial work was done by T. O'Connor SLOANE, his elderly associate editor. AMZ was an immediate commercial success, and in 1927 HG published AMAZING STORIES ANNUAL, which in turn spawned AMAZING STORIES QUARTERLY. In 1929, however, his Experimenter Publishing Company was forced into bankruptcy, almost certainly by Bernarr MACFADDEN, and HG lost control of the journals he had founded, though he immediately bounced back by founding another company and starting 4 more magazines: AIR WONDER STORIES, SCIENCE WONDER STORIES, Science Wonder Quarterly and SCIENTIFIC DETECTIVE MONTHLY, the first 2 being amalgamated the following year as WONDER STORIES. His empire declined through the 1930s (though other projects prospered), with Scientific Detective Monthly (which changed its name to Amazing Detective Tales) lasting less than a year, WONDER STORIES QUARTERLY (as Science Wonder Quarterly had become) ceasing publication in 1933, and Wonder Stories being sold in 1936 to become THRILLING WONDER STORIES. In 1939 he published 3 issues of an early sf COMIC, Superworld Comics, and in 1953 he published his last sf magazine, SCIENCE FICTION PLUS, with HG named as editor but with Sam MOSKOWITZ as managing editor; it ran for 7 issues. A rather different HG publication, Sexology, enjoyed more lasting success. Opinions vary on the beneficence of HG's influence on

GENRE SF. Moskowitz has termed him the "Father of Science Fiction" (in "Hugo Gernsback: 'Father of Science Fiction'" in *Explorers of the Infinite* [1963]), while Brian W. ALDISS said of his emphasis on supposed scientific accuracy that it had "the effect of introducing a deadening literalism" into the field (in *Trillion Year Spree* by Aldiss and David WINGROVE [1986]). HG gave the genre a local habitation and a name; but he bestowed upon his creation a provincial dogmatism and an illiteracy that bedevilled US sf for years. The Science Fiction Achievement Awards are named the HUGOS in his honour; and he himself was given a special Hugo in 1960. [MJE]Other works: *Ultimate World* (1971). See also: ASTOUNDING SCIENCE-FICTION; AUTOMATION; BENELUX; CITIES; CRIME AND PUNISHMENT; DEFINITIONS OF SF; DYSTOPIAS; FABULATION; FANTASTIC VOYAGES; GOLDEN AGE OF SF; HEROES; HISTORY OF SF; ILLUSTRATION; MACHINES; MEDIA LANDSCAPE; NEAR FUTURE; NUCLEAR POWER; OPTIMISM AND PESSIMISM; ORIGIN OF MAN; POLITICS; POWER SOURCES; PROTO SCIENCE FICTION; PSYCHOLOGY; PULP MAGAZINES; ROCKETS; SCIENTISTS; SPACE FLIGHT; SPACE OPERA; TRANSPORTATION; UTOPIAS; WEAPONS.

GERNSBACK PUBLICATIONS

Publishing company. SCIENCE FICTION PLUS.

GERRARE, WIRT

Pseudonym of UK writer William Oliver Greener (1862-?) for most of his work, both fiction and nonfiction, though at least one thriller appeared under his real name. His first novel of any interest, *Rufin's Legacy: A Theosophical Romance* (1892), features a Russian female spy who uses her astral body nefariously. *Phantasms: Original Stories Illustrating Posthumous Personality and Character* (coll 1895) assembles fantasies about a psychic investigator. *The Warstock: A Tale of To-Morrow* (1898) is a genuine sf novel in which a group of brilliant inventors establishes in Morocco an advanced city-state called *Cristalia*, seemingly armoured against invasion. But Germany, using fifth-columnists, takes over, though without reckoning on the eponymous weapon, a device which randomly triggers ammunition dumps worldwide. The scientists then reoccupy the city and prepare to rule the world from their technological meritocracy. [JC]

GERROLD, DAVID

Pseudonym of US author and scriptwriter Jerrold David Friedman (1944-), who was raised in Southern California, gaining a BA in theatre arts there. His earliest commercial sales were tv scripts, the first of them a well known STAR TREK episode, "The Trouble with Tribbles" (1967), which became the subject of one of his two books about the series, *The Trouble with Tribbles* (1973), which includes the script plus a nonfiction narrative. The other, *The World of Star Trek* (1973; rev and co-credited to "The Editors of *Starlog Magazine*" 1984), perceptively analyses the strengths and weaknesses of the show, and recounts its travails in the world of network tv; he also wrote one Star Trek tie, *The Galactic Whirlpool* * (1980). A contribution to the *Star Trek: The Next Generation* book sequence, *Encounter at Farpoint* * (1987), followed after several years; he briefly worked on the tv series STAR TREK: THE NEXT GENERATION. DG's first novel, *The Flying Sorcerers* (1971) with Larry NIVEN, is a lively attempt

to give a scientific rationale to a variety of incidents - which to the observers seem like MAGIC - when an explorer is stranded on a primitive planet. His first solo novel, *Space Skimmer* (1972), deals with a man's search for a vanished GALACTIC EMPIRE and its spaceships, described in the title. Perhaps his best-known work is *When Harlie was One* (fixup 1972; rev vt *When H.A.R.L.I.E. was One* (Release 2.0) 1988), which deals with the evolution of artificial INTELLIGENCE in a COMPUTER, discussing many of the problems of life with an air of profundity not wholly justified by the content (the revised version improves the telling, but does not significantly sophisticate DG's rendering of AI). *With a Finger in my I* (coll 1972) assembles some of his occasionally precious short stories; the title story (1972) is a fantasy about solipsism and PERCEPTION showing a strong if slightly undergraduate sense of verbal play. *Yesterday's Children* (1972; exp 1980; vt *Starhunt* 1987) is a SPACE OPERA, with conflict between a captain and first officer on a starship. *The Man who Folded Himself* (1973) deals in jerky, short-sentenced prose with a hero who meets other versions of himself, doubled through TIME PARADOX, and makes love to several of them in an orgy of reciprocal narcissism. *Moonstar Odyssey* (1977) deals with an extraterrestrial hermaphroditic society whose members do not have to settle into one sex until after adolescence. In both books, a superficial obedience to "Californian" concepts of the free lifestyle revert to more traditional readings of human morality. In the 1980s - a decade during which he did extensive work for tv - DG's writings lost some of their freshness, and his dependency on earlier sf models for inspiration became more burdensome. *The War Against the Chtorr* sequence - *A Matter for Men* (1983; rev 1989), *A Day for Damnation* (1984; exp 1989) and *A Rage for Revenge* (1989), with the first versions of the first 2 titles assembled as *The War Against the Chtorr: Invasion* (omni 1984) - mixes countercultural personal empowerment riffs a la HEINLEIN with violent action scenes as the worm-like Chtorr continue to assault Earth, with no end in sight. Other novels, like *The Galactic Whirlpool* (1980) and *Enemy Mine* * (1985) with Barry B. LONGYEAR - the novelization of ENEMY MINE, a film based on a Longyear story - show a rapid-fire competence but are not innovative. *Chess with a Dragon* (1987) is an amusing but conceptually flimsy juvenile. There is a growing sense that DG might never write the major novel he once seemed capable of - not because he has lost the knack, but because he refuses to. [JC]Other works: *Battle for the Planet of the Apes* * (1973); *Deathbeast* (1978); *Voyage of the Star Wolf* (1990). As Editor: Several 1970s anthologies with Stephen GOLDIN (uncredited): *Protostars* (anth 1971), *Generation: An Anthology of Speculative Fiction* (anth 1972), *Science Fiction Emphasis 1* (anth 1974), *Alternities* (anth 1974) and *Ascents of Wonder* (anth 1977); Norman Jacobs ? *Kerry O'Quinn Present Starlog's Science Fiction Yearbook, Vol 1* (anth 1979) with Dave Truesdale. See also: CLONES; CYBERNETICS; FANTASY; GRAVITY; TERRAFORMING.

GESTON, MARK S(YMINGTON)

(1946-) US writer and attorney whose remarkable first novel *Lords of the Starship* (1967) was published while he was still a student at Kenyon College. This work, which establishes the dark mood of all his fiction and is like its immediate successors set in a weary, war-torn FAR-FUTURE

Earth, describes a dilapidated, decadent, centuries-long attempt to construct an enormous SPACESHIP whose completion would transform the fortunes of everyone involved and mark a phase of rebirth. The project is, however, a shambles and a sham, and the novel closes in ENTROPY and despair. Out of the Mouth of the Dragon (1969) conveys the same mood, introducing prosthetic weaponry that turns many of his characters virtually into CYBORGS without making them any more capable of transforming ancient ways, ancient obsessions. Cultures, weapons, ideas and their embodiments in doom-ridden characters and decaying cities also permeate his third novel, The Day Star (1972), and his fourth, The Siege of Wonder (1976), in which all the themes of his previous books are wrapped up in the perversion and death of a magical unicorn. MSG then fell silent for nearly 20 years: Mirror to the Sky (1992) Mirror to the Sky (1992) - a rare sf examination of the ARTS, in which certain paintings crafted by visiting ALIENS enforce their vision on human viewers - may mark, however, his welcome return to active work. GHIDORAH SANDAI KAIJU CHIKYU SAIDAI NO KESSAN
GOJIRA; RADON.

GHIDRAH, THE THREE-HEADED MONSTER
GOJIRA; RADON.

GHOSTS
ESCHATOLOGY; SUPERNATURAL CREATURES.

GIANT BEHEMOTH, THE
BEHEMOTH, THE SEA MONSTER.

GIANT CLAW, THE
Film (1957). Clover/Columbia. Dir Fred F. Sears, starring Jeff Morrow, Mara Corday, Morris Ankrum. Screenplay Samuel Newman, Paul Gangelin. 76 mins. B/w. A giant bird from outer space decides to build a nest on Earth. It is conveniently protected by an ANTIMATTER shield, so that attempts to kill it at first prove futile, but eventually the field is nullified by scientists shooting mu-mesons and all ends happily - though not for the bird. This is a much-loved terrible film, mainly because of the bird: quite appallingly designed, it is possibly the most laughter-provoking creature in the history of MONSTER MOVIES. [JB/PN]

GIANTS
GREAT AND SMALL.

GIANT SPIDER INVASION, THE
Film (1975). Group 75/Transcentury. Dir Bill Rebane, starring Steve Brodie, Barbara Hale, Alan Hale, Leslie Parrish. Screenplay Robert Easton, Richard L. Huff. 76 mins. Colour. Noted by one critic, Michael Weldon, as the MONSTER MOVIE with the worst special effects since The GIANT CLAW (1957), this is fondly remembered as the one where the giant spider was built out of a modified Volkswagen. The spiders, whose eggs are mistaken for diamonds by a greedy farmer, emerge from a BLACK HOLE (yes) near a small Midwest town, which they terrorize. The script has wonderfully highbrow moments. "It all fits - Einstein's general theory of relativity -

everything!" cries Steve Brodie, the tough guy who laconically copes with the situation. The best spider movie of the period was KINGDOM OF THE SPIDERS (1977), and the best since then has been ARACHNOPHOBIA (1990). [PN]

GIBBARD, T.S.J.
ROBERT HALE LIMITED.

GIBBON, LEWIS GRASSIC
J. Leslie MITCHELL.

GIBBONS, DAVE
Working name of prolific, award-winning UK COMIC-strip artist David Chester Gibbons (1949-); using a bold, firm line style, he specializes in the SUPERHERO genre. Born in St Albans, Hertfordshire, he trained as a surveyor and began his artistic career providing ILLUSTRATIONS and strips for fanzines. He turned professional in 1973, drawing The Wriggling Wrecker for the D.C. Thompson comic Wizard. Further strips with an sf flavour followed until, in 1975, he began work on the Nigerian superhero Powerman, his monthly 16pp episodes alternating with those by Brian BOLLAND to produce a fortnightly publication schedule. DG was one of the initial team of artists on 2,000 AD, drawing Harlem Heroes and Robusters and co-creating Rogue Trooper with writer Gerry Finley-Day. DG drew a number of DR WHO episodes for the UK division of MARVEL COMICS, and in 1981 began a long association with the US publisher DC COMICS, drawing The Creeper, 12 issues of Green Lantern and a SUPERMAN tale called "For the Man who Has Everything", written by Alan MOORE. His greatest achievement to date, also written by Moore, has been the phenomenally successful WATCHMEN (12-vol series 1986-7; graph 1987 US; with additional material 1988 US); this ALTERNATE-WORLD superhero story, rich in semiotics, won a special category for Best Other Forms in the 1988 Hugo Awards (HUGO for discussion of this category). DG's next major project was Give Me Liberty (graph 1990), written by Frank MILLER. DG has recently begun to establish himself as a writer with a Superman/Batman team-up (1991), a Batman vs Predator comic book (1992) and World's Finest (1993), all for DC. [RT]See also: DAN DARE - PILOT OF THE FUTURE; GRAPHIC NOVEL.

GIBBONS, (RAPHAEL) FLOYD (PHILLIPS)
(1886-1939) US writer, mostly of war stories; well known as a war correspondent. The Red Napoleon (1929) is a future- WAR tale featuring a modern-day Mongol dictator, Karakhan, who conquers much of the world, miscegenating as he goes in a deliberate onslaught upon the racist White nations. He is eventually defeated by the USA. In 1941, in Bermudan exile with the dying Karakhan, Gibbons - who appears as his journalist self throughout - recounts these events with some sympathy. [JC]See also: INVASION; VILLAINS.

GIBBS, LEWIS
Pseudonym of Joseph Walter Cove (1891-?), a UK writer whose sf novel, Late Final (1951), deals with a post-WWIII England. [JC]Other works: Parable for Lovers (1934).

GIBSON, COLIN

(? -) NEW ZEALAND writer whose second novel, *The Pepper Leaf* (1971), is a NEAR-FUTURE sf tale set in New Zealand. Fearful of nuclear catastrophe, a small group of vegetarian nudists expose themselves to survival conditions, and their cruel interactions, described in a tense, allusive style, provide a model for, or allegory of, the human condition in extremis. [JC]

GIBSON, EDWARD

(1936-) US Skylab astronaut whose sf novel, *Reach* (1989), set in the more remote NEAR FUTURE, argues for a continuation of the space programme via the story of an expedition sent to discover the nature of an ALIEN lifeform. This proves unfriendly; but the case for human exploration of our potential domain is presented with commendable clarity. In *the Wrong Hands* (1992), set on the 21st century Moon, describes a GENETIC ENGINEERING initiative gone awry, due to the rather old-fashioned lunacy of the scientist involved. [JC]

GIBSON, FLOYD

Paul CONRAD.

GIBSON, WALTER B(ROWN)

(1897-1985) US newspaper journalist, editor and writer who founded and ran *Tales of Magic and Mystery* (1927-8) - where he published his first piece of genre interest, "The Miracle Man of Benares", in 1927 - as well as *True Strange Stories* (1929) for Bernarr MACFADDEN, and *FANTASTIC SCIENCE FICTION* (1952); this latter lasted only 2 issues, and is not to be confused with *FANTASTIC*, also founded 1952. Various prolific, he remains best known under the house name Maxwell Grant - though "pseudonym" would perhaps be a more accurate term, as WBG wrote almost 300 novels as Grant, most for the celebrated pulp magazine *The Shadow* (325 issues 1931-49), whose hero - originating in a 1930 radio series - is a mysterious vigilante who often walks by night. WBG wrote most (not all) of these, but only 25 or so contain sf themes, those later republished as books being *Charge, Monster* (1934; 1977), *The Silent Death* (1978) and *The Death Giver* (1978). Other *Shadow* episodes republished in book form include *The Living Shadow* (1933), *The Shadow and the Voice of Murder* (1940), *Return of the Shadow* (1963) as WBG, *The Weird Adventures of the Shadow* (coll 1966) as WBG, and (all first published in *The Shadow*) *The Weird Adventures of the Shadow: Grove of Doom* (1933; 1969), *The Eyes of the Shadow* (1931; 1969), *The Shadow Laughs!* (1931; 1969), *The Death Tower* (1932; 1969), *The Ghost Makers* (1932; 1970), *Hidden Death* (1932; 1970), *Gangdom's Doom* (1931; 1970), *The Black Master* (1932; 1974), *The Mobsmen on the Spot* (1932; 1974), *Red Menace* (1931; 1975), *Silent Seven* (1932; 1975), *Hands in the Dark* (1932; 1975), *Double "Z"* (1932; 1975), *The Crime Cult* (1932; 1975), *The Romanoff Jewels* (1932; 1975), *The Crime Oracle* (1936; 1975), *Teeth of the Dragon* (1937; 1975), *Kings of Crime* (1932; 1976), *Shadowed Millions* (1933; 1976), *Green Eyes* (1932; 1977), *The Creeping Death* (1933; 1977), *The Shadow's Shadow* (1933; 1977), *Fingers of Death* (1933; 1977), *Murder Trail* (1933; 1977), *Grey Fist* (1934; 1977), *Charg, Monster* (1934; 1977) and *Zemba* (1935; 1977). The *Shadow* titles published as by WBG include *The Mask of Mephisto and Murder by Magic* (coll 1975), *A Quarter of Eight and The Freak Show Murders* (coll 1978), *Crime Over Casco* and *The Mother Goose*

Murders (coll 1979), The Shadow Scrapbook (coll 1979), Jade Dragon and House of Ghosts (coll 1981) and The Shadow and the Golden Master (coll of linked stories 1984). WBG also wrote Rod Serling's The Twilight Zone * (coll 1963; cut vt Chilling Stories from Rod Serling's The Twilight Zone 1965) and Twilight Zone Revisited * (coll 1964). [JC]

GIBSON, WILLIAM (FORD)

(1948-) US-born writer, in Canada since 1968, when he moved north after being rejected by his draft-board. After some time in Toronto - where a significant proportion of his fellow expatriates had come to Canada in protest against the Vietnam War - he moved in 1972 to Vancouver, a Pacific Rim city where attention was uneasily focused upon increasingly dominant Japan across the waters. (It could be argued that the Vancouver attitude toward imperial Japan, and to its Hong Kong "sidekick", provides a model for the numb, colonized acquiescence to a new world order so characteristic of occidentals in the Neuromancer trilogy which made WG famous.) WG began publishing sf with "Fragments of a Hologram Rose" for Unearth in 1977, and by 1983 had produced most of the fiction later assembled in BURNING CHROME (coll 1986 US); some of these tales, like "Johnny Mnemonic" (1981) and the 1982 title story, were set in the Neuromancer universe, and were, therefore, early examples of what would soon become known as CYBERPUNK (which see for detailed examination of the movement). WG did not invent cyberpunk, nor has he ever claimed to have done so. Bruce BETHKE's "Cyberpunk" (1983) supplied the name, and Gardner DOZOIS, in a 1983 article, defined the movement by applying the term to works set in COMPUTER-driven, high-tech NEAR-FUTURE venues inhabited by a slum-bound streetwise citizenry for whom the new world is an environment, not a project. In terms of traditional US sf, this was heresy, and WG's enormous success as an sf writer must have seemed an ominous harbinger of the death of traditional sf. His novels treat traditional sf instruments and themes as unforegrounded figures in the complex mosaic of urban life; he shifts the grounds of sf displacement inwards from cyber (as it were) to punk; the world his novels describe is old, and whether or not it can be understood - in WG's work it generally cannot - its inhabitants are consumers, not makers. The essential displacement from which they suffer - like so many protagonists of Modernist and POSTMODERNIST literature - is the loss of an integrated self. For the inhabitants of WG's world, selfhood has emptied itself into the instruments of the world, and in book after book - like cases of flesh - his characters are found hacking the wilderness for Cargo. Canadian sf - from A.E. VAN VOGT down through Gordon R. DICKSON and beyond - has always tended to lock its protagonists into grey wilderness environments impenetrable to CONCEPTUAL BREAKTHROUGH, where they survive as displaced souls, longing for transcendence. As a Canadian writer, therefore - through his own displacing act of emigration - WG was well placed to write the definitive cyberpunk book. All he needed to add to the new territory he had embraced was - in his remarkably fluent and attentive prose - gear, brand-names, Japanese corporations and mean streets. But in the end the void of the wilderness interpenetrates the things of the world, and generates a sense that they are ultimately vain. The Neuromancer trilogy - NEUROMANCER (1984 US), Count Zero (1986 UK) and Mona Lisa Overdrive (1988 UK) - is all about escaping the flesh. The

protagonist of NEUROMANCER - which won the HUGO, NEBULA, and PHILIP K. DICK AWARDS - is a matrix cowboy or outlaw hired to link a digital version of his mind into CYBERSPACE itself (cyberspace being a worldwide computer matrix of information experienced by any plugged-in sentience as an infinitely complex and chambered VIRTUAL-REALITY labyrinth) and, once "inside", to steal data. The "outside" world of the book is a near-future USA (although never named as such) dominated by Japanese corporations, one of which may be his employer. The plot itself harks back, as does much of the imagery, to the classic mean-streets California thrillers of Raymond Chandler (1888-1959) and Ross Macdonald (pseudonym of Kenneth Millar [1915-1983]); and, true to those models - and to what might be called WG's Canadian pessimism about changing the world - none of the characters of NEUROMANCER have anything but an eavesdropping relationship to the true roots of power. The story eventually moves from Earth into near space, where complex orbiting arcologies house the AIs which, perhaps, secretly run the world; but the protagonist does not covertly long to run the world in their stead. His longing is to transcend the flesh which pulls him back from the bliss of cyberspace. The second and third volumes of the sequence, though more sophisticated as novels, inevitably fail to advance much further - in traditional sf terms-towards working out the implications of the Neuromancer world, which remains a wilderness. The AIs of the first volume have suffered a traumatized, cataclysmic coming to self-awareness, and now haunt cyberspace in the guise of voodoo godlings. A wide range of characters appears throughout Count Zero and Mona Lisa Overdrive, but they share an underlying paralysis; and, as a novelist burdened with the task of creating new tales, WG inevitably pays a price for his refusal to countenance any normal sf sorting-out of the world. Hints given at the end of the last volume of a sudden interstellar growth of perspective singularly fail to convince. Cyberpunk in WG's hands, then, was an assault on future HISTORY. Neuromancer in particular was treated by much of its huge readership as a manual for surviving in style. That WG is uncannily sensitive to manners and idioms may have, for many of his readers, obscured the underlying bleakness of his vision. After spending some time writing filmscripts in Hollywood, however, he allowed that bleakness to come unmistakably to the fore in THE DIFFERENCE ENGINE (1990 UK) with Bruce STERLING. The book is a sustained work of RECURSIVE SF - Benjamin DISRAELI and characters from his work appear throughout - a STEAMPUNK evocation of an ALTERNATE WORLD 19th-century UK dominated by the supposition that in about 1820 Charles BABBAGE succeeded in his attempt to construct the title's COMPUTER. The world that explodes into reality as a consequence of Babbage's triumph is, in THE DIFFERENCE ENGINE, a cruel and polluted DYSTOPIA, a land dominated by calculation, measurement and severely "practical" reason. Vast arterial roads ransack a choking London; huge masonic edifices house the new totalitarian bureaucracy which operates the Engines; and a conscious AI is a-borning. Though the book is at points unduly narrow in conception, and congested as a tale, its ultimate effect is very considerable. Virtual Light (1993), though entirely competent, is a markedly less ambitious portrait of NEAR FUTURE California, viewed through the lens of a thriller plot complete with MCGUFFIN; the vision of the Oakland Bay Bridge transformed into a niche colony for social rejects and rebels is, however, enthralling. In the

sense that he tells tales involving human choices within world-encompassing frameworks overwhelming beyond their capacity to transform, WG could plausibly be seen as a paradigm moralist for the new age of sf. GIESY, J(OHN) U(LRICH)

(1877-1948) US physiotherapist and PULP-MAGAZINE writer, author of many stories, most not sf, in Argosy and All-Story Weekly 1914-34. All for His Country (1914 Cavalier; 1915), which combines plot-material from the future- WAR genre and from the EDISONADE, pits a young inventor's radium-powered gravity-defying plane against the treacherous Japanese; ominously, JUG also accuses Japanese-Americans from California of betrayal. The Jason Croft or Palos trilogy - Palos of the Dog Star Pack (1918 All-Story Weekly; cut 1965), The Mouthpiece of Zitu (1919 All-Story Weekly; cut 1965) and Jason, Son of Jason (1921 Argosy; cut 1966) - features Croft's adventures on Palos, a planet of Sirius. Derivative of Edgar Rice BURROUGHS's Martian stories, these novels are also highly practical, for Croft triumphs not through his own strength but because of an encyclopedic knowledge of Earth's technologies of destruction. JUG's further sf includes a UTOPIA, "In 2112" (1912 Cavalier), written with his frequent collaborator, the Utah lawyer Junius Smith (1883-1945), and a number of humorous stories about the eccentric Dr Xenophon Xerxes Zapt. JUG's sf - tempered as it is by a devout belief in astrology - has dated and is now of merely historical interest, but for years he was considered second only to Burroughs as an author of interplanetary romances. [RB/JC]

GIGAMESH AWARD AWARDS.

GIGANTIS GOJIRA.

GIGANTIS THE FIRE MONSTER GOJIRA.

GIGER, H.R.

Working name of Swiss artist and theatre and film designer - but not illustrator - Hansruedi Giger (1940-). He began developing his distinctive style in the early 1970s. Strikingly grotesque, morbid, necrophile, it draws heavily on the Surreal and the decadent traditions, his acknowledged influences including Arnold Bocklin (1827-1901), Hieronymus Bosch (1460-1516), Salvador Dali (1904-1989) and Antonio Gaudi (1852-1926), and there are clear resemblances also to the paintings of Max Ernst (1891-1976). It is perhaps from Ernst and Gaudi that he first took his main trademark, the combination of organic with machine-like forms, which has been termed "biomechanoid". The first two books of his work were A Rh+ (1971) and H.R. Giger (1976), but it was the third, H.R. Giger's Necronomicon (1977; trans 1978 UK; exp 1991) - the title pays appropriate homage to H.P. LOVECRAFT - which drew the attention of the US and UK public to his work. Among these readers were the producers of the film

ALIEN (1979), who invited HRG to help in the alien designs. (They had also heard of his weird 1975 designs for the unmade Jodorowski version of DUNE.) The spectacular results, done from working drawings subsequently published as a portfolio, Alien (portfolio 1978), and in H.R. Giger's Alien (1979; rev vt Giger's Alien Film Design 1989), revolutionized the look of sf cinema to a degree it would be difficult to overstate; it has since been much imitated in many films, including SATURN 3 (1980), LIFEFORCE (1985) and even VIDEOGAME (1982), though it is doubtful if HRG has profited from this. The idea that alien MACHINES might not look like ours - along with the very idea of the organic machine - was inventive, and in sf-cinema terms an important step away from anthropomorphism. (Some, though, would argue that the incorporation into HRG's aliens and their artefacts of penis and vagina shapes is as anthropomorphic as you can get.) HRG was unhappy with the execution of his designs for the film Poltergeist II (1986). Considering the fame of his film work, it is surprising he has done so little. He continued through the 1980s with very much the same kind of airbrushed painting in ink and acrylics: death/sex/machine imagery of staggering banality according to some, shocking Surrealism according to others; and his seminal influence in the sf field now seems to have been almost accidental, though it is not the first time Surrealism has influenced sf. His 1980s work can be seen in H.R. Giger: N.Y. City (1981 chap), H.R. Giger: Retrospektive, 1964-1984 (1984), Giger's Necronomicon Two (1986), H.R. Giger's Biomechanics (1988; trans Clara H-richt Frame 1990 US) and ARh+ (1991; text trans Karen Williams 1992US). [PN] Other works: Portfolios of interest include: Ein Fressen fur de Psychiater (portfolio 1966); Biomechanoid (portfolio 1969); Trip- Tychon (portfolio 1970); Passagen (portfolio 1971); Second Celebration of the Four (portfolio 1977); Erotomechanics (portfolio 1980); N.Y. City (portfolio 1982), not the same as the book. See also: FANTASY; ILLUSTRATION.

GIJSEN, WIM
[r] BENELUX.

GILBERT, JOHN
(1926-) US writer whose sf novel, Aiki (1986), sets a gladiatorial martial-arts tale in 21st-century New York. [JC]

GILBERT, (WILLIAM) STEPHEN
(1912-) UK writer whose first novel, The Landslide (1943), is a PARALLEL-WORLDS fantasy of some complexity in which primeval eggs, exposed by the titular slide, begin to hatch. His second, Monkeyface (1948), movingly explores the familiar territory of the self-aware ape (APES AND CAVEMEN). His best-known sf novel, Ratman's Notebooks (1968; vt Willard 1971 US), is fundamentally a horror tale. Ratman conceives a special relationship with rats, comes precariously to dominate and commune with them, and leads their vengeful incursions on the world at large; but there is a comeuppance. The book was filmed as Willard (1971). [JC]

GILCHRIST, JOHN
ROBERT HALE LIMITED.

GILES, BAXTER

[s] Andrew J. OFFUTT.

GILES, GEOFFREY
[s] Walter GILLINGS.

GILES, GORDON A.
[s] Eando BINDER.

GILFORD, C(HARLES) B(ERNARD)
(1920-) US teacher and writer whose sf novel, *The Liquid Man* (1969), features a scientist and a problem in undesired metamorphosis, the nature of which is clear from the title. In *The Crooked Shamrock* (1969), the heir to the British throne is abducted by an Irish gang, and raised to adulthood by them before becoming king. [JC]

GILLESPIE, BRUCE
(1947-) Australian educational-books editor, critic and from 1969 publisher of a FANZINE (current), SF COMMENTARY, where much of his writing on sf has appeared. Some of this was reprinted in *Philip K. Dick: Electric Shepherd* (critical anth 1975) ed BG, published by Norstrilia Press, a SMALL PRESS named in honour of Cordwainer SMITH and founded by BG with Carey Handfield and Rob Gerrand; Norstrilia, now long silent, published more than 20 books, many of sf relevance. A later fanzine (from 1984) is *The Metaphysical Review*, which also carries occasional critical pieces. BG has received 9 Ditmar AWARDS for fan writing and publishing and 2 William Atheling Jr Awards for criticism. [PN]See also: AUSTRALIA.

GILLIATT, PENELOPE (ANN DOUGLAS)
(1932-1993) UK writer best known for her work outside the sf field, including the esteemed screenplay for *Sunday, Bloody Sunday* (1971). Her sf novel, *One by One* (1965), depicts a NEAR-FUTURE London hit by a devastating plague. [JC]

GILLILAND, ALEXIS A(RNALDUS)
(1931-) US cartoonist and writer who won HUGOS as Best Fan Artist in 1980, 1983, 1984 and 1985; he also won the JOHN W. CAMPBELL AWARD for Best New Writer of 1982. As an official in the US Federal Government 1956-82, serving mainly as a chemist and specification writer, AAG was well situated to spoof bureaucracy, though his first sf books, the *Rosinante* trilogy - *The Revolution from Rosinante* (1981), *Long Shot for Rosinante* (1981) and *The Pirates of Rosinante* (1982) - significantly stop short of depicting all forms of government as intrusion. Set on a space station chafing at bureaucratic interference from faraway Earth, the sequence amusingly depicts first the successful revolt, then the dawning realization of the occupants that their COMPUTERS have taken control. *The End of the Empire* (1983) features, contrastingly, a protagonist who works to defend a GALACTIC EMPIRE against a comically conceived LIBERTARIANISM, on the grounds that too little government is no less damaging than too much. AAG's second series, the *Wizenbeak* sequence - *Wizenbeak* (1986), *The Shadow Shaia* (1990) and *The Lord of the Troll-Bats* (1992) - is fantasy, featuring a comical wizard who had appeared in cartoon form in previous years. AAG's books of cartoons, where *Wizenbeak* can also be found, include *The Iron Law of Bureaucracy* (graph coll 1979), *Who Says Paranoia Isn't "In" Anymore*

(graph coll 1985) and The Waltzing Wizard (graph coll 1990). [JC]

GILLINGS, WALTER (HERBERT)

(1912-1979) UK journalist and editor, active in FANDOM from the early 1930s; he published (1937-8) 7 issues of an historic FANZINE, Scientifiction. This activity led to his editing the first true UK sf magazine, TALES OF WONDER (1937-42). Immediately after WWII he joined the author Benson HERBERT to create the Utopian Publications imprint, which issued sf, fantasy and some soft-core pornography in cheap paperback format; this included the AMERICAN FICTION and STRANGE TALES series. WG then edited the 3 issues of FANTASY (1946-7). After its demise he produced the professional-looking fanzine FANTASY REVIEW (1947-50); when, in 1950, he was given the editorship of the new professional magazine SCIENCE FANTASY, the fanzine was incorporated as a section of the first 2 issues. John CARNELL took over editorship of Science Fantasy with #3 (Winter 1951/2), and WG dropped out of sf activities for some years. He then produced another fanzine, Cosmos, for 3 issues in 1969, and also appeared regularly in VISION OF TOMORROW (1969-70) with a series about the HISTORY OF SF in the UK, and again as a columnist in SCIENCE FICTION MONTHLY (1974-6), where he also had a column as Thomas Sheridan - the pseudonym under which he had years earlier published the first of his 3 sf stories, "The Midget from Mars" for Tales of Wonder in 1938. Another story, "Lost Planet" (Fantasy 1946), was published as by Geoffrey Giles. [PN]See also: BRITISH SCIENCE FICTION ASSOCIATION; SF MAGAZINES.

GILLMORE, INEZ HAYNES

Pseudonym of US writer Inez Haynes Irwin (1873-1970), whose sf novel, Angel Island (1914), conveys an almost surreal FEMINIST message with considerable competence. After five men are shipwrecked on the eponymous island (in the ROBINSONADE tradition) and tame the beautiful winged women who inhabit it by clipping their wings and breeding with them, the tale gradually makes explicit a kind of consciousness of outrage on the part of the caged beings. [JC]

GILLMORE, PARKER

(? -?) UK writer, mostly of travel books published 1869-93. His sf novel, The Amphibion's [sic] Voyage (1885), is a tale shaped suspiciously like a travelogue, but manages to evoke some interest for the eponymous land-and-sea vehicle, which carries its passengers into encounters with a sea monster or two. [JC]

GILL WOMAN

Roger CORMAN; PLANETA BUR.

GILMAN, CHARLOTTE PERKINS

(1860-1935) US editor, writer and lecturer, and an important figure in the history of US FEMINISM. Although by no means negligible, her later fiction was clearly dedicated to the promulgation of a copious flow of radical thought. However, her first story, The Yellow Wall Paper (1892 New England Magazine; 1899 chap) as by Charlotte Perkins Stetson, was long read as a relatively straightforward tale of horror; it took no substantial task of decoding for later readers to understand that the powerful delusional imagery of the tale reflects the intolerable stress

felt by its autobiographical protagonist at being forced to act out the role of a compliant and sequestered female. CPG divorced her husband in 1894, after having moved to California; she then spent half a decade lecturing before remarrying. The rest of her life was productive. She founded, edited, and wrote almost the entire contents of *The Forerunner*, an issues-oriented journal which ran 1909-16; here first appeared many of the stories assembled decades later as *The Yellow Wallpaper and Other Writings* (coll 1989). This volume does not include the book-length feminist UTOPIA "Moving the Mountain" (1911 *The Forerunner*), set in 1940 after women have decided that enough is enough and have taken over running the USA on a basis of humane, socialist equality. More famously, *Herland* (1914 *The Forerunner*; 1979), along with its sequel "With Her in Ourland" (1916 *The Forerunner*), depicts an isolated parthenogenetic society 2000 years hence. Three men stumble into this gentle, humorous, wise utopian venue; one idolatrously reveres women, one is a male chauvinist, and the third narrates. In the sequel, a woman from *Herland* visits the USA, which she finds worthy of very considerable comment. An autobiography, *The Living of Charlotte Perkins Gilman* (1935), was published after CPG, aged 75, had discovered she had cancer and committed suicide. [JC]About the author: *To Herland and Beyond: The Life and Work of Charlotte Perkins Gilman* (1990) by Ann J. Lane. See also: POLITICS.

GILMAN, ROBERT CHAM
Alfred COPPEL.

GILMORE, ANTHONY
Collaborative pseudonym used in *Astounding Stories of Super-Science* by Harry BATES and Desmond W. HALL, respectively editor and assistant editor of that magazine, for the enthusiastically received Hawk Carse series, put into book form as *Space Hawk* (1931-2 ASF; fixup 1952). Carse and his Black assistant, Friday, are intrepid space adventurers dedicated to driving the Yellow Peril, in the form of the evil Dr Ku Sui, from the spaceways. Bates later revived the character, without Hall, in "The Return of Hawk Carse" (1942). [MJE]See also: ASTOUNDING SCIENCE-FICTION.

GILSON, BARBARA
Charles GILSON.

GILSON, CHARLES (JAMES LOUIS)
(1878-1943) UK writer, best known for fantasies like *The Cat and the Curate* (1934 US), in which a cat is transformed into a seductive Middle Eastern lady, and for LOST-WORLD tales like *The Lost Island* (1910) and, as by Barbara Gilson, *Queen of the Andes* (1935). Other novels with sf elements, generally for a juvenile market, include *The Pirate Aeroplane* (1913), *The Realm of the Wizard King* (1922) and *The City of the Sorcerer* (1934). [JC]

GINSBURG, MIRRA
(1919-) Russian-born US editor, writer and translator. She began her translating career with a version of Mikhail BULGAKOV's "The Fatal Eggs" for FSF in 1964, and later translated an abridged version of his *Master i Margarita* as *The Master and Margarita* (1967). Other translations include a collection of stories by Yevgeny ZAMIATIN, *The Dragon: Fifteen Stories* by

Yevgeny Zamyatin (coll trans from various sources 1967), a new version of his *We* (1920; 1972), and a juvenile sf novel by Lydia OBUKHOVA, *Lilit* (trans as *Daughter of Night* 1974). She has edited and translated the stories for 3 collections of Soviet sf (RUSSIA; SOVIET UNION): *Last Door to Aiya* (anth 1968), *The Ultimate Threshold* (anth 1970) and *The Air of Mars and Other Stories of Time and Space* (juvenile anth 1976). MG also edited *The Fatal Eggs and Other Soviet Satire* (anth 1965), which contains several fantasies. She has written books for very young children. [JC/PN]

GIPE, GEORGE

(1933-1986) US writer known within the sf field for several competent film ties: *Resurrection* * (1980), *Gremlins* * (1984) (Joe DANTE), *Explorers* * (1985) (EXPLORERS) and *Back to the Future* * (1985) (BACK TO THE FUTURE). [JC]

GIR

Jean GIRAUD.

GIRAUD, JEAN

(1938-) French artist (now resident in the USA); staggeringly prolific, remarkably inventive and influential, he is better known in the sf field as Moebius. With his loose, eloquent line style, JG is considered one of Europe's major talents, and his work has influenced an entire generation of fantasy and sf artists. Born in Fontenoy-sous-Bois, near Paris, he displayed from childhood a love of illustration. His early influences were classic US COMIC strips and the engravings of Gustave Dore (1833-1883). He attended the Ecole des Arts Appliques 1954-6, and then wrote and drew a Western comic strip before being drafted into the French army. On discharge in 1960 he worked as an assistant to the Belgian comics artist Joseph Gillain (1914-1980) and later illustrated a series of encyclopedia-like books. It was at this time that he created the sobriquet Moebius, which he first attached to a series of dark-humoured comic strips. In 1963 he met writer Jean-Michel Charlier (1924-1989), and together they created the Western series *Lieutenant Blueberry* for the magazine *Pilote*; this work was collected in 29 vols (1965-90; 1977-9 UK), of which 26 were drawn by JG as "Gir". In the late 1960s he began illustrating, as Moebius, a line of French sf books and magazines and created a number of groundbreaking sf strips. In 1975 he cofounded the magazine *METAL HURLANT* ["Screaming Metal"] with fellow-artist Philippe DRUILLET and writer Jean-Pierre Dionnet (1947-). For this magazine he created *Le bandard fou* ["The Horny Goof"] (1975), *Le garage hermetique de Jerry Cornelius* ["The Airtight Garage of Jerry Cornelius"] (from 1975), *Arzach* (1976), *The Long Tomorrow* (1976), scripted by Dan O'Bannon, and *Les aventures de John Difool* ["The Adventures of John Difool"] (1982-9), a multi-part epic written by film-maker Alejandro Jodorowski: *L'Incal noir* ["The Dark Incal"] (graph 1982), *L'Incal lumiere* ["The Bright Incal"] (coll 1983), *Ce qui est en bas* ["What's Below"] (graph 1984), *Ce qui est en haut* ["What's Above"] (graph 1985), *Le cinquieme essence I* ["The Fifth Essence: I"] (graph 1987), *Le cinquieme essence II* (graph 1988) and *Les mysteres de l'Incal* ["The Mysteries of the Incal"] (graph 1989). The Incal stories have been translated into English as *Incal #1* (1988 UK/US), *#2* (1988 UK/US) and *#3* (1988 UK/US). Keeping track of JG's Moebius material is

a bibliographer's nightmare. Books in French include Gir 30 x 40 (graph 1974), Le bandard fou ["The Horny Goof"] (graph 1975), Arzach (graph 1976), John Watercolor et sa redingote qui tue ["John Watercolor and his Killer Overcoat"] (graph 1976), L'homme, est il bon? ["Is Man Good?"] (graph 1977), Cauchemar blanc ["White Nightmare"] (graph 1978), Le garage hermetique ["The Airtight Garage"] (graph 1979), Tueur des mondes ["World Killer"] (graph 1979), Moebius 30 x 30 (graph 1979), Double evasion (graph 1981), L'Homme programme ["The Programmed Man"] (graph 1981), Le disintegre reintegre ["The Disintegrated Reintegrated"] (graph 1982), Memoire du futur ["Memory of the Future"] (graph 1983), Sur l'etoile ["Upon a Star"] (graph 1983), Venise celeste ["Heavenly Venice"] (graph 1984), L'Univers de Gir ["Gir's Universe"] (graph 1985), Starwatcher (graph 1986), Le saga du crystal ["Crystal Saga"] (graph 1987), Les jardins d'Aedena ["The Gardens of Aedena"] (graph 1987), Made in LA (graph 1988), La citadel aveugle ["The Blind Citadel"] (graph 1989), Nineteen Eighty-eight (graph 1990), Les vacances du Major ["Major's Holiday"] (graph 1990) and La deesse ["The Goddess"] (graph 1990). Collected works in English include Moebius 1: Upon a Star (graph coll 1986 US), #2: Arzach and Other Fantasy Stories (graph coll 1986 US), #3: The Airtight Garage (graph coll 1987 US), #4: The Long Tomorrow and Other Science Fiction Stories (graph coll 1988 US), #5: The Gardens of Aedena (graph coll 1988 US), 6: Pharonesia and Other Strange Stories (graph coll 1988 US), #7: The Goddess (graph coll 1989 US) and a collection of graphics, illustrations and sketches under the title The Art of Moebius (graph coll 1989 US). In 1985 JG relocated to Santa Monica, California, and set up Starwatcher Graphics to publish his posters, graphics and other fine-art pieces, and to promote himself as a conceptual designer. He illustrated one two-episode Silver Surfer story, in a surprise team-up with Stan LEE: Parable (1988-9 US). He also illustrated an ecological story for a special "Earth Day" issue of Concrete (1991 US). Meanwhile spin-off series in comic-strip form from his creations such as The Airtight Garage and Incal have been published as collaborative ventures with other artists and writers; these contribute, from a fabric of interlocking themes, to the creation of a Moebius universe. They include The Elsewhere Prince (1990 US), The Man from Ciguri (1990-91 US), The Onyx Overlord (4-issue comic-book series beginning 1992 US) and Legends of Arzach (6-issue series of short stories accompanied by colour artwork commissioned from leading artists in the comics medium, beginning 1992 US). JG has also been influential in designing for and storyboarding films. Alejandro Jodorowski hired him in 1976 to storyboard his projected film adaptation of Frank HERBERT's novel DUNE (fixup 1965), a venture eventually abandoned through lack of funding. JG designed spacesuits and uniforms for Ridley SCOTT's ALIEN (1979). He designed the animated feature Les maitres du temps ["The Time Masters"] (1982) dir Rene Laloux, based on L'orphelin de Perdide ["The Orphan from Perdide"] (1958), the novel by Stefan WUL, and worked on Disney's TRON (1982) and on Nemo, a Japanese animated film (based on Winsor MCCAY's Little Nemo in Slumberland), in production in 1992. He designed the creature for James CAMERON's 1989 film The ABYSS. A French postage stamp designed by and in honour of JG was issued in 1988.

GIVINS, ROBERT C(ARTWRIGHT)
(1845-1915) US writer whose sf novel, *A Thousand Miles an Hour* (1913), might stand as a compendium of misunderstood science; examples are the concept of an airplane whose vertical screw allows it to remain still while the world turns, and the notion that gravity stops 40 miles up. [JC]

GLADIATORERNA
(vt *The Peace Game*; vt *The Gladiators*) Film (1968). Sandrews/New Line. Dir Peter WATKINS, starring Arthur Pentelow, Frederick Danner, Kenneth Lo, Bjorn Franzen. Screenplay Nicholas Gosling, Watkins. 105 mins, cut to 91 mins. Colour. Watkins uses his customary cinema-verite approach in this Swedish film about a NEAR FUTURE in which, as a surrogate for full-scale war, small teams of soldiers fight it out under the guidance of a COMPUTER. He generates considerable righteous indignation over this, rather pointlessly in that such a system does not exist in reality and is unlikely ever to do so. The battle games are not well staged and the film lacks the impact of Watkins's other sf films, which include *The WAR GAME* (1965), *PRIVILEGE* (1966) and *PUNISHMENT PARK* (1971). A very similar theme was much later used in *ROBOT JOX* (1990). [JB/PN]

GLADIATORS, THE
GLADIATORERNA.

GLAMIS, WALTER
[s] Nat SCHACHNER.

GLASBY, JOHN S(TEPHEN)
(1928-) UK writer, chemist and astronomer, Fellow of the Royal Society of Astronomy, author of popularizing texts in that field and of a large number of stories and novels in various genres for pulp publishers of the 1950s and 1960s. Like R.L. FANTHORPE - alongside whom he supplied *BADGER BOOKS* with most of their sf and fantasy titles - and Dennis HUGHES, he severely curtailed his production when market conditions changed, publishing only one sf novel, *Project Jove* (1971 US), after 1970, although in about 1990 he began to publish short stories once again. Like his colleagues, JSG wrote mainly under a range of pseudonyms and house names, beginning with *Satellite B.C.* (1952), *Time and Space* (1952) and *Zero Point* (1952), all these titles being collaborations with Arthur ROBERTS, sharing the house name *Rand LE PAGE*; JSG's most frequently used personal pseudonym was A.J. Merak. Though much of his work, either solo or in collaboration, was hasty and unremarkable, JSG was entirely capable of more memorable work, especially perhaps in some early stories which showed the influence of A.E. VAN VOGT. [JC] Other works: As John Adams: *When the Gods Came* (1960). As R.L. Bowers: *This Second Earth* (1967). As Berl CAMERON (house name): *Cosmic Echelon* (1952) with Arthur Roberts; *Sphero Nova* (1952) with Roberts. As J.B. Dexter: *The Time Kings* 1958). As Victor LA SALLE (house name): *Dawn of the Half-Gods* (1953); *Twilight Zone* (1954). As Rand Le Page:

See above. As Paul LORRAINE (house name): Zenith-D (1952) with Arthur Roberts. As John C. Maxwell: The Time Kings (1958). As A.J. Merak: Dark Andromeda (1954); Dark Conflict (1959); The Dark Millennium (1959); No Dawn and No Horizon (1959; vt The Frozen Planet 1969 US); Barrier Unknown (1960); Hydrosphere (1960). As John E. MULLER (house name): Alien (1961); Day of the Beasts (1961); The Unpossessed (1961). As J.L. Powers: Black Abyss (1960). As Karl ZEIGFREID (house name): The Uranium Seekers (1953); Dark Centauri (1954).

GLASKIN, G(ERALD) M(ARCUS)

(1923-) Australian writer whose sf novel A Change of Mind (1959 UK) concerns a hypnotic mind-transference between two men, with much emotional activity - and melodrama - consequent upon the changeover. GM has also written a series of nonfiction books, beginning with Windows of the Mind: The Christos Experiment (1974), describing experiments purporting to involve a form of psychic TIME TRAVEL a la J.W. DUNNE. [JC] See also: PSEUDO-SCIENCE.

GLASSER, ALLEN

(? -) US writer and sf fan, briefly active in the 1930s, and who is now remembered as the author of The Cavemen of Venus (1932 chap), a story in pamphlet form which seems to have been the first independent fiction published by the soon-to-be-active fan press. It was published by Conrad H. Ruppert (see SMALL PRESSES AND LIMITED EDITIONS). [JC]

GLASSFORD, WILFRED

Wilfred Glassford MCNEILLY.

GLEN AND RANDA

Film (1971). UMC. Dir Jim McBride, starring Steven Curry, Shelley Plimpton, Woodrow Chambliss, Garry Goodrow. Screenplay Lorenzo Mans, Rudolf WURLITZER, McBride. 94 mins. Colour. The film opens with a shot of a naked man and woman walking hand-in-hand through a dreamlike setting, but it soon becomes clear that this is not the Garden of Eden but a post-HOLOCAUST USA. The young couple drift through the shattered debris of civilization in a search for the mythical city of Metropolis, encountering other survivors along the way; Randa (Plimpton) dies in childbirth, but Glen (Curry) continues his quest. Though made independently for very little money (shot on 16mm and later blown up to 35mm), GAR is more interesting than most of its kind due to McBride's ingenuity in creating an evocatively desolate and sometimes beautiful setting out of existing landscapes; the film is austere but hopeful. McBride has not done much commercial work, but he did go on to make the excellent thriller The Big Easy (1986). [JB/PN]

GLOAG, JOHN

(1896-1981) UK writer, primarily in the fields of social history, architecture and design. His first sf novel, Tomorrow's Yesterday (1932), strongly influenced by H.G. WELLS's THE TIME MACHINE (1895) and Olaf STAPLEDON's LAST AND FIRST MEN (1930), is a satirical criticism of contemporary society as viewed by our successors, a race of cat people who have mastered TIME TRAVEL. Time manipulation featured prominently in several of JG's short stories and, through a drug capable of unlocking

ancestral memories, in the novel 99% (1944). His other novels, again with strong satirical overtones, are chiefly concerned with the effect of new discoveries on society. In *The New Pleasure* (1933) a chemical is used to heighten the sense of smell; in *Winter's Youth* (1934) a rejuvenation process adds 30 years to one's life; and in *Manna* (1940) a fungus that appeases hunger creates a lethargic population. *Tomorrow's Yesterday* was reprinted, with slight revisions, in *First One and Twenty* (coll 1946), which also incorporates 10 stories from *It Makes a Nice Change* (coll 1938). Other fantasy stories appear in *Take One a Week* (coll 1950). After a long period away from the field, JG published a series of historical fantasy novels, *Caesar of the Narrow Seas* (1969), *The Eagles Depart* (1973) and *Artorius Rex* (1977), which attracted comparison with the works of Susan COOPER. [JE] Other works: *Artifex, or The Future of Craftsmanship* (1926 chap), nonfiction; *Sacred Edifice* (1937); *Slow* (1954). About the author: "The Future Between the Wars: The Speculative Fiction of John Gloag" by Brian M. STABLEFORD in *Foundation* (1980). See also: BIOLOGY; END OF THE WORLD; HISTORY IN SF; HISTORY OF SF; POLITICS; REINCARNATION; WAR; WEAPONS.

GLOSSOP, [Captain] REGINALD

(1880-?) UK writer, long resident in France, remembered almost exclusively for *The Orphan of Space* (1926), which lamely prefigures C.S. LEWIS's Ransom trilogy in the conceit that Earth is a diseased planet barred from the higher spheres. The plot concerns the collaboration of a kind of spirit of Gaia with the ghost of a long-dead Chinese scientist to pass the secret of atomic energy on to the protagonists in 1935, so that they can cleanse the planet of its ailment. Some of RG's other novels were vanity-published. [JC] Other works: *The Coming Invasion* (1903 chap); *The Crystal Globe* (1922); *The Magic Mirror* (1923); *Burning Sands* (1928 France); *The Ghastly Dew* (1932), a future- WAR tale in which the Channel Tunnel is a threat; *The Egyptian Venus* (1946).

GLUT, DONALD F(RANK)

(1944-) US writer whose first publications of interest were nonfiction studies like *The Frankenstein Legend* (1973) and *The Dracula Book* (1975), and who also wrote filmscripts. His first novel, *Bugged* (1974), is fantasy; his second, *Spawn* (1976 Canada), is an sf tale featuring intelligent dinosaurs. What seems to have been an extensive interest in the subject led to the *New Adventures of Frankenstein* sequence - *Frankenstein Lives Again* (1977; exp 1981), *Terror of Frankenstein* (1977), *Bones of Frankenstein* (1977 UK) and *Frankenstein Meets Dracula* (1978 UK) - as well as to a further nonfiction title, *The Frankenstein Catalog* (1984), a useful bibliographical companion to the subject. DFG has also written a tie, *The Empire Strikes Back* * (1980), novelizing *The EMPIRE STRIKES BACK*; this text was also published as *The Empire Strikes Back: The Illustrated Edition* * (1980) and assembled in *The Star Wars Trilogy* * (omni 1987) along with the two other relevant novelizations, by Alan Dean FOSTER (writing as George LUCAS) and James KAHN. [JC]

GLYN JONES, RICHARD

(1946-) UK illustrator and publisher. He graduated from Sheffield University and went on to postgraduate work in experimental psychology.

With no formal art training, he began illustrating with underground COMIC strips and became, along with Mal DEAN, the most important illustrator for NEW WORLDS under the editorship of Michael MOORCOCK. He was designer for the last few issues, and also for the succeeding paperback book series. His work shows surprising and inventive contrasts between dark and light spaces, and a striking sense of design. He has also done book covers. In the 1980s he set up a SMALL PRESS in London, Xanadu Publishing, which produced Science Fiction: The 100 Best Novels (1985) by David PRINGLE and other genre-related titles. [PN]

GLYNN, A(NTHONY) A(RTHUR)

(1929-) UK journalist and writer whose sf novels - both routine pulp productions typical of UK publishing at the time - are Search the Dark Stars (1961), under the BADGER BOOKS house name John E. MULLER, and Plan for Conquest (1963). Though he preferred sf, AAG wrote mostly Westerns. [JC]

GNAEDINGER, MARY

(1898-1976) US editor who, as an employee of the Frank A. MUNSEY chain of PULP MAGAZINES, was made editor in 1939 of the new magazine FAMOUS FANTASTIC MYSTERIES. She edited all 81 issues of the magazine, which eventually ceased publication in 1953, as well as two companion magazines: FANTASTIC NOVELS, published 1940-41 and again 1948-51, and A. MERRITT'S FANTASY MAGAZINE, published 1949-50. All three were devoted to reprinting old stories. [MJE]

GNOME PRESS

US specialist SMALL PRESS founded in 1948 by Martin GREENBERG and David A. KYLE. It was the most eminent of the fan publishers of sf, and produced more than 50 books, surviving into the early 1960s. It published many of the major sf authors, and in some cases, as with Robert E. HOWARD's Conan series (published in 6 books 1950-55) and Isaac ASIMOV's Foundation series (published in 3 books 1951-3), was responsible for the manner in which their stories were collected into book form. Other authors included Arthur C. CLARKE, Robert A. HEINLEIN and C.L. MOORE. An associated imprint was Greenberg: Publisher, and in 1958 GP bought out the stock of FANTASY PRESS. Most of GP's books were hardcover, but some saw simultaneous softcover editions. GP was important in the transitional period between GENRE SF as a magazine phenomenon and its arrival in mass-market book PUBLISHING. [MJE/PN]

GOBLE, NEIL

(1933-) US Air Force officer, technical writer, and author of a borderline-sf novel, Condition Green: Tokyo (1967). His first published sf was "Master of None" (ASF 1962). Asimov Analyzed (1972), published by MIRAGE PRESS, is perhaps too respectful toward its subject, and is now out of date. [PN]

GODBER, NOEL (LAMBERT)

(1881-?) UK writer of several light novels, the first of which, Amazing Spectacles (1931), boasts some sf content: a pair of spectacles allows its wearer to see through clothing. [JC] Other works: Keep it Dark! (1932).

GODFREY, HOLLIS

(1874-1936) US writer in whose sf novel, *The Man who Ended War* (1908), the inventor of a radioactive metal-disintegrating beam (a nuclear weapon of sorts, probably the first in world literature) threatens to destroy the world's warships, one by one, if the great powers refuse to disarm. They resist and he carries out his threat, finally killing himself with his own beam, thereby protecting the secret of its manufacture. [JC] Other works: *Dave Morrell's Battery* (1912).

GODFREY, MARTYN N.

(1949-) Canadian writer whose sf, mostly aimed at the young-adult market, includes *The Vandarian Incident* (1981), *Alien War Games* (1984), *The Last War* (1986) - a post- HOLOCAUST tale - *More than Weird* (1987) and *I Spent my Summer Vacation Kidnapped into Space* (1990 US). To date none has markedly striven to stand out from the routine. [JC]

GODS AND DEMONS

The word "God" (or "Gods") is one of the commonest of all nouns in sf story and novel titles. Although this frequency is partly fuelled by the interest in RELIGION that has characterized sf from its earliest days, we must seek further to explain the sheer scale of the phenomenon. The sf writer is a creator of imaginary worlds; in that sense his activity is godlike. It is, then, natural that he or she should especially enjoy fantasies (some might say delusions of grandeur) about superbeings with the ability to create and manipulate whole worlds. But it is not only power fantasies that feed into sf stories about gods; just as important are fantasies of impotence (sf's fascination with the uses of power extending as often to the manipulated as to the manipulators) in which we ourselves are the puppets of (or have even been created by) godlike beings. The idea that we are property - a favourite notion of Charles FORT's - feeds strongly into sf tales of PARANOIA, which are often stories of gods to whom we are subject; one of the commonest forms of METAPHYSICS in sf is to ask whether the universe is wholly arbitrary, or whether its patterns of meaning are somehow planned (though not by us), which brings us full circle back to religion again. A particularly common form of the "we are property" story tale is the retelling of the story of ADAM AND EVE (which see for examples) in terms of what Brian W. ALDISS has termed "Shaggy God" stories: recastings of biblical myth into an sf framework. A common variant is that in which some sort of alien power or god seeds Earth with mankind (Adam and Eve in the first instance), or transmutes the existing ape-people, as in the film *2001: A SPACE ODYSSEY*, where the alien/god takes the form of a black monolith. Such stories were given a new lease of life during the 1970s and early 1980s by the enormous popularity of PSEUDO-SCIENCE books by Erich VON DANIKEN, who saw ancient alien astronauts as having visited Earth eons ago, bearing technological gifts, and now remembered in race memory as gods. The modern sf version of this motif has strange, enormous alien artefacts (BIG DUMB OBJECTS) made - often in space - by a now forgotten race of alien Builders for their own godlike purposes, but seeming to us like incomprehensible sacred relics. Although sf analogues to the One God are comparatively rare in GENRE SF, even in its early days, quite a few works of earlier borderline

sf consider the nature of the Christian God. Marie CORELLI apparently considered religious experience to be electric in nature, and in *A Romance of Two Worlds* (1886; rev 1887) postulated a God who manifests himself electrically. In *A VOYAGE TO ARCTURUS* (1920), David LINDSAY created analogues of the more conventional Christian and Jewish images of God, only to dismiss them in every case as false and cheap in a universe where only pain and personal striving are meaningful. (Analogues of Christ are very much more common in sf than those of God the Father, and are discussed under MESSIAHS.) God-stories in sf are nearly always rationalized, seldom mystical. Many stories are based on the notion that a highly advanced society might seem godlike to a more primitive one, and in many tales of COLONIZATION OF OTHER WORLDS the narrative turns on the difficulties and responsibilities of being seen in this light; an example is *Trudno byt' bogom* (1964; trans as *Hard to be a God* 1973) by the brothers STRUGATSKI. Conversely, other stories present humans as confronted by some form of galactic intelligence which is so high in the order of life as to seem godlike. A very early work by Clifford D. SIMAK, *The Creator* (1935; 1946), features a world-creating alien; the same author's *A Choice of Gods* (1972) proposes a godlike galactic principle. Eric Frank RUSSELL's "Hobbyist" (1947) envisages a god who created life in the Galaxy for mere aesthetic pleasure. A benevolent being does the same thing in Olaf STAPLEDON's *STAR MAKER* (1937) in an altogether more serious treatment of the theme; like several sf writers Stapledon wished to dispense with the anthropomorphic aspects of Christianity while preserving a sense of cosmic meaning and pattern. Not all galactic intelligences are benevolent; James TIPTREE Jr has a godlike galaxy-destroyer in *Up the Walls of the World* (1978). Arthur C. CLARKE proposes a ravening "mad mind" in *The City and the Stars* (1948; exp 1956), but that was created by Man. The Clarke novel raises an interesting notion that recurs quite often, in many forms, from the technological to the quasi-mystical: that a lower form of life might be able to create a higher. A number of stories concern computers that attain godlike powers (see COMPUTERS for a list), sometimes alone and sometimes through a transcendental fusion with their operators, as in *Catchworld* (1975) by Chris BOYCE. A recent example of the computer-god story on an epic scale is Dan SIMMONS's 2-vol *Hyperion Cantos* sequence - *HYPERION* (1989) and *The Fall of Hyperion* (1990) - in which human-created AI networks become the secret manipulators of all things, among their tools being other god-avatars (including the paingod Shrike); the books' titles (and structures) reflect Keats's famous poems about the fall of the old gods and the rise of the new. Indeed the *Hyperion* sequence became overnight the definitive "gods in sf" story, playing almost every imaginable variant on the theme. More metaphysical methods of god-creation are just as common. A.E. VAN VOGT, whose career has largely been devoted to creating SUPERMAN figures, devised the ultimate (though not the most interesting) variant in *The Book of Ptath* (1943; 1947; vt *Two Hundred Million A.D.* 1964; vt *Ptath* 1976), in which a god is created through the force of his followers' prayers, his power being proportional to their number - a vision which governs the most serious of Terry PRATCHETT's *Discworld* novels, *Small Gods* (1992). Gods are created in the flesh in Philip Jose FARMER's *Night of Light* (1957; exp 1966) through the transcendental union of very good (or very bad) men once every seven

years, when the local sun emits a mysterious radiation. In Frank HERBERT's *The God Makers* (1972) humans deliberately create a god using a blend of mystical, psychological and technological means. In this case Herbert's writing was not equal to his theme; and, indeed, god-stories generally meet severe literary problems in attempting to render transcendental experience through GENRE-SF stereotypes. One of the most interesting variants on the theme of the artificially created god is found in Philip K. DICK's *A Maze of Death* (1970), in which a series of mystifying false realities are created, ultimately involving salvation through a godlike Intercessor; only late in the novel is it revealed that the realities and their god are all part of a construct imposed by the computer of a crippled starship. The focus of interest in most sf god-stories is, paradoxically, not religious, though, in the case of Dick and some others, metaphysical questions about reality are certainly raised. More common are god-stories about the exercise of power or the burden of responsibility, or both. The theme is an old one, for the work of the SCIENTIST has been seen by many as a usurpation of powers that are properly God's; such is the case in Mary SHELLEY's *Frankenstein* (1818; rev 1831), where a scientist creates life but cannot create a soul to go with it. A number of variants have been sardonic. James Branch CABELL features several demiurges (world-makers) in his Poictesme fantasies - notably *The Silver Stallion* (1926), where Creation occurs through the boredom of a god whose cosmic perspective leads readily to a detachment seen by its victims as sadistic. This image of less-than-perfect god-creators became almost a CLICHE in genre sf. Robert SHECKLEY, for example, has often proposed rather harassed and incompetent gods, overworked and put upon, as in *Dimension of Miracles* (1968), and Douglas ADAMS echoed this in his *Hitch Hikers' Guide to the Galaxy* books. More seriously, in "Microcosmic God" (1941) Theodore STURGEON has an irresponsible scientist playing god to a miniature world, whose inhabitants he cruelly goads into accelerated technological development. Ursula K. LE GUIN examines the metaphysical aspects of the fallible-god theme, in a manner reminiscent of Dick's work, in *The Lathe of Heaven* (1971). All these works emphasize questions of responsibility. The "delusions of grandeur" aspect of god stories became, starting in the 1960s, the speciality of two very notable sf writers: Philip Jose Farmer and Roger ZELAZNY. Zelazny's "gods" are often, in fact, technologically advanced superhumans, who for not always explained reasons are able to take on "aspects" of godhood, often analogous to those of the gods of legend; the Greek myths in *THIS IMMORTAL* (1966), the Hindu pantheon in *LORD OF LIGHT* (1967) and the Egyptian pantheon in *Creatures of Light and Darkness* (1969). His *Isle of the Dead* (1969) features a feud between gods, and his Amber series features reality changes brought about by quasi-gods in worlds which are constantly changing copies of some Platonic original, beyond which some more ultimate god-figure might be hidden. Many (if not most) of Farmer's books deal with gods, notably the two series set on artificial worlds: the Tierworld series and the Riverworld series. The latter series is the archetype of the "we are property" theme, in which resuscitated humans are the playthings of the gods, and the former emphasizes the all-too-human qualities of the gods that do the manipulating. Artificial worlds of this type can usefully be called POCKET UNIVERSES (which see for further examples), and have become

an sf staple. Farmer and Zelazny regularly and ironically undercut their god-themes with the use of a colloquial and streetwise tone, juxtaposing the sublime with the ridiculous, and this habit has permeated many subsequent examples of the pocket-universe novel. Two writers who have adopted this sort of tone in pocket-universe stories, in which protagonists are manipulated by god figures like pieces on a games board (or perhaps are gods without knowing it), are Piers ANTHONY (sometimes) and Jack L. CHALKER, the latter so devoted to the theme that it embraces almost the whole of his massive output. One pocket-universe variant is the novel set in a VIRTUAL REALITY (which see for examples) generated by human or artificial intelligences. In the last two books of his Neuromancer trilogy (1986-88) William GIBSON has the virtual reality of CYBERSPACE actually occupied by gods within the machine itself, these taking the form of voodoo deities. (The sf voodoo theme, in which archetypal aspects of human behaviour are incarnate - somewhere in the hindbrain? - as gods, may well become a new cliché, one of its more interesting manifestations being in Greg BEAR's *Queen of Angels* [1990].) Philip K. Dick's obsession with godhood runs through much of his work, and indeed entered his life. Our Friends from Frolix 8 (1970) and GALACTIC POT-HEALER (1969) both feature alien quasi-gods and their effect on humans. The Three Stigmata of Palmer Eldritch (1965), as the title suggests, is about a god-being, once a businessman but now inhuman and metallic, who is able to bring about menacing reality-changes that seem almost to be beyond good and evil. Dick's nightmares of ordinary people being cosmically manipulated carry an emotional charge much more intense than genre sf is normally able to produce. Towards the end of his career, theology became his over-riding theme to an extravagant degree, as in *The Divine Invasion* (1982). Much more straightforward gods appear in that small group of books whose genesis goes back to the idea in medieval astrology that each of the planets has a tutelary spirit. Such is the case in C.S. LEWIS's trilogy about Ransom, whose inspiration is directly Christian. The aliens in the novella "If the Stars are Gods" (1974), the title story of the fixup novel of the same name (1977) by Gordon EKLUND and Gregory BENFORD, believe that the universe is controlled by gods located in suns (an idea to be found in William Blake's poetry); the amusing *Dogsbody* (1975) by Diana Wynne JONES is another to make use of the notion. A more sciencefictional version of the same theme is in the living stars of Frank Herbert's *Whipping Star* (1970) and its sequel *The Dosadi Experiment* (1977). Indeed Herbert is, like Dick, a writer for whom godlike figures are the central theme in a majority of his work, most celebratedly in the figures of Paul Atreides (something of a maimed god) in the *Dune Messiah* (1969) and his son Leto, who is transformed in *Children of Dune* (1976) and further in *God-Emperor of Dune* (1981). Further sf god-novels of note include (some at the fantasy end of the spectrum): *The Man who was Thursday: A Nightmare* (1908) by G.K. CHESTERTON, in which a recruiter of secret agents turns out to be God; *The Circus of Dr Lao* (1935) by Charles FINNEY, in which demigods are caged in a circus; most novels by Thomas Burnett SWANN and (though sometimes obscurely) most novels by Gene WOLFE, including *There are Doors* (1988); Harlan ELLISON's *Deathbird Stories: A Pantheon of Modern Gods* (coll 1975; rev 1984); *STRATA* (1981) by Terry Pratchett, as well as his *Discworld* sequence; *Courtship Rite* (1982) by Donald KINGSBURY; *Winterking* (1984) by

Paul HAZEL; Planet of Whispers (1984) by James Patrick KELLY, in which whispers from the right side of the brain are interpreted as the voice of God; Waiting for the Galactic Bus (1988) by Parke GODWIN, in which aliens take the roles of God and the Devil; The Ring (1988) by Daniel Keys MORAN, a Wagner-pastiche in which the gods are genetically engineered superbeings; Neverness (1988) by David ZINDELL, which has a godlike entity whose being is made up of many star systems and who can be reached only by solving mathematical theorems; Rats and Gargoyles (1990) by Mary GENTLE; The Werewolves of London (1990) by Brian M. STABLEFORD; and The Face of the Waters (1991) by Robert SILVERBERG (who has written earlier god-novels, too), in which God is a planetary consciousness. Gods are comparatively rare in sf CINEMA, two exceptions being the appalling RED PLANET MARS (1952), where God turns out to be real and in charge of Mars, and GOD TOLD ME TO (1976; vt Demon), where God the son is reincarnated as a hermaphrodite who tells his subjects to commit mass murder. The concept of demons and devils is equally common in sf, but usually at a quite trivial level: they tend, as in non-horror FANTASY generally, to be seen simply as frightening and malicious entities derived from medieval Christian ideas of Hell, and are quite often played for laughs. There are many demonology stories with sf elements, such as the time-warping demon in Anthony BOUCHER's "Snulbug" (1941) and the other-dimensional alien blood-drinker in Henry KUTTNER's "Call Him Demon" (1946). Norvell W. PAGE's "But without Horns" (1940) uses demonic imagery in a story of a telepathic MUTANT. Demons proper often appear in SWORD AND SORCERY; demonic creatures of darkness were all in a day's work to Robert E. HOWARD's Conan. Particularly unpleasant aliens are often given demonic form (sometimes with talk about racial memory) in genre-sf stories, as in van Vogt's second published story, "Discord in Scarlet" (1939; in The Voyage of the Space Beagle fixup 1950) - which may have been the (unacknowledged) source of the film ALIEN - and Keith LAUMER's A Plague of Demons (1965), both truly nasty creations. A famous twist on the theme is found in Arthur C. Clarke's Childhood's End (1950; exp 1953), in which mankind is confronted by aliens shaped exactly like the Devil (racial precognition of their arrival explains his bat-winged image in Christian mythology) but turn out to have mournfully paternalistic natures. Several sf-oriented fantasies by HARD-SF writers have imagined that Hell and its demons are real, and created a kind of quasi-scientific rationale for them. An early example is Robert A. HEINLEIN's "The Devil Makes the Law" (1940; with vt as 2nd title story of Waldo and Magic, Inc. coll 1950); more recent examples are Operation Chaos (1956-9 FSF; fixup 1971) by Poul ANDERSON and the DANTE ALIGHIERI pastiche Inferno (1975) by Larry NIVEN and Jerry POURNELLE. Demons are, of course, by no means peculiar to Christianity, though in some other mythologies they are hardly to be distinguished from malign or death-dealing gods, as in the demonic green-eyed boy god who haunts the degenerate CYBERPUNK future of Elizabeth HAND's Winterlong (1990). The strong prevalence of god (and devil) themes in sf strongly suggests that, as a genre, sf is not quite the hard-headed, extrapolative literature its proponents sometimes claim. On the other hand, at a time when many actual physicists publish books attempting to reconcile COSMOLOGY or quantum mechanics with the idea of God, it is hardly surprising if sf writers do the same. GOD TOLD ME TO

(vt Demon) Film (1976). Larco. Prod and dir Larry Cohen, starring Tony Lo Bianco, Deborah Raffin, Sandy Dennis, Richard Lynch. Screenplay Cohen. 89 mins. Colour. It is as well that Larry COHEN has his own production company, Larco, since it is impossible to imagine any other company taking on so eccentric a project. This is perhaps the most baroque sf movie ever made. A devout Catholic detective (Lo Bianco) investigates separate instances of mass murder linked by the assassins' confessions that God had told them to do it. Another link is the enigmatic Bernard (Lynch), revealed only at the end to be the hermaphroditic product of a virgin birth - he has a vagina - fathered by a sort of cross between an alien from a flying saucer (UFOS) and a pentecostal fire. Now a MESSIAH, he is responsible for the various murders, having used PSI POWERS to programme the murderers. He offers to bear a child to the (childless) detective, who has only recently learned, to his dismay, that he himself is also the product of an alien-fathered virgin birth. Other directors faced with this bizarre material would have concentrated on the monstrous Bernard; Cohen typically turns it around into a study of the detective's feelings of religious guilt. For all its sophisticated religious symbolism, the film is structured as if it were a conventional policier. [PN]See also: CINEMA; GODS AND DEMONS.

GODWIN, FRANCIS

(1562-1633) English bishop and writer, most noted for his striking description of a lunar UTOPIA in the posthumously and anonymously published *The Man in the Moone, or A Discourse of a Voyage Thither* by Domingo Gonsales, the *Speedy Messenger* (1638). The flight to the low-gravity MOON, accomplished in a flying machine drawn by "gansas" (wild geese) who winter there, is described with some realism; FG cautiously allows that Nicolaus Copernicus (1473-1543) may have been right in some of his theories. (Domingo Gonsales reappears as a character in sf in work by CYRANO DE BERGERAC.) FG's book was reprinted many times in the following centuries - apparently often cut - and was perhaps the most influential work of PROTO SCIENCE FICTION. It is available in *The Man in the Moone: An Anthology of Antique Science Fiction* (anth 1971) ed Faith K. Pizor and T. Allan Comp. [PN]See also: FANTASTIC VOYAGES.

GODWIN, FRANK

[r] CONNIE.

GODWIN, PARKE

(1929-) US writer who began publishing work of genre interest with "Unsigned Original" for *Brother Theodore's Chamber of Horrors* (anth 1977) ed Marvin KAYE "and Brother Theodore". PG has since been more or less equally associated with fantasy and sf, though most of the stories assembled in *The Fire when it Comes* (coll 1984) are the former, the title novella winning a 1982 World Fantasy Award. As an sf writer, PG remains best known for the first two volumes of the *Masters of Solitude* sequence, both with Marvin Kaye: *Masters of Solitude* (1978) and *Wintermind* (1982); a projected third volume has yet to appear. Set in a post- HOLOCAUST USA,

the first volume depicts a conflict between rural followers of a diseased mutant form of Christianity and a city in which a science-based worldview is encapsulated; in the second, a personal drama and an interesting half-breed protagonist intensify the grain of narrative, but peculiarly diminish the sense, given off by the earlier book, of a large sf occasion. A Cold Blue Light (1983), also with Kaye (whom see for the sequel), is a ghost story which confusingly mixes sf and supernatural rationales. PG's second sf sequence, written solo, the Snake Oil series - Waiting for the Galactic Bus (1988), The Snake Oil Wars, or Scheherazade Ginzberg Strikes Again (1989) - is an erratically amusing but ultimately very dark-complexed SATIRE on RELIGION and US society at large, refracted through the behaviour of the two ALIENS who were responsible for breeding Homo sapiens in the first place, and have now taken on the roles of God and Devil; the assault on Christian fundamentalism is explicit. Though a writer whose flamboyance sometimes unhinges his plots, PG remains a figure whose relative obscurity is fully undeserved. [JC]Other works: The Firelord Arthurian fantasy sequence, comprising Firelord (1980), Beloved Exile (1984) and The Last Rainbow (1985); A Memory of Lions (1983), associational; A Truce with Time (1988), contemporary fantasy; Invitation to Camelot (anth 1988); Sherwood (1991) and Robin and the King (1993), two Robin Hood fantasies. See also: GODS AND DEMONS.

GODWIN, TOM

Working name of US writer Thomas William Godwin (1915-1980), whose life and career were afflicted by disease and misfortune: family tragedies caused him to leave school after third grade, kyphosis misshaped his spine and truncated his military career, and he was an alcoholic. He published the first of approximately 30 sf stories, "The Gulf Between", in ASF in 1953, and soon after wrote his most famous tale, "The Cold Equations" (1954), in which a girl stowaway on a precisely payloaded spaceship must be jettisoned by the one-man crew because to transport her extra mass would require more fuel than the starship carries, so making disaster inevitable and dooming also the colony to which the ship is heading. TG's first two novels, The Survivors (1958; vt Space Prison 1960) and its sequel The Space Barbarians (1964), tell of the abandoned human survivors of an alien prison planet who wait 200 years for revenge, then undergo SPACE-OPERA adventures involving a demoralized Earth and telepathic allies but ultimately demonstrating - in the approved ASF fashion - humanity's inextinguishable spirit. A similar bias governs Beyond Another Sun (1971), an anthropological sf novel in which aliens observe Man on another planet. TG wrote relatively little, and almost always within the expansionist tradition fostered by John W. CAMPBELL. What he did write, however, exhibited a fine clarity of conception and considerable narrative verve, though his characterizations were sometimes sentimental. [JC]About the author: "Tom Godwin: A Personal Memory" (1990) by Diane Godwin Sullivan, in Quantum #37. See also: ANTHROPOLOGY; ANTIGRAVITY; COLONIZATION OF OTHER WORLDS; MOON; PHYSICS; PROTO SCIENCE FICTION; RELIGION; SPACE FLIGHT.

GODZILLA

The anglicized version of GOJIRA.

GOG

Film (1954). Ivan Tors/United Artists. Dir and ed Herbert L. Strock, starring Richard Egan, Constance Dowling, Herbert Marshall. Screenplay Tom Taggart, from a story by Tors. 85 mins. 3-D. Colour. In this slow-moving film, originally in 3-D, experiments are being carried out on human subjects in a secret underground laboratory to determine whether manned space flight is possible. Various pieces of equipment start to behave in a lethal fashion: a man loses his life in a centrifuge, another is frozen to death in a high-altitude chamber, a third is killed by high-frequency sound. Finally two experimental ROBOTS, Gog and Magog, go berserk. These accidents turn out to be the work of a foreign power which has taken over the lab's COMPUTER by means of instructions transmitted from a high-flying aircraft. The film's style is similar to that of the tv series SCIENCE FICTION THEATRE (1955-7), also produced by Tors. [JB/PN]

GOGOL, NIKOLAI
RUSSIA.

GOHAGEN, OMAR
AMAZING STORIES; FANTASTIC.

GOJIRA

(vt Godzilla, King of the Monsters; vt Godzilla) Film (1954 Japan; exp with new footage 1956 US). Toho/Embassy. Dir Inoshiro Honda, starring Takashi Shimura, Akira Takarada, Akihiko Hirata (and Raymond Burr in US version). Screenplay Takeo Murata, Honda, based on a story by Shigeru Kayama. 98 mins cut to 81 mins for US release. B/w. This was the first of a long series of Japanese (JAPAN) films featuring Gojira (anglicized as Godzilla), a 400ft (120m) amphibious dinosaur that breathes fire; the name is a portmanteau word from "gorilla" and "kujira" ["whale"]. The film was bought by a US company which released it internationally in 1956 as Godzilla, King of the Monsters (vt Godzilla), replacing segments featuring a Japanese reporter by footage starring Raymond Burr. This first Gojira film was basically a conventional MONSTER MOVIE (nuclear radiation revives a prehistoric monster in the Pacific Ocean and it proceeds to devastate Tokyo), but over the years the sequels have become increasingly esoteric, not to say silly. Originally Toho Studio's special effects (supervised until his death in 1970 by Eiji Tsuburaya) for the Gojira series were fairly impressive, but they became more perfunctory. Unlike Willis H. O'BRIEN's and Ray HARRYHAUSEN's monsters - achieved with stop-motion animation of puppets - Gojira was created using either a man in a suit or small mechanized models. Between Gojira and GOJIRA 1985 (1985) there were 14 other Gojira films: Gigantis (1955; vt Gojira No Gyakushu) released in English as Gigantis the Fire Monster (1959; vt Godzilla Raids Again; vt The Return of Godzilla), with the monster's name changed; King Kong vs. Gojira (1962), released in English as King Kong vs. Godzilla, very successful financially; Mosura vs. Gojira (1964; vt Gojira vs. Mothra), released in English as Godzilla vs. The Thing (vt Godzilla vs. Mothra), featuring the likeable giant moth from MOSURA (1961) and thought by some to be the best of the series; Kaiju Daisenso (1965), released in English as Invasion of Astro-Monster (vt Battle of the Astros; vt Monster Zero; vt Invasion of Planet X), in which Gojira and RADON for the first time are weapons of rather than threateners of Earth; Ghidorah Sandai Kaiju Chikyu

Saidai No Kessan (1965; vt Chikyu Saidai No Kessan), released in English as Ghidrah, the Three-Headed Monster, in which Gojira, Radon and Mosura defend Earth from the nastiest of Toho's monsters, previously introduced in Kaiju Daisenso; Nankai No Daiketto (1966), dir Jun Fukuda, released in English as Ebirah, Horror of the Deep (vt Godzilla vs. the Sea-Monster), in which giant crab Ebirah is defeated, the first of the series not to be directed by Honda; Gojira No Musuko (1967), dir Fukuda, released in English as Son of Godzilla, a comical children's film; Kaiju Soshingeki (1968), dir Honda, released in English as Destroy All Monsters (vt Operation Monsterland; vt The March of the Monsters), in which all 11 Toho monsters to date are feebly on display; Oru Kaiju Daishingeki (1969), dir Honda, released in English as Godzilla's Revenge, too much a rerun of old footage; Gojira Tai Hedora (1971), dir Yoshimitsu Banno, released in English as Godzilla vs. The Smog Monster (vt Godzilla Versus Hedora), in which the emphasis changes from anti-nuclear-weaponry-and-radiation to anti-pollution, and Gojira has become an undignified, friendly buffoon; Gojira Tai Gaigan (1972), dir Fukuda, released in English as War of the Monsters (vt Godzilla on Monster Island), in which pollution-ridden aliens try to take over Earth; Gojira Tai Megaron (1973), dir Fukuda, released in English as Godzilla vs. Megalon, in which Megalon is a giant cockroach; Gojira Tai Mekagojira (1974), dir Fukuda, released in English as Godzilla vs. the Bionic Monster (vt Godzilla vs. the Cosmic Monster), in which Gojira battles his alien-controlled cyborg double; Mekagojira No Gyakushu (1975), dir Honda to celebrate Gojira's 20th birthday, released in English as Terror of Mechagodzilla (vt The Escape of Megagodzilla; vt Monsters from the Unknown Planet), a partial return to form, in which aliens again use bad monsters in an invasion of Earth fought off by good monsters. [PN]See also: CINEMA; COMICS; GREAT AND SMALL.

GOJIRA 1985

(vt Godzilla 1985) Film (1985). Toho/New World. Dir Kohji Hashimoto, R.J. Kizer, starring Raymond Burr (in US version), Keiju Kobayashi, Ken Tanaka. Screenplay Shuichi Nagahara, Lisa Tomei, from a story by Tomoyuki Tanaka. 120 mins, cut to 91 mins USA and 87 mins UK. Colour. The original screenplay from GOJIRA (1954) is not credited, but this is effectively a remake of the first film; although it purports to be a sequel, it ignores the other 14 sequels as if they had never happened. Again the radioactive giant dinosaur attacks ships, then destroys Tokyo. Again footage starring Burr as a reporter is spliced in for the US market (the US/UK versions are half an hour shorter than the Japanese). The plotting is dire; its main genuflection to modernity is the Japanese opposition to US and Russian insistence that Gojira should be nuked. The dialogue and characterization of this MONSTER MOVIE are laughable; but the special effects are better than the first time around. [PN]

GOLD

(vt L'Or) Film (1934). UFA. Dir Karl Hartl, starring Hans Albers, Friedrich Kayssler, Lien Deyers, Michael Bohnen, Brigitte Helm. Screenplay Rolf E. Vanloo. 120 mins. B/w. This German film was made by much the same team that had made F.P.1 ANTWORTET NICHT two years earlier, but is more spectacular and also more nationalistic. German scientists are hired by a

megalomaniac Scottish tycoon who wishes to build a nuclear reactor to transmute base metal into gold. The ethics of the heroes eventually prevail, and the successful prototype is destroyed. The laboratory sequences, with dazzling electrical effects, are impressive, but the film as a whole is somewhat leaden. A French-language version, *L'or*, dir Serge de Poligny, was made at the same time with a different cast, though Brigitte Helm, the love interest, appeared in both. [JB/PN]

GOLD, H(ORACE) L(EONARD)

(1914-) Canadian-born writer and editor, in the USA from an early age, though retaining dual nationality. HLG began his sf career with several sales to *Astounding Stories* in the mid-1930s, the first being "Inflexure" (1934). At that time he wrote under the pseudonyms Clyde Crane Campbell and Leigh Keith, a gambit necessitated, he has said, by antisemitism on the part of the publishers. After a hiatus, he returned to the magazine under his own name with "A Matter of Form" (1938), becoming a regular contributor to *UNKNOWN* with such stories as "Trouble with Water" (1939), an enjoyable humorous *MAGIC* story, and "None but Lucifer" (1939), a collaboration with L. Sprague DE CAMP. He was later assistant to Mort WEISINGER on the magazines *CAPTAIN FUTURE*, *STARTLING STORIES* and *THRILLING WONDER STORIES* (1939-41), from which he moved on to true-detective magazines, *COMICS* and radio scripts. During these years he occasionally used two further pseudonyms, Richard Storey in 1943 and Dudley Dell in 1951. In 1950 he started *GALAXY SCIENCE FICTION*, which from the outset he made one of the leading sf magazines, and for the editing of which he remains best known - indeed, notorious. Afflicted with acute agoraphobia as a result of his wartime experiences, HLG worked from his apartment, doing much of his work by telephone. The emphasis of Gal reflected his interests in *PSYCHOLOGY* and *SOCIOLOGY*, as well as *HUMOUR*, and like John W. CAMPBELL Jr - with whom in 1953 he shared the first *HUGO* to be given for editing a professional magazine - he was credited with suggesting many ideas which his contributors turned into famous stories; he also earned a reputation for overediting. An interesting companion magazine, *BEYOND FANTASY FICTION*, which he also edited, lasted 10 issues 1953-5. He edited *GALAXY SCIENCE FICTION NOVELS*, an sf and fantasy reprint series of variable quality, in the same format as Gal. Later still he became editor of *IF* when it was taken over by Gal's owner. He retired from editing both Gal and *If* in 1961. Over the period of his editorship, HLG compiled a number of anthologies from the pages of Gal: *Galaxy Reader of Science Fiction* (anth 1952; cut to 13 out of 33 stories 1953 UK), *Second Galaxy Reader of Science Fiction* (anth 1954; with 11 stories removed, cut vt *The Galaxy Science Fiction Omnibus* 1955 UK), *The Third Galaxy Reader* (anth 1958), *Five Galaxy Short Novels* (anth 1958), *The Fourth Galaxy Reader* (anth 1959), *The World that Couldn't Be and 8 Other Novelets from Galaxy* (anth 1959), *Bodyguard, and Four Other Short Novels from Galaxy* (anth 1960), *The Fifth Galaxy Reader* (anth 1961), *Mind Partner and 8 Other Novelets from Galaxy* (anth 1961) and *The Sixth Galaxy Reader* (anth 1962). He also edited one independent anthology, *The Weird Ones* (anth 1962). Some of HLG's stories were collected in *The Old Die Rich* (coll 1955). *What Will They Think of Last?* (1976) is a selection of his editorials from Gal with an autobiographical postscript. [MJE] See also: *QUESTAR*.

GOLDEN AGE OF SF

It has been said, cynically, that the Golden Age of sf is 14. Certainly there is no objective measure by which we can say that the sf of any one period was notably superior to that of any other. Nonetheless, in conventional usage (at least within FANDOM) older readers regularly refer quite precisely to the years 1938-46 as sf's Golden Age, and younger readers, though not necessarily convinced, had not yet jettisoned the term when the first edition of this encyclopedia was published in 1979. In 1992 it is not a term so often used, though books like *The World Beyond the Hill: Science Fiction and the Quest for Transcendence* (1989) by Alexei and Cory PANSHIN still argue for the primacy of this period as a peak in sf's development. There is little argument about when the Golden Age began. The term is nearly always used of genre magazine sf (GENRE SF), and it is almost always seen as referring to the period ushered in by John W. CAMPBELL Jr's assumption of the editorship of *ASTOUNDING STORIES* in Oct 1937. (By 1938 he had altered the title to *Astounding Science-Fiction*.) Within a few years Campbell had managed to take over not only many of the best (and youngest) working writers of the period, such as L. Ron HUBBARD, Clifford D. SIMAK, Jack WILLIAMSON, L. Sprague DE CAMP, Henry KUTTNER and C.L. MOORE (the last three often in his companion magazine *UNKNOWN*), but to develop such new writers as Lester DEL REY, Eric Frank RUSSELL (who had a couple of stories in ASF before Campbell arrived), Theodore STURGEON and especially the big three, Robert A. HEINLEIN, Isaac ASIMOV and A.E. VAN VOGT. These writers dominated genre sf until their younger contemporaries Alfred BESTER, James BLISH, Ray BRADBURY, Arthur C. CLARKE, C.M. KORNBLUTH and Frederik POHL, after sometimes protracted apprenticeships, emerged as new forces in the late 1940s and early 1950s. But, as soon as these new names are evoked, it becomes clear that it is difficult to say in what sense the Golden Age could be said to have stopped in 1946, or anywhere in the 1940s. Certainly Campbell's ASF was in the latter 1940s receiving quite high-class competition from *STARTLING STORIES*, and a few years later from *GALAXY SCIENCE FICTION* and the *MAGAZINE OF FANTASY AND SCIENCE FICTION*, and by the 1950s it was coming to be seen as a force for conservatism in magazine sf rather than its spearhead. The "end" of the Golden Age may have had more reality, then, for devotees of ASF than for sf readers in general. Certainly 1938-46 was a period of astonishing activity (among comparatively few writers), the time when most of the themes and motifs of sf were taking their modern shape, which in some cases proved almost definitive and in others continued to be reworked and modified, as is the way of genres. It was also the great age of the PULP MAGAZINES (most of which were dead or transfigured into DIGESTS by early in the 1950s), the period in which genre sf belonged primarily to magazines rather than books, which gave the magazine readers something of a sense of belonging to a kind of secret brotherhood (not a sisterhood: the Golden Age stories were by and large written by men for young male readers.) A balanced reading of genre sf since Campbell would probably see it as becoming progressively more mature; it would also see (as sf became more popular) much mechanical reworking of the Golden Age themes by hack writers, whose increasing numbers may have partly obscured the steady improvement in the upper echelons of the genre. Certainly there were slack

periods, the late 1950s being one such and the late 1970s another, but only with tunnel vision and nostalgia could the claim seriously be made that the period of WWII marked a high point in sf that has never been reached again. Indeed, by the 1980s the Golden Age "classics" of sf, which until then had been reprinted constantly, began to drift quietly from the marketplace as they proved less and less accessible to succeeding generations of readers. It is interesting to turn to one of the anthologies of the Golden Age period - perhaps *Adventures in Time and Space* (anth 1946) ed Raymond J. HEALY and Francis MCCOMAS, or the relevant sections of *The Astounding-Analog Reader* (anth in 2 vols 1973) ed Harry HARRISON and Brian W. ALDISS, or *The Science Fiction Hall of Fame* (anth 1970) ed Robert SILVERBERG - and see how banal the writing and retrospectively creaky the plot devices even of the supposed classics often seem. Isaac Asimov's "Nightfall" (1941) retains the potency of its original idea, but the working out is laboured; Lester del Rey's "Helen O'Loy" (1938) is sentimental and patronizingly sexist. The soaring ideas of Golden Age sf were all too often clad in an impoverished pulp vocabulary aimed at the lowest common denominator of a mass market. It would not hurt to remember, also, that the Golden Age was an almost purely US phenomenon, restricted to the not very large readership of a tiny handful of ephemeral magazines. This is not to devalue it; but to keep things in proportion we should remember that elsewhere (in the UK, and in the USA outside the magazines) non-genre sf books of real literary quality were being published and had already been published which had nothing to do at all with what Campbell was offering. But, when all the caveats have been stated - including the almost undeniable counterclaim that sf now is by and large better written than it was then - there is a residue of truth in the Golden Age myth. For older readers, certainly, there has been nothing since then to give quite the same adrenalin charge (not too far removed from the SENSE OF WONDER). It may be a matter of context. Today we expect sf to present us with amazing concepts (as it still, sometimes, does), but in the 1940s this stuff seemed (except for unusually sophisticated readers, which the pulps were not aimed at anyway) to spring miraculously from nowhere at all. In the years 1938-46 the wild and yearning imaginations of a handful of genre writers - who were mostly very young, and conceptually very energetic indeed - laid down entire strata of sf motifs which enriched the field greatly. In those years the science component of sf became spectacularly more scientific and the fiction component more assured. It was a quantum jump in quality, perhaps the greatest in the history of the genre, and, in gratitude to that, perhaps the term Golden Age should be enshrined. As, indeed, it has been by the authors of many histories and commentaries on the genre, from James E. GUNN to Donald A. WOLLHEIM: the Golden Age does not lack defenders. [PN]

GOLDEN ARGOSY, THE
The ARGOSY .

GOLDIN, STEPHEN

(1947-) US writer, married to Kathleen SKY 1972-82. He began publishing sf with "The Girls on USSF 193" for *If* in 1965 and was runner-up for a NEBULA for Best Short Story with "The Last Ghost" (1971). His early novels

- his first, Herds (1975 Canada), was like its immediate successors written for LASER BOOKS - were stereotyped adventures, and he was better known for an ongoing series of E.E. "Doc" SMITH spin-offs, the Family D'Alembert sequence. The first volume, The Imperial Stars * (1964 If; exp 1976) was directly based on a Smith story about the members of a large family who spend their lives saving the Galaxy from a variety of threats; subsequent volumes - Stranglers' Moon * (1976), The Clockwork Traitor (1977), Getaway World * (1977), Appointment at Bloodstar * (1978; vt The Bloodstar Conspiracy 1978 UK), The Purity Plot * (1978), Planet of Treachery * (1982), Eclipsing Binaries * (1983), The Omicron Invasion * (1984) and Revolt of the Galaxy * (1985) - were derived from the initial premise. Aside from these, his later work is more varied. The Eternity Brigade (1980) is an interestingly nightmarish vision of warfare among various mercenary soldiers whose personalities have been reincarnated (REINCARNATION). A World Called Solitude (1981) is a somewhat overburdened drama of identity. The light Rehumanization of Jade Darcy sequence, with Mary Mason, begins in Jade Darcy and the Affair of Honor (1988) at a cafe called Rix's on an entrepot planet much like, one supposes, Morocco in 1942; the series continues with Jade Darcy and the Zen Pirates (1990). SG cannot be called an original force in sf, but he seldom violates his brief of providing well crafted entertainments. He has been editor of SFWA BULLETIN. [JC]Other works: Caravan (1975 Canada); Scavenger Hunt (1976 Canada) and its sequel, Finish Line (1976 Canada); Assault on the Gods (1977); Mindflight (1978); a Star Trek novel: Trek to Madworld * (1978); And Not Make Dreams Your Master (1981); The Business of Being a Writer (1982) with Kathleen SKY, nonfiction; the Parsina Saga, comprising Shrine of the Desert Mage (1988), The Storyteller and the Jann (1988) and Crystals of Air and Water (1989), fantasy. As Editor: SG anonymously collaborated with David GERROLD on several 1970s anthologies - Protostars (anth 1971), Generation: An Anthology of Speculative Fiction (anth 1972), Science Fiction Emphasis 1 (anth 1974), Alternities (anth 1974) and Ascents of Wonder (anth 1977). He also edited The Alien Condition (1973). See also: ALIENS; ESP; SPACE OPERA.

GOLDING, LOUIS

(1895-1958) UK writer, several of whose popular novels are on Jewish themes. The Doomington Wanderer (coll 1934; vt This Wanderer 1935 US; cut in 2 vols vt The Call of the Hand and Other Stories 1944 chap UK and The Vicar of Dunkerly Briggs 1944 chap UK) contains several romantically couched fantasy tales. The Pursuer (1936) sets a psychological parable of a man obsessed by his Conradian "shadow" in an ALTERNATE WORLD very similar to our own, while Honey for the Ghost (1949) tells a similar tale of possession as a ghost story. [JC]Other works: The Miracle Boy (1927), a religious fantasy; Pale Blue Nightgown: A Book of Tales (coll 1944), fantasies; The Frightening Talent (1973).

GOLDING, WILLIAM (GERALD)

(1911-1993) UK writer, awarded the 1983 Nobel Prize for Literature. He wrote a pre-WWII book of Poems (coll 1934), but remained a provincial schoolmaster until the publication of his first and best-known novel, Lord of the Flies (1954), later filmed twice as LORD OF THE FLIES (1963, 1990),

a superficially simple story about a group of schoolchildren trapped on an ISLAND when their plane is shot down while evacuating them from a nuclear HOLOCAUST. Left alone, the boys - who bear the same names as the schoolboy heroes in R.M. Ballantyne's *The Coral Island* (1858) - soon revert (DEVOLUTION) to tribal savagery. Beyond its obvious allegorizing repudiation of its model, the novel constitutes a complex utterance about the darkness of the human condition and the shapes human nature takes when "free" to do so. WG's second novel, *The Inheritors* (1955), written in part as a reaction to H.G. WELLS's "The Grisly Folk" (1921), could be seen as anthropological sf (ANTHROPOLOGY; ORIGIN OF MAN); it views through the eyes of a Neanderthal the morally ambiguous triumph of Cro-Magnon Man. Pincher Martin (1956; vt *The Two Deaths of Pincher Martin* 1957 US) is as much sf as Ambrose BIERCE's "An Occurrence at Owl Creek Bridge", with which it has frequently been compared. A castaway on a tiny rock in the ocean, Pincher seems to be surviving with desperate defiance; but, as the ending makes clear, the rock he clings to is the same shape as a diseased tooth he touches constantly with his tongue, and his "survival" may well be no more than a last flicker of pre-purgatorial consciousness. WG's contribution to *Sometime, Never* (anth 1956) ed anon, a book including also stories by John WYNDHAM and Mervyn PEAKE, is "Envoy Extraordinary", a long tale subsequently made into a play, *The Brass Butterfly* (1957 US; rev 1958 UK), about Alexandrian Greek inventor Phanocles' attempts to get his steam engine, gun, pressure-cooker and printing-press accepted by the Roman emperor, who in refusing these gifts proves philosophically wiser than the inventor. The story also appears in *The Scorpion God* (coll 1971) along with two fantasies. WG's relation to sf is as tangential as his relation to the conventional mainstream novel; especially in his early works, he treads the line between allegory and novel with astonishingly fruitful results. [JC]About the author: Critical literature on WG is extensive and widely available. See also: CONCEPTUAL BREAKTHROUGH; DISCOVERY AND INVENTION; HISTORY IN SF; HISTORY OF SF; SOCIOLOGY.

GOLDMAN, STEPHEN H.

James E. GUNN.

GOLDSMITH, CELE

(1933-) US editor of SF MAGAZINES who in 1956-8 was assistant editor and then managing editor of AMAZING STORIES and FANTASTIC under Paul W. FAIRMAN, becoming editor of both in Dec 1958; she held this position until June 1965, when the magazines were sold and ceased for a time to publish original stories. Under her editorship the quality of both improved markedly; she was prepared to encourage experiment and was particularly sensitive to new writers. Among the authors whose first published stories appeared in her magazines were Thomas M. DISCH, Roger ZELAZNY and Ursula K. LE GUIN; the latter said of CG, in *THE WIND'S TWELVE QUARTERS* (coll 1975), that she was "as enterprising and perceptive an editor as the science fiction magazines ever had". CG married in 1964, becoming Cele G. Lalli. [MJE]See also: WOMEN SF WRITERS; ZIFF-DAVIS.

GOLDSMITH, HOWARD

(1943-) US research psychologist and writer whose fiction - including *The Whispering Sea* (1976), *The Shadow*, and *Other Strange Tales* (coll 1977

chap), *Terror by Night, and Other Strange Tales* (coll 1977) and *Invasion: 2200 A.D.* (1979) - was designed for "reluctant readers". With Roger ELWOOD he produced the anthology *Spine-Chillers: Unforgettable Tales of Terror* (anth 1978). [JC]

GOLDSTEIN, LISA

(1953-) US writer who began writing work of genre interest with *The Red Magician* (1982), a fantasy based on Hungarian motifs and venues and set during the Holocaust; it won the American Book Award for that year. With considerable intensity, and in a style which treats sf and fantasy material through a MAGIC-REALIST looking-glass, LG has since then consistently submitted her protagonists - who are in any case generally alienated from mainstream life - to deeply alienating venues which are themselves threatened with radical transformation. *The Dream Years* (1985) - alternating sequences of which are set in a 1920s Paris succumbing to the tenets of Surrealism, and at the crisis point of the Events of 1968 - is a timeslip romance which conflates the artistic movement for a transformed reality with the later moment in history when it seemed, for an instant, that the world might shift. *A Mask for the General* (1987), set in a DYSTOPIAN 21st-century USA, depicts an opposition between the General who rules the land and the mask-makers who tap tribal depths, who create totem visages for their friends and enemies, and who wish to transform the General into one of them, human again, no longer alienated. The alienation suffered by the protagonists of *Tourists* (1989; rev 1994) - which is unconnected to an early short story, "Tourists" (1984 IASFM) - is superficially more conventional, for the land of Amaz in which they find themselves caught - as emissaries of a USA which represents a version of reality no longer valid in this new world - seems at first glance no more than a typical Middle Eastern backdrop. But the US family's search for a 1000-year-old document of seeming archaeological interest swerves dizzyingly into an attempt to trace a course between two converging topologies of reality, and to survive the clash. Though readable in sf terms, *Tourists* displays much of the same feel for the labyrinth of the Orient that found more fantastic expression in *The Arabian Nightmare* (1983) by Robert Irwin (1946-). Some of LG's relatively few short sf stories were assembled in *Daily Voices* (coll 1989), and her short fantasy stories were assembled in *Travelers in Magic* (coll 1994). Her 1990s work has in fact been heavily concentrated in that genre; both *Strange Devices of the Sun and Moon* (1993) and *Summer King, Winter Fool* (1994) are fantasies, both being impressively original. [JC]See also: ARTS; TIME TRAVEL.

GOLEM

The medieval Jewish legend of the Golem comprises a set of PROTO-SCIENCE-FICTION stories about the maker and the made. Several well known rabbis and Judaic scholars of the Middle Ages and early Renaissance had Golem stories ascribed to them, the most elaborate cycle being that connected with Rabbi Judah Loew ben Bezalel (1512-1609), the Maharal of Prague, a controversial and admired sage and community leader. "His" version of the Golem, Joseph, is an automaton made from the sand and mud lining the Vltava River. To animate him, the rabbi orders one of his

assistants to make a circuit of the figure 7 times, entrusting him with combinations of letters to utter as he does so; subsequently the rabbi and his assistants recite Genesis ii.7, which refers to the creation of Man as a single entity, and the Golem comes to "life". This Prague version of the legend contains explicit discussions of the Golem as artificial human being and as human instrument: a being without past or future. Three uniquely human faculties are denied it: inclination, either to good or evil; the soul associated with language; and the power to engender. It is used to inspect the streets of the Prague ghetto. The tale of the Golem is important to sf not because of any primacy it might claim regarding the concept of an artificial creature but because it is a narrative, and because it centrally concerns the making of the most complex tool imaginable: something (or someone) who looks, and superficially acts, like us. It is a study in how we shape the environment to meet our needs, and how we relate to that changed environment while dead labour assists in the structuring of live labour. It augments Joanna RUSS's curiously neglected suggestion that work is one of the central concerns of sf. Several earlier tales and fragments of tales, including some Talmudic references, have survived. One significant version of the legend is associated with a rabbi of Chelm near Lublin in Poland; in this variant there is a fear that the creature may grow, and it is destroyed. The Chelm version gave rise to Christian developments of the material into what might be called the Promethean GOTHIC: tales in which a nameless rabbi manages to deactivate the creature, but is himself smothered in its fall. Of 20th-century responses to the fable, the most famous is probably Gustav MEYRINK's *Der Golem* (1914; cut trans Madge Pemberton as *The Golem* 1928 US; full version of trans 1976 US). In *He, She and It* (1991; vt *Body of Glass* 1992 UK) Marge PIERCY retells the tale to enforce an analogy between the Golem and CYBORGS. [EMP]

GOLIGORSKI, EDUARDO
LATIN AMERICA.

GOLLANCZ

UK publishing house, properly styled Victor Gollancz Ltd, famous (until its sale to the US company Houghton Mifflin in 1990) as one of the last family companies in UK publishing; in 1992 Houghton Mifflin sold the firm to the Cassell group of companies, where it became an imprint. Its early strength was in political polemic; its main postwar strengths were detective fiction and sf: from the early 1960s to the late 1980s it was the premier UK publisher of sf books in hardcover, both native and US. In the past half decade it has faced greater competition, but it is still (1995) one of the market leaders. Its earlier history as a publisher, with some gripping stuff from the files, is told in *Gollancz: The Story of a Publishing House: 1929-1978* (1978) by Sheila Hodges. Victor Gollancz (1893-1967), the firm's founder in 1928, had always been interested in the fantastic; though he was never to publish any sf by H.G. WELLS, one of his inaugural books was Wells's *The Open Conspiracy* (1928), and within a year he was publishing reissues of several works by M.P. SHIEL and a new novel by E.H. VISIAK. In the 1930s came Charles FORT's *Lo!* (1931), which flopped badly, the first translation of Franz KAFKA's *Der Prozess* (written

1914-15; 1925; trans Willa and Edwin Muir as *The Trial* 1937), sf novels by Murray Constantine (Katharine BURDEKIN), Andrew MARVELL, Joseph O'NEILL, R.C. SHERRIFF, Francis STUART and others, and five novels by Charles WILLIAMS. One of G's most valued authors was George ORWELL, but in 1944 Victor Gollancz turned down *Animal Farm* (1945), seeing its anti-Stalinism as inappropriate at a time when Russia, the UK's ally, was suffering during the war. Later he also rejected Orwell's *NINETEEN EIGHTY-FOUR* (1949). Though this was an unpromising beginning to the postwar period, G did publish a number of good sf titles in the 1950s, both non-genre and GENRE SF, the latter including a 1954 edition of Theodore STURGEON's *MORE THAN HUMAN* (1953); none, however, was labelled as "science fiction". This term and the sf list proper (20 or so books a year) were introduced by Hilary Rubinstein, Victor Gollancz's nephew, after Gollancz had in 1961 published Kingsley AMIS's study of sf, *New Maps of Hell* (1960 US). Most of the early big names were US: Hal CLEMENT, Harry HARRISON, Robert A. HEINLEIN, Frederik POHL, Robert SHECKLEY, Clifford D. SIMAK and others. The first important UK writer to be added was J.G. BALLARD, with *The Drowned World* (1962). For the next two decades Gollancz's plain yellow jackets with black typography came to seem almost synonymous with UK-published hardcover sf. (Since the mid-1980s pictorial jackets have been phased in for most of the major sf and fantasy authors.) Other important UK writers joining Gollancz were Arthur C. CLARKE, Richard COWPER, Keith ROBERTS, Bob SHAW and Ian WATSON, with later additions including Robert P. HOLDSTOCK, Paul J. MCAULEY, Phillip MANN and Terry PRATCHETT, several of whom made their debuts with Gollancz. Subsequent US authors included Philip K. DICK, William GIBSON, Ursula K. LE GUIN and Robert SILVERBERG. The children's list included Peter DICKINSON. After Rubinstein left in 1963, John Bush took over the list until the early 1980s, when Malcolm EDWARDS took over (spending larger sums on books than Gollancz had previously allowed), being followed by Richard Evans in 1989. Gollancz sf editors have normally held very senior positions in the company, sf providing a major contribution to the company's profit. [PN]

GOOCH, STAN

[r] Christopher EVANS.

GOODCHILD, GEORGE

(1885-1969) UK thriller and adventure writer and playwright. His first sf novel, *The Eye of Abu* (1927) as by Alan Dare, was an Atlantean (ATLANTIS) LOST-WORLD novel relating the discovery of the Fountain of Youth. As GG he followed this with *The Monster of Grammont* (1927), marginally sf, *The Emperor of Hallelujah Island* (1930), about a kingdom of criminals, *A Message from Space* (1931) and *Doctor Zil's Experiment* (1953), in which survivors of a world-destroying DISASTER undergo various tribulations. [JE/BS]

GOONAN, KATHLEEN ANN

(1952-) US writer who began publishing sf with "Wanting to Talk to You" for IASFM in 1991, and whose first novel, *Queen City Jazz* (1994), is a sophisticated and explosively inventive variation on the post-HOLOCAUST tale central to American sf since World War 2. The protagonist is-unknown to herself-a CLONE who leaves her isolated, fundamentalist community in a

quest to restore to life her murdered boyfriend and her telepathic dog.
She goes to Cincinnati, Ohio, one of several

GORDON, MILLARD VERNE

[s] Donald A. WOLLHEIM.

GORDON, NEIL

A.G. MACDONELL.

GORDON, REX

Most frequently used pseudonym of UK writer S(tanley) B(ennett) Hough (1917-) for his sf work, although under his own name he has published Mission in Guemo (1953), the borderline-sf thriller Extinction Bomber (1956) and Beyond the Eleventh Hour (1961), a story of nuclear HOLCOAUST in which all the major nations of the world except the UK and India destroy themselves. As RG, he began publishing sf with Utopia 239 (1955), whose protagonists escape a nuclear holocaust by TIME TRAVEL into the future, where a sexually liberated UTOPIA uses its high technology to survive the consequences of the final war. No Man Friday (1956; vt First on Mars 1957 US), a ROBINSONSADE which is perhaps RG's strongest book, retells Crusoe's adventures on MARS, in quietly convincing terms, though the science is sometimes shaky; the film ROBINSON CRUSOE ON MARS (1964) does not credit RG, though the storyline bears notable resemblances. First to the Stars (1959 US; vt The Worlds of Eclis 1961 UK) is thematically similar: a crash-landed man and woman try to survive and breed without any cultural aids at all. First Through Time (1962 US; vt The Time Factor 1964 UK) is a time-travel thriller that asks most of the standard questions about predestination. Throughout his career RG showed a strong grasp of human motivation that jarred against a rather superficial use of sf themes and scientific knowledge in general; his underlying pessimism about humanity has seemed as a consequence rather underargued. [JC]Other works: Utopia Minus X (1966 US; vt The Paw of God 1967 UK); The Yellow Fraction (1969 US); Creative Writing (nd but c1983 chap) as by S.B. Hough, nonfiction.

GORDON, RICHARD A.

[s] Stuart GORDON.

GORDON, SPIKE

[s] John Russell FEARN.

GORDON, STUART

Pseudonym of Scottish writer Richard Gordon (1947-), who also writes as Alex R. Stuart and published his first sf story -"A Light in the Sky" for NW in 1965 - as Richard A. Gordon. His first sf novel, Time Story (1972),

describes a criminal's attempt to flee retribution via TIME TRAVEL. In his Eyes books - One-Eye (1973 US), Two-Eyes (1974 US) and Three-Eyes (1975 US), assembled as The Eyes Trilogy (omni 1978) - the MUTANT One-Eye triggers the forces of chaos in an apocalyptic post- HOLOCAUST land where humanity fights a losing battle against genetic decay; in increasingly elaborated prose (SG's main fault as a writer is an inadequate control over imagery) the trilogy proceeds to a complex self-confrontation of mankind. Smile on the Void: The Mythhistory of Ralph M'Botu Kitaj (1981 US) ponderously guys late-20th-century susceptibilities in the "biography" of an almost certainly fake MESSIAH. Fire in the Abyss (1983 US), though terribly overcrowded, impressively plants the Elizabethan sailor Sir Humphrey Gilbert (1537-1583) via time travel into an apocalyptically dissolving present-day. The Watchers trilogy - Archon (1987), The Hidden World (1988) and The Mask (1988) - is another extremely complex time-travel fantasy, in the opposite direction, as 20th-century personal traumas intersect, in medieval and Reformation France, with the cultural ills of the present and the NEAR FUTURE. SG's language has baroque vigour and his plots are increasingly inventive; he lacks mainly a capacity to moderate and therefore give verisimilitude to the rush of notions.

[JC]Other works: Suaine ?

novels, of which The Outlaws (1972), The Devil's Rider (1973) and The Bike from Hell (1973) have fantasy/sf components.

GORER, GEOFFREY (EDGAR)

(1905-1985) UK anthropologist and writer whose Nobody Talks Politics (1936) is a SATIRE on UK POLITICS of the 1930s as seen through the eyes of a young man woken from a 10-year trance. Its Epilogue is set in the NEAR FUTURE. [JC]

GORGO

Film (1960). King Bros/MGM. Dir Eugene Lourie, starring Bill Travers, William Sylvester, Vincent Winter. Screenplay John Loring, Daniel Hyatt, based on a story by Lourie and Hyatt. 78 mins. Colour. A prehistoric reptile is captured off a small island in the Irish Sea, taken to London and put on show. But the 65ft (20m) creature turns out to be a mere infant, as everyone discovers when its 150ft (45m) mother comes to collect it, demolishing bits of London in the process. We are allowed to sympathize with the monsters and cheer their escape. Good use is made of locations, and there are interesting special effects by Tom Howard. The monsters are achieved by the cheap man-in-a-suit technique, but are effective nonetheless. Lourie had once worked as an art director for Jean Renoir, and his latter-day reputation as director of sea-going MONSTER MOVIES was a sad come-down (The BEAST FROM 20,000 FATHOMS ; BEHEMOTH, THE SEA MONSTER), but G is atmospheric and crisply made. The novelization, with wholly irrelevant soft-core pornographic additions, is Gorgo * (1960) by Carter BINGHAM. [JB/PN]

GORODISCHER, ANGELICA

[r] LATIN AMERICA.

GOTHIC SF

In current usage a "Gothic" is a romantic novel which has a strong

element of the mysterious or the supernatural and which usually features the persecution of a woman in an isolated locale; but this restricted and specialized use of the word has nothing to do with sf. The term "Gothic" entered critical terminology with the publication of *The Castle of Otranto* (1765), subtitled "A Gothic Story", by Horace Walpole (1717-1797). As in architecture, the word originally referred to a medieval style. Although the Middle Ages had for much of the 18th century been thought of as barbaric, a nostalgia had now developed for the romantic splendours of an idealized Middle Ages that never existed. Gothic novels in imitation of Walpole's ghostly tale became quite common as the century drew to a close; indeed their popularity was closely allied to the growth of Romantic literature generally. The Gothic may be seen as a reaction to the emphasis on reason which prevailed in the Enlightenment, the intellectual world of the 18th century. In a world ruled by Order, where Isaac Newton (1642-1727) had explained the mechanics of the Solar System, Carolus Linnaeus (1707-1778) had shown how plants and animals could be logically classified, Adam Smith (1723-1790) had written of the apparently immutable laws of ECONOMICS, and sermons in church regularly pictured God as a kind of master watchmaker who had wound the Universe up and left it to tick like a perfectly regulated mechanism, some room needed to be left for mystery, the marvellous, the evil, the inexplicable. The movement was probably given impetus at the beginning of the 19th century by science itself becoming remystified through all the work being done on the strange forces of electromagnetism, and also by a crumbling social stability, as signalled by many political revolutions across the Western World. Such is the background against which Mary SHELLEY's *Frankenstein* (1818; rev 1831) should be read. With this book, along with the contemporary works of E.T.A. HOFFMANN and a little later Edgar Allan POE, the use of science in fiction was becoming assimilated into a literary movement which emphasized mystery over knowledge, and the dangers of Man trespassing in a territory rightfully God's. The linking of science with the Gothic may have been partly a historical accident, and the balance was soon to be partly rectified by the sometimes laboured common sense of Jules VERNE (even he produced a Gothic hero, in *Captain Nemo*), but it certainly had repercussions in sf which have by no means died away. Brian W. ALDISS, in his critical work *Billion Year Spree* (1973; rev with David WINGROVE as *Trillion Year Spree* 1986), argues that sf "is characteristically cast in the Gothic or post-Gothic mould". That may be putting it too strongly, but Aldiss's view is certainly a useful antidote to the commoner views that sf is a literature either of technology or of UTOPIAS and anti-utopias. Certainly from Mary Shelley's day to now, much sf has been devoted to secrets, to inexplicable violence and wildness lurking beneath the veneer of civilization and to the ALIEN and the monstrous bursting in on us from the outside; Gothic sf emphasizes danger, and attacks the complacency of those of us who imagine the world to be well lit and comfortable while ignoring that outside all is darkness. Gothic sf characteristically clothes these fears in quasiscientific talk, but in spirit it is quite opposed to the outlook of the SCIENTIST. The prototype is perhaps Robert Louis STEVENSON's *Strange Case of Dr Jekyll and Mr Hyde* (1886) - which, in its story of a respectable doctor whose alter ego is a brutish sensualist and a living monument to the reality of Original Sin,

can be read as an allegory of the violent subconscious struggling with the conscious mind - for the archetypal Gothic story is the tale of the Thing in the Cellar, in which an everyday world of surface conceals the menacing depths (and subtexts). Other sf writers of the 19th century who worked in the Gothic mode were Bulwer LYTTON, Ambrose BIERCE and Arthur MACHEN. In the 20th century, the Gothic mode was largely hived off into the genre of occult/horror, but it never lost its kinship with sf. WEIRD TALES was the archetypally Gothic PULP MAGAZINE, and several of its authors wrote sf too. H.P. LOVECRAFT, of course, is as pure an instance of the Gothic writer as can be found in this century, but some of the same qualities can be found in writers who were much more closely associated with sf than Lovecraft ever was. About two-thirds of all sf films (CINEMA), especially MONSTER MOVIES, are pure Gothic. PARANOIA in sf nearly always falls into the Gothic mode. The Gothic idea of the Promethean or Faustian mad scientist (CONCEPTUAL BREAKTHROUGH; SCIENTISTS) punished for assuming the creative powers belonging to the gods or God (sometimes for creating artificial life without a soul) was central to sf early in this century, as in the films ALRAUNE (1928) and FRANKENSTEIN (1931). Other sf variants of Gothic images are the renegade ROBOT (along with all ghost-in-the-machine stories), most Luddite stories, most stories of manipulation by beings who may be GODS AND DEMONS, nearly all stories rationalizing SUPERNATURAL CREATURES, most stories about ambiguous ALIEN artefacts; indeed, to put it more widely still, most stories in which the Universe proves unamenable to rational (or "cognitive") understanding. It is so easy to find Gothic elements in even the most celebrated writers of sf that there is little point in listing actual books containing them. Sf writers whose work is consistently Gothic are, among many others: John BLACKBURN, James P. BLAYLOCK, Ray BRADBURY, S. Guy ENDORE, Robert P. HOLDSTOCK, K.W. JETER, Stephen KING, Nigel KNEALE, Dean R. KOONTZ, Richard MATHESON, Kim NEWMAN, Tim POWERS, Maurice RENARD, Sax ROHMER, Dan SIMMONS, Curt SIODMAK, Lisa TUTTLE and Chelsea Quinn YARBRO; it is no coincidence that nearly all of these have written HORROR fiction as well. But there are strong Gothic elements in other sf writers whose work is considered less borderline. These include - again, among a hundred others - Brian W. Aldiss, Alfred BESTER, James BLISH, Algis BUDRYS, Richard COWPER, Samuel R. DELANY, Philip K. DICK, Thomas M. DISCH, Philip Jose FARMER, William GIBSON, George R.R. MARTIN, Michael MOORCOCK, Geoff RYMAN, Fred SABERHAGEN, Hilbert SCHENCK, Lucius SHEPARD, Lew SHINER, Michael SWANWICK, Sheri S. TEPPER, Jack VANCE, Howard WALDROP, Gene WOLFE, John WYNDHAM and Roger ZELAZNY. If the case for the prevalence of Gothic sf is correct, then we must see it as so deeply engrained that it cannot be considered a mere sport or mutant form of the genre. There has always been a tension in sf between the Classical desire for order and understanding - for the Universe that can be known - and the Romantic desire (which fits the observable facts to date) that the Universe should continue to surprise us, hold secrets and malignities. This latter desire (or fear, or both) is the Gothic, and its coexistence with the Classical or cognitive, in most major sf writers of our century, is not a paradox; the place where the two forces meet (Classical and Romantic, cognitive and Gothic) might almost be described as the central place where sf happens, the seeding-ground for

its fertility. If this is the case, then Brian Aldiss's above-noted comment (DEFINITIONS OF SF) is not as eccentric as some have found it; moreover, those definitions that see sf as exclusively cognitive (like Darko SUVIN's) are missing the point; they are prescriptive, not descriptive. Sf remains a Romance literature. Its vaunted SENSE OF WONDER arises as much from its Gothic as from its scientific elements, and will continue to do so as long as the Thing in the Cellar keeps lashing its tail. [PN]See also: FANTASY; HISTORY OF SF.

GOTLIEB, PHYLLIS (FAY)

(1926-) Canadian writer probably best known for her POETRY. She took an MA with the University of Toronto in English language and literature, and married a professor of computer science, whom she credits for assistance on her second sf novel. She began publishing sf with "A Grain of Manhood" for Fantastic in 1959 and gained considerable praise for her first novel, Sunburst (1964 US), which treats feelingly of the growth of a connected group of MUTANT children, of their harrowing difficulties, of the gestalt concord they arrive at, and of their coming to (a somewhat overplotted) accord with the surrounding world. Complexities of kinship and identity also pervade her Sven Dahlgren books - O Master Caliban! (1976 US) and Heart of Red Iron (1989 US) - which take place on a planet set aside for environmental experiments. In the first the young four-armed Dhalgren must confront and defeat the sentient ROBOTS which have seized power from his scientist father; in the second he must calibrate the needs of various ALIEN races and come to terms with his own humanity. PG's stories - some of the best are assembled in Son of the Morning and Other Stories (coll 1983 US) - also tend to investigate questions of human nature through sf tropes, like PSI POWERS, that are congenial to that sort of exploration. A second series, the Starcats books - A Judgement of Dragons (1980 US), Emperor, Swords, Pentacles (1982 US) and The Kingdom of the Cats (1985 US) - features interstellar travel and other sf trappings attuned to SCIENCE FANTASY needs. With Douglas BARBOUR she edited Tesseract(2) (anth 1987), a series - #1 ed Judith MERRIL - designed to showcase Canadian sf. [JC]See also: CANADA.

GOTSCHALK, FELIX C.

(1929-) US writer and psychologist who began publishing sf with "Outer Concentric" and "The Examination" for New Dimensions 4 (anth 1974) ed Robert SILVERBERG. In a relatively short time he established a reputation as an author of high linguistic energy whose stories emoted a ruthless savvy about the future. Many of his tales are narrated through stunning linguistic displays of the emotional and physiological ways of being that humans display in isolation and in their relations to the social world; these ways of being are constantly articulated by the protagonists in a flow of brilliant jargon, with the result that existence and the LINGUISTIC perception of existence become identical. The effect is exhilarating and also rather terrifying. FCG's first novel, Growing Up in Tier 3000 (1975), is set in a world very similar to that of many of the tales, and deploys a similarly searching sense of the surface of events and of identities, though its plot moves with some difficulty: in an energy-quarantined, savagely competitive, complexly automated DYSTOPIAN

future society, young children show their readiness to take over from their elders (in a *reductio ad absurdum* of the Whorfian hypothesis that language structure determines our conceptualization of the world) by understanding the languages necessary for survival in the hyperkinetic new. At least two further novels have been written and await publication; but the aggressive ingenuity of his style, and the oddly high-strung gallantry of his attitude to the futures in store for the human race - that they are to be endured with grace, but never "won" - make his work unlikely to reach a wide market. [JC] See also: CITIES; FABULATION; TABOOS.

GOTTESMAN, S.D.

Pseudonym used on magazine stories by C.M. KORNBLUTH 1940-42, once solo, 5 times with Frederik POHL, and twice with both Pohl and Robert A.W.

LOWNDES. [PN]

GOTTLIEB, HINKO

(1886-1948) Yugoslav writer, editor and lawyer whose sf novel, *The Key to the Great Gate* (manuscript trans Fred Bolman and Ruth Morris from the Serbo-Croat 1947 US), was first composed in an Italian concentration camp (the manuscript was destroyed and had to be reconstructed later). An imprisoned SCIENTIST, having learned how to expand and contract the Einsteinian spacetime continuum, dazzles and befuddles his Nazi guards, gradually becoming an effective symbol of human dignity and the freedom of the spirit. The book is also funny, in a fashion possibly evocative, for readers not familiar with Serbo-Croat literature, of writers like Karel CAPEK. [JC]

GOULART, RON(ALD JOSEPH)

(1933-) US writer, born in California, where he lived until the late 1960s and which he has made the setting (whether or not literally so) for much of his sf. After graduation he worked in an advertising agency; he has put on record the influence of this experience on the forming of his concise, polished style. He published his first sf, "Letters to the Editor", in FSF in 1952, and wrote many stories before the appearance of his first sf novel, *The Sword Swallower* (1968), which features the Chameleon Corps of shapeshifting agents; the book - like much of his ensuing work - is set in a SPACE-OPERA venue called the Barnum System which much resembles Southern California: urbanized, helter-skelter, crazed and balkanized, the planets of this system, where the Corps originates, are populated in large part by traditional comic stereotypes or humours, deftly drawn. Again like many of its successors, the novel features a gangly detective on the trail of a complex crime (CRIME AND PUNISHMENT); his need to search out clues and suspects takes him (conveniently) through a wide spectrum of scenes and characters. Similarities of plot and setting (and numerous cross-references) dog any anatomizer of series in the RG universe, but other books specifically connected to the Barnum System include *The Fire-Eater* (1970), *Death Cell* (1971), *The Chameleon Corps and Other Shape Changers* (coll 1972), *Plunder* (1972), *Shaggy Planet* (1973), *Flux* (1974), *Spacehawk, Inc.* (1974), *A Whiff of Madness* (1976), *The Wicked Cyborg* (1978), *Daredevils, Ltd* (1987), *Starpirate's Brain* (1987) and *Everybody Comes to Cosmo's* (1988); the Star Hawk sequence of novels - *Empire 99* (1980) and *The Cyborg King* (1981),

based on the COMIC strip illustrated by Gil Kane - are also set in Barnum. Along with the remarkable AFTER THINGS FELL APART (1970), these books share a swiftness of telling, a constant hilariousness and a cogency; elsewhere, jokes sometimes seem to guide the storylines, which can be flimsy. Much of RG's work is, in fact, journeyman, though even in the most desultory tale his smooth dialogue-driven style is always recognizable. In the mid-1970s and 1980s he wrote under various pseudonyms (including the house names Kenneth ROBESON and Con Steffanson, as well as personal pseudonyms like Chad Calhoun, R.T. Edwards, Ian R. Jamieson, Josephine Kains, Jillian Kearny, Howard Lee, Zeke Masters, Frank S. Shawn and Joseph Silva) a large number of novelizations and other routine work (see listing below for titles of genre interest). As RG, his Vampirella series - Bloodstalk * (1975), On Alien Wings * (1975), Deadwalk * (1976), Blood Wedding * (1976), Deathgame * (1976) and Snakegod * (1976) - put a character derived from stories published in Vampirella, a comic book which ran from 1969 to 1983; his versions were thinly humorous. The Wild Talents sequence, which includes A Talent for the Invisible (1973) and Hello, Lemuria, Hello (1979), and the Gypsy sequence about an identity-quest, which includes Quest of the Gypsy (1976) and Eye of the Vulture (1977), similarly lacked their author's full attention. A darker, sharper, more attentive aspect of the RG vision of California-as-Barnum can be seen in those of his novels - Wildsmith (1972), among others - which feature the highly humanized, eccentric, wilful ROBOTS which are perhaps his most enduring creation. Quite remarkably comic in their deadpan obsessiveness and pernickety sang-froid, they serve also as genuinely effective icons of a time - the NEAR FUTURE - and a place - either Southern California itself or the world which it portends - caught in the throes of convulsive change. The slightness of RG's plotting does at times make his satirical intent difficult to perceive; an underlying saliency can be detected more clearly, perhaps, in collections like What's Become of Screwloose? and Other Inquiries (coll 1971), Broke Down Engine and Other Troubles with Machines (coll 1971), Nutzenbolts and More Troubles with Machines (coll 1975) and Skyrocket Steele Conquers the Universe and Other Media Tales (coll 1990) - the last being connected with the novel Skyrocket Steele (1980). Odd Job No. 101 and Other Future Crimes and Intrigues (coll 1975), Calling Dr Patchwork (1978), Big Bang (1982) and Brainz, Inc. (1985) make up the Odd Jobs sequence, whose interest diminishes with extension. Though he is prolific and acute, it can still be said of RG that his dark wit and adroit handling of plot and theme have not yet been directed to a project of a scope sufficient to give those talents full play. [JC] Other works: Gadget Man (1971); Clockwork's Pirates (1971 dos); Ghost Breaker (coll 1971 dos); Hawkshaw (1972); The Tin Angel (1973), later assembled with Flux as Flux and The Tin Angel (omni 1978 UK); Shaggy Planet (1973); When the Waker Sleeps (1975); The Hellhound Project (1975); The Enormous Hourglass (1976); Challengers of the Unknown * (1977); Crackpot (1977); The Emperor of the Last Days (1977); The Panchronicon Plot (1977); Nemo (1977); Capricorn One * (1978) (CAPRICORN ONE); Dr Scofflaw (1979 dos); Hail Hibbler (1980); The Robot in the Closet (1981); Brinkman (1981); Upside Downside (1982); 3 Battlestar Galactica novels, all with Glen A. LARSON, Greetings from Earth * (1983), Experiment in Terra * (1984) and The Long Patrol * (1984); Hellquad (1984); The Prisoner of Blackwood

Castle (1984); Suicide, Inc. (1985); Galaxy Jane (1986); The Curse of the Obelisk (1987); The Tijuana Bible (1989). The introduction to William SHATNER's extremely Goulart-like TekWar (1989) thanks RG for his help; this book and its two sequels, TekLords (1991) and TekLab (1991), have been attributed to RG. As Josephine Kains: The Devil Mask Mystery (1978); The Curse of the Golden Skull (1978); The Green Lama Mystery (1979); The Whispering Cat Mystery (1979); The Witch's Tower Mystery (1979); The Laughing Dragon Mystery (1980); The Witch's Tower Mystery (1980), a non-sf tale with RECURSIVE elements. As Howard Lee: Two Kung Fu novels: Chains (1973) and Superstition (1973). As Frank S. Shawn: Books in the Phantom series: The Veiled Lady * (1973); The Golden Circle * (1973); The Mystery of the Sea Horse * (1973); The Hydra Monster * (1973); The Goggle-Eyed Pirates * (1974); The Swamp Rats * (1974). As Kenneth Robeson (house name): Books in the The Avenger series: The Man from Atlantis * (1974); Red Moon * (1974); The Purple Zombie * (1974); Dr Time * (1974); The Nightwitch Devil * (1974); Black Chariots * (1974); The Cartoon Crimes * (1974); The Death Machine * (1974); The Blood Countess * (1975); The Glass Man * (1975); The Iron Skull * (1975); Demon Island * (1975). As Con Steffanson (house name): Books in the Flash Gordon series: The Lion Men of Mongo * (1974); The Plague of Sound * (1974); The Space Circus * (1974). As Joseph Silva: The Island of Dr Moreau * (1977) (The ISLAND OF DR MOREAU); Stalker from the Stars * (1977) with Lein Wein and Mary Wolfman; Holocaust for Hire * (1979), a Captain America novel. The pseudonym plays on the name of one of RG's many private eyes, Jose Silvera. As Editor: The Hardboiled Dicks (anth 1965); Lineup Tough Guys (anth 1966); The Great British Detective (1982); The Encyclopedia of American Comics (1990), for which he also wrote about half the entries. Nonfiction: The Assault on Childhood (1972); Cheap Thrills: An Informal History of the Pulp Magazines (1972); An American Family (1973); The Adventurous Decade: Comic Strips in the Thirties (1976); Focus on Jack Cole (1986 chap); The Great Comic Book Artists (1986) and The Great Comic Book Artists Volume 2 (1988); Ron Goulart's Great History of Comic Books (1986); The Dime Detectives (1988). GOULD, ALAN

[s] Michael A. BANKS.

GOULD, F(RANCIS) CARRUTHERS

(1844-1925) UK illustrator and writer, creator of a large number of sharply satirical political cartoons in the decades before WWI. "Who Killed Cock Robin?", and Other Stories for Children Young and Old (coll 1896) assembled various parodic animal fables, among which "The Great Beetle War" comes closest to sf. Explorations in the Sit-tee Desert, Being a Comic Account of the Supposed Discovery of the Ruins of the London Stock Exchange some 2000 Years Hence (1899 chap) is a surprisingly effective and pointed SATIRE written from a post- HOLOCAUST viewpoint. [JC]

GOULD, F(REDERICK) J(AMES)

(1855-1938) UK writer of numerous works in which he espoused an agnostic philosophy. His sf novel, The Agnostic Island (1891), exposes some Christian missionaries to a society which threatens their beliefs. [JC]

GOVE, PHILIP BABCOCK

(1902-1972) US academic, author of *The Imaginary Voyage in Prose Fiction: A History of its Criticism and a Guide for its Study*, with an Annotated Check List of 215 Imaginary Voyages from 1700 to 1800 (1941; reissued by ARNO PRESS 1975). Though in no sense a book about sf per se, it is one of the most important and reliable tools for the researcher into 18th-century FANTASTIC VOYAGES, about which few books have been written. [PN]See also: CRITICAL AND HISTORICAL WORKS ABOUT SF.

GOWLAND, JOHN STAFFORD

(1898-?) UK writer whose sf novel, *Beyond Mars* (1956), treats, perhaps rather primitively, space travel to the Moon and beyond by use of ANTIGRAVITY. [JC]

GRABIEN, DEBORAH

(1954-) US writer. Her first novel, *Woman of Fire* (1988; vt *Eyes in the Fire* 1989 US), is fantasy. Her second, the post- HOLOCAUST *Plainsong* (1990 US), is an unsentimental PASTORAL tale about the arrival of a new Messiah in a plague-devastated land. Her third novel is *Fire Queen* (1990); her fourth, *And Then Put Out the Light* (1993), is a ghost story. [JC]

GRAEME, BRUCE

[r] Anthony ARMSTRONG.

GRAHAM, DAVID

[r] ROBERT HALE LIMITED.

GRAHAM, J(OHN) M(ICHAEL)

[r] ROBERT HALE LIMITED.

GRAHAM, P(ETER) ANDERSON

(? -1925) UK writer on rural themes whose post- HOLOCAUST novel, *The Collapse of Homo Sapiens* (1923), written in the apocalypse-obsessed aftermath of WWI, identifies the fall of mankind with the defeat of the UK by an alliance of coloured powers, which themselves soon disintegrate, leaving the world to shrink and degenerate. The traveller who is moved through time to witness this disaster puts much of the blame for the UK's unreadiness upon trade-union nihilists. [JC]

GRAHAM, ROBERT

Joe HALDEMAN.

GRAHAM, ROGER PHILLIPS

[r] Rog PHILLIPS.

GRAHAM, TOM

Sinclair LEWIS.

GRAHAME-WHITE, CLAUDE

(1879-1959) UK author of two sf juveniles with Harry HARPER (whom see for details): *The Air-King's Treasure* (1913) and *The Invisible War-Plane: A Tale of Air Adventure in the Great Campaign*(1915). [JC]

GRAND TOUR: DISASTER IN TIME

DISASTER IN TIME.

GRANT, ANTHONY
ROBERT HALE LIMITED.

GRANT, CHARLES L(EWIS)

(1942-) US writer who has restricted himself since the late 1970s almost exclusively to horror and fantasy fiction (see listing below), mainly under his own name (sometimes in the form C.L. Grant), though he has written books as by Felicia Andrews, Steven Charles, Simon Lake, Lionel Fenn and Geoffrey Marsh. He began publishing work of genre interest with "The House of Evil" for FSF in 1968, but really became active only after the mid-1970s with the release of his first novels, the Parric family series of post- HOLOCAUST tales: The Shadow of Alpha (1976), Ascension (1977) and Legion (1979). Set in a balkanized USA ravaged by a PlagueWind and beset with petty dictators and crazed ANDROIDS, all three novels - they form part of a much longer, uncompleted sequence - are told in a somewhat heated style possibly derived from the example of Samuel R. DELANY, and perhaps more suitably applied, as CLG has seemingly decided, to other genres. Further novels containing sf elements include The Ravens of the Moon (1979), but the precepts of horror fiction are generally dominant. Of his horror, the best known titles fit into the Oxrun Station sequence. He has edited two notable series - Shadows and two of the Night Visions anthologies - and a useful manual, Writing and Selling Science Fiction (anth 1976). His "A Glow of Candles, a Unicorn's Eye" won the 1978 Best Novelette NEBULA. [JC]Fantasy and horror titles:Oxrun Station: The Hour of the Oxrun Dead (1977); The Sound of Midnight (1978); The Last Call of Mourning (1979); The Grave (1981); The Bloodwind (1982); a 19th-century trilogy internal to the Oxrun sequence and comprising The Soft Whisper of the Dead (1982), The Dark Cry of the Moon (1986) and The Long Night of the Grave (1986); Nightmare Seasons (fixup 1982); The Orchard (1986); Dialing the Wind (1989).Singletons: A Quiet Night of Fear (1981); Tales from the Nightside (coll 1981); A Glow of Candles and Other Stories (coll 1981); The Nestling (1982); Night Songs (1984); The Teaparty (1985); The Pet (1986); For Fear of the Night (1988); In a Dark Dream (1989); Stunts (1990); Fire Mask (1991); Something Stirs (1991); Raven (1993); Jackals (1994); The X Files: Goblins *(1994), tied to the tv series.As Felicia Andrews: Mountainwitch (1980).As Steven Charles: The Private Academy sequence of sf/horror novels for a young-adult audience, comprising Nightmare Session (1986), Academy of Terror (1986), Witch's Eye (1986), Skeleton Key (1986), The Enemy Within (1987) and The Last Alien (1987).As Lionel Fenn: The Quest for the White Duck sequence of comic fantasies, comprising Blood River Down (1986), Web of Defeat (1987), Agnes Day (1987) and The Seven Spears of the W'dch'ck (1988); the Kent Montana series of comic sf tales, which invoke Hollywood icons through the adventures of a failed actor, comprising Kent Montana and the Really Ugly Thing from Mars (1990), Kent Montana and the Reasonably Invisible Man (1991);Kent Montana and the Once and Future Thing (1991), The Mark of the Moderately Vicious Vampire (1992) and 668: The Neighbor of the Beast (1992); the Diego series, featuring a gunslinger who travels through time, and comprising Once Upon a Time in the East (1993), By the Time I Get to Nashville (1994) and The Semi-Final Frontier (1994).As Simon Lake: The Midnight Place

sequence comprising *Midnight Place: Daughter of Darkness* (1992), #2: *Something's Watching* (1992), #3: *Death Cycle* (1993) and #4: *He Told Me To* (1993). As Geoffrey Marsh: *The Lincoln Blackthorne* thrillers, *The King of Satan's Eyes* (1984), *The Tale of the Arabian, Knight* (1986), *The Patch of the Odin Soldier* (1987) and *The Fangs of the Hooded Demon* (1988). As editor (series): *The Shadows* anthologies, comprising *Shadows* (anth 1978; vt *Shadows II* 1987 UK), #2 (anth 1979), #3 (anth 1980), #4 (anth 1981; vt *Shadows* 1987 UK), #5 (anth 1982), #6 (anth 1983), #7 (anth 1984), #8 (anth 1985), #9 (anth 1986) and #10 (anth 1987), the entire series being showcased in *The Best of Shadows* (anth 1988) and *Final Shadows* (anth 1991); of the *Night Visions* anthologies, *Night Visions 2* (anth 1985; vt *Night Visions: Dead Image* 1987; vt *Night Terrors* 1989 UK) and *Night Visions 4* (anth 1987; vt *Night Fears* 1989 UK) uncredited for the UK versions; the *Greystone Bay* anthologies, comprising *The First Chronicles of Greystone Bay ** (anth 1985), *Doom City ** (anth 1987), *The SeaHarp Hotel ** (anth 1990) and *In the Fog: the Final Chronicle of Greystone Bay* (anth 1993). As editor (singletons): *Nightmares* (anth 1979); *Horrors* (anth 1981); *Terrors* (anth 1983); *The Dodd, Mead Gallery of Horror* (anth 1983); vt *Gallery of Horror* 1983 UK; *Midnight* (anth 1985); *After Midnight* (anth 1986).

GRANT, DAVID
Craig THOMAS.

GRANT, JOHN
Paul BARNETT.

GRANT, MARK
David F. BISCHOFF.

GRANT, MAXWELL
STREET ?

details) wrote some 300 novels, usually about *The Shadow*. He was followed by Dennis LYNDY (whom also see). [JC]

GRANT, RICHARD

(1952-) US writer; he lives with Elizabeth HAND. RG began writing work of genre interest with "Drode's Equations" for *New Dimensions* 12 (anth 1981) ed Marta RANDALL, and came to rapid prominence with three novels of mixed sf/fantasy provenance, set in the same post- HOLOCAUST land, almost certainly the USA, but transfigured by time and events. The first, *Saraband of Lost Time* (1985), is set much the deepest into this venue, so far into the future that the rather shambling plot mainly serves the PLANETARY-ROMANCE function of guiding the reader through the world, whose contours have reminded some critics of M. John HARRISON's *Viriconium*. The rich array of protagonists featured in *Rumours of Spring* (1987) is reminiscent of the same source, though RG seems quite visibly to have taken more pleasure in creating characters than Harrison ever has; the plot involves a quest, hampered by spiritual ENTROPY, for the Gaian spirit of the forest which is beginning to assault the desultory evening cultures of humankind. Beyond Harrison, authors freely used as models by RG include James P. BLAYLOCK and John CROWLEY; but the amalgam has a recognizable flavour of its own. *View from the Oldest House* (1989) casts its net even

more widely, bringing in allusions to figures from Milton to James Joyce to Archibald MacLeish to Thomas PYNCHON, in addition to all the above; the story itself, set in a NEAR-FUTURE, HOLOCAUST-haunted version of the same domain, tends to founder in these labyrinths of reference, just as its protagonist founders in his search for a self. A fourth novel, *Through the Heart* (1992), sharpens in sf terms RG's abiding venue: North America after the Fall, and won the 1993 PHILIP K. DICK AWARD. [JC]See also: ANTI-INTELLECTUALISM IN SF; PHILIP K. DICK AWARD.

GRANT, ROBERT

(1852-1940) US novelist chiefly remembered for *Unleavened Bread* (1900). With John Boyle O'REILLY (1844-1890), an Irish writer who escaped Australian exile to live in the USA, J.S. of Dale (a pseudonym of US lawyer Frederick Jessup Stimson [1855-1943]) and J.T. Wheelwright (1856-1925), also a New England lawyer, RG wrote *The King's Men: A Tale of To-morrow* (1884), set in a republican UK around the 1940s, during a period of Royalist rebellion (like that of Bonnie Prince Charlie 200 years earlier). There is a great deal of tangled action, and some sf artillery. Republicanism triumphs. [JC]

GRANVILLE, AUSTYN

(? -?) 19th-century US author, resident for some years in Australia. His racy, bigoted lost-race (LOST WORLDS) novel *The Fallen Race* (1892), one of the earliest sf books set in Australia, shares the belief in a great inland sea which in real life led to the disappointment or death of many explorers. Stranded in the desert, a doctor finds a lost race developed, absurdly, from the primeval union of aboriginals and kangaroos; its people, almost spherical in shape, are ruled by a White (human) queen. The protagonist outwits a palace revolution, survives the amorous attentions of a female spheroid, establishes - through technological knowhow and CULTURAL ENGINEERING - a middle-class UTOPIA, and marries the queen. [PN]Other works: *If the Devil Came to Chicago* (1894) with W. Wilson Knott, a reformist fantasy about vice. See also: SEX.

GRAPHIC NOVEL

To speak of the graphic novel is to speak of a particular kind of COMIC book, but to do so after about 1985 is to risk applying what has become a marketing term to questions of definition, transforming a practical distinction into what looks superficially like a separate genre. The graphic novel proper is a self-contained narrative in comic-book form. It is almost never, in other words, part of an ongoing series like *Fantastic Four* (from 1961), though there are exceptions, like Dave SIM's *Cerebus the Aardvark* (from 1977), a connected series of stories projected to extend to 300 issues. It should be noted, too, that many graphic novels are initially published episodically in comic-book format, whether or not originally conceived as a single narrative, only subsequently reaching the state which readers tend to recognize as that of a graphic novel; that is, a large (often quarto-sized), usually perfect-bound volume of anywhere from 50 to 300 pages. Through the 20th century, many books have been published which present a fictional tale primarily or solely through a sequence of pictures; the first important artist to become involved in graphic storytelling was probably Frans Masereel (1889-1972), whose

nonverbal narratives in woodcut - culminating in *Die Stadt* (1925; as *The City* 1988 UK) - vividly encapsulated a 1920s sense of the new century in imagery reminiscent of the medieval Dance of Death. Books like Szegeti Szuts's *My War* (1931), might also seem to constitute part of a tradition which led directly to the graphic novels of the 1970s, but this is almost certainly misleading. Though many graphic-novel writers and illustrators are clearly aware of various forms of visual narrative - including recent painterly experiments in visual narration like *A Humument: A Treated Victorian Novel* (1980) by Tom Phillips (1937-) - the graphic novel itself derives from the very specific conventions of the comic, in particular from the extraordinarily sophisticated, cinema-derived narrative techniques which have been developed over the decades by comic-book artists, and which distinguish the comic from all other forms of visual storytelling. Masereel may have collaborated on film work (with directors like Abel Gance [1889-1981]), but only after having created his novels in terms which were cognate with but which did not borrow directly from the early CINEMA. No more is a recent figure like Glen Baxter a graphic novelist, as we are using the term. His *The Billiard Table Murders: A Gladys Babbington Morton Mystery* (1990) is certainly a visual novel; but Baxter is a cartoonist rather than a comic-book artist, and his visual pages are frozen images which highlight and comment upon the narrative action, whereas in a true graphic novel the images carry the action. The difference is as between night and day. Though comic-derived tales - like *He Done Her Wrong: The Great American Novel: And Not a Word in it - No Music, Too* (1930) by Milt Gross (1895-1953) - were not uncommon from an early date, the term "graphic novel" was coined, possibly by the author himself, to describe what was itself in fact a collection of linked stories, *A Contract with God* (graph 1978) by Will Eisner (1917-), but it did not become a widely used label until the release of a strangely ill matched trio - *Maus* (1980-85 Raw; graph 1987) by Art Spiegelman (1948-), *WATCHMEN* (1986-7; graph 1987) by Alan MOORE and Dave GIBBONS, and *Batman: The Dark Knight Returns* (1986; graph 1986) by Frank MILLER - raised the profile of the serious narrative comic book and, in large part because of the low prestige of the comic-book medium, instigated a commercial need for a distinguishing term ("Adult Comic" had already been taken by comics with explicit sexual content). Today, however, many so-called graphic novels are no more than costly collections of entirely routine SUPERHERO tales and the like. Among titles that, by contrast, deserve to be noticed are *Ed the Happy Clown* (1986; graph 1989) by Chester BROWN, *The Magician's Wife* (1986 France; graph 1987 US) by Jerome CHARYN and Francois Boucq, *Violent Cases* (graph 1987) by Neil GAIMAN and Dave MCKEAN, the various graphic novels serialized in *LOVE AND ROCKETS* - including *Human Diastrophism* (graph 1989) by Gilbert Hernandez (1957-) and *Ape Sex* (graph 1989) by Jaime Hernandez - *Elektra: Assassin* (1986-7; graph 1987) by Frank Miller and Bill SIENKIEWICZ, *V for Vendetta* (1982-5; graph 1990) by Alan Moore and David Lloyd, *A Small Killing* (graph 1991) by Moore and Oscar Zarate and *The Complete New Statesmen* (graph 1990) by John Smith (1967-) with Jim Baikie, Duncan Fegredo and Sean Phillips. The term may have become a commercial tag, but its very existence represented an opportunity for ambitious comic-book artists and writers to begin to test the boundaries of their medium, to demonstrate the organized complexity possible in the

interplay between the conventions of written narrative and visual storytelling. The best graphic novels are more than the sum of their parts; they are visions of the world which cannot be paraphrased into any other medium. [NG/JC]

GRATACAP, LOUIS POPE

(1851-1917) US naturalist and writer whose first sf novel, *The Certainty of a Future Life on Mars: Being the Posthumous Papers of Bradford Torrey Dodd* (1903), remains his best known. Dying in the conviction that dead humans transcendently ascend to a Martian REINCARNATION as embodied spirits, the narrator's father is soon communicating from there by radio with his son. Martian society, he reports, is UTOPIAN - with natives of the planet as servants - and Mars itself has canals; an essay on MARS by the Italian astronomer Giovanni Schiaparelli (1835-1910) closes the volume. *A Woman of the Ice Age* (1906) is a turgid prehistoric romance. *The Evacuation of England: The Twist in the Gulf Stream* (1908) pins its expectations of catastrophe on the completion of the Panama Canal; the ensuing mini Ice Age persuades the UK monarchy to transplant itself to Australia. *The Mayor of New York: A Romance of the Days to Come* (1910) is set in AD2000, when "suicidariums" gently gas the willing and anarchism threatens the independent state of New York. In *The New Northland* (1915) a lost race (LOST WORLDS) of Hebrew-speaking dwarfs inhabits a clement hollow in the Arctic, where their possession of vast amounts of radium seals their fate, for the protagonist decides that these riches must be exploited. LPG's range was wide, incorporating much material which has become central to sf, but his books are overlong, choked by his compulsive didacticism, and consequently unreadable today. [JC]Other works: *The End: How the Great War was Stopped* (1917), a fantasy in which the risen dead terrify the living into stopping the war.

GRAUSTARK

RURITANIA.

GRAUTOFF, FERDINAND HEINRICH

(1871-1935) German historian and writer, known in English for two pseudonymous works of fiction. In "1906" - *Der Zusammenbruch der alten Welt* (1905; trans G. Herring as *Armageddon 190- 1907 UK*) as by Seestern, the USA instigates a future WAR with Germany which is catastrophic for Europe but beneficial for Russia and the USA. *Bansai!* (1908; trans anon as *Banzai!* 1908 Canada) as by Parabellum pits the USA against the Japanese, with results initially disastrous for the USA, though the invading armies of the East are eventually driven all the way back past the Rocky Mountains to the sea. [JC]See also: *INVASION*.

GRAVEL, GEARY

(1951-) US writer and (since 1978) a Certified Sign Language Interpreter. He began publishing sf with *The Alchemists* (1984); it and its sequel, *The Pathfinders* (1986), make up the first 2 volumes of the *Autumnworld Mosaic* sequence, set in a Galaxy abandoned by superior ALIENS after they have passed their technologies on to the human race, which proceeds to conquer the neighbouring planetary systems, sometimes to the detriment of existing inhabitants. The first novel describes an attempt on

the part of a human group to thwart the "expansionists" on a planet occupied by nonsentient humanoids; the second involves a damaging plunge into the "dark beyond space" where as-yet-unrevealed mysteries of cosmogony reside. Further volumes are projected. The Fading Worlds series - A Key for the Nonesuch (1990) and Return of the Breakneck Boys (1991) - is a SCIENCE-FANTASY adventure set in a mysterious GAME-WORLD-like arena, into which the protagonist initially stumbles when he uses a borrowed key to gain access to, as he thinks, a toilet. Further volumes of this series, too, are projected. GG continues to seem a polished writer who has not quite yet unleashed what seems a considerable talent. [JC]Other works: Hook *(1992), a version of the film for young adults; various ties to Batman, the Animated Series, including Batman, the Animated Movie: Mask of the Phantasm * (1994), and 4 linked texts: Batman, the Animated Series: Shadows of the Past* (1993), #2: Duel to the Death * (1994) and #3: The Dragon and the Bat *(1994).

GRAVES, C(HARLES) L(ARCOM)

[r] E.V. LUCAS.

GRAVES, ROBERT (VON RANKE)

(1895-1985) UK poet, novelist and critic, best known for an active poetic career, extending from the beginning of WWI into the 1970s, and for such novels as I, Claudius (1934). His tendentious claim that he wrote fiction solely for commercial reasons does little to explain the high quality of all but his first novel, the RURITANIAN extravaganza No Decency Left (1932) with Laura Riding (1901-1991), together writing as Barbara Rich. The Golden Fleece (1944; vt Hercules, My Shipmate 1945 US) is an erudite fantasy of considerable power. His UTOPIAN sf novel Watch the North Wind Rise (1949 US; vt Seven Days in New Crete 1949 UK) complexly dramatizes some ideas concerning the nature of POETRY and its ideal relation to the world that he had earlier expounded in The White Goddess (1947 US), a nonfiction study. Seven Days is framed as a possible dream of its protagonist, a poet called into the future by the Poet-Magicians who rule utopian New Crete, and whose worship of the White Goddess benefits from her literal existence; but the book provides no clear-cut advocacy of the utopia it describes, and indeed it becomes clear that the Goddess has arranged for the poet's intrusion precisely so that he may - like so many visitors to utopias - unbalance what has become a sterile society. The escapist, timeless nature of New Crete, and the mediocre poetry it produces, are depicted with considerable ambivalence by RG, who allows no "winners" in his quest for a view of the world that will appropriately balance the opposing forces of whole-witted time-fulness and half-witted utopia. [JC]Other works: The Shout (1929 chap).About the author: There is much critical literature about RG in general. On Seven Days in New Crete the following are useful: Fritz LEIBER's "Utopia for Poets and Witches" in RIVERSIDE QUARTERLY 4 (1970), Robert H. Canary's "Utopian and Fantastic Dualities in Robert Graves's Watch the North Wind Rise" in SCIENCE-FICTION STUDIES 4 (1974) and Peter Briggs's "Watch the North Wind Rise" in Survey of Modern Fantasy Literature (anth 1983) ed Frank N. Magill. See also: ANTHROPOLOGY; GALACTIC EMPIRES; The MAGAZINE OF FANTASY AND SCIENCE FICTION ; MYTHOLOGY.

GRAVES, VALERIE

Marion Zimmer BRADLEY.

GRAVITY

The force of gravity is the most inescapable and unvarying fact of terrestrial life, and when writers first sent characters into SPACESHIPS and on to other planets the phenomenon of low gravity, or of no gravity at all, figured prominently among the wonders of space. Many early authors did not realize that complete weightlessness is a consequence of free fall, but this soon became a fact to be taken for granted in describing SPACE FLIGHT, and now few writers bother to emphasize it. A delightful account of the attractions of weightlessness was given by Fritz LEIBER in "The Beat Cluster" (1961); a more straightforward introduction is contained in Arthur C. CLARKE's *Islands in the Sky* (1952). In Bob SHAW's *THE RAGGED ASTRONAUTS* (1986) the most difficult part of interplanetary travel by BALLOON (no free fall here) between two mutually orbiting planets only 5000 miles (8000km) or so apart, and with a common atmosphere, is the transition of the weightless zone where the two gravitic pulls cancel out. Weightlessness in practice is more likely to be a nuisance than anything else. The favoured method of providing "artificial gravity" in a spaceship or SPACE HABITAT is to spin the ship about an axis to generate a centrifugal force acting outward from the axis, so that the vessel's wall becomes the "floor". The visual paradoxes associated with a "gravity" that acts outwards on the inside of a hollow object were exploited in the film *2001: A SPACE ODYSSEY* (1968), in Arthur C. CLARKE's *Rendezvous with Rama* (1973), and in Harry HARRISON's *Captive Universe* (1969). Few writers apart from Clarke mention the Coriolis force, a sideways force on a moving object which also results from a spinning system, and makes things tend to move in circles; it might be a severe disadvantage in a very large spinning spaceship. The Coriolis force is not encountered if the gravity is provided by a constant linear acceleration, nor if the problem is solved outside known science by having recourse to gravity generators such as SPINDIZZIES. Centrifugal force also comes into play on rapidly rotating planets, where it combines with the force of gravity to define the direction of the vertical. Since the surface of a planet tends to be generally at right angles to the combined centrifugal and gravitational forces, the centrifugal force can be treated for most practical purposes as a part of the gravity, having the effect of decreasing the gravity at the equator (where it is already likely to be lower because of the shape of the planet), as in Hal CLEMENT's *Mission of Gravity* (1954). This novel tells of the very high gravity on the massive, rapidly rotating, disc-shaped planet of Mesklin, and of the effect of these conditions on the psychology of the planet's intelligent lifeforms. In our Solar System high gravity, nowhere near as extreme as Mesklin's, can be found on JUPITER; this is described in Poul ANDERSON's "Call Me Joe" (1957), James BLISH's "Bridge" (1952) - the story which describes the development of spindizzies - and Arthur C. Clarke's "A Meeting with Medusa" (1971), from which was developed *The Medusa Encounter* (1990) by Clarke and Paul PREUSS. Much stronger gravitational forces than these can be expected near the very massive but small objects composed of collapsed matter (NEUTRON STARS; PHYSICS). Not just the gravitational field's

overall strength is important: the variations in its strength between different locations can exert forces even on an object in free fall. These are called "tidal forces" (the tides on Earth, caused by the difference between the Moon's gravitational pull on opposite sides of Earth, provide the most familiar example). Tidal forces feature in Larry NIVEN's "Neutron Star" (1966) and "There is a Tide" (1968). A collapsing star of sufficient mass (about three times that of the Sun) would pass through the neutron-star stage to become a BLACK HOLE - some high-gravity stories of the 1970s and 1980s are discussed under that heading - and there has been a large amount of sf set around (or even within) such venues. The wish for a method of manipulating gravity has been a rich source of IMAGINARY SCIENCE, indeed ANTIGRAVITY has been something of a philosopher's stone to sf writers, and is discussed in some detail in that entry. The attraction of antigravitational themes grows from a kind of resentment at the inescapable restraints gravity imposes on us in the real world. Cecelia HOLLAND deals in rather cavalier manner with gravity in *Floating Worlds* (1976), the worlds of the title being cities floating above Saturn and Uranus. David GERROLD's *Space Skimmers* (1972) exploits an imaginary gravitic effect (using gravity as a kind of point applied to a surface) which yields an attractive spaceship designed as if by M.C. Escher. *Walkers on the Sky* (1976) by David J. LAKE owes more to wish fulfilment than to science, but does offer a technological explanation for the behaviour summarized in the title. Gravity as a theme has naturally been in the main the province of HARD-SF writers like Hal Clement and Larry Niven. Working very much in their tradition are the physicist Robert L. FORWARD, who has written two interesting novels about a lifeform living in intensely high-gravity conditions on the surface of a neutron star - *Dragon's Egg* (1980) and its sequel *Starquake!* (1985) - and Stephen BAXTER, whose *Raft* (1991) is set in an ALTERNATE UNIVERSE where gravity, instead of being (to simplify) the weakest of the fundamental forces, as it is in our Universe, is one of the strongest; the results are described with elan. [TSu/PN]

GRAY, ALASDAIR (JAMES)

(1934-) Scottish painter, playwright and author who began publishing work of genre interest with "The Yellow Dream" for *Collins Magazine for Girls and Boys* in 1950; this tale was gathered, along with a wide variety of sf fables and FABULATIONS, in *Unlikely Stories, Mostly* (coll 1983). His first and most substantial novel was *Lanark: A Life in Four Books* (1981), a vast tale whose burly narrative voice shoulders aside questions of genre as impertinences; the protagonist is born, lives and dies in Glasgow, whence, transformed into an alter ego named Lanark, he is transported to the regimented subterranean DYSTOPIA of Unthank, which is of course Hell but which also - as he enters the "Epilogue" - becomes the text of *Lanark*, through which he wages his way. *1982 Janine* (1984) is a metaphysical fantasy, with some of the same embedded entwinings of life and book. *The Fall of Kelvin Walker: A Fable of the Sixties* (1985) and *Something Leather* (1990) are associational, as are the tales assembled in *Lean Tales* (coll 1985), which also includes work by James Kelman and Agnes Owens. *McGrotty and Ludmilla, or The Harbinger Report* (1975 as BBC radio play; 1990) is a mildly poisonous SATIRE of UK life and politics set in a moderately

displaced ALTERNATE WORLD, and Poor Things: Episodes from the Early Life of Archibald McCandless M.D. Scottish Public Health Offices (1992; rev 1993) fabulates the Frankenstein story (FRANKENSTEIN MONSTER) and FEMINISM. A History Maker (1994) sets an eccentric tale of border warfare with England in the Scotland of the 23rd century. Though published by mainstream houses, most of AG's books have been designed by him in his own unmistakable style, so that his oeuvre is unique inside and out. [JC]See also: CITIES.

GRAY, CURME

(1910-1980) US writer in whose complex sf novel Murder in Millennium VI (1951) a homicide case shakes a matriarchal DYSTOPIA thousands of years hence - murder being inexplicable to the inhabitants of this world. The focus of interest in the novel is the gradual unveiling of the fact that a gradual transition - not back to patriarchy but to some synthesis - is under way. There is a detailed analysis in In Search of Wonder (1956) by Damon KNIGHT, the admiring tone of which has not been universally shared. [JC]

GRAY, ROD

Gardner F. FOX.

GRAZIER, JAMES

(1902-1975) US writer in whose awkwardly written Runts of 61 Cygni C (1970) humans encounter approximately humanoid aliens and lots of kinky sex on the planet 61 Cygni C. [JC]Other works: Hydra (1969) as by James A. Grazier, a juvenile.

GREAT AMERICAN PUBLICATIONS FANTASTIC UNIVERSE.

GREAT AND SMALL

One of the commonest fantastic devices in literature and legend is the alteration of scale. MYTHOLOGY and folklore abound with giants and miniature humans, and different perspectives dependent upon changes of scale are central to many of the SATIRES recognized today as works of PROTO SCIENCE FICTION, most notably Jonathan SWIFT's Gulliver's Travels (1726) and VOLTAIRE's Micromegas (1750 Berlin; 1752 France; trans 1753). Mark TWAIN's uncompleted works include "Three Thousand Years among the Microbes" (written 1905; 1967), in which a germ called Huck inhabits the body of a tramp, recalling Morgan ROBERTSON's earnest medical fantasy "The Battle of the Monsters" (1899). Modern satires using distortion of scale in other ways include Joe Orton's Head to Toe (1971), J.G. BALLARD's "The Drowned Giant" (1965; vt "Souvenir") and Jessamyn WEST's The Chilekings (1967). The first SCIENTIFIC ROMANCE of the microcosm was "The Diamond Lens" (1858) by Fitz-James O'BRIEN, in which a scientist discovers a tiny humanoid woman in a water-drop. The tactic of shrinking human beings to insect-size in order that they may observe the small-scale wonders of the natural world is common in didactic sf, ranging from Alfred Taylor SCHOFIELDEN's Travels in the Interior (1887; as by Luke Courteney) through Edwin PALLANDER's The Adventures of a Micro-Man (1902) and Bob OLSEN's "The Ant with the Human Soul" (1932) to Donald SUDDABY's Lost Men in the Grass (1940) as by Alan Griff. More ambitious didactic microcosmic

fantasies can be found in George GAMOW's Mr Tompkins Explores the Atom (1944). Adventure stories in which humans are pitted against giant insects and monstrous spiders are commonplace, ranging from Sara Coleridge's curious fantasy Phantasmion (1837) through the stories assembled in Murray LEINSTER's The Forgotten Planet (1920-53; fixup 1954) to the series begun with Spider World: The Tower (1987) by Colin WILSON; a duel with a spider is the high-point of the film The INCREDIBLE SHRINKING MAN (1957) based on Richard MATHESON's The Shrinking Man (1956). The idea that there might be worlds within worlds was popularized by the Rutherford-Bohr model of the atom as a tiny "solar system" with electrons orbiting the nucleus. The notion that all the atoms of our Universe might be solar systems in their own right, and all of our Universe's solar systems themselves atoms in a macrocosm, was developed by several writers, appearing first in The Triuneverse (1912) by R.A. KENNEDY. The PULP-MAGAZINE writer who made the theme his own was Ray CUMMINGS, whose works in this vein include the microcosmic romances The Girl in the Golden Atom (1919-20; fixup 1921), The Princess of the Atom (1929; 1950) and Beyond the Vanishing Point (1931; 1958) and the macrocosmic romance Explorers into Infinity (1927-8; 1965). Other pulp writers who borrowed the theme from Cummings include Harl VINCENT, for "The Microcosmic Buccaneers" (1929), S.P. MEEK for "Submicroscopic" (1931), Donald WANDREI for "Colossus" (1934), Jack WILLIAMSON for "The Galactic Circle" (1935) and Festus PRAGNELL for The Green Man of Kilsona (1935 as "The Green Man of Graypec"; 1936; vt The Green Man of Graypec 1950 US). Numerous other pulp-sf stories featured miniaturized men, including "A Matter of Size" (1934) by Harry BATES, "He who Shrank" (1936) by Henry L. HASSE, whose protagonist is both giant and miniature man while shrinking through a whole series of worlds-within-worlds, "Fury from Lilliput" (1949) by Murray LEINSTER, "Chaos in Miniature" (1952) by H.J. CAMPBELL, and the classic "Surface Tension" (1952) by James BLISH. Despite the inherent logical flaws in the notion (to do with the relationships between mass, strength and organic complexity) the idea of human miniaturization has retained sufficient fascination to encourage writers to continue to fudge the issue; it crops up in such novels as Atta (1953) by Francis Rufus BELLAMY, Cold War in a Country Garden (1971) by Lindsay GUTTERIDGE and The Men Inside (1973) by Barry N. MALZBERG, and in such films as DR CYCLOPS (1940), The Incredible Shrinking Man, FANTASTIC VOYAGE (1966) and INNERSPACE (1987). The process of fudging can be ingenious, sometimes recruiting the notion of the expanding Universe, as in the playful "Prominent Author" (1954) by Philip K. DICK and Land of Dreams (1987) by James P. BLAYLOCK. An interesting attempt to accommodate the microcosmic romance to more modern atomic theory is "Nor Iron Bars" (1957) by James Blish. An intriguing recomplication of the theme involves the depiction of miniature worlds whose time-flow is more rapid than ours, as in "Pygmy Planet" (1932) by Jack Williamson, "Microcosmic God" (1941) by Theodore STURGEON, Edge of Time (1958) by David Grinnell (Donald A. WOLLHEIM) and DRAGON'S EGG (1980) by Robert L. FORWARD, which is set on a NEUTRON STAR, the rapid time-flow being a relativistic consequence of the huge surface GRAVITY. Miniature worlds constructed for specific purposes are featured in "The Tunnel under the World" (1954) by Frederik POHL and Counterfeit World (1964 UK; vt Simulacron-3 1964 US) by Daniel F. GALOUYE. Giants are usually treated less

sympathetically than very tiny characters, for obvious reasons; the oversized heroes of *The Food of the Gods* (1904) by H.G. WELLS and Titan's Daughter (1961) by James Blish are notable exceptions. The giant ALIENS in Raymond F. JONES's *The Alien* (1951) and Blish's *The Warriors of Day* (1953) are menacing, although the one in Joseph L. GREEN's *Gold the Man* (1971; vt *The Mind Behind the Eye*) isn't. In films which invert the theme of *The Incredible Shrinking Man*, including *The AMAZING COLOSSAL MAN* (1957) and *Attack of the 50-Foot Woman* (1958), the central characters become figures of menace, although the charismatically gargantuan star of *KING KONG* (1933) has always generated sympathy, as has his one-time saurian rival *GOJIRA*. When human beings must live as scavengers in worlds populated by alien giants, as in Kenneth BULMER's *Demon's World* (1964; vt *The Demons*), William TENN's *OF MEN AND MONSTERS* (1963 Gal as "The Men in the Walls"; exp 1968) and the tv series *LAND OF THE GIANTS*, they are the obvious heroes, but when humans are the giants sympathy usually attaches to the tiny aliens, even when - as in A. Bertram CHANDLER's "Giant Killer" (1945) - they are not humanoid. The notion of social stratification based on more moderate differences of size is cleverly developed in the fantasies of Sharon Baker (1938-1991) set on the planet Naphar, including *Quarrelling*, *They Met the Dragon* (1984). John CHRISTOPHER's *The Little People* (1967) is the most sciencefictional of the many notable juvenile fantasies which feature tiny races living fugitive lives in the human world; others include T.H. WHITE's *Mistress Masham's Repose* (1946) and the two series begun with *The Borrowers* (1952) by Mary Norton (1903-1992) and *Truckers* (1989) by Terry PRATCHETT. By far the best modern fantasy to include aspects of microcosmic romance is John CROWLEY's *Little, Big* (1981), and it is to the realms of FANTASY that most of the themes dealing with microcosms and macrocosms really belong. [BS] See also: COSMOLOGY; FANTASTIC VOYAGES.

GREATOREX, WILFRED

1990.

GREAT SCIENCE FICTION / SCIENCE FICTION GREATS

One of the many reprint DIGEST-size magazines published by Sol Cohen's Ultimate Publishing Co. employing the reprint rights acquired when Cohen bought *AMAZING STORIES* and *FANTASTIC*. 21 issues were released, quarterly Oct 1965-Spring 1971, the first 12 under the title *Great Science Fiction*, #13-#16 as *Science Fiction Greats* and #17-#21 as *SF Greats*. The contents were mostly short stories by well known authors, reprinted from the period when Cele GOLDSMITH edited *AMZ* and *Fantastic*. #13 was devoted entirely to Robert SILVERBERG and #14 entirely to Harlan ELLISON. This was one of Cohen's better publications, for he was selecting from an interesting period in the history of his source magazines. [BS]

GREAT SCIENCE FICTION STORIES

TREASURY OF GREAT SCIENCE FICTION STORIES.

GREELEY, ANDREW M(ORAN)

(1928-) US Roman Catholic priest and writer, several of whose books have been nonfiction texts on matters of faith; among the rest are detective novels (sometimes with paranormal elements) and some fantasy and sf,

beginning with Nora Maeve and Sebi (1976 chap), a short fantasy tale, and The Magic Cup (1979), a fantasy set in medieval Ireland. God Game (1986) depicts a priest introduced by COMPUTER to a fantasy GAME-WORLD. The Final Planet (1987) features the Irish Catholic captain of a desperately wandering starship called Iona from the planet Tara, who must descend to a very secular planet to see if colonists are admissible, almost (but never quite) bedding a female scientist en passant. Angel Fire (1988) is a SCIENCE-FANTASY novel about an Irish-descended Nobel Prize-winning scientist - he has been honoured for the already discredited "punctuated equilibrium" theory of EVOLUTION - blessed with a literal guardian angel, who protects him very well. Sacred Visions (anth 1991) ed with Michael CASSUTT (and Martin H. GREENBERG anon) assembles a wide range of stories about RELIGION. [JC] See also: GAMES AND SPORTS; VIRTUAL REALITY.

GREEN, HENRY

Pseudonym of UK industrialist and writer Henry Vincent Yorke (1905-1973), author of several laconic but richly thought-through novels from Blindness (1926) to Doting (1952). His one sf tale, Concluding (1948), set 50 years hence in a DYSTOPIAN socialist UK, presents through imagery and dialogue a complex vision of a world in which humanity and Nature are irretrievably severed. [JC]

GREEN, HILARY

[r] ROBERT HALE LIMITED.

GREEN, I.G.

Pseudonym of US writer Ira Greenblatt (? -), in whose Time Beyond Time (1971) the hero is either killed by lightning or caught in a "time-nexus" and cast into a disease-free ATLANTIS, where he finds himself immortal and becomes embroiled in many exciting adventures. [JC]

GREEN, JEN

[r] Sarah LEFANU.

GREEN, JOSEPH (LEE)

(1931-) US writer of sf and technical journalism who began publishing sf in 1962 with "The Engineer" in NW. An Affair with Genius (coll 1969 UK) assembles some of his better early work. Although many of his 70 stories to date (not all sf) have appeared in the USA - along with popular-science articles in ASF that demonstrate the lucid gift of exposition visible also in his fiction - it was in the UK that he first established his name, and there that most of his books were first published. The Loafers of Refuge (1962-3 NW; fixup 1965 UK), his first novel, chronicles the gradual coming together, to their mutual benefit, of colonizing humans and humanlike natives on the planet Refuge, mainly through the mediation of the protagonist (COLONIZATION OF OTHER WORLDS). JG's best novel to date is probably his second, Gold the Man (1971 UK; vt The Mind Behind the Eye 1972 US), which deals very competently (though not in depth) with a variety of themes from SUPERMAN to ALIENS and INTELLIGENCE. Gold is Homo sapiens born with about 4oz (120g) of extra association neocortex. As an adult he is asked to "operate" a brain-damaged giant invader from inside its head (GREAT AND SMALL). Returning, thus incorporated, to the alien's blandly UTOPIAN home planet, he works out the reason for the imminent

destruction of its sun: sentient sunspots. All ends well. Further novels include *Conscience Interplanetary* (1965-71 var mags, fixup 1972 UK), the uneven story of a Conscience whose job it is - in an unhappy replay of the protagonist's role in *The Loafers of Refuge* - to adjudicate as to the INTELLIGENCE of alien species before allowing human beings to exploit their planets. [JC]Other works: *Star Probe* (1976 UK); *The Horde* (1976 Canada). See also: COMMUNICATIONS; MATTER TRANSMISSION.

GREEN, MARTIN (BURGESS)

(1927-) UK academic and writer, long resident in the USA. Some of his early studies of the linkages between culture and literature, like "Science and Sensibility" (in *Science and the Shabby Curate of Poetry* coll 1964) and *Children of the Sun* (1976), express a remote interest in GENRE SF; later works, like *The Robinson Crusoe Story* (1990) and *Seven Types of Adventure Tale: An Etiology of a Major Genre* (1991), though their interest remains mainly associational, show a mind increasingly sensitive to the structures underlying genre writing. His one attempt at fiction, *The Earth Again Redeemed: May 26 to July 1, 1984, on This Earth of Ours and its Alter Ego: A Science Fiction Novel* (1977), uneasily posits an ALTERNATE WORLD where the Roman Catholic Church has blocked the development of science, and where a visiting CYBORG from our own ruined timeline detects clear signs of coming disaster. [JC] See also: ANTIMATTER.

GREEN, NUNSOWE

Pseudonym of unidentified UK writer of the sf discussion novel, *A Thousand Years Hence; Being Personal Experiences as Narrated by . . .* (1882). Though the featured tour of the future turns out to have been a dream, the novel invokes a wide range of sf notions, from ESP to TERRAFORMING. [JC]

GREEN, ROBERT

(? -) Canadian writer and musician whose *The Great Leap Backwards* (1968) depicts a future where COMPUTERS have taken over the cities, leaving the countryside in a natural state. [JC]

GREEN, ROGER (GILBERT) LANCELYN

(1918-1987) UK author, scholar, critic and translator (from classical Greek), with a special interest in FANTASY. Among his many works those most relevant to sf studies are *C.S. Lewis* (1963), *C.S. Lewis: A Biography* (1974) with Walter Hooper, and *Into Other Worlds: Space-Flight in Fiction, from Lucian to Lewis* (1957). The latter is one of the earlier books on sf, but is primarily pitched at a rather anecdotal and trivial level. His *Andrew Lang* (1946) throws light on an author whose relationship to sf has been almost forgotten (Andrew LANG); a later study, *Andrew Lang* (1962 chap), is less thorough. RLG's allegorical and old-fashioned fantasy, *From the World's End* (1948), is about visionary dreams in an old house. *The Land Beyond the North* (1958) carries Jason and the Argonauts ultimately to a sacrifice at Stonehenge. [PN]Other works (nonfiction): *Tellers of Tales* (1946); *The Story of Lewis Carroll* (1949); *Fifty Years of Peter Pan* (1954); *J.M. Barrie* (1960 chap). As Editor: *The Diaries of Lewis Carroll* (2 vols 1953); *Modern Fairy Stories* (anth 1955); *Fairy Stories* (coll 1958) by Mary Molesworth; *Thirteen Uncanny Tales* (anth 1970); *A Book of*

Magicians (anth 1973; vt A Cavalcade of Magicians US); Strange Adventures in Time (anth 1974); The Complete Fairy Tales of George MacDonald (coll 1977); The Unknown Conan Doyle (coll 1984) with John Michael Gibson. This list is selective; RLG as editor and reteller produced almost 100 books for children. See also: PROTO SCIENCE FICTION.

GREEN, ROLAND J (AMES)

(1944-) US writer whose first sale was the first volume in the Wandor SWORD-AND-SORCERY sequence (see listing below), though his first published work was a volume in the similar Richard Blade sequence (see listing below) under the house name Jeffrey Lord. His sf has generally been written in collaboration, notably 2 vols in the Janissaries sequence of military novels with Jerry POURNELLE, Janissaries: Clan and Crown (1982) and Janissaries III: Storms of Victory (1988). Others include: Jamie the Red (1984) with Gordon R. DICKSON; a continuation of H. Beam PIPER's Paratime Police/Lord Kalvan books with John F. CARR, Great King's War * (1985); and The Book of Kantela (1985) with Frieda Murray (RJG's wife). The Peace Company series of military sf novels - Peace Company (1985), These Green Foreign Hills (1987) and The Mountain Walks (1989) - are by RJG alone, as is the Starcruiser Shenandoah sequence, comprising Squadron Alert (1989), Division of the Spoils (1990), The Sum of Things (1991), Vain Command (1992), The Painful Field (1993) and Warriors for the Working Day (1994). In these works it is difficult to pin down any strongly individual tone. [JC] Other works: The Wandor books, comprising Wandor's Ride (1973), Wandor's Journey (1975), Wandor's Voyage (1979) and Wandor's Flight (1981); Throne of Sherran: The Book of Kanetal (1985); novels tied to Robert E. HOWARD's Conan, Conan the Valiant * (1988), Conan the Guardian * (1991), Conan the Relentless * (1992), Conan and the Gods of the Mountain * (1993) and Conan at the Demon's Gate * (1994). As Jeffery Lord, #9 through #37 of the -#1 through #8 were by Manning Lee STOKES; #30 was by Ray NELSON- Richard Blade series, Kingdom of Royth (1974), Ice Dragon (1974), Dimension of Dreams (1974), King of Zunga (1975), The Golden Steed (1975), The Temples of Ayocan (1975), The Towers of Melnon (1975), The Crystal Seas (1975), The Mountains of Brega (1976), Warlords of Gaikon (1976), Looters of Tharn (1976), Guardians of the Coral Throne (1976), Champion of the Gods (1976), The Forests of Gleor (1977), Empire of Blood (1977), The Dragons of Englor (1977), The Torian Pearls (1977), City of the Living Dead (1978), Master of the Hashomi (1978), Wizard of Rentoro (1978), Treasure of the Stars (1978), Gladiators of Hapanu (1979), Pirates of Gohar (1979), Killer Plants of Binaark (1980), The Ruins of Kaldac (1981), The Lords of the Crimson River (1981), Return to Kaldac (1983) and Warriors of Laittan (1984). As John CLEVE: Spaceways #15: Starship Sapphire (1984) with Andrew J. OFFUTT, writing together as Cleve. As Editor: 2 vols in the War World SHARED-WORLD anthologies created by Jerry Pournelle: The Burning Eye * (anth 1988) and Death's Head Rebellion * (anth 1990), both with John F. Carr.

GREEN, SHARON

(1942-) US writer who came to notice for her Terrilian Sequence of sadomasochistic novels in the manner of John NORMAN, with which the advertising copy explicitly linked them. The sequence is The Warrior

Within (1982), The Warrior Enchained (1983), The Warrior Rearmed (1984), The Warrior Challenged (1986) and The Warrior Victorious (1988); they differ from Norman's in being set on a more plausible planet. Other series directed to the same market include the Jalav/Amazon Warrior sequence - The Crystals of Mida (1982), An Oath to Mida (1983), Chosen of Mida (1984), The Will of the Gods (1985) and To Battle the Gods (1986) - and the Diana Santee, Spaceways Agent sequence: Mind Guest (1984) and Gateway to Xanadu (1985). The Far Side of Forever sequence - The Far Side of Forever (1987) and Hellhound Magic (1989) - is more traditional fantasy. Other titles include Lady Blade, Lord Fighter (1987), projected to initiate a series, The Revel Prince (1987), Mists of the Ages (1988), also projected to start a series, and Dawn Song (1990), No Haven for the Guilty (1990), Silver Princess, Golden Knight (1993) and The Hidden Realms (1993). [JC]

GREEN, STEPHEN
Neil BELL.

GREEN, TERENCE M(ICHAE)L

(1947-) Canadian teacher and writer who began publishing work of genre interest with "Of Children in the Foliage" in Aurora: New Canadian Writing 1979 (anth 1979) ed Morris Wolfe; the story was gathered with further lean and subtle tales in The Woman who is the Midnight Wind (coll 1987). In his short fiction TMG, like many Canadian writers, tenders a vision which might be called melancholy humanism. His first novel, Barking Dogs (1988 US), on the other hand, opens that vision out but, to do so, forcibly transforms Toronto into a mean-streets venue suitable for displays of high-tech weaponry displays by a vengeful cop. In Children of the Rainbow (1992) a descendant of the Bounty mutineers undergoes TIME-TRAVEL stress and imprisonment. [JC]See also: CANADA.

GREENBERG, MARTIN

(1918-) US publisher and anthologist, not to be confused with Martin H. GREENBERG. In 1948 he cofounded with David A. KYLE and others GNOME PRESS, one of the small but important early publishers of GENRE SF in hardcover format. MG edited 7 anthologies for Gnome, of which Coming Attractions (anth 1957) consisted of sf-related nonfiction articles. The others were Men Against the Stars (anth 1950; cut vt 9 Stories from Men Against the Stars 1963), Travelers of Space (anth 1951), with 16 illustrations by Edd CARTIER, Journey to Infinity (anth 1951), Five Science Fiction Novels (anth 1952; with novels by Fritz LEIBER and A.E. VAN VOGT omitted, cut vt The Crucible of Power 1953 UK), The Robot and the Man (anth 1953) and All About the Future (anth 1955). Most are loosely thematic. [PN]See also: SMALL PRESSES AND LIMITED EDITIONS.

GREENBERG, MARTIN H(ARRY)

(1941-) US anthologist and academic, not to be confused with Martin GREENBERG. He has a doctorate in Political Science (1969) and has taught at the University of Wisconsin - Green Bay since 1975, currently holding the position of Professor of Regional Analysis, Political Science, and Literature and Language. Most of his own writing, like Bureaucracy and Development: A Mexican Case Study (1970), has been in the field of

political science; his sf writing has been restricted to two reference tools, *Index to Stories in the Thematic Anthologies of Science Fiction* (1978) with Joseph D. OLANDER and Marshall B. TYMN, and *Science Fiction and Fantasy Series and Sequels: A Bibliography - Volume 1: Books* (1986) with Tim Cottrill (1958-) and Charles G. WAUGH. It is as an anthologist - primarily of sf and fantasy, although he has also edited many anthologies in other genres - that MHG has become a dominant figure, working both solo and with colleagues, usually Olander and Waugh, either separately or together, and with the occasional collaboration of MHG's wife, Rosalind M. Greenberg. Team anthologies - anthologies put together by two or more professional anthologists who divide up the various tasks involved, which include everything from story research and selection through copyright searches down to selling the actual book - were not unknown before MHG began to work, but he very quickly established himself in a commanding position, and by 1995 had published well in excess of 450 anthologies, primarily assembling reprint and original material of interest to sf and fantasy readers; in many recent titles his contribution has been anonymous, and it is increasingly difficult to maintain an accurate checklist of his output. His efficiency as an anthologist is self-evident, and the quality of the product is rarely negligible, though some titles show a lack of daring in their selection of contents: this flatness stands in odd contrast to the imaginativeness of most of the concepts presented, for it is clear that MHG has a high talent for conceiving hook themes and titles. Most of the huge array is made up of fiction anthologies, but several nonfiction titles have appeared, including the *Writers of the Twenty-First Century* series of anthologies reprinting critical articles on major writers, all ed with Olander: Isaac Asimov (anth 1977), Ray Bradbury (anth 1980), Arthur C. Clarke (anth 1977), Philip K. Dick (anth 1983), Robert A. Heinlein (anth 1978) and Ursula K. Le Guin (anth 1979). Other nonfiction anthologies include *Fantastic Lives: Autobiographical Essays by Notable Science Fiction Writers* (anth 1981), *The End of the World* (anth 1983) with Olander and Eric S. RABKIN, *The Legacy of Olaf Stapledon* (anth 1989) with Charles Elkins and Patrick A. McCarthy, and *No Place Else: Explorations in Utopian and Dystopian Fiction* (anth 1983) with Olander and Rabkin. Of the fiction anthologies, many have been edited by MHG either alone or with his team (by which term we refer not to contractual relationships - about which we claim no knowledge - but to the text partnerships so clearly in evidence), but in addition a large number also credit as co-editor a "name" writer - often a fiction author associated with the subject of the book in question. Although it is probable that some of these "name" editors did little more than approve contents assembled by the team, most of the MHG/"name" anthologies are genuine collaborative efforts. For this reason, and because there is little profit in duplicating long ranks of titles, we list all MHG/"name" anthologies (of which there are nearly 200) in the entries for the "name" writers involved rather than below. Of MHG's collaborators (some are academics who are not part of the MHG team) we treat the following as "name" writers: Robert ADAMS (6 titles), Poul ANDERSON (5, MHG anon in 1), Piers ANTHONY (1), Isaac ASIMOV (127+), Gregory BENFORD (6), Robert BLOCH (1; MHG anon), Orson Scott CARD (1; MHG anon), Terry CARR (1), Arthur C. CLARKE (1; MHG anon), David A. DRAKE (4), Alan Dean FOSTER (1), Andrew M. GREELEY (1,

with Michael CASSUTT, MHG anon), Damon KNIGHT (1), Barry N. MALZBERG (2), Richard MATHESON (1), Walter M. MILLER (1), William F. NOLAN (3), Andre NORTON (2), Frederik POHL (4), Bill PRONZINI (1), Fred SABERHAGEN (1), Robert SILVERBERG (10), S.M. STIRLING (2), Robert E. WEINBERG (1), Connie WILLIS (1) and Jane YOLEN (5), of which only the Yolen titles are listed below. The first MHG anthologies, beginning with Political Science Fiction (anth 1974) with Patricia WARRICK, were clearly designed to appeal to teachers; opinions were strongly divided about the usefulness of some of their accompanying critical apparatus. The Through Science Fiction educational sequence includes: Introductory Psychology Through Science Fiction (anth 1974; exp 1977) with Harvey Katz and Warrick; Anthropology Through Science Fiction (anth 1974) with Carol Mason and Warrick; Sociology Through Science Fiction (anth 1974) with Joseph D. Olander and Warrick; School and Society Through Science Fiction (anth 1974) with Olander and Warrick; American Government Through Science Fiction (anth 1974) with Olander and Warrick; The New Awareness: Religion Through Science Fiction (anth 1975) with Warrick; Run to Starlight: Sports Through Science Fiction (anth 1975) with Olander and Warrick; Social Problems Through Science Fiction (anth 1975) with John Milstead, Olander and Warrick; The City: 2000 A.D.: Urban Life Through Science Fiction (anth 1976) with Ralph S. Clem and Olander; Marriage and the Family Through Science Fiction (anth 1976) with Val Clear, Olander and Warrick; Criminal Justice Through Science Fiction (anth 1977) with Olander; No Room For Man: Population and the Future Through Science Fiction (anth 1979) with Ralph S. Clem and Olander; Dawn of Time: Prehistory Through Science Fiction (anth 1979) with Silverberg and Olander. They were not addressed to a wide audience. Later titles, which tended to appeal to more general markets, lacked pedagogical aids and began to feature the name collaborators listed above. The topical range of these anthologies is enormous, and many of them are cited in relevant theme entries throughout this encyclopedia. We list them below in the following order: first, MHG alone; next, MHG with non-team collaborators; finally, MHG with team collaborators (sometimes plus non-team collaborators). Each subdivision of the listing is in chronological order. [JC] Other works: MHG alone: The Classic Philip Jose Farmer 1952-1964 (coll 1984) and The Classic Philip Jose Farmer 1964-1973 (coll 1984); The Best of Margaret St Clair (coll 1985); The Best of Marion Zimmer Bradley (coll 1985; cut 1990 UK); Ursula K. Le Guin: Five Complete Novels (omni 1985) ed anon; Amazing Stories: Visions of Other Worlds (anth 1986); The Best Science Fiction of Isaac Asimov (coll 1986) ed anon; Amazing Science Fiction Anthology: The Wonderful Years, 1926-1935 (anth 1987), The War Years, 1936-1945 (anth 1987) and The Wild Years, 1946-1955 (anth 1987); The Best of Pamela Sargent (coll 1987); Bart Science Fiction Triplet #1 (anth 1988), only vol published; Foundation's Friends: Stories in Honor of Isaac Asimov (anth 1989); The Asimov Chronicles: Fifty Years of Isaac Asimov (coll 1989; vt in 6 vols as The Asimov Chronicles #1 1990, #2 1990, #3 1990, #4 1991, #5 1991 and #6 1991); The Further Adventures of Batman * (anth 1989), The Further Adventures of Batman #2: Featuring the Penguin (anth 1992) and #3: Featuring Catwoman (anth 1993), and The Further Adventures of the Joker * (anth 1990); Mummy Stories (anth 1990); The Diplomacy Guild (anth 1990); Christmas on Ganymede, and Other Stories (anth 1990); The Leiber Chronicles (coll 1990); The Fantastic Adventures

of Robin Hood (anth 1991); Fantastic Chicago (anth 1991); Isaac's Universe #1: The Diplomacy Guild * (anth 1991) and #2: Phases in Chaos * (anth 1991); New Stories from The Twilight Zone * (anth 1991); Nightmares on Elm Street: Freddy Krueger's Seven Sweetest Dreams * (anth 1991); After the King: Stories in Honor of J.R.R. Tolkien (anth 1992); Dracula, Prince of Darkness (anth 1992); The Super Hugos (anth 1992); The Further Adventures of Superman (anth 1993); A Newbery Halloween (anth 1993); Frankenstein: the Monster Wakes (anth 1993); Nebula Award Winning Novellas (anth 1994).MHG with non-team collaborators:MHG with John L. Apostolou: The Best Japanese Science Fiction Stories (anth 1989).MHG (anon) with Barbara Brenner, Seymour Reit and Howard Zimmerman: The Bank Street Book of Science Fiction (anth 1989); The Bank Street Book of Fantasy (anth 1989).MHG with Alan BRENNERT (anon): Stories from the New Twilight Zone * (anth 1991).MHG with John W. CAMPBELL Jr: Astounding Science Fiction, July 1939 (anth 1981) - the July 1939 issue of ASF in facsimile.MHG with Edward L. FERMAN: The Magazine of Fantasy and Science Fiction, April 1965 (anth 1981) - the Apr 1965 issue of FSF in facsimile.MHG with Ed Gorman: Stalkers: All New Tales of Terror and Suspense (anth 1989); Solved (anth 1991); The Dean Koontz Companion (anth 1994) with Gorman and Bill Munster. MHG (anon) with Robert McCammon: Under the Fang (anth 1991).MHG with Francis M. Nevins: Hitchcock in Prime Time (anth 1985).MHG (anon) with Byron PREISS: The Ultimate Werewolf (anth 1991); The Ultimate Dracula (anth 1991); The Ultimate Frankenstein (anth 1991).MHG with Patrick L. Price: Fantastic Stories: Tales of the Weird ? with Stanley SCHMIDT: Unknown Worlds: Tales from Beyond (anth 1988).MHG and Robert E. WEINBERG with Stefan R. Dziemianowicz: Weird Tales: 32 Unearthed Terrors (anth 1988); Rivals of Weird Tales: 30 Great Fantasy ? Horror Stories from the Weird Fiction Pulps (anth 1990); Famous Fantastic Mysteries: 30 Great Tales of Fantasy and Horror from the Classic Pulp Magazines Famous Fantastic Mysteries and Fantastic Novels (anth 1991); A Taste for Blood (anth 1993) with Dziemianowicz alone; Sea-Cursed (anth 1994) with Dziemianowicz and T Liam McDonald.MHG with Jane Yolen: Werewolves (anth 1988); Things that Go Bump in the Night (anth 1989); Vampires (anth 1991).MHG with team collaborators:MHG with Rosalind M. Greenberg: Phantoms (anth 1989); Horse Fantastic (anth 1991); Christmas Bestiary (anth 1992).MHG and R.M. Greenberg with Charles G. Waugh: 14 Vicious Valentines (anth 1988).MHG with Joseph D. Olander: Tomorrow, Inc.: SF Stories about Business (anth 1976); The Best of John Jakes (coll 1977); Time of Passage (anth 1978); Science Fiction of the Fifties (anth 1979).MHG and Olander with Patricia Warrick: Science Fiction: Contemporary Mythology: The SFWA-SFRA Anthology (anth 1978).MHG and Olander with Charles G. Waugh: Mysterious Visions: Great Science Fiction by Masters of the Mystery (anth 1979).MHG with Charles G. Waugh: Love, 3000 (anth 1980); The Human Zero: The Science Fiction Stories of Erle Stanley Gardner (coll 1981); The Fantastic Stories of Cornell Woolrich (coll 1981); The Best Science Fiction of Arthur Conan Doyle (coll 1981); Hollywood Unreel: Fantasies about Hollywood and the Movies (anth 1982); The Fantastic Saint (coll 1982); The Arbor House Celebrity Book of Horror Stories (anth 1982); Cults! GREENBERGER, ROBERT
[r] Michael Jan FRIEDMAN.

GREENBERG: PUBLISHER
GNOME PRESS; Martin GREENBERG.

GREENFIELD, IRVING A.
(1928-) US writer in various genres, noted for expansive historical fantasies. Waters of Death (1967), Succubus (1970; as by Campo Verde 1977) and The Stars Will Judge (1974; vt Star Trial 1977) apply a lush though highly readable psychologizing style to routine sf matters. As Bruce Duncan he wrote Mirror Image (1968 chap dos), a minor work. [JC]Other works: The UFO Report (1967), nonfiction; The Others (1969); The Ancient of Days (1973); A Play of Darkness (1974); To Savor the Past (1975); Aton (1975); The Face of Him (1976); Julius Caesar is Alive and Well (1977); The Gods' Temptress (1978), a fantasy; The Fate of an Eagle (1990); the Depth Force series of military-sf novels, comprising Depth Force (1984), Depth Force #2: Death Dive (1984), #3: Bloody Seas (1985), #4: Battle Stations (1985), #5: Torpedo Tomb (1986), #6: Sea of Flames (1986), #7: Deep Kill (1986), #8: Suicide Run (1987), #9: Project Discovery (1988), #10: Death Cruise (1988), #11: Ice Island (1988), #12: Harbor of Doom (1989), #13: Warmonger (1989), #14: Deep Rescue (1990) and #15: Torpedo Treasure (1991).

GREENHOUGH, TERRY

Working name of UK writer Terence Greenhough (1944-) for most of his fiction, though he used the pseudonym Andrew Lester for the routine novel *The Thrice-Born* (1976), about persecuted hermaphrodites on a distant planet. TG began publishing sf with "The Tree in the Forest" for *Science Fiction Monthly* in 1974. His first novel, *Time and Timothy Grenville* (1975), typically of this writer somewhat discursively exploits an uneasy, oppressive relation between the world at large and its protagonist in a story of complex TIME TRAVEL and ALIENS, in which Earth itself proves to be at stake. [JC]Other works: *The Wandering Worlds* (1976); *Thoughtworld* (1977); *The Alien Contract* (1980).

GREENLAND, COLIN

(1954-) UK writer and academic who took a PhD in sf at Oxford, publishing his thesis in revised form as *The Entropy Exhibition: Michael Moorcock and the UK "New Wave"* (1983). This text also includes extensive examinations of the works of Brian W. ALDISS and J.G. BALLARD and gives competent readings of these and other authors, though it (understandably) fails to provide anything like a definitive modelling of the notoriously portable field and slippery topic of the NEW WAVE and its prime organ, NEW WORLDS. CG later edited, with Eric S. RABKIN and George E. SLUSSER, *Storm Warnings: Science Fiction Confronts the Future* (anth 1987 US). Beyond some further critical pieces - and *Death is no Obstacle* (1992), a book-length interview with Michael MOORCOCK, mostly about the latter's work - his interest had by this point shifted towards fiction, though he was to take on the position of Reviews Editor for FOUNDATION: THE REVIEW OF SCIENCE FICTION in 1990. CG began publishing works of genre interest with "Miss Otis Regrets" for *Fiction Magazine* in 1982. His first novel, *Daybreak on a Different Mountain* (1984), a fantasy, wrestles mildly with an ENTROPY-laden plot and venue, and with a range of New Wave influences forgivable in a book coming from a scholar's loaded mind. Two further fantasies set in different parts of the same world, *The Hour of the Thin Ox* (1987) and *Other Voices* (1988), gradually demonstrated a sharpening, meticulously intelligent, cold, quiet narrative voice, and plots which carefully picked at some of the unthinking assumptions, general to FANTASY, about war and peace, prejudice and love. Of much greater sf interest was his fourth novel, *TAKE BACK PLENTY* (1990), a devotedly exuberant SPACE OPERA and the first of the Plenty sequence, which won the ARTHUR C. CLARKE AWARD and the BRITISH SCIENCE FICTION AWARD. The story involves much tried-and-true material - from the MARS where the tale begins to the tough female space-tramp who runs her own ship and is in all sorts of trouble, and on to the ALIENS who dominate human space - and indeed there are moments when CG seems all too knowing. But the neatly calipered parodies are accomplished with love, lacking any trace of the disdain that has tended to disfigure much UK space opera; and the high jinks are genuinely earned. *In the Garden: The Secret Origin of the Zodiac Twins* (1991 chap) is a short prequel, and *Seasons of Plenty* (1995) is the projected sequel. *Harm's Way* (1993) approaches STEAMPUNK in its depiction of an ALTERNATE WORLD solar system bathed in a sea of Aether, so that great sailing ships dominate the spacelanes; but is, in the end, more satisfactorily to be read as fantasy. CG has become, quite suddenly, one of the dominant figures of his generation of sf writers. He contributed

the entry on Bruce STERLING to this encyclopedia. [JC]Other works: Magnetic Storm (graph 1984) with Martyn Dean and Roger DEAN; Interzone: The First Anthology (anth 1985) ed with John CLUTE and David PRINGLE. See also: INTERZONE; MILFORD SCIENCE FICTION WRITERS' CONFERENCE; OUTER PLANETS; SCIENCE FICTION FOUNDATION; SPACE FLIGHT; WOMEN AS PORTRAYED IN SCIENCE FICTION.

GREENLEAF, WILLIAM

(?1917-) US writer who began publishing sf with his first novel, Timejumper (1980), an adventure incorporating an unusually subtle presentation of the rite of passage central to the sf genre. His further novels share a common galactic background, though it is clear he is interested in that background not to challenge it with cosmogonies and alarums but in order to add verisimilitude to tales of humans caught off-balance in the vast Universe, and attempting to cope. The Tartarus Incident (1983) lovingly describes an accident which dumps an untrained group of humans on the planet of the title. The Pandora Stone (1984) is a tale of detection involving an AI and a return to an almost deserted Earth, where wisdom still resides. Starjacked! (1987) and Clarion (1988) cover similar ground, perhaps rather hurriedly. [JC]

GREENLEAF PUBLISHING

IMAGINATION; IMAGINATIVE TALES.

GREENLEE, SAM

(1930-) US writer whose NEAR-FUTURE sf novel, The Spook who Sat by the Door (1969), features a Black uprising in a near-contemporary USA. [JC] See also: POLITICS.

GREENWALD, HARRY J.

ROBERT HALE LIMITED.

GREENWOOD PRESS

US specialist publishing house, based in Westport, Connecticut, whose books are largely academic and sometimes bibliographical; it has a special interest in sf, and is one of the major academic publishers in this area. GP has published commentaries on sf by Martha A. Bartter (1989), Thomas D. CLARESON (1984), Bud Foote (1990), Donald M. HASSLER (1982), John J. PIERCE (1987 and 1989), Gary K. WOLFE (1986) and others, and anthologies of critical essays on sf ed Michael R. COLLINGS, Thomas P. Dunn and Richard D. Erlich, Martin H. GREENBERG, Robert E. Myers, Donald Palumbo, Robert Reilly, Carl B. YOKE and others, many in GP's Contributions to the Study of Science Fiction and Fantasy series, which began in 1982 and has (by 1992) published over 40 volumes. Some of the anthologies have been selected from conference proceedings of the annual International Conference on the Fantastic in the Arts. Other GP books are the splendid Science Fiction, Fantasy, and Weird Fiction Magazines (1985) ed Marshall B. TYMN and Mike ASHLEY, and A Biographical Dictionary of Science Fiction and Fantasy Artists (1988) by Robert E. WEINBERG, both standard references. GP has also published complete runs of many famous sf magazines (mostly PULP MAGAZINES) in microfiche, including AMZ, Planet Stories and Startling Stories. [PN] See also: SF IN THE CLASSROOM.

GREER, RICHARD

ZIFF-DAVIS house name used once by Robert SILVERBERG and Randall GARRETT, on the story "The Great Klandar Race" (AMZ 1956), and twice during 1956-7 by others (unidentified). [PN]

GREER, TOM

Working name of Irish surgeon Thomas Greer (1846/7-1904) for his writing; he lived in the UK from about 1880. In his *A Modern Daedalus* (1885) an Irish lad invents a one-man flying device which straps to the shoulders. The UK Government attempts to persuade him to use it against Ireland. Though he longs simply for peace, UK military action forces him onto the side of the revolutionaries, and a squadron of Irish fliers gains independence for their oppressed island home. [JC]

GREG, PERCY

(1836-1889) UK poet, novelist and historian, son of the prolific essayist William Rathbone Greg (1809-1881); PG also wrote as Lionel G. Holdreth. His first work of genre interest was "Guy Neville's Ghost" for Blackwood's in 1865; the nonfiction *The Devil's Advocate* (1878) contains some speculative material. He was author of an important early sf novel, *Across the Zodiac: The Story of a Wrecked Record* (1880) (FANTASTIC VOYAGES), which is perhaps most significant for its detailed depiction of the protagonist's journey to MARS through the use of apery, an ANTIGRAVITY force (the concept provided a model for many later novels) which he uses to propel his SPACESHIP, whose construction is carefully described. Once on Mars, a more orthodox detailing of UTOPIA ensues: the Martians' version, though technologically advanced and benignly monarchical, suffers from scientific literalism (wrong thoughts are criminal) and dubious sexual morality (women are bought and sold). Finding himself allied to an opposing group of telepaths who believe in family life, the protagonist is embroiled in a final conflict and loses friends and wife, though the telepaths win the war. He escapes to his spaceship and the novel ends abruptly. *Across the Zodiac* remains readable. [JC/BS]See also: HISTORY OF SF; POWER SOURCES.

GREGG PRESS

US publisher of reprints in hardcover, a subsidiary of G.K. Hall ? The Gregg Press Science Fiction Reprint Series, ed David G. HARTWELL with Lloyd W. CURREY as associate editor, included a variety of novels and collections dating from the 18th century until recent times. Among them were several new volumes, including *ALYX* (coll 1976; vt *The Adventures of Alyx* 1985 UK) by Joanna RUSS. GP also published books of critical material about sf drawn from such academic journals as *SCIENCE-FICTION STUDIES* and *FOUNDATION*. The GP reprints - many of which represented the first hardcover editions of out-of-print paperback originals - were regarded by critics as the best of the several sf reprint hardcover series, all aimed primarily at libraries; new and often lengthy introductions to the fiction reprints, by leading critics and authors, were a useful feature. 1978 was a peak year for the series, with 61 titles published. In 1980 it became clear that the backlist inventory was too large, and the roster of new publications was radically cut down. During 1980-84 Currey alone edited

the GP Masters of Science Fiction and Fantasy author bibliographies, which covered 18 writers in 14 volumes. GP stopped publishing sf in 1984, and disappeared on being absorbed into Macmillan in Spring 1991. [PN/MJE]

GREGOR, LEE

[s] Tony ROTHMAN.

GREGORY, JOHN

Robert HOSKINS.

GREGORY, OWEN

(? -) Pseudonym of the UK author of Meccania, the Super State (1918), a futuristic DYSTOPIA describing a German mechanical and totalitarian society taken to its logical extreme. It contrasts interestingly with the portrait of a dystopian Germany in Milo HASTINGS' City of Endless Night (1920). [JE]See also: HISTORY OF SF; POLITICS.

GREMLINS

Film. Joe DANTE.

GRENDON, STEPHEN

August W. DERLETH.

GREY, CAROL

[s] Robert A.W. LOWNDES.

GREY, CHARLES

E.C. TUBB.

GRIBBIN, JOHN

(1946-) UK writer known mostly for his very numerous science popularizations. Most of his novels have been in collaboration and have tended to a certain narrative predictability, though the science content has always been impressively presented. Sixth Winter(1979) with Douglas (William) Orgill (1922-1984) is a HARD-SF tale dealing with the coming of a new ice age. Brother Esau (1982), again with Orgill, charts the events following the discovery of the Yeti. Double Planet (1988) and its remote sequel Reunion (1991), both with Marcus CHOWN, are set in the same universe, though 1000 years apart. In the first, astronauts must intercept a comet thought to be on collision course with Earth; in the second the lunar population comes under the influence of a cult claiming to hold the secret to the replenishment of the MOON's atmosphere. JG's only solo novel, Father to the Man (1989), arguably his best book, is a readable and witty tale of a geneticist hero pitted against a world of spreading religious fundamentalism. Ragnarok (1991) with D.G. COMPTON is a NEAR-FUTURE cautionary tale in a traditional vein: a SCIENTIST threatens to end human civilization unless peace is declared; almost inadvertently, Ragnarok does indeed occur. Innervations (1993) is a weak POCKET UNIVERSE tale. [MB]Other works: Very many science books, including: The Jupiter Effect (1974) and Beyond the Jupiter Effect (1983), both with Stephen Plagemann (Immanuel VELIKOVSKY); White Holes: Cosmic Gushers in the Universe (1977); In Search of Schrodinger's Cat (1984); Blinded by the Light (1991).See also: ANTHROPOLOGY; APES AND CAVEMEN (IN THE HUMAN WORLD); BLACK HOLES; GENETIC ENGINEERING; PARALLEL WORLDS.

GRIDBAN, VOLSTED

Pseudonym initially used by E.C. TUBB for 3 novels written for Scion Publications: Alien Universe (1952), Reverse Universe (1952) and Debracy's Drug (1953). Tubb then used the name on 2 novels for the Milestone Press - Planetoid Disposals, Ltd (1953) and Fugitive of Time (1953) - but Scion objected and reclaimed the name, which was used thereafter by John Russell FEARN (whom see for titles). [BS]

"GRIFF"

House name of Modern Publications, used by John Russell FEARN on the sf novel Liquid Death (1953) and on non-sf works by F. Dubrez FAWCETT. [JC]

GRIFF, ALAN

Donald SUDDABY.

GRIFFIN, BRIAN

(1941-) UK writer who published two unremarkable sf novels for ROBERT HALE LIMITED, The Nucleation (1977) and The OMEGA Project (1978). He is better remembered for the competent Apertures: A Study of the Writings of Brian Aldiss (1984) with David WINGROVE. [JC]

GRIFFIN, P(AULINE) M(ARGARET)

(1947-) US writer known initially as the author of the untaxing Star Commandos military-sf sequence set in an interstellar venue: Star Commandos (1986), Star Commandos #2: Colony in Peril(1987), #3: Mission Underground (1988), #4: Death Planet (1989), #5: Mind Slaver (1990), #6: Return to War (1990), #7: Fire Planet (1990), #8: Jungle Assault (1991) and #9: Call to Arms (1991). PMG has also published several fantasy stories, including material contributed to Andre NORTON's Witch World sequence, such as "Oath-Bound" in Tales of the Witch World *(anth 1987) ed Norton and Witch World: The Turning: Storms of Victory * (1991) with Norton; of greater sf interest was Redline the Stars (1993) with Norton, which revisits the latter's Solar Queen sequence. [JC]

GRIFFIN, RUSSELL M(ORGAN)

(1943-1986) US academic and writer who began publishing sf with his first novel, The Makeshift God (1979), an overwritten and overlong but notably intelligent romance of origins, set initially in a drab Arab-dominated marginally pre- CYBERPUNK USA, and then on a planet which houses mysteriously significant data about the deep human past. Century's End (1981) takes another blackly satirical look at the NEAR FUTURE of Earth, generating comparisons between RMG and writers like Kurt VONNEGUT Jr and - more relevantly - John T. SLADEK. In The Blind Man and the Elephant (1982) RMG tackled a theme dear to Sladek, the consequences of thrusting a tabula-rasa personality into a meat-grinder world - in Sladek's case it is usually a young ROBOT that loses its innocence; in RMG's it is a fast-maturing and monstrous experiment in cloning. The novel closes, after some very funny passages, in a state of utter despair. RMG's final novel, The Timeservers (1985), returns to the relative extroversion of his first in the story of a young soldier's confrontation with CLONES, far stars and telepathic ALIENS. RMG's premature death halted a career which could have soared. [JC]See also: END OF THE WORLD; MONSTERS.

GRIFFITH, GEORGE

Working name of UK traveller, journalist and writer George Chetwynd Griffith-Jones (1857-1906), the son of a clergyman and one of the most influential sf writers of his time. He appeared frequently in the pre-sf MAGAZINES and PULP MAGAZINES, particularly PEARSON'S WEEKLY and PEARSON'S MAGAZINE, writing as GG or, for some short stories, as Levin Carnac. He was instrumental in the transformation of the future- WAR novel to a more sensational form, capitalizing on contemporary political anxiety; and he helped make up a literary coterie, including William LE QUEUX, M.P. SHIEL and Louis TRACY, which specialized in the genre. GG first established himself with *The Angel of the Revolution* (1893 *Pearson's Weekly*; rev 1893) and its sequel *Olga Romanoff* (1893-4 *Pearson's Weekly* as "The Syren of the Skies"; rev 1894). In the first a revolutionary organization equipped with aerial battleships creates a reformed society under the government of a world federation; the second, set 125 years later, describes the upheaval which transforms this UTOPIAN state to one of total anarchy. Both are remarkable for their foresight of battle tactics in air warfare and for their anticipation of radar, sonar and nuclear weapons. They include elements which would only later become commonplace, notably the struggle by international cartels for world domination and the apocalyptic visions of Armageddon on Earth and of DISASTER from the heavens by comet. These elements can be found also in *The Outlaws of the Air* (1894-5 *Short Stories*; rev 1895), *Gambles with Destiny* (coll 1898), *The Great Pirate Syndicate* (1898 *Pick-Me-Up*; rev 1899), *The Lake of Gold* (1903), *A Woman Against the World* (1903), *The World Masters* (1903), *The Stolen Submarine* (1904), *The Great Weather Syndicate* (1906), *The World Peril of 1910* (1907) and *The Lord of Labour* (1911). From early in his career GG was overshadowed by H.G. WELLS, a fact which caused him to diversify his work, in search of critical acclaim. Such praise never came, although he produced notable examples of several themes: IMMORTALITY featured in *Valdar the Oft-Born* (1895 *Pearson's Weekly*; rev 1895) and *Captain Ishmael* (1901), the latter also being an early example of the PARALLEL-WORLDS theme; the LOST-WORLD theme in *The Romance of Golden Star* (1895 *Short Stories* as "Golden Star"; rev 1897), *The Virgin of the Sun* (1898) and *A Criminal Croesus* (1904); SPACE FLIGHT in *A Honeymoon in Space* (1900 *Pearson's Magazine* as "Stories of Other Worlds"; exp 1901); the fourth DIMENSION in *The Mummy and Miss Nitrocris* (fixup 1906; vt *The Mummy and the Girl UK*); telepathy in *A Mayfair Magician* (1905; vt *The Man with Three Eyes UK*); RELIGION in *The Missionary* (1902); and the supernatural in *Denver's Double* (1901), *The White Witch of Mayfair* (1902) and *The Destined Maid* (1908). GG's influence on contemporary UK sf was extensive, from E. Douglas FAWCETT's *Hartmann the Anarchist* (1893) through to Cyril Seymour's *Comet Chaos* (1906) and John MASTIN's *The Stolen Planet* (1906), and can still be seen today, as in Michael MOORCOCK's 19th-century pastiches. (Since GG's anti-US stance precluded US publication of many of his works, his influence there has been negligible.) Several of his novels have been reprinted in recent times, as well as a collection of unreprinted stories, *The Raid of "Le Vengeur"* (coll 1974) ed George LOCKE. [JE] Other works: *Briton or Boer?* (1897); *The Gold Finder* (1898); *The Justice of Revenge* (1901); *The Sacred Skull* (1908). About the author: "War: Warriors of If" in *Strange Horizons: The Spectrum of Science Fiction* (1976) by Sam MOSKOWITZ. See also:

GRIFFITH, MARY

(?1800-1877) US horticultural writer and novelist whose early futuristic UTOPIA, *Three Hundred Years Hence* (1950), originally appeared as one of the stories in *Camperdown, or News from our Neighbourhood* (coll 1836), published as by *An Author of our Neighbourhood*. In an extremely early use of the SLEEPER-AWAKES convention, the tale takes its protagonist 200 years forward into an automated, urban world where women are emancipated, slavery is abolished, drunkards are pilloried, good hygiene is enforced, dogs are extinct and Shakespeare is expurgated. It is a bluestocking world, but one created with a substantial force of imagination. [JC/PN] See also: SUSPENDED ANIMATION.

GRIFFITH, NICOLA

(1960-) UK writer resident in the US from 1989 who began publishing work of genre interest with "An Other Winter's Tale" for *Network* in 1987, and who attracted wide attention with her first novel, *Ammonite* (1993), a late and sophisticated traversal of the themes-and the venues through which those themes have typically been expressed-of FEMINISM in sf. Her female protagonist, who is both agent and victim of an interstellar, imperialist, capitalistic, male-dominated government, is charged to investigate a planet inhabited only by women, because a mysterious virus kills off any males who land there. The protagonist gradually comes to understand the lesbian culture of the planet Jeep-which at points resembles the culture of *Whileaway* used by Joanna RUSS in more than one work-and her own sexuality. While men do occupy the background (ie surrounding space) and threaten to sterilize Jeep for fear of the virus, the overall feel of *Ammonite* is that of lessons about human nature learned, and taught, without grievance. [JC]

GRIFFITHS, DAVID ARTHUR

(? -) UK writer whose obscurity is only marginally lessened by the knowledge that, while working for CURTIS WARREN, he invited E.C. TUBB to write his first novels. Under the house name Gill HUNT DAG wrote *Vega* (1951) and *Fission* (1952); under the house name King LANG he wrote *Gyrator Control* (1951), *Astro-Race* (1951), *Task Flight* (1951), *Rocket Invasion* (1951) and *Projectile War* (1951); and under the house name David Shaw he wrote *Laboratory "X"* (1950), *Planet Federation* (1950) and *Space Men* (1951). Though unconfirmed, there is a strong possibility that DAG was the author of 6 Tarzan-derived novels under the house name Marco GARRON. [JC]

GRIFFITHS, JOHN (C.)

(1934-) UK writer in whose sf novel, *The Survivors* (1965), an assorted group of folk hang on in a Cornish cave after China starts WWII. A nonfiction (and significantly unliterary) study, *Three Tomorrows: American, British and Soviet Science Fiction* (1980), treats the genre as a forum, defined according to the sociological principles of Karl Mannheim (1893-1947), for predictive utterances that illustrate national characters. [JC]

GRILE, DOD
Ambrose BIERCE.

GRIN, ALEXANDER
[r] RUSSIA.

GRINNELL, DAVID
Donald A. WOLLHEIM.

GRIP
L. Edgar WELCH.

GROGAN, GERALD
(1884-1918) UK writer, killed in WWI. His sf novel, A Drop in Infinity (1915), carries its unwilling protagonists via a mad SCIENTIST's device into an empty but congenial PARALLEL WORLD. A lengthy ROBINSONADE evolves during which the protagonists become reconciled to their lot, have children, survive a crisis and find themselves finally isolated from Earth. [JC]

GRONFELDT, VIBEKE
DENMARK.

GROOM, (ARTHUR JOHN) PELHAM
(? -) UK writer whose long series of Peter Mohune novels were mostly crime stories; the last two, however, concern themselves with the implications of nuclear power. In The Fourth Seal (c1947) Mohune comes across a secret society which has privately developed atomic fission. In The Purple Twilight (1948) he travels to MARS in search of the descendents of ATLANTIS, finding instead telepathic members of a dying Martian race, who tell him they themselves destroyed Atlantis in self-defence, but later fell into an arms race leading to the nuclear civil war that sterilized them all. When Mohune returns to Earth he finds a similar arms race developing, with similar sterilizing weapons. He tells of his experiences - in vain. [JC]

GROSSE VERHAU, DER
(vt The Big Mess) Film (1970). Kairos Film. Prod and dir Alexander Kluge, starring Siegfried Graue, Vincenz Starr, Maria Sterr, Silvia Forsthofer. Screenplay Kluge, Wolfgang Mai. 86 mins. B/w and colour. This West German comedy is by a director - a leading light of the German New Wave - whose apprenticeship was with Fritz LANG. It is an amusing DYSTOPIA set in AD2034, when the Galaxy has been opened up to entrepreneurs, and monopoly capitalism - in this case the Suez Canal Company - is rampant. DGV focuses on two not especially bright astronauts caught in the muddle of the system, who smuggle, wreck spaceships for scrap or do deals with insurance companies. The imagery of working stiffs in ramshackle spacecraft points forward to ALIEN (1979). [PN]

GROUNDHOG DAY
Film (1993). Columbia. Dir and co-prod Harold Ramis; screenplay Danny Rubin and Ramis, based on a story by Rubin; starring Bill Murray, Andie MacDowell, Chris Elliott. 101 mins. Colour. Phil Connors (Murray) is a cynical and unhappy tv weatherman, dejected at having to cover for the

fifth time the annual Groundhog Day ceremony in the small town of Punxsutawney. The groundhog predicts six more weeks of winter, and indeed the tv crew is snowed in that night. When Connors wakes next morning, it is for him the same day - Groundhog Day - in Punxsutawney all over again. And again, after he has gone to bed, the next day. And again for a very long time. Although most people take the film as fantasy, the idea of a day endlessly repeated in a time loop is actually quite familiar in genre sf. The difference here is that Connors has free will, and can do with the day what he likes. At first he is irresponsible, later suicidal. He oscillates between nasty and smarmy nice. He attempts (unsuccessfully) to seduce his idealistic producer Rita Hanson (MacDowell) by learning all about what she likes and dislikes over a long series of the same day. What makes the film wonderful is the absolute integrity with which the ramifications of the simple idea are explored, and the crispness of the editing and performances throughout. It becomes clear that the day will go on forever unless, perhaps, Connors learns how to get the day right. It is quite astonishingly well made, for it could so easily have gone wrong; the subtle differences-all catalysed by Connors-from day to day are superbly rendered and quite gripping. Ideas of death darkly interpose themselves between Connors and his infinitely slow learning process, itself a kind of metaphor for real life. It is not even a simple story of redemption, for some of Connors' unpleasantness remains, mercifully, intact at the end, and it is arguable that he finally gets the day right more out of the pressure of tedium than because he has learned to love this simple (but kind of boring) town. No one will ever make a better-or funnier-time loop film than this. It should have won a HUGO, but it was JURASSIC PARK year. [PN]

GROUSSET, PASCHAL
Andre LAURIE.

GROVE, FREDERICK PHILIP
(1897-1948) German-born Canadian writer, born Felix Paul Greve. His output included realistic novels, rural studies and the sf SATIRE Consider Her Ways (written 1913-23; 1947), which presents the notes of an amateur scientist in telepathic contact with three ants, members of an exploratory team from South America. Their comments on the nature of Man and human society are pointed, and the picture of ant society is remarkably detailed. The novel has never received due attention. [JC]See also: CANADA.

GROVE, PETER J.
[r] ROBERT HALE LIMITED.

GROVE, W.
(? -?) UK writer of whom nothing is known except that he was the author of A Mexican Mystery (1888) and its sequel, The Wreck of a World (1889), which trace the coming to a kind of consciousness of the MACHINES of Earth; they then breed other machines and revolt, driving humanity from the continental USA by about 1950. [JC]

GROVES, J(OHN) W(ILLIAM)
(1910-) UK writer, variously employed, who began publishing sf with "The

Sphere of Death" for AMZ in 1931, but whose career consisted mainly of desultory magazine publications until his first novel for ROBERT HALE LIMITED, Shellbreak (1968), in which a man awakens in AD2505 armed with knowledge that helps him to topple a corrupt dictatorship. The Heels of Achilles (1969) presents a world in which the dead have come mysteriously to life. [JC]

GRUBER, MARIANNE
[r] AUSTRIA.

GRUNERT, CARL
[r] GERMANY.

GUERARD, ALBERT JOSEPH
(1914-) Influential US critic and novelist, who has taught at Amherst College, Harvard University and Stanford University. He has long been an advocate of US experimentalist fiction. His sf novel Night Journey(1950) depicts an idealistic soldier against the background of a useless NEAR-FUTURE European WAR. The loss of his illusions is rendered with psychological acuity. [JC]

GUERNSEY, H.W.
[s] Donald WANDREI.

GUERRE PLANETARI
II PIANETA DEGLI UOMINI SPENTI.

GUIN, WYMAN (WOODS)
(1915-1989) US pharmacologist, advertising executive and writer who began publishing sf with "Trigger Tide" as Norman Menasco for ASF in 1950, though his career can be said really to have begun with "Beyond Bedlam" (1951) which, like most of his best work of the 1950s and early 1960s, appeared first in Gal and was subsequently included in Living Way Out (coll 1967; exp vt Beyond Bedlam 1973 UK). "Beyond Bedlam" is a brilliant novelette describing an Earth about 1000 years hence where drugs enforce a strictly regulated schizophrenia (PARANOIA) in every human being in a five-days-on, five-days-off routine, each body being inhabited alternately by two personalities, the balance between whom nullifies Man's subconscious aggressions, thus eliminating the "paranoid wars" of the "ancient Moderns". But passion and art likewise disappear. The good and evil of this system are explored with a literacy and verisimilitude that make it a genuinely interesting variation on Aldous HUXLEY's vision of drug-enforced stability in BRAVE NEW WORLD (1932). Similar hyperbolic distortions of the "normal" world govern stories like "My Darling Hecate" (1953) and "The Delegate from Guapanga" (1964). The Standing Joy (1969), a PARALLEL-WORLDS story set in a nostalgically rendered other Earth, features a SUPERMAN, a good deal of harmless SEX and a general sense of missed focus. WG will be remembered for the power of his early stories. [JC]See also: CRIME AND PUNISHMENT; GALAXY SCIENCE FICTION; PSYCHOLOGY; SOCIOLOGY.

GU JUNZHENG
CHINESE SF.

GULL, RANGER
Guy THORNE.

GUNN, JAMES E(DWIN)

(1923-) US writer, critic and teacher, born in Kansas City and educated at the University of Kansas, where he is now a professor of English and journalism and Director of the Center for the Study of Science Fiction. He began publishing sf with "Communications" for Startling Stories in 1949 as Edwin James, a disguise he dropped for good in 1952 after 10 stories. Throughout his career, JEG's favoured form has been the short story or novelette; his best book-length fictions have been either collaborations or assemblages of shorter material. He has also published considerable sf criticism, beginning with excerpts from his MA thesis in Dynamic Science Fiction (1953-4) and continuing with the brief *The Discovery of the Future: The Ways Science Fiction Developed* (1975). More notable is a competent illustrated survey of sf, *Alternate Worlds: The Illustrated History of Science Fiction* (1975), although it inevitably suffers from superficiality in its attempt at comprehensive coverage of later years, with many writers appearing only as names in paragraph-long lists. For this critical work JEG won the 1976 PILGRIM AWARD. More recently, he edited *The New Encyclopedia of Science Fiction* (1988), a shortish and film-dominated text which is in no way a sequel to or otherwise connected with the first edition of *The Encyclopedia of Science Fiction* (1979) ed Peter NICHOLLS. JEG's first two books were *SPACE OPERAS*. *This Fortress World* (1955) pits its protagonist against a repressive future religion. *Star Bridge* (1955), with Jack WILLIAMSON, shows through a sometimes pixilated intricacy of plotting the mark of its senior collaborator's grasp of the nature of good space opera. Everyone, it turns out, is being manipulated, for the salvation of mankind, by an immortal Chinese with a parrot. *Station in Space* (coll of linked stories 1958) assembles several uninteresting early tales about how Man is tricked into space exploration for his own good. *The Joy Makers* (fixup 1961) describes, in JEG's dark, ponderous, cumulatively impressive manner, a society whose members are controlled by synthetic forms of release that corrode their sense of reality. In *The Immortals* (fixup 1962), JEG's best known work, a mutation confers IMMORTALITY upon a group of people who become collectively known as Cartwrights; as their condition is transmissible to others by blood transfusion, they are forced underground by the understandable desire of mortal men to attain immortality. The hospital setting of the book adds verisimilitude. As *The IMMORTAL* (1969), it became a made-for-tv series, which JEG novelized as *The Immortal ** (1970). JEG's second novel to gain general esteem, *The Listeners* (fixup 1972), makes productive use of its episodic structure in depicting the installation of an electronic listening post to scan for radio messages from the stars, and the 100-year wait that ensues. JEG's somewhat morose style (in his better moments he evokes a kind of sense of the melancholy of wonder) nicely underlines the complex institutional frustrations and rewards of this long search. Indeed, his forte seems to lie in the narrative analysis of stress-ridden administrations and their administrators; and his best work is usually set in organizations or among groups of people forced to cooperate. Women (WOMEN AS PORTRAYED IN SCIENCE FICTION), however, tend to be excluded from

the higher purposes of such organizations, and are sometimes depicted balking at the sacrifices men must make to reach the stars. Nevertheless, JEG has made a considerable success of his chosen length and venue, and his later works - particularly *Crisis!* (fixup 1986) - can ruminate absorbingly on the administration of humanity's problems to come.

[JC]Other works: *Future Imperfect* (coll 1964); *The Witching Hour* (coll 1970); *The Burning* (fixup 1972); *Breaking Point* (coll 1972); *Some Dreams are Nightmares* (coll 1974), containing short stories from *Station in Space*, *The Joy Makers* and *The Immortals*; *The End of the Dreams: Three Short Novels About Space, Happiness and Immortality* (coll 1975), containing long stories from *Station in Space*, *The Joy Makers* and *The Immortals*; *The Magicians* (1954 *Beyond* as "Sine of the Magus"; exp 1976); *Kampus* (1977); *The Dreamers* (1977 in *Triax* ed Robert SILVERBERG as "If I Forget Thee"; exp 1980; vt *The Mind Master* 1982); *Tiger! Tiger!* (written 1952; 1984 chap); *The Unpublished Gunn* (coll 1992 chap). Nonfiction: *Teacher's Manual: The Road to Science Fiction* (1980 chap) with Stephen H. Goldman (1943-1991), who also served as Associate Editor for JEG's *New Encyclopedia* and was its major contributor; *Isaac Asimov: The Foundations of Science Fiction* (1982), for which he received a 1983 HUGO; *Inside Science Fiction: Essays on Fantastic Literature* (coll 1992). As Editor: The 4 vols of *The Road to Science Fiction* sequence, comprising *From Gilgamesh to Wells* (anth 1977), *From Wells to Heinlein* (anth 1979), *From Heinlein to Here* (anth 1979) and *From Here to Forever* (anth 1982). About the author: *A James Gunn Checklist* (1984 chap) by Chris DRUMM. See also: ALIENS; ANTI-INTELLECTUALISM IN SF; ASTRONOMY; BIBLIOGRAPHIES; COMMUNICATIONS; CRITICAL AND HISTORICAL WORKS ABOUT SF; DYSTOPIAS; GALACTIC EMPIRES; GAMES AND SPORTS; GENRE SF; GOLDEN AGE OF SF; HUGO; ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE; JOHN W. CAMPBELL MEMORIAL AWARD; LEISURE; MAGIC; MEDICINE; NEBULA; PSYCHOLOGY; RELIGION; SCIENCE FICTION WRITERS OF AMERICA; SOCIOLOGY; UTOPIAS.

GUNN, NEIL M(ILLER)

(1891-1973) Scottish writer and civil servant, author of many novels, the first being *Grey Coast* (1926). It and some others - like *Morning Tide* (1931), *The Last Glen* (1932), *Second Sight* (1940) and *The Silver Bough* (1948) - contain fantasy elements of interest. *The Green Isle of the Great Deep* (1944), a sequel to *Young Art and Old Hector* (1942), describes the experiences of an old man and a young boy in an underground realm which turns out to be a sterile and totalitarian land of the dead: their protests to God are successful. *The Well at World's End* (1951), whose title acknowledges a debt to William MORRIS, sums up NMG's style, which is rich and sometimes sentimental, and his abiding concern, which is the evocation of an idealized Scotland. [JC]

GUNNARSSON, THORARINN

(1957-) US writer who has been strongly identified with FANTASY because of *Song of the Dwarves* (1988), its sequel *Revenge of the Valkyrie* (1989), plus *Make Way for Dragons!* (1990), sequelled by *Human, Beware!* (1990) and *Dragons on the Town* (1992), both sequences humorous. The *Starwolves* sequence - *The Starwolves* (1988), *Starwolves: Battle of the Ring*

(1989), Starwolves: Tactical Error (1991) and Starwolves: Dreadnought (1992) - is rousing SPACE OPERA, opposing human warriors to a sentient space fortress. Dragonlord of Mystara * (1994) is tied to a game. [JC]

GUNTHER, GOTTHARD

[r] GERMANY.

GURK, PAUL

[r] GERMANY.

GURNEY, DAVID

Patrick BAIR.

GURNEY, JAMES

(1958-) US illustrator, raised in California, studied at the Art Center College of Design in Pasadena. JG made his sf debut with a cover for FSF in 1982, but his real baptism of fire that year was working as one of only two background painters on the animated SWORD-AND-SORCERY film Fire and Ice (1982). JG, who works in oils, primarily paints book covers; he has also done historic and prehistoric paintings for National Geographic. His style is one of the most painterly in sf since the retirement of John SCHOENHERR; in a field that emphasizes surface slickness, JG is refreshing. His influences are eclectic, but include Norman Rockwell (1894-1978). His popular Dinotopia: A Land Apart from Time (1992) is an art book, with text also by JG, telling of a 19th-century LOST WORLD in which humans coexist with intelligent dinosaurs. See also:

ILLUSTRATION.

GUTTERIDGE, LINDSAY

(1923-) UK writer. His sf series featuring Matthew Dilke - Cold War in a Country Garden (1971), Killer Pine (1973) and Fratricide is a Gas (1975) - calls upon themes from espionage to ECOLOGY to buttress far-fetched tales of a government agent miniaturized with some companions (GREAT AND SMALL) to test the chances of counteracting OVERPOPULATION by resettling the world with a miniaturized mankind. [JC]

GYERTYAN, ERVIN

[r] HUNGARY.

SF?

HABER, KAREN

Working name of Karen Lee Haber Silverberg (1955-), US writer and anthologist, married to Robert SILVERBERG since 1987. She began publishing work of genre interest with "Madre de Dios" for FSF in 1988, and came to general notice with the Fire in Winter sequence, which traces the fortunes of a family of PSI-POWERED mutants and their threatened subculture in a 21st-century USA: The Mutant Season (1989) with Silverberg, The Mutant Prime (1990), Mutant Star (1992) and Mutant Legacy(1993). Silverberg's influence was initially evident - the first volume was derived from his "The Mutant Season" (1973) - but KH soon established her own identity as a sharp, warm teller of tales. A singleton, Thieves Carnival (1990 chap dos), prequels Leigh BRACKETT's The Jewel of Bas (1944 Planet Stories;

1990 dos), with which it was paired as a TOR BOOKS Double. With Silverberg, KH co-edited the new sequence of UNIVERSE anthologies, carrying on from Terry CARR's original series: Universe 1 (anth 1990), Universe 2 (anth 1992) and Universe 3 (anth 1994). [JC]

HABIBI, AMIL
ARABIC SF.

HACKETT, [General Sir] JOHN (WINTHROP)
(1910-) British Army officer (retired) and writer, whose *The Third World War: August 1985* (1978; rev 1982) and *The Third World War: The Untold Story* (coll 1982), both written with the help of a think-tank of soldiers, journalists and diplomats, together describe the course of a (largely) conventional war between (mostly) NATO and the Warsaw Pact in a mock historical style. The books represent an attempt to alert the public to the dangers posed by war against the Soviet bloc, and remain interesting largely because of the authenticity and detail of their descriptions of what such a conflict might actually have been like. [NT]

HADLEY, ARTHUR T(WINING)
(1923-1977) US journalist and writer whose successful novel, *The Joy Wagon* (1958), uses a borderline-sf treatment of COMPUTERS in a sharply comic send-up of the US electoral system. The computer runs for President and almost wins. [JC] See also: POLITICS.

HADLEY, FRANKLIN
Russ R. WINTERBOTHAM.

HADLEY PUBLISHING COMPANY
US specialist SMALL PRESS, 1947-8, based in Providence, Rhode Island, owned by Thomas P. Hadley. It grew out of (or was a renaming of) Buffalo Book Co., under which name it published *The Time Stream* (1931 Wonder Stories; 1946) by John TAINE and *The Skylark of Space* (1928 AMZ; 1946) by E.E. "Doc" SMITH. A very short-lived company, HPC was notable for publishing John W. CAMPBELL Jr's first book, *The Mightiest Machine* (1934-5 ASF; 1947), A.E. VAN VOGT's *The Weapon Makers* (1943 ASF; 1947; rev vt *One Against Eternity* 1952) and L. Ron HUBBARD's *Final Blackout* (1940 ASF; 1948). The company was bought out by Donald M. Grant (1927-) and became the Grandon Company; later, under his own name, Grant became an important small-press publisher of fantasy. [MJE/PN]

HAGGARD, [Sir] H(ENRY) RIDER
(1856-1925) UK civil servant, lawyer, agricultural expert and writer. HRH spent the years 1875-81 in the Colonial Service in South Africa, where he gained much of the material for his fiction. On his return to the UK he read for the bar while at the same time beginning to produce novels and other work. With his third and fourth novels, *King Solomon's Mines* (1885) and the even more successful *She: A History of Adventure* (1886-7 The Graphic; cut 1886 US; text restored 1887 UK; The Annotated *She* [1991 US] ed Norman Etherington is a variorum text with erratic additional notes), HRH was catapulted into fame, and soon left the bar; he was knighted in 1912. These novels of anthropological sf remain his most famous; they established a pattern he would follow for the rest of his career. That

pattern might be described as a central model for Edgar Rice BURROUGHS and the SCIENCE-FANTASY subgenre whose popularity attended the latter's revival in the 1960s: it is a pattern in which realistic portraits of the contemporary world (in HRH's case South Africa) are combined with backward-looking displacements (in his case invoking LOST WORLDS, IMMORTALITY and REINCARNATION) to give a general effect of deep nostalgia. HRH was fascinated by ruins, ancient civilizations and primitive customs. His allied interest in the PSEUDO-SCIENCE of Spiritualism link him to such contemporaries as Bulwer LYTTON and Marie CORELLI, though in fact his central literary friendships were with Andrew LANG and Rudyard KIPLING; he shared with the latter a fin de siecle sense - which proved entirely accurate - that the British Empire was on the wane. His prose was sometimes overblown, but he was a gifted storyteller with a powerful imagination and the ability to create memorable heroic figures, like the Zulu Umslopogaas, whose early life is the subject of the remarkable *Nada the Lily* (1892 US). Umslopogaas appears also in HRH's principal sequence, the novels about white hunter Allan Quatermain which gave Africa to the world as a haven in the mind's eye. Here the Quatermain books are given in order of internal chronology, the dates of their settings preceding the titles: 1835-8 *Marie* (1912); 1842-69 *Allan's Wife* (1887), which was incorporated into *Allan's Wife and Other Tales* (coll 1889); 1854-6 *Child of Storm* (1913); 1859 *Maiwa's Revenge* (1888); 1870 *The Holy Flower* (1915; vt *Allan and the Holy Flower* 1915 US); 1871 *Heu-Heu, or The Monster* (1924); 1872 *She and Allan* (1921 US); 1873 *The Treasure of the Lake* (1926 US); 1874 *The Ivory Child* (1916); 1879 *Finished* (1916 US); 1879 "Magepa the Buck" in *Smith and the Pharaohs and Other Tales* (coll 1920); 1880 *King Solomon's Mines*; 1882 *The Ancient Allan* (1920); 1883 *Allan and the Ice Gods: A Tale of Beginnings* (1927); 1884-5 *Allan Quatermain: Being an Account of his Further Adventures and Discoveries in Company with Sir Henry Curtis, Bart., Commander John Good, and one Umslopogaas* (1887; cut vt *Allan Quatermain and the Lost City of Gold* * 1986, the text being shaped into a film novelization). A heavily cut version of *She* was published a decade later (1896 UK); the abridgement may have been done by W(illiam) T(homas) Stead (1849-1912), who edited the series in which it appeared. Not all these books could be described as science fantasy, but all project that sense of desiderium - the longing for that which is lost - that lies at the heart of true science fantasy; and those titles written late in HRH's career - like *The Ancient Allan*, a tale of love-death set in Egypt, and *Allan and the Ice Gods*, in which Quatermain is thrown back in time by means of a drug and inhabits the body of a paleolithic man - tend to express their author's potent (but submerged) sexuality in venues so remote that a suppressed libidinousness can become, occasionally, almost explicit. It is, however, in the *Ayesha* sequence that HRH's Victorian libido found easiest release from the chains of the present. In *She: A History of Adventure* (rewritten for the movies by Don Ward as *She: The Story Retold* * 1949 US), *Ayesha: The Return of She* (1905; vt *The Return of She: Ayesha* 1967 US), *She and Allan*, which provides a link with the Quatermain series, and *Wisdom's Daughter: The Life and Love Story of She-Who-Must-Be-Obeyed* (1923), HRH created, in the immortal and subversive *Ayesha*, what has come to seem an abiding emblem of that longing for "primitive" transcendence that typically marks the end of eras. The sudden

ageing of Ayesha in the first volume of the sequence (later volumes dally inconsequentially with her earlier life) has an effect both tragic and petty. *The World's Desire* (1890), with Andrew Lang, a pendant to the main series, carries Odysseus into new adventures, during which he discovers that Helen of Troy and Ayesha are one. A knotted eroticism also infuses *When the World Shook: Being an Account of the Great Adventure of Bastin, Bickley, and Arbuthnot* (1919), a novel plotted in part by Kipling (who later helped HRH with *Allan and the Ice Gods*): the three eponymous Victorians find the high priest of ATLANTIS in SUSPENDED ANIMATION; having caused the first Flood, he is about to start another; his daughter, likewise discovered, causes ructions in the hearts of the three. HRH can seem both heated and evasive to modern readers, but read in context he is a figure of very considerable power, a stirrer in deep waters.

[DP/JC] Other works: *Cleopatra: Being an Account of the Fall and Vengeance of Harmachis, the Royal Egyptian, as Set Forth by his Own Hand* (1889 US); *Beatrice* (1890); *Eric Brighteyes* (1891); *Montezuma's Daughter* (1893); *The People of the Mist* (1894); *Heart of the World* (1895); *The Wizard* (1896); *Swallow: A Tale of the Great Trek* (1899 US); *Elissa, the Doom of Zimbabwe: Black Heart ? rev vt Black Heart and White Heart and Other Stories*; title story of US edition only, vt *Elissa, or The Doom of Zimbabwe* 1917 UK); *Lysbeth: A Tale of the Dutch* (1901 US); *Stella Fregelius: A Tale of Three Destinies* (1903 US); *Pearl-Maiden: A Tale of the Fall of Jerusalem* (1903); *The Brethren* (1903); *Benita* (1906; vt *The Spirit of Bambatse* 1906 US); *The Yellow God: An Idol of Africa* (1908 US); *The Ghost Kings* (1908; vt *The Lady of the Heavens* 1908 US); *The Lady of Blossholme* (1909); *Morning Star* (1910); *Queen Sheba's Ring* (1910); *Red Eve* (1911); *The Mahatma and the Hare: A Dream Story* (1911); *The Wanderer's Necklace* (1914); *Moon of Israel: A Tale of the Exodus* (1918); *The Missionary and the Witch-Doctor* (1920 chap US); *The Virgin of the Sun* (1922); *Queen of the Dawn: A Love Tale of Old Egypt* (1925); *Mary of Marion Isle* (1929; vt *Marion Isle* 1929 US); *Belshazzar* (1930). There are various omnibuses. About the author: *Bibliography of the Works of H. Rider Haggard* (1947) by J.E. Scott; *The Cloak that I Left* (1951) by Lilius Rider Haggard; *Rider Haggard: His Life and Work* (1960) by Morton Cohen; *The Wheel of Empire* (1967) by Alan Sandison; *Rider Haggard* (1984) by Norman Etherington. See also: ANTHROPOLOGY; DIME-NOVEL SF; HISTORY OF SF; ORIGIN OF MAN; PULP MAGAZINES; RADIO (USA); SERIES; SEX.

HAGGARD, WILLIAM

Pseudonym of Richard Clayton (1907-), UK civil servant whose political thrillers, usually featuring Colonel Russell (retired in later volumes) of the Secret Service, sometimes extrapolate on current political trends, after the fashion of their genre. *Slow Burner* (1958) has some sf content relating to the atomic-power process described by the title. The skulduggery in *Venetian Blind* (1959) concerns Negative Gravity, "a prize beyond price. The conquest of space, the ultimate weapon"; it proves chimerical. *The Bitter Harvest* (1971) deals with germ warfare. [JC]

HAHN, RONALD M.

[r] GERMANY.

HAHN, STEVE

Stephen ROBINETT.

HAIBLUM, ISIDORE

(1935-) US writer, born, educated and based in New York, where he has set much of his fiction. The humour expressed in his novels is Yiddish in style (IH is himself a Jew), especially in his first sf novel, *The Tsaddik of the Seven Wonders* (1971). IH writes a fluent though sometimes rather disarranged kind of comic sf, of which *The Wilk are Among Us* (1975; rev 1979) is a representative example, with its amusingly overcomplicated plot, its frenetic spoofing of the ALIENS-in-our-midst theme, and its general failure to take hold of its materials. *Nightmare Express* (1979), a comparatively ambitious ALTERNATE-WORLD detective novel, and a later mystery series set in the 21st century - *The Mutants are Coming* (1984) and *Out of Sync* (1990) - maintain a similar tone. His attempts to amalgamate Yiddish humour and sf themes are of technical interest. [JC] Other works: *The Return* (1973); *Transfer to Yesterday* (1973); three novels featuring a detective named Dunjer, being *Interworld* (1977), *Outerworld* (1979 dos) and *Specterworld* (1991); two novels featuring the Siscoe and Block detective team, being *The Identity Plunderers* (1984) and *The Hand of Ganz* (1985).

HAIGH, RICHARD

1. Richard (Douglas) Haigh (1924-1991). UK civil servant and author of one routine SPACE OPERA for ROBERT HALE LIMITED, *The Golden Astronauts* (1980). 2. Richard Haigh. UK author (probably pseudonymous) of a series of horror novels, *The Farm* (1984) and *The City* (1986), both featuring man-eating pigs. [JC]

HAILE, TERENCE J.

(1921-1979) UK author of two sf novels remarkable for their clumsiness and their apparent ignorance of basic physical laws. In *Space Train* (1962) a farmer builds a rocket-powered train which, as a consequence of sabotage, takes off into space. There he encounters interplanetary crabs before returning to Earth. *Galaxies Ahead* (1963) is similarly implausible. [NT]

HAILEY, JOHANNA

Sharon JARVIS.

al-HAKIM, TAWFIQ

(1898-1986) Regarded along with Nobel-prize winning author Najib Mahfuz as the most important modern Egyptian writer, author of over 50 books of short stories, novels, dramas and essays, some of sf interest. In 1947 he published his first sf short story, "Fi sana malyun" ["In the Year Million"]. His most interesting sf works are plays. In *Rihla ila al-ghad* (1950; trans as "Voyage to Tomorrow" 1981) he uses relativistic TIME TRAVEL during interstellar flight, in something of a homage to H.G. WELLS. Two one-act plays have sf themes: *Shair ala al-qamar* (1972; trans as "Poet on the Moon" 1981) and *Taqrir qamari* ["Moon Account"] (1972). The first uses sf metaphor in a story about the struggle of Art to assert its place in society; the second tells of two extraterrestrials writing a report about life on Earth. English translations of "Voyage to Tomorrow" and "Poet on the Moon" can be found in *Plays, Prefaces and Postscripts* (2 vols, coll 1981). His essays about the future in *Hadith maa al-kawkab*

["Conversation with the Planet"] (coll 1974) have sf relevance, as do some other works. [JO]See also: ARABIC SF; THEATRE.

HALAM, ANN
Gwyneth JONES.

HALBERSTAM, MICHAEL J(OSEPH)
(1932-1980) US medical doctor and writer whose *The Wanting of Levine* (1978) depicts a 1988 US presidential campaign which ends in the election of the Jewish politician Levine, whose wry wisdom may bring the nation back from the violent civil strife that has already begun to balkanize the land. [JC]

HALDANE, CHARLOTTE (FRANKEN)
(1894-1969) UK writer, married to J.B.S. HALDANE and sister-in-law of Naomi MITCHISON. Her sf novel, *Man's World* (1926), set in a 21st-century society which divides women into whores and sainted breeders ([Hyperlink to: WOMEN AS PORTRAYED IN SCIENCE FICTION](#)), takes an ambivalent attitude towards the eugenic thinking (GENETIC ENGINEERING) responsible for such a state, but eventually seems to suggest that the social cost of improving the human stock by fiat has been too high. The racism delineated - Whites have risen to new biological heights while Blacks are systematically poisoned - is also ambivalent in the telling. Two fantasies are *Melusine*, or *Devil Take Her!* (1936), about the survival of witches in Christian Europe, and *The Shadow of a Dream* (1952). [JC]

HALDANE, J(OHN) B(URDON) S(ANDERSON)
(1892-1964) UK biologist, brother of Naomi MITCHISON. He dabbled in sf in an incomplete and posthumously published novel, *The Man with Two Memories* (1976), about a man's mental link with an inhabitant of another world. JBSH's bold speculative essays heavily influenced significant works by other writers. *Daedalus, or Science and the Future* (1924), the first of the long-running series of *Today* ? anticipation of GENETIC ENGINEERING, and provided the image of the future sarcastically extrapolated by Aldous HUXLEY in *BRAVE NEW WORLD* (1932). The semifictional "The Last Judgment" in *Possible Worlds* (coll 1927) provides an evolutionary prospectus for the human race which was extensively elaborated by Olaf STAPLEDON in *LAST AND FIRST MEN* (1930). JBSH's wife Charlotte HALDANE drew heavily on his ideas for *Man's World* (1926). "On Being the Right Size", also from *Possible Worlds*, discusses problems of scale in sf (e.g., giants 10 times human size but with - unworkably - the same proportions). *My Friend Mr Leakey* (coll of linked stories 1937) is a book of fantasies for children. [BS]About the author: *J.B.S.: The Life and Work of J.B.S. Haldane* (1968) by Ronald W. CLARK. See also: ANTHROPOLOGY; BIOLOGY; CHILDREN'S SF; COLONIZATION OF OTHER WORLDS; DYSTOPIAS; END OF THE WORLD; EVOLUTION; FAR FUTURE; FUTUROLOGY; SUN; UTOPIAS; VENUS.

HALDEMAN, JACK C(ARROLL) II
(1941-) US writer who began publishing sf with "Garden of Eden" for *Fantastic* in 1971. His 50 or so stories have tended to avoid the more serious SPACE-OPERA themes, sticking generally to GAMES-AND-SPORTS tales about ROBOT football players, precognitive STARS, and the like. His first novel, *Vector Analysis* (1978), sets problems in space and sees them

solved. His second, *Perry's Planet* * (1980), is a Star Trek tie, and his third, with his wife Vol Haldeman and Andrew J. OFFUTT, all signing as John CLEVE, is *Spaceways #11: The Iceworld Connection* (1983). There is *No Darkness* (fixup 1983) with his brother Joe HALDEMAN, amusedly pits a hick from the hinterlands of a colony planet against some interstellar difficulties, leading picaresquely to the saving of the Universe. Bill, the Galactic Hero on the Planet of the Zombie Vampires * (1991) with Harry HARRISON is slapstick. But not all JCH's work has been determinedly light; some of his earlier stories - like "Songs of Dying Swans" (1976), about the death of some genetically altered humans - show genuine aesthetic skills, a sense of bluff cunning which came more and more to the fore in the 1980s. He remains perhaps most at ease in collaborations; his contributions to *Slow Dancing Through Time* (coll 1990), an assembly of stories written by various authors in collaboration with Gardner DOZOIS, are among his best work. *Echoes of Thunder* (1991 chap dos) with Jack DANN is also of interest. [JC]See also: MATHEMATICS.

HALDEMAN, JOE (WILLIAM)

(1943-) US writer who took a BS in physics and astronomy before serving as a combat engineer in Vietnam (1968-9), where he was severely wounded, earning a Purple Heart; later, in 1975, he took an MFA. The range of degrees was an early demonstration of the complexity of his interest in the HARD SF with which he has sometimes been identified; and his experiences in Vietnam have marked everything he has since written, including his first book, *War Year* (1972), a non-sf novel set there. He began publishing sf with "Out of Phase" for Gal in 1969, and came to sudden prominence with the critical and popular success of his first sf novel, *THE FOREVER WAR* (1972-4 ASF; fixup 1974), which, with "You Can Never Go Back" (1975), makes up a series whose description of the life of soldiers in a future WAR counterpoints and in some ways rebuts Robert A. HEINLEIN's vision in *STARSHIP TROOPERS* (1959). In *THE FOREVER WAR* interstellar travel is effected by "collapsar jumps", which are subjectively instantaneous but which in fact take many years to accomplish, so that they work as a kind of one-way TIME TRAVEL; sent by this means to fight in engagement after engagement on different planets, soldiers are doomed to total alienation from the civilization for which they are fighting, and if they make too large a jump face the risk of coming into battle with antiquated weaponry. Their deracination is savage, their camaraderie cynically manipulated. As a portrait of the experience of Vietnam the book is remarkable. It won a Ditmar (AWARDS), a NEBULA and a HUGO; the first volumes of a GRAPHIC-NOVEL version are *The Forever War 1* (graph 1991) and *The Forever War 2* (graph 1991), both illustrated by Marvano. *Mindbridge* (1976), a novel whose narrative techniques are suggested by its dedication to John Dos Passos (1896-1970) and John BRUNNER, is composed in alternating sequences of straight narration, reportage, excerpts from books (some written long after the events depicted), graphs and other devices. The story itself is a not unconventional space epic, with MATTER TRANSMISSION, telepathy-inducing "toys"-actually small aquatic animals - abandoned by an extinct race of godlike aliens, and so forth. *All My Sins Remembered* (fixup 1977) returns to the existential chaos of Earth, and introduces an enduring model of the

JH protagonist: a competent hero whose identity is threatened from without, by the manipulations of worldly powers, and from within, by the need to make sense of an existence without ultimate meaning. In JH's novels, making sense of things is itself an act of heroism. As his most typical books revolve around this task - and are resolved in its often ambiguous accomplishment - it is not surprising that he has rarely written sequels. Once the goal has been reached, the story ends. The only exception to this pattern is the Worlds sequence comprising *WORLDS* (1981), *Worlds Apart* (1983) and *Worlds Enough and Time* (1992). These books, which also differ from his typical work in featuring a female protagonist, are distinguished by the broad compass of their portrayal of a NEAR-FUTURE Earth under the threat of nuclear HOLOCAUST, which is soon realized. In the surviving SPACE HABITATS - each a small world representative of a different kind of civilization - some sense must be made of the human enterprise: the relict planet must be preserved and, in the third volume, humanity must attempt to reach the stars. JH's other novels of the 1980s are only intermittently successful. *Tool of the Trade* (1987), a TECHNOTHRILLER, repeats in a damagingly affectless manner the themes of earlier books; and *Buying Time* (1989; vt *The Long Habit of Living* 1989 UK) weakens a central tale about the purchasing of IMMORTALITY by a displeasing failure to address the kind of society in which this might be acceptable, or the kind of human who might pursue the goal. But *THE HEMINGWAY HOAX* (1990), the magazine version of which won a Nebula as Best Novella, movingly entangles its typical JH protagonist in a complex set of dilemmas (and ALTERNATE WORLDS) which test to the utmost his capacity to retain moral choice, to remain even approximately whole. JH's stories, assembled in *Infinite Dreams* (coll 1979) and *Dealing in Futures* (coll 1985), are of subsidiary interest to his novels - though "Tricentennial" (1976) won a Hugo, and "Graves" (1993) won a Nebula - but sometimes illustrate with clarity the themes which drive them. Throughout his career there has been a sense - not usual in US sf - that JH thinks of his novels as necessary acts in a lifelong enterprise, a moral theatre whose meaning will be defined only when he finishes. It is perhaps for this reason that he is not good at repeating himself, that those books in which he attempts to do so are surprisingly bad, and that after two decades his readers continue to await each new title - each new act in the existential drama - with very substantial interest. [JC] Other works: Two borderline sf Attar spy novels, *Attar's Revenge* (1975) and *War of Nerves* (1975), under a Pocket Books house name, Robert Graham; two Star Trek novels, *Planet of Judgment* * (1977) and *World without End* * (1979); *There is No Darkness* (1983) with his brother Jack C. HALDEMAN II (whom see for details); *More than the Sum of his Parts* (1985 Playboy; 1991 chap). As Editor: *Cosmic Laughter* (anth 1974); *Study War No More* (anth 1977); *Nebula Award Stories Seventeen* (anth 1983); three anthologies with Martin Harry GREENBERG and Charles G. WAUGH, being *Body Armor: 2000* (anth 1986), *Supertanks* (anth 1987) and *Space-Fighters* (anth 1988). About the author: *Joe Haldeman* (1980) by Joan Gordon. See also: *ALIENS*; *ASTOUNDING SCIENCE-FICTION*; *BLACK HOLES*; *COLONIZATION OF OTHER WORLDS*; *FASTER THAN LIGHT*; *HIVE-MINDS*; *ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE*; *MEDICINE*; *POETRY*.

(1822-1909) Prolific US writer, contributing editor to *The Atlantic Monthly*, Unitarian preacher and abolitionist; he is best known today for the title story (1863) of *The Man without a Country and Other Tales* (coll 1868). *Sybaris and Other Homes* (coll 1869), describing a UTOPIAN colony of Sybarites uncovered on an ISLAND off the coast of Italy, is of sf interest. A second utopian fiction, *Ten Times One is Ten: The Possible Reformation* (1871), as by Frederick Ingham, is constructed as a fantasy of socially beneficial haunting; it first appeared (1870) in EEH's own journal *Old and New*, which he founded to espouse the ideals embodied in the tale. *Hands Off* (1881 *Harper's New Monthly Magazine*; 1895 chap) interestingly places two time-travelling spirits in Biblical Egypt, where as an experiment they construct an ALTERNATE WORLD in which the patriarch Joseph escapes captivity, with disastrous results. Of primary interest to sf readers are "The Brick Moon" (1869) and its short sequel, "Life in the Brick Moon" (1870)-both revised into one story in *His Level Best and Other Stories* (coll 1872), later reprinted in *The Brick Moon and Other Stories* (coll 1899), and published independently as *The Brick Moon* (1971 chap) - which comprise probably the first attempt to describe an artificial Earth satellite, along with its accidental launching into orbit and the attempts of those stranded upon it to survive. [JC]Other works: *Back to Back: A Story of Today* (1878; exp vt *How They Lived in Hampton: A Study of Practical Christianity Applied in the Manufacture of Woollens* 1888), a utopian speculation in story form.About the author: "The Real Earth Satellite Story" in *Explorers of the Infinite* (1963) by Sam MOSKOWITZ.See also: DISCOVERY AND INVENTION; HISTORY OF SF; SPACE HABITATS.

HALE, ROBERT, LIMITED
ROBERT HALE LIMITED.

HALEY, CLAUDE
Leonard G. FISH.

HALIBUT, EDWARD
[s] Richard WILSON.

HALIDOM, M. Y.
Pseudonym of an unidentified UK writer who wrote also as Dryasdust, under which name he is perhaps best known for the 3-vol *Tales of the Wonder Club* (coll 1899-90; each vol subsequently published as by MYH vt *Tales of the Wonder Club: First Series* 1903; *Second Series* 1904; *Third Series* 1905). Most of the stories assembled are supernatural. *The Wizard's Mantle* (1890; rev 1903 as by MYH) also appeared initially as by Dryasdust. Further titles, all as by MYH, and some including suggestions of sf, were *The Spirit Lovers* (coll 1903), *A Weird Transformation* (1904), about a reanimated corpse, *The Woman in Black* (1906), *Zoe's Revenge* (1908), *The Poet's Curse* (1911) and *The Poison Ring* (1912). [JC]

HALL, AUSTIN
(c1885-1933) US writer who claimed to have written over 600 stories in various pulp genres, mainly Westerns. He began publishing sf and fantasy with "Almost Immortal" for *All-Story Weekly* in 1916. "The Rebel Soul" (1917 *All-Story Weekly*) and its sequel, the book-length "Into the Infinite" (1919 *All-Story Weekly*), typically infuse

immortality-through-vampirism and TIME TRAVEL with pulp cliches, not always ineffectively; in their concern with the nature of human personality all three are derivative of Robert Louis STEVENSON's Strange Case of Dr Jekyll and Mr Hyde (1886 chap). Possibly confused by the collaborative process, The Blind Spot (1921 Argosy; 1951) with Homer Eon FLINT cloaks a central plot-involving an interdimensional gateway into a PARALLEL WORLD - in layers of unresolved melodrama. Cruelly, Damon KNIGHT quoted extensively from it in a critical piece (reprinted as part of Chapter 3 of In Search of Wonder [coll 1956; exp 1967]) to demonstrate its infelicities. A sequel, The Spot of Life (1932 Argosy; 1964), was by AH alone; it offers scientific explanations for the gateway (or blind spot) plus doses of dynastic politicking in the parallel world. People of the Comet (1923 Weird Tales; 1948), a weaker tale, is a variant on the theme of solar-system-as-atom in a greater macrocosm (GREAT AND SMALL). [JC]See also: HISTORY OF SF; MARS.

HALL, DESMOND W(INTER)

(1909-1992) US writer and editor who served as assistant editor of Astounding Stories of Super Science (ASTOUNDING SCIENCE-FICTION) under Harry BATES 1930-33, also collaborating with Bates as a writer under the pseudonyms H.G. WINTER and, more famously, Anthony GILMORE; as Gilmore they produced the popular Hawk Carse series, which reached book form as Space Hawk (coll of linked stories 1952). DWH also wrote some stories under his own name as well as one under an unidentified pseudonym for Weird Tales. After F. Orlin TREMAINE took over from Bates, DWH continued as assistant editor for a time before being promoted to the editorship of the magazine Mademoiselle. In "Gold on Gold", in What Will They Think of Last? (1976), H.L. GOLD claimed that it was DWH rather than Tremaine who actually ran ASF. [MJE]

HALL, FRANCES

(? -) US writer, author of Pretender (1979) with Piers ANTHONY. [JC]

HALL, HAL(BERT) W(ELDON)

(1941-) US bibliographer, Special Formats Librarian at Texas A ? University Library. His useful series of BIBLIOGRAPHIES began with SFBRI: Science Fiction Book Review Index, 1970 (1971 chap), and volumes relating to each year have been published in each succeeding year up to Vol 15, 1984 (1985 chap); since then, each volume now titled Science Fiction and Fantasy Book Review Index, there have been Vol 16, 1985 (1988 chap), Vol 17, 1986 (1988 chap) and Vol 18, 1987 1990 chap). Three retrospective books collecting and revising these are Science Fiction Book Review Index 1923-1973 (1975), Science Fiction Book Review Index 1974-1979 (1981) and Science Fiction and Fantasy Book Review Index 1980-1984 (1985), the last with Geraldine L. Hutchins. All are most useful to the researcher: comprehensive and accurate, they contain also a great deal of data about sf magazine publication. On this latter subject HWH has published A Checklist of Science Fiction Magazines (1972 chap) and The Science Fiction Magazines: A Bibliographical Checklist of Titles and Issues through 1982 (1983 chap). A second series of reference works began with Science Fiction Research Index, Vol 1 (1979 chap) and Vol 2 (1982 chap), running to date to Vol 7 (1987) and Vol 8 (1990 chap). A collection of the first 6 vols

plus additions is the monumental Science Fiction and Fantasy Reference Index, 1878-1985: An International Author and Subject Index to History and Criticism (2 vols 1987), to which vols 7 and 8, which bring the story up to 1987, are the initial supplements. Subsequent supplements are included in the annual bibliographies ed Charles N. BROWN and William G. CONTENTO: Science Fiction, Fantasy, ? and 1991 (1992). There are, of course, omissions - it is not possible to examine the review pages of every newspaper in the world - but these works are the best available for determining the location of reviews and articles on anything from CYBERPUNK through NIGHT OF THE LIVING DEAD to TOLKIEN. The continually expanding computer database in which HWH has stored all this material also contains information on the location of important sf/fantasy book and magazine COLLECTIONS, and HWH has published various articles on this subject - one written with Neil BARRON in Anatomy of Wonder: A Critical Guide to Science Fiction, Third Edition (1987) ed Barron - and one book, Science/Fiction Collections: Fantasy, Supernatural ?

[PN] Other works: Chad Oliver: A Preliminary Bibliography (1985 chap; rev vt The Work of Chad Oliver 1990); The Work of Louis L'Amour: An Annotated Bibliography and Guide (1991). See also: CRITICAL AND HISTORICAL WORKS ABOUT SF.

HALL, JAMES
[s] Henry KUTTNER.

HALL, JOHN RYDER
William ROTSLER.

HALL, NORMAN
[r] ROBERT HALE LIMITED.

HALL, ROBERT LEE
(1941-) US writer and high-school teacher whose first novel, Exit Sherlock Holmes (1977; rev 1977 UK), purports to be a lost Watson manuscript telling more about the relationship of Holmes and Moriarty. As in David DVORKIN's later Time for Sherlock Holmes (1983), TIME TRAVEL fuels the plot. [JC]

HALL, RODNEY
(1935-) Australian poet and writer, Chairperson since 1991 of the Australia Council, a body responsible for government arts policy and funding. His long, vivid, humorous, baroque fourth novel, Kisses of the Enemy (1987), is set in the NEAR FUTURE in an Australia now a republic. A campaign of cultural subversion unsettles a nation that has hitherto offered little resistance to its rape by foreign opportunists. Several of his other novels - including Just Relations (1982), The Second Bridegroom (1989) and The Grisly Wife (1993)- contain fantasy elements. [PN]

HALL, RONALD
(1929-) UK writer in whose sf novel, The Open Cage (1970), an escaped con returns to a violently altered and apocalyptic world. [JC]

HALL, SANDI
(1942-) UK-born writer, journalist and feminist activist, resident

variously in Canada, Zambia, NEW ZEALAND, Australia, the USA and Mexico. In New Zealand she belonged to the "Broadsheet" collective, founded the NZ Women's Party, and publicly announced her lesbianism. In the NEAR-FUTURE The Godmothers (1982 UK), her first novel, two groups of women in a well realized feminist AD2095 oppose patriarchal oppression. Wingwomen of Hera (1987 US), the first volume of the projected Cosmic Botanists sequence, is less didactic: the collision of patriarchal and feminist values is background for a strong plot with convincing societies and characters. SH writes well; and refreshingly believes that a feminist future does not necessarily imply UTOPIA. [MMacL]

HALLE, LOUIS J(OSEPH)

(1913-1984) US academic and writer whose UTOPIA, Sedge (1963), contrasts a community which isolates itself from civilization for hundreds of years with the increasingly frenetic world beyond the gates. [JC]

HALLEN, A.L.

(? -?) UK writer whose Angilin: A Venite King (1907) is among several novels by early writers that prefigure the PLANETARY ROMANCES of Edgar Rice BURROUGHS, though without the flair. The planet in question is VENUS; the protagonist is an Earthman who transports his psyche there in an attempt to find his dead love; the plot is ornate and dynastic, and features airships. [JC]

HALLI, H.R.

[r] FINLAND.

HALLIWELL, TONY

Hugh DARRINGTON.

HALLOWEEN III: SEASON OF THE WITCH

Film (1983). Dino De Laurentiis. Prod Debra Hill, John CARPENTER. Dir Tommy Lee Wallace, starring Tom Atkins, Stacey Nelkin, Dan O'Herlihy. Screenplay Wallace (but primarily by Nigel KNEALE, uncredited). 98 mins. Colour. Not at all a true sequel to the "stalk and slash" Halloween films, this is a horror film with an sf rationale. Crazy Irish entrepreneur Cochran (O'Herlihy), infuriated by Halloween's commercial degradation, plans to restore to it its proper mystical significance. Using microchips manufactured from a stolen Stonehenge monolith, he manufactures and sells huge numbers of Halloween masks that will hideously destroy their child wearers when triggered by an electronic pulse relayed through tv advertisements. Kneale had his name taken off the credits, disgusted at this becoming more and more like a SPLATTER MOVIE, but a true eeriness remains to balance the physical horrors (not all of which are merely arbitrary), especially in the dark-suited, polite ANDROID killers and in the menacing sleepy streets of the company town. Directed by a Carpenter protege, this film has the enjoyably grisly flavour of Carpenter's own. [PN]

HALLUS, TAK

Stephen ROBINETT.

HALSBURY, EARL OF

Working name of UK writer Hardinge Goulburn Giffard, Second Earl of

Halsbury (1880-1943). His future- WAR novel, 1944 (1926), depicts a cataclysmic conflict in which the USSR attacks the UK from the air, leaving only a few survivors. The protagonist, a modern Noah, prepares to leave the shattered island by ark, but is told that the USSR has been itself obliterated, and returns to build a new UK. [JC]

HAM, BOB

(? -) US author of the Overload sequence of post- HOLOCAUST series of military-sf adventures comprising Overload #1: Personal War (1989), #2: The Wrath (1989), #3: Highway Warriors (1989), #4: Tennessee Terror (1989), #5: Atlanta Burn (1990), #6: Nebraska Nightmare (1990), #7: Rolling Vengeance (1990), #8: Ozark Payback (1991), #9: Huntsville Horror (1991), #10: Michigan Madness (1991), #11: Alabama Bloodbath (1991) and #12: Vegas Gamble (1991). [JC]

HAMBLY, BARBARA

(1951-) US author, primarily of FANTASY, based in Southern California. She entered genre publishing with the Darwath Trilogy fantasy sequence, published by DEL REY BOOKS: The Time of the Dark (1982), The Walls of Air (1983) and The Armies of Daylight (1983). In these a historian and a biker from Los Angeles find themselves in a struggle between Good and Evil in a PARALLEL WORLD where MAGIC works; the conventional fantasy situation is invigorated to a degree by the lively treatment. Her Sun Wolf fantasy sequence, to date open-ended, is more original in both style and matter: The Ladies of Mandrigyn (1984), The Witches of Wenshar (1987)-reissued together as The Unschooled Wizard (omni 1987) - and The Dark Hand of Magic (1990). These novels have, without preaching, an attractive element of FEMINISM in their depiction of the women in their medieval fantasy world, some of whom are mercenaries, others at least potentially self-reliant. In the Windrose series - The Silent Tower (1986) and The Silicon Mage (1988), and Dog Wizard (1993), the first two assembled as Darkmage (omni 1988) - BH, who had previously used occasional sf ideas in her fantasy, produced a true genre-bending sequence in its apposition of science and magic by placing two parallel worlds (one ours) in phase in a story involving an evil sorcerer's consciousness embedded in a COMPUTER as "a series of subroutines". BH's sole pure sf novel to date is Those who Hunt the Night (1988; vt Immortal Blood UK 1988), which was marketed as HORROR. It is a good whodunnit in the STEAMPUNK manner, set in Victorian England, about a skilled investigator hired to protect vampires - rationalized as a race parallel to humanity but with somewhat different ethics - from whoever is murdering them. Magicians (persecuted) behave once again rather as displaced SCIENTISTS in the initial world of the projected Sun-Cross sequence: The Rainbow Abyss (1991 UK) and The Magicians of Night (1992), both volumes being assembled as Sun-Cross (omni 1992) The second book, with savage irony, transports one of these true magicians into our own world among the occultists and pseudo-scientists clustered around Hitler in Nazi Germany. BH has created her own corner of the FANTASY market, characteristically pressing occasional sf ideas into the service of her fundamentally fantastic themes, but without pushing too hard against fantasy/sf genre constraints. Her books - by no means potboilers, and sometimes painful - are normally vigorous, interesting and alert within

her self-imposed format. [PN]Other works: The Quirinal Hill Affair (1983; vt Search the Seven Hills 1987), an historical whodunnit; Ishmael * (1985), Ghost Walker * (1991) and Crossroad * (1994), all STAR TREK ties; Dragonsbane (1986), fantasy; Beauty and the Beast * (1989) and Beauty and the Beast: Song of Orpheus * (1990), novelizing tv episodes from BEAUTY AND THE BEAST; Stranger at the Wedding (1994; vt Sorcerer's War 1994 UK); Bride of the Rat God (1994).See also: HISTORY OF SF.

HAMILTON, CICELY

Pseudonym under which UK novelist, playwright, actress and feminist Cicely Mary Hamill (1872-1952) published all her adult work, though her children's fiction, including some stories for the Sexton Blake series, was written as by Scott Rae and by Max Hamilton. Her best-known plays are eloquently suffragist; they include How the Vote was Won (1909 chap) with Christopher St John (circa 1875-1960), in which the outcome predicted by the title is achieved when those women without means go on strike. Her sf novel, Theodore Savage: A Story of the Past or the Future (1922; rev vt Lest Ye Die 1928), bitterly depicts a future WAR in whose aftermath the people of the UK, driven out of the cities, revert to superstitious barbarism. The ironically named protagonist lives to a great age in a small village full of savages who think of pre-collapse artifacts as obscene. CH is one of the first - and among the darkest - of those UK sf novelists whose vision of things was shaped by WWI, which they saw as foretelling the end of civilization. [JC]Other works: Little Arthur's History of the Twentieth Century (1933).See also: END OF THE WORLD; HISTORY IN SF.

HAMILTON, CLIVE C.S. LEWIS.

HAMILTON, EDMOND (MOORE)

(1904-1977) US writer, married to Leigh BRACKETT from 1946. With E.E. "Doc" SMITH and Jack WILLIAMSON, he was one of the prime movers in the development of US sf, sharing with those writers in the creation and popularization of classic SPACE OPERA as it first appeared in PULP MAGAZINES from about 1928. His first story, "The Monster-God of Mamurth" for Weird Tales in 1926, which vulgarized the florid weird-science world of Abraham MERRITT, only hinted at the exploits to come, though EH found SCIENCE FANTASY a fertile vein, collecting this story and others in his first book, The Horror on the Asteroid ? (coll 1936 UK). Only two years later, with the publication of "Crashing Suns" (1928 Weird Tales), he was writing genuine space opera of the sort with which he soon became identified: the Universe-spanning tale in which an Earthman and his comrades (not necessarily human) discover a cosmic threat to the home Galaxy and successfully - either alone, or with the aid of a space armada, or both-combat the ALIENS responsible for the threat. Science or pseudo-science served as a magically enabling doubletalk for the easier presentation of interstellar action, and the scope, colour and dynamic clarity of this liberated action did much to define the SENSE OF WONDER for a generation of readers, who rewarded EH with several nicknames in recognition of his gift, variously "World-Destroyer", "The World Wrecker", or "World-Saver Hamilton". Though not technically part of the

series, "Crashing Suns" is structurally identical to the six Interstellar Patrol stories, which followed immediately; when they were (with the exception of "The Sun People" [1930]) finally reprinted in the 1960s, this story was properly included, giving its title to the second volume. Outside the Universe (1929 Weird Tales; 1964) and Crashing Suns (coll 1965) represent, with faults and virtues grandly magnified, the heart of EH's early work - and the heart, therefore, of space opera. Others of his works contributing to the creation of the form include The Metal Giants (1926 Weird Tales; 1932 chap), "The Comet Doom" (1928) and "The Universe Wreckers" (1930). The main failure of EH's work is a lack of cohesion, through the lack of any sense of strategic plotting; that lack would of course be remedied in the work of E.E. Smith. EH persisted with the format through the 1930s, with gradually diminishing success, occasionally under pseudonyms including Robert Castle, Hugh Davidson, Robert Wentworth and the house name Will GARTH; and-dangerously for his career - occupied much of his time in the early 1940s with the smoother but significantly less lively Captain Future series, published 1940-50 by Standard Magazines in CAPTAIN FUTURE (1940-44) and afterwards in Startling Stories (1945-6 and 1950-51). Not all the Captain Future stories were by EH. Five were signed with the house name Brett STERLING, of which two were by EH and three - "Worlds to Come" (1943), "Days of Creation" (1944) and The Tenth Planet (1944 CF; 1969) - were by Joseph SAMACHSON, with one further title - The Solar Invasion (1946 Startling Stories; 1969) - being by Manly Wade WELLMAN. Each tale was written to a rigorous formula in which the super-scientist protagonist, backed by three aides (one ROBOT, one ANDROID and one brain in a box), brings an interstellar villain to justice. EH's Captain Future titles eventually released in book form are Danger Planet (1945 Startling Stories as "Red Sun of Danger"; 1968, as by Sterling), Outlaw World (1946 Startling Stories; 1969), Quest Beyond the Stars (1942 Captain Future; 1969), Outlaws of the Moon (1942 Captain Future; 1969), The Comet Kings (1942 Captain Future; 1969) - which was probably the outstanding tale among them - Planets in Peril (1942 Captain Future; 1969), Calling Captain Future (1940 Captain Future; 1969), Captain Future's Challenge (1940 Captain Future; 1969), Galaxy Mission (1940 Captain Future as "The Triumph of Captain Future"; 1969), The Tenth Planet (1944 Captain Future as "Magic Moon"; 1969, as by Sterling), The Magician of Mars (1941 Captain Future; 1969) and Captain Future and the Space Emperor (1940 Captain Future; 1969). 11 further novels remain in magazine form: "Captain Future and the Seven Space Stones" (1941), "Star Trail to Glory" (1941), "The Lost World of Time" (1941), "The Face of the Deep" (1943), "The Return of Captain Future" (1950), "Children of the Sun" (1950), "The Harpers of Titan" (1950), "Pardon My Iron Nerves" (1950), "Moon of the Unforgotten" (1951), "Earthmen no More" (1951) and "Birthplace of Creation" (1951). From "The Return of Captain Future" (1950) onwards these tales were novelettes, usually around 10,000 words. The original idea for Captain Future had come from Mort WEISINGER, a senior editor with the Standard Magazines group. Later, in 1941, Weisinger shifted over to DC COMICS, and took many of his top writers with him, including EH, who worked for some time in the mid-1940s as a staff writer on SUPERMAN, along with Henry KUTTNER and others. Unfortunately for EH, his work in comics and his involvement with Captain Future (which was aimed

primarily at teenaged boys) made it initially somewhat difficult for him to be accepted after WWII as the competent and versatile professional he had in fact been for years, a writer with a much wider range than was generally realized, one who had already produced several stories whose comparatively sober verisimilitude prefigured post-WWII requirements. After his marriage to Brackett in 1946 his output diminished, but its quality increased, a fact obscured by the publication in book form over the next years of material from his early career - like *Tharkol*, *Lord of the Unknown* (1939 *Startling Stories*; 1950 UK), in which Martians invade Earth for its water - and by his habitual rehashing of space-opera conventions in old-fashioned epics like *The Sun Smasher* (1954 *Universe*; 1959 *dos*), *Battle for the Stars* (1956 *Imagination* as by Alexander BLADE; exp 1961) and *Fugitive of the Stars* (1957 *Imagination*; rev 1965 *dos*). His final series, the *Starwolf* tales about tough interstellar adventurer Morgan Chane, is similarly antiquated in premise, but told in a clean-cut trimmed-down language which has won it supporters. The sequence comprises *The Weapon from Beyond* (1967), *The Closed Worlds* (1968) and *World of the Starwolves* (1968), all three being assembled as *Starwolf* (omni 1982). At the same time, however, EH was writing novels which, though in the space-opera tradition, were more carefully composed and darker in texture. It is for these novels, plus *The Monsters of Juntenheim* (1941 *Startling Stories* as "A Yank at Valhalla"; 1950 UK; vt *A Yank at Valhalla* 1973 *dos* US), that he is now mainly remembered. The best is probably *The Haunted Stars* (1960), in which well characterized humans face a shattering mystery on the MOON: the secret of star travel left by long-dead ALIENS, along with dark warnings. *The Star Kings* (1949; vt *Beyond the Moon* 1950), whose plot reflects *The Prisoner of Zenda* (1894) by Anthony Hope (1863-1933) (*RURITANIA*), is grander in scope but less impressively written; its sequels are collected in *Return to the Stars* (coll of linked stories 1970), and both volumes are assembled as *Chronicles of the Star Kings* (omni 1986 UK). Other titles of interest from this flourishing period are *City at World's End* (1951), *The Star of Life* (1947 *Startling Stories*; rev 1959) and *The Valley of Creation* (1948 *Startling Stories*; rev 1964), a strongly written SWORD-AND-SORCERY tale with an sf denouement. EH shared with his long-time colleague Jack Williamson a capable and flexible attitude towards the post-WWII genre and its markets (in contrast to the third great originator of US space opera, E.E. Smith, who was a generation older). Through his ability to evolve a cleaner and more literate style to meet these new demands, and to apply this style to his old generic loves, EH wrote novels at the end of his career that read perfectly idiomatically as novels of the 1960s, as evidenced also in two compendiums of his shorter work: *What's It Like Out There? and Other Stories* (coll 1974) and the posthumous *The Best of Edmond Hamilton* (coll 1977) ed Leigh Brackett. In the end, it can be said of EH that he took space opera seriously enough to make it good. [JC] Other works: *Tiger Girl* (1945 chap UK); *Murder in the Clinic* (coll 1946 chap UK); *Doomstar* (1966); *The Lake of Life* (1937 *Weird Tales*; 1978 chap). As Editor: *The Best of Leigh Brackett* (anth 1977). About the author: *Leigh Douglass Brackett and Edmond Hamilton: A Working Bibliography* (1988 chap) by Gordon BENSON Jr. See also: AIR WONDER STORIES; AMAZING STORIES; ASTEROIDS; COLONIZATION OF OTHER WORLDS; COMICS; COMPUTERS; COSMOLOGY; CRIME AND PUNISHMENT; CYBORGS; DEVOLUTION;

HAMILTON, (ANTHONY WALTER) PATRICK

(1904-1962) UK writer best known for plays like *Rope* (1929) and for several acute and supple novels of hopelessness in the UK of the 1930s. His sf novel *Impromptu in Moribundia* (1939) further explores this milieu through its dreamlike exploration of another planet where Earth's customs are seen inverted, as in a distorting mirror. *Hangover Square* (1941) is a split-personality murder mystery. [JC]

HAMILTON, TODD CAMERON

[r] P.J. BEESE.

HAMILTON, VIRGINIA (ESTHER)

(1936-) US writer, mostly of juveniles, and of very considerable interest in that field for the exploratory intensity of her work, from *Zeely* (1967) on, and for the depth of her presentation of the complex experience of being Black in the USA. Several of her early tales, like *M.C. Higgins, the Great* (1974) and *Sweet Whispers, Brother Rush* (1982), are fantasies. Of particular sf interest is the *Justice Cycle - Justice and her Brothers* (1978), *Dustland* (1980) and *The Gathering* (1981) - describing the slow growth of a sibling gestalt into an entity which may well prefigure a higher form of humanity. The relationship between the siblings, as *Justice* begins to realize that she must take control over her identical-twin elder brothers, is developed with great skill. [JC] Other works: *The Magical Adventures of Pretty Pearl* (1983); *The People Could Fly: American Black Folk-Tales* (coll 1985); *The Dark Way: Stories from the Spirit World* (coll 1990). See also: SUPERMAN.

HAMILTON ?

AUTHENTIC SCIENCE FICTION.

HAMLET, OVA

[s] Richard A. LUPOFF.

HAMLING, WILLIAM L(AWRENCE)

(1921-) US writer and editor. Active as an sf fan in the late 1930s and early 1940s, he published a number of stories, the first of which, "War with Jupiter" with Mark Reinsberg, appeared in *AMAZING STORIES* in 1939. WLH later went to work for ZIFF-DAVIS under Raymond A. PALMER, and was managing editor of *AMZ* and *FANTASTIC ADVENTURES* 1948-50. In 1951 he became editor and publisher of *IMAGINATION*, having bought the title from Palmer. He added a companion, *IMAGINATIVE TALES*, and continued both until late 1958. In 1955 he started an early men's magazine, *Rogue*. In the late 1960s his publishing company Greenleaf Classics, which specialized in erotic novels, ran badly foul of US pornography laws for publishing an illustrated edition of a Congressional investigation of pornography, an offence for which he was imprisoned along with his co-publisher Earl Kemp

(1929-), compiler of the pamphlets *Who Killed Science Fiction?: An Affectionate Autopsy* (anth 1960 chap) and *Why is a Fan?* (anth 1961 chap). Greenleaf Classics and its associated imprints (Adult Books, Candid Reader, Companion Books, Ember Library, Idle Hour Books, Late House Library, Leisure Books, Nightstand Books, Pleasure Readers and Regency Books) published over 50 titles of sf pornography; they are listed in *The Science Fiction Collector* 4 (1977) ed J. Grant Thiessen and in Donald H. TUCK's *The Encyclopedia of Science Fiction and Fantasy through 1968*, Volume 3: Miscellaneous (1982). Greenleaf published several of the early works of Harlan ELLISON. [MJE/PN]

HAMMOND, KEITH
Henry KUTTNER.

HAMMURA, RYO
[r] JAPAN.

HAMPSON, FRANK
(1918-1985) UK artist who almost singlehandedly brought the UK COMIC strip into the scientific age. When the Rev. Marcus Morris and FH originated the Eagle comic in 1949-50, FH created the sf strip DAN DARE - PILOT OF THE FUTURE for its full-colour front pages. What made the strip so revolutionary was FH's genius for colour, draughtsmanship and characterization, and his ability to create authentic future technology. He brought the comic strip closer to the CINEMA than any other UK artist before him, with panoramas, close-ups and a great feeling for movement and sequence. Until 1959, together with a team of artists, scriptwriters and scientific advisers, FH controlled the cult spaceman on his adventures across the Solar System. He abandoned Dan Dare to draw an impressive life of Christ in comic-strip form, *The Road of Courage* (1959-60; graph 1981); apart from a short stint on *Lady Penelope* for TV21 in 1964, this was his last comic strip. Indeed, dogged by ill health and bitter about his shabby treatment by Eagle's publishers, he produced very little published work at all after this, although he illustrated seven books for very young children for the publisher Ladybird Books and produced two sf spreads for MARVEL COMICS's UK Spider-Man title in 1976. He received the Italian Yellow Kid award in 1975. [ABP/RT]See also: RADIO.

HANCOCK, H(ARRIE) IRVING
(1868-1922) US martial arts specialist and writer, mostly for boys, who remains of sf interest for the *Conquest of the United States* sequence - *The Invasion of the United States*, or *Uncle Sam's Boys at the Capture of Boston* (1916), *In the Battle for New York*, or *Uncle Sam's Boys in the Desperate Struggle for the Metropolis* (1916), *At the Defense of Pittsburgh*, or *The Struggle to Save America's "Fighting Steel" Supply* (1916) and *Making the Stand for Old Glory*, or *Uncle Sam's Boys in the Last Frantic Drive* (1916) - set around 1920 and depicting the invasion of the USA by a Germany already victorious in Europe. Slightly advanced airplanes are in evidence, as is much action. Germany loses. [JC]

HAND, ELIZABETH
(1957-) US writer and critic who began publishing fiction with "Prince of Flowers" for *Twilight Zone Magazine* in 1988. Her first novel,

WINTERLONG (1990), set on Earth some hundreds or thousands of years hence, combines sf and fantasy materials in a way made familiar by writers of PLANETARY ROMANCES from Jack VANCE through Gene WOLFE to Richard GRANT (with whom she lives). The tale features baroque bioengineering, mythical resonances and ornate psychopathologies intensely glimpsed; the prose is occasionally very powerful, but the book is rather too long. A second volume set in the same universe, Aestival Tide (1992), showed a formidable improvement in its pacing, though necessarily abjuring some of the interwoven density of mood in the previous volume; the central city where the action occurs is superbly decadent, and the artificial woman, manufactured of glass and metal as a storage vehicle for human culture, is well-conceived. In the third volume, Icarus Descending (1993), the baroque superstructure of the dying world continues to collapse, accompanied by a revolt of the "geneslaves" who have been present throughout. EH's fourth novel, Waking the Moon (1994 UK; cut 1995 US), is a fantasy of history. [JC] See also: CYBERPUNK; FANTASY; GODS AND DEMONS; HOLOCAUST AND AFTER.

HANDLEY, MAX (ADRIAN ROBERT)

(1945-) UK writer known in the sf world only for *Meanwhile* (1977), an intricately comic FABULATION crammed to bursting point with devices from the whole spectrum of sf and fantasy, all introduced by a sharply knowledgeable hand. [JC]

HANDMAID'S TALE, THE

Film (1990). Cinecom/Bioskop. Dir Volker Schlöndorff, starring Natasha Richardson, Faye Dunaway, Aidan Quinn, Elizabeth McGovern, Victoria Tennant, Robert Duvall. Screenplay Harold Pinter (1930-), based on THE HANDMAID'S TALE (1985) by Margaret ATWOOD. 108 mins. Colour. A near-future USA, some time after a right-wing coup, is now a patriarchal, fundamentalist, totalitarian state, suppressive of all liberal thought and especially of women, who have no rights at all. The heroine is a "handmaid", one of the few women whose reproductive systems have survived the (very vaguely specified) ravages of chemical pollution and radiation from power-plants. A handmaid's duty is to bear children to important men, conception taking place at ceremonies where she is sandwiched between piously thrusting husband and demure wife; the baby is taken by the wife. This US/German adaptation was perhaps doomed to failure. The believability of Atwood's original novel depends largely on texture, on irony, on the watchful but partially submissive consciousness through which its events are filtered: novels of this kind are notoriously difficult to film. Stripped of this fineness of observation, THT's lurid future is so diagrammatic - despite excellent performances - that suspension of disbelief becomes impossible. The most terrifying aspect of the novel, the wounded complicity with which many of its women consent to their own dehumanization, is weakened by making the film's heroine (Richardson) an active revolutionary who finally cuts the throat of her owner, played by Duvall, whose portrayal of nearly unconscious hypocrisy - he sees himself as a kind man - is the best thing in the film. [PN]

HANDS OF A STRANGER
ORLACS HANDE.

HANDS OF A STRANGLER
ORLACS HANDE.

HANDS OF ORLAC, THE
ORLACS HANDE.

HANLEY, JAMES

(1901-1985) Irish writer, in the UK from around the time he began - with *Drift* (1930) - to publish his many novels and collections. His only sf, *What Farrar Saw* (1946; rev as coll, vt *What Farrar Saw and Other Stories* 1984), set in a NEAR-FUTURE land much like war-depleted England, presents a country choked by both an invidious class system and huge traffic jams, which serve as a metaphor for social sclerosis. The jams are cleared with bombs, but the system seems intact. [JC]

HANNA, W.C.

(?1910-) US writer in whose *The Tandar Saga* (1964) the natives of Tandar cruise space looking for habitable planets. [JC]

HANNAN, ROBERT CHARLES

(? -?) UK writer whose first sf novel, *The Betrothal of James* (1898), attempts to extract some humour from the fact that female cats must be sacrificed in the production of a rejuvenation pill. *Thuka of the Moon* (1906), a fantasy in which lunar deities amuse themselves by creating various humanlike beings, awkwardly prefigures Philip Jose FARMER's *World of Tiers* POCKET-UNIVERSE sequence. In *The Electric Man* (performed 1906; 1910 chap), a play, a primitive ROBOT is mistaken for the hero, with farcical consequences. [JC]

HANSEN, KARL

(1950-) US writer who began publishing sf with "A Red, White and Blue Fourth of July" in 2076: *The American Tricentennial* (anth 1976) ed Edward BRYANT, and who published stories fairly frequently in the late 1970s. His first novel, *War Games* (1980 as "Sergeant Pepper" in *The Berkley Showcase* #5 ed Victoria Schochet; exp 1981), is a surprisingly searing military-sf vision; it is set in the loose Hybrid universe, as is his second, *Dream Games* (1985 Omni as "Dreams Unwind"; exp 1985), which less interestingly describes a rebellion against a COMPUTER-controlled DYSTOPIA. Further volumes of the Hybrid series are anticipated. [JC]

HANSEN, L(OUISE) TAYLOR

(? -) US writer who published numerous sf stories and popular science articles in the PULP MAGAZINES from 1929 to at least 1948, beginning with "The Undersea Tube" for AMZ in 1928; this details the failure of a subway under the Atlantic. She probably attended the University of California Los Angeles for graduate work in science. Her stories, which revolve around hard-science explanations or technological problems, tend to include many diagrams. *The Ancient Atlantic* (1969), nonfiction, deals with the geological and mythic history of the Atlantic Ocean. [JD]

HANSON, VERN

Working name of UK writer Victor Joseph Hanson (1920-), author of a number of some routine sf published over a brief span: *The Twisters* (coll 1963), *Creatures of the Mist* (1963), *Claws of the Night* (1964) and *The*

Grip of Fear (coll 1964). [JC]

HAPNA!

SCANDINAVIA.

HARBEN, WILL(IAM) N(ATHANIEL)

(1858-1919) US writer, most of whose novels variously depict life in the South. "In the Year Ten Thousand" (1892 Arena) is a UTOPIAN sketch espousing vegetarianism. His sf novel, The Land of the Changing Sun (1894), is a LOST-WORLD tale featuring an underground utopia/dystopia, Alpha, founded 200 years earlier under the Arctic by a group of inventive Englishmen, who espouse a rigid eugenic regime, and who heat and light their habitat with an artificial sun, which moves on tracks and changes colour pleasingly. Intruding magma threatens their world, and they decide to evacuate Alpha in advanced submarines. [JC]See also: HISTORY OF SF.

HARBINSON, W(ILLIAM) ALLEN

(1941-) UK writer who has concentrated on the sf of PARANOIA, generally rooted in the notion that ALIENS are either investigating our planet or governing us, or both. The Projekt Saucer sequence - in order of internal chronology, Projekt Saucer #1: Inception (1991 US), Phoenix: Projekt Saucer #2 (1995) and Genesis (1980; vt Projekt Saucer #2: Genesis 1991 US; vt Genesis: Projekt Saucer #3 1995 UK) - connects UFOS and superscience in a global conspiracy. Otherworld (1984) collapses under the burden of attempting to make stylistic bricks out of material of this sort, but The Light of Eden (1987; vt Eden 1987 US) more successfully follows the psychiatric examination of some humans who gradually make it clear that they are not in fact hallucinating an alien presence in the land. Dream Maker (1991) suggests that UFOS in need of energy from human minds are sucking holes in the ozone layer. [JC]

HARBOTTLE, PHILIP (JAMES)

(1941-) UK local government officer and sf researcher. PH is the world authority on the works of John Russell FEARN, whose literary estate he represents and with whom he has posthumously collaborated, completing several stories. His bibliographical study of Fearn is The Multi-Man (1968 chap). PH is an expert in publishing data relating to UK GENRE SF, especially in magazine form, and has contributed research to several UK books about sf. He edited the magazine VISION OF TOMORROW for its 12 issues, Aug 1969-Sep 1970, as well as, anon, 3 anthologies: Eternal Rediffusion (anth 1973 chap), Flight on Titan (anth 1973 chap) and Passage to Saturn (anth 1973 chap). His work as a whole has been summarized in 2 linked volumes, Vultures of the Void: A History of British Science Fiction, 1946-1956 (1992 US) and British Science Fiction Paperbacks, 1949-1956 (1992 US), both with Steve HOLLAND. [PN/JC]

HARCOURT, GLENN

[r] Carter SCHOLZ.

HARDING, LEE (JOHN)

(1937-) Australian freelance photographer and writer who began publishing sf with "Displaced Person" for Science Fantasy in 1961; he eventually expanded this story as Displaced Person (1979; rev vt Misplaced

Persons 1979 US). Aimed - like *The Weeping Sky* (1977) and *Waiting for the End of the World* (1983), which are equally impressive - at a teenage audience, it memorably imprisons its protagonist in a world turning to grey just as the grim solitude of his own life becomes painfully manifest. This use of sf plots to explore character became a kind of trademark of the LH novel. During the 1960s, sometimes writing as Harold G. Nye, he concentrated on magazine work, twice winning a Ditmar AWARD, in 1970 for "Dancing Gerontius" (1969) and in 1972 for the magazine version of his first novel, *Fallen Spaceman* (1971 If; rev 1973; rev 1980 US), a juvenile. His adult novels - *A World of Shadows* (1975 UK) and *Future Sanctuary* (1976 Canada) - have been perhaps less notable than his juveniles, though the last impressively anatomizes a desolate NEAR-FUTURE Australia. His other juveniles include *The Children of Atlantis* (1976), *The Frozen Sky* (1976), *Return to Tomorrow* (1977) and *The Web of Time* (1980 UK); they are sombre and clear. LH has edited *Beyond Tomorrow: An Anthology of Modern Science Fiction* (anth 1976; cut 1977 UK), *The Altered I: An Encounter with Science Fiction* (anth 1976), which presents some of the productions of an sf workshop in Australia presided over by Ursula K. LE GUIN, and *Rooms of Paradise* (anth 1978). [JC]See also: CHILDREN'S SF; PSYCHOLOGY.

HARDING, RICHARD

Pseudonym of US writer Robert Tine (? -), author of the *Outrider SURVIVALIST* sequence: *The Outrider* (1984), #2: *Fire and Steel* (1984), #3: *Blood Highway* (1984), #4: *Bay City Burnout* (1985) and #5: *Built to Kill* (1985). As usual, the HOLOCAUST is vengefully enjoyed. [JC]

HARD SF

Item of sf terminology coined by P. Schuyler MILLER in ASF (Nov 1957) and since then widely used by sf FANDOM and readers; it has sometimes overlapped in meaning with "hardcore sf", often used in the 1960s and 1970s to mean the kind of sf that repeats the themes and (to a degree) the style of the GENRE SF written during the so-called GOLDEN AGE OF SF. Though still sometimes used in a way that implies the element of nostalgia associated with "hardcore sf", the term "hard sf" now seems to refer to something rather simpler, as summarized by Allen STEELE (in "Hard Again" in NEW YORK REVIEW OF SCIENCE FICTION, June 1992): "Hard sf is the form of imaginative literature that uses either established or carefully extrapolated science as its backbone." Steele goes on to regret the association in many readers' minds of hard sf with "a particular political territory - usually located somewhere on the far right", an association which, while certainly sometimes justifiable, has cultural origins that cannot easily be elucidated. The commonly used distinction between hard and SOFT SCIENCES runs parallel to that between hard and SOFT SF. Theme entries in this volume which deal with the so-called hard sciences include, but are not restricted to, ASTRONOMY, BLACK HOLES, COMPUTERS; COSMOLOGY, CYBERNETICS, FASTER THAN LIGHT, GRAVITY, MATHEMATICS, NUCLEAR POWER, PHYSICS, POWER SOURCES, ROCKETS, SPACE FLIGHT, SPACE SHIPS, TECHNOLOGY and WEAPONS. All but the most puristic reader would probably accept also BIOLOGY, GENETIC ENGINEERING and TERRAFORMING as appropriate material for hard sf. But it is possible to write a kind of hard sf about

almost anything, as can be exemplified by Brian M. STABLEFORD's rationalizing treatment of vampires in *The Empire of Fear* (1988). Hard sf should not, however, wilfully ignore or break known scientific principles, yet stories classified as "hard sf" often contain, for example, ESP, SUPERMAN, FASTER-THAN-LIGHT and TIME-TRAVEL themes (see also IMAGINARY SCIENCE). While a rigorous definition of "hard sf" may be impossible, perhaps the most important thing about it is, not that it should include real science in any great detail, but that it should respect the scientific spirit; it should seek to provide natural rather than supernatural or transcendental explanations for the events and phenomena it describes. [PN]

HARD TO BE A GOD
TRUDNO BYT' BOGOM.

HARDWARE

Film (1990). Palace/Millimeter/A Wicked Films Production. Dir Richard Stanley, starring Stacey Travis, Dylan McDermott, John Lynch, William Hootkins. Screenplay Stanley, based (it was admitted after a threatened lawsuit) on a 1980 JUDGE DREDD story. 94 mins, but many prints shortened to avoid adults-only rating. Colour. In a radioactive city in an apparently post- HOLOCAUST near future, a dope-smoking sculptress is given a military robot's head to incorporate into a steel sculpture. It reincorporates itself using pieces of the sculpture, thereby taking the film from the technopunk- DYSTOPIA genre into the Luddite killer- ROBOT genre. The 24-year-old director, Stanley, had a track record in so-called Industrial Music rock videos, and the eclectic, pack-rat junk sensibility which this suggests (a bit of Andrei TARKOVSKY here, a bit of Dario Argento there, a bit of CYBERPUNK everywhere) surprisingly transcends cliché in the images if not the script. Though H is basically a simple low-budget SPLATTER MOVIE, it is unusually inventive in its design and in several of the characters, notably Hootkins as a rotund sadistic voyeur. The crazed robot is a Mark 13, and the film's epigraph is adapted from (where else?) the Gospel According to St Mark, Chapter 13: "No flesh shall be spared." [PN]See also: CINEMA.

HARDY, DAVID A(NDREWS)

(1936-) UK illustrator, known as much for his astronomical paintings in the accurate tradition of Chesley BONESTELL as for his sf work. DH learned his craft at the Margaret Street College of Art in Birmingham, and was soon painting for the British Interplanetary Society. Some of his best early work was to illustrate a nonfiction book by Patrick MOORE, *Sun, Myth, and Men* (1954); DAH later illustrated and cowrote with Moore *Challenge of the Stars* (1972). His work has appeared on magazine and book covers, most notably (beginning 1971) many covers for FSF, the magazine for which he developed his famous "Space Gumby", a green alien which lent humour to his vivid astronomical scenes. He was an important artist for *VISION OF TOMORROW*, and worked also for *Science Fiction Monthly*, *If* and *Gal*. Other book credits include *Galactic Tours* (1981) with Bob SHAW and artwork for *Atlas of the Solar System* (1982) and *Visions of Space* (1989). [JG/PN]

HARDY, PHIL(IPPE)

(1945-) UK expert on rock music and film, on both of which subjects he has published widely, having been founding editor of Studio Vista's Rockbooks series and of the magazine Music Business. Among his notable books on film those most relevant to sf are The Aurum Film Encyclopedia: Science Fiction (1984; vt Science Fiction: The Complete Film Sourcebook 1985 US; vt The Encyclopedia of Science Fiction Movies 1986 ; rev 1991) and The Aurum Film Encyclopedia: Horror (1985; vt The Encyclopedia of Horror Movies 1987 US; rev projected 1993), both of which he edited and partly wrote. Well edited, containing detailed credits and critical annotations on well over 1000 films each, these books are-despite inevitable small errors and on rare occasion weird judgments - about the most readable and useful reference works in book form on their subjects (CINEMA). There are more comprehensive filmographies available, but PH's are much the most comprehensive to contain critical comment. The Science Fiction volume - whose 1991 updating was largely the work of Kim NEWMAN - is the only current (1992) book to be more comprehensive in the field than this encyclopedia. [PN]

HARGRAVE, JOHN (GORDON)

(1894-1982) UK writer and illustrator. At age 17 he became the chief cartoonist for the London Evening News; he also illustrated several books of interest, including a 1909 edition of Jonathan SWIFT's Gulliver's Travels (1726) and Black Tales for White Children (coll 1914) by C.H. Stigland. His work was all in black-and-white, with effects that ran from the forceful to the jagged. He became involved in the Boy Scout movement during WWI, then left it to found a rival organization, the Kibbo Kift, whose principles he advocated in a quasi- UTOPIAN novel, Young Winkle (1925); he invented an automatic aircraft navigator; and he was involved in Social Credit, a theory that advocated the redistribution of resources to increase purchasing power. Of his nonfiction, The Life and Death of Paracelsus (1951) is of note. His sf novel, The Imitation Man (1931), depicts the life of an artificially created homunculus with the power of ESP who causes a good deal of furore but soon dies. [JC]See also: SUPERMAN.

HARGRAVE, LEONIE

Thomas M. DISCH.

HARKER, KENNETH

(1927-) UK author with a training in physics. His sf novels - The Symmetrians (1966), which concerns a DYSTOPIAN response to nuclear HOLOCAUST, and The Flowers of February (1970) - are straightforward but uninspired. [JC]

HARMON, H.H.

[s] Robert Moore WILLIAMS.

HARMON, JIM

Working name of US writer and RADIO producer James Judson Harmon (1933-), who began publishing sf with "The Smuggler" for Spaceway in 1954, and who became active in the magazine field. A nonfiction book, The Great Radio Heroes (1967), discusses SUPERMAN and other programmes and

characters of sf interest. A similarly well documented nostalgic study is *The Great Movie Serials: Their Sound and Fury* (1972) by JH and Donald F. GLUT. JH also contributed a number of articles to *RIVERSIDE QUARTERLY*.
[JC/PN]

HARNESS, CHARLES (LEONARD)

(1915-) US patent attorney and writer, born in Texas. His first published story was "Time Trap" for ASF in 1948, a convoluted time-loop story involving the working of tremendous forces off-stage and a quasitranscendental experience as the hero goes back in time to remake the world. His subsequent output shows a remarkable consistency in echoing and developing these themes. His first two novels, *Flight into Yesterday* (1949 *Startling Stories*; exp 1953; vt *The Paradox Men*) and *THE RING OF RITORNEL* (1968), feature cycles in time and HEROES who undergo transcendental metamorphoses in order to manipulate their own destinies and that of the human race; both novels are shamelessly melodramatic, and have an obvious kinship with the work of A.E. VAN VOGT. Shorter works in the same vein include "The New Reality" (1950) - sf's best ADAM AND EVE story - and "Stalemate in Space" (1949; vt "Stalemate in Time"). The first phase of his career (1948-53) may well have ended because of his failure to sell the remarkable novella "The Rose" (1953 *AUTHENTIC SCIENCE FICTION*; title story of *The Rose* [coll 1966 UK], which also includes "The New Reality" and "The Chessplayers") to a US market. This striking allegory of the opposed worldviews of science and the ARTS is a memorable exemplar of the particular kind of SUPERMAN story which represents future human EVOLUTION in metamorphic terms. Its reprinting in the 1960s was the result of the interest in CLH's work of Michael MOORCOCK, who reprinted several CLH stories in *NEW WORLDS*, and this may have been responsible for Harness's second burst of creativity, which produced *THE RING OF RITORNEL* and several shorter works drawing on his experience as a lawyer, including "An Ornament to his Profession" (1966) and "The Alchemist" (1966). (CLH had earlier drawn on this experience in writing whimsical articles and stories for ASF as Leonard Lockhard, sometimes working in collaboration with Theodore L. THOMAS.) CLH returned to sf writing for a third time with the futuristic infernal romance *Wolfhead* (1977-8 *FSF*; 1978), one of several sf novels to borrow heavily from DANTE ALIGHIERI and to recast the myth of Orpheus and Eurydice. He has been moderately prolific since then, aided by his retirement from legal work in 1981. *The Catalyst* (1980) is one of several CLH stories featuring quasimiraculous scientific discoveries made in frank defiance of supposedly rational procedures. The transcendental time-looping of his earlier novels is reiterated in *Firebird* (1981), *Krono* (1988), and - in an un-space-operatic fashion - in *Lurid Dreams* (1990), whose out-of-body time traveller meets up with Edgar Allan POE. *Redworld* (1986) is an eccentric Bildungsroman set on a peculiar alien world, which may be in part a transfiguration of the author's early life. His fondness for outrageously melodramatic courtroom dramas in which absolutely everything is rigged against the defendant, first displayed in "Probable Cause" (1968), is echoed in *The Venetian Court* (1982) and *Lunar Justice* (1991). CLH is an original, stylish and imaginatively audacious writer whose relative neglect is difficult to understand. His most recent books may not have quite the scope and exuberant panache of his earlier efforts,

but it is nevertheless unfortunate that the works of such a colourful and highly readable writer should still be condemned, with one recent exception, to appear only as ephemeral paperback originals. Despite his one-time fashionability in the UK, none of his recent works has been published there. [BS]About the author: Charles L. Harness: Attorney in Space: A Working Bibliography (1992 chap) by Phil STEPHENSEN-PAYNE. See also: COMPUTERS; COSMOLOGY; CRIME AND PUNISHMENT; ESCHATOLOGY; FORCE FIELD; GALACTIC EMPIRES; GAMES AND SPORTS; HISTORY IN SF; JUPITER; MEDICINE; METAPHYSICS; MOON; MUSIC; MYTHOLOGY; RECURSIVE SF; SCIENTISTS; SUN; TIME PARADOXES; WEAPONS.

HARNICEK, MARTIN

[r] CZECH AND SLOVAK SF.

HARPER, GEORGE W(ILLIAM)

(1927-) US volcanologist and writer, often of nonfiction pieces for journals like ASF. His only sf novel, *Gypsy Earth* (1982), is a full-flung SPACE OPERA in the manner of the pre-WWII masters of that form, pitting valiant Terrans against vast invading spacefleets, which they initially destroy. The modernity of the tale was perhaps revealed by the destruction of Earth partway through; but survivors in the eponymous hollow ASTEROIDS wreak revenge, and humanity survives. [JC]

HARPER, HARRY

(1880-1960) UK author with Claude GRAHAME-WHITE of two sf juveniles, *The Air-King's Treasure* (1913) and *The Invisible War-Plane: A Tale of Air Adventure in the Great Campaign* (1915). In the latter an airship is concealed by paint which (it is claimed) neither absorbs nor reflects light. Much later HH wrote two solo works of semifictional FUTUROLOGY, *Winged World* (1946) and *Dawn of the Space Age* (1946). [PN]

HARPER, RORY

(? -) US writer who began publishing sf with *Petrogypsies* (1985 in *Far Frontiers* ed John F. CARR and Jerry POURNELLE; exp 1989), an essentially comic novel set in what seems to be an ALTERNATE WORLD where oil exploration is done by bio-constructs piloted by "gypsies", whose skills dominate the venue. [JC] See also: POWER SOURCES.

HARPER, VINCENT

(? - ?) US writer whose sf novel, *The Mortgage on the Brain, Being the Confessions of the late Ethelbert Craft, MD* (1905), describes an electric-shock treatment which alters personality beneficially and undermines many then-conventional views of the nature of the mind. The story is a melodramatic hotchpotch, but is of interest in its reference to the ego, which is described (as in the title) as holding no more than a mortgage on its habitat: this idea has found sophisticated support in late-20th-century studies of the workings of the mind. [JC] See also: PSYCHOLOGY.

HARRINGTON, ALAN

(1919-) US writer, author of *The Immortalist* (1969), a work of speculative nonfiction. His sf novel, *Paradise 1* (1977), set in the 21st century, tells of potential IMMORTALITY and of a continuing struggle to

wrest humanity free of its contract with death. [JC]

HARRIS, CLARE WINGER

(1891-1968) US writer (known also as Mrs F.C. Harris), the first woman to publish sf in the specialized 1920s PULP MAGAZINES, beginning with "A Runaway World" for *Weird Tales* in 1926. "The Fate of the Poseidonia" (1927) won third prize in an AMZ contest. She experimented with a female point of view in "The Fifth Dimension" (1928), and her stories generally feature strong women, most notably Sylvia, airplane pilot and mechanic in "The Ape Cycle" (1930). Her work often dealt with beings on the borders of humanity - CYBORGS and ape-people (APES AND CAVEMEN) in particular. She assembled her work in *Away from Here and Now* (coll 1947). [JD]

HARRIS, FRANK

Working name of UK writer and editor James Thomas Harris (1856-1931), who spent some years as a lawyer in the USA and who is now best known for his erotic autobiography, *My Life and Loves* (1922-7), which first appeared in 5 privately published volumes. In *Pantopia* (in *Undream'd of Shores* [coll 1924] as "The Temple of the Forgotten Dead"; much exp 1930 US) a young man is shipwrecked somewhere in the South Atlantic, finding himself on a utopian ISLAND whose Spanish-speaking socialist inhabitants make use of radar, lasers and atomic power, and who as a matter of course do what is good for their race in a natural fashion. Unfortunately, also as a matter of course, they execute strangers. Luckily the hero is saved by a privileged maiden, and both eventually escape. [JC]

HARRIS, J. HENRY

(? -?) UK writer whose uneasily fin-de-siecle sf novel, *A Romance in Radium* (1906), follows the investigative journey to Earth of a feathered female ALIEN, a member of an angel-like species from 100,000,000 miles away; her people are confused as to why earlier visitors stayed on our planet and became mortal. The answer is SEX - or, as JHH puts it, marriage. Angels, it seems, cannot get enough of marriage. [JC]

HARRIS, JOHN BEYNON

[r] John WYNDHAM.

HARRIS, JOHNSON

John WYNDHAM.

HARRIS, LARRY M(ARK)

[r] Laurence M. JANIFER.

HARRIS, MACDONALD

Pseudonym used by US writer and academic Donald William Heiney (1921-1993) for all his fiction which, though composed in a smooth and accessible style, tends significantly to foreground any elements of fantasy (FABULATION) with which it may deal. *Bull Fever* (1973) treats a modern family romance in terms of the myth of the Minotaur. *The Balloonist* (1976) recounts a failed 1897 BALLOON expedition to the North Pole in terms reminiscent of Jules VERNE's *Voyages extraordinaires*; indeed, the book is dedicated to Verne. *The Little People* (1986) takes its title from the myth of faerie, though in a delusional frame. *Glowstone* (1987) posits a kind of ALTERNATE WORLD in which a woman strongly reminiscent of Marie

Curie (1867-1934) makes identical scientific discoveries. Screenplay (1982), a TIME-TRAVEL tale, deposits its hero in a film-noir dream of 1920s Hollywood. Several of the stories assembled in *The Cathay Stories and Other Fictions* (coll 1988) carry a contemporary Marco Polo backwards in time to the increasingly fabulous world of the original (1254-1324). [JC/GF]

HARRIS, RAYMOND

(1953-) US writer who began publishing sf with his first novel, *The Broken Worlds* (1986), an attractive picaresque adventure. *Shadows of the White Sun* (1988) seems at first assessment almost too complex - it is set in a FAR-FUTURE Solar System dominated by revenant star-sailors whose descendents occupy seven SPACE HABITATS called the Hypaethra, orbiting the Sun, while a computer-created ANDROID race occupies the planet Veii in exchange for ritual tribute paid to the Despot who dominates the habitats. But embedded within this surround are a convincing murder mystery, a trek and an examination of character. Echoes of both Frank HERBERT and Gene WOLFE are detectable, not to RH's discredit. Complications of venue and plot affect *The Schizogenic Man* (1990) more seriously, with a 21st-century balkanized, computer-run, city-state USA where lives change according to periodic lotteries, and a TIME-TRAVEL plot that further shuffles the reality cards; the novel was the 1991 runner-up for the PHILIP K. DICK AWARD. RH's work has yet to come fully into focus, but there is a sense that this may happen very soon. [JC]

HARRIS, ROGER

[r] Michael MOORCOCK

HARRIS-BURLAND, J(OHN) B(URLAND)

(1870-1926) UK writer whose first novels of sf interest, *Dacobra*, or *The White Priests of Ahriman* (1903) and *The Princess of Thora* (1904 US; vt Dr Silex 1905 UK as JBH-B), were signed Harris Burland. The first tale sets in an occult frame a wide range of supernatural subjects including IMMORTALITY; the second, a LOST-WORLD novel, features a race of lost Normans who have developed into SUPERMEN in an enclave at the North Pole. *The Gold Worshipers* (1906 US), as JBH-B, returns to one of the subjects of the first novel - the transubstantiation of metals - in a congested tale of greed, gold-making and amply reimbursed remorse. [JC] Other works: *Workers in Darkness* (1908), borderline.

HARRISON, CRAIG

(1942-) UK-born NEW ZEALAND playwright and writer whose work embodies consistently anti-racist themes. *Broken October: New Zealand 1985* (1976) posits political terrorism and racial conflict resulting in a US-backed military takeover. In *The Quiet Earth* (1981), filmed as *The QUIET EARTH* (1985), a GENETIC-ENGINEERING disaster depopulates the planet. The insane protagonist realizes, in a moment of CONCEPTUAL BREAKTHROUGH that vindicates his PARANOIA, that he has caused the DISASTER. *Days of Starlight* (1988) pits scientists against the US military after a holographic recorder of Earth's history is discovered. Technically excellent, CH's work is sometimes uninvolved. [MMaL]

HARRISON, HARRY

(1925-) US writer, born Henry Maxwell Dempsey (though his father changed his name to Harrison soon after HH's birth), now usually resident, after many years of travelling, in Ireland. HH began his career as a commercial artist about 1946, working chiefly in comics as an illustrator and writer, often in collaboration with Wallace A. WOOD, supplying illustrations as well to magazines like GALAXY SCIENCE FICTION and eventually having a stint as art director of Picture Week. At the same time - being from an early age an sf enthusiast and friendly with many writers through his membership of the Hydra Club, a New York group of sf professionals - he began to think about writing. Damon KNIGHT, then editor of WORLDS BEYOND and one of the Hydra Club members, commissioned some illustrations from HH for that magazine; he then - far more importantly - bought HH's first story, "Rock Diver", which appeared in Worlds Beyond in 1951. HH's short fiction appeared regularly from then, sometimes as by Felix Boyd or Hank Dempsey. In 1953 HH served as editor of ROCKET STORIES for 1 issue (#3) under the house name Wade KAEMPFERT. In later years, HH was also for short periods in charge of the magazines Impulse (SCIENCE FANTASY), AMAZING STORIES and FANTASTIC. In 1957, from Mexico, HH sold his first story to John W. CAMPBELL Jr for ASTOUNDING SCIENCE-FICTION, thereby initiating a long and close relationship with both editor and magazine. This was his first tale featuring the interstellar-criminal-turned-law-enforcer Slippery Jim DiGriz, the Stainless Steel Rat, HERO of a set of fast-moving adventures with a broad leavening of HUMOUR: The Stainless Steel Rat (fixup 1961 US), The Stainless Steel Rat's Revenge (1970 US) and The Stainless Steel Rat Saves the World (1972 US) - all assembled as The Adventures of the Stainless Steel Rat (omni 1977) - plus The Stainless Steel Rat Wants You! (1979 US), The Stainless Steel Rat for President (1982 US), A Stainless Steel Rat is Born (1985 US) and The Stainless Steel Rat Gets Drafted (1987 UK). (HH did the jacket illustrations for the UK hardcover editions of the second and third books.) HH always remained a stout defender of Campbell, even though as editor and critic his attitude often seemed diametrically opposed to Campbell's increasingly stiff-necked social and political views. He edited Campbell's Collected Editorials from Analog (coll 1966), was filmed at a working lunch with Campbell and Gordon R. DICKSON, a session which resulted in the Harrison-Dickson collaborative novel The Lifeship (1976 US; vt Lifeboat 1978 UK), and after Campbell's death edited a memorial anthology, Astounding (anth 1973; vt The John W. Campbell Memorial Anthology 1974 UK). HH's first published novel appeared a year before The Stainless Steel Rat: Deathworld (1960 US; vt Deathworld 1 1973 UK). Its highly kinetic description of the COLONIZATION of a planet crammed with hostile life established him as a vigorous writer of intelligent action adventures. Further volumes in the Deathworld series are Deathworld 2 (1964 US; vt The Ethical Engineer 1964 UK) and Deathworld 3 (1968 US), all three being assembled as The Deathworld Trilogy (omni 1974 US); "The Mothballed Spaceship" (1973) was an associated short story. The third series begun by HH in his early years (though the second volume was not to appear for three decades) was the Bill, the Galactic Hero sequence, starting with Bill, the Galactic Hero (1965 US), a sharp extended lampoon of aspects of stories by Robert A. HEINLEIN, Isaac ASIMOV and even HH himself. The later volumes of the series declined, unfortunately, into undirected slapstick: Bill, the Galactic Hero: The

Planet of the Robot Slaves (1989 US; vt Bill, the Galactic Hero on the Planet of Robot Slaves 1989 UK), Bill, the Galactic Hero on the Planet of Bottled Brains (1990 US) with Robert SHECKLEY, Bill, the Galactic Hero on the Planet of Tasteless Pleasure (1991) with David F. BISCHOFF, Bill, the Galactic Hero on the Planet of the Zombie Vampires (1991) with Jack C. HALDEMAN II, and Bill, the Galactic Hero on the Planet of Ten Thousand Bars (1991; vt Bill, the Galactic Hero on the Planet of the Hippies from Hell 1992 UK) with Bischoff. Most of HH's singletons are also of interest. They include: a group of stories exploring the ROBOT theme, War with the Robots (coll 1962 US); the examination of MATTER TRANSMISSION in One Step From Earth (coll 1970 US); a parody of E.E. SMITH in Star Smashers of the Galaxy Rangers (1973 US); Captive Universe (1969 US), an unusual GENERATION-STARSHIP story using a background of Aztec culture (CONCEPTUAL BREAKTHROUGH; POCKET UNIVERSE); Tunnel through the Deeps (1972 US; vt A Transatlantic Tunnel, Hurrah! 1972 UK), a PARALLEL-WORLD novel in which the American Revolution failed and the British Empire still flourishes; and Skyfall (1976 UK), a fairly conventional DISASTER novel. Some, however, like Invasion: Earth (1982 US), seem to parody nothing but their author's own attempts to parody bad SPACE OPERA. In contrast, MAKE ROOM! MAKE ROOM! (1966 US) is a serious - indeed, impassioned - novel of OVERPOPULATION, gravely told and well formed. It formed the basis of the film SOYLENT GREEN (1973), though much of its substance was lost in transition; the film nevertheless won the 1973 NEBULA for Best Dramatic Presentation. Later series of interest include the To the Stars sequence - Homeworld (1980 US), Wheelworld (1981 US) and Starworld (1981 US), all three being assembled as To the Stars (omni 1981) - which combine muscular sf-adventure plotting with sharp narrative analyses of UK and US life. Far more important, however, is the Eden series - West of Eden (1984 US), Winter in Eden (1986 US) and Return to Eden (1988 US) - an ambitiously conceived ALTERNATE-WORLD sequence based on the assumption that the dinosaurs did not suffer extinction and, in the due course of time, have evolved into saurians skilled at biotechnology. Their encounter with a savage humanity, and the irreconcilable differences between two intelligent species warring for Lebensraum, is intrinsically interesting, tightly and informatively told, and dramatically gripping as the slowly approaching Ice Age adds intensity to the strife and the sense of peril. Along with his earliest sf adventures and Make Room! Make Room!, the Eden books are by a considerable margin HH's best work. For many years HH's close professional association with Campbell was balanced by his even closer personal and professional association with Brian W. ALDISS, a figure dauntingly averse to the Campbellian vision. Together they founded the critical magazine SF Horizons, whose two issues served as a litmus test for sf criticism; they edited an annual Best SF anthology (see listing below); they collaborated on other anthologies, such as Nebula Award Stories Two (anth 1967 US), All About Venus (anth 1968 US; exp vt) Farewell, Fantastic Venus! A History of the Planet Venus in Fact and Fiction (anth 1968 UK; cut vt 1968 US), The Astounding-Analog Reader, Volume One (anth 1972 US; vt in 2 vols as The Astounding-Analog Reader, Volume One 1973 UK and The Astounding-Analog Reader, Volume Two 1973 UK) and The Astounding-Analog Reader, Volume Two (anth 1973 US); and they assembled the Decade series - Decade: The 1940s (anth 1975), Decade: The

1950s (anth 1976) and Decade: The 1960s (anth 1977).HH has been hard to pin down. He has lived everywhere. He was an author of the hardest of hard-sf adventure novels while at the same time mercilessly spoofing the conventions - and politics - of that literature. He is deeply American, and deeply expatriate. He might spend the rest of his career writing bad-joke spin-offs from his own earlier work, or he might compose his masterpiece. After 40 years, there is still no knowing. [MJE/JC]Other works: Planet of the Damned (1962 US; vt Sense of Obligation 1967 UK) and its sequel, Planet of No Return (1981 US); Vendetta for the Saint * (1964 US) as Leslie CHARTERIS; Plague from Space (1965 US; vt The Jupiter Legacy 1970 US); Two Tales and 8 Tomorrows (coll 1965 UK); The Technicolor Time Machine (1967); The Man from P.I.G. (1968 US; with additional story as coll vt The Men from P.I.G. and R.O.B.O.T. 1974 UK), a juvenile; The Daleth Effect (1970 US; vt In Our Hands, the Stars 1970 UK); Prime Number (coll 1970 US); Spaceship Medic (1970 UK); Stonehenge (1972 US; exp vt Stonehenge: Where Atlantis Died 1983 US) with Leon E. STOVER; Montezuma's Revenge (1972 US) and Queen Victoria's Revenge (1974 US), linked associational novels; The California Iceberg (1975 UK); The Best of Harry Harrison (coll 1976 US; rev 1976 UK); Great Balls of Fire: A History of Sex in Science Fiction Illustration (1977 UK), nonfiction; Spacecraft in Fact and Fiction (1979) with Malcolm EDWARDS, nonfiction; Mechanismo (1978), nonfiction; Planet Story (1979 UK); The QE II is Missing (1980 UK), associational; A Rebel in Time (1983 US).As Editor: Apeman, Spaceman: Anthropological Science Fiction (anth 1968 US) with Leon E. Stover; the Author's Choice anthologies, in which authors chose their own favourites and said why, comprising Backdrop of Stars (anth 1968 UK; vt SF: Authors' Choice 1968 US), SF: Author's Choice 2 (anth 1970 US), #3 (anth 1971 US) and #4 (anth 1974 US); the Best SF annual series, all with Brian W. Aldiss, comprising Best SF: 1967 (1968 US; vt The Year's Best Science Fiction No 1 1968 UK), The Year's Best Science Fiction No 2 (anth 1969 UK; exp vt Best SF: 1968 1969 US), The Year's Best Science Fiction No 3 (anth 1970 UK; vt Best SF: 1969 1970 US), The Year's Best Science Fiction No 4 (anth 1971 UK; vt Best SF: 1970 1971 US), The Year's Best Science Fiction No 5 (anth 1972 UK; vt Best SF: 1971 1972 US), Best SF: 1972 (anth 1973 US; vt The Year's Best Science Fiction No 6 1973 UK), Best SF: 1973 (anth 1974 US; cut vt The Year's Best Science Fiction No 7 1974 UK), Best SF 1974 (anth 1975 US; cut vt The Year's Best Science Fiction No 8 1975 UK) and The Year's Best Science Fiction No 9 (anth 1976 US; vt Best SF: 1975 1976 US); Blast Off: S.F. for Boys (anth 1969 UK; rev vt Worlds of Wonder 1969 US); Four for the Future: An Anthology on the Themes of Sacrifice and Redemption (anth 1969 UK); the Nova series of original sf stories, comprising Nova 1 (anth 1970), #2 (anth 1972 US), #3 (anth 1973 US; vt The Outdated Man 1975 US) and #4 (anth dated 1974 but 1975 US); The Year 2000 (anth 1970 US); The Light Fantastic (anth 1971 US) and Ahead of Time (anth 1972 US), the latter with Theodore J. Gordon; A Science Fiction Reader (anth 1973 US) with Carol Pugner; Science Fiction Novellas (anth 1975 US) with Willis E. MCNELLY; Hell's Cartographers (anth 1975 UK) with Brian W. Aldiss; There Won't Be War (anth 1991) with Bruce MCALLISTER.About the author: Harry Harrison (last rev 1985 chap) by Gordon BENSON Jr; Harry Harrison (1990) by Leon STOVER.See also: ANTHOLOGIES; ANTHROPOLOGY; ARTS; ATLANTIS; AUTOMATION; CHILDREN'S SF; COMICS; CRIME AND PUNISHMENT;

HARRISON, HELGA (SUSAN BARBARA)

(1923-) UK writer whose sf novel, *The Catacombs* (1962), depicts with some irony a post- HOLOCAUST world in which "Crishuns", having persuaded themselves that they warrant special attention, await salvation. [JC]

HARRISON, MICHAEL

(1907-1991) UK writer in various genres, mostly not sf. He wrote an early film novelization, *The Bride of Frankenstein* * (1936) as Michael Egremont, and some of the stories assembled in *Transit of Venus* (coll 1936) are of fantasy interest. His first and most interesting sf novel, *Higher Things* (1945), is clearly influenced by H.G. WELLS. An impoverished young man, caught in the trammels of a clerical position but with dreams of higher things, finds in himself the power to levitate, which he does at crucial moments in his rather melancholy life to escape his and the world's muddles. He then makes a long (probably delusional) flight to confront the Dictator (Hitler) and to discuss with him the world's fate, a middle-period Wellsian excursion which is succeeded by a Wellsian quietus: the protagonist, haunted by PARANOIA, decides to escape the world entirely in a levitated, airtight gondola. *The Darkened Room: An Arabesque* (1951) is like *Higher Things* set in the mythical town of Rowcester; it features a cat kept artificially alive to further a blackmail scheme. *The Brain* (1953) devotes itself to a mushroom cloud which becomes sentient. [JC] Other works: *The Exploits of the Chevalier Dupin* (coll 1968 US) and *Murder in the Rue Royale* (coll 1972) are collections of mystery stories extending the canon of Edgar Allan POE's seminal detective. See also: PSI POWERS.

HARRISON, M(MICHAEL) JOHN

(1945-) UK writer and rock-climber, closely identified in the 1960s with NEW WORLDS, where he published his first sf story, "Baa Baa Blocksheep", in 1968, and for which he later wrote some of the best tales using the Jerry Cornelius template, or icon, from the series created by Michael MOORCOCK. He also wrote considerable criticism for NW, usually as Joyce Churchill, and served for some time as its literary editor. Typical work from this period was assembled in *The Machine in Shaft Ten and Other Stories* (coll 1975), which reveals its NEW-WAVE provenance in narrative discontinuities and subheads after the fashion of J.G. BALLARD. His first novel, *The Committed Men* (1971; rev 1971 US), is an impressive post-HOLOCAUST story set in a fractured England, centring physically on the ruins of the motorways, and generating a powerful sense of entropic dismantlement. His third, *The Centauri Device* (1974 US), is a significantly disgruntled SPACE OPERA, perhaps his least successful book, and one which demonstrates MJH's persistent discomfort with the escapist conventions of this sort of sf. Unsurprisingly, the doomsday device of the title duly blows up the Galaxy. As the first volume of his *Viriconium* sequence, though much simpler than later instalments, his second novel, *The Pastel City* (1971), is of greater interest. It is a FAR-FUTURE science

fantasy set on a bleak Dying Earth, whose description plays on SWORD-AND-SORCERY imagery, though nothing happens of a magical nature. Viriconium itself is both the land - conveyed with a growing capacity to portray in words the physical world - and the city at the end of time which dominates it. The second volume of the sequence, A STORM OF WINGS (1980 US), rewrites its predecessor in language whose intensity is both surreal and topographically exact, so that an orthodox tale of alien INVASION becomes a series of bleak tableaux vivants as witnessed through the insectoid perceptions of the invaders. In Viriconium (1982; vt The Floating Gods 1983 US), the final novel of the sequence, is far more abstract, rendering the fin de siècle transports of its plot in language of a fixating painterly density. The UK versions of the stories assembled as Viriconium Nights (coll 1984 US; much rev 1985 UK) - and later brought together with In Viriconium as Viriconium (omni 1988) - focus even more intensely upon the task of seeing their dying landscapes with utter exactitude, so that the inhabitants of the city present their failed artistries in terms less and less reassuring to any sense that they are able to inhabit a fantasy world; this sense of the closing of the world was intensified in The Luck in the Head (1983 Interzone text alone, as MJH; text rev as graph 1991) with Ian MILLER, which darkly re-viewed a tale from the UK collection. The reality of things seen comes, in the end, to be the only reality to which MJH will give allegiance in the sequence; all else is unearned. The central lesson to be extracted from his work - that any personal escape from the world must be earned by attending to that very world, for only when self and city and rockface are seen with true sight do we know what it is we wish to leave - is reiterated in most of the stories assembled in The Ice Monkey and Other Stories (coll 1983), some of which are sf tales of a striking and obdurate coldness, and in The Course of the Heart (1992), where a partial fulfilment of the longing enacts a stringent penalty. In Climbers (1989), an associational novel about rock-climbing, the lesson is driven home with something like ferocity. The protagonists of this book are losers and obsessives, and the land they climb is dreadful with the weight of being; in a sense, therefore, the book truly defines the end of the Viriconium sequence and the preceding sf tales, because for MJH the only difference between the lords and ladies in science fantasy and climbers clinging to a rock in the real world is that the latter know where they are. [JC] Other works: Fawcett on Rock (1987) as by Ron Fawcett, nonfiction. See also: CITIES; ENTROPY; DISASTER; NEW WRITINGS IN SF; PERCEPTION.

HARRISON AWARD WORLD SF.

HARRY AND THE HENDERSONS

(vt Bigfoot and the Hendersons UK) Film (1987). Amblin/Universal. Dir William Dear, starring John Lithgow, Melinda Dillon, Joshua Rudoy, David Suchet, Don Ameche, Kevin Peter Hall. Screenplay Dear, William E. Martin, Ezra D. Rappaport. 111 mins. Colour. This amiable, well made film is sf only in that it deals with a lost race (LOST WORLDS). Harry is a Bigfoot, an 8ft (2.4m) intelligent hairy anthropoid, a shy native of the US Northwest. He is knocked down by the car of and then temporarily adopted

by the Henderson family of Seattle. Made by Steven SPIELBERG's production company, Amblin Entertainment, HATH is effectively a variation on the theme of his E.T.: THE EXTRATERRESTRIAL (1982), in which the innocent ALIEN, healer of human hurt, pursued by the unthinking mob, is this time a father - rather than a child-figure. The occasional tartness of the film's wit compensates for the its almost excessive sweetness; this proved to be a commercial miscalculation. The novelization is Harry and the Hendersons * (1987; vt Bigfoot and the Hendersons 1987 UK) by Joyce THOMPSON. There has also been a tv sitcom based on the film. [PN]See also: APES AND CAVEMEN (IN THE MODERN WORLD).

HARRYHAUSEN, RAY

(1920-) US special-effects supervisor, long based in the UK, associated with many sf and fantasy films. As a boy his main interests were sculpture and palaeontology. The desire to see his own clay figures move on the screen, aroused by KING KONG (1933), stimulated his interest in photography and special effects. While Willis H. O'BRIEN, who had animated King Kong, was preparing to make MIGHTY JOE YOUNG (1949), RH approached him, showed sample footage of his work on 16mm, and was hired as his assistant on this film and on the subsequent abortive project El Toro Estrella, about a boy, a bull and a dinosaur. RH and O'Brien then went their separate ways, though they later teamed up briefly to work on the dinosaur sequences in the pseudo-documentary Animal World (1956). RH supervised the effects in The BEAST FROM 20,000 FATHOMS (1953), which was a success. He then formed a partnership with producer Charles H. Schneer that continued through his active career. Their first film together was IT CAME FROM BENEATH THE SEA (1955); it was followed by EARTH VS. THE FLYING SAUCERS (1956) and 20 MILLION MILES TO EARTH (1957). By then the sf film boom was in decline and they decided that their next project would be a mythic fantasy. In 1958 they made The Seventh Voyage of Sinbad, the first animation film of its type in colour. It proved a huge financial success and similar fantasies followed: The Three Worlds of Gulliver (1960), MYSTERIOUS ISLAND (1961) and Jason and the Argonauts (1963). Then there was a shift back to sf with FIRST MEN IN THE MOON (1964), ONE MILLION YEARS BC (1966) and The VALLEY OF GWANGI (1969). In the 1970s and 1980s their output fell and they returned to the format of their best-loved films, The Seventh Voyage of Sinbad and Jason and the Argonauts. Their three further films in the same vein were The Golden Voyage of Sinbad (1973), Sinbad and the Eye of the Tiger (1977) and Clash of the Titans (1981). In the latter (an adaptation of the Perseus legend) they attempted, by using distinguished actors in supporting roles, to counter criticisms that their films had become 5min dollops of monster-fighting stitched together with 15min stretches of pointless running about and bad acting. It remained a relative disappointment, not helped by the inclusion of an insufferable mechanical owl patterned on LucasFilm's R2D2 in STAR WARS (1977) - a film which, ironically, was deeply influenced by RH's earlier fantasies. The alien craft of Earth vs. the Flying Saucers and the Ymir of 20 Million Miles to Earth probably stand as RH's best animation, and Jason and the Argonauts as his best film. While his effects were very influential state-of-the-art stuff in the 1950s and 1960s, he proved reluctant to adapt to the 1980s and 1990s boom in computer-assisted

animation; Film Fantasy Scrapbook (1972; rev 1974; further rev 1981) expresses his sense of things. He has gracefully retired, now sculpting figures from his films and acting as spiritual godfather to his pupils-cum-successors, Jim Danforth, David Allen and Phil Tippett. He appears, thinly disguised, as "Roy Holdstrom" in Ray BRADBURY's *A Graveyard for Lunatics* (1990). [JB/KN]

HARSH MISTRESS

ABSOLUTE MAGNITUDE.

HART, ELLIS

[s] Harlan ELLISON.

HARTING, PIETER

(1812-1885) Dutch polymath, immensely prolific in scientific fields such as biology, medicine and geology. His one sf novel, *Anno 2065* (1865 as by Dr Dioscorides; trans anon as *Anno Domini 2071* 1871 UK), posits a liberal world 200 years hence which is at peace, has new sources of power, and is highly industrious. [JC]

HARTLEY, L(ESLIE) P(OLES)

(1895-1972) UK novelist and short-story writer known mainly for his works outside the sf field, especially for *The Go-Between* (1953) and for the trilogy comprising *The Shrimp and the Anemone* (1944), *The Sixth Heaven* (1946), which has some slight fantasy content, and *Eustace and Hilda* (1947). His ghost stories - some of the finest from this century - were variously collected in *Night Fears and Other Stories* (coll 1924), *The Killing Bottle* (coll 1932), *The Travelling Grave and Other Stories* (coll 1948 US), *The White Wand* (coll 1954), *Two for the River* (coll 1961) and *Miss Carteret Receives and Other Stories* (coll 1971); these and more were assembled in *The Complete Short Stories of L.P. Hartley* (coll 1973 in 2 vols). His sf novel, *Facial Justice* (1960), deals sourly but sensitively with personal dilemmas after humanity has re-emerged from underground after a nuclear DISASTER. Many of the precepts of the subsequent DYSTOPIA satirize the welfare state and English socialism. For women, true equality involves a literal equality of physical appearance, with poignant effects. It has been argued that, when the female protagonist unmasks the dictator responsible, showing her to be an ancient and envious hag, the author reveals a fundamental misogyny; the point is moot. [JC] See also: HISTORY OF SF; POLITICS.

HARTLIB, SAMUEL

(c1600-1660) Polish-born scientist, chemist and writer, in the UK from about 1625. SH was the author of a Royalist UTOPIA, *A Description of the Famous Kingdome of Macaria* (1641). A facsimile edition was published in 1961 in the USA. [JC]

HARTMAN, EMERSON B.

(1887-1969) US writer whose *Lunarchia: That Strange World Beneath the Moon's Crust* (1937) began a projected interplanetary sequence in the Edgar Rice BURROUGHS vein with the discovery of a colourful civilization within the Moon. No further volumes appeared. [JC] Other work: *The Giant of the Sierras* (1945), which may be a non-fiction study.

HARTRIDGE, JON

(1934-) UK writer associated, like Brian W. ALDISS, with the Oxford Mail, of which he was features editor. His sf novels, Binary Divine (1969) and Earthjacket (1970), take a dark view of Earth's crowded, DYSTOPIAN, urbanized future. [JC]

HARTWELL, DAVID G(EDDES)

(1941-) US editor, publisher and critic, with a PhD from Columbia in Comparative Medieval Literature. His first publication of genre interest is SF-I: A Selective Bibliography (1971 chap) with L.W. CURREY, both writing as Kilgore TROUT; he also assisted Currey in the latter's seminal Science Fiction and Fantasy Authors: a Bibliography of First Printings of their Fiction and Selected Nonfiction(1979). He published and edited The Little Magazine (1965-88), a literary magazine, and since 1988 has been reviews editor of The NEW YORK REVIEW OF SCIENCE FICTION , published by Dragon Press, the SMALL PRESS of which he was partner 1973-8 and is now proprietor. He edited the short-lived COSMOS SCIENCE FICTION AND FANTASY MAGAZINE 1977-8.His substantial influence in the sf world has been mainly, however, as an editor and/or advisor for various commercial sf publishers, including Signet (1971-3), Berkley/Putnam (1973-8), GREGG PRESS (1975-86) - an academic publisher of important sf reprints - Pocket Books/Simon & Schuster (1978-83), where he was responsible for their important TIMESCAPE BOOKS sf imprint, TOR BOOKS (1984-current), where he is consulting sf editor, Arbor House (1984-8) and William Morrow (1988-91). His career - a tightrope walk - testifies to the difficulties DGH has partly conquered in reconciling the conflicting demands of art and commerce, especially during his tenure with Pocket Books' Timescape programme, where he published many distinguished titles, including Gene WOLFE's Book of the New Sun tetralogy (1980-3).The anthologies DGH has edited include: The Battle of the Monsters and Other Stories (anth 1976) with L.W. CURREY, 19th-century sf; the Christmas sequence of ghost and other supernatural stories, comprising Christmas Ghosts (anth 1987) with Kathryn CRAMER, Spirits of Christmas (anth 1989) with Cramer, Christmas Stars(anth 1992), Christmas Forever (anth 1993) and Christmas Magic(anth 1994) The Dark Descent (anth 1987; vt in 3 vols , The Dark Descent #1: The Colour of Evil 1990 UK; #2: The Medusa in the Shield 1990 UK and #3: A Fabulous, Formless Darkness 1991 UK), horror stories; Masterpieces of Fantasy and Enchantment (anth 1988) and Masterpieces of Fantasy and Wonder (anth 1989), both with Cramer; The World Treasury of Science Fiction (anth 1989); Foundations of Fear: an Exploration of Horror (anth 1992), The Ascent of Wonder: The Evolution of Hard Science Fiction (anth 1994) with Cramer, which contains intriguingly contrasting definitions of HARD SF in the editors' comments and in the introduction by Gregory BENFORD; and Northern Stars: The Anthology of Canadian Science Fiction (anth 1994; exp 1985) with Glenn Grant. DGH won a World Fantasy AWARD in the Special Award/Professional category in 1988, and has 7 times been nominated for a HUGO as Best Editor. He has written a number of critical essays on sf; and his Age of Wonders: Exploring the World of Science Fiction (1984) is wide-ranging, informal and anecdotal, treating sf and FANDOM as both a literary and a sociological phenomenon. [PN]See also: PHILIP K. DICK AWARD.

HARVEY, FRANK (LAIRD)

(1913-1981) US writer whose collection of stories, *Air Force!* (coll 1959), concentrates on that branch of the armed services, but with a NEAR-FUTURE setting which includes manned satellites and the like. [JC]

HARVEY, JAMES

Gardner F. FOX.

HARVEY, M(ARY) ELAYN

(1945-) US writer whose sf novel, *Warhaven* (1987), the first volume of a projected trilogy, puts its young protagonist through a series of trials, at the end of which he has clearly prepared himself to become one of the Guardians who covertly supervise a variety of spacefaring races. Throughout, his solutions to problems tend, unusually, to dodge the use of force. [JC]

HASKIN, BYRON

(1899-1984) US film director. His film career began in 1919 when he became an assistant cameraman for Louis J. Selznick. He directed 4 films in 1927, but later worked mostly as a cinematographer; he supervised the special-effects department for Warner Bros. 1936-47. In 1947 he began directing again with *I Walk Alone*, a Hal Wallis production. In 1952 he formed a creative partnership with producer George PAL, directing several films for him. The first of these was *WAR OF THE WORLDS* (1953); it was followed by *The Naked Jungle* (1954), *CONQUEST OF SPACE* (1955) and *The POWER* (1968), the latter codirected with Pal. Other sf movies directed by BH were *FROM THE EARTH TO THE MOON* (1958) and *ROBINSON CRUSOE ON MARS* (1964). He also directed many tv episodes, including several in *The OUTER LIMITS*. BH's background in special effects meant that he never neglected them in his films, unlike many other sf film-makers of the 1950s. His work as a director was likable - as in Disney's *Treasure Island* (1950) - but uninspired: *War of the Worlds* derives impact from its spectacle, but most of his other sf films are merely competent. Probably his most interesting and personal film, on which he had a fair degree of control, was *Robinson Crusoe on Mars*. He retired in 1967. [JB]

HASSE, HENRY L.

(1913-1977) US fan and sf writer who frequently worked in collaboration with others, notably A. Fedor (with whom he published his first story, "The End of Tyme" for *Wonder Stories* in 1933), Emil PETAJA, whose pseudonym E. Theodore Pine he once shared, and Ray BRADBURY, with whom he collaborated on Bradbury's first professional story, "Pendulum" (1941). His best-known story is the novelette "He who Shrank" (1936) (*GREAT AND SMALL*). An sf novel, *The Stars Will Wait* (1968), is unremarkable. [JC]

HASSLER, DONALD M(ACKEY II)

(1937-) US academic and scholar of sf, based at Kent State University, Ohio. DMH was President of the *SCIENCE FICTION RESEARCH ASSOCIATION* 1985-6, and became managing editor of the journal *EXTRAPOLATION* with the Summer 1986 issue, co-editor with the Winter 1987 issue, and editor with the Spring 1990 issue. He was a pioneer in the early 1980s of "academic tracks" in world sf- *CONVENTION* programming. Books by DMH relating to sf are *Erasmus Darwin* (1973 chap), *The Comedian as the Letter D: Erasmus*

Darwin's Comic Materialism (1973 Netherlands), Comic Tones in Science Fiction: The Art of Compromise with Nature (1982), Hal Clement, Reader's Guide 11 (1982 chap) and Isaac Asimov, Reader's Guide 40 (1991 chap). Collections of critical essays ed DMH are Patterns of the Fantastic: Academic Programming at Chicon IV (anth 1983), Patterns of the Fantastic II (anth 1984) and, with Carl B. YOKE, Death and the Serpent: Immortality in Science Fiction and Fantasy (anth 1985). With Sue Strong Hassler (1938-), he also edited Arthur Machen ? Friendship, 1923-1947 (coll 1994). [PN]See also: CRITICAL AND HISTORICAL WORKS ABOUT SF; IMMORTALITY.

HASSLER, KENNETH W(AYNE)

(1932-) US personnel specialist and writer whose routine sf novels are The Glass Cage (1969), Destination: Terra (1970), The Dream Squad (1970), A Message from Earth (1970), Intergalac Agent (1971) and The Multiple Man (1972). [JC]

HASTINGS, GEORGE GORDON

(? -?) US writer whose sf novel, The First American King (1904), carries two protagonists - the more important being a brilliant inventor - by SUSPENDED ANIMATION to the USA of AD1975. They find it to be a RURITANIAN empire assaulted from within by Federated Nihilists, who eventually take power and establish - in singularly unstrict accordance with their name - a benevolent welfare state. Rather unusually, GGH approves, and the novel ends peacefully. [JC]

HASTINGS, HUDSON

[s] Henry KUTTNER.

HASTINGS, MILO (MILTON)

(1884-1957) US nutritionist, editor and writer, sometimes on agricultural subjects - The Dollar Hen (1909) is a nonfiction text about hens. With striking accuracy, his future- WAR sf centres on conflict between either Japan or Germany and the rest of the world. Set around 1950, "In the Clutch of the War-God: The Tale of the Orient's Invasion of the Occident" (1911 Physical Culture) effectively espouses the cause of eugenical Japan against a bigoted USA, which loses the war but becomes healthy. Set around AD2150, and far more impressive, City of Endless Night (1919 True Story as "Children of 'Kultur'"; rev 1920) describes a Germany partly defeated after centuries of warfare, but remaining impregnable underground within a great dome which shelters Berlin. Here a proto-Nazi DYSTOPIA has taken shape, with under-races genetically distinguished from one another (and from the sybaritic ruling class) by a ruthless breeding programme; thought-control is universal. The imagery of this striking novel links it with the German Expressionist cinema and films like Fritz LANG's METROPOLIS (1926), as well as to dystopian fictions like HUXLEY's BRAVE NEW WORLD (1932). [JC]See also: HISTORY OF SF; POLITICS.

HATCH, GERALD

Pseudonym of US writer Dave Foley (1910-1973), whose sf novel, The Day the Earth Froze (1963), was one of a series published by Monarch Books on similar themes, including Charles FONTENAY's The Day the Oceans Overflowed (1964) and Christopher ANVIL's The Day the Machines Stopped (1964). [JC]

HAUNTED PALACE, THE
Roger CORMAN.

HAUPTMANN, GERHART (JOHANN ROBERT)

(1862-1946) German playwright and novelist, winner of the 1912 Nobel Prize for Literature, whose greatest plays were performed before the turn of the century and whose novels were written later. Of sf interest is *Die Insel der grossen Mutter, oder Das Wunder von Ile des Dames: Eine Geschichte aus dem Utopischen Archipelagus* (1924; trans Willa and Edwin Muir as *The Island of the Great Mother* 1925 US). The subtitle - "The Miracle of the Ile des Dames: A Tale from the Utopian Archipelago" - fairly describes the complex mood of GH's *ROBINSONADE*, which portrays a matriarchal ISLAND society founded after a shipwreck, and follows the young men who, upon being exiled to another part of the Isle of Women, soon revolt, ending an ideal world. [JC] Other works: *Hanneles Himmelfahrt* (1893; trans 1894 UK) and *Die versunkene Glocke* (1896; trans C.H. Meltzer as *The Sunken Bell* 1898 UK) and *Till Eulenspiegel* (1928), fantasy plays *Atlantis* (1912; trans Adele and Thomas Seltzer 1912 US), which has nothing to do with Atlantis, but contains supernatural elements.

HAUSER'S MEMORY

Made-for-tv film (1970). Universal/NBC TV. Dir Boris Sagal, starring David McCallum, Susan Strasberg, Lilli Palmer, Robert Webber, Leslie Nielsen. Screenplay Adrian Spies, based on *Hauser's Memory* (1968) by Curt Siodmak. 100 mins. Colour. Siodmak's 1968 novel is an updated but equally absurd variation on the theme of his novel *Donovan's Brain* (1943), which was filmed three times (*DONOVAN'S BRAIN*; *The LADY AND THE MONSTER* ; *VENGEANCE*): a dead man's mind somehow exerts influence on the living. This time DNA material taken from the brain of a dead German Nazi scientist in order to preserve his scientific knowledge is injected into a young US Jewish scientist (McCallum). The conflicts created within the hero's mind by this experiment in memory-transfer have dramatic potential, mostly wasted as the film degenerates into a conventional thriller about the CIA versus the Russians. At the end, Hauser's memory now dominating the hero, a melodramatic revenge takes place. [JB]

HAWEL, RUDOLF
[r] AUSTRIA.

HAWKES, JACQUETTA

(1910-) UK archaeologist and writer, known mainly for such works outside the sf field as *The Land* (1951). She was married to J.B. PRIESTLEY. *Fables* (coll 1953; vt *A Woman as Great as the World and Other Fables* 1953 US) includes "The Unites", a long exemplary tale which combines fantasy and DYSTOPIAN sf: God sends down an investigative angel to find out why humans have grown silent. The angel reports that, although *Homo sapiens* has degenerated into a breed of hive-dwelling automata through too sedulous a striving after equality, dissidents have begun to recreate human conflict and difference. God seems pleased. *Providence Island: An Archaeological Tale* (1959) is a fairly late example of anthropological sf (ANTHROPOLOGY), in which an expedition comes across survivors from the Magdalenian culture of the late Paleolithic living within an extinct

volcano on a Pacific ISLAND. They have highly developed empathic and PSI POWERS, developed as a kind of cultural alternative to technological prowess; they use these powers to fend off US nuclear tests. A Quest for Love (1980) is a REINCARNATION fantasy. [JC]See also: LOST WORLDS.

HAWKIN, MARTIN

Working name of UK writer Martin Hawkins (? -) for his INVASION novel, When Adolph Came (1943), featuring an ALTERNATE WORLD in which the Germans conquer the UK (HITLER WINS). An underground movement soon begins to turn the tables. [JC]

HAWKINS, WARD

(1912-1990) US writer who spent most of his career producing Westerns, usually in collaboration with his elder brother, John Hawkins. In the 1980s WH wrote tv scripts and the Borg and Guss sequence of humorous sf adventures - Red Flame Burning (1985), Sword of Fire (1985), Blaze of Wrath (1986) and Torch of Fear (1987) - starring Harry Borg and his sidekick Guss the lizard-man in an alternate-universe (ALTERNATE WORLDS) Galaxy. [JC]

HAWKWOOD, ALLAN H. BEDFORD-JONES.

HAWTHORNE, NATHANIEL

(1804-1864) US writer known primarily for his work outside the sf field. One of the formative figures in US literature, NH was intrigued throughout his writing career by themes we would now call sf. His extensive notebooks outline dozens of projected sf works, some of which he was able to complete, while others he worked on unsuccessfully until his death. A long line of doctors, chemists, botanists, mesmerists, physicists and inventors parade their marvellously creative and destructive skills through his fiction, even the most apparently fantastic events being given naturalistic explanations. Thus much of his writing at least borders on sf. In three of his four major romances, sf elements run as a main undercurrent. A secret medical experiment controls the plot of The Scarlet Letter (1850); the main action of The House of the Seven Gables (1851) derives from hypnotism (PSYCHOLOGY) and a strange inherited disease; all the major events in The Blithedale Romance (1852) flow from a major topic of 19th-century sf, mesmeric control. A SCIENTIST's quest for the elixir of life is the subject of Dr Heidegger's Experiment (1837 Salem Gazette; 1883 chap) and two unfinished, posthumously published romances, all possibly differing draft attempts at the same basic story: the title story of The Dolliver Romance and Other Pieces (1864 The Atlantic Monthly as "The Dolliver Romance"; coll 1876), and Septimius: A Romance (1872 UK; vt Septimius Felton, or The Elixir of Life 1872 US). Some stories, such as "The Man from Adamant" (1837), come directly from pseudo-scientific curiosities NH encountered as editor of The American Magazine of Useful and Entertaining Knowledge. NH's short work of interest appeared in Twice-Told Tales (coll 1837; exp in 2 vols 1842), Mosses from an Old Manse (coll 1846) and The Snow-Image and Other Twice-Told Tales (coll 1852). Three of his early stories had profound influences on subsequent 19th-century sf, and all three still stand as masterpieces of the genre.

In "The Birthmark" (1843) a lone genius who has invented numerous scientific marvels commits the fatal error of attempting to remove the one blemish which keeps his wife from being perfect, a tiny birthmark which makes this lovely woman disgusting to him. "The Artist of the Beautiful" (1844) describes the creation of an automaton butterfly which, for another lone inventive genius, substitutes for love, sex and biological procreation. In "Rappaccini's Daughter" (1844) a scientist attempts to make his only child impervious to the evils of the world by filling her with secret poisons, but is foiled by his arch-rival. Part of the enduring power of these three tales comes from their deep penetration into the psychology of a group of men emerging in NH's society, the technical-scientific elite. NH's sf extends the achievements of Mary SHELLEY's Frankenstein (1818) into the dawn of the age of modern science and the literature that is part of that age's culture, modern sf.

[HBF]Other works: Doctor Grimshawe's Secret (1883); The Ancestral Footstep (1883); The Ghost of Doctor Harris (1900 chap); The Dolliver Romance, and Kindred Tales (coll 1900); The Complete Short Stories of Nathaniel Hawthorne (coll 1959), assembling 72 tales; The Snow Image and Uncollected Tales (coll 1974) ed E.F. BLEILER; Young Goodman Brown and Other Short Stories (coll 1992). See also: ARTS; BIOLOGY; CLICHES; GAMES AND TOYS; HISTORY OF SF; HORROR IN SF; MACHINES; MEDICINE.

HAWTON, HECTOR

(1901-) UK writer and Humanist, at one time managing director of the Rationalist Press Association. The Col. Max Masterson sequence - Tower of Darkness (1950), Blue-Eyed Buddha (1951), Black Emperor (1952) and The Lost Valley (1953) - verges on sf, the final volume being a lost-race (LOST WORLDS) tale. Operation Superman (1951) is an old-fashioned yarn about a man whose INTELLIGENCE has been much heightened by shock-treatment experiments in a Nazi concentration camp. As John Sylvester, he wrote two sf novels for adolescents, Master of the World (1949) and The Flying Saucer (1952). As John Sylvester, he wrote two sf novels for adolescents, Master of the World (1949) and The Flying Saucer (1952). [JC/PN]

HAY, GEORGE

Working name of UK writer, editor and sf enthusiast Oswyn Robert Tregonwell Hay (1922-), who began publishing sf in the early 1950s with Flight of the "Hesper" (1951), Man, Woman and Android (1951), This Planet For Sale (1952) and, as by King LANG, Terra! (1953). Turning to editing, he produced Hell Hath Fury (anth 1963), a collection of stories from UNKNOWN; The Disappearing Future (anth 1970); Stopwatch (anth 1974), an original anthology with stories by John BRUNNER, Ursula K. LE GUIN, Christopher PRIEST, A.E. VAN VOGT and others; The Edward De Bono Science Fiction Collection (anth 1976), a selection of stories chosen to illustrate De Bono's theories of "lateral thinking"; The Necronomicon (anth 1978), a hoax assemblage of texts, dominated by Colin WILSON, arguing that a certain manuscript was passed obscurely from the Renaissance alchemist John Dee on down to H.P. LOVECRAFT, with The R'lyeh Text (anth 1993) projected to continue in the same vein; and the Pulsar sequence of original anthologies, Pulsar 1 (anth 1978) and Pulsar 2 (anth 1979), with stories from Robert HOLDSTOCK and Ian WATSON as well as older

figures like van Vogt. The first volume of a long-meditated collection, *The John W. Campbell Letters, Volume One* (coll 1986 US) ed Perry A. CHAPDELAIN, Tony Chapdelaine and GH, was welcomed for the light it shed on numerous moments of sf history; a second volume is projected (John W. CAMPBELL Jr). From the end of the 1960s, GH worked to establish some formal organization to promote sf in the UK, and was instrumental in the establishment of the SCIENCE FICTION FOUNDATION, espousing in that role his continuing sense that sf provides an armamentarium of tools for coping with the future. [MJE/JC]

HAY, JACOB

(1920-1976) US writer whose sf novel, *Autopsy for a Cosmonaut* (1969; vt *Death of a Cosmonaut* 1970 UK), with John M. KESHISHIAN, describes a NEAR-FUTURE space crisis in which NASA attempts a space rendezvous with a Soviet satellite suspected of harbouring a nuclear warhead. [JC]

HAY, JOHN

Working name of Australian writer and farmer John Warwick Dalrymple-Hay (1928-). In his sf novel, *The Invasion* (1968 UK), a NEAR-FUTURE war begins after a US test missile devastates China, whose retaliation includes the waging of atomic WAR on the coastal cities of Australia. Inland survivors band together to resist the invaders. [JC]

HAY, W(ILLIAM) DELISLE

(? -?) UK writer and Fellow of the Royal Geographical Society, known for his writings on New Zealand matters. His first sf novel, *The Doom of the Great City, Being the Narrative of a Survivor*, written A.D. 1942 (1880), retains interest for the vividness with which it depicts the collapse of London through the onslaught of a poisonous fog (POLLUTION), though the piety of the reportage is vicious. *Three Hundred Years Hence, or A Voice from Posterity* (1881), which is more substantial (but even less pleasant), is a future HISTORY told as a series of smug lectures delivered in AD2180, long after the White races have committed genocide on all Blacks and Orientals, and created a technological and political paradise on Earth. [JC]

HAYES, FREDERICK WILLIAM

(1848-1918) UK painter, playwright and writer whose sf novel, *The Great Revolution of 1905, or The Story of the Phalanx* (1893), describes from a 1930s perspective the successful efforts of the socialist middle-class "Phalanx" to take over the UK. [JC]

HAYNES, JOHN ROBERT

Philip WILDING.

HAYWARD, WILLIAM STEPHENS

(? -?) UK writer, prolific author of adventure novels for three decades after about 1860, whose sf novel, *The Cloud King, or Up in the Air and Down in the Sea* (1865), features a balloon trip to an African LOST WORLD in which low gravity seems to help keep the natives from ageing. [JC]See also: BOYS' PAPERS.

HAYWOOD, ELIZA (FOWLER)

(?1693-1756) UK actress, publisher and most prolific female writer of her

time. Much of her work was scandalous, containing thinly veiled characterizations of notable contemporaries. The Adventures of Eovaai, Princess of Ijavea: A Pre-Adamitical History (1736; vt The Unfortunate Princess 1741) is an allegorical political SATIRE set before the destruction of Earth's second moon and featuring, among many accounts of sorcery, the visitation by mechanical means of an extraterrestrial (this was several years before the appearance of VOLTAIRE's Micromegas [1751]). EH also wrote Memoirs of a Certain Island Adjacent to the Kingdom of Utopia (2 vols 1725-6), an anonymously published allegorical UTOPIA built around a series of sexual scandals, and The Invisible Spy (1755) as by "Explorabilis", in which an INVISIBILITY belt is used to eavesdrop on society gossip. The anonymous satirical LOST-WORLD novel Memoirs of the Court of Lilliput (1727) was (perhaps wrongly) attributed to her by Alexander Pope in 1729. [JE]About the author: The Life and Romances of Mrs Eliza Haywood (1915) by G.F. Whicker.

HAZEL, PAUL

(1944-) US writer whose Finnbranch Trilogy makes use of some sf devices, though primarily a Celtic fantasy about a hero - and underworld god - named Finn, told in a dense, difficult style which nevertheless has very considerable power. The first 2 vols, Yearwood (1980) and Undersea (1982), are moderately orthodox, though recounted with unconventional intensity, but the third, Winterking (1985), is set in an ALTERNATE-WORLD version of a contemporary USA riven by the numinous presence of gods and threatened by terminal transformation; in this respect the book resembles John CROWLEY's Little, Big (1981). All 3 vols have been assembled as The Finnbranch (omni 1986 UK). The Wealdwife's Tale (1993) is fantasy. [JC]See also: GODS AND DEMONS.

HAZLITT, HENRY

(1894-1993) US journalist and author in whose sf novel, The Great Idea (1951; vt Time Will Run Back 1952 UK), the communist Wonworld society of the future is transformed back into a free-market capitalist society, the agent of change being the dictator's son. The communism of this society is more Soviet than Marxist. [JC]See also: DYSTOPIAS; ECONOMICS.

HAZZARD, WILTON

[s] Margaret ST CLAIR.

HEADLINE PUBLICATIONS

SUPER-SCIENCE FICTION.

HEAL, PENELOPE

[r] M.H. ZOOL.

HEALY, RAYMOND J(OHN)

(1907-?1969) US editor who, in collaboration with J. Francis MCCOMAS, compiled the 35-story, 1000pp Adventures in Time and Space (anth 1946; cut vt Selections from Adventures in Time and Space 1954; recut vt More Adventures in Time and Space 1955; text restored, vt Famous Science-Fiction Stories 1957), which remains a definitive anthology of magazine sf up to 1945 and is credited with considerable influence in helping to give GENRE SF literary respectability. RJH later pioneered the

original sf ANTHOLOGY with New Tales of Space and Time (anth 1951) and 9 Tales of Space and Time (anth 1954), which included notable stories by such writers as Isaac ASIMOV, Anthony BOUCHER and Ray BRADBURY. [MJE/JC]See also: ASTOUNDING SCIENCE-FICTION; GOLDEN AGE OF SF.

HEARD, GERALD

Working name of UK author and speculative journalist H(enry) F(itzgerald) Heard (1889-1971), which he used for both fiction and nonfiction in the UK; in the USA, where he lived after 1937, he wrote his fiction as H.F. Heard. He is perhaps best remembered for his association with Aldous HUXLEY in investigations of the Vedanta cult and for such speculative studies as *The Ascent of Humanity* (1929) and *The Third Morality* (1937). His UFO popularization *The Riddle of the Flying Saucers: Is Another World Watching?* (1950; rev 1953), was well received, although time has passed it by. Some of his detective and horror fictions featuring Mr Mycroft-A Taste for Honey (1941; vt A Taste for Murder 1955), Reply Paid (1942) and The Notched Hairpin (1949) - are borderline-sf pastiches of Arthur Conan DOYLE's Sherlock Holmes stories; *Murder by Reflection* (1942) features a killing done by radiation poisoning. The title story of *The Great Fog and Other Weird Tales* (coll 1944; vt *The Great Fog: Weird Tales of Terror and Detection* 1946; with 2 stories added and 1 dropped, rev under first title 1947 UK) is a DISASTER tale, the mould-derived Great Fog destroying all civilization. In the title story of *The Lost Cavern* (coll 1948) a man is held captive by intelligent bats. Set in the 19th century, *The Black Fox: A Novel of the 'Seventies* (1950 UK) is a supernatural tale, the fox being Anubis. *Doppelgangers: An Episode of the Fourth, the Psychological, Revolution, 1997* (1947), which is sf, rather laboriously sets up a conflict among three factions, each of whose philosophies is in didactic opposition to the others'. *Gabriel and the Creatures* (1952; vt *Wishing Well* 1953 UK) recasts some of GH's evolutionary speculation in sf form for children. [JC]See also: DYSTOPIAS; ECOLOGY; EVOLUTION; The MAGAZINE OF FANTASY AND SCIENCE FICTION .

HEARD, H.F.

[r] Gerald HEARD.

HEARTBEEPS

Film (1981). Universal. Dir Allan Arkush, starring Bernadette Peters, Andy Kaufman, Randy Quaid. Screenplay John Hill. 79 mins. Colour. Obviously disliked by its distributors, who trimmed it by 10 minutes before release (not enough action) and then allowed it to sink almost without trace, this film is a mildly amusing, perhaps over-cute, extremely silly comedy about two domestic ROBOTS (male and female) who escape from the repair shop and fall in love. It oscillates between gentle SATIRE and over-the-top sentimentality. The robots (Peters and Kaufman in all-over plastic) are well realized. [PN]

HEATH, PETER

Pseudonym of US writer Peter Fine (1938-), whose novels *The Mind Brothers* (1967), *Assassins from Tomorrow* (1967) and *Men who Die Twice* (1968) comprise the routine thriller-like *Mind Brothers* sf series. [JC]

HEATH, ROYSTON

George C. WALLIS.

HEAVY METAL

Glossy BEDSHEET-size US colour COMIC-strip magazine inspired by the French magazine METAL HURLANT and reprinting English-language versions of mainly sf and fantasy material from this and other French, Italian and Spanish sources alongside similar matter by select US contributors. Published monthly Apr 1977-Dec 1985, quarterly from the Winter (i.e., January) 1986 issue and then bimonthly from Mar 1989, HM has built a reputation for high quality in both presentation and content; in an editorial during 1985 it claimed a readership of over 2 million. Monthly issues carried serialized material in episodes of varying length, causing an often uncomfortable segmentation of some stories; the change to quarterly publication introduced a policy of presenting only complete stories and full-length GRAPHIC NOVELS. HM's list of contributors reads like a roster of the world's best artists and writers of comic-strip sf, and the following is only a selection: Enki BILAL, Vaughn BODE, Caza, Howard V. CHAYKIN, Richard CORBEN, Guido Crepax, Philippe DRUILLET, Fernando Fernandez, Juan Gimenez, Jean GIRAUD (Moebius), Jeff Jones, Rod Kierkegaard, Tanino Liberatore, Milo Manara, Georges Pichard, Jose Ribera, Aleuteri Serpieri, Jacques Tardi, Daniel Torres and Berni Wrightson. In addition to the regular issues there have been several "Specials", including Son of Heavy Metal (1983), Heavy Metal's Even Heavier Metal (1984), Bride of Heavy Metal (1986) and Best of Heavy Metal (1986). HM has also published a line of graphic novels, most of which previously appeared as serials in the magazine. The animated film Heavy Metal (1981) dir Gerald Potterton displayed animated improvisations on themes and characters featured in HM. A live-action sequel, Heavy Metal's Burning Chrome, was planned but never realized. [RT]

HECHT, BEN

(1894-1964) US journalist, novelist, playwright, film scriptwriter and publisher, associated with Bohemian literary circles before becoming prominent in Hollywood night-life in the early 1930s. His writings are particularly notable for their cynicism, iconoclasm and irony. Many of his short stories border on SCIENCE FANTASY, most vividly "The Adventures of Professor Emmett" (in A Book of Miracles coll 1939) (HIVE-MINDS); some were influenced by the works of Charles FORT. BH is best known in the sf field for Fantazius Mallare (1922) and its sequel The Kingdom of Evil (1924), an erotic and supposedly decadent account of a descent into madness; the first volume was successfully prosecuted for obscenity on the grounds of its illustrations (by Wallace Smith). [JE]Other works: Eleven Selected Great Stories (coll 1943); Miracle in the Rain (1943); The Collected Stories of Ben Hecht (coll 1945).

HECHT, FRIEDRICH

[r] AUSTRIA.

HEINBERG, AAGE

[r] DENMARK.

HEINE, IRVING

Dennis HUGHES.

HEINE, WILLIAM C(OLBOURNE)

(1919-) Canadian writer in whose NEAR-FUTURE *The Last Canadian* (1974; vt *Death Wind* 1976 US; vt *The Last American* 1986 Canada) a plague survivor flees northwards into ice and snow. [JC]

HEINLEIN, ROBERT A(NSON)

(1907-1988) US writer, educated at the University of Missouri and the US Naval Academy, Annapolis. After serving as a naval officer for five years, he retired due to ill-health in 1934, studied physics at UCLA for a time, then took a variety of jobs before beginning to publish sf in 1939 with "Lifeline" for ASF, a magazine whose GOLDEN AGE he would profoundly shape, just as he rewrote US sf as a whole in his own image. RAH may have been the all-time most important writer of GENRE SF, though not its finest sf writer in strictly literary terms; his pre-eminence from 1940 to 1960 was both earned and unassailable. For half a century he was the father - loved, resisted, emulated - of the dominant US form of the genre. He came to the role naturally. Unlike most of John W. CAMPBELL Jr's pre-WWII recruits to ASF, he entered the field as a mature man, already in his 30s, with one genuine career (the military) honourably behind him. He was smart, aggressive, collegial, competent and highly inventive. And he worked fast. By 1942 - when he stopped writing to do his WWII service as an engineer at the Naval Air Experimental Station, Philadelphia - he had already published almost 30 stories, including three novels which would only later be released in book form. Moreover, it had soon been made clear that those stories published under his own name - like "Requiem" (1940), "The Roads Must Roll" (1940), "Blowups Happen" (1940) and the short novel "If This Goes On . . ." (1940; rev 1953) - fitted into a loose Future History, the schema for which Campbell published in ASF in 1941. As a device for tying together otherwise disparate stories, and for establishing a privileged (and loyal) group of readers familiar with the overall structure into which individual units were magically inserted, RAH's outline of the future was an extraordinarily acute idea. It was imitated by many other writers (with considerable success by Poul ANDERSON and Larry NIVEN, to name but two), but for many years only RAH's and perhaps Isaac ASIMOV's similar scheme - by priority, and by claiming imaginative copyright on the imagined future - were able to generate a sense of genuine CONCEPTUAL BREAKTHROUGH. RAH himself largely abandoned his Future History after 1950 (if the RECURSIVE novels of his last years are discounted for the moment); all the short stories in the sequence were soon assembled in book form as *The Man who Sold the Moon* (coll 1950; with 2 stories cut 1951), *The Green Hills of Earth* (coll 1951) and *Revolt in 2100* (coll 1953). Two early novels also belonged to the series: *Methuselah's Children* (1941 ASF; rev 1958), which concerns an extended family of near-immortals, and *Orphans of the Sky* (fixup 1963 UK) - assembling *Universe* (1941 ASF; 1951 chap) and "Common Sense" (1941 ASF) - which contains an innovative presentation of the GENERATION STARSHIP concept. With *Methuselah's Children*, the three collections were republished - "Let There Be Light" (1950) being omitted and "Searchlight" (1962) and "The Menace from Earth" (1957) added - in *THE PAST THROUGH TOMORROW* (omni 1967; with *Methuselah's Children* omitted, cut 1977 UK). Not

all of RAH's early writing consisted of Future History stories, although most of his non-series work was initially published under the pseudonyms Anson MacDonald, Lyle Monroe, John Riverside and Caleb Saunders, including the novels *Sixth Column* (1941 ASF as MacDonald; 1949 as RAH; vt *The Day After Tomorrow* 1951) and *BEYOND THIS HORIZON* (1942 ASF as MacDonald; 1948 as RAH). In *Sixth Column* an Asiatic *INVASION* of the USA is defeated by a resistance - disguised as a *RELIGION* - which uses superscientific gadgets to accomplish "miracles". The original idea came from Campbell, who had incorporated it in the then unpublished novella "All" (in Campbell's *The Space Beyond* [coll 1976]). *BEYOND THIS HORIZON* describes a future society of material plenty where people spend their time seeking the meaning of life (*GENETIC ENGINEERING*). Some of RAH's best stories belong to this period: "And He Built a Crooked House" (1941), about an architect who inadvertently builds into another dimension; "By His Bootstraps" (1941 as by MacDonald), a superb *TIME-PARADOX* fantasia; and "They" (1941), a fantasy about solipsism. "Waldo" (1942 as by MacDonald), about a crippled inventor who lives in a satellite, gave rise to a significant item of *TERMINOLOGY*, the real-life equivalents of the protagonist's remote-control lifting devices subsequently being known as *WALDOES*. These stories, and the later non-series stories, are collected in various volumes: *Waldo and Magic, Inc.* (coll 1950; vt *Waldo: Genius in Orbit* 1958), *Assignment in Eternity* (coll 1953; in 2 vols, vt *Assignment in Eternity* 1960 UK and *Lost Legacy* 1960 UK), *The Menace from Earth* (coll 1959), *The Unpleasant Profession of Jonathan Hoag* (coll 1959; vt 6 X H 1961), *The Worlds of Robert A. Heinlein* (coll 1966) and *Requiem: New Collected Works* (coll 1992) ed Eric KOTANI. In a style which exuded assurance and savvy, RAH's early writing blended slang, folk aphorism, technical jargon, clever understatement, apparent casualness, a concentration on people rather than gadgets, and a sense that the world described was real; it was a kind of writing able to incorporate the great mass of necessary sf data necessary without recourse to the long descriptive passages and deadening explanations common to earlier sf, so that his stories spoke with a smoothness and authority which came to seem the very tone of things to come. His characters were competent men of action, equally at home with their fists and a slide-rule (*EDISONADE*) and actively involved in the processes and procedures (political, legal, military, industrial, etc.) which make the world turn. Described in tales whose apparent openness concealed very considerable narrative craft, these characters seemed genuinely to inhabit the worlds of tomorrow. By the end of his first three years of writing, RAH had domesticated the future. In the years 1943-6 RAH published no fiction, but in 1947 he expanded his career - and the potential reach of genre sf as a marketable literature - in two new directions: he sold a number of short stories to the *Saturday Evening Post* and other "slick" magazines; and he published - with Scribner's, a highly respectable mainstream firm - the first US juvenile sf novel to reflect the new levels of characterization, style and scientific plausibility now expected in the field. *Rocket Ship Galileo* (1947) is not an outstanding work (its young heroes confront and defeat a gaggle of conspiring Nazis on the Moon) but it was the first in a series that represents the most important contribution any single writer has made to *CHILDRENS' SF*. (It also formed the basis of a film, *DESTINATION MOON* [1950], scripted by RAH.

) Space Cadet (1948), the second in the series, renders RAH's own experiences at Annapolis in sf terms. With the third, Red Planet: A Colonial Boy on Mars (1949; text restored 1989), which recounts the adventures of two young colonists and their Martian "pet", RAH came fully into his own as a writer of sf for teenagers. A strong narrative line, carefully worked-out technical detail, realistic characters and brisk dialogue are the leading virtues of this and most of his later juveniles, which include Farmer in the Sky (1950), Between Planets (1951), THE ROLLING STONES (1952; vt Space Family Stone 1969 UK), Starman Jones (1953), The Star Beast (1954), Tunnel in the Sky (1955), Time for the Stars (1956), CITIZEN OF THE GALAXY (1957) and Have Space Suit - Will Travel (1958). The last three of these, along with Starman Jones and The Star Beast, rank among the very best juvenile sf ever written; their compulsive narrative drive, their shapeliness and their relative freedom from the didactic rancour RAH was beginning to show when addressing adults in the later 1950s all make these books arguably his finest works. After 1950 RAH wrote very little short fiction - the most notable piece is the time-paradox tale "All You Zombies" (1959) - concentrating for some years on the highly successful stream of juveniles, although never abandoning the adult novel. The Puppet Masters (1951; text restored 1989) is an effective if rather hysterical INVASION story, and a prime example of PARANOIA in 1950s sf. Double Star (1956), about a failed actor who impersonates a galactic politician (RURITANIA), won a HUGO, and is probably his best adult novel of the 1950s, although the mellow and charming The Door into Summer (1957), a TIME-TRAVEL story, is also much admired; all three books were assembled as A Heinlein Trio (omni 1980). His next novel, however, was something else entirely. STARSHIP TROOPERS (1959), originally written as a juvenile but rejected by Scribner's because of its violence, is the first title in which RAH expressed his opinions with unfettered vigour. A tale of interstellar WAR, it won a 1960 Hugo but also gained RAH the reputation of being a militarist, even a "fascist". The plot as usual confers an earned adulthood upon its young protagonist, but in this case by transforming him from a pacifist into a professional soldier. This transformation, in itself dubious, is rendered exceedingly unpleasant (for those who might demur from its implications) by the hectoring didacticism of RAH's presentation of his case. Father-figures, always important in his fiction, tended from this point on to utter unstoppable monologues in their author's voice, and dialogue and action become traps in which any opposing versions of reality were hamstrung by the author's aggrieved partiality. But this, for good and for ill, was the fully unleashed Heinlein. His next novel, STRANGER IN A STRANGE LAND (1961; text restored 1990), a stronger work which won him another Hugo, is even more radical. Valentine Michael Smith, of human stock but raised on Mars, returns to Earth armed with his innocence and the PSI POWERS bequeathed to him by the Martians. After meeting Jubal Harshaw and being tutored by this ultimate surrogate-father and know-all voicebox for RAH himself, Valentine begins his transformation into a MESSIAH-figure, demonstrates the nature of grokking - a term which RAH created for this book, and which can be defined as gaining, more or less instantly, deep spiritual understanding - and eventually "discorporates", a form of dying which is painless and which can be freely imposed upon

others. This costless disincorporation of human beings marks the book as a FANTASY, and not, perhaps, as one very markedly adult; and it was unfortunate for Sharon Tate that its dreamlike smoothness (a smoothness even more winningly evident in the much longer restored version) could, if his claims are to be credited, be translated into this-worldly action by the sociopathic murderer Charles Manson. However, among those capable of understanding the nature of a fiction, it has proved to be RAH's most popular novel, in the later 1960s becoming a cult-book among students (who were drawn to it, presumably, by its iconoclasm and by RAH's apparent espousal of free love and mysticism), and remains by far the best of the books he wrote in his late manner. There followed 2 minor works, *Podkayne of Mars: Her Life and Times* (1963), an inferior juvenile which proved to be his last, and *Glory Road* (1963), a largely unsuccessful attempt at *SWORD AND SORCERY*. *Farnham's Freehold* (1964), another long and opinionated novel of ideas, invokes rather unpleasantly a Black despotism in the USA of the FAR FUTURE (see also *POLITICS; SURVIVALIST FICTION*), and begins to fully articulate a theme that obsessed the late RAH: the notion of the family as utterly central. From this time onward, hugely extended father-dominated families, sustained by incest and enlarged by mating patterns whose complex ramifications required an increasing use of time travel and *ALTERNATE WORLDS*, would tend to generate the plots of his novels. Before he plunged fully into this final phase, however, RAH published *THE MOON IS A HARSH MISTRESS* (1966), which won a 1967 Hugo and marked a partial return to his best form. About a revolution among Moon-colonists - many historical parallels being made evident with the War of Independence - it is of value partly because it shows the nature of RAH's political views very clearly. Rather than being a fascist, he was a right-wing anarchist, or "libertarian" (*LIBERTARIANISM*), much influenced by *SOCIAL DARWINISM*. But the fact that RAH's politics are a prime concern in discussions of his later novels points to the sad decline in the quality of dramatization in his sf. As Alexei PANSHIN, his most astute earlier critic, pointed out, RAH once dealt in "facts" but latterly he dealt only in "opinions-as-facts". And as these opinions-as-facts were uttered in RAH's voice by domineering monologuists, his last novels increasingly conveyed a sense of flouncing solitude, and were frequently described - with justice - as exercises in solipsism; for, no matter how many characters filled the foreground of the tale, his casts ultimately proved either cruelly disposable or members of the one enormous intertwined family whose begetter bore the countenance, and spied the tracts, of the author. *I Will Fear No Evil* (1970) is an interminable novel about a rich centenarian who has his mind transferred to the body of his young secretary; it brought into the open the espousal of free sex (and inevitable babies begat upon wisecracking women who long to become gravid) first evident in *STRANGER IN A STRANGE LAND*. *Time Enough for Love, or The Lives of Lazarus Long* (1973), a late coda to the Future History series, was perhaps the most important of the late books in that it established the immortal Long, a central character in *Methuselah's Children*, as RAH's final - and most enduring - alter ego. Other novels which revolve around Lazarus Long include "The Number of the Beast" (1980 UK), *The Cat who Walks through Walls* (1985) and *To Sail Beyond the Sunset* (1987). *FRIDAY* (1982) and *Job: A Comedy of Justice* (1984) similarly gathered other works

from RAH's prime into the late fold. The final effect of these novels - in direct contrast to their joke-saturated telling - was one of embitterment. By devaluing everything in the Universe except for the one polymorphic family, RAH effectively repudiated the genre whose mature tone he had himself almost singlehandedly established, and the USA whose complex populism he had so vividly expressed. In the end, the father of sf abandoned his children. RAH was guest of honour at three World SF Conventions, in 1941, 1961 and 1976. His works remained constantly in print. He has repeatedly been voted "best all-time author" in readers' polls such as those held by LOCUS in 1973 and 1977, and in 1975 he was recipient of the First Grand Master NEBULA. His death in 1988 was deeply felt. [DP/JC]Other works: *The Discovery of the Future* . . . Speech Delivered by Guest of Honor at 3d World Science Fiction Convention (1941 chap); *Tomorrow, the Stars* (anth 1951); *The Robert Heinlein Omnibus* (omni 1958 UK), containing *The Man who Sold the Moon* and *The Green Hills of Earth*, which is not to be confused with *A Robert Heinlein Omnibus* (omni 1966 UK), containing *BEYOND THIS HORIZON*, *The Man who Sold the Moon* and *The Green Hills of Earth*; *Three by Heinlein* (omni 1965; vt *A Heinlein Triad* 1966 UK), containing *The Puppet Masters* and *Waldo and Magic, Inc.*; *The Best of Robert Heinlein* (coll 1973 UK; vt in 2 vols as *The Best of Robert Heinlein 1939-1942* 1977 UK and *The Best of Robert Heinlein 1947-1959* 1977 UK); *The Notebooks of Lazarus Long* (1978 chap), being extracts from *Time Enough for Love*; *Expanded Universe* (coll 1980), including much nonfiction; *Grumbles from the Grave* (coll 1989) ed Virginia Heinlein, a first selection of letters with other material; *Starship Troopers/The Moon is a Harsh Mistress/Time Enough for Love* (omni 1991); *Tramp Royale* (written 1953-4; 1992), travel memoir; *Take Back Your Government: A Practical Handbook for the Private Citizen Who Wants Democracy to Work* (1992), a pragmatic nonfiction text written in the 1940s. About the author: "One Sane Man: Robert A. Heinlein" by Damon KNIGHT, in *In Search of Wonder* (1956; rev 1967); "Robert A. Heinlein" by Sam MOSKOWITZ, in *Seekers of Tomorrow* (1966); *Heinlein in Dimension* (1968) by Alexei Panshin; "First Person Singular: Heinlein, Son of Heinlein" by James BLISH, in *More Issues at Hand* (1970); *Robert A. Heinlein: A Bibliography* (1973 chap) by Mark OWINGS; *Robert A. Heinlein: Stranger in his Own Land* (1976; much rev 1977) by George Edgar SLUSSER; *The Classic Years of Robert A. Heinlein* (1977) by Slusser; *Robert A. Heinlein* (anth 1978) ed J.D. OLANDER and Martin H. GREENBERG; *Robert A. Heinlein: America as Science Fiction* (1980) by H. Bruce FRANKLIN; "Robert A. Heinlein" by Peter NICHOLLS, in *Science Fiction Writers* (1982) ed E.F. BLEILER; *A Robert A. HEINLEIN'S CAREER

Robert A. Heinlein was such a successful science fiction writer that many people don't realize he got a very late start in his field. Heinlein's first job was as a Navy officer, but that career ended when he contracted tuberculosis. In the five years between Heinlein's discharge and the start of his writing career in 1939, at age 32, he engaged in many colorful and apparently unsuccessful business ventures. At the height of the Depression, he became a mining speculator and found himself the owner of a silver mine in Colorado. He later tried to sell the mine, but a prospective buyer was machine-gunned to death before the deal could close. Luckily for his public, Heinlein managed to extricate himself from his business deals. And he went on to become one of the most important science fiction writers of his generation.

HEINLEIN'S EDITOR

Robert Heinlein did some of his best work in the 1940s and 50s. His enormous success moved him from writing for pulp magazines to writing for high-class publishers like Scribners. Heinlein recommended a cover artist named Hubert Rogers to his editor at Scribners, Alice Dalgliesh. Dalgliesh said that Rogers was "too closely associated with a cheap magazine" - meaning Astounding, which published many of Heinlein's stories. To prove her point, Dalgliesh showed him a story from the magazine, which happened to be written by Heinlein himself and published under a pseudonym. "I chuckled and said nothing," said Heinlein later. "It was not my place to educate her."

HELLFIRE

Film (1986). Manley. Written and dir William Murray, starring Kenneth McGregor, Sharon Mason, Julie Miller, Jon Maurice, Joseph White. 89 mins. Colour. In 1997 a revolutionary power source, Hellfire, is a controversial issue. Terrorists destroy a space station in an attempt to stop the project which, while it could produce pollution-free energy, also - as in Fire Pattern (1984) by Bob SHAW and Torched (1986) by James Blackstone (John BROSANAN) - tends to produce spontaneous human combustion. A private eye (McGregor) is hired by a cool blonde (Miller) to investigate her murderous tycoon brother, who controls Hellfire. Stereotyped hardboiled underworld events are foregrounded, while an understated but quite

effective future vision serves as background. Director Murray is clumsy with actors and action scenes alike, and, while the sparkly combustion trick is quite impressive, the futuristic vehicles are unconvincing.

[KN]See also: SPACE HABITATS.

HELPRIN, MARK

(1947-) US writer who served in the British Merchant Navy and the Israeli armed forces, experiences transmuted in *A Dove of the East* and *Other Stories* (coll 1975), which contains some fantasies. He is best known for his only genre work, *Winter's Tale* (1983), an epic fable set in an imaginary New York. The novel attempts to be a fantastic history of the city in the 20th century, celebrating the forces which gave birth to it, and catapulting it towards an ambiguously redemptive apocalypse at the end of the century. MH employs sf images and ideas (such as extraordinary MACHINES and TIME TRAVEL), but at heart the book remains a fairytale, concerned more with MAGIC than with science. [PR]Other works: *Swan Lake* (1989 chap), fantasy based on the ballet.

HEMING, JOHN W(INTON)

(1900-1953) Extremely prolific Australian writer who began publishing sf novels with *The Living Dead* (1942) and was associated during WWII with the Australian firm Currawong Publishers in the release of native sf, US imports being banned at the time. He wrote one novel, *Time Marches Off* (1942 chap), as Paul de Wreder. [JC]Other works: *Subterranean City* (1942 chap); *King of the Underseas* (1942 chap); *Other Worlds* (1942 chap); *From Earth to Mars* (1943 chap); *In Aztec Hands* (1944 chap); *The Weird House* (1951).

HEMINGWAY, AMANDA

(1955-) UK writer who began publishing work of genre interest with "The Alchemist" in 1981 for that year's issue of the *Faber* ? series of anthologies. Her first novel, *Pzyche* (1982), places an uncomfortable and virginal female protagonist on a mineral-rich, art-obsessed planet, where she unappreciatively undergoes a series of adventures. [JC]

HEMYNG, (SAMUEL) BRACEBRIDGE

(1841-1901) UK writer best known in the USA for the Jack Harkaway boys' stories from 1871, but responsible for many other tales. His sf novel, *The Commune in London, or Thirty Years Hence* (1871 chap), is an anti-Communard version of the 1871 uprising in Paris as translated into a shocked UK. [JC]

HENDERSON, ZENNA

(1917-1983) US writer and schoolteacher who frequently used her teaching experience in Arizona and elsewhere as a base for her stories; perhaps significantly, given her treatment of ALIENS as emblems of our better selves, during WWII she taught interned Japanese-Americans in a relocation camp. Her first story was "Come on, Wagon!" for *FSF* - the magazine with which she is mostly strongly associated - in 1951; soon after, with "Ararat" (1952), she began publishing in *FSF* the series of stories about *The People* which comprises her central achievement. Put together with framing devices as *PILGRIMAGE: THE BOOK OF THE PEOPLE* (fixup 1961) and *The*

People: No Different Flesh (coll of linked stories 1966) - and assembled as The People Collection (omni 1991 UK) - the sequence recounts over a long timespan the arduous experiences of a group of aliens with PSI POWERS who have been shipwrecked on Earth and must try to survive as well and fully as possible; although outwardly indistinguishable from humans, they are morally superior. A further story, "The Indelible Kind" (1968), appears with unconnected stories in Holding Wonder (coll 1971); this collection, along with The Anything Box (coll 1965), assembles most of ZH's stories independent of The People. The same decorous warmth infuses all her work, sometimes overly reducing tensions and contrasts, but usually demonstrating her humane talent to advantage, though her wholesomeness can be vitiating. [JC]See also: CHILDREN IN SF; ESP; The MAGAZINE OF FANTASY AND SCIENCE FICTION ; PASTORAL; SUPERMAN; WOMEN SF WRITERS.

HENHAM, ERNEST G(EORGE)

(1870-?) UK writer whose first novel of genre interest, Tenebrae (1898), features the depredations of a monstrous spider. Bonanza: A Story of the Outside (1901) is a tale of the Arctic Gold Rush in which prospectors stumble across a valley protected by a magnetic FORCE FIELD. The Feast of Bacchus (1907) is a horror fantasy. As John Trevena, EGH wrote two novels of interest: Furze the Cruel (1907), a fantasy, and The Reign of the Saints (1911), an sf tale set 200-300 years in the future at a point when an internally divided UK is threatened by revolutionary strife. [JC]

HENRY, MARION

[s] Lester DEL REY.

HENSLEY, JOE L(OUIS)

(1926-) US writer and Indiana Judicial Circuit Court judge 1975-88, active as an author of suspense novels, one of which, The Poison Summer (1974), was named in the New York Times Best of the Year List in 1974. He began publishing sf with "Treasure City" for Planet Stories in 1952, and appeared with some frequency in the field, sometimes as J.L. Hensley and once, in collaboration with Alexei PANSHIN, as Louis J.A. Adams. Much of his best work appears in Final Doors (coll 1981), including two collaborations with Harlan ELLISON. His work is vigorous and action-oriented, possibly to a fault in his only sf novel, The Black Roads (1976 Canada), a chase story set in a post- HOLOCAUST USA whose integral web of roads is dominated by a tyrannous organization; a rebellion is in the works. [JC]

HERBERT, [Sir] A(LAN) P(ATRICK)

(1890-1971) UK humorist, writer and politician, prolific for 60 years after he began publishing light verse in Punch, some of it fantastic, around 1910. The Red Pen (1927 chap), the libretto for a radio opera with music (not included) by Geoffrey Toye (1889-1942), is a NEAR-FUTURE story in which artists arrange for the nationalization of the arts. Number Nine, or The Mind-Sweepers (1951) and its loose sequel, Made for Man (1958), also set in the near future, are political SATIRES, good-tempered except on the matter of divorce, in which area APH's liberal instincts caused him

to disagree profoundly with Church of England doctrines. A late example of his long-extended Misleading Cases sequence, "Reign of Error?" in Bardot M.P.? (coll 1964), addresses the legal question of the criminal responsibility of a COMPUTER. [JC]

HERBERT, BENSON

(1912-1991) UK writer with a master's degree in science who began publishing sf in US magazines with "The World Without" for Wonder Stories in 1931 and was fairly active in the 1930s. Crisis! - 1992 (1935 Wonder Stories as "The Perfect World"; 1936) deals with the ominous passage of another planet close to Earth's orbit, and with what humans discover when they land on it: the planet is actually a giant SPACESHIP. The book was prefaced by M.P. SHIEL. During WWII BH wrote several very short, moderately exuberant SPACE OPERAS: Hand of Glory: Strange Adventures in the Pennines (?1943 chap); Thieves of the Air (?1943 chap) with Festus PRAGNELL; Strange Romance (1943 chap) and The Red-Haired Girl (1944 chap). With Walter GILLINGS as director, BH financed and founded Utopia Publications, which published some sf, including the AMERICAN FICTION series and STRANGE TALES. [JC/PN]

HERBERT, BRIAN (PATRICK)

(1947-) US writer, son of Frank HERBERT, who began publishing sf with his third book and first novel, Sidney's Comet (1983), a comic SATIRE - the eponymous comet being composed of human garbage - set in the 27th century; the sequel, The Garbage Chronicles (1985), is also perhaps somewhat desultory. Both feature, inter alia, amusing parodies of his father's stylistic quirks. Sudanna, Sudanna (1985), set on a surreally conceived planetoid, describes the lives of its resident bureaucracy-ridden ALIENS in a tone that determinedly shifts from HUMOUR to gravity and back. Man of Two Worlds (1986), with Frank Herbert, frolics rather cumbrously with reality games, and its presentation of ALIENS who dream us up is not always coherent, though the final pages, when humans dream back, are more exhilarating. Prisoners of Arionn (1987) again juxtaposes aliens (conceived with an elaborate though somewhat skittish lightness of touch) and human society (in this case San Francisco) in a plot which uneasily details the former's kidnapping of the latter, while at the same time examining with genuine insight some family relationships. If BH was in fact wrestling with genres in an attempt to intermingle them fruitfully, an inadequate control over narrative structure was proving detrimental to the attempt. This sense of virtuous effort and only partial success persists through The Race for God (1990) and Memorymakers (1991) with Marie Landis (?1935-). It is, all the same, of continuing interest to follow his career; he is an author who, at any point it seemed, might get the note right. [JC] Other work: The Notebooks of Frank Herbert's Dune (1988), ed; Songs of Muad'Dib: The Poetry of Frank Herbert (coll 1992), ed. See also: TRANSPORTATION.

HERBERT, FRANK

[s] Bill RANSOM.

HERBERT, FRANK (PATRICK)

(1920-1986) US writer born in Tacoma, Washington, and educated at the

University of Washington, Seattle. FH worked as a reporter and editor on a number of West Coast newspapers before becoming a full-time writer. He lived in Washington State. He began publishing sf with "Looking for Something?" for Startling Stories in 1952. During the next decade he was an infrequent contributor to the sf magazines, producing fewer than 20 short stories (which nevertheless constituted a majority of his short fiction; he never made a significant impact with work below novel length). At this time he also wrote one novel, THE DRAGON IN THE SEA (1955 ASF as "Under Pressure"; 1956; vt 21st Century Sub 1956; vt Under Pressure 1974), a much praised sf thriller containing complex psychological investigations aboard a submarine of the future. His emergence as a writer of major stature commenced with the publication in ASF in 1963-4 of "Dune World", the first part of his Dune series. It was followed in 1965 by "The Prophet of Dune"; the two were amalgamated into DUNE (fixup 1965), which won the first NEBULA for Best Novel, shared the HUGO, and became one of the most famous of all sf novels. DUNE is a novel of extraordinary complexity. It encompasses intergalactic POLITICS of a decidedly feudal nature, the development of PSI POWERS, RELIGION - specifically the reluctant but inevitable evolution of its protagonist into a MESSIAH - and WAR. Its primary impact, however, lay in its treatment of ECOLOGY, a theme which it brought into the forefront of modern sf readers' and writers' awareness. The desert planet Arrakis, with its giant sandworms and its Bedouin-like human inhabitants, the Fremen, clinging to the most precarious of ecological niches through fanatical scrupulousness in water conservation, is possibly the most convincing PLANETARY-ROMANCE environment created by any sf writer. With its blend (or sometimes clash) of complex intellectual discourse and Byzantine intrigue, DUNE provided a template for FH's more significant later work. Sequels soon began to appear which carried on the arguments of the original in testingly various manners and with an intensity of discourse seldom encountered in the sf field. Dune Messiah (1969) elaborates the intrigue at the cost of other elements, but Children of Dune (1976) recaptures much of the strength of the original work and addresses another recurrent theme in FH's work - the EVOLUTION of Man, in this case into SUPERMAN; both these novels, along with the original, were assembled as The Great Dune Trilogy (omni 1979 UK). God Emperor of Dune (1981) followed, then Heretics of Dune (1984 UK) and Chapter House Dune (1985 UK; vt Chapterhouse: Dune 1985 US), these three being assembled as The Second Great Dune Trilogy (omni 1987 UK). The last volume of the sequence is comparatively desultory, but God Emperor of Dune and Heretics of Dune, like the enormously extended development section in the first movement of a great symphony, work and rework the initial material into more and more elaborate presentations of the initial themes. As a whole, the sequence almost fully justified FH's decision - certainly astute in marketing terms - to so comprehensively draw out his original inspiration. Although Dune dominated his career from 1965-much later a film based on it, DUNE (1984), was released - FH began in the mid-1960s to publish other novels and series with admirable regularity. The Green Brain (1966) features mutated insects which achieve corporate intelligence (HIVE-MINDS). Destination: Void (1966; rev 1978), a clotted novel on a CYBERNETICS theme, concentrates on the construction of an AI aboard a starship, where it comes to the conclusion that it is God (GODS AND

DEMONS). The Pandora sequence, all written with Bill RANSOM - The Jesus Incident (1979), The Lazarus Effect (1983) and The Ascension Factor (1988) - follows on from Destination: Void, exploring in exhaustive detail the implications of the earlier book while placing in a PLANETARY-ROMANCE frame the complex and developing relationship between God-"protected" human stock and the natives of Pandora. The Eyes of Heisenberg (1966) is about GENETIC ENGINEERING and IMMORTALITY, and The Heaven Makers (1968; rev 1977) again copes with immortality. The Santaroga Barrier (1968), describing a higher order of INTELLIGENCE evolved within an isolated, near-UTOPIAN community, served to emphasize the thematic centrality of intelligence throughout FH's work, in which consistent attempts are made not only to suggest different, or evolved, types of intelligence but to describe them in detail. Among contemporary sf writers only Ian WATSON has addressed this theme as frequently and as convincingly. ALIEN intelligence (see also LIVING WORLDS) is examined in Whipping Star (1970; rev 1977) and, more searchingly, in its sequel The Dosadi Experiment (1977) which, while orchestrating a plot of multi-levelled intrigue, describes several different alien species in detail, examines the effect of an experiment in extreme OVERPOPULATION, and gifts its hero and heroine with advanced PSI POWERS, including total mind transference. FH's other sf novels include: The God Makers (1960 Fantastic as "The Priests of Psi"; exp 1972), in which a god is reified through human endeavours; the rather surly The White Plague (1982), in which a man driven into mad misogyny destroys the women of the world; and the minor Man of Two Worlds (1986) with his son Brian HERBERT. More important than any of these, however, is Hellstrom's Hive (1973), which derives its title from the film The Hellstrom Chronicle (1971) but otherwise has little connection with it. Arguably FH's most successful novel after DUNE, this presents in persuasive detail an underground colony of humans selectively bred, on insect-hive principles, into various specializations. In this society the individual's existence is of minor importance; the continuation of the hive as a functioning entity is paramount. The novel points up the contradictions of a society which in its own terms is a successful utopia, but which from an outside human viewpoint is horrific. Much of FH's work makes difficult reading. His ideas were genuinely developed concepts, not merely decorative notions, but they were sometimes embodied in excessively complicated plots and articulated in prose which did not always match the level of thinking, so that much of his writing seemed dense and opaque. His best novels, however, were the work of a speculative intellect with few rivals in modern sf. [MJE/JC] Other works: The Worlds of Frank Herbert (coll 1970 UK; with 1 story added 1971 US); Soul Catcher (1972), a non-sf novel; The Book of Frank Herbert (coll 1973); The Best of Frank Herbert (coll 1975 UK; cut vt The Best of Frank Herbert: 1952-1970 1976 UK; text restored vt in 2 vols as The Best of Frank Herbert 1952-1964 1977 UK and The Best of Frank Herbert 1965-1970 1977 UK); Direct Descent (fixup 1980); The Priests of Psi (coll 1980 UK); Eye (coll 1985). Nonfiction: Survival and the Atom (coll 1952); New World or No World (anth 1970), an environmental anthology; Threshold: The Blue Angels Experience (1973); Without Me, You're Nothing: The Essential Guide to Home Computers (1980) with Max Barnard; The Maker of Dune: Insights of a Master of Science Fiction: Frank Herbert (coll 1987) ed Tim O'Reilly; The Notebooks of Frank Herbert's Dune

(1988) ed Brian Herbert; Songs of Muad'Dib: The Poetry of Frank Herbert (coll 1992), ed. About the author: Frank Herbert (1980) by David M. Miller; Frank Herbert (1981) by Timothy O'Reilly; The Dune Encyclopedia (anth 1984) ed Willis E. McNelly; Dune Master: A Frank Herbert Bibliography (1988) by Daniel J.H. Levack. See also: ASTOUNDING SCIENCE-FICTION; COMMUNICATIONS; COMPUTERS; ESP; FANTASY; FORCE FIELD; GALAXY SCIENCE FICTION; GAMES AND TOYS; HISTORY IN SF; LINGUISTICS; LONGEVITY (IN WRITERS AND PUBLICATIONS); MUSIC; PARANOIA; SPACESHIPS; UNDER THE SEA.

HERBERT, WILLIAM

Pseudonym of the unidentified UK author of *The World Grown Young* (1891), a placidly tendentious record of NEAR-FUTURE reforms imposed benevolently from above upon a grateful UK by its richest citizen. Attacks by Russia and the USA are routinely defeated. [JC]

HERCK, PAUL van

[r] Paul VAN HERCK.

HERNADI, GYULA

[r] HUNGARY.

HERNAMAN-JOHNSON, FRANCIS

(1879-1949) UK medical researcher and author of *The Polyphemes: A Story of Strange Adventures Among Strange Beings* (1906). The beings, giant intelligent Moon-worshipping ants from a Pacific island, just fail to conquer the world, despite their use of "X Magnetism" to power flying machines which bomb Europe. [JC]

HEROES

Sf began to produce a distinctive kind of hero well before the beginning of the 20th century. As might be expected, sf writers - most of whom expressed interest (sometimes monitory) in the advancement of science - soon found models for heroic action in SCIENTISTS (or, perhaps more accurately, inventors). From early in its history, the US dime novel (DIME-NOVEL SF) featured young protagonists who invented their way out of dire straits in a thousand tales, and who soon took on many of the advertised characteristics of the most charismatic US inventor/scientist of the 19th century, Thomas Alva Edison (EDISONADE for details); well into the 20th century, heroes on the edisonade model figured large in GENRE SF, generally in SPACE OPERA between the World Wars, although the influence of the Edison myth can be detected also in Robert A. HEINLEIN's *Competent Man*. At the same time, it cannot be denied that in much sf the figure of the scientist remained far too remote and enigmatic to stand as a hero, and it was only rarely - as in H.G. WELLS's *THE TIME MACHINE* (1895) - that adult sf featured scientists in roles that gave them the opportunity to assume protagonist burdens of heroism. Over against the heroes of the edisonade, sf very frequently featured young heroes who had become entangled with matters of superscience entirely by accident: a certain bewildered astonishment was a constant feature of the role. FLASH GORDON and BUCK ROGERS are heroes of this type, as is John Star, hero of Jack WILLIAMSON's *The Legion of Space* (1934; 1947). And whether or not their creators deemed them to be inventor/scientist heroes - as C.M. KORNBLUTH argued in "The Failure of the Science Fiction Novel as Social

Criticism" (1959) - the worldview of E.E. SMITH's heroes and all their kind is that of small children, and their adventures are daydreams which proceed according to the pattern of make-believe games. This pattern, common to almost all action-adventure fiction, stands out particularly clearly in PULP-MAGAZINE sf simply because the scope of the make-believe is so great. Edgar Rice BURROUGHS's Barsroom novels are perhaps the ultimate in literary daydreams, and the enduring attraction of such fantasies is shown by the constant proliferation of their imitators. Edmond HAMILTON's CAPTAIN FUTURE stories and the PERRY RHODAN adventures are examples of more strictly sciencefictional variants. In the 1940s John W. CAMPBELL Jr used his influence as editor of ASTOUNDING SCIENCE-FICTION to urge sf writers to modify the standard pulp hero by putting much greater emphasis on problem-solving aptitude and engineering skill. Archetypes of this new image included the staff of George O. SMITH's Venus Equilateral (1942-5 ASF; fixup 1947), who were forever scribbling equations and designs on the tablecloths in Joe's Bar. It might be argued that this was very limited progress, and that the new image appealed to the worldview of the adolescent in the process of learning, upgrading mental competence at the expense of physical prowess, but really coming no nearer to genuine characterization. Certainly there is a great deal of sf which is attractive to the adolescent - and particularly to the alienated adolescent, bound more closely to a private mental world - and, just as E. E. Smith's Lensmen relate to their Arisian mentors in the same way that children relate to adults, a similar relationship, but at a later stage, is reflected in Poul ANDERSON's Flandry series, in which the hero's flamboyant behaviour and contempt for imperial decadence relates very well to the mood of adolescent rebellion. The conscientiously unorthodox Campbell had a particular fondness for scientist-heroes who were determined paradigm-breakers, and this was shared by many of his writers. Even nonscientist heroes are frequently portrayed in magazine sf as diehard rebels against stultifying orthodoxy, and the iconoclast who demonstrates by his delinquency that he is fit for membership in the social elite is an annoying sf CLICHE. Although there were few true antiheroes in sf before, say, the emergence of Michael MOORCOCK's Jerry Cornelius in The Final Programme (1965-7 NW; 1968) - Harry HARRISON's Stainless Steel Rat (in The Stainless Steel Rat [1961] and its sequels) being too lovable a rogue to qualify, though there is a good case to be made that the evolution of E.E. SMITH's Blackie DuQuesne from Skylark of Space (1928) to Skylark DuQuesne (1966) neatly encapsulates the growth of the concept - there was a long pre-existent tradition of heroic bloody-mindedness in magazine sf. As a more mature approach to characterization began to appear in sf during the 1940s, the heroic stature of its protagonists inevitably began to be compromised. True heroes are implicitly unrealistic characters of more-than-human dimensions, and the pulp SUPERHEROES who had existed on the fringe of sf, like DOC SAVAGE, were largely diverted into the world of the COMICS, where SUPERMAN became the archetype of a vast legion of caped crusaders. In the sf pulps, too, superhumans became heroes, following a prototype established by A.E. VAN VOGT in SLAN (1940 ASF; 1946). The van Vogtian hero is always adrift in a hostile world whose circumstances are beyond his understanding, but he is possessed of awesome, temporarily dormant powers

whose ultimate flowering will enable him spectacularly to prevail. This slightly schizoid stereotype became increasingly common, and also more elaborate and extravagant. Later works in this vein frequently feature heroes who exhibit an odd combination of vulnerability and godlikeness; several examples can be found in the work of Roger ZELAZNY (see also PARANOIA). It is, of course, the function of heroes to appease the psychological forces within us that must necessarily be repressed in the day-to-day routine of adult intercourse with the world, and there is really no need to worry - as the psychoanalyst Fredric Wertham (1895-1981) did in *The Seduction of the Innocent* (1954) - that the fascination of children and sf fans with superheroes might be perverted or fascistic. The utility of social outsiders in heroic roles is also, inevitably, reflected in the increasingly common use of ALIENS as heroes, and sometimes MACHINES (although ROBOTS and sentient COMPUTERS pose problems when employed as foci for reader-identification). These trends too began in the 1940s but became more pronounced in subsequent decades. The most extreme cases of "outsider" heroes are perhaps to be found in CYBORG stories which use brains-in-boxes as viewpoint characters. Despite the processes of sophistication which have reduced many of its protagonists to a more human scale, modern sf has carried forward the trends which were set in the 1940s, albeit in more selfconscious - and often frankly humorous - ways. The noble rebel against oppressive authority remains commonplace, his activities celebrated with awesome sentimentality in such novels as Michael D. RESNICK's *Santiago* (1986). The oppressed child-become-superhero has also been provided with a striking new archetype in Orson Scott CARD's *ENDER'S GAME* (1977 ASF; exp 1985), although Card's anxiety about the propriety of this genocidal power-fantasy led him to pad out the expanded version with much philosophical debate and to produce sequels in which Ender becomes a kind of saintly redeemer. Comic-book superhero fantasy has moved back into a closer alliance with written fiction, reflected in such projects as George R.R. MARTIN's *WILD CARDS* series of multi-authored "mosaic novels" or BRAIDS. It is noticeable that modern comic-book superheroes are very often social outsiders, the TEENAGE MUTANT NINJA TURTLES providing a striking example. The market-encouraged overlap between sf and HEROIC FANTASY has helped to maintain much older kinds of hero despite acute problems of plausibility. Sciencefictional transfigurations of Greek and other hero-myths are surprisingly numerous, most notable among them R.A. LAFFERTY's *Space Chantey* (1968) and Tim POWERS's *Dinner at Deviant's Palace* (1985), and *Grail Quests* are also featured in such novels as Samuel R. DELANY's *NOVA* (1968). Antiheroes have been very much in fashion in recent times thanks to the CYBERPUNK movement, but the parallel fashionability of militaristic sf (WAR) has resulted in a wide spectrum of heroic types which ranges from steadfastly honourable soldiers through mercenaries to determined followers of a SURVIVALIST ethos. Female heroes were almost unknown in sf before 1960, although sweet-natured "heroines" were to be found in abundance, but as more and more female writers have moved into sf this imbalance has been spectacularly redressed; a great deal of contemporary sf has now taken on the burden of appeasing the frustrations of women in much the same way that 1940s sf appeased the frustrations of adolescent boys. Although the path of progress was first mapped by feminist writers like Joanna RUSS,

creator of the troubled-but-competent Alyx, female heroes are now so numerous in certain roles - notably that of starship pilot - that such assignments no longer seem propagandistic. SCIENTISTS, for the most part, are still out in the cold, rarely afforded even moderate heroic status: an accurate but sad reflection of contemporary social attitudes. [BS/JC]See also: ANTI-INTELLECTUALISM IN SF; VILLAINS.

HEROIC FANTASY

In the TERMINOLOGY of sf/fantasy readers, this term began in the late 1970s to overtake SWORD AND SORCERY as the name of the subgenre which we choose - perhaps arbitrarily - to discuss under the latter head. The two terms (which both continue in common but diminished usage into the 1990s) are close but not identical in meaning. However, the nuances that distinguish them differ according to the writer (or blurb-writer) who uses them, though perhaps "Heroic Fantasy" comprehends a greater range of possible fictions. There is probably no argument about the twin poles of Heroic Fantasy (or Sword and Sorcery) being the gentlemanly works of J.R.R. TOLKIEN and the far-from-gentlemanly works of Robert E. HOWARD, especially his Conan series. Other terms applied both critically and commercially to fantasy have proliferated; they include Adult Fantasy, High Fantasy, Epic Fantasy, Quest Fantasy and SCIENCE FANTASY, but none are susceptible to any rigorous definition that would correspond to the variations in actual usage. By the 1990s the compulsion felt by publishers to label their books generically had slackened - it may have proved counterproductive - and many works of Heroic Fantasy now have merely the word FANTASY on the cover, or no descriptive word at all. [PN]See also: MAGIC; PLANETARY ROMANCE.

HERON-ALLEN, EDWARD

[r] Christopher BLAYRE.

HERRICK, ROBERT

(1868-1938) US academic and writer best known for *The Master of the Inn* (1908), whose eponymous hero cures the mentally ill by making them work hard and contemplate, too. His one sf novel, *Sometime* (1933), set 1000 years hence, describes the visit of some Africans to a post-ice-age North America, where the races have finally bred together, sexual prudishness has been cast off at last, and the CITIES have been abandoned. RH clearly approves all these changes. [JC]

HERRIN VON ATLANTIS, DIE

(vt *L'Atlantide*; vt *Lost Atlantis*; vt *The Mistress of Atlantis*) Film (1932). Nero Film. Dir G.W. Pabst (1885-1967), starring Brigitte Helm and (German version) Gustav Diessl, (French version) Jean Angelo, (English version) John Stuart. Screenplay Ladislaus Vajda, Hermann Oberlander, based on *L'Atlantide* (1919) by Pierre BENOIT. 87 mins. B/w. This German film is based on Benoit's lurid popular novel about Antinea, the Queen of ATLANTIS (in this case a city beneath the North African desert), who lures a succession of men to their doom and displays their mummified bodies in a bizarre trophy room. The similarities between this and H. Rider HAGGARD's *She* (1887) are obvious. *L'Atlantide* has been filmed several other times: the first was a tedious 1921 French version dir Jacques Feyder; in 1948 a

kitsch US version, *Siren of Atlantis* (vt *Atlantis*; vt *Queen of Atlantis*), was dir Arthur Ripley, Greg R. Tallas, Douglas Sirk and John Brahm, starring Maria Montez; and in 1961 a French/Italian coproduction, *Antinea, L'Amante della Citta Sepolta* (vt *Atlantis, the Lost Kingdom*) - not to be confused with *ATLANTIS, THE LOST CONTINENT* prod George PAL in 1960 - was dir Edgar G. Ulmer and Giuseppe Masini. The Pabst film is superior to these others, not only for its visual flair but also for Brigitte Helm's striking performance as the queen (she is also remembered for her dual role as heroine and evil robot in *METROPOLIS* [1926]). It is, however, slow-moving, and no one could take this pulp romance seriously. Three versions, in German, French and English, were made simultaneously with Helm starring in all, although otherwise the casts were different. [JB/PN]

HERSEY, HAROLD (BRAINERD)

(1893-1956) US editor, publisher, story writer and poet. A man of great energy and relatively little talent, HH edited such sf PULP MAGAZINES as *THRILL BOOK*, *MIRACLE SCIENCE AND FANTASY STORIES* and *Mystery Adventures*, though most of his editorial work was not sf-related. His early writing, all negligible, appeared under various pseudonyms; but *Night* (coll 1923), a POETRY collection, has superb artwork by Elliott DOLD, and *Pulpwood Editor* (1937) is an informative (albeit anecdotal) look at the pulp-magazine world. [RB]See also: *ALTERNATE WORLDS*; *INTELLIGENCE*; *OVERPOPULATION*; *THEATRE*.

HERSEY, JOHN

(1914-1993) US novelist and journalist, perhaps best known for his early report, *Hiroshima* (1946). His *White Lotus* (1965) is an *ALTERNATE-WORLDS* story in which China conquers the USA and makes slaves of White Americans, including the teenager renamed *White Lotus*. *The Child Buyer* (1960) is a *NEAR-FUTURE* story - told in the form of a courtroom drama - in which corporations bid for effective ownership of child prodigies. *My Petition for More Space* (1974) is a radically *DYSTOPIAN* rendering of an enormously regimented Earth bedevilled by *OVERPOPULATION* problems - the protagonist lives in a tiny cubicle and petitions, vainly, for an extra foot in each direction. [JC]

HERSHMAN, MORRIS

(1920-) US writer whose sf novel, *Shareworld* (1972; vt *The Crash of 2086* 1976), takes a *DYSTOPIAN* view of the stock market dominating the entire world and anticipates a final and definitive *Crash*. [JC]

HERTZKA, THEODOR

(1845-1924) Austrian economist and author of the influential socialist *UTOPIA*, *Freiland: Ein Soziales Zukunftsbild* (1890; trans Arthur Ransom - not Arthur Ransome [1884-1967] - as *Freiland: A Social Anticipation* 1891 UK) and its sequel, *Eine Reise nach Freiland* 1893; trans anon as *A Visit to Freiland, or The New Paradise Regained* 1894 UK; vt *A Trip to Freiland* 1905 US). These offer little in the way of fictional pleasures in the bland portrayal of their African setting, but most unusually manage to depict an ideal society in terms that sound genuinely livable. It may be the case that they fail satisfactorily to suggest a convincing relationship between private and public control of production (*ECONOMICS*), but all the same

the books inspired a Freeland Society in the USA, and some local colonies were actually established. [JC]See also: AUSTRIA.

HERVEY, MAURICE H.

(? -?) UK writer active at the end of the 19th century. The protagonist of his sf novel, *David Dimsdale, M.D.: A Story of Past and Future* (1897), awakens in 1920 (*SLEEPER AWAKES*) to find ubiquitous electrical advances plus the daughter of the woman he'd loved in 1895. He ends up marrying the daughter. [JC]

HERVEY, MICHAEL

(1920-1979) UK writer who moved to Australia in 1951; he is author of an estimated 3500 short stories in various genres. His sf work is minor; it includes a future- UTOPIA tale, *Strange Hunger* (1946), and some of the stories assembled in *The Queer-Looking Box* (coll 1944 chap), *Murder Medley* (coll 1945 chap), *Horror Medley* (coll 1946 chap) and *Creeps Medley* (coll 1946 chap). [SH]

HERZL, THEODOR

[r] AUSTRIA; ISRAEL.

HERZOG, ARTHUR (III)

(1927-) US writer and editor who has also worked with the Peace Corps and as a political manager. His first sf novel, *The Swarm* (1974), convincingly posits an ecological catastrophe when the African honey-bee mutates and invades North America (*ECOLOGY*; *HIVE-MINDS*). Partly based on fact (African bees have indeed bred with South American bees to form a large and belligerent hybrid), the novel is well researched and written, as are *Earthsound* (1975), in which a seismologist attempts to warn sceptical New Englanders of an approaching earthquake and is thought to be merely hysterical, and *Heat* (1977; rev 1989), which is an early attempt to deal with the greenhouse effect. In later novels, AH moved less convincingly towards SATIRE. In *IQ 83* (1978) an attempt to retune DNA predictably backfires, and the America series - *Make Us Happy* (1978) and *Glad to Be Here* (1979) - takes him shakily into the realms of DYSTOPIA. [PN/JC]Other works: *Aries Rising* (1980); *The Craving* (1982).See also: *DISASTER*.

HERZOG, EMILE

[r] Andre MAUROIS.

HESKY, OLGA (LYNFORD)

(1912-1974) UK editor and writer in whose wry and somewhat Surrealist sf novel, *The Purple Armchair* (1961), the ALIEN who resembles an armchair and is purple must decide whether or not the human race - caught in a near-future DYSTOPIA dominated by COMPUTERS - should survive. Eventually the "chair" says no. [JC]

HESSE, HERMANN

(1877-1962) German-born writer, a Swiss citizen from 1923. His long career culminated with the publication of his largest novel, *Das Glasperlenspiel* (1943; trans M. Savill as *Magister Ludi* 1949 US; preferred trans Richard and Clara Winston as *The Glass Bead Game* 1969 US); it was largely as a result of this novel that HH was awarded the 1946 Nobel Prize

for Literature. Set in a future land closely resembling Europe, it is a complex UTOPIA whose structure revolves around the eponymous game. For the inhabitants of the community of Castilia, under the guidance of Joseph Knecht, their Magister Ludi (or Master of Games), the undescribed aesthetic and intellectual disciplines of the game culminate in experiences that - by analogy with the music of J.S. Bach - serenely resolve the dissonances of the outside world. Knecht's biography constitutes the bulk of the novel, and his poems and essays are published in an appendix. Through these texts, which are suffused with allusions to and renderings of the world-transcending subtleties and graces of the Castilian mind-plays, Knecht's life has a sometimes exalting effect on the reader, though Knecht himself must eventually repudiate the game for a more humane vision of utopia.HH's great popularity in translation in the 1960s and 1970s derives more directly, however, from earlier and more accessible works, like Siddharta (1922; trans Hilda Rosner 1954 UK) and Der Steppenwolf (1927; trans Basil Creighton as Steppenwolf 1929 UK; trans rev 1963), in which Jungian depth psychology, Indian mysticism and Weltschmerz are perhaps overpalatably combined; these and others of his novels can be read - unwisely - to emphasize any fantasy elements, for at their core they are meditations on transcendence. [JC]Other works: Demian (1919; trans W.J. Strachan 1958 UK); Die Morgenlandfahrt (1932; trans Hilda Rosner as The Journey to the East 1956 chap UK); Strange News from Another Star (coll trans 1972 US) and Pictor's Metamorphoses and Other Fantasies (coll trans Rika Lesser 1982 US), collecting his fantasies, some of which are sf.See also: ARTS.

HEXT, HARRINGTON

Eden PHILLPOTTS.

HEY, RICHARD

[r] GERMANY.

HEYDON, J(OSEPH) K(ENTIGERN)

(? -?) UK writer whose World D (1935), as told to him by "Hal P. Trevarthen, Official Historian of the Superficies", describes the creation of an UNDER-THE-SEA culture, Helioxenon; the detail is considerable, sometimes Catholic. On the jacket the novel was credited to Trevarthen.

[JC]

HEYDRON, VICKI ANN

[r] Randall GARRETT.

HEYMANN, ROBERT

[r] GERMANY.

HICKS, GRANVILLE

(1901-1982) US writer, editor and broadcaster, most of whose significant work lay in the field of cultural studies, initially from a Marxist

standpoint, though from 1939 he became disillusioned with any form of communism. His first novel, *The First to Awaken* (1940) with Richard M. Bennett, was a SLEEPER-AWAKES tale whose protagonist reaches the year AD2040 via SUSPENDED ANIMATION and finds there a literately described and mutedly sane socialist UTOPIA. [JC]

HIDDEN, THE

Film (1988). New Line-Heron Joint Venture/Third Elm Street Venture. Dir Jack Sholder, starring Kyle MacLachlan, Michael Nouri, William Boyett. Screenplay Bob Hunt. 97 mins. Colour. A quiet stockbroker goes on a homicidal spree. We learn his body is temporarily occupied by a homicidal slug-like ALIEN, which moves from body to body but is soon recognizable from its behaviour. Police detective Beck (Nouri) works with an FBI man (MacLachlan) who turns out to be an alien cop in a human body. Finally, after six body changes, the Ferrari-driving alien killer is defeated. TH is a fast-moving, violent, well made formula film with no intellectual ambitions but an interesting, ambiguous ending. The story is sufficiently close to that of Hal CLEMENT's *Needle* (1950; vt *From Outer Space* 1957) as to make one wonder why he received no screen credit. The oddly coupled human/alien cop team was to become an instant film cliché: *ALIEN NATION* and *I COME IN PEACE*. The sequel, *The Hidden II* (1993), went straight to video; dir and written Seth Pinsker, starring Raphael Sbarge and Kate Hodge, 90 mins, it reprises ten minutes of the original before moving to a time 15 years later, with Hodge playing the daughter of Detective Beck and more evil alien spawning to be prevented. [PN] See also: MONSTER MOVIES.

HIDDEN WORLD, THE

US magazine PULP MAGAZINE-size, 16 issues, Spring 1961-Winter 1964, published and ed Raymond A. PALMER. This was a quarterly publication, handling SHAVER-Mystery and flying-saucer (UFOS) material, and purporting to be science fact rather than science fiction. #1 elaborated on the Shaverian "Mantongue" language. Circulation had by the end dropped from 10,000 to 2000; the issue marked Winter 1964 was in fact released in 1966. [FHP/PN]

HIGH, PHILIP E(MPSON)

(1914-) UK writer, variously employed for a number of years before beginning to publish sf in 1955 with "The Statics" for *Authentic Science Fiction*; he contributed to UK magazines, especially *NEBULA SCIENCE FICTION*, for several years before publishing his first sf novel *The Prodigal Sun* (1964 US), which set the model for most of those to follow. His sense of the world is pessimistic, but he overlays that sense with plots of an epic cast. In this first novel, characteristically, an Earthman possessing powers enhanced through his upbringing by an ALIEN race returns to his grim home planet, rousing it. Other novels combining social comment and adventure include *No Truce with Terra* (1964 dos US), *The Mad Metropolis* (1966 dos US; vt *Double Illusion* 1970 UK) and *These Savage Futurians* (1967 dos US). *The Time Mercenaries* (1968 dos US) interestingly places a 20th-century submarine into a time when mankind has lost its genetic capacity to fight; the resurrected crew (having been artificially preserved) dutifully saves mankind from aliens. Though constrained by his dystopian sense of the possibilities of Man's future,

PEH has been capable of writing enjoyable adventures, though without fully stretching his dark imagination. His later work, written largely for ROBERT HALE LIMITED, was less engaging. [JC]Other works: Reality Forbidden (1967 dos US); Twin Planets (1967 US); Invader on my Back (1968); Butterfly Planet (1971); Come, Hunt an Earthman (1973); Sold-For a Spaceship (1973); Speaking of Dinosaurs (1974); Fugitive from Time (1978); Blindfold from the Stars (1979).See also: SUN.

HIGHLANDER II: THE QUICKENING

Film (1990). Davis-Panzer/Lamb Bear Entertainment. Dir Russell Mulcahy, starring Christopher Lambert, Sean Connery, Virginia Madsen, Michael Ironside, Allan Rich. Screenplay Peter Bellwood, from a story by Brian Clemens and William Panzer, based on characters created by Gregory Widen. 100 mins. Colour.This is a sequel to Highlander (1986), which was a pure fantasy about two immortals, one good (with amnesia) and one bad, who battle through the centuries. The sequel begins in 1999 with the sword-wielding immortal Scotsman (Lambert again) saving humanity by building a shield to replace the destroyed ozone layer. Moving forward to AD2034 we find a corporate DYSTOPIA in the subtropical twilight (shot in Argentina) beneath the shield, which is now maintained only for corporate profit, the ozone layer being in much better condition, though this is kept secret. The protagonist - who turns out to be an ALIEN - oscillates unnervingly between youth and age, mortality and IMMORTALITY, before disposing of the shield and the alien warlord (Ironside) who has temporarily become a partner of the corporate villains. Rumoured production problems and budget cuts may explain the incoherence of what could have been much more fun. [PN]

HIGH TREASON

Film (1929). Gaumont. Dir Maurice Elvey, starring Benita Hume, Jameson Thomas, Basil Gill, James Carew. Screenplay L'Estrange Fawcett, based on a play by Noel Pemberton-Billing. 95 mins, cut to 69 mins. B/w.This forgotten curiosity, one of the earliest UK sound movies, was quite a big film in its day, when it was seen as a kind of English METROPOLIS (1926)-a comparison that does not for an instant hold water. Set in the world of 1940 (a Channel tunnel, tv, aeroplanes landing on London skyscrapers), it envisages a tense political situation between United Europe, to which England belongs, and a United America. The Peace League saves the world from war by assassinating the leader of United Europe. The production design is singularly unstriking and the story absurd. [PN]

HIGHWAYMAN, THE Glen A. LARSON.

HILL, CAROL (DeCHELLIS)

(1942-) US writer whose first novel, Jeremiah 8:20 (1970), is a raucous FABULATION about the Apocalypse. Her second, Let's Fall in Love (1975), spoofs sex, pornography and politics in a vaguely fantastic 1970s milieu. The Eleven Million Mile High Dancer (1985; vt Amanda and the Eleven Million Mile High Dancer 1988 UK), equally flamboyant in diction, carries its female astronaut protagonist into metaphysical (and Theory-of-Indeterminacy-and-Zen-evoking) contact with the eponymous

representation of the nature of the Universe. [JC]

HILL, DOUGLAS (ARTHUR)

(1935-) Canadian-born writer and editor, in the UK from 1959. Most of his early books were nonfiction, *The Supernatural* (1965) with Pat Williams, and *Magic and Superstition* (1968) being of interest to a genre audience. His involvement in sf and fantasy began through his editing of anthologies like *Window on the Future* (anth 1966) and *Way of the Werewolf* (anth 1966); he served as Associate Editor of NW in 1967-8. He began a long sequence of novels for younger and older children (CHILDREN'S SF) with *Coyote the Trickster* (1975) with Gail Robinson. Several series ensued: the Last Legionary sequence of *SPACE OPERAS* - *Galactic Warlord* (1979), *Deathwing over Veynaa* (1980), *Day of the Starwind* (1980), *Planet of the Warlord* (1982) and *Young Legionary: The Earlier Adventures of Keill Randor* (1982), all but the last (a prequel) being assembled as *The Last Legionary Quartet* (omni 1985) - which builds effectively on an interplanetary revenge quest; the Huntsman sequence - *The Huntsman* (1982), *Warriors of the Wasteland* (1983) and *Alien Citadel* (1984) - set on an Earth enslaved by alien invaders; and the ColSec sequence - *Exiles of ColSec* (1984), *The Caves of Klydor* (1984) and *ColSec Rebellion* (1985) - whose young protagonists strive for freedom after being shipwrecked on an unknown planet. His only adult sf novels, *The Fraxilly Fracas* (1989) and its sequel, *The Colloghi Conspiracy* (1990), are also space opera - as is the ongoing *Apotheosis Trilogy*, comprising *The Lightless Dome* (1993) and *The Leafless Forest* (1994) - and share with his juveniles an engaging briskness, though psychological depths tend to remain unplumbed. [JC] Other works: *The Exploits of Hercules* (1978); *Have Your Own Extra-Terrestrial Adventure* (1983 chap); the Talents series of fantasies, comprising *Blade of the Poisoner* (1987) and *Master of Fiends* (1987); *Penelope's Pendant* (1990); *World of the Stiks* (1994). For younger children: *Moon Monsters* (1984 chap); *How Jennifer (and Speckle) Saved the Earth* (1986 chap); *Goblin Party* (1988 chap); *Penelope's Pendant* (1990); *The Tale of Trelle the Troog* (1991 chap). As Editor: *The Devil his Due* (anth 1967); *Warlocks and Warriors* (anth 1971); *Tribune 40* (anth 1977), not sf or fantasy; *The Shape of Sex to Come* (anth 1978), sf stories about SEX; *Alien Worlds* (anth 1981); *Planetfall* (anth 1986).

HILL, ERNEST

(1915-) UK writer who began publishing sf with "The Last Generation" for NW in 1954, and who published some stories of interest, most notably the *DYSTOPIAN "Atrophy"* (1965 in *New Writings in SF #6*, ed John CARNELL). His novels - the rather desultory *SPACE OPERA Pity about Earth* (1968 dos US), *The GC Radiation* (1971) and *The Quark Invasion* (1978), the latter two being written for ROBERT HALE LIMITED - are of less interest. [JC]

HILL, H. HAVERSTOCK

J.M. WALSH.

HILL, JOHN

Dean R. KOONTZ.

HILL, ROGER

[r] Glen A. LARSON.

HILL, RUSSELL

(? -) US writer whose sf novel, *Cold Creek Cash Store* (1986), presents an unremarkable vision of a post- HOLOCAUST refuge in California. [JC]

HILL, WILLIAM BOYLE

(? -) Writer, probably UK, whose novel *A New Earth and a New Heaven* (1936) is of exceedingly moderate sf interest for its advocacy of a garden-city subtopian future, but which comes somewhat to life on its protagonists' visit to a LOST WORLD - in the heart of Australia - whose inhabitants are in touch with MARS. [JC]

HILLEGAS, MARK R.

(1926-) US sf critic and professor of English who has been based at Southern Illinois University. In 1961 he gave, at Colgate, one of the first university-level classes in sf in the USA (SF IN THE CLASSROOM). His academic study *The Future as Nightmare: H.G. Wells and the Anti-Utopians* (1967) deals primarily with such MAINSTREAM WRITERS of DYSTOPIAS as Karel CAPEK, Aldous HUXLEY, C.S. LEWIS, George ORWELL and Yevgeny ZAMIATIN; it has become a standard reference. A later work ed MRH is *Shadows of Imagination: The Fantasies of C.S. Lewis, J.R.R. Tolkien and Charles Williams* (anth 1969). His sf criticism, which includes a number of essays, was all published in the 1960s and 1970s. He won the PILGRIM AWARD in 1992. [PN]

**HILLMAN PERIODICALS
WORLDS BEYOND.****HILTON, JAMES**

(1900-1954) UK writer, in the USA from 1935, known mainly for slightly sentimental mainstream novels like *Good-bye Mr Chips* (1934). His romantic LOST-WORLD novel, *Lost Horizon* (1933), is set in the hidden Tibetan valley of Shangri-La (his coinage), and deals with IMMORTALITY. The book is emotionally moving, and was extremely popular; it has been filmed twice (LOST HORIZON). [JC] Other works: *Nothing So Strange* (1947 US), associational, about an experimental scientist and the Manhattan Project. See also: ANTHROPOLOGY; UTOPIAS.

HINE, MURIEL

(? -) UK writer whose *The Island Forbidden to Man* (1946) seemed to espouse the feminist UTOPIA hinted at in the title (FEMINISM), but did not give it long for this world. [JC]

HINGLEY, RONALD (FRANCIS)

(1920-) UK lecturer in Russian studies and writer whose sf novel *Up Jenkins!* (1956) satirically presents a UK split in two, the northern half remaining more or less free, the southern half, *People's Britain*, being ruled in totalitarian fashion. The SATIRE of *People's Britain* is deft. [JC]

HINTON, C(HARLES) H(OWARD)

(1853-1907) UK author whose many essays about the fourth and other DIMENSIONS in space and time are collected along with some works of fiction in *Scientific Romances* (coll 1886) and *Scientific Romances: Second*

Series (coll 1902). His interest was partly inspired by Edwin ABBOTT's Flatland (1885), and he wrote a novel of his own set on a circular two-dimensional world, An Episode of Flatland (1907). His other sf story is "Stella", in Stella and An Unfinished Communication (coll 1895; reprinted as part of Scientific Romances: Second Series), a short novel about an invisible girl which antedated H.G. WELLS's The Invisible Man (1896). "An Unfinished Communication" is a metaphysical fantasy which represents life after death as freedom to move in the fourth dimension (time) through the moments of life, "unlearning" and re-evaluating. "The Persian King", in Scientific Romances, is a curious allegory applying mathematical logic to Christian ideas of atonement. Interest in CHH's work has recently been revived by virtue of the attention paid to it in stories and essays by Rudy RUCKER. [BS]See also: ESCHATOLOGY; INVISIBILITY; MATHEMATICS; RELIGION.

HINZ, CHRISTOPHER

(1951-) US writer who made a considerable impact with the Paratwa sequence: Liege-Killer (1987) - which won the Compton Crook/Stephen Tall AWARD for Best First Novel - Ash Ock (1989) and The Paratwa (1991). From the first, the sequence has given off a sense of professional polish and hurry, densely packing a wide variety of 1980s adventure-sf conventions into an intensely realized post- HOLOCAUST setting dominated by SPACE HABITATS which contain those who escaped before the end of life on Earth. Technology is controlled, but pressure is building; and when the Paratwa - pre-holocaust, genetically primed assassins - begin to reappear, CH soon engages a large cast in violent action, as the villains are hunted down and their masters (the Ash Ock) are exposed. It could not be claimed that the second and third volumes of the sequence show any deep originality, but the impersonal vigour of the narrative strikes a responsive note. A singleton, Anachronisms (1988), also demonstrates CH's canny adherence to demanding genre models in the tale of a corporation-owned survey ship - packed with CYBORGS, ESPERS, obsessed SCIENTISTS, a paramilitary cadre, and Realpolitik-driven AIs - which must face the threat of a seemingly undefeatable ALIEN which assaults them from an about-to-be-exploited planet. The parallels with the movies ALIEN (1979) and ALIENS (1986) are too explicit not to have been meant as a homage, and demonstrate that the sophisticated models of action in space deployed by those films had become necessary to high-quality, cutting-edge written adventure sf. CH is an alert follower. [JC]

HIRD, JAMES DENNIS

(1850-?1920) UK writer involved in 19th-century temperance movements and Christian socialism. His Toddle Island; Being the Diary of Lord Bottsford (1894), an Erewhonian UTOPIA set on an ISLAND in the Pacific, rather effectively satirizes much of UK intellectual life. [JC]

HIRSCHMAN, EDWARD

[r] Edgar Rice BURROUGHS.

HISTORY IN SF

The real history of the world and the many alternative histories which might have replaced it (ALTERNATE WORLDS) are extensively featured in sf

stories of TIME TRAVEL and PARALLEL WORLDS, but sf writers have also drawn much inspiration from history in designing hypothetical futures. Sometimes, like Charles L. HARNESS in *Flight into Yesterday* (1949 *Startling Stories*; exp 1953; vt *The Paradox Men*) and James BLISH in *CITIES IN FLIGHT* (1950-62 var mags; omni 1970), they have made use of actual theories-from Arnold Toynbee (1889-1975) in the former case, Oswald Spengler (1880-1936) in the latter - which have claimed to detect authentic cyclic patterns in history; more commonly, though, they have simply borrowed the past as a convenient template. Thus Miles J. BREUER and Jack WILLIAMSON replayed the story of the American Revolution as the story of the revolt of the MOON's colony against its Earthly masters in *The Birth of a New Republic* (1930 *AMZ*; 1981); Robert A. HEINLEIN later did this more convincingly in *THE MOON IS A HARSH MISTRESS* (1966). Isaac ASIMOV gave to this process of borrowing a new gloss of sophistication in the first phase of his *Foundation* series (1942-50 *ASF*; in 3 vols 1951-3; as *THE FOUNDATION TRILOGY* omni 1963) by inventing his own futuristic science of PSYCHOHISTORY, by which Edward Gibbon's retrospective analysis of the decline and fall of the Roman Empire is transmuted into Hari Seldon's prophetic analysis of the decline and fall of the GALACTIC EMPIRE. Seldon's Plan, however, can change these deterministic prophecies by social engineering. Interestingly, a later novel by Asimov, *The End of Eternity* (1955), argues as strongly against social engineering as the *Foundation* series argued for it. Toynbee eventually recanted the cyclic theory outlined in *A Study of History* (12 vols 1934-61), and the earlier quasideterministic theories of Giambattista Vico (1668-1744) and Spengler's *Decline of the West* (1918-22) never quite attained academic respectability, but the attractions of such theories to sf writers are obvious. Blish's fascination with Spengler became deep, respectful and altogether serious, and A.E. VAN VOGT drew inspiration from Spengler in *The Voyage of the Space Beagle* (fixup 1950). Toynbee's ideas continued to echo various writers' works, including Frederik POHL's and C.M. KORNBLUTH's "Critical Mass" (1961), in which they are quoted directly, Frank HERBERT's *DUNE* (fixup 1965), which seems to draw on Toynbee's picture of the Janissary-supported Turkish courts of the later Middle Ages, and Larry NIVEN's *A World out of Time* (1967), which uses the Toynbee-derived notion of "water-monopoly empires" - i.e., empires founded on irrigation control. Philosophers of history who dealt in NEAR-FUTURE climaxes rather than recurrent cycles - G.W.F. Hegel (1770-1831) and Karl Marx (1818-1883) are the most obvious examples - have naturally been of less interest to sf writers. The PULP MAGAZINES inherited from the dime novels (DIME-NOVEL SF) a striking "mythologized" version of the USA's recent past in the Western genre, which glorified the "frontier spirit". This myth (see also SOCIAL DARWINISM) was transferred to sf, where it became the animating force of countless stories about the exploration of the Solar System and the COLONIZATION OF OTHER WORLDS. The reflection of this mythical version of US history has maintained a tenacious hold over the images of the future contained in GENRE SF, and has been elaborated in various ways, sometimes painfully naive and sometimes quite extraordinary. (The phenomenon is not, of course, restricted to fiction; the idea of space as a "high frontier" requiring conquest by bold pioneers informs much actual political rhetoric, and may be regarded as NASA's guiding

myth.) It is not only US history per se which is reflected in stories of space pioneering; US writers have been perfectly willing to adapt "relevant" bits of more distant history, producing such images as those in Poul ANDERSON's *The High Crusade* (1960), H. Beam PIPER's *Space Viking* (1963) and Ben BOVA's *Privateers* (1985). Anderson has been a particularly prolific and artful borrower of entrepreneurial models from the past, taking in explorers, privateers, merchant princes and all manner of military empire-builders. Unlike US genre sf, UK SCIENTIFIC ROMANCE was heavily influenced by more pessimistic metaphysical notions of eternal recurrence. As citizens of an empire in decline rather than descendants of mythical pioneers, UK writers inherited a rather different attitude to the past, reflected in such elegiac and defeatist fantasies of cyclic history as Edward SHANKS's *The People of the Ruins* (1920), Cicely HAMILTON's *Theodore Savage* (1922) and John GLOAG's "Pendulum" (c1930) and *Tomorrow's Yesterday* (1932). J.B. PRIESTLEY's *Time plays* dealt more delicately and not quite so darkly with similar philosophical ideas. Olaf STAPLEDON adopted a more robust view of future history in his classic *LAST AND FIRST MEN* (1930), toying with cyclicity but eventually discarding it in favour of a more open-ended philosophy of progress, but even he could not shake off a pessimistic conviction that whatever civilizations rise up must ultimately decline and fall. The pulp-sf writers were sometimes suspicious of the idea of progress, but in general they had much more faith in the notion that contemporary civilization was destined to thrive and expand for some considerable time; such future histories as Laurence MANNING's in *The Man who Awoke* (1933 *Wonder Stories*; fixup 1975) and the far more elaborate patterns drawn in the future-history series of Heinlein and Anderson are conspicuously open-ended. Relatively few pulp visionaries imagined that any significant and irreversible rot was likely to set in before the Galactic Empire had attained a glorious zenith. (*GALACTIC EMPIRES* for the argument that the open framework supplied by Asimov's *Foundation* series proved so comprehensive as to render unnecessary the sort of future history worked out with such pains by Heinlein and in rather less detail by later writers.) In somewhat similar fashion, UK writers of scientific romance have often tended to see the past as something inelastically resistant to change. William GOLDING's inventor in "Envoy Extraordinary" (1956; play version *The Brass Butterfly* 1958) fails ignominiously to interest the Roman Empire in gunpowder, the steam engine and the printing press, just as the scientist in Ronald W. CLARK's *Queen Victoria's Bomb* (1967) finds that his invention arouses little excitement in Victorian England. (It was, of course, the UK that produced Herbert Butterfield [1900-1979], the historian who wrote the clever satire *The Whig Interpretation of History* [1931] in an attempt to expose the absurdity of belief in progress, and also the folly of that kind of history written, perhaps unwittingly, to flatter a society's image of itself; many works of sf, even though set in the future, are open to the criticism of "whiggery".) In sharp contrast, the hero of L. Sprague DE CAMP's classic pulp timeslip story *LEST DARKNESS FALL* (1939 *Unknown Worlds*; 1941; rev 1949) averts the Dark Ages by means of a series of small and subtle technological fixes, and many genre writers felt it necessary to set up corps of "time police" to protect history from casual spoliation by careless or evil-minded time-travellers. Examples include Anderson's

The Guardians of Time (fixup 1960) and The Corridors of Time (1965), Barrington J. BAYLEY's The Fall of Chronopolis (1974) and Diana Wynne JONES's A Tale of Time City (1987); however, Fritz LEIBER's Change War series includes one story, "Try and Change the Past" (1958), whose basic point is the impossibility of changing history at all. It was not until the spectre of the Bomb caught up with US sf writers that tragic images of historical recurrence - like that in Walter M. MILLER's classic A CANTICLE FOR LEIBOWITZ (1955-7 FSF; fixup 1960), which portrays a future Dark Age in which learning has once more retreated to the monasteries - began to appear in some quantity. More pessimistic philosophies of history, like the one deployed in Kornbluth's "The Only Thing We Learn" (1949) and the one detected by John F. CARR in the stories he collected for H. Beam PIPER's posthumous Empire (coll 1981), also began to infect genre sf in this period. More recently, the aftermath of world-scale HOLOCAUST has been much more widely exploited as a setting for historical "replays" in such novels as Paul O. WILLIAMS's Pelbar Cycle, begun with The Breaking of Northwall (1981), and Kim Stanley ROBINSON's THE WILD SHORE (1984). However, the progressive optimism of US sf has generally been maintained, being unrepentantly and exuberantly displayed in such fantasies of history as D.R. BENSEN's ironic And Having Writ . . . (1978) and Poul Anderson's THE BOAT OF A MILLION YEARS (1989). Anderson and other US writers in the same vein have always taken it for granted that liberal democracy is the evolutionary ideal of all political systems. Although UK sf has absorbed much of the imaginative drive of US sf since the importation of the genre label, its more thoughtful exponents have always maintained a relatively modest and sceptical attitude to the dynamics of history, as displayed in such novels as Brian W. ALDISS's An Age (1967; vt Cryptozoic! US and later UK edns), Andrew STEPHENSON's The Wall of Years (1979) and Ian WATSON's Chekhov's Journey (1983). [TS/BS]

HISTORY OF SF

Sf is an impure genre (DEFINITIONS OF SF) which did not finally take shape until the late 19th century, although all its separate elements existed earlier. If the labelling of any earlier story as sf depended only on the presence of sf elements there would be many such. The Babylonian Epic of Gilgamesh, for example, has a FANTASTIC VOYAGE and a great world-flood, and in those respects it qualifies; but such retrospective labelling is not very useful, since there is no sense at all in which we can regard sf as a genre conscious of being a genre before the 19th century. Sf proper requires a consciousness of the scientific outlook, and it probably also requires a sense of the possibilities of change, whether social or technological. A cognitive, scientific way of viewing the world did not emerge until the 17th century, and did not percolate into society at large (FUTUROLOGY) until the 18th (partly) and the 19th (to a large extent); a sense of the fragility of social structures and their potential for change did not really become widespread until the political revolutions of the late 18th century. These questions are discussed further under PROTO SCIENCE FICTION, in which entry a number of early scientific fictions, from Johannes KEPLER through CYRANO DE BERGERAC and Jonathan SWIFT, along with even earlier writers, are treated. The main elements which eventually, in varying proportions, became melded into sf

are as follows: (1) the FANTASTIC VOYAGE; (2) the UTOPIA (along with the Anti-Utopia and the DYSTOPIA); (3) the conte philosophique, or Philosophical Tale (SATIRE); (4) the GOTHIC; (5) the TECHNOLOGICAL and SOCIOLOGICAL Anticipation, especially as it developed into the US tradition of the tale of DISCOVERY AND INVENTION in the dime novels (DIME-NOVEL SF; EDISONADE). As with sf, these constituent genres are not generically pure: for instance, the Fantastic Voyage is combined with the Dystopia in Jonathan Swift's Gulliver's Travels (1726; rev 1735); the Gothic is combined with the Anticipation in The Mummy! (1827) by Jane LOUDON. The two figures most important to sf in the early 19th century were Mary SHELLEY and Edgar Allan POE, both of whom wrote Gothic romances informed with a degree of scientific speculation, standing out in this respect from isolated, freakish speculations such as Captain Adam SEABORN's Symzonia (1820), one of the earliest of the many novels based on the idea of a HOLLOW EARTH, and A Voyage to the Moon (1827) by Joseph ATTERLEY. By the middle of the century a number of US writers, in particular, were making use of sf elements in their work, notably Nathaniel HAWTHORNE, Herman MELVILLE and Fitz-James O'BRIEN, as was Lord LYTTON in the UK. In the 1860s Jules VERNE began to publish something more strongly resembling modern sf than anything written by his predecessors. His books were described as "Extraordinary Voyages" by his publisher; many of them deal directly with the impact of NEAR-FUTURE technology. After Verne, and to some extent because of his success, the sf trickle became a torrent. The next figure whose work had a truly transformative impact on early sf was H.G. WELLS, in many of whose stories which began to be published in the 1890s the Gothic, the Utopia and the Anticipation are closely bound together and reworked into a form which all readers today recognize as inarguably sf. Most sf since Wells's has adhered more or less closely to the Wellsian balances between abstract speculation and characterization and between scientific and sociological speculation. Though Wells's achievement was great, it is too simple by far to imagine as earlier accounts of the genre did to a greater or lesser extent that sf jumped straight from Verne to Wells and then exploded into the form we know today. Wells had many contemporaries who wrote sf, and many predecessors; between the publication of Verne's first sf novel, Cinq semaines en ballon (1863; trans as Five Weeks in a Balloon, or Journeys and Discoveries in Africa, by Three Englishmen 1869 US), and Wells's first, THE TIME MACHINE (1895 US; rev 1895 UK), the genre had been consolidating and expanding. Notable titles from the period are, in chronological order: The Steam Man of the Prairies (1868) by Edward S. ELLIS, "The Brick Moon" (1869) by Edward Everett HALE, The Battle of Dorking (1871 chap) by George T. CHESNEY, The Coming Race (1871) by Lytton, Erewhon (1872) by Samuel BUTLER, Recits de l'infini (1872 France; trans as Stories of Infinity: Lumen 1873) by Camille FLAMMARION, Frank Reade and his Steam Man of the Plains (as "The Steam Man of the Plains" 1876; 1892) by Harry Enton (FRANK READE LIBRARY), She (1887) by H. Rider HAGGARD, Across the Zodiac (1880) by Percy GREG, Flatland (1884) by Edwin A. ABBOTT, After London (1885) by Richard JEFFERIES, L'Eve future (1886; trans as The Eve of the Future 1981 US) by VILLIERS DE L'ISLE-ADAM, Strange Case of Dr Jekyll and Mr Hyde (1886) by Robert Louis STEVENSON, "Les xiphuz" (1887; trans as "The Shapes") by J.H. ROSNY an, A Crystal Age

(1887) by W.H. HUDSON, *Looking Backward, 2000-1887* (1888) by Edward BELLAMY, *A Connecticut Yankee in King Arthur's Court* (1889) by Mark TWAIN, *A Plunge into Space* (1890) by Robert CROMIE, *News from Nowhere* (1890) by William MORRIS, *Olga Romanoff* (1894) by George GRIFFITH, *A Journey to Mars* (1894) by Gustavus POPE, and *The Call of the Cosmos* (1895 Russia; trans 1963) by Konstantin TSIOLKOVSKY. The above list is highly selective; it is only as a result of recent bibliographical research carried out by many scholars including Tom CLARESON, I.F. CLARKE, Lyman Tower SARGENT, Darko SUVIN and pre-eminently Everett F. BLEILER in *Science-Fiction: The Early Years* (dated 1990 but 1991) that we have become able to see how radically incomplete it is. Bleiler lists 618 sf works (stories and novels) for this same period 1863-95. Despite the comparative lack of well remembered names among the authors of sf in that period, it is now clear that the last three decades of the 19th century were the seed-bed for the modern genre. Wells did not spring from nowhere; he refined an existing tradition. In the 1880s and after, many new and inexpensive MAGAZINES appeared, and quite a few of them published sf stories, as did the dime novels (DIME-NOVEL SF) in the USA and the BOYS' PAPERS in the UK a little later, and with the advent of the PULP MAGAZINES (as opposed to the "slicks") in the late 1890s the market for magazine sf expanded still more. These changes meant that sf was for the first time finding a truly popular audience, but one whose expectations of literature were often crude; the prime demand was for an action-packed story. By Wells's time a rift between the SCIENTIFIC ROMANCE and pulp sf was beginning to open. Several of the pre-Wells titles listed above initiated subgenres which were to prove popular. The *Steam Man of the Prairies* inaugurated sf in dime-novel format, usually featuring boys involved in the creation and use of marvellous inventions (these were the years when Thomas Alva Edison [1847-1931] was becoming a national hero in the USA; EDISONADE). Sf dime novels continued until the 1900s, at which time they were gradually replaced by such JUVENILE SERIES as TOM SWIFT and by the stories in the new PULP MAGAZINES. H. Rider Haggard's *She*, a great success, led to the massive popularity of the LOST-WORLD romance; this continued with some vitality into the 1930s, and is not quite extinct even today. George T. Chesney's *The Battle of Dorking* ushered in the era of the future- WAR story, which often featured INVASION, perhaps the most popular of all the fringe sf genres in the late 19th century. Wells's *THE WAR OF THE WORLDS* (1898) popularized the extraterrestrial invasion. Future-war stories remain popular today, especially in interstellar venues, but their great era ended with the start of WWI, which so devastatingly failed to fulfil future-war writers' expectations of a vivid and rapidly concluded conflict. The earlier potted histories of sf that jumped from Verne (1863) to Wells (1895) tended to do the same for the years between Wells and AMZ (1926), as if the intervening years were comparatively empty. Yet the period 1895-1926 is considerably more packed than even 1863-95. There is not space here to give titles; authors whose sf largely appeared in the first instance in magazines include Frank AUBREY, Edgar Rice BURROUGHS, William Wallace COOK, Ray CUMMINGS, George Allan ENGLAND, Ralph Milne FARLEY, Homer Eon FLINT, Austin HALL, Murray LEINSTER, A. MERRITT, Victor ROUSSEAU and Garrett P. SERVISS; those primarily remembered for book publication include Edwin Lester ARNOLD, J.D. BERESFORD, Karel CAPEK, J.J. CONNINGTON, Arthur Conan DOYLE, E.M. FORSTER, Owen GREGORY, Will N.

HARBEN, Milo HASTINGS, William Hope HODGSON, Fred T. JANE, Rudyard KIPLING, Kurd LASSWITZ, David LINDSAY, Jack LONDON, John MASTIN, E. V. ODLE, Max PEMBERTON, Maurice RENARD, M.P. SHIEL, Guy THORNE, E. Charles VIVIAN, Edgar WALLACE, S. Fowler WRIGHT and Yevgeny ZAMIATIN. From an sf point of view, the most important magazines before the arrival of the specialist sf magazines were those published by Frank A. MUNSEY in the USA and, in the UK, PEARSON'S MAGAZINE and PEARSON'S WEEKLY. Many reputations were made in the magazines, the most influential being that of Edgar Rice Burroughs; his first work was "Under the Moons of Mars", which appeared in 1912 in Munsey's ALL-STORY MAGAZINE as by Norman Bean and later in book form, expanded as A PRINCESS OF MARS (1917), under his own name. Burroughs's great popularity did much to skew magazine sf away from scientific and social speculation towards the PLANETARY ROMANCE adventures in colourful and usually primitive other-worldly landscapes in effect creating the genre which would later become known as SCIENCE FANTASY. By 1926 the split between mainstream and genre sf was becoming pronounced; mainstream sf is explained in detail in MAINSTREAM WRITERS OF SF, but here we can briefly say that it is sf by writers (often already established as authors of non-sf novels and stories) working outside the traditions of magazine sf, and who often (though not always) appear to be ignorant of the very existence of those traditions. At worst, this leads to an inordinate amount of re-inventing the wheel; at best, writers like Olaf STAPLEDON or John GLOAG or Aldous HUXLEY or Andr MAUROIS have been free to write serious books for adults without the constrictions imposed by PULP-MAGAZINE editors aiming at a predominantly juvenile and not especially literate readership. But it is only with hindsight that we can refer to these authors as mainstream: because "science fiction" as a marketing label was not a term widely used in the USA in the 1930s and was hardly used at all in the UK before the 1950s, we can hardly be surprised if writers in the UK failed to adhere to sf's generic protocols. Is there any point in calling a river the main stream before the tributary exists? However, Olaf Stapledon did not write in a vacuum, any more than had his predecessor H.G. Wells. Brian M. STABLEFORD, in Scientific Romance in Britain 1890-1950 (1985), makes a powerful case for the Scientific Romance, tales characterized by a moderate gloom (OPTIMISM AND PESSIMISM), long temporal perspectives (EVOLUTION) and a paucity of HEROES. Arguably many Scientific-Romance authors-who tend to be regarded by modern critics (especially in the USA) as mainstream were in fact conscious of writing in an sf tradition, but one rather different from that developing in the US magazines: it was UK-based, and it was nurtured in hardcover books rather than magazines, but for all practical purposes it was indeed an sf tradition. In the UK it is only since the 1940s that the magazine GENRE-SF tradition and the Scientific Romance tradition have really merged, in the work of Arthur C. CLARKE, John WYNDHAM and others. GENRE SF was usually published in the first instance in magazine format (at least until the paperback book revolution of the 1950s). The first English-language magazine devoted wholly to sf was AMAZING STORIES, founded in 1926 by Hugo GERNSBACH; it was subtitled "The Magazine of Scientifiction" (SCIENTIFCTION). Many SF MAGAZINES followed, although not in large numbers before the 1940s. The usual modern term "science fiction" was hardly used before the early 1930s, and did not pass into

general parlance before John W. CAMPBELL Jr took over the editorship of ASF. But genre sf was becoming readily distinguishable as a separate entity. Until the 1960s the perception of middle-class readers was that sf by authors like Aldous HUXLEY, George ORWELL and George R. STEWART was "respectable" (they would probably not have described it as sf) while genre sf was not. Perhaps to rectify this sort of prejudice, most of the earlier books about sf heavily emphasized genre sf, and in so doing distorted the history of sf as a whole. A high proportion (although less than half) of the authors represented in this volume are not genre-sf writers, and those who published before, say, 1955, might not even have understood the "sf" label had it been applied to their work, which it almost invariably was not (and in many cases is not today). The standard histories usually give a passing nod to Huxley and Orwell, but the sheer scale of sf publication outside the magazine tradition is still not generally realized-works by writers as diverse as John COLLIER and L.P. HARTLEY, William GOLDING, C.S. LEWIS, Oscar LEWIS, Sinclair LEWIS and Wyndham LEWIS, Vladimir NABOKOV and Rex WARNER and Herman WOUK. In the 1930s, indeed, magazine sf was at rather a low ebb, though at this time the new subgenre of SPACE OPERA was being developed almost entirely within the magazines. The extraordinary growth in sf publishing since WWII has caused us to forget its relative unimportance up to the end of the 1930s. Out of many hundreds of specialized pulp magazines, only a few were devoted to sf; it is unlikely that, in those days, sf had more than 2-3 per cent of the pulp market. Many magazine-sf writers turned their hand to any of half a dozen pulp genres. It was not until a generation of sf specialists began publishing in the magazines at the end of the decade that the so-called Golden Age of (magazine) sf began. There were specialist forerunners of course, notable among them being John W. CAMPBELL Jr (often writing as Don A. Stuart), Edmond HAMILTON, E.E. "Doc" SMITH, John TAINE, Stanley G. WEINBAUM and Jack WILLIAMSON; but little of it is as enjoyable to read now as once it was. Magazine sf of the 1930s is important mainly for what it led to, especially when Campbell took over the editorship of ASF in Oct 1937 (for the detailed story ASTOUNDING SCIENCE-FICTION and GOLDEN AGE OF SF), and magazine sf began to become mature; during 1938-46 many of its most celebrated writers Isaac ASIMOV, Alfred BESTER, James BLISH, Arthur C. CLARKE, Robert A. HEINLEIN, Frederik POHL, A.E. VAN VOGT and many others made their debuts. The sf that was published in the magazines during the Golden Age was to be the basis of the sf book-publishing boom which in both hardcovers and paperback, first by specialist SMALL PRESSES and then by mass-market publishers was a phenomenon of the 1950s and has continued unabated ever since. At first the majority of these sf books reprinted their material directly from the magazines. The gradual shift of emphasis from magazine to book publication (until the late 1960s, unlike the case in any other branch of literature, prior publication in a magazine was still the rule rather than the exception) won genre sf a much larger readership than ever before; by the 1970s sf constituted around 10 per cent of all English-language fiction published, and with the growing readership came a greater public acceptance of sf as "respectable". Sf book publishing is discussed under the rubrics SF PUBLISHING and ANTHOLOGIES. The increase in maturity of genre sf during the 1940s was only relative. Most sf publishers from 1926

seem to have assumed that their main readership was made up of teenage boys, as is obvious in both editorial and advertising material right through the era of the sf PULP MAGAZINES at least to 1950 and after. The publisher Donald A. WOLLHEIM is on record as believing this, and we can see confirmation in the remarkable but adventure-story-oriented sf lists he edited from the 1950s, first at ACE BOOKS and later at DAW BOOKS. A similar targeting of the young readership has been adopted successfully by DEL REY BOOKS. On the other hand, Jim BAEN, editor of GALAXY SCIENCE FICTION in the mid-1970s, believes surveys support him in showing that the readership reaches its median age in the mid-20s. No market surveys yet carried out have been extensive or reliable enough to prove the point one way or the other, though it has long been obvious that there is actually more than one sf market. Whatever the truth of the matter, the belief that the readership was young and primarily male was sufficient to discourage genre sf from including complex or experimental writing; the vocabulary of the pulp magazines, while vigorous, was mostly undemanding. Before the cultural shifts of the 1960s, which affected all fiction publishing, genre sf normally observed TABOOS about SEX, bad language and RELIGION. Even in the 1970s these taboos were ingrained deeply enough to cause some able writers to abandon sf altogether, or to talk publishers into printing their books without the ghetto-izing "sf" label on the cover. The domination of Campbellian sf within the genre began to falter with the inauguration of two important new magazines, The MAGAZINE OF FANTASY AND SCIENCE FICTION in 1949 and GALAXY SCIENCE FICTION in 1950. The former emphasized literacy and style to an extent unprecedented in sf-magazine publishing, and the latter specialized in witty SATIRE, often sociological rather than technological, written by such important writers as Alfred BESTER, C.M. KORNBLUTH and Frederik POHL, Robert SHECKLEY, William TENN and, occasionally, Philip K. DICK. During the 1950s and 1960s, the emphasis of genre sf shifted from the hard sciences (engineering, astronomy, physics, etc.) to the SOFT SCIENCES (sociology, psychology, etc.). Stories of PSI POWERS and ESP had been popular ever since the first appearance of A.E. van Vogt's SLAN (1940 ASF; 1946; rev 1951), but they absolutely boomed in the 1950s; the market eventually became saturated (as it did at about the same time with flying-saucer stories; UFOS), and the psi story subsided to a lower though constant level in the 1960s. The 1950s were also notable for the first real sf boom in the movies (CINEMA; MONSTER MOVIES), though the films were rather different from most written sf of the period. The most obvious change in 1950s sf is surprisingly seldom discussed: the shift in protagonists from highly trained, self-reliant and in control of events to baffled, ordinary and subject to manipulation by the powerful in society. As worries about POLITICS, ECOLOGY and OVERPOPULATION grew in the 1960s, an already perceptible shift away from simple optimism began to accelerate (OPTIMISM AND PESSIMISM). This move is much connected in readers' minds with the advent of the NEW WAVE, though this was never an easily definable movement indeed, it was not an organized movement at all and its outward signs lay as much in a greater willingness to adopt more complex narrative strategies as in any generally downbeat attitude. But pessimism in sf certainly did increase in the late 1960s, reflecting massive cultural changes taking place in Europe and the USA, as did left-wing political attitudes; most previous genre sf had

either been dead to POLITICS or had adopted a stance interpreted by many as right-wing (LIBERTARIANISM; SOCIAL DARWINISM). The late 1960s were also notable for seizing on the idea of ENTROPY as a useful all-purpose metaphor. Isaac Asimov, looking back from 1981, described magazine sf of 1926-38 as "adventure dominant", that of 1939-50 as "technology dominant", and that of 1950 on as "sociology dominant". James E. Gunn preferred to describe the Campbell years as "science-dominant", and added a fourth category, "style dominant", for the period beginning in the mid-1960s. John CLUTE's shorthand account, given in 1992, is rather different: "In 1942 . . . the inner tale of sf was a tale of empire . . . in 1952, it was hubris . . . in 1962, solipsism . . . in 1972, retribution . . . in 1982, memory . . . in 1992, the inner tale of sf is a tale of exogamy." This, though an initially cryptic-seeming formulation, is one for which most readers would find it surprisingly simple to provide supporting examples. By the 1960s sf was being read so much more widely than before that its ideas, and its iconography generally, had begun dramatically to feed back into mainstream fiction previously the intellectual traffic had been mostly the other way. While some writers, such as Kurt VONNEGUT Jr, J.G. BALLARD and Michael MOORCOCK, succeeded (to varying degrees) in shrugging off the sf taint, other writers were embracing sf, so that, although it might be controversial to claim some of the works of Angela CARTER, Romain GARY, Russell HOBAN, Thomas PYNCHON and Angus WILSON (and many others) as pure sf, there is little question that their thrillers, romances or fabulations drew on sf among their more obvious sources. Since 1960 there has been a complex cross-fertilization of genres. While, at the intellectual end of the spectrum, FABULATIONS have been making more and more use of sf images and themes, at the popular end fantasy, horror and DISASTER novels have borrowed heavily from sf, as has the bestseller (itself now a definable genre). As an example of the latter, The Crash of '79 (1976) by Paul E. ERDMAN is pure sf extrapolation, though it uses the conventional narrative strategies of the bestseller in its tale of NEAR-FUTURE disaster in POLITICS and ECONOMICS. Barbara HAMBLBY and David GEMMELL are only two of the writers who import sf elements into their fantasies. At the beginning of the 1990s, generic labelling is less insistent than it was a decade earlier, and bookshops regularly place sf on the same shelves as fantasy and horror (as, indeed, they have for a long time); in some cases the books are by the same authors. With hindsight, it might seem that sf as a separate, definable genre was a phenomenon of, say, 1926-65. By the 1990s hard sf, arguably the heart of the genre in an earlier era, had shrunk to a comparatively small section of the overall sf market. A significant cultural change took place in 1992 when the SCIENCE FICTION WRITERS OF AMERICA officially agreed to admit fantasy and horror writers to their ranks (in practice, many had been there for years), the organization changing its name to the Science Fiction and Fantasy Writers of America. Many of the stories in Gardner DOZOIS's Year's Best Science Fiction anthologies are so far removed from their generic roots that they would not appear out of place in, say, The New Yorker. At the same time, a Postmodernist (POSTMODERNISM AND SF) nostalgia for sf of an earlier, simpler period became apparent from the number of pastiche works published by sf writers in the 1980s and 1990s that referred selfconsciously and often to the genre's own history. (Three

early examples are Michael MOORCOCK's *Dancers at the End of Time* sequence, Brian W. ALDISS's *Frankenstein Unbound* [1973] and Christopher PRIEST's *The Space Machine* [1976].) The ages of development and consolidation have passed, it sometimes seems, to be replaced by an age of rococo decoration. While these developments have been more obvious since the late 1980s, they are no more than a culmination of a genre-mixing process that has been continuing since the New Wave of the 1960s. An important strand in this has been the commercial success of sf, largely catalysed by films, notably *2001: A SPACE ODYSSEY* (1968), *STAR WARS* (1977), and Steven SPIELBERG's *CLOSE ENCOUNTERS OF THE THIRD KIND* (1977) and *E.T.: THE EXTRATERRESTRIAL* (1982). The result of this success was a much greater awareness in the 1980s of sf as a commercial "product" to be packaged like any other, and aimed at the juvenile end of the market. The 1980s rapidly became a bibliographer's nightmare, with the proliferation of various BRAIDS and TIES, many of them SHARECROPS: tv and film novelizations and spin-offs, SERIES, SHARED WORLDS, GAME-WORLDS and so on. Most of these categories had existed earlier, but never on the massive scale of the 1980s and the present. Though patient readers could find good work within them, the commercial imperatives generating them led all too obviously to an absolute deluge of hack work, far greater than had been visible in sf book publishing previously. Many sf authors have argued that this mass of "product" is drowning out the individuality of what publishers call the midlist: that portion of their booklist that sells reliably if not in huge numbers, and without much in the way of promotion the portion to which books by most of the better sf authors belong. Fortunately, apocalyptic premonitions of sf's imminent death by drowning seem (as usual) premature; if anything, greater numbers of exciting sf writers emerged in the 1980s than in the 1970s. Sf, by marrying outside the genre (one of the meanings of "exogamy" in Clute's terms), is more likely to disappear by a generalized cultural absorption than through neglect. At the beginning of the 1980s LOCUS was listing about 180 new English-language genre-sf novels each year; by the end of the decade the figure was about 280 (the Locus figures are likely to be on the low side). This is not necessarily a proof of the genre's health, but it certainly does not look like a symptom of terminal illness. By the end of the 1980s the sf-film boom was wavering and, as ever, sf on tv was still not having the good fortune that eager producers intending to ride on the film boom of the early 1980s kept (and still keep) hoping for, generally destroying all hope of real success by playing it safe and producing programmes of staggering banality. The few surviving professional sf magazines had dwindling circulations, even ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE (founded 1977), which could be regarded as the only new US sf magazine to approach the high quality of what had been the big three: ASF, FSF and Galaxy. In another part of the sf landscape the news was more cheerful: as desktop publishing, using comparatively cheap home computers, became possible, there was in the mid-1980s a proliferation of SEMIPROZINES, some containing fiction, some containing criticism, and some both. These magazines, even though usually of quite small circulation, soon proved something of a nursery and a debating ground for many young writers; this compensated, to a degree, for the shrinking of the professional-magazine market. The most exciting sf event of the 1980s was the advent of CYBERPUNK (with William GIBSON and

Bruce STERLING cast as its prophets); despite the obvious hyperbole with which it was greeted by the media publicity machines, cyberpunk certainly represented a real invigoration of the genre and came closer than anything else in the period to revitalizing hard sf as well. [PN]Further reading: A very much fuller account of sf's history can be gained by following up the various cross-references in the above entry. Many ANTHOLOGIES of sf from specific periods are available, and book reprint series have brought older works back into the light. Numerous books on the history of sf are discussed under CRITICAL AND HISTORICAL WORKS ABOUT SF.

HITCHCOCK, RAYMOND (JOHN)

(1922-) Indian-born UK writer and cartoonist whose Percy books - Percy (1969) (filmed in 1971 as Percy) and Percy's Progress * (1972), filmed in 1974 - find mirth in penis transplation. Venus 13: A Cautionary Space Tale (1972) also deals lightly with sex, depicting the complications that surround a eugenic mating in a space satellite. [JC]

HITCH HIKER'S GUIDE TO THE GALAXY, THE

Tv series (1981). BBC TV. Written and created by Douglas ADAMS, prod Alan J.W. Bell, associate prod John Lloyd, starring Simon Jones as Arthur Dent, David Dixon as Ford Prefect, Mark Wing-Davey as Zaphod Beeblebrox and Sandra Dickinson as Trillian. 6 35min episodes, re-edited to 7 episodes for first US release. Colour.This tv serial began life in 1978 as a 6-episode radio series (officially numbered Fit the First through Sixth) followed the same year by a one-off Fit the Seventh, with 5 more episodes in 1980 (2 cowritten with its producer John Lloyd, who also received a production credit on the tv series). This had built up a massive (for radio) cult following; commercially released recordings of the radio broadcasts sold widely. Adams then turned his scripts into the bestselling novels The Hitch Hiker's Guide to the Galaxy (1979) and The Restaurant at the End of the Universe (1980), with two further volumes later. The tv version was largely based on the first 6 radio episodes, only slightly on the subsequent 6; many scenes from the radio series were not included in the books. Adams had substantial tv experience, having been a script editor on DR WHO. The tv series was very funny indeed (although less liked by many aficionados than the original radio version) and was notable for the sophisticated graphics with which the eponymous talking Guidebook itself was animated. The series belongs to a very English school of comparatively deadpan (and somewhat cruel) absurd humour, based on the implicit premise that the Universe is arbitrary and unkind, especially to the English, and suffers from galloping ENTROPY. Although US tv seldom produces work of this sort, the programme was successful there also, although not to the same extent as in the UK. It is often replayed, and is available on video, slightly expanded, with average episodes of 40 rather than 35 mins. [PN]

HITLER WINS

For nearly half a century it has been an enjoyable creative exercise to imagine what kind of ALTERNATE WORLD might have evolved had Germany won WWII, and many novels and stories have been written to explore that assumption. But the first Hitler-wins tales were not exercises in reconstructing history; Swastika Night (1937) by Murray Constantine (

Katharine BURDEKIN), was not set in an alternate world, and nor were the several others published 1939-45. Any Hitler-wins story published before the end of WWII falls under the general category of the future- WAR or INVASION tale, and was almost certainly designed as a dreadful warning of the consequences of defeat. Examples include *Loss of Eden* (1940; vt *If Hitler Comes* 1941) by Douglas Brown (1907-) and Christopher Serpell, *Then We Shall Hear Singing* (1942) by Storm JAMESON, *Grand Canyon* (1942) by Vita SACKVILLE-WEST, *When the Bells Rang* (1943) by Anthony ARMSTRONG and Bruce Graeme (1900-1982), and *When Adolf Came* (1943) by Martin HAWKIN. A subcategory - novels in which Hitler seems about to win, but loses an important battle or secret at the last moment - includes many borderline tales of warfare and espionage; among the serious examples are detailed fictional prognoses like Fred ALLHOFF's *Lightning in the Night* (1939 Liberty; 1979), which predicts a US readiness to use nuclear weapons against Germany as a final resort. The death of Hitler in 1945 marked the end of the real WWII in Europe, but for any number of reasons - the astonishing intensity of the evil he represented; the dreadful clarity of the consequences had the Allies failed; the melodramatic intensity of the conflict itself, with the whole war seeming (then and later) to turn on linchpin decisions and events; and (shamingly) the cheap aesthetic appeal of Nazism, with its Art Deco gear, its brutal elites, its Blitzes and Panzer strikes, its secrecy and paranoia - WWII very soon became a focus for speculative thought, and it was only a few months before the first alternate-world Hitler-wins tale was published (in HUNGARY): Laszlo Gaspar's *Mi, I. Adolf* ["We, Adolf 1"] (1945). The first significant example in English was SARBAN's *THE SOUND OF HIS HORN* (1952), which sinuously intertwines sadism and aesthetics into a vision of decadence with roots in Germany's mythic past. This book may have influenced - and certainly served as a tonal precedent for - several works both within the field, like Keith ROBERTS's "Weihnachtsabend" (1972), and outside it, as in non-alternate-history novels of Germany like Gabriel Fielding's *The Birthday King* (1962) and Michel Tournier's *Le Roi des Aulnes* (1970; trans Barbara Bray as *The Erl-King* 1972 UK). The most famous single Hitler-wins sf tale is probably Philip K. DICK's *THE MAN IN THE HIGH CASTLE* (1962), in which Hitler's victory becomes a kind of poisonous backdrop for a complex tale; and the most telling commentary on the moral underside of the subgenre is Norman SPINRAD's *The Iron Dream* (1972), in which the young Hitler, a failure at politics, becomes a pulp novelist whose tale *Lord of the Swastika* exploits, to savagely ironic effect, some of the responses of many readers to tales of "genuine" Nazi triumph. Half a century after the end of WWII, new Hitler-wins stories are less common, but the number written during this intervening period has been remarkable. They include Hilary BAILEY's "The Fall of Frenchy Steiner" (1964), Otto BASIL's *Wenn das der Fuhrer wusste* (1966; cut trans Thomas Weyr as *The Twilight Men* 1968 US), Greg BEAR's "Though Road No Whither" (1985), David BRIN's "Thor Meets Captain America" (1986), Len DEIGHTON's *SS-GB* (1978), J.R. DUNN's "Crux Gammata" (1992), David DVORKIN's *Budspy* (1987), Gordon EKLUND's "Red Skins" (1981), Harlan ELLISON's *STAR TREK* teleplay "The City on the Edge of Forever" (shown 1967), Gary Gyax's and Terry Stafford's *Victorious German Arms: An Alternate Military History of World War II* (1973 chap), Robert Harris's *Fatherland* (1992), James P. HOGAN's *The Proteus Operation*

(1985), Trevor HOYLE's Q: Through the Eye of Time (1977), the film IT HAPPENED HERE (1966), C.M. KORNBLUTH's "Two Dooms" (1958), Fritz LEIBER's THE BIG TIME (1961), Brad LINAWEAVER's Moon of Ice (1988), Norman Longmate's (1931-) If Britain had Fallen * (1974), based on a 1972 BBC programme, Kenneth Macksey's Invasion: The German Invasion of England, July 1940 (1980), Richard MEREDITH's Run, Come See Jerusalem (1976), in which the Nazis do eventually lose, though only after nuking Chicago, Frederic MULLALLY's Hitler has Won (1975), Eric NORDEN's The Ultimate Solution (1973), Andre NORTON's The Crossroads of Time (1956) and And All the King's Men (1990) by Gordon Stevens (1945-). An interesting theme anthology is Hitler Victorious (anth 1986) ed Gregory BENFORD and Martin Harry GREENBERG, which contains several of the stories listed above. Peter FLEMING's Invasion 1940 (1957; vt Operation Sea Lion 1957 US) describes in great detail the preparations Germany made to invade the UK in 1940, speculating in the last chapter on what might have happened had a successful invasion occurred. WWII, Fleming suggests, might in that event have been won by Hitler. [JC]

HIVE-MINDS

A hive-mind is the organizing principle of the community in those insect species of which the basic reproductive unit is the hive, organized around a single fertile female, the queen. The term is used more loosely in some sf stories, often referring to any situation in which minds are linked in such a way that the whole becomes dominant over the parts. Because the organization of social-insect communities is so very different from that of mammal communities, while showing a degree of structural complexity comparable only to human societies, ants and their kindred have always held a particular fascination for sf writers, and the ant-nest is the most obvious model for an ALIEN society. Early expressions of this fascination include "The Empire of the Ants" (1905) by H.G. WELLS, "The Adventures of Professor Emmett" (1939) by Ben HECHT, "The Ant with the Human Soul" (1932) by Bob OLSEN, "Doomsday Deferred" (1949) by Will F. Jenkins (Murray LEINSTER) and "Come and Go Mad" (1949) by Fredric BROWN. Wells's THE FIRST MEN IN THE MOON (1901) was the first of many to depict an alien hive-society. Giant ants and wasps are among the standard figures of menace employed by sf writers; notable examples are found in Ralph Milne FARLEY's The Radio Man (1924 Argosy; 1948), Frank A. RIDLEY's The Green Machine (1926), Alfred Gordon BENNETT's The Demigods (1939), the film THEM! (1954) and Keith ROBERTS's The Furies (1966). Real-world scares concerning "killer bees" have been reflected in such novels as Arthur HERZOG's The Swarm (1974) and the associated Irwin ALLEN film. "The Empire of the Ants" and other stories portray hive-insects as serious contenders to end human domination of Earth, but Frank HERBERT's The Green Brain (1966) imagines a multispecies insect hive evolving in order to protect the world's ecological balance against the short-sighted policies of humankind. Most sf novels which imagine hivelike human societies find the idea repugnant, and it is often cited as the ultimate totalitarian DYSTOPIA; examples include The Human Termites (1929 AMZ: 1979) by David H. KELLER, The Riddle of the Tower (1944) by J.D. BERESFORD and Esme Wynne-Tyson and Morrow's Ants (1975) by Edward HYAMS. L. Sprague DE CAMP's wry Rogue Queen (1951) features the revolutionary overthrow of a hivelike

state. Some recent sf writers have been more conscientiously ambivalent - examples include T.J. BASS's *Half Past Human* (1971), Frank Herbert's *Hellstrom's Hive* (1973) and Robert SILVERBERG's *The Queen of Springtime* (1989) - but their eventual verdict remains negative. Less hivelike group-minds are not uncommon in sf stories dealing with ESP, and the idea that some kind of group-mind represents the evolutionary destiny of the species crops up frequently; it figures extensively as an image of transcendental social harmony in Olaf STAPLEDON's *Last and First Men* (1930) and *Star Maker* (1937), and is memorably developed in Theodore STURGEON's *More than Human* (1953) and "To Marry Medusa" (1958; exp vt *The Cosmic Rape* 1958) and in Arthur C. CLARKE's *Childhood's End* (1953). The loss of individuality is, however, still seen as a horrific prospect in such novels as *Enemies of the System* (1978) by Brian W. ALDISS and *Dusha Mira* (1964; trans Antonina W. Bouis as *World Soul* 1978 US) by Mikhail EMTSEV and Eremei PARNOV. The ambivalence with which many recent sf stories regard hive-minds derives mainly from the association of group-minds with the notion of transcendent EVOLUTION, but there has also been a tendency for recent sf writers calculatedly to question the assumptions made by their forerunners. Thus, whereas in *Starship Troopers* (1959) Robert A. HEINLEIN was content to assume that human individualism and alien hive-organization must fight a fundamental Darwinian struggle for existence, Joe HALDEMAN was prepared to suggest in *The Forever War* (1974) that mankind might be greatly enriched by making peace with the aliens. The alien hive-minds in Barrington J. BAYLEY's "The Bees of Knowledge" (1975) and Keith LAUMER's *Star Colony* (1981) are treated with some respect, and Orson Scott CARD followed up the genocidal *Ender's Game* (1977 ASF; exp 1985) with *Speaker for the Dead* (1986), in which the guilt-stricken hero searches for a suitable home for the last surviving alien queen. The most detailed and sympathetic sf image of an alien hive-society is that in *Serpent's Reach* (1982) by C.J. CHERRYH; another clever deployment is in Linda STEELE's *Ibis* (1985), an ironic account of a love affair between an alien female and a human male. The actual genetic politics of hive-organization - revelation of which has been the greatest triumph of the sociobiology of Edmund O. Wilson (1929-) - whereby the misnamed "queen" stands revealed as a helpless sex-slave forced to work to the genetic advantage of her sisters, has not yet found significant reflection in sf. HJORTSBERG, WILLIAM (REINHOLD)

(1941-) US writer, much of whose work - like his first novel, *Alp* (1969), or his third, *Toro! Toro! Toro!* (1974) - is FABULATION. *Gray Matters* (1971), which is sf, grounds its fantastic episodes in a future UTOPIA where people are reborn (REINCARNATION) from entombment as "Cerebromorphs" within an enormous CYBERNETIC complex only when they have achieved some transcendence of their personal identities. *Falling Angel* (1978), filmed as *Angel Heart* (1987), grippingly marries detection and horror in a secret-sharer tale of striking grimness. [JC]Other works: *Symbiography* (1973); *Tales and Fables* (coll 1985 chap).

HOAXES

Most people know what happened when Orson Welles read *The War of the Worlds* on radio in 1938. Hearing of an invasion by Martians, many listeners headed for the hills. But this wasn't the first time that the public fell for a science fiction tale. In 1838 the *New York Sun* published a series of articles about the eminent astronomer, Sir John Herschel. Using a new and powerful telescope, one article said, Herschel could see that the moon was populated by humanoid figures with batlike wings. The reports caused a sensation. Eventually the newspaper admitted that one of its reporters had fabricated what became known as "The Moon Hoax." Nine years later, the *New York Sun* published as true Edgar Allan Poe's story about a hot air balloon that had blown across the Atlantic Ocean. Although the "Balloon Hoax" was exposed as false in less than one day, the story influenced French writer Jules Verne when he wrote *Five Weeks in a Balloon and Around the World in Eighty Days*.

HOBAN, RUSSELL (CONWELL)

(1925-) US-born writer and illustrator, in the UK from 1969. After serving in WWII, he worked in advertising and tv until the mid-1960s, becoming a full-time writer in 1967. Most of his many titles are children's books, about 50 of them being illustrated texts for younger children, like the first, *What Does It Do and How Does It Work?* (1959), and (to mention only one of many stunning fables) *La Corona and the Tin Frog* (1974 Puffin Annual; 1979 chap). Although not sf, his early masterpiece for children cannot go unnoticed: the potent allegorical burden of *The Mouse and his Child* (1967) may in fact have hampered its acceptance by the younger readers for whom it was ostensibly written, for the epic quest of a clockwork mouse and his son for a secure haven - where they will no longer need to undergo the existential trauma of needing to be rewound - is metaphorically dense and abidingly melancholy, and the *Dolls' House* they eventually reach does not absolve them from their own form of mortality. In other words, *The Mouse and his Child*, like all the greatest children's books, is best read twice: as a child, and again later. It was not until the 1970s that RH began to write the adult novels for which he has become best known, beginning with *The Lion of Boaz-Jachin and Jachin-Boaz* (1973), a FABULATION in which the raw Being of the long-dead lion of the world is embraced by the eponymous father and son in a moment of unity. Both *Kleinzeit* (1974) and *Turtle Diary* (1976) offer worlds displaced by language, though not on analysis literally fantastic. But RH's next novel, *RIDDLEY WALKER* (1980), for which he received the JOHN W. CAMPBELL MEMORIAL AWARD in 1982, is a genuine-and quite extraordinary - sf novel, set 2000 or so years after the HOLOCAUST in southern England, just as the barbarian societies of the land have rediscovered the use of gunpowder. It is a situation much explored in the sf of the latter half of

the 20th century, and RH's penetration of the moral and cultural complexities involved is acute; but what distinguishes the book from other attempts to represent something like a full sense of how it might actually seem to inhabit such a world is its language (LINGUISTICS), a remarkably inventive and internally consistent presentation of an evolved and living tongue. The often-quoted first sentence of the novel gives something of the flavour: "On my naming day when I come 12 I to gone front spear and kilt a wyld boar he parbly ben the las wyld pig on the Bundel Downs any how there hadnt ben none for a long befor him nor I aint looking to see none agen." In this tongue, legends - like the tale of the "Littl Shynin Man the Addom" - seem told in a timeless present tense, and Riddley Walker's own groping progress towards an understanding of the dangers of a return to the old ways also seems told for the first time. Subsequent novels have been fabulations of intriguing complexity, while some of the tales assembled in *The Moment under the Moment* (coll 1992) are of moderate genre interest. *Pilgermann* (1983) allows its 11th-century protagonist to inhabit various eras in a kind of ghost form. *The Medusa Frequency* (1987) heavily foregrounds the myths of Orpheus and Medusa in the tale of a 20th-century novelist who, like the twinned parent and son of RH's first adult novel, strives to find the moment, or the tongue, or the tale, that will join together in Being all that is asunder. But the later novel stops short of finding that Story. Only in RIDDLEY WALKER do the levels seem, at moments, to inhabit one another - do story and the world trick the eye into seeming one. [JC] See also: ANTHROPOLOGY; DEVOLUTION; HISTORY OF SF.

HOBANA, ION
[r] ROMANIA.

HOCH, EDWARD D(ENTINGER)
(1930-) US writer best known for his crime novels and stories. With the short story "Co-Incidence" (1956), as by Irwin Booth, he began publishing detection-oriented sf, later using as well the pseudonyms Stephen Dentinger, Pat McMahon and R.L. Stevens. The numerous stories featuring detective Simon Ark, who claims to be 2000 years old - some collected in *The Judges of Hades and Other Simon Ark Stories* (coll 1971), *City of Brass and Other Simon Ark Stories* (coll 1971) and *The Quests of Simon Ark* (1984) - are marginal sf or fantasy. EDH's sf series featuring Earl Jazine of the *Computer Cops* mixes sf and detection in action tales of 21st-century crises involving computer crimes. The series includes "Computer Cops" (1969), *The Transvection Machine* (1971), *The Fellowship of the HAND* (1973) and *The Frankenstein Factory* (1975). Within his range, EDH is a briskly competent storyteller. [JC]

HODDER-WILLIAMS, (JOHN) CHRISTOPHER (GLAZEBROOK)
(1926-) UK writer, pilot, composer and sound engineer. His first novel, *The Cummings Report* (1957) as by James Brogan, was not sf. He began publishing sf with *Chain Reaction* (1959), which concerns itself, as does almost all of his fiction, with the relationship between Man and the machine technology he has created, in this case through a mystery plot about radiation sickness spread by food. His next three novels were aviation stories, sharing the same general theme, but since *The Main Experiment* (1964) he has written only sf, almost always in the form of

novels with NEAR-FUTURE scenarios. These include *Fistful of Digits* (1968), which introduces self-programming computers to an obsessive tale about loss of individuality, and *The Silent Voice* (1977), about the human brain's capacity to receive radio waves directly - to potentially ominous effect. *The Chromosome Game* (1984), set 200 years after a nuclear HOLOCAUST, grimly argues that human nature will soon, once again, disastrously express itself in the old way. CH-W's novels combine social and cultural concerns typical of UK post-WWII writers with somewhat melodramatic plotting and stiff characterization of a rather male-chauvinist variety; the effect is sometimes sharp, but more often uneasy. [JC] Other works: *The Egg-Shaped Thing* (1967; the UK hardcover edition is definitive); *98.4* (1969); *Panic O'Clock* (1973); *Cowards' Paradise* (1974; UK paperback slightly rev); *The Prayer Machine* (1976); *The Thinktank that Leaked* (1979). See also: GENETIC ENGINEERING; PARANOIA.

HODGART, MATTHEW (JOHN CALDWELL)

(1916-) UK academic, Professor of English at Sussex University from 1964. His continuation of Jonathan SWIFT's *Gulliver's Travels* (1727), *A New Voyage to the Country of the Houyhnhnms* (1969 chap), is a SATIRE on the 1960s upheavals in higher education in the UK. [JC]

HODGE, T. SHIRBY

Pseudonym of US writer Roger Sherman Tracy (1841-1926). His sf novel, *The White Man's Burden: A Satirical Forecast* (1915), is set in AD5000, by which period the warlike and primitive White races have been restricted to North America while, in Black-dominated Africa, anarchism and scientific genius have generated a UTOPIAN world. A White invasion suffers ignominious defeat, and the narrator - a (White) interloper from the 20th century - returns to his own time. Considering its period, the book is remarkable for declining to treat Blacks as inherently inferior to Whites. [JC] See also: POLITICS.

HODGKINS, DAVID C.

[s] Algis BUDRYS.

HODGSON, WILLIAM HOPE

(1877-1918) UK writer who ran away to sea in his youth and was deeply affected by his experiences aboard ship: he never lost a profound fascination, reflected in all his poetry and most of his stories and essays, for the mysteries of the sea. His fantastic sea stories - the first was "From the Tideless Sea" (1906 *The London Magazine*) - owe an obvious debt to the traditions of supernatural fiction, but he derived his horrific imagery mainly from the scientific imagination; notable examples are "The Voice in the Night" (1907), in which castaways are transformed by a fungus they have been obliged to eat, and "The Stone Ship" (1914), in which an ancient wreck is raised to the surface by a volcanic eruption, bringing many weird creatures with it. In his first novel, *The Boats of the "Glen Carrig"* (1907), a ship's crew is marooned on an island near a land of floating seaweed inhabited by bizarre and terrible lifeforms. His second, *The House on the Borderland* (1908; recent paperback edns cut), is a remarkable visionary fantasy in which a man living in a house which apparently co-exists in two worlds undertakes an allegorical spiritual

odyssey through time and space, witnessing the destruction of the Solar System. *The Ghost Pirates* (1909) also juxtaposes the known world with an alien counterpart as a ship "slips" into intermediacy and its crew witness strange and frightening manifestations. His last-published novel, *The Night Land* (1912), describes in a peculiar mock-archaic style an epic FAR-FUTURE journey across the face of a much altered and monstrously populated Earth. The allegorical aspect of WHH's novels embodies a conviction that horrid evil forces move beneath the surface of reality, sometimes becoming vilely manifest in creatures such as the spirit which possesses the SCIENTIST in the blasphemous fantasy "Eloi, Eloi, Lama Sabachthani" (written 1912; 1919 as "The Baumoff Explosion") and the entity manifested in "The Hog", the last of his Carnacki series of stories featuring an occult detective, gathered as *Carnacki the Ghost-Finder* (coll 1913; exp 1947). Some of his short stories were collected in *Men of the Deep Waters* (coll 1914), *The Luck of the Strong* (coll 1916) and *Captain Gault* (coll 1917), though the last has no fantastic material. The best were reprinted in the ARKHAM HOUSE collection *Deep Waters* (coll 1967 US); Arkham had earlier reprinted all four of his novels in *The House on the Borderland and Other Novels* (omni 1946 US). Some of his stories were further reprinted in *Masters of Terror, Volume One: William Hope Hodgson* (coll 1977), and some unreprinted stories were assembled in *Out of the Storm* (coll 1975), which features also a biography of WHH by Sam MOSKOWITZ that draws heavily on research conducted by R. Alain Everts, whose *Strange Company* issued in 1988 a set of 15 booklets containing stories by WHH in their magazine versions (some had been revised for book publication). Other booklets containing previously unreprinted stories are the British Fantasy Society's *William Hope Hodgson: A Centenary Tribute 1877-1977* (coll 1977 chap) and *Demons of the Sea* (coll 1992 chap) ed Sam Gafford; the latter also contains 3 of WHH's essays, including the futuristic SATIRE "Date 1965: Modern Warfare" (1908). For some reason, possibly involving US copyright protection, WHH arranged for privately printed editions of drastically condensed versions of several of his books. The short version of *The Night Land*, initially issued in *Poems and The Dream of X* (coll 1912 chap), has been separately reprinted as *The Dream of X* (1977 chap), while the abridgement of three Carnacki stories in *Carnacki, the Ghost Finder, and a Poem* (coll 1910 chap) is reprinted alongside the condensed novel from *The Ghost Pirates, a Chaunty and Another Story* (coll 1909 chap) in *Spectral Manifestations* (coll 1984 chap). Ian Bell, the compiler of *Spectral Manifestations*, has also edited a collection of essays about WHH, *Voyages and Visions* (anth 1987 chap). HOFFMAN, LEE

Working name of US sf fan and writer Shirley Bell Hoffman (1932-); she was married for a time to Larry T. SHAW. LH is probably better known for her Westerns than for her sf, which she began publishing with a short novel, *Telepower* (1967 chap), following it with *The Caves of Karst* (1969), *Always the Black Knight* (1970) and *Change Song* (1972). The last-named is,

typically of her work, a polished, unpretentious adventure in which a juvenile protagonist on an unspecified planet, similar to but probably not Earth, succeeds in acquiring self-knowledge along with adult power. In and Out of Quandry (coll 1982 chap dos) is a short collection of essays and tales, mostly humorous (QUANDRY). [JC]See also: UNDER THE SEA.

HOFFMANN, E(RNST) T(HEODOR) A(MADEUS)

(1776-1822) German composer, painter, lawyer, judge and writer. About 1808 he changed his third given name from Wilhelm to Amadeus in homage to Mozart, and for many years he thought of himself primarily as a musician, being intensely involved in all aspects of MUSIC from composition to criticism. His first story, "Gluck", was not written until 1809, so that it was only in the last 15 years of his life that he turned to the artform in which he did his most significant work: his tales. These expressed a grotesque Romanticism more effectively than those of any other writer of his time and, variously translated and assembled, have strongly influenced European literature. His only completed novel, Die Elixiere des Teufels (1813-16; trans R.P. Gillies as The Devil's Elixir 1824 UK; vt The Devil's Elixirs 1963), typically concerns itself with a monk seduced by the Devil. Collections of his shorter works are Fantasiestucke ["Fantasy Pieces"] (coll 1814-15), Nachtstucke ["Night Pieces"] (coll 1816-17) and Die Serapionsbruder (coll 1818-21; trans Alexander Ewing in 2 vols as The Serapion Brethren 1886 and 1892, both UK); early English translations from various sources include Hoffman's Strange Stories (coll trans anon 1855 US), Hoffmann's Fairy Tales (coll trans L. Burnham 1857 US) and Weird Tales of E.T.W. [sic] Hoffmann (coll trans T.J. Bealby in 2 vols 1885 UK); convenient recent assemblies include E.F. BLEILER's The Best Tales of Hoffmann (coll of old trans 1967 US), Selected Writings of E.T.A. Hoffmann (coll trans Leonard J. Kent and Elizabeth C. Knight in 2 vols 1969 US) and Three Marchen of E.T.A. Hoffmann (coll trans Charles E. Passage 1971 US). Three of ETAH's stories formed the basis of the opera Tales of Hoffmann (1881) by Jacques Offenbach (1819-1880), which was filmed in 1951.ETAH, like his celebrated successor in the GOTHIC, Edgar Allan POE, was interested in contemporary science, and especially in the psychological theories of Emanuel SWEDENBORG and the animal magnetism espoused by Franz Mesmer (1734-1815); his stories in this vein have influenced later sf. His best-known story, "Der Sandmann" ["The Sandman"] (1816), features the sinister spectacle-maker Dr Coppelius and the beautiful automaton he builds, with which the hero falls in love. Predating Mary SHELLEY's Frankenstein (1818), this story is an important forerunner of ROBOT and ANDROID stories. It formed the basis of the ballet Coppelia (1870) by Leo Delibes (1836-1891). HOFFMANN, OSKAR

[r] GERMANY; Der LUFTPIRAT UND SEIN LENKBARES LUFTSCHIFF .

HOGAN, ERNEST

(1955-) US writer who began publishing sf with "The Rape of Things to Come" for AMZ in 1982. His first novel, Cortez on Jupiter (1990), uses the subversive tone of CYBERPUNK to tell the tale of a countercultural street artist looking for fulfilment, travelling from the usual hyperbolic

NEAR-FUTURE Southern California by jagged stages to JUPITER, where he confronts without blinking an ALIEN species with whom it has been death for more mundane souls to speak. High Aztech (1992) is set in the Tenochtitlan (aka Mexico City) of AD2045. There is an explosiveness about the tale, and about EH's short fiction, which marks him as a figure of interest for the 1990s. [JC]

HOGAN, JAMES P(ATRICK)

(1941-) UK-born systems-design engineer and writer, in the USA from 1977 and a full-time author from 1979. His first novel (and first publication), *Inherit the Stars* (1977), aroused interest for the exhilarating sense it conveys of scientific minds at work on real problems and for the genuinely exciting scope of the sf imagination it deploys. The book turned out to be the first volume in the Minervan Experiment sequence, being followed by *The Gentle Giants of Ganymede* (1978) and *Giants' Star* (1981), all three being assembled as *The Minervan Experiment* (omni 1981; vt *The Giants Omnibus* 1991). Much later, the sequence continued with *Entoverse* (1991), a tale that laboriously expands the initial premise through the use of a parallel universe in which, rather oddly for a writer pugnaciously associated with the HARD-SF wing of the genre, only MAGIC can cope with the strangeness of the physical world - in the earlier volumes of the sequence the reader was safely in the hands of an author who brooked no such nonsense. The sequence is in fact a hard-sf fable of humanity's origins - we are the direct descendants of the highly aggressive inhabitants of the destroyed fifth planet, who would have conquered the Galaxy had they not blown themselves up - and espouses a vision of the Universe in which other species must learn to cope with the knowledge that we will, some day, come into our inheritance. Although JPH could not maintain the flow of speculative thought that drove the first volumes, the sequence stands as his best work. Other novels variously succeed in presenting HEROES - generally clumped into male-bonded affinity groups - and scientific problems of a similar nature. In *The Genesis Machine* (1978) one of these heroes averts the END OF THE WORLD. In *Voyage from Yesteryear* (1982) a colony world, governed according to the kind of Trickster Libertarianism of old and honoured ASF writers like Eric Frank RUSSELL, effortlessly faces down and flummoxes an attempt by Earth to re-establish control. In *Code of the Lifemaker* (1983) a ROBOT civilization on Titan is saved from similarly corrupt Earth corporations. But in *Endgame Enigma* (1987) a NEAR-FUTURE Russian threat to dominate the world via armed satellite is recounted with leaden flippancy, and this brought to the fore a problem JPH has presented to his readers from the first. Though most of them either share or accept his right-wing POLITICS, and tolerate his editorial intrusions about personal betes-noires like the ECOLOGY movement, JPH's extreme awkwardness as a stylist and creator of character has made his books difficult, at times, actually to read. When he abandons his strengths - his hard-edged sense of how SCIENTISTS think, and his joyful capacity to stretch the terms of SPACE OPERA - this gaucheness is difficult to ignore. It is to be hoped that he will return to the game of thought. [JC] Other works: *The Two Faces of Tomorrow* (1979); *Thrice Upon a Time* (1980); *The Proteus Operation* (1985), a HITLER-WINS story; *Minds, Machines ? The Mirror Maze* (1989); *The Infinity*

Gambit (1991). See also: ALTERNATE WORLDS; AUTOMATION; EVOLUTION; LIBERTARIAN SF; MOON; NUCLEAR POWER; UTOPIAS.

HOGAN, ROBERT J.

[r] G-8 AND HIS BATTLE ACES; The MYSTERIOUS WU FANG .

HOLBERG, LUDVIG, [Baron]

(1684-1754) Danish playwright, essayist and historian. Born in Bergen, Norway, LH studied at Copenhagen and settled permanently in Denmark, where he was appointed professor at Copenhagen University, first of philosophy, later of metaphysics and of Latin rhetoric, and finally of history (1730).

A prolific author, he published several voluminous poems, 32 comedies and the satirical novel *Nicolai Klimii iter subterraneum* (1741 in Latin; exp 1745; trans anon as *A Journey to the World Under-Ground*. By Nicolas Klimius 1742 UK; vt *The Journey of Niels Klim to the World Underground* 1960 US; vt *A Journey to the World Underground* 1974 US). This is a satirical UTOPIAN novel, deriding LH's contemporary world and inspired primarily by Jonathan SWIFT's *Gulliver's Travels* (1726; rev 1735), Thomas MORE's *Utopia* (Part 2 1516 in Latin; both parts 1551 in English) and Montesquieu's *Lettres persanes* (1721). One of the most influential 18th-century SATIRES, it describes the FANTASTIC VOYAGE of Niels Klim through a hole in a mountain (the name Holberg can be translated as "hollow mountain") into a HOLLOW EARTH, where he finds a minute sun circled by the planet Nazar, whose inhabitants show a societal pattern diametrically opposed to that of the contemporary stereotype: WOMEN are the dominant sex and males perform only menial tasks. It is notable that Holberg's novel was considered dangerously radical in Denmark; the English translation preceded publication in Danish by 47 years. [J-HH] See also: BIG DUMB OBJECTS; DENMARK.

HOLBROOK, JOHN

[s] Jack VANCE.

HOLDSTOCK, ROBERT P(AUL)

(1948-) UK writer with an MSc in medical zoology from the London School of Hygiene and Tropical Medicine. He spent 1971-4 in medical research before becoming a full-time writer, though he had published his first story, "Pauper's Plot", for NW as early as 1968. He wrote much of his short fiction in the following years. Among the more notable stories are the novelettes "Travellers" (1976), a TIME-TRAVEL tale, and "The Time Beyond Age" (1976); others are collected in *In the Valley of the Statues* (coll 1982). After the mid-1970s his writing broke into two superficially incompatible categories. Under the house names Ken BLAKE and Richard KIRK, and as Robert Black, Chris Carlsen, Steven Eisler and notably Robert Faulcon, he published (see listing below) at least 20 novels, novelizations and works of popular sf "nonfiction", almost all of them hasty commercial efforts but infused, nevertheless, with a black intensity of action that gave even clichéd SWORD-AND-SORCERY plots something of a mythic intonation. At the same time, under his own name, he began to publish sf novels like *Eye Among the Blind* (1976) and *Earthwind* (1977), in both of which he uneasily attempted to accommodate the compulsive mythologizing of his dark fantasies to "normal" sf worlds. The result was

a series of books whose narrative energies seem hampered by decorum: the interplay between ALIENS and alienation in *Eye Among the Blind* is effective but ponderously expressed; *Earthwind* utters slow-moving hints at the powers of a "chthonic" atavism; and *Where Time Winds Blow* (1981), the best of these early books, ornately but without much movement posits an environment suffering arbitrary transfigurations through time-shifts. With the publication of *Mythago Wood* (1984), however, RH's two careers suddenly and thankfully converged in a tale whose elaborate proprieties of rationale are driven by narrative energies and an exuberance of language previously restricted in crude form to his Berserker novels, written as Chris Carlsen. Much expanded from his short 1981 fantasy of the same title, *Mythago Wood* is FANTASY rather than sf only if it is wrong to consider the creation of a rational model for conceiving racial archetypes a proper subject for sf. The frame of the tale is indeed obdurately rational, and the "mythagoes" discovered - and transmuted - by the contemporary protagonist are appropriate expressions of what might be called the unconscious tale of the race: they are that tale made animate, and each mythago bears a name or names - and enacts the nature - of those archetypes that embody, for Britons, the permutations of that tale. The wood from which they come - like the interior lands for which the protagonists of much UK fantasy long - is huger inside than out, and in describing it RH engages in language of a metaphoric density rarely encountered in marketable fiction. The book won the 1986 World Fantasy AWARD. Its sequel, *Lavondyss: Journey to an Unknown Region* (1988), only increases the intensity of the cooperation between rational discourse and Sehnsucht (a term C.S. LEWIS employed to describe the melancholy longing for "something that has never actually appeared in our experience", and by which he meant to designate the impulse behind certain kinds of fantasy). The longing of the protagonists of *Lavondyss* to enter the "unknown region" where archetypes shape themselves into the human story is absolute, and it gives the book much of its potency as an explication of mythopoeisis. Several of the stories assembled in *The Bone Forest* (coll 1991) serve as pendants to the central novels; and *The Fetch* (1991), a fantasy, traverses similar terrain. In transforming the Matter of Britain into archetypal sf, RH has re-assembled old material, and old generic devices, into a new territory for fiction. [JC]Other works: *Encyclopedia of Science Fiction* (1978), Consultant Editor; *Necromancer* (1978), paranormal horror; *Elite: The Dark Wheel* * (1984 chap), novella based on a computer game; *Bulman* * (1984) and *One of Our Pigeons is Missing* * (1984), associational tv novelizations; *The Emerald Forest* * (1985), novelizing the John Boorman film. As Ken Blake (house name): *Cry Wolf* * (1981), *The Untouchables* * (1982), *Operation Susie* * (1982) and *You'll be All Right* * (1982), associational titles in the *The Professionals* series. As Robert Black: *Legend of the Werewolf* * (1976) and *The Satanists* * (1977), both novelizing films. As Chris Carlsen: *The Berserker* series, comprising *Shadow of the Wolf* (1977), *The Bull Chief* (1977) and *The Horned Warrior* (1979). As Steven Eisler: The linking texts for 2 vols of reprinted illustrations, being *Space Wars Worlds and Weapons* (1979) and *The Alien World* (1980). As Robert Faulcon: *The Night Hunter* sequence, comprising *The Stalking* (1983) and *The Talisman* (1983), both assembled as *The Stalking* (omni 1987), *The Ghost Dance* (1984) and *The Shrine* (1984), both assembled as *The Ghost*

Dance (omni 1987), and The Hexing (1984) and The Labyrinth (1987), both assembled as The Hexing (omni 1988).As Richard Kirk (house name): Swordsmistress of Chaos * (1978) with Angus WELLS, writing together as Kirk, A Time of Ghosts * (1978) and Lords of the Shadows * (1979), being titles in the Raven series.Nonfiction: Alien Landscapes (1979), Tour of the Universe: The Journey of a Lifetime - The Recorded Diaries of Leio Scott and Caroline Luranski (1980), Magician: The Lost Journals of the Magus Geoffrey Carlyle (1982), Realms of Fantasy (1983) and Lost Realms (1985), all written with Malcolm EDWARDS, all primarily picture books.As Editor: Stars of Albion (anth 1979) with Christopher PRIEST; the Other Edens series of original anthologies, all with Christopher EVANS, comprising Other Edens (anth 1987), Other Edens II (anth 1988) and Other Edens III (anth 1989).See also: BRITISH SCIENCE FICTION AWARD; DEVOLUTION; GOTHIC SF; MYTHOLOGY; NEW WRITINGS IN SF.

HOLKAR, MO
[r] M.H. ZOOL.

HOLLAND
BENELUX.

HOLLAND, CECELIA

(1943-) US writer whose numerous historical novels, beginning with The Fire Drake (1966), have explored with striking vividness many of the genuine "alternate worlds" on Earth. One of these, still-born as a tale set in Mongol China, became the sf novel Floating Worlds (1976), a formidably long and complex SPACE OPERA involving conflict in the Solar System between Inner and Outer Planets. A wide range of contrasting societies, on an anarchist Earth and on the OUTER PLANETS themselves, provide a convincing background for the presentation of characters of unusual complexity. The protagonist is a woman, subtly drawn, ambivalent in her motivations, highly believable; on the Outer Planets, the description of the floating cities (GRAVITY) is likewise believable, and involving.Though not sf, Home Ground (1981), which puts an sf writer into a UTOPIAN commune, makes its points in the RECURSIVE mode which has become familiar within the genre. Pillar of the Sky (1985) combines historical research and fantasy in a story centred on Stonehenge. [JC]See also: WOMEN SF WRITERS.

HOLLAND, STEPHEN

(1962-) UK bibliographer and critic who has also scripted some COMICS, including a 1989 story for The Cursed Land and a 1990 story for Computer Killer. His main work has been in the almost infinitely perplexing field of post-WWII UK paperback publishers and authors, and he has done much to clarify the two decades after 1945, a period rife with pseudonymous titles, ephemeral publications, fly-by-night publishers and reticent authors. His bibliographical studies, most of them short but illuminating, include Scion and Dragon Books (1984 chap), Modern Fiction (1984 chap), Curtis Warren and Grant Hughes (1985 chap), John Spencer and Badger Books (1985 chap), Gaywood Press, Compact Books and Hank Janson Publishers (1986 chap), Piccadilly Novels (1986 chap), Digit Books (1986 chap), Brown Watson (1986 chap), R. ?

Viking/WDL/Consul (1987 chap), Hamilton ?

Blake Library (1988 chap), Paul Renin: A Bibliographical Checklist (1990 chap), The Gramol Group (1990 chap) and The Mike Western Story (1990 chap). The Trials of Hank Janson (1991) and The Fleetway Companion (anth in 2 vols 1992) were more commodious presentations of this material. His work as a whole has been summarized in two linked volumes, Vultures of the Void: A History of British Science Fiction, 1946-1956 (1992 US) and British Science Fiction Paperbacks, 1949-1956 (1992 US), both with Philip HARBOTTLE. He has contributed several entries to this encyclopedia. [JC]

HOLLOWAY, BRIAN

(? -) UK writer of whom nothing is known beyond the fact that he wrote sf novels under a number of CURTIS WARREN house names: Destination Alpha (1952) as Berl CAMERON, Titan's Moon (1952) as Neil CHARLES, Southern Exploration (1953) as Adam Dale, Trans-Mercurian (1952) as King LANG, "A" Men (1952) as Rand LE PAGE, Beyond Geo (1953) as Arn ROMILUS, and Lost World (1953) as Brian SHAW. He also wrote two sf novels for the firm under personal pseudonyms: The Mortals of Reni (1953) as Von Gruen and Red Storm (1952) as Brian Storm. [JC]

HOLLOW EARTH

The concept of the Earth as a hollow, spherical shell with a habitable, internal concave surface accessible through polar openings or caves, or by mechanical bores, has long been a significant motif in sf. The idea's dual origins, from RELIGION and PSEUDO-SCIENCE, are still potent. Traditionally Hell was sited inside the Earth, a notion that persisted at least until the 18th century, when a theologian proposed that Earth's rotation was caused by the damned scrambling to escape from Hell. In pseudo-science the astronomer Edmond Halley (1656-1742), to account for magnetic phenomena, suggested in a paper published by the Royal Society in 1692 that Earth (and the other planets) consisted of concentric, nested spheres surrounding a small central sun, with, possibly, openings at the poles. The first important use of Halley's concept came in Ludvig HOLBERG's Nicolaii Klimii iter subterraneum (1741 in Latin; exp 1745; trans anon as A Journey to the World Under-Ground. By Nicolas Klimius 1742 UK; vt The Journey of Niels Klim to the World Underground 1960 US; vt A Journey to the World Underground 1974 US), in which a young Norwegian falls through the Earth's crust to the hollow interior, where he has adventures on an inner planet and on the concave shell among nonhuman intelligent beings. Derivative from Holberg's work is Giacomo CASANOVA's Icosameron (1788; cut trans Rachel Zurer as Casanova's 'Icosameron' 1986 US), which is concerned, inter alia, with ALIEN lifeforms inside the Earth. The largest impetus to modern hollow-Earth fiction came from a persuasive US soldier, John Cleves SYMMES, who revitalized and publicized Halley's theory of concentric spheres and polar openings. Symzonia (1820) by Adam SEABORN (an unidentified pseudonym), a pleasant early IMAGINARY VOYAGE, satirizes Symmes's ideas; it also comments, a clef, on the political structures of Europe and the USA. It has been suggested that Edgar Allan POE's "MS Found in a Bottle" (1833) and The Narrative of Arthur Gordon Pym (1838) are indebted to Symmes and Symzonia, but it is more probable that Poe had in mind the caves and water engine involved in the traditional Abyss of

Waters. Much the best known hollow-Earth stories are Edgar Rice BURROUGHS's Pellucidar novels: *At the Earth's Core* (1914 All-Story; 1922), *Pellucidar* (1915 All-Story-Cavalier; 1923) and several sequels. Based loosely on Symmes, these stories develop Burroughs's usual themes: Gibson-girl romance, frustrated sexual assaults and dominance (here empire-building among naive natives) against a background of palaeontological survivals. While the earlier stories are rational in their assumptions, later ones slip into supernaturalism involving REINCARNATION and Hell. For Burroughs the Moon, too, is hollow, as in *The Moon Maid* (1923-25 Argosy-All-Story; 1925). The concept of the hollow Earth has otherwise been used for the most varied fictional purposes. In a dystopian attack on FEMINISM, *Pantaletta* (1882 US) by "Mrs J. Wood" (probably a man), the world within is run by arrogant dominant woman who have changed even personal pronouns to avoid sexism. "Vera Zarovitch"'s (Mary E. Bradley LANE) *Mizora* (1880-81 Cincinatti Commercial; 1890 US), on the other hand, posits a feminist, socialist UTOPIA, where males are no longer biologically necessary. In *Nequa* (1900) by Jack ADAMS the themes are sexual equality, altruism and socialism. The "single tax" proposed by the US economist Henry George (1839-1897) offers the leitmotif for Byron Welcome's *From Earth's Centre* (1894 US), and an odd mixture of occultism, anarchism and Fourierist socialism supports the story thread of M. Louise Moore's *Al Modad* (1892 US). John Uri LLOYD's *Etidorhpa* (1895) describes occult advancement as the narrator progresses to the centre; George W. Bell's *Mr Oseba's Last Discovery* (1904 New Zealand) promotes New Zealand real estate by comparing that country to the edenic interior; and "My Bride from Another World" (1904 Physical Culture) by "Rev. E.C. Atkins" plugs for Bernarr MACFADDEN's hygienics - nudism, vegetarianism and back-to-Nature. *Plutonia* (1915; 1924; trans as *Plutonia* 1957) by the great Russian geologist Vladimir Afanasevich OBRUCHEV is frankly written as a simple introduction to palaeontology. Obruchev adds a new supposition: the Earth solidified hollow, and a comet knocked a hole in the shell, permitting access. Fantastic adventure with less message characterizes Charles Willing BEALE's *The Secret of the Earth* (1899), William R. BRADSHAW's occult *The Goddess of Atvatabar* (1892), Frank Powell's lurid boys' thriller *The Wolf-Men* (1905 UK), Roy ROCKWOOD's boys' book *Five Thousand Miles Underground* (1908), William J. Shaw's *Under the Auroras* (1888 US), Fred THORPE's serialized DIME NOVEL "In The World Below" (1897 Golden Hours) and Park Winthrop's "The Land of the Central Sun" (1903 Argosy). A religious note is not uncommon. In the later stories of the paranoid Shaver mystery (Richard S. SHAVER) the inner world is a Hell; however, edenic stories, in which creation took place inside the Earth, like Casanova's *Icosameron*, are more frequent. There is an internal city called Eden in Willis George EMERSON's *The Smoky God or, A Voyage to the Inner World* (1908). In William A. Miller's *The Sovereign Guide* (1989 US) Eden still exists, though overgrown, as does the tomb of ADAM AND EVE. Seaborn's *Symzonia* and Beale's *The Secret of the Earth* both consider surface humans as descendants of exiles from the interior. The gravitational peculiarities of a hollow Earth are seldom utilized. Exceptions are Clement FEZANDIE's "A Journey to the Center of the Earth" (1925 Science and Invention) and Konstantin TSIOLKOVSKY's "Dreams of Earth and Sky" (1895; trans in *The Call of the Cosmos* coll 1963). In most cases

the writers cited do not take the hollow-Earth concept seriously. On the whole, the hollow Earth is simply a convenient alien place for odd adventures or panaceas, but it would be easy enough to work out a psychoanalytic or other metaphoric interpretation of the motif. True hollow-Earth stories should not be confused with stories set in deep cave-systems, another very common theme. Two of the most famous underground stories of this type are LYTTON's *The Coming Race* (1871; vt *Vril: The Power of the Coming Race* 1972 US) and Jules VERNE's *Voyage au centre de la terre* (1863; exp 1867; trans anon as *Journey to the Centre of the Earth* 1872 UK). A third example, not often thought of as being such, and especially prone to the psychoanalytic interpretation, is Lewis CARROLL's *Alice's Adventures in Wonderland* (1865). Hollow-Earth stories still show up occasionally in the modern period. Among the more interesting are "Black as the Pit, from Pole to Pole" (1977 *New Dimensions* 7) by Howard WALDROP and Steven UTLEY, Richard A. LUPOFF's *Circumpolar!* (1984) and Rudy RUCKER's *The Hollow Earth* (1990). Nothing is ever crystal clear in a novel by James P. BLAYLOCK, but *The Digging Leviathan* (1984) appears also to be marginally a hollow-Earth story. It is interesting that all these tales are couched as nostalgic pastiche (and often close to MAGIC REALISM), as if merely to mention a hollow Earth today were to evoke a wondrous past time. [EFB]

HOLLY, JOAN HUNTER

A late working name of US writer Joan Carol Holly (1932-1982), who before 1970 signed herself J. Hunter Holly. JHH had a degree in psychology and conducted creative-writing workshops as well as doing her own work; a benign brain tumour, removed in 1970, interrupted her career 1966-70, and she later suffered further ill health. She began publishing sf with a novel, *Encounter* (1959), in which Man and inimical ALIEN confront one another. Much of her work - including *The Flying Eyes* (1962), *The Dark Planet* (1962) and *The Time Twisters* (1964)-involves melodramatic alien INVASIONS and other traumatic encounters. Among her better stories, written after her illness, are "The Gift of Nothing" (1973) and "Psi Clone" (1977). *Keeper* (1976 Canada) and *Shepherd* (1977 Canada) make up a short DYSTOPIAN series in which one man opposes an oppressive regime. JHH wrote straightforward adventure novels whose dark undertones were of interest. [JC] Other works: *The Green Planet* (1960); *The Gray Aliens* (1963; vt *The Grey Aliens* 1964 UK); *The Running Man* (1963); *The Dark Enemy* (1965); *The Mind Traders* (1966); *The Assassination Affair* * (1967), #10 in the *MAN FROM U.N.C.L.E.* series; *Death Dolls of Lyra* (1977). See also: *WOMEN SF WRITERS*.

HOLLYWOOD BOULEVARD

Roger CORMAN; Joe DANTE.

HOLM, SVEN

(1940-) Danish novelist who works in various modes, from realism to KAFKA-inspired modernism. His one sf work, *Termush, Atlanterhavskysten* (1967; trans Sylvia Clayton as *Termush* 1969 UK), tells of the psychological problems encountered by a group of rich survivors dwelling in their luxury shelter after a nuclear HOLOCAUST. While bona fide sf, *Termush* is also a parable of the alienation of modern, materialistic Man.

[DN/JC]

HOLMBERG, JOHN-HENRI
[r] SCANDINAVIA.

HOLMES, A.R.
[s] Harry BATES.

HOLMES, BRUCE T.
(? -) US writer whose sf novel, *Anvil of the Heart* (1983), presents with some poignance one of the potential nightmares attendant upon the successful GENETIC ENGINEERING of the human species: the slow death of the last pre-altered humans as their children confront a new world. [JC]

HOLMES, H.H.
[s] Anthony BOUCHER.

HOLOCAUST AND AFTER

This is part of a giant cluster of themes which has always played a central role in sf, both GENRE SF and MAINSTREAM. It is impossible to dissect out the different aspects of this cluster so that they are mutually exclusive; hence there is some overlap between this entry and ADAM AND EVE (many sf tales deal with a second genesis after catastrophe), ANTHROPOLOGY (the emphasis is often on tribal patterns forming in a brutalized and diminished population), EVOLUTION and DEVOLUTION (evolutionary change has since the 18th century been linked with natural catastrophe), ENTROPY (holocaust is one of the more dramatic aspects of everything running down), HISTORY IN SF (human-inspired disasters are often seen as part of a Toynbeeian or Spenglerian process of historical cycles), the END OF THE WORLD (holocaust on a major scale), ECOLOGY (interference with nature is often seen as the bringer of disaster), MEDICINE (the agent of holocaust is often plague), MUTANTS (the use of nuclear weapons is often seen as leading to massive mutation in plants, animals and humans), NUCLEAR POWER (the most popular agent of holocaust in fiction since WWII), OPTIMISM AND PESSIMISM and SURVIVALIST FICTION (which is all too often written by men for men, featuring men shooting other men after civilization's convenient collapse). The catastrophe variants are summarized under DISASTER; particular aspects of catastrophe are discussed in most of the above entries. Here we concentrate on the many stories whose focus is not so much the disaster itself but the kind of world in which the survivors live, and which they make for themselves. The aftermath of holocaust may be the most popular theme in sf; this encyclopedia mentions at least 400 examples at novel length. The genre is as old as sf itself: a convenient starting point is Mary SHELLEY's second sf novel, *The Last Man* (1826), in which plague crosses Europe from the Middle East, leaving one survivor in Rome who is possibly the last man. Natural catastrophe, too, strikes in Herrmann LANG's *The Air Battle: A Vision of the Future* (1859), in which European civilization is destroyed by flood and earthquake, but a benevolent North-African federation brings peace to the world, Black leading White back to social order. The novel in which the post-holocaust story takes on its distinctive modern form is Richard JEFFERIES's *After London* (1885), in which the author's strategy is to set the novel thousands of years after the catastrophe has taken place; in

this way an interesting, alienating perspective is gained. The hero takes his own society (as in most later stories in this vein it is quasimedieval) for granted; he endeavours to reconstruct the nature of the fallen civilization that preceded it, and also the intervening years of barbarism. Ever since Jefferies's time the post-holocaust story has tended to follow this pattern; for every book whose hero lived through the holocaust itself - John CHRISTOPHER's *The Death of Grass* (1956; vt *No Blade of Grass US*), filmed as *NO BLADE OF GRASS* (1970), and Robert MERLE's *Malevil* (1972 France; trans 1974), filmed as *MALEVIL* (1981), being examples - there are several whose story begins long after the disaster is over but while its effects are still making themselves felt. Though such stories continue to fascinate, there has been surprisingly little variation in the basic plot: disaster is, in the average scenario, seen as being followed by savage barbarism and a bitter struggle for survival, with rape and murder commonplace; such an era is often succeeded by a rigidly hierarchical feudalism based very much on medieval models. When the emphasis falls on struggle and brutality, as it very often does, we have in effect an awful-warning story. But often the new world is seen as more peaceful and ordered, more in harmony with Nature, than the bustle and strife of civilization. Such stories are often quasi-UTOPIAs in feeling and PASTORAL in their values. There is no denying the attraction of such scenarios: they tempt us with a kind of life in which the individual controls his or her own destiny and in which moral issues are clear-cut. In mature versions of the post-holocaust story there is usually an emotional resonance developed from a tension between loss and gain, with the simplicities of the new order not wholly compensating for the half-remembered glories and comforts of the past. This is the case with George R. STEWART's *EARTH ABIDES* (1949), and may explain why, despite its occasionally fulsome prose, that novel has attained classic status. The first two decades of the 20th century saw no particular boom in the genre, but at least two works are still well remembered: Jack LONDON's *The Scarlet Plague* (1914) and S. Fowler WRIGHT's *Deluge* (1928) (sequelled by Dawn [1929]); in both cases the catastrophe is natural. This was so of most holocaust stories in those days of comparative innocence. Even after WWI, mankind's capacity for self-destruction was seldom seen as efficient enough to operate on a global scale. Other relevant stories of the period are Garrett P. SERVISS's *The Second Deluge* (1912), George Allan ENGLAND's *Darkness and Dawn* (1914), an unusually optimistic story of reconstruction, J.J. CONNINGTON's *Nordenholt's Million* (1923) and P. Anderson GRAHAM's cranky racist *The Collapse of Homo Sapiens* (1923). Connington's book made much of the reconstruction of TECHNOLOGY; from this point on the relationship of technology to the post-holocaust world, and the often ambiguous feelings of the latter towards it, became prominent. Thomas Calvert MCCLARY's *Rebirth* (1934 ASF; 1944) is a casually callous account of a SCIENTIST so disgusted by what he self-righteously regards as the decadence of modern civilization that he invents a ray which causes everyone to forget all acquired knowledge, including how to talk: starting from instinct, the smartest and toughest re-educate themselves in technology in about 10 years; most die. Edwin BALMER's and Philip WYLIE's *When Worlds Collide* (1933), with its reconstruction sequel *After Worlds Collide* (1934), has a scientific elite escaping a doomed Earth in a giant

rocket and rebuilding on a new planet, at the same time fighting off communists; it was filmed as *WHEN WORLDS COLLIDE* (1951). Stephen Vincent BENET's "The Place of the Gods" (1937; vt "By the Waters of Babylon") blends superstitious fear and plangent nostalgia in telling of a barbarian boy's response to the technological wonders of a ruined city; its sentimentality was to become a recurrent note in many such tales after WWII: it ends, "We must build again." Many of the authors cited have not been closely connected with GENRE SF. The post-holocaust theme, particularly in the UK, has had a strong attraction for MAINSTREAM writers, perhaps because it offers such a powerful metaphor for exploring Man's relation with his social structures: it pits art against Nature. Two strong UK examples from the 1930s are Alun LLEWELLYN's *The Strange Invaders* (1934) and John COLLIER's *Tom's A-Cold* (1933; vt *Full Circle USA*); both evoke the atmosphere of a fallen society with considerable intensity of feeling. An interesting French novel published during WWII was *Ravage* (1943; trans Damon KNIGHT as *Ashes, Ashes* 1967 US) by Rene BARJAVEL, in which the disappearance of electricity turns France rural. After the Hiroshima bombing a new period began in which, unsurprisingly, the post-holocaust story came to seem less fantastic; it also became more popular, and developed a distinctively apocalyptic atmosphere, a heavy emphasis on a supposed antitechnological bias among the survivors, and a concentration on the results of nuclear power in general and radiation in particular. The mood was darker in that imagined catastrophes were now primarily manmade. Man became pictured as a kind of lemming bent on racial suicide - through nuclear, biological and chemical warfare in stories of the 1940s and 1950s, and through POLLUTION, OVERPOPULATION and destruction of Earth's ecosphere in many stories since the 1960s. Among the darker scenarios set after nuclear war are: Judith MERRILL's *Shadow on the Hearth* (1950); Wilson TUCKER's *The Long Loud Silence* (1952); Ward MOORE's "Lot" (1953) with its sardonic sequel "Lot's Daughter" (1954), the uncredited bases for *PANIC IN YEAR ZERO* (1962); Mordecai ROSHWALD's *Level 7* (1959); Pat FRANK's *Alas, Babylon* (1959), more optimistic than the others about the possibility of re-ordering society; Alfred COPPEL's *Dark December* (1960); and Fritz LEIBER's extremely savage "Night of the Long Knives" (1960; vt "The Wolf Pair"), which can be found in *The Night of the Wolf* (coll 1966). Novels which place a greater emphasis on the kinds of society developed after the holocaust are: Algis BUDRYS's *False Night* (1954; text reinstated and exp, vt *Some Will not Die* 1961; rev 1978), a very grim book; Margot BENNETT's *The Long Way Back* (1954), in which civilized Africans send a colonizing expedition to legendary Great Britain, where they find Whites still living in caves; *Dark Universe* (1961) by Daniel F. GALOUYE, set in an underground *POCKET UNIVERSE*; Edgar PANGBORN's *DAVY* (1964), *The Judgment of Eve* (1966) and *The Company of Glory* (1975); Brian W. ALDISS's *Non-Stop* (1958; vt *Starship USA*) and *Greybeard* (1964), the latter dealing with life after mass sterility has struck humanity; Philip K. DICK's *DO ANDROIDS DREAM OF ELECTRIC SHEEP?* (1968), where pollution has destroyed the animal kingdom, and which, much changed, was the basis of the film *BLADE RUNNER* (1982); and John BOWEN's *After the Rain* (1958), dealing with the psychology of the survivors of a great flood. Paramount among such books is Walter M. MILLER's *A CANTICLE FOR LEIBOWITZ* (fixup 1960), an ironic black comedy

about the ways in which a post-holocaust civilization's history recapitulates the errors of its predecessor. The story is set largely in an abbey, where fragments of half-understood technological knowledge have been kept alive by the Church. The book is vivid, morose and ebulliently inventive; it has been very influential. Miller's vision of technology as being (though morally neutral) at once saviour and destroyer is echoed in several books, including some already cited, in which an antitechnological majority, usually medieval in social structure and rigidly conservative in outlook, is unable to suppress the scientific curiosity of young malcontents; two good examples are Leigh BRACKETT's *The Long Tomorrow* (1955) and John WYNDHAM's *Re-Birth* (1955 US; rev vt *The Chrysalids* UK). (The English disaster novel at this time was dominated by Wyndham and by John CHRISTOPHER, both writing several post-holocaust novels.) At a more popular, adventure-story level, several writers have picked up the idea (found also in the Brackett and Wyndham novels) of a secret enclave of scientifically advanced technocrats in an otherwise primitive world. Such is the situation in Piers ANTHONY's trilogy collected as *Battle Circle* (omni 1977), which began with *Sos the Rope* (1968). A film pitting barbarians against an island of technology is *ZARDOZ* (1973), where the sympathy, as often happens, is with the barbarian. In stories of this type technology is generally feared, since it was through technology that mankind almost destroyed itself; a furtive technology is pitted against MAGIC in a FAR-FUTURE post-holocaust venue in Fred SABERHAGEN's trilogy consisting of *The Broken Lands* (1968), *The Black Mountains* (1971) and *Changeling Earth* (1973), but here, despite a tenuous rationale, the tone of the story is more that of *SWORD AND SORCERY* than of sf proper. Indeed, many sword-and-sorcery stories are set in a post-holocaust period when mankind has taken the route of magic rather than science; the rather silly idea is presumably that if we give up depending on technology we may be able to work miracles instead. In one of the commonest variants the magic is rationalized: the post-holocaust society develops PSI POWERS. With the increased publicity given to the so-called counterculture in the late 1960s (reflected in sf by the NEW WAVE), post-holocaust stories of rather a different kind became popular. Hell's-Angels-style motorcycle gangs roam a ruined world in two colourful romances, Roger ZELAZNY's *Damnation Alley* (1969), badly filmed with many changes as *DAMNATION ALLEY* (1977), and Steve WILSON's *The Lost Traveller* (1976); the same idea is used more subtly in a grimmer work, Brian W. Aldiss's *Barefoot in the Head* (fixup 1969), as motorcyclists roll through the debris of a Europe half-destroyed by the use of psychedelic drugs as weapons. J.G. BALLARD's oeuvre is made up largely of post-holocaust stories; he has evoked catastrophes of all sorts, manmade and natural, sudden and protracted, and often his protagonists act in psychic collaboration with the forces that threaten humanity's security. Scarred motorways continue to link up the decaying communities of M. John HARRISON's forceful first novel, *The Committed Men* (1971), which has something of a Ballardian bleakness but a rather tougher survival mentality in the protagonists. Other notable post-holocaust stories of the late 1960s and the 1970s are *HEROES AND VILLAINS* (1969) by Angela CARTER, "The Snows are Melted, the Snows are Gone" (1969) by James TIPTREE Jr, "The Lost Continent" (1970) by Norman SPINRAD, *The End of the Dream* (1972) by Philip Wylie, returning to a theme he first worked with 40

years earlier, Hiero's Journey (1973) by Sterling LANIER, Winter's Children (1974 UK) by Michael CONEY, Earthwreck! (1974) by Thomas N. SCORTIA, WALK TO THE END OF THE WORLD (1974) by Suzy McKee CHARNAS, WHERE LATE THE SWEET BIRDS SANG (fixup 1976) by Kate WILHELM, THE STAND (cut 1978, text largely restored and rev 1990 UK) by Stephen KING, and DREAMSNAKE (fixup 1978) by Vonda N. MCINTYRE. A fine story from this period was "A Boy and his Dog" (1969) by Harlan ELLISON, interestingly filmed as A BOY AND HIS DOG (1975). Indeed, the 1960s, and more prolifically the 1970s, saw many variations on the post-holocaust theme in the CINEMA aside from those already mentioned, including ON THE BEACH (1959), The WORLD, THE FLESH AND THE DEVIL (1959), The DAY OF THE TRIFFIDS (1963), L' ULTIMO UOMO DELLA TERRA (1964; vt The Last Man on Earth); KONEC SRPNA V HOTELU OZON (1966; vt The End of August at the Hotel Ozone), NIGHT OF THE LIVING DEAD (1968), The BED-SITTING ROOM (1969), GAS-S-S-S (1970), GLEN AND RANDA (1970), The OMEGA MAN (1971), NIPPON CHINBOTSU (1973; vt The Submersion of Japan; vt Tidal Wave), The ULTIMATE WARRIOR (1975), JUBILEE (1978), QUINTET (1979) and MAD MAX (1979); UK tv took up the idea with SURVIVORS (1975-7). The success of Mad Max not only produced two sequels but began a whole cycle of post-holocaust colourful-barbarian action thriller films that continued right through the 1980s, including 1990: I GUERRIERI DEL BRONX (1982; vt Bronx Warriors) and CITY LIMITS (1984). In fact the 1980s was a period in which the post-holocaust venue became primarily used as a conveniently barbaric backdrop for feats of romantic adventure and, perhaps more worryingly, for the macho acts of rapine and savagery that characterize SURVIVALIST FICTION, which became very popular at this time. Although the post-holocaust genre remained popular in the 1980s film industry, and produced a strange variety of films, it produced no great ones, perhaps the most telling being George A. ROMERO's DAY OF THE DEAD (1985). Others were FUKKATSO NO HI (1980; vt Virus), MEMOIRS OF A SURVIVOR (1981), Le DERNIER COMBAT (1983; vt The Last Battle), RED DAWN (1984), NIGHT OF THE COMET (1984), The QUIET EARTH (1985), SLIPSTREAM (1989) and HARDWARE (1990). Earlier, post-holocaust venues had by the 1970s become popular in CHILDREN'S SF, a particularly good book being Z for Zachariah (1975) by Robert C. O'BRIEN. Too often, however, such books were designed to teach moral lessons of the currently approved kind, often simplistically; the typical holocaust of 1980s children's books features ecological spoliation brought about by evil capitalists, one of the livelier examples being Scatterlings (1991) by Isobelle CARMODY. While post-holocaust scenarios in films (and in COMICS, where they became extremely popular) were tending to trivialize the genre, it remained an important and still very popular element in serious sf in book form. Interesting and rather admirable are the 7 Pelbar books of Paul O. WILLIAMS, beginning with The Breaking of Northwall (1981), in which fragmented societies in a rural post-holocaust USA begin slowly to knit themselves together. Another good series was Richard COWPER's Corlay trilogy (1976-82), a contemplative PASTORAL work set in England centuries after low-lying areas have been covered by the rising sea. William BARNWELL's Blessing trilogy (1980-81) features a fantastic quest in a world recovering after a holocaust deliberately brought about for metaphysical reasons. Storm CONSTANTINE's Wraeththu trilogy (1987-9) presents luridly but with some flair a hermaphroditic race arising in a

devastated world. Notable single novels from the 1980s and since include *Voices in Time* (1980) by Hugh MACLENNAN, *In the Drift* (fixup 1984) by Michael SWANWICK, *The Postman* (1985) by David BRIN, *Wolf in Shadow* (1987; vt *The Jerusalem Man* 1988 US) by David GEMMELL, *The Sea and Summer* (1987; vt *Drowning Towers* 1988 US) by George TURNER, *The Wall around Eden* (1989) by Joan SLONCZEWSKI, *WINTERLONG* (1990) by Elizabeth HAND and *BONE DANCE: A FANTASY FOR TECHNOPHILES* (1991) by Emma BULL. But the outstanding post-holocaust novel of the decade was probably *RIDDLEY WALKER* (1980) by Russell HOBAN, in which the nature of the future civilization is vividly evoked through its devolved language (LINGUISTICS). Life after the holocaust is a theme that continues to grip the imagination. The idea of destroying our crowded, bureaucratic world and then rebuilding afresh offers an exciting psychic freedom. The rusting symbols of a technological past protruding into a more primitive, natural, future landscape are among the most potent of sf's icons. [PN]

HOLT, CONRAD G.
John Russell FEARN.

HOLTBY, WINIFRED
(1898-1935) UK writer who espoused, in *South Riding* (1936) and other novels and essays, the informed, complex FEMINISM which was also reflected in her near-future *SATIRE*, *The Astonishing Island* (1933): the island satirized is not Tristan da Cunha, from which the bewildered protagonist hails, but the UK. [JC]

HOLTEN, KNUD
[r] DENMARK.

HOLT-WHITE, W(ILLIAM EDWARD BRADDEN)
(1878-?) UK writer in various genres, author of 7 novels of sf interest. In *The Earthquake: A Romance of London in 1907* (1906) the ruined capital is taken in hand by an aristocratic Prime Minister. In *The Man who Stole the Earth* (1909), which begins as a RURITANIAN pot pourri of politics and romance, a love-lorn inventor bombs most of Europe into submission in his drive to wed the daughter of the King of Balkania, forcing the world, en passant, into a state of peace. *The Prime Minister's Secret* (1910) is marginal sf. *Helen of All Time* (1910) rather remarkably compresses into one volume an advanced airship (TRANSPORTATION) and the REINCARNATION of Helen of Troy. *The Man who Dreamed Right* (1910), though suffering from WH-W's general tendency to overpack his tales to the point of parody, rather movingly depicts an innocent man whose dreams predict the future, and who is destroyed at the hands of the world's rulers (including Teddy Roosevelt), all desperate to corner his power. *The World Stood Still* (1912) not entirely plausibly describes the catastrophic effect on the world when its financiers go on strike; and *The Woman who Saved the World* (1914) concerns NEAR-FUTURE terrorism. [JC]

HOLZHAUSEN, CARL JOHAN
[r] SCANDINAVIA.

HOME-GALL, EDWARD REGINALD
[r] William Benjamin HOME-GALL.

HOME-GALL, WILLIAM BENJAMIN

(1861-1936) UK writer, much of whose work was boys' fiction, including *Beyond the Northern Lights* (1903) as by Reginald Wray, a LOST-WORLD tale set near the North Pole. *The Dweller in the Half-Light* (1923), also as by Wray, is fantasy for adults. WBH-G's son, Edward Reginald Home-Gall (1899-1975), was the most prolific of all authors of boys' stories next to Frank Richards (usual pseudonym of Charles Hamilton [1876-1961]), and was responsible for two Human Bat tales: "Caught in the Spider's Web" (1950) and *The Human Bat v. the Robot Gangster* (1950). [JC]

HOMER

(c800BC) The most famous of early Greek poets, generally supposed to be the author of the *Iliad* and the *Odyssey*; these were probably not written down until the 6th century BC, and come to us in much later versions. The *Odyssey* is not, of course, sf, but stands paradigmatically at the head of the PROTO-SCIENCE-FICTION genre of the FANTASTIC VOYAGE. In Homer's day the Mediterranean was a tabula rasa, just as the worlds of outer space are today; to say that the *Odyssey* is a kind of first-millennium-BC template for PLANETARY ROMANCE may be to confuse the sublime with the ridiculous, but its aspiring spirit, always seeking to learn what is over the next horizon, testifies to the longevity of those human feelings which today are fed into the reading and writing of sf. [PN]See also: MUSIC; MYTHOLOGY.

HOMUNCULUS

(vt *Homunculus der Fuhrer*) Serial film (1916). Deutsche Bioscop. Dir Otto Rippert, starring Olaf Fonss, Friedrich Kuhne. Script Otto and Robert Neuss, based on a story by Robert Reinert. 6 episodes; total length 401 mins. B/w. This 6-part silent German serial, the most popular of the WWI period, tells of an artificial man created by a scientist (Kuhne) who wants to make a perfect creature of pure reason. But the result, Homunculus (the Danish actor Fonss), resents the fact that he is not a real human being (and has no soul); after being driven from country to country he becomes the dictator of a large, unnamed nation and plans to conquer the world, being finally destroyed by a convenient bolt of lightning. H contains seminal themes of the GOTHIC variety, foreshadowing many sf/ HORROR films: the archetypal mad SCIENTIST, the inherent evil of TECHNOLOGY and scientific progress, superhuman ANDROIDS, conquest of the world and a fiery, apocalyptic climax. [JB]

HOMUNCULUS DER FUHRER

HOMUNCULUS.

HONEY, I BLEW UP THE KID

Film (1992). Walt Disney. Exec prods Albert Band, Stuart Gordon; dir Randal Kleiser; screenplay Thom Eberhardt, Peter Elbling, Garry Goodrow, based on a story by Goodrow, based on characters created by Gordon, Brian Yuzna and Ed NAHA; starring Rick Moranis, Marcia Strassman, Robert Oliveri, Daniel and Joshua Shalika, Lloyd Bridges, John Shea, Keri Russell. 89 mins. Colour. The sequel to the good and successful *HONEY, I SHRUNK THE KIDS* (1989), this has the same family, headed by nutty inventor Wayne Szalinski (Moranis) in more trouble. Or the same trouble reversed.

Two-year old son Adam (played with some charm by the Shalika twins) is accidentally subjected to a growth ray; he grows first to seven feet, then to 14 feet, then to 50 feet. Soon he has a tantrum, and is on his way to trample Las Vegas. Depressingly formulaic and one-note, though with several funny moments, the film has nothing like the metaphoric and psychological resonance of its predecessor, and its larger budget seems to have persuaded all concerned to be too careful, notably Moranis, who tones down the madness as if he expects to be taken as a role model for good fatherhood. It is a case of small is beautiful rather than bigger is better. The film, perhaps grudgingly, gives a credit-buried in the end titles-to Kit REED, whose "Attack of the Giant Baby" (1976 FSF) could be said to have got there first. [PN]

HONEY, I SHRUNK THE KIDS

Film (1989). Walt Disney. Dir Joe Johnston, starring Rick Moranis, Matt Frewer, Thomas Brown, Amy O'Neill, Robert Oliveri. Screenplay Ed NAHA, Tom Schulman, from a story by Stuart Gordon, Brian Yuzna and Ed Naha. 93 mins. Colour. Eccentric inventor Szalinski (Moranis) builds a miniaturizing machine which is accidentally activated, shrinking his own two children and those of his macho next-door neighbour. Swept up in the trash they emerge in the garden, have adventures, fall tentatively in love (the two eldest), return, almost get eaten in a bowl of breakfast cereal, and are ultimately regrown. There is some timid metaphor about kids whose parents make them feel small, and about the jungle of suburbia (in this case the untidy lawn literally becomes a jungle), but it is not so disturbing a film as INCREDIBLE SHRINKING MAN. The special effects sequences are well done and the film is fun. [PN]

HONG KONG CHINESE SF.

HOOBLER, THOMAS

(?1944-) US writer of an sf adventure, The Hunters (1978) with Burt WETANSON, and of Dr Chill's Project (1987; vt Dr Chill 1989 UK), an sf juvenile involving PSI POWERS. [JC]

HOOVER, H(ELEN) M(ARY)

(1935-) US writer, all of whose novels of sf interest have been juveniles for older children. First were Children of Morrow (1973) and its sequel, Treasures of Morrow (1976), a post- HOLOCAUST sequence which, in describing a reactionary state and its pro- TECHNOLOGY successor, plumps cautiously for the latter; the books demonstrate a smoothly searching style and a grasp of character. HMH soon showed her competence with a wide range of venues and themes. The Delikon (1977), again set on Earth, investigates a political revolution. The protagonist of The Rains of Eridan (1978), set on an ALIEN world where scientific stations are assaulted by waves of seemingly unnatural fear, uncovers the mystery without betraying the methods and goals of science. Return to Earth (1980), set a millennium hence on Earth, humanizes a thriller plot through its close portrayal of a growing friendship between an old man and a young girl - friendship between generations being unusually evident in HMH's work. The two young protagonists of This Time of Darkness (1980) transcend

the bleak POCKET-UNIVERSE society in which they have been raised. Another Heaven, Another Earth (1981) intriguingly presents a complex vision of human limitations on a colony planet which is demonstrably inimical to life. Throughout, HMH shows a deft attentiveness to the problem of engaging her readership in tales of worlds whose solidity precludes easy triumphs for young protagonists, but which gives them a chance to achieve an enlightened freedom; always there is a sense that in the end the lessons awaiting readers in her texts are unequivocally meant to be learned. Her novels are, in the best sense, didactic. [JC]Other works: The Lost Star (1979); This Time of Darkness (1980); The Bell Tree (1982); The Shepherd Moon: A Novel of the Future (1984); Orvis (1987; vt Journey through the Empty 1990 UK); The Dawn Palace: The Story of Medea (1988); Away is a Strange Place to Be (1990); Only Child (1992). HOPE, LAURA LEE
Harriet S. ADAMS.

HOPKINS, JAMES
[r] William F. NOLAN; Robert REGINALD.

HORACE GOLD: ECCENTRIC

Some say that science fiction writers and editors are strong individualists; others call them eccentrics. There is no doubt that Horace Gold was one of the latter. Gold founded Galaxy magazine in 1950. Because he was profoundly agoraphobic, he conducted all of this business from his apartment. Isaac Asimov remembers that the first time he visited him, Gold left the room abruptly in the middle of a conversation. Asimov was perplexed and started to leave. On the way out, the phone rang. When Asimov was called to the phone, he discovered that Gold was on the line. Since Gold couldn't stand the company of a stranger, he decided to call Asimov from his bedroom. And that's how the meeting proceeded. Besides his penchant for odd meetings, Gold was also known for writing very insulting rejection letters, even to writers he liked. In his collection Earth is Room Enough, Asimov published a parody of Gold in one of three poems entitled Rejection Slips.

HORLAK, E.E.
Sheri S. TEPPER.

HORLER, SYDNEY

(1888-1954) UK writer, most of whose 150 novels are thrillers, some importing sf devices in the form of fantastic inventions and/or MCGUFFINS. Some of the Paul Vivanti sequence - specifically The Mystery of No. 1 (1925; vt The Order of the Octopus 1926 US), The Screaming Skull, and Other Stories (coll 1930; cut c1945), The Worst Man in the World (1930), Lord of Terror (1935) and Virus X (1945) - are of interest in their admixture of occult and fragmentary superscience elements, with DEATH RAYS making an appearance or two. The title story in The Man who Shook the Earth (coll 1933) features an attempt to blackmail the world by a SCIENTIST who has discovered the secret of atomic energy. [JC]Other works: The Formula: A Novel of Harley Street (1933; vt The Charlatan 1934 US); The Vampire (1935); The Evil Messenger (1938); The House with the Light

(1948); The House of the Uneasy Dead (1950); The Face of Stone (1952).

HORN, PETER

House name used in ZIFF-DAVIS magazines by Henry KUTTNER once, for "50 Miles Down" (Fantastic Adventures 1940), and by David Vern (David V. REED) twice, also in 1940. [JC/PN]

HORNE, R. HENGIST

[s] Richard Henry HORNE.

HORNE, RICHARD HENRY

(1803-1884) UK writer credited by William WILSON as the author of what is, according to Wilson's DEFINITION OF SF, an exemplary work of "Science-Fiction": The Poor Artist, or Seven Eye-sights and One Object (1871), a didactic novella in which a struggling artist achieves success by reproducing seven different images of a coin as perceived by various woodland creatures. RHH signed some of his other work R. Hengist Horne. [BS]See also: PERCEPTION.

HORNER, DONALD W(ILLIAM)

(1874-?) UK astronomer, meteorologist and writer who specialized in popular-science texts. Though published as boys' fiction, By Aeroplane to the Sun: Being the Adventures of a Daring Aviator and his Friends (1910) offers a numerate and complex vision of a high-tech NEAR FUTURE, featuring picturephones, tv and electric cars, and describing the protagonists' usual tour of the Solar System with prescient realism. The ship operates by a kind of ION DRIVE; its inhabitants, some of whom are women, use pressure suits when necessary; and the planets themselves, as well as the cool SUN, offer a wide range of challenges. Their Winged Destiny: Being a Tale of Two Planets (1912; vt The World's Double: Being a Tale of Two Planets 1913) expands the scope of the earlier book, sending its astronauts from a possibly doomed Earth to its double in orbit around Alpha Centauri. Both novels demonstrate the speed with which the advance of science - DWH was of course no amateur - was engendering radical changes in the venues and plotting conventions that went to make up GENRE SF long before the founding of AMAZING STORIES in 1926. [JC]

HORNIG, CHARLES D.

(1916-) US editor whose career began in 1933 when, as a young sf fan, he started a FANZINE called The Fantasy Fan and happened to send a copy of it to Hugo GERNSBACK. By coincidence, Gernsback was at that time looking for a new managing editor for WONDER STORIES, and was so impressed by CDH's editorial that he decided to offer him the post. At 17, CDH became the youngest-ever sf magazine editor, attending evening classes at the same time until he finished high school. He edited Wonder Stories Nov 1933-Apr 1936, when the magazine was sold to another publisher and became THRILLING WONDER STORIES. CDH did not give up his fan activities, continuing The Fantasy Fan on a monthly basis until early 1935. At Gernsback's instigation he began the SCIENCE FICTION LEAGUE, a club centred on Wonder Stories. CDH initiated a "new-story" policy in an attempt to emulate the "thought-variant" stories published by F. Orlin TREMAINE in ASF; but this did not achieve many notable results-although he did publish Stanley G. WEINBAUM's first story, "A Martian Odyssey" (1934), to great acclaim. He

published one story of his own under the pseudonym Derwin Lesser, used again in articles he contributed to the magazine SCIENCE FICTION, which he edited from its inception in Mar 1939. He also edited two companion magazines: FUTURE FICTION and SCIENCE FICTION QUARTERLY. None of these magazines achieved any distinction; they were taken over (and the first 2 titles amalgamated) by Robert A.W. LOWNDES in 1941. A convinced pacifist, CDH was a conscientious objector to WWII, and in 1942 was assigned to a public-service forestry camp. He left in 1943 and was imprisoned later the same year as an absolute objector to all forms of wartime service. [MJE]

HORROR IN SF

The often propounded notion that sf is a literature of rational, scientifically based extrapolation is in most instances false. Much sf is anti-science, for reasons partly historic and perhaps partly intrinsic. The famous remark of the Spanish painter Goya (1746-1828) that the Sleep of Reason breeds Monsters is inarguable in its most obvious meaning: when rationality is in abeyance, terrible things happen. But the phrase seems to allow a rather different interpretation, one of great significance to sf: that it is science itself which, when it dreams, dreams monsters; in other words, the link between the bright light of science and the darkness of monstrosity is a link of blood and kinship. Certainly much sf might lead us to suppose that this apparent paradox is true. Brian W. ALDISS argued in Billion Year Spree (1973) that sf "was born from the Gothic mode" in the 19th century (GOTHIC SF), and that was also one of the birthplaces of horror fiction; certainly many of sf's early manifestations were horrible indeed, with E.T.A. HOFFMANN's malign ROBOT-maker Coppelius, Mary SHELLEY's FRANKENSTEIN MONSTER, Robert Louis STEVENSON's Jekyll and Hyde, Nathaniel HAWTHORNE's poison-saturated daughter of the scientist Rappaccini, and Edgar Allan POE's rotting M. Valdemar being celebrated but not untypical examples. In the flurry of fantastic fiction published in magazines and PULP MAGAZINES between, say, 1880 and 1930, occult and supernatural fiction and sf were so closely related as to be disentangled only with the greatest difficulty, and sometimes not very convincingly. Ambrose BIERCE, Algernon BLACKWOOD, Arthur Conan DOYLE, William Hope HODGSON, Arthur MACHEN and A. MERRITT are only a few of the very many writers of that half-century whose work hovered between sf's light and horror's darkness. Even during and after the 1930s, when pulp fiction was being more and more categorized into separate groups, we find that it was not just the sf magazines like AMZ and ASF that published sf: much sf, of an often horrific kind, continued to appear in WEIRD TALES, a magazine largely devoted to supernatural fiction. Even H.P. LOVECRAFT wrote some borderline sf. In the ordinary world, science, then as now, came in two guises: on the one hand it offered a gleaming, safe future; on the other

it carried us to the brink of apocalypse. Its medical research might unleash new diseases, its robots run amok, its intellectualism generate a race with huge brains and withered bodies, its physics create death rays or atomic bombs. Science was ungodly; it might even awaken the dead. Sf is, even now, by and large written by ordinary people rather than scientists. This was almost exclusively so in the 1930s, and it is no wonder that much of the sf of those early years gave science a bad press. Many people agree that sf should be about science, but that has never meant that sf should like science. The anti-scientism of much 1930s sf (also visible at the more reputable end of the spectrum in the work of writers like C.S. LEWIS) did no more than reflect the fears of the 1930s, fears that are in no wise abated in the 1990s. Public anxieties aroused by science and technology are bound to manifest themselves in fiction, especially horror fiction; this is natural and unsurprising. The only surprising thing about it is that so many commentators on the genre are surprised by it. These commentators have, of course, endeavoured to banish sf/horror from the sf genre, and some have actually contrived DEFINITIONS OF SF intended to do just this. Wishing, however, does not make it so; and the fact is that the supposed splitting in the 1920s and 1930s of the fantastic-fiction tradition into separate genres of sf, horror and FANTASY never really took place - or, at least, that the process was never completed. This failure to exorcise the demons from sf is most visible in sf CINEMA. To this day maybe half of all sf movies are horror movies. Of the 250 or so films given entries in this encyclopedia that could be cited to demonstrate the case, a few dozen or so of the most prominent should be sufficient. In the 1920s we had DR JEKYLL AND MR HYDE, METROPOLIS, ALRAUNE (vt Unholy Love; vt Daughter of Destiny) and ORLACS HANDE (vt The Hands of Orlac); in the 1930s we had FRANKENSTEIN, MAD LOVE, The INVISIBLE MAN , KING KONG and ISLAND OF LOST SOULS; in the 1940s (when there was almost no sf cinema at all) we had DR CYCLOPS and The LADY AND THE MONSTER ; the 1950s offered rich pickings with The THING , The BEAST FROM 20,000 FATHOMS , INVADERS FROM MARS, THEM!, The QUATERMASS EXPERIMENT , TARANTULA, INVASION OF THE BODY SNATCHERS, The BLOB and I MARRIED A MONSTER FROM OUTER SPACE, among very many others; things slowed down a little in the 1960s with VILLAGE OF THE DAMNED, The DAMNED , The BIRDS , X - THE MAN WITH THE X-RAY EYES, DR STRANGELOVE: OR HOW I LEARNED TO STOP WORRYING AND LOVE THE BOMB, TERRORE NELLO SPAZIO (vt Planet of the Vampires), SECONDS, WEEKEND, QUATERMASS AND THE PIT, NIGHT OF THE LIVING DEAD and SCREAM AND SCREAM AGAIN; in the 1970s we saw A CLOCKWORK ORANGE , FROGS, The CRAZIES , IT'S ALIVE!, WESTWORLD, The PARASITE MURDERS , The STEPFORD WIVES , BUG, DEMON SEED, COMA, PIRANHA, The BROOD and, most notably of all, ALIEN; in the 1980s there were ALTERED STATES, SATURN 3, SCANNERS, The THING , VIDEODROME, Der LIFT , The TERMINATOR , RE-ANIMATOR, The FLY , PREDATOR, MONKEY SHINES, THEY LIVE, SOCIETY, TREMORS, HARDWARE, DARKMAN and ALIENS; already in the 1990s we have had TERMINATOR 2: JUDGMENT DAY and ALIEN3. All of these are sf. All of these can be described as horror. There is something going on here beyond anxieties about science. It is the theme (discussed in detail under GOTHIC SF and again under MONSTER MOVIES) of the incursion of the irrational into an apparently calm and ordered venue - an intrusion that in the real world we all fear with good reason; for this fear (which is

for some an active desire) we may need a catharsis in harmless fictional form. It is a theme for which the metaphoric flexibility of sf is peculiarly well adapted to cater. The worldview of PARANOIA is one that sf has often adopted. Horror itself, as a separate genre, has roots older than those of sf, and had begun to develop its distinctive patterns by the time of the Romantic movement in the very early 19th century - a little earlier than sf. Like sf it was by the 1930s widely if incorrectly considered as distinct from other literary genres. Horror did not, however, become a major genre in the mass market until the late 1970s and early 1980s - a boom that partly resulted from Stephen KING's popularity - and later in the 1980s it began to seem as if the horror wave had already crested. It is a genre defined not by its content but by its presumptive effect - this is why it so readily overlaps with other genres which are identified by their content; we know that horror-sf is common, and lately there has been a mini-boom in horror Westerns. Various critical attempts have been made, seldom very convincingly, to distinguish between horror and weird fiction, or horror and terror, or even horror and the New Gothic. (The term horror is regarded by some as an unpleasant lowest-common-denominator word for the genre, hence the occasional search for something that sounds more respectable, such as "dark fantasy"; but some contrary writers glory in even less attractive terms, like the current "splatterpunk" [see also SPLATTER MOVIES]. Regardless of what terms critics use, the predominant marketing term remains "horror".) Horror fiction can be either psychological horror - often psychopaths cutting up women with sharp instruments, sometimes the inner landscapes of maimed minds - or supernatural horror, or very often both, stories in the second category being (perhaps) no more than an externalization of the demons conjured up within the first. When sf collides with horror it is, curiously enough, usually via the supernatural category, though very often in a rationalized format (GODS AND DEMONS; GOLEM; SUPERNATURAL CREATURES) where some kind of quasiscientific explanation is given - as in Richard MATHESON's I Am Legend (1954) and Brian M. STABLEFORD's The Empire of Fear (1988), both vampire novels - for apparently unnatural, and often horrible, manifestations. (The term MONSTER is sometimes reserved for more overtly sciencefictional horrors, like the carnivorous killer in Alien.) Just as sf often uses horror motifs, so too does horror sometimes use sf motifs, as in Joe R. Lansdale's The Drive-In 2: Not Just One of Them Sequels (1989), in which a "big red comet" causes carnivorous dinosaurs to manifest in a metamorphosed Texas. Lansdale is one of the many interesting writers lacking entries in this encyclopedia because their use (if any) of sf tropes is so inexplicable; but his borderline case does serve to show up the insecurity any scholar must feel in attempting to dissect horror, fantasy and sf out from each other. There seems little point in listing here sf authors whose work contains major horror components; such a list would be not only unmanageably long but also rather arbitrary, for such genre-crossing occurs in work of very varied literary ambition and for a variety of purposes, some horror-sf stories being admonitory fables, others exercises in the provision of rollercoaster thrills, still others tales of mental breakdown and the hallucinatory worlds such illness can produce. As argued above, horror cannot easily be defined by content, only by its desired effect, which may be a matter of auctorial tone, or of

lethal subtext. Coagulations of horror with sf have come from authors as various as Ray BRADBURY and Thomas M. DISCH, Charles BEAUMONT and Dan SIMMONS, Clark Ashton SMITH and L. Ron HUBBARD, Frank Belknap LONG and Dean R. KOONTZ, Gerald KERSH and K.W. JETER. The theme of CHILDREN IN SF, in particular, is a hothouse for such crossovers. With sf cinema it is possible to be very much more specific: the auteur directors who have specialized in blending sf with horror are first and foremost David CRONENBERG and then, still importantly, Larry COHEN, Roger CORMAN, George A. ROMERO and Ridley SCOTT, in turn followed perhaps by Charles BAND, James CAMERON, John CARPENTER, Michael CRICHTON and Joe DANTE, along with the important film-writer Nigel KNEALE. There are many books and magazines about horror. A particularly useful quarterly magazine that sometimes considers horror-sf crossover books - and a better informed and more intelligent review than many magazines in the field - is *Necrofile: The Review of Horror Fiction* ed Stefan Dziemianowicz, S.T. Joshi and Michael Morrison, published by Necronomicon Press, Rhode Island, USA, since Summer 1991. [PN]

HORSNELL, HORACE

(1882-1949) UK drama critic and novelist whose *Man Alone* (1940) describes the experiences of the last man on Earth as he wanders through London after the final DISASTER. *Castle Cottage* (1940) is a ghost story and *The Cool of the Evening* (1942) a rather gentle ADAM-AND-EVE fable set at the close of Adam's life. [JC]

HORTON, GORDON T.

[r] ROBERT HALE LIMITED.

HOSHI, SHIN'ICHI

(1926-) One of the pioneers of Japanese sf. SH, who has specialized in the short-short story, became the first full-time sf writer in JAPAN. His stories were influential on the younger generation, and he was largely responsible for the popularization of sf and its way of thinking. He has developed a writing style that gives an sf flavour even to his non-sf works, and which is appropriate to his attacks on everyday values. Although he is sometimes called the Japanese Ray BRADBURY, his writings are more satirical than poetic: comparison with Fredric BROWN might be closer to the mark. A graduate of Tokyo University, he helped Takumi SHIBANO found *Uchujin*, the first Japanese FANZINE, in 1957; his first professional sale, "Sekisutora" ["Sextra"] (1957), had originally been published in *Uchujin* #2. His best known story is "Bokkochan" (1958; trans under same title FSF 1963); it also appeared in *Jinzo Bijin* ["A Man-Made Beauty"] (coll 1961). By 1983 he had published over 1000 stories, including two sf/fantasy novels: *Muma No Hyoteki* ["Target of Nightmare"] (1964), in which a ventriloquist is controlled by his doll, and *Koe No Ami* ["Net of the Voice"] (1970), in which a telephone network becomes conscious and takes control of human society. Other works have included historical novellas, collections of unconventional short essays, and fictionalized documentaries including biographies of his father and grandfather. An important multivolume retrospective is *Hoshi Shin'ichi No Sakuhinshu* ["The Complete Works of Shin'ichi Hoshi"] (coll 1974). Two books of English translations are *The Spiteful Planet* and *Other Stories*

(coll trans 1978 Tokyo) and There was a Knock (coll trans 1984 Tokyo), the latter collecting short-short stories. [TSh]

HOSKINS, ROBERT

(1933-) US writer and editor. RH began publishing sf with "Feet of Clay" for If in 1958 as by Phillip Hoskins. He worked as a literary agent 1967-8, and served as senior editor with Lancer Books 1969-1972. His first published novel, Evil in the Family (1972) as by Grace Corren, is a TIME-TRAVEL fantasy. The Shattered People (1975) is FAR-FUTURE sf, pitting a primitive culture against a technological civilization which has been exploiting it. The Stars sequence - Master of the Stars (1976 Canada), To Control the Stars (1977) and To Escape the Stars (1978) - is based loosely on RH's "The Problem Makers" (1963), and describes a cluster of galactic civilizations, connected by a system of ancient stargates, over a period of eons. Legacy of the Stars (1979) as by John Gregory is an sf adventure unconnected to the sequence. RH's books make no claims to be anything more than entertaining action adventures. As an anthologist, RH is of primary importance as editor of the INFINITY series of original anthologies: Infinity #1 (anth 1970), #2 (anth 1971), #3 (anth 1972), #4 (anth 1972) and #5 (anth 1973). [PN/JC] Other works: Tomorrow's Son (1977); Jack-in-the-Box Planet (1978), juvenile sf; The Attic Child (1979) as by Grace Corren; The Night Runner: The Gemini Run * (1979) as by Michael Kerr. Other works as editor: First Step Forward (anth 1969); The Stars Around Us (anth 1970); Swords against Tomorrow (anth 1970); The Far-Out People (anth 1971); Tomorrow One (anth 1971); Wondermakers (anth 1972); Strange Tomorrows (anth 1972); The Edge of Never (anth 1973), fantasy; Wondermakers 2 (anth 1974); The Liberated Future (anth 1974); The Future Now: Saving Tomorrow (anth 1977); Against Tomorrow (anth 1979).

HOUGH, S(TAN) B.

[r] Rex GORDON.

HOUGHTON, CLAUDE

Pseudonym of Claude Houghton Oldfield (1889-1961), a UK writer known primarily outside the sf field. He declared that all his work was based on the thesis that modern civilization must collapse "because it no longer believes it has a destiny"; thus his novels of ideas occasionally stray into the surreal, the supernatural or the sciencefictional. His one borderline-sf novel is This was Ivor Trent (1935), which examines the effect upon a writer of a vision which reveals to him a man of the future. His first novel, Neighbours (1926), is an intriguing study in abnormal PSYCHOLOGY whose narrator makes an obsessive study of his "next-door neighbour", unaware of the fact that he is merely an alienated facet of his subject's mind. Some of CH's later works also feature eccentric psychologies, but their fantastic elements are minimal. Julian Grant Loses his Way (1933) is a bitterly misanthropic character-study cast in the form of a posthumous fantasy. Three Fantastic Tales (coll 1934 chap) contains 3 brief philosophical fantasies. [BS] See also: SUPERMAN.

HOUSE, [Colonel] EDWARD MANDELL

(1858-1938) US political figure - in his refusal of official duties rather like an earlier Bernard Baruch (1870-1965)-involved with President

Woodrow Wilson in setting up the League of Nations. Philip Dru, Administrator: A Story of Tomorrow, 1920-1935 (1912) is a surprisingly wide-ranging exercise in political sf. After a cartel of corrupt business tycoons attempts to suborn the US Government, Dru instigates a new Civil War, wins, and in place of the old US Government establishes a radical UTOPIA that features universal suffrage and other "socialist" innovations. He then saves the rest of the world. [JC]

HOUSEHOLD, GEOFFREY

(1900-1988) UK writer who remains best known for *Rogue Male* (1938), the first of a run of thrillers whose intensely stoic lone protagonists condemn the political world, seeking authenticity in the soil and in autonomous acts, like the attempted assassination of Hitler which forms the premise of this book. GH's first novel, *The Terror of Villadonga* (1936; rev vt *The Spanish Cave* 1936 US), for older children, describes the discovery of a prehistoric sea-beast. *The Third Hour* (1937) sends its protagonist to South America in search of UTOPIA. *The Dance of the Dwarfs* (1968) is set in the Amazon basin, where feral prehistoric survivals cause some horrific damage. *The Cats to Come* (1975) is a fantasy about a future Earth ruled by cats. *Hostage: London; The Diary of Julian Despard* (1977) is a NEAR-FUTURE thriller. *The Sending* (1980) is a dark fantasy. *Summon the Bright Water* (1981) is a SCIENCE-FANTASY tale invoking ATLANTIS. *Arrows of Desire* (1985), set in a crumbling post- HOLOCAUST UK, expresses once again, and for the final time, GH's profound doubt that humanity could ever govern itself with dignity. [JC]

HOUSE NAMES PSEUDONYMS.

HOUSMAN, LAURENCE

(1865-1959) UK writer, brother of the poet A.E. Housman (1859-1936) and best known for his plays and for several volumes of fantasy stories, including *Gods and their Makers* (coll 1897; with stories added, vt *Gods and Their Makers and Other Stories* coll 1920), *What Next? Provocative Tales of Faith and Morals* (coll 1938), *Strange Ends and Discoveries* (coll 1948) and *The Kind and the Foolish: Short Tales of Myth, Magic and Miracle* (coll 1952). Some of his work for children, such as his first book, *A Farm in Fairyland* (coll 1894), and some of his plays, such as *Possession* (1921), are also of fantasy interest, as is his novel *Trimblerigg* (1924). Closer to an sf interest are his two RURITANIAN tales, *John of Jingalo: The Story of a Monarch in Difficulties* (1912; vt *King John of Jingalo* 1912 US) and its sequel *The Royal Runaway*, and *Jingalo in Revolution* (1914); in both novels there is a running commentary on UTOPIAN social solutions, particularly with regard to WOMEN's rights. [JC] Other works: *All-Fellows: Seven Legends of Lower Redemption* (coll 1896) and *The Cloak of Friendship* (coll 1905), both assembled with 1 additional story as *All-Fellows and the Cloak of Friendship* (omni 1924); *The House of Joy* (coll 1895) and *The Field of Clover* (coll 1898), both recast, with *A Farm in Fairyland*, as *Moonshine and Clover* (coll 1922) and *A Doorway to Fairyland* (coll 1923); *The Blue Moon* (coll 1904); *Ironical Tales* (coll 1926); *What O'Clock Tales* (coll 1932), juvenile fables.

HOUSTON, DAVID

Pseudonym of US writer Houston Force Lumpkin III (1938-), who produced sf books with some intensity for a few years. Generally unremarkable, though competent, his works began with *Alien Perspective* (1978) and an sf-adventure sequence comprising *Gods in a Vortex* (1979) and *Wingmaster* (1981). He then wrote a series of novels tied to the TALES OF TOMORROW tv series: *Tales of Tomorrow #1: Invaders at Ground Zero ** (1981), *#2: Red Dust ** (1981), *#3: Substance X ** (1981) and *#4: Ice from Space ** (1982). He was also responsible for *Swamp Thing ** (1982) with Len Wein, a SWAMP THING film tie. [JC]

HOVORKA, ROBERT L(EO) Jr

(1955-) US writer whose first sf novel, the SPACE OPERA *Derelict* (1988), is reminiscent of *ALIEN* (1979). [JC]

HOWARD, (JOHN) HAYDEN

(1913-1987) US writer who began publishing sf with "It" for *Planet Stories* in 1952. His sf novel, *The Eskimo Invasion* (fixup 1967), set (rather unusually) in Canada, comprises a speculative view of OVERPOPULATION problems through a story about a group of Eskimos transformed into an apparently benign, fast-breeding new species. [JC]

HOWARD, IVAN

(? -) US editor who produced 7 anthologies 1962-4 for Belmont books, and nothing since: *The Weird Ones* (anth 1962; IH uncredited), *Escape to Earth* (anth 1963), *Novelets of Science Fiction* (anth 1963), *Rare Science Fiction* (anth 1963), *6 and the Silent Scream* (anth 1963), *Way Out* (anth 1963) and *Things* (anth 1964). [PN]

HOWARD, ROBERT E(RVIN)

(1906-1936) US writer. REH wrote no sf - although *Almuric* (1939 *Weird Tales*; 1964) is a PLANETARY ROMANCE in the manner of Edgar Rice BURROUGHS - but his association with H.P. LOVECRAFT and WEIRD TALES helped to maintain the sf community's interest in his extravagant SWORD-AND-SORCERY stories. His few contributions to Lovecraft's Cthulhu Mythos do not bring out the sf elements. He was the real parent and inspiration of the sword-and-sorcery (or HEROIC FANTASY) genre (although earlier writers have been retrospectively recruited to it by historians), which existed as an enclave of the sf marketplace until FANTASY became a marketing category in the late 1960s, after which REH's work enjoyed a spectacular posthumous boom. His first professionally published story was "Spear and Fang" for *Weird Tales* in 1925; he quickly became an amazingly prolific writer of vigorous adventure fiction in several pulp genres. REH's most celebrated works are those which comprise the Conan the Barbarian series; 17 of these appeared in *Weird Tales* 1932-6, and 4 more were published posthumously. The series has been extended vastly, first by the fan Bjorn Nyberg (1929-), whose pastiche novel was edited by L. Sprague DE CAMP; then De Camp turned several other unpublished REH stories into Conan stories, and he and Lin CARTER wrote many more around fragments and outlines as well as creating pastiches of their own. Further adventures have been produced by Andrew J. OFFUTT, Robert Jordan (1948-) and Steve PERRY, among others. The popularity of the series was further enhanced by the film *Conan the*

Barbarian (1981) starring Arnold Schwarzenegger, although it de-emphasized the fantasy element. The bibliography of the series is inordinately complicated, but the whole of the authentic canon can be found in 5 GNOME PRESS vols: in order of internal chronology, The Coming of Conan (coll 1953; includes 2 non-series stories, 2 revisions and some supplementary material), Conan the Barbarian (coll 1955), The Sword of Conan (coll 1952), King Conan (coll 1953) and Conan the Conqueror (1935 Weird Tales as "The Hour of the Dragon"; 1950; rev vt The Hour of the Dragon 1977). Gnome also issued the De Camp/Nyberg The Return of Conan (1957; vt Conan the Avenger 1978) and the De Camp revisions in Tales of Conan (coll 1955). Lancer published 11 vols of a 12-vol set, later completed and reissued by ACE BOOKS: again in order of internal chronology, these are Conan (coll 1967), Conan of Cimmeria (coll 1969), Conan the Freebooter (coll 1968), Conan the Wanderer (coll 1968), Conan the Adventurer (coll 1966), Conan the Buccaneer (1971; by De Camp and Carter), Conan the Warrior (coll 1967), Conan the Usurper (coll 1967), Conan the Conqueror (1967), Conan the Avenger (1968), Conan of Aquilonia (coll 1977; by De Camp and Carter) and Conan of the Isles (1968 by De Camp and Carter). Two omnibuses -The Conan Chronicles (omni 1989UK) and The Conan Chronicles 2 (omni 1990 UK) - assemble the first 6 titles of this sequence. Using the original magazine texts, Donald M. Grant issued handsome illustrated editions of many of the REH stories including The People of the Black Circle (1974), A Witch Shall Be Born (1975), The Tower of the Elephant (coll 1975), Red Nails (1975), Rogues in the House (coll 1976), The Devil in Iron (coll 1976), Queen of the Black Coast (coll 1978), Pool of the Black One (coll 1986) and The Hour of the Dragon (1989). A Berkley paperback series advertised as "the authorized edition" and ed Karl Edward Wagner includes The Hour of the Dragon (1977), The People of the Black Circle (coll 1977) and Red Nails (coll 1977). The Conan Chronicles (omni 1989). Two MARVEL COMICS based on the character are Conan the Barbarian and The Savage Sword of Conan. Other REH sword-and-sorcery series include one set in Conan's imaginary prehistoric world, collected in King Kull (coll 1967, ed and with additional material by Lin Carter. Others are collected in Bran Mak Morn (coll 1969; cut vt Worms of the Earth 1987) and Red Shadows (coll 1968; vt in 3 vols as The Moon of Skulls 1969, The Hand of Kane 1970 and Solomon Kane 1971). REH wrote at high speed and his work is unsophisticated, but it is vigorous, fast-paced and easy to read. His suicide - after learning of his mother's imminent death - brought to a premature end what might have been an extraordinarily productive career. [MJE/BS] Other works: Skull-Face and Others (coll 1946; vt in 3 vols as Skull-Face and Others 1976 UK, The Valley of the Worms, and Others 1976 UK and The Shadow Kingdom 1976 UK); Always Comes Evening (coll 1957), poetry; The Dark Man and Others (coll 1963; cut vt Pigeons from Hell 1976); Wolfshead (coll 1968); Tigers of the Sea (coll 1976); The Book of Robert E. Howard (coll 1976); The Second Book of Robert E. Howard (coll 1976); The Robert E. HOWARD, TROY

Lauran Bosworth PAINE.

HOWARD, WARREN F.

[s] Frederik POHL.

HOWELL, SCOTT

Paul CONRAD.

HOWELLS, WILLIAM DEAN

(1837-1920) US writer, best known for his many realist novels from 1870
onwards. His UTOPIAN sequence, *A Traveler from Altruria* (1892-3
Cosmopolitan; 1894) and *Through the Eye of the Needle* (Part One 1894
Cosmopolitan; exp 1907), is a deceptively mild-mannered assault on the
pretensions of late-19th-century US democracy and culture, seen from the
perspective of a dreamlike visitor from Altruria, a land where the
principles of Christianity and of the US Constitution, taken literally,
result in an ethical form of socialism. In the second volume the visitor
returns to Altruria with his US bride, and both send letters back
describing that land, whose nature is somewhat influenced by the work of
Edward BELLAMY, more so by that of William MORRIS. Capitalism has been
replaced by a genuine altruistic "neighbourliness", and the two books
attack hypocrisy and the more ruthless forms of capitalism in a manner
both unmistakable and highly telling, even though gently put. *Letters of
an Altrurian Traveler* (1893-4 *Cosmopolitan*; 1961) assembles bridging
material WDH published only in magazine form; *The Altrurian Romances* (omni
1968) reprints everything. Much the same narrative technique reappears
movingly in *The Seen and Unseen at Stratford-on-Avon* (1914), whose revived
but ghostly Shakespeare, addressing the 20th-century narrator, sweetly
defends his right to be considered the author of his own plays; the book
is an answer to Mark TWAIN's *Is Shakespeare Dead?* (1909) which, after the
fashion of the time, argues Francis BACON's authorship. *Questionable
Shapes* (coll 1903) and *Between the Dark and the Daylight* (coll 1907),
neither sf, assemble (along with other work) CLUB STORIES in which the
psychologist Wanhope scientifically debunks the ghost stories of his
fellow members. [JC] Other works: *The Undiscovered Country* 1880); *The
Leatherwood God* (1916). As Editor: *Shapes that Haunt the Dusk* (anth 1907)
with Henry Mills Alden.

HOWES, JANE

Wilmar H. SHIRAS.

HOWL, MARCIA YVONNE

[r] Sharon JARVIS.

HOWLING, THE

Joe DANTE.

HOYLE, [Sir] FRED

(1915-) UK astronomer and writer, famed in the former capacity for his maverick views on many subjects, including a long-held advocacy of the Steady State theory of the creation of the Universe, a concept replaced after much acrimony by the currently orthodox Big Bang theory. A possible consequence of his combative attitude towards theory and his colleagues was the apparent weariness which afflicted him in 1973, the year of his knighthood, when he resigned his posts at Cambridge University as Plumian professor of ASTRONOMY and experimental philosophy, and as director of the Cambridge Institute of Theoretical Astronomy, which he had founded. He subsequently much increased the rate of his writing, both fiction and nonfiction. The first in the latter category, and his first book, *The Nature of the Universe* (1950), had eloquently popularized his COSMOLOGY in 1950s terms, as had what is possibly his most important popularization, *Frontiers of Astronomy* (1955); later works, like *Astronomy and Cosmology* (1975 US), *Astronomy Today* (1975; vt *Highlights in Astronomy 1975 US*) and *The Universe According to Hoyle* (1982 US), aggressively updated those arguments. More unusual postulates about the nature of the Universe were presented - with Chandra Wickramasinghe (1939-) - in books such as *Lifecloud: The Origin of Life in the Universe* (1979), *Diseases from Space* (1979), *Evolution from Space* (1981) and *Cosmic Life-Force* (1988), which argue that complex organic molecules, including viruses, form in the nuclei of comets and are deposited on Earth during close encounters or impacts; they join the gene pool, making EVOLUTION possible. *Ice: The Ultimate Human Catastrophe* (1981) argues that a new Ice Age is imminent. It could be argued that FH's formidable reputation and powers as a scientific intellect have obscured the true nature of his sf, none of which is told with anything like a strict adherence to scientific principles, plausible or speculative. His first novel, *The Black Cloud* (1957) postulates the arrival of a sentient cloud of gas from space which - in a manner reminiscent of the work of Edmond HAMILTON- proceeds to blot off the Sun's rays from Earth, killing the scientists who attempt full-scale COMMUNICATION with it, because such an intense exposure to the cloud's mentality overwhelmingly displaces their human conception of reality. In later novels offers of transcendence would affect FH's SCIENTISTS like catnip, giving them the chance both to escape "orthodox" science and to demonstrate an impatient contempt for civilian dealings: his books, which typically read as mystical romps into the transcendental, are of absorbing interest for their aggressive presentation of the argument that science-educated people are more fit to govern than arts-educated people, partly because numeracy is a necessary qualification for rulers but also because civilians face life through a tangle of disabling emotions. FH's work, therefore, when it is not expressive of a holiday escapism, is consistently political (POLITICS) in orientation. *Ossian's Ride* (1959), his second novel, is told initially in a manner reminiscent of John Buchan (1875-1940) or Geoffrey HOUSEHOLD: a protagonist, on the run in rough-and-tumble Ireland from a posse of incompetent agents, gradually uncovers an underlying sf plot - at which point the book changes course utterly. Stranded ALIENS plan to transform Earth into a rationalized, high-tech, skyscraper-packed UTOPIA, by force if necessary: they offer to recruit the protagonist, who joins them gladly. With John ELLIOT, FH next

published *A for Andromeda* * (1962) and *Andromeda Breakthrough* * (1964), adapted from their tv serials with those titles (which see). With the exception of one further solo novel, *October the First is Too Late* (1966), an emotionally disjointing excursion through time-slipped areas of Earth, and a collection of stories, *Element 79* (coll 1967), FH for some 20 years concentrated exclusively on collaborative work; *Comet Halley* (1985) noticeably lacked the drive of his collaborations. The obvious power of his personality is reflected in the fact that the novels written with Elliot, and the more important ones with his son Geoffrey HOYLE, differ in no significant way from the early solo efforts. In the first novel with Geoffrey, *Fifth Planet* (1963), an alien intelligence offers, as usual, a challenge-and an ultimate marriage of minds - to a scientist who must attempt to make sense of events on Achilles, a grassy, wandering planet. *Rockets in Ursa Major* (1962 as unpublished children's play by FH; rev 1969) and its sequel, *Into Deepest Space* (1974 US), are spasmodic SPACE OPERAS involving an ALIEN-guided trip through a BLACK HOLE. The protagonist of *The Incandescent Ones* (1977 US), trapped on a DYSTOPIAN Earth, finds to his relief that he is an ANDROID, and thus entitled to disincorporate into the higher consciousnesses who inhabit Jupiter. *The Westminster Disaster* (1978) welcomes a terrorist-inspired nuclear destruction of London, with the buildings of Whitehall coming "down like so many rotten fruit". But most interesting perhaps is *The Inferno* (1973), in which an explosion at the galactic core wipes out all human life except for small groups, mainly in Scotland, which an impatient scientist comes to rule: as wish-fulfilment, the tale is perhaps more self-revealing than many "civilian" authors would dare to pen; the power of the book, nevertheless, is very considerable. By this point, FH and his son had become adept at a style whose apparent disjointedness concealed an intensity which scathed the mundane world. In his best work, FH demonstrates not the power of scientific method but the personal allure of transcendental intoxication. His appeal is straightforward. In his hands, sf does not explain. It releases. [JC/PN] Other works: *The Small World of Fred Hoyle: An Autobiography* (1986). With Geoffrey Hoyle: *Seven Steps to the Sun* (1970); *The Molecule Men and The Monster of Loch Ness: Two Short Novels* (coll 1971); the Professor Gamma series of juvenile novels, comprising *The Energy Pirate* (1982 chap), *The Frozen Planet of Azuron* (1982 chap), *The Giants of Universal Park* (1982 chap) and *The Planet of Death* (1982 chap). See also: ANTI-INTELLECTUALISM IN SF; CONCEPTUAL BREAKTHROUGH; CYBERNETICS; DISASTER; DISCOVERY AND INVENTION; INTELLIGENCE; LIVING WORLDS; MATHEMATICS; PARALLEL WORLDS; PHYSICS.

HOYLE, GEOFFREY

(1941-) UK writer, author of several sf novels with his father, Fred HOYLE (whom see for details). 2010: *Living in the Future* (1972) is a nonfiction exercise in FUTUROLOGY for children. [JC]

HOYLE, TREVOR

(1940-) UK writer who has, most unusually, been able to apply an erudite surrealism to works directed towards a mass market. He had not, however, yet mastered this technique for his first novel, *The Relatively Constant Copywriter* (1972), a dourly joky FABULATION which he self-published. He

remains best known for his Q series-Q: Seeking the Mythical Future (1977), Q: Through the Eye of Time (1977) and Q: The Gods Look Down (1977)-set in a variety of ALTERNATE WORLDS and detailing the work and crises of its overall protagonist, a Myth Technologist who, in the second volume, must cope with the re-creation, on an alternate world, of an experimental Adolf Hitler whose existence threatens to leak into our own familiar Earth (HITLER WINS). TH's mature range was demonstrated by the publication in the same year, 1979, of This Sentient Earth (1979 US; vt Earth Cult 1979 UK), an unremarkable sf adventure, and The Man who Travelled on Motorways (1979), an intensely crafted hegira through the apocalyptic inscapes of a UK approaching the end. The Last Gasp (1983 US; rev 1990) is a salutary dreadful-warning tale about terminal POLLUTION, implying very clearly that humanity's behaviour could be described as lemming-like. Vail (1984), once again focusing on motorways, presents a NEAR-FUTURE UK in DYSTOPIAN terms. K.I.D.S. (1987; vt Kids 1990 US) is a horror tale which climaxes in nuclear HOLOCAUST. It may be that, in finding several audiences, TH has failed to find any one audience that properly recognizes him; but he still has readers, and they continue to look for his work. [JC]Other works: Three BLAKE'S SEVEN tv ties, being Blake's Seven * (1977; vt Terry Nation's Blake's 7: Their First Adventure 1988 US), #2: Project Avalon * (1979; vt Terry Nation's Blake's 7: Project Avalon 1988 US) and #3: Scorpio Attack * (1971; vt Terry Nation's Blake's 7: Scorpio Attack 1988 US); The Rock Fix (1977); The Stigma (1980).

HOYNE, THOMAS TEMPLE

(1875-1946) US writer, a popularizer of ECONOMICS topics and author of Intrigue on the Upper Level: A Story of Crime, Love, Adventure and Revolt in 2050 A.D. (1934), in which a primitive, hierarchical, gangster-run capitalist society is riven by discontent among the lower orders, and is eventually overthrown. [JC]

HRUSKA, ALAN

(1933-) US writer whose sf novel, Borrowed Time (1984), attempts with some success to suggest analogies and crossings between various ALTERNATE WORLDS and the bicameral human brain. [JC]

HUANG HAI

[r] CHINESE SF.

HUBBARD, L(AFAYETTE) RON(ALD)

(1911-1986) US writer in many genres, including sf and fantasy, and subsequent quasireligious figure whose founding of DIANETICS and in 1952 the Church of SCIENTOLOGY led to much controversy, which continues. He began publishing sf with "The Dangerous Dimension" for ASF in 1938, and remained active until, more than a decade later, he transferred his creative gifts to the RELIGION he founded. He wrote under his own name and as Kurt von Rachen, Rene Lafayette and Frederick Engelhardt; other names remain unrevealed. Though there is no hard and fast line, his fantasy, much of it published in Unknown, was frequently as by LRH, and his sf, mostly in ASF, was frequently pseudonymous (although at least 12 items, some of them full-length though yet-unreprinted novels, appeared in ASF as by LRH). Certainly LRH was for John W. CAMPBELL Jr, in the throes of

creating his GOLDEN AGE OF SF, a worthwhile and prolific contributor to the two journals, though he was not a member of that small group - L. Sprague DE CAMP, Robert A. HEINLEIN and Isaac ASIMOV being the prime movers-who were rewriting the rules of generic plausibility in terms which survived for many years. Retrospective attempts to elect LRH to that central role are best seen as gestures of loyalty from those sympathetic to his later career.His best-known early sf novel, Final Blackout (1940 ASF; 1948), grimly describes a world devastated by many wars in which a young army officer becomes dictator of the UK, which he organizes to fend off a decadent USA. It cannot be denied that the book veers extremely close to the fascism its text explicitly disavows. But sf was clearly not LRH's forte, and most of his work in the genre reads as tendentious or laboured or both. As a writer of fantasy, however, he wrote with an occasionally pixilated fervour that is still pleasing, and sometimes reminiscent of the screwball comedies popular in the 1930s cinema. Slaves of Sleep (1939 Unknown; 1948), with its sequel "The Masters of Sleep" (1950), his best-known fantasy, is laid in the Arabian Nights environment set aside for him by Campbell as his exclusive bailiwick in Unknown. The darkly PARANOID Fear (1940 Unknown; 1957) was perhaps rather stronger and more original, and demonstrated a powerful capacity to hook the reader into worlds where normal logic is distressingly maladaptive; it appeared also as one of the 2 novellas in Typewriter in the Sky/Fear (1940 Unknown for "Typewriter in the Sky"; coll 1951) and as one of the 2 novellas in Fear ?

coll 1970). "Typewriter in the Sky", a slyly effective self-referential FABULATION, may be his most permanently memorable work. Return to Tomorrow (1950 ASF as "To the Stars"; 1954) is a remarkably ruthless SPACE OPERA (SOCIAL DARWINISM). The Ole Doc Methuselah stories, as by Rene Lafayette, have been assembled as Ole Doc Methuselah (1947-50 ASF; coll 1970). He wrote other series, too, notably the Conquest of Space series (as Lafayette) in Startling Stories, all but the last story in 1949: "Forbidden Voyage", "The Magnificent Failure", "The Incredible Destination", "The Unwilling Hero", "Beyond the Black Nebula", "The Emperor of the Universe" and "The Last Admiral" (1950). As Kurt von Rachen he wrote the Kilkenny Cats series, all in ASF: "The Idealists" (1940), "The Kilkenny Cats" (1940), "The Traitor" (1941), "The Mutineers" (1941) and "The Rebels" (1942). In general his early work, though composed with delirious speed, often came to haunt his readership, and its canny utilization of SUPERMAN protagonists came to tantalize them with visions of transcendental power.The vulnerability of the sf community - from Campbell and A.E. VAN VOGT down to the naivest teenage fans - to this lure of transcendence may help account for the otherwise puzzling success first of Dianetics, then of Scientology itself, which gained many early recruits from sf; for, both as technique and as religion, these very US bodies of doctrine centrally posited a technology of self-improvement, a set of instructions to follow in order to liberate the transcendent power within one (EDISONADE). LRH became very wealthy on the proceeds of his intuition concerning "spiritual technology", and departed the sf field for many years, not to return until the publication of Battlefield Earth: A Saga of the Year 3000 (1982), an enormously long space opera composed in an idiom that seemed embarrassingly archaic. This was followed by the Mission Earth

"dekalogy", a 10-vol sequence whose farcical overemphases fail to disguise an overblown tale that would have been more at home in the dawn of the PULP MAGAZINES; it comprises The Invaders Plan (1985), Black Genesis (1986), The Enemy Within (1986), An Alien Affair (1986), Fortune of Fear (1986), Death Quest (1987), Voyage of Vengeance (1987), Disaster (1987), Villainy Victorious (1987) and The Doomed Planet (1987). The posthumous publication of some of these books has led to speculation as to their true authorship. The sequence was released by LRH's own firm, Bridge Publications, and was heavily promoted, reflecting LRH's - and his intellectual heirs' - apparent desire to re-establish his reputation in the sf world. At the same time, he inaugurated the WRITERS OF THE FUTURE CONTEST and the Writers of the Future workshops for new authors, some of whom have reported benefits (Algis BUDRYS for further discussion); the associated anthology series is L. RON HUBBARD PRESENTS WRITERS OF THE FUTURE. In the early 1990s, much of LRH's early work was scheduled for reissue from Bridge Publications; and in 1992 it was announced that an underground crypt had been constructed near Petrolia, California, by an arm of the Church of Scientology known as the Church of Spiritual Technology, to house "the religious works of L. Ron Hubbard and other key religious works of mankind". [JC/PN]Other works: Buckskin Brigades (1937; rev 1987; further rev 1987), associational; Death's Deputy (1940 Unknown; 1948) and The Kingslayer (coll 1949; vt Seven Steps to the Arbiter 1975), also bound together as From Death to the Stars (omni 1953); Triton and Battle of Wizards ("Triton" 1940 Unknown; "Battle of Wizards" 1949 Fantasy Book; coll 1949), also bound with Ed Earl REPP's The Radium Pool (coll 1949) as Science Fantasy Quintet (anth 1953); The Case of the Friendly Corpse (1941 Unknown; 1991); The Automagic Horse (1994 chap). Nonfiction: Dianetics: The Modern Science of Mental Health (1950) and very many others of this type, including This is Scientology: The Science of Certainty (1955 UK), Scientology: The Fundamentals of Thought (1956 UK) and The Phoenix Lectures (1968 UK). See also: ALIENS; ASTOUNDING SCIENCE-FICTION; COSMOLOGY; FASTER THAN LIGHT; HORROR IN SF; MEDICINE; MESSIAHS; MUSIC; POLITICS; PSI POWERS; PSYCHOLOGY; SPACESHIPS; VIRTUAL REALITY; WAR.

HUBSCHMAN, THOMAS

(? -) US author of two unremarkable sf adventures, Alpha-II (dated 1979 but 1980) and Space Ark (1981). [JC]

HUDSON, JAN

George H. SMITH.

HUDSON, MICHAEL

Michael KUBE-MCDOWELL.

HUDSON, W(ILLIAM) H(ENRY)

(1841-1922) UK naturalist and writer, born in Argentina. His fine quasi-UTOPIAN novel of the FAR FUTURE, A Crystal Age (1887 anon; signed, with a new preface, 1906) depicts small, self-sufficient, matriarchally organized households living in harmony with Nature. The protagonist, tragically, cannot adapt to their PASTORAL way of life. A similar quasisupernatural harmony with the Amazonian forest is enjoyed by the wild girl Rima - the last of her race - in the affectingly powerful novel Green Mansions

(1904); she is ultimately destroyed by the local Indians, who are no more in tune with Nature than is the unhappy civilized protagonist. Both stories are remarkable anticipations of modern ecological mysticism (ECOLOGY). "Marta Riquelme", in *El Ombu* (coll 1902), is an equally feverish fantasy in which the eponymous woman undergoes sorrow-induced metamorphosis into a bird. *A Little Boy Lost* (1905) is a children's fantasy which further develops Hudson's peculiar fascination with maternal figures. [BS]See also: ANONYMOUS SF AUTHORS; HISTORY OF SF; SLEEPER AWAKES.

HUEFFER, FORD MADOX

[r] Ford Madox FORD.

HUGHES, DENNIS (TALBOT)

(? -) UK writer, one of several authors of paperback originals for obscure houses in the late 1940s and 1950s who have remained reticent - or indifferent - about revealing much about themselves as individuals. DH was among the most prolific, producing some 60 known sf novels in less than half a decade. Like John S. GLASBY and the even more prolific R.L. FANTHORPE, DH made use of a wide range of sf themes with considerable invention, especially on some of his later fantasy stories, which often feature allegorical and/or dream sequences; but the books themselves were slackly written, albeit with some improvement over the years. This carelessness was entirely understandable given the sweat-shop conditions of his employment. [JC]Works include:As Dennis (or Denis) Hughes: *The Earth Invasion Battalion* (1950); *Murder by Telecopter* (1950); *Formula 695* (1950); *War Lords of Space* (1950); *Moon War* (1951).As Marvin Ashton: *People of Asa* (1953).As Ray Barry: *Death Dimension* (1952); *Blue Peril* (1952); *Gamma Product* (1952); *Humanoid Puppets* (1952); *Ominous Folly* (1952).As George Sheldon Browne (or Brown): *Destination Mars* (1951); *The Planetoid Peril* (1952); *The Yellow Planet* (1954).As Berl CAMERON (house name): *Maid of Thuro* (1952); *Lost Aeons* (1953).As Dee Carter: *Blue Cordon* (1952); *Chloroplasm* (1952); *Purple Islands* (1953).As Neil CHARLES (house name): *Twenty-Four Hours* (1952); *The Land of Esa* (1953); *Beyond Zoaster* (1953); *Pre-Gargantua* (1953); *World of Gol* (1953); *Research Opta* (1953).As Lee ELLIOT (house name): *Bio-Muton* (1952).As Marco Garon (house name): *The Rex Brandon* jungle fantasies, loosely derived from Tarzan, comprising *Jungle Allies* (1951), *Death Warriors* (1951), *Black Fury* (1951), *White Gold* (1951), *Black Sport* (1951), *Bush Claws* (1951), *Silent River* (1951), *Veldt Warriors* (1951), *Leopard God* (1952), *Snake Valley* (1952), *Fire Tribes* (1952) and *Mountain Gold* (1952) (Marco GARRON).As Irving Heine: *Dimension of Illion* (1955 chap).As Gill HUNT (house name): *Elektron Union* (1951); *Hostile Worlds* (1951); *Planet X* (1951); *Space Flight* (1951); *Spacial Ray* (1951).As Von KELLAR (house name): *Ionic Barrier* (1953).As Brad KENT (house name): *Biology "A"* (1952); *The Fatal Law* (1952); *Catalyst* (1952).As John Lane: *Maid of Thuro* (1952); *Mammalia* (1953).As Rand LE PAGE (house name): *Asteroid Forma* (1953).As Grant Malcolm: *The Green Mandarin Mystery* (1950).As G.R. Melde: *Pacific Advance* (1954).As Van REED (house name): *House of Many Changes* (1952).As Russell Rey: *The Queen People* (1952); *Valley of Terror* (1953).As William Rogersohn: *North Dimension* (1954); *Amiro* (1954).As Arn ROMILUS (house name): *Brain Paleo* (1953); *Organic*

Destiny (1954).As E.R. Royce: Experiment in Telepathy (1954).

HUGHES, EDWARD P.

(? -) US writer who began publishing sf with "In the Name of the Father" for FSF in 1980. His first novel, *The Long Mynd* (1985), depicts a post-HOLOCAUST world which has been brought into being by PSI POWERS. Master of the Fist (coll of linked stories 1989) repeats significant elements of the first venue. [JC]

HUGHES, MONICA

(1925-) UK-born writer, from 1952 in CANADA, where she has won several awards in recognition of her novels for older children, including the Canada Council Children's Literature Prize in 1982 and 1983. Her first sf novels, *Crisis on Conshelf Ten* (1975) and its sequel, *Earthdark* (1977 UK), utilize an UNDER-THE-SEA and a Lunar setting to explore in a humane fashion the crises of adolescents in venues which, typically of her work in general, encompassingly keep them alive, but at a cost. This irony of survival - it is an irony likely to evoke an acute response from young readers - is very much sharpened in the Isis sequence, for which MH remains best known: *The Keeper of the Isis Light* (1980 UK), *The Guardian of Isis* (1981 UK) and *The Isis Pedlar* (1982 UK). The protagonist of the sequence, a deeply isolated orphan teenager, is initially alone on the planet Isis except for a guardian ROBOT. It is only when human settlers arrive that she discovers that she has been bio-engineered into a kind of reptile for survival purposes, and must from this point adjust to her job as warden and to her solitude. Other series include the DYSTOPIAN Arc One sequence - *Devil on My Back* (1984 UK) and *The Dream Catcher* (1986 UK) - and *Sandwriter* (1985 UK) and its sequel, *The Promise* (1989). Singletons of interest include: *The Tomorrow City* (1978 UK), which again demonstrates the costs of survival through the story of a young girl who is blinded by the great COMPUTER designed by her father to protect her environment; *Beyond the Dark River* (1979 UK), a post- HOLOCAUST tale set in the prairies of northern Canada; *Ring-Rise, Ring-Set* (1982 UK), again set in a threatened Canada; and *Invitation to the Game* (1990), in which the implicit PARANOIA of some of MH's earlier work becomes frighteningly articulate, as a seemingly benevolent 21st-century government transports unemployable adolescents to an unknown destination, where they will be very happy. [JC] Other works: *The Beckoning Lights* (1982); *Space Trap* (1983); *The Crystal Drop* (1992). See also: CHILDREN'S SF.

HUGHES, TED

(1930-) Working name of UK poet Edward James Hughes for all his writing. Best known for volumes of dark, violent verse such as *Crow* (coll 1970; rev 1971), which like all his work features representations of other species in terms hinting at mythic metamorphoses, he has been Poet Laureate since 1984. Of sf interest is his children's sequence, comprising *The Iron Man: A Story in Five Nights* (1968; vt *The Iron Giant* 1968 US), and *The Iron Woman* (1993 chap), in the first volume a frightening but friendly iron man defends the world against a dragon from space, ultimately persuading it to sing the music of the spheres, a sound which soothes humanity's terrible lust for war and causes peace; it was made into a musical (MUSIC), *The Iron Man* (1989) by Pete Townshend (1945-). Also for

children, *What is the Truth? A Farmyard Fable for the Young* (1984 chap) and *Ffangs the Vampire Bat and the Kiss of Truth* (1986 chap), both written in a style that intermingles verse and prose, are complex tales mixing didactic concerns with flights of sf hyperbole. Much of his verse for children, variously collected in volumes like *Moon-Whales* (coll 1976 US; rev 1988 UK), is fantasy. [JC]

HUGHES, ZACH

Working name of US writer Hugh Zachary (1928-) for almost all his sf; he uses his real name for other work, and has written as well under various pseudonyms, including Evan Innes, Peter Kanto, Pablo Kane and Marcus Van Heller. His novels in the sf field are expertly devised and readable and frequently surprisingly dark in their implications. *The Book of Rack the Healer* (1973) and its sequel *Thunderworld* (1982) explore with some complexity first a post- HOLOCAUST USA, then a planet whose ALIEN population renders humanity's survival problematic. *The Legend of Miaree* (1974) again subjects alien races to a reading which is pessimistic about the chances of species survival. *Tide* (1974) and *The St Francis Effect* (1976) are more routine but *Seed of the Gods* (1974) sharply parodies the Erich VON DANIKEN books. Other novels, like *The Stork Factor* (1975), *For Texas and Zed* (1976) and *Tiger in the Stars* (1976 Canada), variously exploit SPACE-OPERA themes, sharing with his first books an inventive knack for aliens. Without undue emphasis, elements of a shared background link several of these titles - *Killbird* (1980), for instance, is clearly set in the same universe as *The Legend of Miaree* - and ZH's work gives a general sense of only casually developed potential, along with very considerable unevenness: *Sundrinker* (1987), another tale of aliens, features as protagonist a mobile plant, arguing the plausibility of the premise with some force; while *The Dark Side* (1987) is a conventional space opera. In the end, ZH gives the air of being a professional writer less than fully attentive to the genre. [JC] Other works: *Pressure Man* (1980); *Gold Star* (1983); *Closed System* (1986); *Life Force* (1988); *Mother Lode* (1991); *Deep Freeze* (1992); *The Omnificence Factor* (1994). As Evan Innes: *The America 2040* sequence of SPACE-OPERA adventure *SHARECROPS* comprising *America 2040* (1986), #2: *The Golden World* (1986), #3: *The City in the Mist* (1987), #4: *The Return* (1988) and #5: *The Star Explorer* (1988). As Pablo Kane: *A Dick for All Seasons* (1970). As Peter Kanto: Of his numerous sex novels under this name, *The World where Sex was Born* (1969), *Rosy Cheeks* (1969), *Taste of Evil* (1969) and *Unnatural Urges* (1969) are of some interest. As Marcus Van Heller: *The Ring* (1968). As Hugh Zachary: *Gwen, in Green* (1974); *The Revenant* (1988).

HUGIN

SCANDINAVIA.

HUGO

The almost invariably used term, in honour of Hugo GERNSBACK, for the Science Fiction Achievement Award; it has been an official variant of the formal title since 1958. Hugos were first awarded at the 1953 World SF

CONVENTION; the idea was then dropped for a year (1954), but since 1955 the awards have been annual. They have always been the amateur or fan awards as opposed to, say, the NEBULA or PHILIP K. DICK AWARD, which are voted on by different categories of professional reader. The original idea, from fan Hal Lynch, was based on the National Film Academy Awards (Oscars). The award takes the form of a rocketship mounted upright on fins. The first model was designed and produced by Jack McKnight; from 1955 a similar design by Ben Jason has normally been used. The rockets have been cast since 1984 (except 1991) in Birmingham, UK, at the foundry of prominent fan Peter WESTON; in 1992 they were gold-plated to celebrate the 50th Worldcon. Awards are made in several classes, which have varied in definition and number from year to year. They are given primarily for fiction, but classes for editing, artwork, film and tv, fan writing and illustration have also been included; moreover, occasional unclassified special awards have been given. The rules governing awards are made, and often remade, at Worldcon business meetings, held annually. Winners in each class are chosen by ballot; since 1960 the voters have been limited annually to members of the forthcoming Worldcon (anyone can buy membership without actually attending the convention). The occasional special awards, however, are made by Worldcon committees. Voting on Hugos is always carried out postally before the convention begins; counting is done using the single transferable ballot, often known as the Australian ballot (after the system used in Australian lower-house elections), the least successful contender's votes being redistributed, using second or subsequent preferences, after each count, until one candidate has a clear majority. There was no nominating procedure up to 1958. Since 1959 there have been ballots for nominations, distributed to fans generally until 1963, when they were limited to the membership of the current and previous year's Worldcon, except in 1965 and 1967. World conventions are held over Labor Day Weekend in September, and Hugos are given for publication or activity in the preceding calendar year. Hence, for example, a novel which wins a 1998 Hugo will have been published in 1997 (though, if it also wins a Nebula, the latter will be known confusingly as the 1997 Nebula). "No award" votes have for many years been permitted, and have resulted occasionally in void classes. Since 1963, story series and tv series have been excluded from the short-fiction and drama classes; thus in 1968 five individual STAR TREK episodes were nominated for the drama award, while in 1962 Brian W. ALDISS was able to win the short-fiction award with a series, the Hothouse stories. The definitions of the various categories of short fiction have varied. There was no short-fiction award in 1953. In the years 1955-9 there were only two classes of short fiction: novelette and short story. These were amalgamated 1960-66 as "short fiction"; few short stories were nominated during this period. In 1967 the novelette class was reintroduced, and a new class, novella, was included from 1968. In 1970-72 the only two classes were short story and novella. Since 1973 there have again been three classes of short fiction. Since the early 1970s a novella has been defined as being 17,500-40,000 words, a novelette as 7500-17,500 words, a short story as any fiction shorter than a novelette and a novel as any fiction longer than a novella. Since 1971, the drama category has included recordings. In 1973 the professional-magazine class changed to a professional-editor class, to acknowledge the

increasing importance of original ANTHOLOGIES. In 1980 the new category of nonfiction book was added, the first award being given to the first edition of this encyclopedia, and subsequent awards have gone to books of criticism, scholarship, artwork, reminiscence and science fact: a category in which GRAPHIC NOVELS compete with encyclopedias is perhaps too much of a grab-bag; the 1989 Worldcon committee did choose specifically to exclude A Brief History of Time (1988 US) by Stephen Hawking (1942-), causing some slight controversy. Since 1984 the new category of SEMIPROZINE has been included, for publications midway between FANZINES and professional magazines. The Hugos have for many years been subject to criticism on the grounds that awards made by a small, self-selected group of hardcore fans do not necessarily reflect either literary merit or the preferences of the sf reading public generally; hardcore FANDOM probably makes up less than 1 per cent of the general sf readership. Certainly Hugos have tended to be given to traditional HARD SF, and have seldom been awarded to experimental work, but they have been, on the whole, surprisingly eclectic. While many awards have gone to (good but) conservative writers like Poul ANDERSON, Robert A. HEINLEIN, Clifford D. SIMAK and Larry NIVEN, they have also been given to such doyens of the NEW WAVE as Harlan ELLISON, Roger ZELAZNY and James TIPTREE Jr, and to a number of works of literary excellence which quite fail to conform to the standard patterns of genre expectation, such as Walter M. MILLER Jr's A CANTICLE FOR LEIBOWITZ (1959) and Ursula K. LE GUIN's The Dispossessed (1974). Neither was Fritz LEIBER's eccentric THE BIG TIME (1958; 1961), which won the award before going into book format, a traditionalist selection. The rival award, the NEBULA, is chosen by professional writers, but there is no evidence that they have consistently selected works of superior literary merit; indeed, some critics would argue the contrary case, that the Hugo voters have proved themselves marginally the more reliable judges. Though good books are often ignored, and in some years individual awards have seemed strange, the track record of the Hugos has been, on the whole, quite honourable. Another cavil is that both Hugo and Nebula, being US-centred, are notably chauvinistic, and awards to non-US writers have been rare. Nevertheless, despite all the criticisms to which both awards are readily subject, they are of real value to their recipients in increasing book sales. Up-to-date listings of the rules under which Hugo awards are made can be found in the programme booklets for each Worldcon, as Article II of the Constitution of the World Science Fiction Society. Much of the Hugo-winning short fiction is available in a series of anthologies edited by Isaac ASIMOV (whom see for details).

[PN]Novels: 1953: Alfred BESTER, THE DEMOLISHED MAN 1955: Mark CLIFTON and Frank RILEY, They'd Rather be Right 1956: Robert A. HEINLEIN, Double Star 1957: no award 1958: Fritz LEIBER, THE BIG TIME 1959: James BLISH, A CASE OF CONSCIENCE 1960: Robert A. Heinlein, STARSHIP TROOPERS 1961: Walter M. MILLER Jr, A CANTICLE FOR LEIBOWITZ 1962: Robert A. Heinlein, STRANGER IN A STRANGE LAND 1963: Philip K. DICK, THE MAN IN THE HIGH CASTLE 1964: Clifford D. SIMAK, WAY STATION 1965: Fritz Leiber, THE WANDERER 1966: Roger ZELAZNY, ". . . And Call Me Conrad" and Frank HERBERT, DUNE (tie) 1967: Robert A. Heinlein, THE MOON IS A HARSH MISTRESS 1968: Roger Zelazny, LORD OF LIGHT 1969: John BRUNNER, STAND ON ZANZIBAR 1970: Ursula K. LE GUIN, THE LEFT HAND OF DARKNESS 1971: Larry NIVEN, RINGWORLD 1972: Philip Jose FARMER, TO YOUR SCATTERED BODIES GO 1973: Isaac

 by the Committee in 1988 and voted on, so it was not a Special Committee
 Award (see below). It was won by Alan MOORE and Dave GIBBONS for a GRAPHIC
 NOVEL, *WATCHMEN*. However, this particular award has mysteriously
 disappeared from subsequent official lists of past Hugo Winners, so its
 status is not clear.Special Committee Awards:Not strictly Hugo awards,
 these have been given from time to time to people as various as Hugo
 Gernsback for being "The Father of Science Fiction" in 1960, Pierre
 VERSINS for his *L'Encyclopedie de l'Utopie et de la science fiction* in
 1973 and Chesley BONESTELL for his illustrations in 1974. We do not list
 them in full.See also: JOHN W. CAMPBELL AWARD; SF MAGAZINES; WOMEN SF
 WRITERS.

HULL, E(DNA) MAYNE

(1905-1975) Canadian-born US writer, married from 1939 to A.E. VAN VOGT,
 who collaborated with her on most of her work, either in its original
 magazine form or by expanding it for book publication. She began
 publishing sf with "The Flight that Failed" for ASF in 1942, and made her
 greatest impact with the Arthur Blord series, later assembled by van Vogt
 as *Planets for Sale* (1943-6 ASF; fixup 1954) with EMH alone credited; the

1965 ed credits both authors; and with the magazine version of *The Winged Man* (1944 ASF; exp van Vogt 1966 with both authors credited). The collection *Out of the Unknown* (coll 1948) was credited to both writers, and consisted of 6 stories, 3 each, according to their original bylines. EMH ceased writing sf and fantasy when she became involved in DIANETICS. [JC]

HUMANOIDS FROM THE DEEP

Roger CORMAN; *L' ISOLA DEGLI UOMINI PESCE*.

HUME, FERGUS(ON WRIGHT)

(1859-1932) UK writer raised in New Zealand, and who may have been born there; he lived in the UK at least from 1886, when *The Mystery of a Hansom Cab* (1886) made his name. It was followed by about 140 further books, most of them novels, some being fantasy and a few sf, including *The Year of Miracle: A Tale of the Year One Thousand Nine Hundred* (1891), a DISASTER novel in which the UK is depopulated by a plague. *The Island of Fantasy* (1892) is a marginal UTOPIA set on a Mediterranean island. *The Nameless City: A Romany Romance* (1893), *The Expedition of Captain Flick* (1896) and *The Mother of Emeralds* (1901) are LOST-WORLD novels, the first featuring a secret Gypsy land, the second set in the Indian Ocean and featuring ancient Greeks, and the third set in Peru, where Incans have developed an underground civilization based on electricity. [JC] Other works: *The Gentleman who Vanished: A Psychological Phantasy* (1890; vt *The Man who Vanished* 1892 US); *Aladdin in London* (1892); *Chronicles of Faeryland* (coll 1892); *The Harlequin Opal* (1893); *The Dwarf's Chamber, and Other Stories* (coll 1896); *For the Defense* (1898 US); *The Devil-Stick* (1898); *The Scarlet Bat* (1905); *The Green Mummy* (1908); *The Sacred Herb* (1908); *The Blue Talisman* (1912); *A Son of Perdition: An Occult Romance* (1912); *Mother Mandarin* (1912).

HUMOUR

There is a false belief that sf and humour do not mix. Certainly sf has produced many bad jokes - Arthur C. CLARKE's *Tales From the White Hart* (coll of linked stories 1957) is entirely devoted to them - but from the beginning it has also produced many good ones. Much sf humour takes the form of social SATIRE, and stories of this kind are discussed mainly in that entry. While the discussion below naturally includes satires also, it focuses on sf that elicits laughter rather than a wry smile. The wittiest sf writers of the late 19th century were probably Mark TWAIN, Samuel BUTLER, Ambrose BIERCE and H.G. WELLS. The humour of Twain's *A Connecticut Yankee in King Arthur's Court* (1889), like so much humour generally, is rooted in self-confident prejudice: Twain clearly found the bumbling incompetence of the Middle Ages irresistibly funny. Butler's satire in *Erewhon* (1872) often consists of topsy-turvy analogies, as in the comparison between UK churches and Erewhonian banks, pointing up the self-interest Butler supposed to be the motive for religious devotion. Bierce's short stories often have a grim and macabre humour. Wells's, on the other hand, are often jolly, as in "The Truth about Pyecraft" (1903). Other early works of sf humour are *Mr Hawkins' Humorous Inventions* (coll of linked stories 1904) by Edgar FRANKLIN and *Button Brains* (1933) by J. Storer CLOUSTON, a novel that introduced several ROBOT jokes which have

since been overused. Also working in the 1930s was John COLLIER, whose short stories amuse through the sometimes poisonous sharpness of their language and a cruel sense of the ironies of life. Roald DAHL and - to a degree - Gerald KERSH were to write rather similar stories later on, but these writers, working in the tradition of VILLIERS DE L'ISLE-ADAM's Contes cruels ["Cruel Stories"] (coll 1883), were primarily fantasists who used sf themes only occasionally. Occasional humorists have consistently popped up in GENRE SF, and with the advent of the magazine UNKNOWN in 1939 they had a platform. Unknown specialized in whimsical fantasy, sometimes dealing with SUPERNATURAL CREATURES, very often set in ALTERNATE WORLDS. Anthony BOUCHER was an important contributor, and many of his stories of this type are collected in The Compleat Werewolf (coll 1969). Even better remembered are the Harold Shea stories by L. Sprague DE CAMP and Fletcher PRATT, later collected as The Complete Enchanter (coll 1975): propelled back into versions of a mythic or literary past, Shea has a terrible time coming to terms with the local customs in worlds where MAGIC works. The early 1940s also saw a whole series of broad but accomplished jokes by Eric Frank RUSSELL, usually featuring cunning protagonists who deflate the pretensions of the brutal, the stupid and the pompous in various interplanetary venues. Examples from a slightly later period, when Russell had perfected his wisecracking style, are ". . . And Then There Were None" (1951), Wasp (1957) and The Space Willies (1956 ASF; exp 1958; vt Next of Kin UK). From the same period come many of Fredric BROWN's amusing stories, like "Placet is a Crazy Place" (1946), in which the eponymous planet meets itself during its orbit, creates hallucinations, is undermined by heavy-matter widgie birds and becomes the locale for horrendous puns. Brown's outrageous inventions have appeared in many collections, including Angels and Spaceships (coll 1954; vt Star Shine) and Nightmares and Geezenstacks (coll 1961). A less well known funny sf book of that period is The Sinister Researches of C.P. Ransom (coll of linked stories 1954) by Homer NEARING Jr. Humorous genre sf is more common in short stories than at novel length. Three of sf's premier humorists worked commonly and perhaps at their best in this form, with the result that, perhaps, their full stature has not been generally recognized: Henry KUTTNER, William TENN and Robert SHECKLEY. Kuttner's humour may have dated the most quickly, but "The Twonky" (1942 as by Lewis Padgett) is a classic (filmed in 1952 as The TWONKY), as are his Hogben stories (1947-9) and the Galloway Gallegher series, collected as Robots Have No Tails (1943-8 ASF; coll 1952). Tenn's style is more polished; but it is Sheckley who for many years remained the most consistent humorist of them all. Nothing is ever quite what it seems in Sheckley's urbane stories, and, with an inventiveness that lasted through the 1950s and 1960s, he depicted the naive but sometimes successful struggles of little men against an unimaginably absurd and rather menacing cosmos. Philip K. DICK, although a fundamentally more serious writer, had something of the same quality, and most of his novels have a rich sense of the various comic ways in which the life of the future might thwart us; he is especially well known for robots that talk back. Both Dick and Sheckley often published in GALAXY SCIENCE FICTION, a magazine that, notably under Horace GOLD, encouraged wit, satire and a moderately demanding literacy in its writers, who also included Frederik POHL and Alfred BESTER, both of whom were as much at

home with the humorous story as with the serious sf for which they are best remembered. Bester's "The Men who Murdered Mohammed" (1958), a wry and funny TIME-PARADOX story, appeared in FSF, the home of Reginald BRETNOR's appalling Ferdinand Feghoot series of vignettes with punning punch-lines. Most well known sf authors have tried their hand at humour at one time or another, sometimes rather heavy-handedly, as in Keith LAUMER's Retief series or Gordon R. DICKSON's and Poul ANDERSON's Hoka series. More successful in this line has been Harry HARRISON, who has often amusingly parodied the excesses of genre sf, as in the Stainless Steel Rat stories and in Bill, the Galactic Hero (1965). A wry, Irish humour of sharp observation comes often from Bob SHAW, who also has a good line in pastiche; his comic novel Who Goes Here? (1977) straight-facedly produces a spaceship which has a matter transmitter at each end, and thus can be driven by being repeatedly transmitted through its own length. Comic sf of the 1960s and 1970s tended strongly towards satire, and its comedy - especially that of the NEW WAVE - was often black. Nearly all of John T. SLADEK's work is of this sort; it tends more towards irony than farce (although he has also written raucously funny farce, notably in parody), blending comedy with nightmare in tales that often deal with technology running amok and mankind being manipulated. His one-time collaborator Thomas M. DISCH is one of the most formidable of sf's wits and stylists, though again it is the wry smile rather than the outright laugh that is evoked. Michael MOORCOCK often deals in a comedy of unexpected juxtapositions, as in his Dancers at the End of Time series, where time-travellers constantly misunderstand one another's customs. In the same period, however, Ron GOULART became known for knockabout, satiric farce. Gaining notoriety late in the 1960s, R.A. LAFFERTY is offbeat in quite another way. His bizarre, quasi-surrealist humour depends strongly on the exuberant idiosyncrasy of his language; his flamboyantly tall stories are seen by some as morally stringent, dismissed by others as empty games. His work has never fitted the conventions of genre sf, floating somewhere between sf and fantasy. The same could be said of the Illuminatu Trilogy (1975) by Robert SHEA and Robert Anton WILSON, a rambling story of conflicting conspiracies and secret cults which persuasively argues for the accuracy of a paranoid (PARANOIA) view of POLITICS; a sometimes bloodshot view of the vagaries of human behaviour is expressed through farce, wisecracks and general lunacy. One of the least plausible of all comic sf novels is Piers ANTHONY's Prostho Plus (1971), featuring a kidnapped Earth dentist forced to practise on a hideous variety of alien teeth; it is carried off, against all the odds, with verve. Anthony subsequently became known for comic fantasy rather than comic sf, his tone being in the tradition set by De Camp and Pratt in their Unknown stories. Along with Christopher STASHEFF's Warlock series, Anthony's novels set a trend, in the 1970s and 1980s, for novels sited in alternate fantasy worlds featuring slapstick, agonizing puns, and a Twain-like juxtaposition of modernisms with archaisms. Alan Dean FOSTER, Craig Shaw Gardner, Robert ASPRIN and many others have worked in this subgenre, which has proved commercially very successful, though it includes more dire undergraduate humour than is digestible for grown-up readers. The first great success story of written sf humour in the 1980s - a decade not generally notable for funny sf - was Douglas ADAMS. Other

producers, on a much smaller scale, were Rudy RUCKER and Howard WALDROP in the USA and (more recently) Robert RANKIN in the UK. Humour notoriously translates badly, and the wit of Stanislaw LEM in such works as *Cyberiad* (coll 1965; trans as *The Cyberiad* 1974) and "Kongres Futurologiczny" (1971; trans as *The Futurological Congress* 1974), while attested by his Polish readership as being full of subtle ironies and linguistic fireworks, appears rather crude in the English-language versions. Sf humour has been a mainstay of both the small and large screens. In the USA, humorous tv series have included *MY FAVORITE MARTIAN*, *MY LIVING DOLL*, *MORK AND MINDY* and *ALF*, most of these being sitcoms in which human foibles become all too clear when seen from an alien perspective. A very selective list of humorous sf movies from the USA would include *The ABSENT-MINDED PROFESSOR*, *ANDROID*, *BILL AND TED'S EXCELLENT ADVENTURE*, *DARK STAR*, *DR STRANGELOVE OR: HOW I LEARNED TO STOP WORRYING AND LOVE THE BOMB*; *EARTH GIRLS ARE EASY*, *FLESH GORDON*, *The ICE PIRATES*, *The MAN WITH TWO BRAINS*, *MEET THE APPELGATES*, *MONKEY BUSINESS*, *The NUTTY PROFESSOR*, *The PRESIDENT'S ANALYST*, *REAL GENIUS*, *The ROCKY HORROR PICTURE SHOW*, *SCHLOCK*, *SHORT CIRCUIT*, *SLEEPER*, *SPACED INVADERS*, *TERRORVISION* and *WEIRD SCIENCE*, a list which should, perhaps, include as well the films of Larry COHEN and David CRONENBERG which, though mostly sf/horror, are also shot through with dark humour, as are some *SPLATTER MOVIES*, like *RE-ANIMATOR*. No clear conclusion can be drawn from the list, which contains few really good films and few really bad. It does contain a notable amount of pastiche and parody, something that normally occurs fairly late in the history of any genre, and it is interesting to note that the majority of the films listed are quite recent; many are aimed at a younger audience. The story is a little different in the UK, where sf humour for the big screen is rare and, when it does appear, usually poor, as in *MORONS FROM OUTER SPACE*. But there is a long tradition of light-hearted humour in UK tv, which bubbled up strongly in much of the long-running *DR WHO* series. It did not, however, reach cult proportions until the tv version of the radio success *The HITCH HIKER'S GUIDE TO THE GALAXY* appeared in 1981. This was written by Douglas Adams, whose *Hitch Hiker* books, developed from the radio series, became bestsellers. Behind the extremely funny absurdity of the series there seems to be a mournfully nihilist view of life on Earth (and in the cosmos), where nothing means very much at all, and we are all shuttlecocks racketed around by fate or, if it comes to that, *ENTROPY*. A similar view of the soft white underbelly of human existence reappeared in 1988 in the (also very successful) tv series *RED DWARF*, a *SPACE OPERA* with an unbelievably small cast, only one of them indubitably both human and alive. There is one line of development visible among the variety of authors named in this entry: sf humour has by and large been pessimistic. The ordinary guy battered by circumstance, trying to find meaning or justice in a Universe where these commodities may be nonexistent, is a character running through from Collier via Sheckley, Dick and Sladek to reach perhaps its apotheosis in Adams. Indeed Kurt VONNEGUT Jr, probably the most famous of all sf humorists, fits squarely into this tradition. In, for example, *THE SIRENS OF TITAN* (1959) and *Cat's Cradle* (1963) - and with a somewhat more brittle and fatalistic air in *Slaughterhouse-5* (1969)

- Vonnegut contrives scenarios at once witty, sardonic and nihilistic, though in the earlier books the nihilism is softened by the affection he shows for the absurd and doomed ambitions of his protagonists. Some see Vonnegut as a fierce wit in the tradition of Jonathan SWIFT; others find his black comedies increasingly facile, repetitive, and disfigured by the literary equivalent of nervous tics. So it goes. David LANGFORD's parodic bent infiltrates much of his fiction, though it is most clearly expressed in *The Dragonhiker's Guide to Battlefield Covenant at Dune's Edge: Odyssey Two* (coll 1988), which assembles parodies of various writers and tendencies. But the great UK comic success of the 1980s is Terry PRATCHETT, whose *Discworld* books climb to the top of bestseller lists with satisfying regularity, and who writes work both joyful and delightful, allowing the little man his triumphs as well as his agonies. Most readers would call these books fantasies, but they are, after all, set on a planet other than Earth. It is, one must confess, a very flat planet, and perched on the back of a giant turtle . . . [PN]

HUNGARY

Sf in the modern sense evolved tentatively in Hungary in the 1870s, although it had had forerunners. The end of the 18th century was characterized by the popularity of FANTASTIC VOYAGES and UTOPIAS. French and other sources inspired Tarimenés utazása ["The Voyage of Tarimenés"] (1804) by György Bessenyei (1747-1811). The hero, who gets to an unknown country, not only describes the perfect order of the state but also presents a copy of its constitution. Another important fantastic utopia was Utazás a Holdba ["Voyage to the Moon"] (1836) by Ferenc Ney (1814-1899), a novel in which travellers find that the Moon has everything they miss on Earth: the possibility of happiness and the happiness of equality. János Munkácsy (1802-1841), in his *Hogy áll a világ a jövő században?* ["How Stands the World in the Next Century?"] (1838), describes the wonderful future development of TRANSPORTATION and many social changes: deadly WEAPONS are put aside and conflicts between states are settled by competitive poetry recitals. The first Hungarian SPACE OPERA was *Végnapok* ["The Final Days"] (1847) by Miklós Jókai (1794-1865). This apocalyptic novel had an immense success. The story takes place on Earth in a FAR-FUTURE ice age. Mor Jókai is justly regarded as the greatest author produced by Hungary. He was very prolific - his collected works run to several hundred volumes. His most important works of fantasy and sf are *Oceánia* about a romantic ATLANTIS, *Fekete gyémántok* (1870; trans A. Gerard as *Black Diamonds* 1896), set in a North Polar sea, *Egész az északi pólusig* ["All the Way to the North Pole"] (1876), in which ancient patriarchs and fairy-like ladies are revived from frozen hibernation to facilitate the author's criticism of contemporary society, and *Ahol a pénz nem Isten* ["Where Money is not a God"] (1904), describing the life of a happy island community, and hinting at the possibility of the fall of the Austro-Hungarian empire. Along with these sometimes Edgar Allan POE-like fantasies comes Jókai's most significant sf novel, *A jövő század regénye* ["The Novel of the Next Century"] (1872), whose story is founded in the invention of a marvellous new material, "ichor". Airplanes made of ichor serve the heroes, who dominate global communications and trade; declaring war on anarchistic Russia, they fight the last war of mankind and create

eternal peace. The novel then moves onto the cosmic scale: a comet menaces Earth but is fought off by mankind, the Moon is colonized and the Solar System is conquered. Jokai's disciple Titusz Tótvölgyi (1838-1918) wrote a surprisingly interesting novel about the future socialist state: *Az új világ* ["The New World"] (1888). Elsewhere, besides sociopolitical novels there were fantasies of markedly scientific foundation, like *Repülőgepen a Holdba* ["On an Airplane to the Moon"] (1899) by István Makay (1870-1935), another Jokai disciple, which, antedating H.G. WELLS, describes a society of cave-dwelling Selenites. *Barna Arthur* ["Arthur Barna"] (1880) by Gusztáv Bekszics (1847-1906) has an African volcano spreading flowing gold over the country, with the consequent bankruptcy of trusts, banks and states. In the first half of the 20th century the authors gathering around the journal *Nyugat* ["West"] were attracted almost without exception to the fantastic, and with them sf reached artistic heights once more; they include Dező Kosztolányi (1885-1935), Géza Csáth (1888-1919), Géza Laczkó (1884-1953), Gyula Szini (1876-1932), László Cholnoky (1879-1929), Béla Balázs (1884-1949) and Margit Kaffka (1880-1918). Unfortunately, only two names are known in the English-speaking world: Frigyes KARINTHY and Mihály BABITS. Karinty wrote a good many stories about TIME TRAVEL, DISASTER, PSI POWERS and so on, but these are surpassed by his philosophical novels. *Utazás Faramidoba* (1916) and *Capillaria* (1921), which have been assembled as *Voyage to Faramido/Capillaria* (omni trans Paul TABORI 1965 Hungary; 1966 US), are sardonic sequels to Jonathan SWIFT's stories of Gulliver and his travels. The former deals with problems of AI and the latter describes the conflict between men and women in an UNDER-THE-SEA empire. *Mennyei riport* ["A Report from the Heavens"] (1937), the surprising story of a journey to the next world, is an important precursor of modern sf. The novels of the poet Mihály Babits stand out for their literary merit and for the interest of their ideas. *In Golyakalifa* ["Storks' Caliph"] (1916; trans as *King's Stork* 1948 Hungary; retrans anon as *The Nightmare* 1966), his first novel, he created a world of pure fantasy; the protagonist is a young man living a surreal double life. Another novel, *Elza pilóta, avagy a tökéletes társadalom* ["The Pilot Elza, or The Perfect Society"] (1933), is a description of an episode in an age of eternal war, its protest against fascism being pointed at a time when fascism was spreading rapidly. *Utazás Kazohiniában* ["A Voyage in Kazohinia"] (1941 censored; text restored 1946) by Sándor Szathmáry (1897-1974) is a bitter, Swiftian (and Karintyan) SATIRE describing a new journey of Gulliver. Kazohinia is divided into two parts, one where exaggerated rationalism prevails, the other ruled by the uncontrolled power of the instincts. In the Fall of 1945 László Gaspar (? -) produced his short novel *Mi, I. Adolf* ["We, Adolf 1"] (1945), subtitled "If the Germans had Won". In this postwar nightmare, fascism rules by terror and weaponry, and all peoples are slaves of the Germans (HITLER WINS). The two decades after WWII did not favour Hungarian sf - Soviet sf, along with the theoretical views it espoused, dominated the sf published in Hungary - and only one item from this period is memorable: *Az ibolyaszínű fény* ["The Violet Light"] (1956) by Péter Foldes (1916-), a juvenile adventure that presents interesting ideas. In 1968, however, the publishing house Mora began a paperback sf series under the imprint *Kozmosz Fantasztikus Könyvek*. In 1972 Mora followed this with the magazine *Galaktika*, ed Peter KUCZKA, which started as a quarterly and is

now a monthly, with a circulation of 50,000. Its younger stablemate (since 1985) is Robur, a bimonthly sf magazine for juvenile readers, with a circulation of 80,000-100,000. Other publishers now publish sf, though the Mora book series, also long under the editorship of Kuczka, remains the most significant. Today 25-30 authors in Hungary are engaged in sf, although many of them work also in other genres. Among the older authors is Maria Szepes (1908-), who in Tukorajto a tengerben ["Mirror Door in the Sea"] (1976), Surayana elo szobrai ["Living Statues of Surayana"] (1971) and Napszel ["Sunwind"] (1983) draws her figures of fantasy with great psychological force. She introduced ESP motifs to Hungarian sf, mainly through her first and most influential novel, A voros oroszlán ["The Red Lion"] (1946), the story of an alchemist living through the centuries and from sin to redemption. Ivan Boldizsar (1912-1988) belonged to the same generation; his Születésnap ["Birthday"] (1959) is a TIME-TRAVEL novel. The most famous book of Istvan Elek (1915-) is a juvenile adventure, Merenylet a világtérben ["An Attempt in Space"] (1967). József Cserna (1899-1975) wrote a number of admonitory stories about nuclear WAR, the destruction of the ECOLOGY and other dangers menacing mankind. Next comes the generation of writers now in their 50s and 60s, like Gyula Fekete (1922-), an excellent novelist in the realistic tradition. His sf works are all utopian and educational, whether set on unknown islands or on distant planets. In A szerelmesek bolygója ["Planet of Lovers"] (1964) he deals satirically with juvenile morals and life-values; in Triszex ["Trisex"] (1974) he predicts changes in family life and in human relationships. His most famous work is A kék sziget ["The Blue Island"] (1976), a harmonious UTOPIA. Gyula Hernádi (1926-) is a restless, experimenting author; he blends surrealism with real and fictitious documents. His significant novels are Az erőd ["The Fortress"] (1971), Az elnökasszony ["Madame President"] (1978) and Hasfelmetező Jack ["Jack the Ripper"] (1982). Zoltán Csernai (1925-) is one of the most popular sf writers. His main focus is on encounters between ALIENS and humans in the past and present; this provides the background to his trilogy Titok a világ tetején ["Secret on the Top of the World"] (1961), Az ozonvíz balladája ["The Ballad of the Flood"] (1964) and Atlantisz ["Atlantis"] (1968). His Boldogságcsinalok ["Producers of Happiness"] (1974) is an interesting psychological novel. Among his several short stories, "Kövek" ["Stones"] (1974) is perhaps the best of all Hungarian sf short stories; it has been much translated. Peter Zsoldos (1930-) is an sf author in the US-UK tradition, his recurrent subjects being SPACE FLIGHT and ROBOTS. His best novels are Feladat ["The Task"] (1971), Ellenpont ["Counterpoint"] (1973), Tavoli tűz ["A Distant Fire"] (1969), A Viking visszatér ["Return of the Viking"] (1967) and A holtak nem vetnek árnyékot ["The Dead Cast No Shadows"] (1983). Ervin Gyertyán (1925-) prefers a humorous, satirical attitude Kibernerosz ["Cyberneros"] (1963) and Isten ovd az elnököt! ["God Save the President!"] (1971), paying special attention to the differences between Man and MACHINE, and also to the nature of identity. Two sf works by Miklós Ronaszegi (1930-), A rovarok lázadása ["Revolt of the Insects"] (1969) and Ordogi likőr ["Liquor of the Devil"] (1972), were published as juveniles, although there is nothing juvenile about their themes: the first analyses the mechanisms of fascism and the second unveils ways in which modern society

dehumanizes and manipulates. Novels of adventure and scientific inspiration have been written also by Klara Feher (1922-), Laszlo Nemes (1920-) and Tibor Dane (1923-). Dezso Kemeny (1925-) melds sf with the crime story. Az utolsó ember ["The Last Man"] (1982) by Peter Bogati (1924-), a ROBINSONADE about the last survivor of world HOLOCAUST, bears comparison with better-known treatments of the subject. Laszlo Andras (1919-1988), Gyorgy Nemes (1910-), Andras Kurti (1922-) and Rudolf Weinbrenner (1923-1987) are all writers who have enriched Hungarian sf with one or two books. A rather different coloration can be found in A Kozmosz tizenötödik törvénye ["The Fifteenth Law of the Cosmos"] (1984) by Mihaly Gergely (1921-), a novel in which alien visitors try to force humanity into peace and intelligent cooperation. Perhaps the most important member of the younger generation is Peter Szentmihalyi Szabo (1945-). His collection of short stories A sebezhetetlen ["The Invulnerable"] (coll 1978) tries out every voice and technique of sf; A tökéletes változat ["The Perfect Variety"] (1983) is a DYSTOPIA about contradictory social systems in the distant future. Two very prolific younger authors are Laszlo L. Lorincz (1939-) and Istvan Nemere (1944-). Lorincz's collection of short stories A nagy kupola szégyene ["The Shame of the Great Dome"] (coll 1982) deals with CRIME AND PUNISHMENT and with problems of social isolation. His novels, such as A hosszú szafari ["The Long Safari"] (1984) and A földalatti piramis ["The Underground Pyramid"] (1986), are much appreciated for their exciting plots, richness of ideas and beautiful style. Nemere's most successful novels (out of about 60) are A kozmosz korbácsa ["The Whip of the Cosmos"] (1982), Az acélcapa ["The Steel Shark"] (1982) and A neutron akció ["The Neutron Project"] (1982). One MAINSTREAM WRITER who has occasionally turned to sf is Peter Lengyel, who wrote the prizewinning Ogg második bolygója ["Ogg's Second Planet"] (1969). [PK]

HUNGER, ANNA
R. DeWitt MILLER.

HUNT, GILL

House name used 1950-52 by the UK paperback publisher Curtis Warren. The authors who have used the name (for titles see their entries) are John BRUNNER, David GRIFFITHS, Dennis HUGHES, John JENNISON and E.C. TUBB. Because it was Brunner's first book, Galactic Storm (1951) has become the best-known of the GH titles; it is not, however, significantly less routine than its stablemates. [JC]

HUNTER, EVAN

Once the main pseudonym and now the adopted legal name of the US writer born S.A. Lombino (1926-), who remains best known as Ed McBain, under which byline he has written at least 50 laconic police procedurals as well as some action-detections in the John D. MACDONALD mould. As EH he is most famous for novels like The Blackboard Jungle (1954), and his later career has had little to do with sf, most of his work in the genre appearing - under his own name and as Richard Marsten and Hunt Collins - in the 1950s. This early output included a number of magazine sf stories, published 1953-6-some of which were assembled in The Last Spin (coll 1960 UK) and Happy New Year, Herbie (coll 1963) - and the screenplay for Alfred

Hitchcock's *The BIRDS* (1963). His first three sf novels were juveniles: the protagonist in *Find the Feathered Serpent* (1952) utilizes his father's TIME-TRAVEL device to return to - and to participate in - the founding of the Mayan empire; *Rocket to Luna* (1953), as by Richard Marsten, puts students on the first trip to the Moon; and *Danger: Dinosaurs!* (1953), as by Marsten, again takes its heroes by time-travel into an exciting era. His first adult sf novel, *Tomorrow's World* (1954) as "Malice in Wonderland" as by EH; exp 1956; vt *Tomorrow and Tomorrow* (1956), as by Hunt Collins, takes a somewhat satirical look at a future dominated by organized DRUG addicts. In a marketing decision somewhat at odds with EH's normal practice, the book was later published unchanged (1979 UK) as by Ed McBain: it is certainly not in the McBain style. *Nobody Knew They Were There* (1971) is set in 1974, but is a tale of campus violence only marginally displaced into sf. The plot of *Ghosts* (1980), one of his extensive series of 87th Precinct police-procedural novels as by Ed McBain, surprisingly hinges on parapsychological manifestations (ESP), to the detriment of its merit as a detection. EH's long inactivity as an sf writer has been the genre's loss. [JC]See also: LEISURE; PULP MAGAZINES.

HUNTER, E. WALDO

[s] Theodore STURGEON.

HUNTER, NORMAN (GEORGE LORIMER)

(1899-) UK writer first active before WWII, his publishing career having begun with *Simplified Conjuring for All* (1923); he was in fact a professional conjuror. A humorous fairy tale, "The Bad Barons of Crashbania", appeared with Gertrude Monro Higgins's "Kings and Queens" as half a chapbook (coll 1932 chap). He lived in South Africa 1949-70, a period during which he published nothing. His classic CHILDREN'S SF series about Professor Branestawm and his inventions - *The Incredible Adventures of Professor Branestawm* (coll 1933), *Professor Branestawm's Treasure Hunt* (coll 1937), *Stories of Professor Branestawm* (coll 1939), *The Peculiar Triumph of Professor Branestawm* (coll 1970), *Professor Branestawm up the Pole* (coll 1972), *Professor Branestawm's Great Revolution* (coll 1974), *Professor Branestawm 'round the Bend* (coll 1977) and *Professor Branestawm's Perilous Pudding* (coll 1979) - delightfully involves the professor and his extraordinary devices in various exploits and entanglements. There followed a compilation, *The Best of Branestawm* (coll 1980), and a series of booklets: *Professor Branestawm and the Wild Letters* (1981 chap), *Professor Branestawm's Pocket Motor Car* (1982 chap), *Professor Branestawm's Mouse War* (1982 chap), *Professor Branestawm's Crunchy Crockery* (1983 chap) and *Professor Branestawm's Hair-Raising Idea* (1983 chap). The initial titles inspired a 1969 UK tv series. NH also wrote a number of tales for younger children, many of them revolving around the King and Queen of Incrediblania. [JC]

HUNTING, (HENRY) GARDNER

(1872-1958) US writer whose sf novel *The Vicarion* (1926; exp 1927) features a device which gives sight of the past. As a consequence, murders can be solved, politics cleaned up and the true events of history understood at last. [JC]See also: MACHINES.

HURD, DOUGLAS (RICHARD)

(1930-) UK Conservative politician and writer, in the former capacity serving his government for an extended period at Cabinet level. His sf novels are, perhaps understandably, NEAR-FUTURE thrillers in which the UK must survive threats from within and without (POLITICS). Send Him Victorious (1968) with Andrew Osmond (1938-) features threats of political upheaval from within. The Smile on the Face of the Tiger (1969) sees China demanding Hong Kong back from her imperial masters (a plot which has, of course, become part of history). Scotch on the Rocks (1971) describes a Scottish liberation movement (and may be prophetic). [JC]Other works: Truth Game (1972).

HURD, GALE ANNE

(1955-) US film producer who cut her teeth on Roger CORMAN's New World Pictures' exploitation movies; she was production manager on BATTLE BEYOND THE STARS (1980) and coproduced the car-chase movie Smokey Bites the Dust (1981) with Corman. She came to prominence with the excellent low-budget independent film The TERMINATOR (1984), whose screenplay was cowritten by her and her then husband James CAMERON (also a graduate of the Corman school of low-budget film-making skills): both were in their 20s; he directed and she produced. This was sufficient to get them the high-status job of producing and directing ALIENS (1986), which they did with panache. They next worked together on The ABYSS (1989), whose screenplay (by Cameron) contained roman a clef elements in its story of the break-up of a marriage between two highflying professionals; they had separated personally by then, and to a degree professionally, although GAH worked as executive producer on TERMINATOR 2: JUDGMENT DAY (1991), perhaps the most expensive film ever made. (The actual producer was B.J. Rack.) GAH's expertise with genre movies was underwritten by two sf films she produced apart from Cameron, ALIEN NATION (1988) and TREMORS (1990), the latter being an especially craftsmanlike work. Among the non-sf and marginal sf features she has produced are Bad Dreams (1988), horror; The Waterdance (1992), drama about paraplegics; Raising Cain (1992), confused Brian de Palma thriller of some sf interest with its strange experiments in the PSYCHOLOGY of child-raising. More recently GAH returned to sf to produce the disappointing NO ESCAPE (1994), a future prison movie set on a tropical island. Although it is difficult to gauge the creative influence of producers as opposed to directors, GAH's track record is impressive; most of her films (even the low-budget ones) are polished and look good, and she seems to have an affinity with sf subjects. [PN]

HURWOOD, BERNHARDT J(ACKSON)

(1926-1987) US writer who wrote occult books for younger readers - like Strange Curses (coll 1975) and By Blood Alone (1979) - the Man from T.O.M. C.A.T. soft-porn quasithriller sequence as by Mallory T. Knight, comprising The Man from T.O.M.C.A.T. #1: The Dozen Deadly Dragons of Joy (1967), #2: The Million Missing Maidens (1978), #3: The Terrible Ten (1967), #4: The Dirty Rotten Depriving Boy (1967), #5: Tsimmis in Tangier (1968), #6: The Malignant Metaphysical Menace (1968), #7: The Ominous Orgy (1969), #10: The Peking Pornographer * (1969) and The Bra-Burner's Brigade (1971). The Invisibles sequence, comprising The Invisibles (1971) and The

Mind Master (1973), were sf stories about a mad SCIENTIST who conducts experiments on human subjects. Kingdom of the Spiders * (1977) was a film tie (KINGDOM OF THE SPIDERS). [JC]

HUTCHINSON, DAVID (CHRISTOPHER)

(1960-) UK writer who published 4 volumes of stories at a very early age - Thumbprints (coll 1978), Fools' Gold (coll 1979), Torn Air (coll 1980) and The Paradise Equation (coll 1981) - and then moved into journalism. The deftness and quiet humaneness of his work seemed better than precocious, and it came as welcome news in the late 1980s that he was turning his attention again to sf. [JC]

HUXLEY, ALDOUS

(1894-1963) UK novelist and man of letters whose fame was freshest in the 1920s, a decade which his work, conveying as it did an overwhelming sense of psychic aftermath, captured precisely; his best fiction, like Point Counter Point (1928), was written then. From 1937 he lived in the USA. He is today almost certainly remembered most widely for his seminal DYSTOPIA, BRAVE NEW WORLD (1932), a book which established such words as "soma" (originally from Sir Thomas MORE's Utopia [1517]) and "feelie" in the English language, and which contributed to social and literary thought a definite model of pharmacological totalitarianism. (Soma is a kind of psychedelic drug used as a social control; the feelies are multisense - or "VIRTUAL REALITY" - movies, developed for the same reason.) BRAVE NEW WORLD depicts a future Earth in which the expression of dissonant emotions and acts is rigorously controlled from above, ostensibly for the betterment of all, though in fact the motives of those in power are, as always, self-serving. Babies, prior to being decanted, are chemically adjusted to grow to assume the body-type and intelligence required at that moment by society, and as a result enter into the appropriate castes, from Alpha to Epsilon (GENETIC ENGINEERING). Sex and all other relationships are casual, without dissonance or affect. As in any dystopia, the story both illustrates and exposes this plastic paradise, and presents opportunities for discussion about it. One protagonist goes to a Savage Reservation (where, as a kind of control, a few old-style humans are permitted their exemplary culture) and there rescues a woman in trouble; he returns with her and her Savage son to the central society. To this she proves unable to adjust: after causing general disgust through her display of visible diseases and her horrifying descent into age, she overdoses despairingly on soma. Her son does little better, though the fracas he causes gains him and two discontented citizens an interview with Mustapha Mond, one of the 10 World Controllers, who argumentatively justifies the price paid for stability. When the unconvinced Savage attempts to live alone and so to replicate the conditions necessary for the creation of high art, he is soon driven by the mass MEDIA into committing suicide. As argument and as SATIRE, BRAVE NEW WORLD is a compendium of usable points and quotable jibes - the substitution of Ford for God being merely the best known - and has provided material for much subsequent fiction. Its pessimistic accounting of the sterility and human emptiness of utopian communities shaped by a reductive scientism has caused the book to be read as a decisive refutation of those UTOPIAS of H.G. WELLS - e.g., Men Like

Gods (1923)-whose strident OPTIMISM about scientific utopianism even Wells himself could not manage to support with much imaginative conviction. Brave New World Revisited (coll 1958), later assembled with its predecessor (omni 1960), is a nonfiction series of essays on the themes of the novel from the perspective of 25 years later. After moving to the USA, AH wrote two novels in which utopia/dystopia debates are continued. Ape and Essence (1948), powerfully dystopian, is set in AD2108 after an atomic and bacteriological final WAR. From New Zealand, which has been left untouched, a researcher visits the USA, where he discovers a literally devilish society: human nature and science have gone savagely wrong, and females - now contemptuously known as "vessels" - come into oestrus for only two weeks in the year, after Belial Day. The pessimism of the book is unalleviated, and its presentation, as a kind of ideal filmscript, horrific and disgusted. Island (1962) presents a utopian alternative to the previous books, though without much energy. Pala - the ISLAND in question - is set safely in the Indian Ocean, and has long enjoyed a mildly euphoric existence, sustained spiritually by religious practices derived from Tantric Buddhism, and physically by moksha, a sort of benign soma, whose psychedelic effects smooth the rough edges of the world. But the book itself is powerless to convince. Of AH's other work, After Many a Summer Dies the Swan (1939; vt After Many a Summer 1939 UK), in which a Californian oil magnate rediscovers an 18th-century longevity compound and its macabre consequences (APES AND CAVEMEN for other tales that evoke images of DEVOLUTION), and Time Must Have a Stop (1944), one of whose protagonists undergoes posthumous experiences, are both of genre interest. AH was at his most striking in those of his novels, some technically sf, which treated their fictional content as subservient to the matters being discussed and illuminated. The literacy of his style, and the apparent sophistication of his transcendental thought, have perhaps impressed traditional sf readers and critics more than he deserved. There is no denying, however, the extreme importance of the example of his thought in the intellectual development of the genre. [JC]About the author: There are many critical studies. Lilly Zahner's Demon and Saint in the Novels of Aldous Huxley (1975) provides clear analysis and an adequate bibliography. Other studies include Aldous Huxley: A Study of the Major Novels (1968) by Peter Bowering, and Aldous Huxley, Satire and Structure (1969) by Jerome Meckier. See also: ANTHROPOLOGY; AUTOMATION; BIOLOGY; CRITICAL AND HISTORICAL WORKS ABOUT SF; EVOLUTION; FUTUROLOGY; HISTORY OF SF; IMMORTALITY; LEISURE; MACHINES; MAINSTREAM WRITERS OF SF; MUSIC; PERCEPTION; SOCIOLOGY; TECHNOLOGY; THEATRE.

HYAMS, EDWARD S(OLOMON)

(1910-1975) UK writer, prolific in various genres, fiction and nonfiction, from before WWII; he was also active as a translator. Although not widely known as a writer of sf or fantasy, he published several novels of sf interest. Not in Our Stars (1949) depicts the discovery of a fungus of use in biological warfare. The Astrologer (1950) is an early novel on the ecological theme of soil exhaustion, and the DISASTER its protagonist tries to avert by denying men sex, like Lysistrata. The Final Agenda (1973) places a worldwide organization of anarchists in power in a NEAR-FUTURE venue, and traces with considerable sympathy their attempts to

found an ecological UTOPIA. *Morrow's Ants* (1975) is about the creation of a HIVE-MIND. Typically of writers not identified with the genre, ESH tends to use sf components in a didactic fashion, although in his case to considerable effect. [JC]Other works: *The Wings of the Morning* (1939), a Wellsian discursive novel set just before a future WAR; *Sylvester* (1951; vt 998 1952 US); *The Last Poor Man* (1966); *The Death Lottery* (1971); Prince Habib's *Iceberg* (1974). See also: ASTRONOMY; ECOLOGY; SCIENTISTS.

HYDE, CHRISTOPHER

(1949-) Canadian writer, generally of TECHNO THRILLERS, beginning with *The Wave* (1979 US) and continuing with titles like *Styx* (1982 US), *Jericho Falls* (1988 UK), *Crestwood Hills* (1988 US), *Egypt Green* (1989 US) and *White Lies* (1990 US). The last features a mentally suspect NEAR-FUTURE US President who puts out a contract on himself. [JC]

HYDE, SHELLEY

Kit REED.

HYDER, ALAN

(? -?) UK writer known only for the remarkable *Vampires Overhead* (1935), in which comet-hopping vampires invade Earth, causing general devastation; the tale is told with very considerable vigour. It was included in a list prepared in 1983 by Karl Edward Wagner for *Twilight Zone* of the 13 best sf HORROR novels. [JC]

HYMAN, MIRANDA

Miranda MILLER.

HYNE, C(HARLES) J(OHN) CUTCLIFFE (WRIGHT)

(1866-1944) UK writer. He utilized his ample travelling experience in creating the popular *Captain Kettle* series which appeared in *PEARSON'S MAGAZINE*, in book form beginning with *Honour of Thieves* (1895; vt *The Little Red Captain* 1902), and later in the cinema; *Captain Kettle on the Warpath* (coll 1916), *The Rev. Captain Kettle* (coll 1925), *Mr Kettle, Third Mate* (1931) and *Ivory Valley* (1938) are the only volumes to contain sf elements. He is best known for *The Lost Continent* (1900), set in ATLANTIS at the time of its destruction. CJCH began writing sf with *Beneath Your Very Boots* (1889), a LOST-WORLD tale set in caves under England, following it up with a ROBINSONADE, *The New Eden* (1892), later turning to future WAR with *Empire of the World* (1910; vt *Emperor of the World* 1915) and to the Wandering-Jew theme with *Abbs, His Story through Many Ages* (1929). This diversity of ideas was even more prevalent in his short stories, particularly *The Adventures of a Solicitor* (coll of linked stories 1898) as by Weatherby Chesney, which contains stories about INVISIBILITY, ROBOTS, SPACE FLIGHT and rejuvenation, together with several GOTHIC and weird fantasies. CJCH, one of the most prolific writers of early magazine sf, is now almost forgotten. [JE]Other works: *The Recipe for Diamonds* (1893); *The Stronger Hand* (coll 1896); *The Adventures of an Engineer* (coll of linked stories 1898) as by Weatherby Chesney; *The Foundered Galleon* (1898-9 *Scraps* as by Weatherby Chesney and Alick Jones; 1902) as by Weatherby Chesney; *Atoms of Empire* (coll 1904); *Red Herrings* (coll 1918); *West Highland Spirits* (coll 1932); *Man's Understanding* (coll 1933), some sf; *Wishing Smith* (1939). See also: CRIME AND PUNISHMENT; WEAPONS.

HYPERION PRESS

US publisher based in Westport, Connecticut. HP's relevance to sf is through its photographically reproduced reprint series, Classics of Science Fiction; HP was the first publisher to undertake such a series, preceding ARNO PRESS, GARLAND and GREGG PRESS. The series editor was Sam MOSKOWITZ, who also provided introductions to many of the volumes; the books selected were primarily drawn from the late 19th and early 20th centuries. The first series, published 1974, had 23 vols; the second, published 1976, had 19 vols. HP also brought back into print 6 anthologies and collections of criticism by Moskowitz. [MJE/PN]

HYPERSPACE

In sf TERMINOLOGY, a kind of specialized space through which SPACESHIPS can take a short cut in order to get rapidly from one point in "normal" space to another far distant. The term was probably invented by John W. CAMPBELL Jr in Islands of Space (1931 Amazing Stories Quarterly; 1957). It is now so thoroughly incorporated into the conventions of GENRE SF that few sf writers feel called upon to explain its meaning, although Robert A. HEINLEIN gave a particularly clear account in Starman Jones (1953). Hyperspace is often seen as a space of higher DIMENSION through which our three-dimensional space can be folded or crumpled, so that two apparently distant points may almost come into contact. Sometimes, as in Frederik POHL's "The Mapmakers" (1955), hyperspace is seen as a POCKET UNIVERSE, a kind of visitable map with a one-to-one correspondence to our own Universe (with all points hopefully arranged in the same order). In "FTA" (1974) by George R.R. MARTIN, although hyperspace exists, travel by it takes longer. In Redshift Rendezvous (1990) by John E. STITH a starship has to cope with the fact that the velocity of light in hyperspace is 22mph (35kph); relativistic effects thus occur at very modest velocities. The prohibitions in Relativity theory against travelling FASTER THAN LIGHT are not really circumvented with devices like SPACE WARPS or hyperspace, since it is actually FTL journeys and not FTL velocities that are prohibited, a point often not appreciated by sf writers; if an FTL journey takes place via hyperspace, the fact remains that the arrival might be witnessed by observers elsewhere in the Universe as preceding the take-off, and Relativity prohibits the principle of causality being broken by the reversal of cause and effect. A relevant article is "Hyperspace" by David LANGFORD in The Science in Science Fiction (1982) by Peter NICHOLLS, Brian M. STABLEFORD and Langford. More recently, a scientific book on the subject is Hyperspace: A Scientific Odyssey Through Parallel Universes, Time Warps, and the 10th Dimension (1994) by Michio Kaku, professor of theoretical physics at the City College of the City University of New York. [PN/TSu]

HYPHEN

Northern Irish FANZINE (1952-65) ed from Belfast by Walt Willis, with Chuck Harris and later Ian McAuley; probably the most famous of humorous fanzines. The quality and style of H's writing made it not only one of the most admired fanzines of its time but also gave it considerable prestige and influence in FANDOM. Contributors included Robert BLOCH, Damon KNIGHT, Bob SHAW, William F. TEMPLE and James WHITE. There was a single-issue

revival in 1987. [PR/RH]

HYPNOSIS
PSYCHOLOGY.

SF?

ICARUS XB-1
IKARIE XB-1.

ICEMAN

Film (1984). Universal. Prod Norman Jewison. Dir Fred Schepisi, starring Timothy Hutton, John Lone, Lindsay Crouse. Screenplay Chip Proser, John Drimmer, from a story by Drimmer. 99 mins. Colour. Set in the Arctic (shot in Canada), it tells of a Neanderthal dug out of the ice, thawed, resuscitated and studied. Eschewing the caveman clichés (APES AND CAVEMEN) of films like TROG (1970), it adopts a sensitive and supposedly realistic manner, much being made of Neanderthal LINGUISTICS. But the story is so thin as to be almost invisible, and the film sags tediously as eco-clichés of the period lead to predictable clashes between the anthropologist, on the side of life, and the female scientist, on the side of cold-blooded research. The scientific methods on display are laughably inept and unlikely. [PN]

ICE PIRATES, THE

Film (1984). MGM/United Artists. Dir Stewart Raffill, starring Robert Urich, Mary Crosby, Michael D. Roberts, Anjelica Huston, John Matuszak, Ron Perlman. Screenplay Raffill, Stanford Sherman. 94 mins. Colour. Sf parodies have seldom worked well in the cinema, but this is an exception. Jason (Urich) is a pirate captain of a spaceship (he and his crew carry cutlasses and wear high boots) who raids merchant ships for ice (the planets in this area being arid), meets a princess and has adventures. The film's success depends on the script's real knowledge (unusual in the movies) of written sf's dafter conventions as well as the CLICHÉS of sf cinema; both are neatly caricatured. Particularly lunatic is the final battle in a time warp, with the heroic contenders visibly ageing, the day being saved by the hero's baby who grows rapidly into a man and repels the elderly boarders. There is a small, irritating, chest-bursting ALIEN scuttling around, and Anjelica Huston buckles an expert swash. The farce is played straight enough to work, and the whole thing, though sometimes too broad, is agreeably genial. Raffill went on to direct The PHILADELPHIA EXPERIMENT (1984). [PN]

I COME IN PEACE

(vt Dark Angel US) Film (1989). Vision. Dir Craig R. Baxley, starring Dolph Lundgren, Brian Benben, Matthias Hues. Screenplay Jonathan Tydor and Leonard Maas Jr. 91 mins. Colour. Good cop (Lundgren) and silly FBI man (Benben) go up against ALIEN drug dealer in Houston, with brief assistance from alien cop. ICIP is rather like a downmarket ALIEN NATION and also borrows from The HIDDEN. The alien, who is collecting human endorphins, is big and uses a razor-edged self-propelled compact disc as a weapon. This formula action movie is only partially redeemed by Mark Helfrich's

brisk editing. It ends thus: Alien: "I come in peace." Lundgren: "And you go in pieces, asshole!" [PN]

IDLER, THE

UK magazine published monthly by Chatto ?

and others), ed Jerome K. Jerome and Robert BARR - both jointly and separately - and by Arthur Lawrence, Sidney H. Sime, and others, Feb 1892-Mar 1911. Although comparatively short-lived, TI published much sf, mainly through the leanings of its founding editors, both (at times) fantasy authors and both of whom contributed sf stories to its pages.

Other notable contributors in its early days were Edwin Lester ARNOLD, Arthur Conan DOYLE, Mark TWAIN and H.G. WELLS. TI continued to publish fantasy and sf from writers such as Patrick Vaux, William Hope HODGSON and Paul Bo'ld until its demise. Many stories from TI were reprinted in MCCLURE'S MAGAZINE. [JE]

IDRIS, YUSUF

ARABIC SF.

IF

US DIGEST-size magazine. 175 issues Mar 1952-Nov/Dec 1974. It was founded by the Quinn Publishing Co. with Paul W. FAIRMAN as editor, but James L. QUINN quickly assumed the editorial chair himself, in Nov 1952, holding it until Damon KNIGHT took over Oct 1958-Feb 1959. There were no issues Feb-July 1959 because the title was sold during that year to Digest Productions and became a companion to GALAXY SCIENCE FICTION under the editorship of Gal's editor H.L. GOLD, who stayed in the post July 1959-Sep 1961. Frederik POHL assumed the editorship Nov 1961. From July 1963 the publisher operated as Galaxy Publishing Corp. Gal and If were both sold in 1969 to the Universal Publishing and Distributing Co., and Ejler JAKOBSSON took over as editor of both in July 1969. James BAEN became editor with the Mar/Apr issue in 1974, shortly before the magazine folded. For most of its life it was bimonthly, but Mar 1954-June 1955, and again July 1964-May 1970, it was monthly. The latter period was its heyday; it won HUGOS for Best Magazine in 1966, 1967 and 1968. If was at first merely subtitled Worlds of Science Fiction, but in Nov 1961 the cover logo - though not the spine - was altered to Worlds of If Science Fiction. If absorbed its bimonthly companion, WORLDS OF TOMORROW, in 1967. The title was resurrected for one issue by Clifford R. Hong in 1986 (Sep-Nov 1986, vol. 23, number 1, issue 176) and immediately disappeared again. The most notable story appearing in If during the Quinn period - during one year of which, 1953-4, Larry SHAW did most of the actual editing - was James BLISH's classic A CASE OF CONSCIENCE (Sep 1953; exp 1958). At its height, under Pohl, the magazine featured several Hugo-winning stories, including Robert A. HEINLEIN's The Moon is a Harsh Mistress (Dec 1965-Apr 1966; 1966), Larry NIVEN's "Neutron Star" (Oct 1966) and Harlan ELLISON's "I Have No Mouth and I Must Scream" (Mar 1967); other stories included Samuel R. DELANY's "Driftglass" (June 1967). In this period the magazine also featured A.E. VAN VOGT's return to sf-writing after a long absence, and the fourth volume of E.E. "Doc" SMITH's Skylark series, nearly 30 years after the third - Skylark Du Quesne (June-Oct 1965; 1966). Under Jakobsson's editorship the magazine resumed playing second fiddle to Gal

and gradually declined until it was merged with its companion as of Jan 1975. It had been, overall, one of the more distinguished sf magazines. Writers who made their debuts in If include David R. BUNCH, Larry Niven, William F. NOLAN, Andrew OFFUTT and Alexei PANSHIN. Artwork was quite good from early on. Ed VALIGURSKY was the first art editor - replaced by Mel Hunter in 1955 - and introduced Kelly FREAS's and Kenneth Fagg's work to the magazine. Later artists included Jack GAUGHAN, Gray MORROW and Wally WOOD. The history of If's UK editions is inordinately complex. Strato Publications reprinted 15 numbered issues from the 1953-4 period, and a further 18 (beginning again at #1) in 1959-62. Gold Star Publications marketed a UK edition Jan-Nov 1967 whose issues were dated 10 months later than the otherwise identical US editions. Copies of the UPD version were imported 1972-4 and numbered for UK release, the numbers running #1-#9 and then, astonishingly, #11, #1, #13, #3, #4 and #5! The last issue of If was never distributed in the UK. Two anthologies of stories from If, in magazine format, were released as The First World of If (anth 1957) and The Second World of If (anth 1958), both ed Quinn. There followed The If Reader of Science Fiction (anth 1966) and The Second If Reader of Science Fiction (anth 1968), both ed Pohl. More recent collections have been The Best from If (anth 1973) ed anon, The Best from If Vol II (anth 1974) ed The Editors of If Magazine, and The Best from If Vol III (anth 1976) ed James Baen. [BS/PN]

IGGULDEN, JOHN

(1917-) Australian author whose sf work is restricted to an unremarkable DYSTOPIAN novel, Breakthrough (1960 UK), in which a dictator uses implanted radio-controlled devices for purposes of repression. [JC]

IGNOTUS, CORONEL

[r] SPAIN.

IJAS, JYRKI (NILO JUHANI)

(1943-) Finnish film editor, translator and journalist, the first of whose (few) sf stories was "Koekaniini" ["Guinea Pig"] in 1968. One of the founders of Aikakone magazine (FINLAND), he is also publisher and editor of Ikaros magazine, winner of the Finnish Kosmoskyna award in 1988, editor of Ensimmäinen yhteys ["First Contact"] (anth 1988) and an sf critic. He wrote the entry on FINLAND for this encyclopedia. [PN]

IKARIE

CZECH AND SLOVAK SF; Jaroslav OLSA.

IKARIE XB-1

(vt Voyage to the End of the Universe; vt Icarus XB-1) Film (1963). Film studio Barrandov. Dir Jindrich Polak, starring Zdenek Stepanek, Radovan Lukavsky, Dana Medricka. Screenplay Pavel Juracek, Polak. 81 mins, cut to 65 mins. Colour. This interesting Czech film is set in a giant spaceship (with elaborate interiors designed by Jan Zazvorka) on a long exploratory mission. The shipboard routines, coolly observed, create the impression of a culture alien to ours. The stock situations of comparable US-UK films and tv series (STAR TREK and SPACE 1999, for example) are mostly avoided by the Czech writers, although the build-up of suspense when the spaceship encounters a wreck floating in space adds a touch of

SPACE OPERA. The ending - the spaceship reaches a planet that we realize is contemporary Earth - is a US addition to the otherwise savagely cut print used for US and UK release. [JB/PN] See also: CINEMA.

IKIN, VAN (GEORGE)

(1951-) Australian editor and writer who began publishing sf stories with "The Lecherous Leech" for *Void* in 1977, just before that journal became an anthology series. As editor, he published *Australian Science Fiction* (anth 1982), which includes a long historical survey; *Glass Reptiel Breakout*; and *Other Australian Speculative Stories* (anth 1990); and *Mortal Fire: Best Australian SF* (anth 1993) with Terry DOWLING. [JC]

ILIC, DRAGUTIN

[r] YUGOSLAVIA.

ILIEV, GEORGI

[r] BULGARIA.

ILLING, WERNER

[r] GERMANY.

ILLUSTRATED MAN, THE

Film (1968). SKM Productions/Warner-Seven Arts. Dir Jack Smight, starring Rod Steiger, Claire Bloom, Robert Drivas, Don Dubbins, Jason Evers. Screenplay Howard B. Kreitsek, based on *The Illustrated Man* (coll 1951) by Ray BRADBURY. 103 mins. Colour. Bradbury's idea of a man whose various tattoos each represent a different tale did not completely work as an afterthought framework to link the stories of his collection, and it is even less successful in the film, which Bradbury hated. The stories are "The Long Rains" (astronauts lost on Venus), "The Veldt" and "The Last Night of the World"; only "The Veldt" (VIRTUAL-REALITY nursery animals come to life and are used by future children to dispose of parents) is anything other than limp and literal-minded. The same actors appear in each episode; apparently Smight, the director, was aiming at an atmosphere of downbeat enigma and malign destiny, with Steiger, the tattooed man, as a constantly reincarnated loser. Another Bradbury anthology film is *VELD* (1987). [PN/JB]

ILLUSTRATION

1. From the Beginnings to 1978 The historical function of art in sf has been to illustrate rather than interpret; this reflects the hard-edged nature of early GENRE SF itself, which portrayed technics-dominated society rather than interpreting its *raison d'être*; just as this kind of sf was popular science plus human- or wonder-interest, so the illustrations were there to provide page-interest. When these functional attitudes weakened, sf illustrations became freer, aspiring to illumination rather than diagram. Today their relationship to text is often generic rather than specific. Before the SF MAGAZINES, there is little that can be regarded as pure generic sf illustration, though the art history of that early period of sf publication awaits research. Inspiration was derived on the one hand from black-and-white masters of graphic pun, such as Jean Ignace Grandville (1803-1847), Richard ("Dicky") Doyle (1824-1883) and the astonishing Albert ROBIDA, or specialists in

futuristic WAR like Fred T. JANE, and on the other hand from more "serious" artists, such as Gustave Dore (1832-1883) and John Martin (1789-1854). The latter in particular, the first artist of the immense, has had great influence; his mighty visions were natural material for Hollywood, and echoes of them abound in, for instance, the original KING KONG (1933). The other matter upon which the first generation of sf illustrators could rely was the spate of pictures of scientific and engineering marvels appearing in the press; a later generation turned to NASA handouts. Many drawings in Hugo GERNSBACH's early magazines in particular can be traced directly to sawn-down or blown-up versions of the Eiffel Tower and the thermionic valve or tube. Such illustrations accompanied stories which were often cautionary in nature: scientific experiments could result in DISASTER; interstellar gas and renegade planets were hazards in Earth's path; ROBOTS were prone to rape inventors' daughters - but still TECHNOLOGY had to go on. The illustrations were diagrams to enforce the thesis, and often set over a line or two of actual text. Yet the subservient role of the sf artist is by no means the whole story. Even in the most commercial period it was recognized that the impact of the cover sold the magazine or paperback; in consequence, care and money went into the cover art. Some artists worked at their best on covers not just because the pay was better. Dedication was a more noteworthy characteristic than artistic excellence among this low-salaried breed of men. Because of printing deadlines some publishers, particularly those with a "stable" of magazines, commissioned covers before stories. As a result, a writer might be asked to write a tale to fit a picture; this doubtful privilege gave the writer his name on the cover but could also entail a cut in the already mean rates of payment. In this way, magazine art developed and became, even if in small compass, a tradition, with names of prolific illustrators like Frank R. PAUL, Virgil FINLAY and Emsh (Ed EMSHWILLER) dominating the field. Interior art became increasingly less tied to text, just as text became less tied to technics. It was free to indulge in the pleasantly hazy symbolism of a Paul ORBAN, the immaculacy of an Alex SCHOMBURG, or even the whimsicality of an Edd CARTIER. It was also at liberty to fudge on the detail in which members of the previous generation of illustrators, such as Frank R. Paul and Elliott DOLD, had gloried. Increasingly, the magazine covers symbolized the spirit of the magazine rather than depicting an incident in an actual story; the series of covers Emsh executed for GALAXY SCIENCE FICTION in the early 1960s provides a noteworthy example of this. Increased paper and production costs in the 1940s hit the PULP MAGAZINES hard; as they dwindled, the COMIC book - which grew out of comic strips - rose in popularity. Hal Foster (1892-1982) had started the ever-popular Tarzan strip in 1929, in the same year that BUCK ROGERS IN THE 25TH CENTURY, drawn by Dick CALKINS and written by Philip NOWLAN, appeared on the scene. What Tarzan did for Africa, Buck did for space. Success bred imitators: the 1930s brought the caveman ALLEY OOP, a sort of anti-Tarzan (by Vincent Hamlin), The Phantom (Lee Falk and Ray Moore), BRICK BRADFORD (Clarence Gray and William Ritt), and the much admired FLASH GORDON, elegantly drawn by Alex RAYMOND. From such SUPERHEROES it was only a step to the king of them all, SUPERMAN. Created by Jerry SIEGEL and Joe Shuster, two sf fans, this character began life in a comic book, Action Comics, in 1938, and was a success from the

start. Like Flash and Buck before him, Superman went into RADIO and then into films. By 1941, the fortnightly comic-book version had reached a circulation of 1,400,000. The day of the superhero had dawned. MARVEL COMICS introduced The Fantastic Four in 1961; since then Marvel's fabulous but fallible beings - The Spider-Man, The Incredible Hulk, The Silver Surfer and the rest of the grotesques - have changed the nature of comics and, on the whole, improved the standard of draughtsmanship in the field. But the most astonishing developments came from France, in particular from the group of artists (of whom Philippe DRUILLET was one) working for the magazine METAL HURLANT. Here the mood was of brooding unease rather than action; sophisticated surreal effects were achieved without recourse to balloons or commentary. As the written word affected artwork, so artwork influenced the written word. There was a period in sf when interiors of SPACESHIPS were vast, shadowy, and echoing; they came complete with cast-iron doors opening directly onto space and equipped with doorknobs for handles. That was the influence of Calkins's Buck Rogers. Raymond's Flash Gordon had similar effects, and his line of galactic romance, with proud queens dressed in fur-tipped boots and haughty expressions, and usurping villains lurking behind the arras with axe and ray-gun, is with us yet. The enormous vacuum-vehicles of Christopher FOSS spring from A.E. VAN VOGT's epics - and will surely inspire future van Vogts. Imitation is promoted by systems of tight deadlines and tighter payrolls; whatever comes to hand must be used. Artists, like writers, still borrow heavily from each other. In the jungle world of the pulps, artists moved easily from one genre to another, depending on the corporation employing them. We should be surprised not that there is so little individuality but that there is so much. Hubert ROGERS, ASF's chief artist throughout much of the 1940s, produced many covers for other STREET ? Frank Kelly FREAS, an ASF illustrator of infinite jest, created Mad Magazine's lunatic optimist Alfred E. Neuman ("What, me worry?"). In the magazines of the early post-Gernsback period the mode depended heavily on horror and GOTHIC, perhaps because here was a convention readily to hand, waiting to be adapted. Finlay, Lawrence (Lawrence Sterne STEVENS), Hannes BOK, Alexander LEYDENFROST and Cartier are names that spring to mind. These artists of the macabre secured and kept a great following: Finlay and Bok in particular have become revered since their deaths. Leydenfrost, son of a Dutch illustrator, produced some of the most imaginative MONSTERS in the business; they are frequently based on insect morphology. Later sf artists were able to forge an idiom more in tune with the technophile nature of sf. The precept of Frank R. PAUL was decisive here. An artist with training as an architect, Paul was possibly Gernsback's most remarkable discovery. This prodigious talent created his own brand of future city, with its sensuously curving lines an exotic amalgam of Byzantium and the local movie palace, owing something to the Art Deco movement. The same patterns were exaggerated in paranoid style by Elliot DOLD, who developed an intense poetry of machinery. During this period, H.W. WESSO also produced spirited interpretations of mighty cities and machineries, as did Leo MOREY and Orban, but it was the purity of line of Charles SCHNEEMAN and Rogers that best conveyed the aspirations of technocratic culture, where the merely human dwindles in the light of its aseptic artefacts. Few sf illustrations are memorable in their own right; they come and they go.

An exception must be made for Schneeman's idealistic picture of E.E. "Doc" SMITH's hero, Kimball Kinnison, the Grey Lensman, striding along with two formidable alien allies (ASF Oct 1939). Together with Rogers's cover for Robert A. HEINLEIN's "The Roads Must Roll" (ASF Nov 1939), it represents a synthesis of that immaculate metal-clad future towards which many thought the world was rolling. Of course it was an illusion: WWII was already raging in Europe. In place of Rogers, Freas became ASF's most popular artist; he specialized in roughnecks with guns. ASF was iconoclastic, aware of its brand-image as the intellectual's sf magazine. The emphasis was on the word, which got things done, not the drawing, which was merely decorative; in consequence, much interior artwork was dull. For vigour, one turned to lesser magazines, to the crowded Herman Vestals in *Startling Stories* and *Planet Stories*, or to Rod RUTH in *Fantastic Adventures*, whose spirited sketches for "Queen of the Panther World" by Berkeley LIVINGSTON (July 1948) still retain their power. Of the new 1950s magazines, *Gal* has already been mentioned. Its misty interior illustrations appeared refreshingly contemporary; best-remembered exponents of this style are William Ashman, Don Sibley, Dick Francis and the alarming Kossin. Among the names rising to prominence in the 1960s were John SCHOENHERR, Mel Hunter (1929-) and Jack GAUGHAN. By this time, the magazines had tidied up their typography, imitating their powerful rivals in the paperback industry; it is in paperback books that most of the traditional art is aired nowadays. With sf motifs pervading certain strata of popular MUSIC, sf and fantasy art made formidable appearances on record album sleeves. Notably, Roger DEAN's striking composites of machine, insect, animal and bone have convincing power. Dean and the remarkably fecund Patrick Woodroffe (1940-) published collections of their own work, as did Karel THOLE, King Surrealist of sf art. The new professional magazines of the later 1970s relied heavily on old modes of illustration. *GALILEO* did best, with Tom Barber striving towards something fresh. But it seemed undeniable that innovations would be more likely to occur elsewhere. Innovation follows cash flow: movies, tv and record-album covers adopted, on a wide front, an idiom that virtually began in the magazines. That early work, for many reasons, can never be repeated; for aesthetic reasons, it cannot be ignored. A number of books of the 1970s deal, in whole or in part, with sf illustration: Hier, *L'an 2000* (1973 France; trans as *2000 A.D.*: Illustrations from the Golden Age of Science Fiction Pulps 1975) by Jacques SADOUL; *One Hundred Years of Science Fiction Illustration* (1974) by Anthony FREWIN; *Science Fiction Art* (1975) by Brian W. ALDISS and *A Pictorial History of Science Fiction* (1976) by David A. KYLE. [BWA]2. From 1978 to 1992 This has been a period of few sf magazines: *Gal* died and the circulations of those that survived slipped inexorably downhill. The new UK magazine *INTERZONE* (begun 1982) unevenly experimented with cover art in many styles, Ian MILLER's bizarre, STEAMPUNK machines being among the more memorable results. The balance, so far as sf illustration was concerned, became permanently tilted in this period away from magazines and towards the covers of paperback books and the dust-jackets of hardcovers, and even here (remuneration in the book business not being highly competitive) some of the more successful artists, like Frank FRAZETTA, worked only briefly in the field before moving on to other forms of commercial art. A big success on book covers of the late 1970s were the erotic fantasies of

Boris VALLEJO, whose busty bimbos in bondage harked back with a kind of frozen tastelessness to the era of the pin-up girl, but after a while his work could most easily be bought in the form of calendars. Through much of the 1970s and 1980s UK sf paperback book covers were dominated by space pictures in a smooth, airbrushed style, with vast spacecraft looming - a style which most critics associated with Chris FOSS. Tim WHITE and Jim BURNS, Foss's heirs as the most successful UK sf illustrators, worked easily in this mode, though much of the best work of both is in other styles. Anthony ROBERTS and Angus MCKIE were also among the guilty parties. Burns was the first UK artist to win a HUGO for his work. While the style lasted, it looked to the casual bookshop browser as if all UK-published sf was effectively the same book. In the USA, sf cover art was dominated through the 1980s by the paintings of Michael WHELAN, meticulous and vivid but perhaps with a rather-too-commercial predictability. He has created what will surely be an all-time record by failing to win the Hugo for Best Professional Artist only twice in the years 1980-1991 inclusive, winning 10 Hugos in all in that category, and an 11th for Best Non-Fiction Book. Some find that the covers of one of his closer competitors, Don MAITZ (who also won a Hugo), have more movement and vigour. Many of Maitz's covers are fantastic rather than technological, and the move away from icons of technology as a means of selling sf in book form was if anything even more pronounced in the USA during the 1980s than in the UK. Sf books sometimes featured the work of almost purely fantastic artists like ROWENA or the well achieved Art Nouveau pastiche of Thomas CANTY (although decorative styles based on woodcuts, stained glass and late-19th-century illustration had previously been used, to very great effect, by Leo and Diane DILLON). Other notable US cover artists of the 1980s include James GURNEY, Barclay SHAW and Darrell SWEET. It is surprising that Surrealist book covers have been used comparatively seldom for sf, despite the memorable work of Richard POWERS in the USA (BALLANTINE BOOKS during the 1950s) in this supposedly more up-market and respectable style. Others to adopt a semi-Surrealist style were Brian LEWIS in the UK, Paul LEHR in the USA and Karel THOLE in Europe, but none of these are artists whose work is at all typical of the 1980s. The best known sf-Surrealist of our time is, like Thole, a European, and deeply influenced by the traditions of decadent graphic art that were always so much stronger in Europe than in the USA. This is H.R. GIGER, the Swiss painter whose work became justly celebrated in the USA with the film ALIEN (1979), for which he designed both monsters and spacecraft. His biomorphic creations are both phallic and vulval in a manner that, had it appeared in comic strips in the 1950s, would have justified the hysteria of Dr Fredric Wertham (1895-1981), whose book *The Seduction of the Innocent* (1954) charged that coded vaginas appeared in the shading of some comics drawing. (These and similar charges led directly to the introduction of the Comics Code in 1955.) Giger is not a cover artist, and has had only a small influence in that field. It may be that sf illustration as a separate genre is slowly dying away, with the advent of the paperback book not really compensating for the death of the magazines in providing a niche for it. Certainly, there is not much in the sf art of the late 1980s/90s to get excited about; most of the development has been in fantasy art (and much of that, too, deals in visual stereotypes). While general standards are

much higher than they were in, say, the PULP MAGAZINES, the sense of lurid freedom seems to have disappeared now that publishers carefully commission book covers which, normally, are designed to attract without giving offence. In one area there have been great advances: the COMICS, once again. Most comics art is poor, but some is very good indeed. A new development in comics, the GRAPHIC NOVEL, has showcased artists, either working in close collaboration with writers or writing their own scenarios, some of whom are exceptional; they include Enki BILAL, Brian BOLLAND, Dave GIBBONS, Dave MCKEAN and Frank MILLER. But this is a wholly different art from sf illustration proper, comics being themselves a storytelling medium whereas magazine illustrations and book covers have the more static function of rendering icons designed to label the publication as being sf (or fantasy) and then to sell it, not to further the story. See the Introduction for lists of comics artists and sf illustrators who receive entries in this encyclopedia. [PN] See also: SEX.

ILLUSTRATORS OF THE FUTURE CONTEST WRITERS OF THE FUTURE CONTEST.

IMAGINARY SCIENCE

Imaginary science is extremely common in sf; it is not at all the same thing as PSEUDO-SCIENCE. The difference is that the adherents of the pseudo-sciences believe them to be true, whereas the sf writer who uses imaginary science knows perfectly well that it is untrue. Sf has often been criticized for scientific illiteracy, sometimes unfairly, for, while it does produce many simple SCIENTIFIC ERRORS, it commonly uses presently impossible science for two good reasons, neither of them ignorant: (a) what is impossible now may one day become possible; (b) imaginary science may be essential for plot purposes. An example of the first category is the common sf device of MATTER TRANSMISSION. All matter can be described in terms of information and, since all information can be transmitted, then one may legitimately theorize that matter transmission (or at least matter reconstruction) does not transgress the laws of Nature as we know them, even though the practical problems are so vast as to seem, at present, insuperable. (Instantaneous matter transmission, the most common form portrayed in sf, is another kettle of fish: it violates Relativity in the same way as any other mode of FASTER-THAN-LIGHT travel, such as via HYPERSPACE.) Similarly, SUSPENDED ANIMATION is not possible now but, with advances in CRYONICS, one day it may be. We are primarily concerned here with the second category: the imaginary scientific device which does indeed contradict what we know of the sciences, usually PHYSICS, but which allows the writer a kind of imaginative freedom extremely difficult to obtain otherwise. The five best-known examples are ALTERNATE WORLDS; ANTIGRAVITY; FASTER-THAN-LIGHT (or FTL) travel and COMMUNICATION; INVISIBILITY; and TIME TRAVEL. A separate entry is devoted to each of these. The game - it is indeed a game - is to produce as plausible a rationalization for the impossible as the author's artistry will allow, and it is precisely this skill that worries the scientific purist. Thus James BLISH, in his Cities in Flight series (1955-62; omni 1970), explains his SPINDIZZY by referring to work by real theoretical physicists with an air of such bland conviction that a generation of sf readers may have

grown up believing that antigravity is possible. Similarly, H.G. WELLS in *The Invisible Man* (1897) rattles on about refraction with a perfectly straight face. Blish did not believe in antigravity, nor Wells in invisibility: their aim was simply to rationalize the surrealistic central images of their story - US cities flying through space in Blish's book, and a suit and a mask being removed to reveal nothing behind them in Wells's. The imaginary science was there to clear the way, and, of course, to lend conviction to the tale. Time travel is perhaps the clearest example. The ingenuity of sf writers is constantly aimed at subverting the prohibitions physics appears to place on time travel - some to do with causality - because, critically, time travel gives narrative access to the past and the future, and opens up exactly that perspective that is central to sf's finest achievements. Through its (almost certainly impossible) use, sf writers have achieved the freedom to consider things both possible and real, as in the fields of HISTORY, EVOLUTION and even METAPHYSICS - all three in the case of the great original, H.G. Wells's *THE TIME MACHINE* (1895). A puritanical demand for universal scientific responsibility (the genre is called science fiction after all) would instantly destroy this and many others of sf's most intellectually rigorous works. The publication of many books of scientific popularization in the 1970s and 1980s, particularly those about the relationship of quantum physics to COSMOLOGY, gave new credence to some of the imaginary sciences. If some real scientists were prepared to contemplate quantum-mechanical explanations for ALTERNATE WORLDS, or time-travelling particles like TACHYONS, or the possibility that BLACK HOLES may provide portals to other, distant areas of time or space (or even to "different universes"), then why should not sf authors be allowed the same imaginative warrant? The imaginary sciences took on a new lease of life, and Schrodinger's cat became, belatedly, an overnight success. The cynic, of course, might argue that this is simply a case of sf feeding back into science. A controversial example of imaginary science is the employment of ESP or PSI POWERS - which might more properly be seen as within the province of the pseudo-sciences - as central to the story. Some sf writers, such as Alfred BESTER and Blish, have used psi powers exactly as they might use other imaginary sciences, as an evocative and useful plot device; other sf writers appear to be propagandizing on behalf of parapsychology, or at least succumbing to the lure of wish fulfilment. In SUPERMAN tales especially, the science involved tends to be pseudo rather than imaginary, and perhaps open to criticism on that account. Writers of HARD SF often like to develop a realistic extrapolation from one imaginary change in scientific laws, or even in the fundamental constants of the Universe. Thus Bob SHAW, in *THE RAGGED ASTRONAUTS* (1986), invents a universe where pi equals exactly 3 (and where - perhaps as a remote consequence? - interplanetary travel between two planets closely orbiting one another is possible by balloon); Stephen BAXTER's *Raft* (1991) takes place in a universe where the force of GRAVITY is very much stronger than in ours; John E. STITH's *Redshift Rendezvous* (1990) proposes that in HYPERSPACE the velocity of light is 22 mph (35kph). Sf writers have been inventive in creating imaginary scientific devices - such as the "slow glass" of Shaw's poignant "Light of Other Days" (1966) and others, which allows us to view the past because light takes so long to penetrate a sheet of the material - and occasionally even new sciences. An early

example of the latter, and still one of the best, is Alfred JARRY's 'pataphysics, the science of imaginary solutions. Isaac ASIMOV was especially prolific in creating new sciences, such as POSITRONICS and PSYCHOHISTORY, though in these cases he was somewhat evasive about the details of how they worked; he has also used such old imaginary-science favourites as miniaturization (GREAT AND SMALL), in *Fantastic Voyage* (1966), and in *THE GODS THEMSELVES* (1972) he came up with an "electron pump" that provides us with a limitless supply of electricity (electrons) in return for positrons supplied to an alternate universe. His most absurd coup in the imaginary-science line was "thiotimoline", described in "The Endochronic Properties of Resublimated Thiotimoline" (1948), which parodies the dusty style of a scientific report, and in its several sequels. Thiotimoline is, in effect, a time-travelling chemical which effortlessly reverses cause and effect. Ursula K. LE GUIN likewise came up with a new science in a spoof-scientific paper, "The Author of the Acacia Seeds and Other Extracts from the Journal of the Association of Therolinguistics" (1974); therolinguistics is the study of animal language and literature. One real science is thus far imaginary, in the sense that it has no available subject matter: XENO BIOLOGY. [PN]

IMAGINARY VOYAGES

A term much used in the TERMINOLOGY of sf/fantasy critics, probably derived from the French, whose name for the genre is "voyages imaginaires". From this term was also derived *Voyages extraordinaires*, the overall series title used by publisher Hetzel on the novels of Jules VERNE. In this encyclopedia the theme is treated under FANTASTIC VOYAGES and PROTO SCIENCE FICTION. A book on the subject is *The Imaginary Voyage in Prose Fiction* (1941) by Philip Babcock GOVE. [PN]

IMAGINATION

US DIGEST-size magazine. 63 issues. First released Oct 1950 by the Clark Publishing Co., ed Raymond A. PALMER. Early in 1951, with #3, it was acquired by William L. HAMLING's Greenleaf Publishing Co., and continued with Hamling as editor until Oct 1958. Beginning as a bimonthly, it operated a six-weekly and then briefly a monthly schedule Sep 1952-July 1955. Until July 1955 its full title was *Imagination: Stories of Science and Fantasy*; from Oct 1955 it became *Imagination Science Fiction*. Hamling followed a policy of including a short novel in each issue. Among his most frequent contributors were Kris NEVILLE and Daniel F. GALOUYE, both of whom published much of their early work in I; others were Milton LESSER, Dwight V. SWAIN and, towards the end of I's career, Edmond HAMILTON. I dealt primarily in routine SPACE OPERA, and featured an unusually high number of titles ending in exclamation marks. [BS]

IMAGINATIVE TALES

US DIGEST-size magazine. 26 issues. A bimonthly companion to IMAGINATION, IT was published by William HAMLING's Greenleaf Publishing Co., ed Hamling, Sep 1954-Nov 1958. The last 3 issues, July-Nov 1958, were published under the title *Space Travel* (but continued the previous numeration) in a doomed effort to capture the post-Sputnik space-enthusiast market. IT began as a humorous FANTASY magazine, the first 6 issues featuring complete novels in the style of Thorne Smith

(1892-1934) by Charles F. Myers and Robert BLOCH, but from Sep 1955 it reverted to a policy identical to that of its companion, featuring only sf, with a short novel heading every issue. Regular writers included Edmond HAMILTON, Geoff St Reynard (Robert W. Krepps) and Dwight V. SWAIN, while the supporting short fiction was principally supplied by authors from the regular stable writing for the ZIFF-DAVIS magazines AMZ and Fantastic. [BS]

IMAGINE

. . . CANADA.

I MARRIED A MONSTER FROM OUTER SPACE

Film (1958). Paramount. Dir Gene Fowler Jr, starring Tom Tryon, Gloria Talbot, Ken Lynch. Screenplay Louis Vittes, from a story by Fowler and Vittes. 78 mins. B/w. Another manifestation of the rampant PARANOIA of the 1950s, IMAMFOS might be called an sf version of I Married a Communist. In this enjoyably tasteless MONSTER MOVIE, a young woman's fiance, on the way to his wedding, is captured and replaced by a shape-shifting ALIEN, one of a group whose mission on Earth is to breed with human women in an attempt to replenish their own declining population. The sexual subtext of some other sf B-movies is here brought out into the open, notably in the famous wedding-night scene where a flash of lightning reveals to the audience (but not the wife) the alien lineaments beneath the nervous cigarette-smoking husband's face. But the woman, who grows suspicious of her "spouse" over the next year, convinces a "real" man of what is happening and he organizes a rescue party. The aliens, impervious to bullets, are destroyed when dogs are set on them, and dissolve into writhing, bubbling alien knots. At various points, surprisingly, some sympathy for the aliens is deliberately roused, and in this respect IMAMFOS is more interesting than the otherwise deservedly more celebrated INVASION OF THE BODY SNATCHERS (1956), whose story, in part, it imitates. Gene Fowler, a former editor for Fritz LANG, directed well. [PN/JB] See also: INVASION; SEX.

IMMORTAL, THE

US tv series (1969-71). Paramount/ABC TV. Concept based on the novel The Immortals (fixup 1962) by James E. GUNN. Executive prod Tony Wilson. Prod Lou Morheim. Dirs included Joseph Sargent (pilot), Mike Caffey. Writers included Robert Specht, Stephen Kandel, Dan Ullman. Starring Christopher George, Carol Lynley, Don Knight, David Brian, Barry Sullivan. 75min pilot, followed by 15 50min episodes. Colour. In the 1969 pilot Ben Richards (George) is discovered to have a rare blood-type which renders him immune to disease and to the ageing process. An elderly millionaire wants to keep him locked up as a human fountain of youth, but he escapes to search for his long-lost brother, who may have the same type of blood. The 1970 series reverts to the formula of the hunted man - others are after him, too - having adventures on his travels. The novelization is The Immortal * (1970), also by Gunn. [JB]

IMMORTALITY

Immortality is one of the basic motifs of speculative thought; the elixir of life and the fountain of youth are hypothetical goals of classic

intellectual and exploratory quests. What is usually involved is, strictly speaking, extreme longevity and freedom from ageing - the uselessness of the former without the latter is reflected in the myth of Tithonus and in Jonathan SWIFT's account of the Struldbruggs. One thing immediately noticeable about this rich literary tradition is that immortality is often treated as a false goal, sometimes as a curse recalling the infinitely tedious punishments meted out to Ixion, Tantalus, Sisyphus and the Wandering Jew. It is understandable that GOTHIC fantasies such as *St Leon* (1799) by William Godwin (1756-1836), *Melmoth the Wanderer* (1820) by Charles MATURIN, *The Wandering Jew* (1844-5) by Eugene Sue (1804-1857), *Auriol* (1850) by W. Harrison Ainsworth (1805-1882) and *The Death Ship* (1888) by W. Clark RUSSELL should be suspicious; these are cautionary tales, warning against the emptiness of dreams (though a cynic might equally suggest sour grapes). It is perhaps surprising, though, that early sf writers mostly followed suit. Walter BESANT's *The Inner House* (1888) proposes that immortality would lead to social sterility - an opinion echoed by many later writers, including Martin SWAYNE in *The Blue Germ* (1918), Harold Scarborough (1897-1935) in *The Immortals* (1924) and Aldous HUXLEY in *After Many a Summer Dies the Swan* (1939; vt *After Many a Summer* UK). Stories which take a brighter view - like George C. FOSTER's *The Lost Garden* and the trilogy by George S. VIERECK and Paul ELDRIDGE begun with *My First Two Thousand Years* (1928) - usually have only a few privileged immortals living in a world of mortals. When George Bernard SHAW expressed enthusiasm for universal longevity in *Back to Methuselah* (1921), Karel CAPEK added a rebutting preface to his own play *The Makropoulos Secret* (1925) to explain his own opinion that it would be an unmitigated curse even for a single individual. This difference of opinion remains very evident in sf. In some stories immortality is the beginning of limitless opportunity; in others it represents the ultimate stagnation and the end of innovation and change. We find the former view in such early pulp stories as "The Jameson Satellite" (1931) by Neil R. JONES and *The Man who Awoke* (1933; fixup 1975) by Laurence MANNING, and its converse in David H. KELLER's "Life Everlasting" (1934; title story of *Life Everlasting and Other Tales* [1947]) and John R. PIERCE's "Invariant" (1944). In later magazine sf, the former attitude is implicit in J.T. MCINTOSH's "Live For Ever" (1954) and James BLISH's "At Death's End" (1954), while the latter is seen in Damon KNIGHT's "World without Children" (1951). Frederik POHL's *Drunkard's Walk* (1960), Brian W. ALDISS's "The Worm that Flies" (1968) and Bruce MCALLISTER's "Their Immortal Hearts" (1980). There is, however, a general acceptance of the fact that the desire for immortality is immensely powerful, and that it constitutes the ultimate bribe; lurid dramatizations of this supposition include Jack VANCE's *To Live Forever* (1956), James E. GUNN's *The Immortals* (1955-60; fixup 1962), John WYNDHAM's *Trouble with Lichen* (1960), Norman SPINRAD's *BUG JACK BARRON* (1969), Bob SHAW's *One Million Tomorrows* (1970), Robert SILVERBERG's *The Book of Skulls* (1972), Thomas N. SCORTIA's "The Weariest River" (1973) and Mack REYNOLDS's and Dean ING's *Eternity* (1984). There have been numerous notable sf novels featuring immortal heroes, including A.E. VAN VOGT's *The Weapon Makers* (1943; 1952), Wilson TUCKER's *The Time Masters* (1953; rev 1971), Clifford D. SIMAK's *WAY STATION* (1963), Roger ZELAZNY's *THIS IMMORTAL* (1966) and Robert A. HEINLEIN's *Time Enough for Love* (1973). But

the dominant opinion seems to be that boredom and sterility must eventually set in. Raymond Z. GALLUN's *The Eden Cycle* (1974) is an extended study of this presumed phenomenon, and the protagonists of Michael MOORCOCK's *Dancers at the End of Time* sequence (1972-6) must go to extreme and absurd lengths to keep ennui at bay. Some of the modern stories dealing with the theme are scrupulously analytical, and are among the finest exercises in speculative thought that the genre has produced. Most are respectful of the problematic aspects of longevity, but almost all eventually favour the prospect; notable examples of extended contes philosophiques in this vein include Robert Silverberg's "Born with the Dead" (1974) and *Sailing to Byzantium* (1985), Octavia E. BUTLER's *WILD SEED* (1980), Pamela SARGENT's *The Golden Space* (1982), Kate WILHELM's *Welcome, Chaos* (1983) and Poul ANDERSON's epic *THE BOAT OF A MILLION YEARS* (1989). A particularly notable negative story is "The Tithonian Factor" (1983) by Richard COWPER, in which hasty users of a technology which gives them a Struldbrugg-like longevity are discomfited by the subsequent discovery that humans do indeed have a joyous spiritual afterlife. Damon Knight's "Dio" (1957), Marta RANDALL's *Islands* (1976; rev 1980) and Frederik POHL's *Outnumbering the Dead* (1990 UK) are interesting stories about lone mortals in societies of immortals. Research in biotechnology following the cracking of the genetic code has encouraged speculation that technologies of longevity are a real prospect, and a new immediacy was introduced into the theme when R.C.W. Ettinger's *The Prospect of Immortality* (1964) popularized the idea that CRYONIC preservation might allow people now living to be preserved until the day when they might benefit. Though satirized in such novels as Anders BODELSEN's *Freezing Down* (1971; vt *Freezing Point*), this notion inspired a curious political "manifesto" in Alan HARRINGTON's *The Immortalist* (1969), followed by his extravagant novel *Paradise 1* (1977); Harrington prefers the term "emortality", which signifies an immunity to ageing but not to injury. Technologies of longevity and genetically engineered emortality play a central role in Brian M. STABLEFORD's and David LANGFORD's future history *The Third Millennium* (1985), and the theme is a constant preoccupation in Stableford's recent solo work, notably *The Empire of Fear* (1988). A collection of essays on immortality in sf is *Death and the Serpent* (anth 1985) ed Carl B. YOKE and Donald M. HASSLER. A theme anthology is *Immortal* (anth 1978) ed Jack DANN. IMPOSSIBLE VOYAGE, AN
VOYAGE A TRAVERS L'IMPOSSIBLE.

IMPULSE
SCIENCE FANTASY.

INCIDENT AT RAVEN'S GATE

(vt *Encounter at Raven's Gate*) Film (1988). Hemdale. Dir Rolf de Heer, starring Steven Vidler, Celin Griffen, Ritchie Singer, Vince Gil, Saturday Rosenberg. Screenplay Marc Rosenberg, de Heer. 89 mins. Colour. Australian cinema has produced a number of under-appreciated genre items, such as *The Last Wave* (1978) and *Razorback* (1984). This is another, a conspiracy-cum-UFO movie which locates its bizarre storyline in a dried-up, mean-spirited

outback. It starts awkwardly with an unnecessary flashback structure, and risks alienating audiences accustomed to complete explanations for all manifestations, but is otherwise an outstanding atmospheric nail-biter. As in the best 1950s cheapies - IT CAME FROM OUTER SPACE (1953) is the particular touchstone evoked - the fantastic elements are used to bring out the tensions of the human characters. The pressures on an already uptight policeman turn him into a menace who competes with the influence of the offscreen ALIENS as the source of the film's HORROR, so that IARG wavers between the psycho-movie and alien-encounter genres. Though the film does not produce tentacled monstrosities, it does have a few impressively unsettling moments in the invaded-transformed Raven's Gate farmhouse. [KN]

INCREDIBLE HULK, THE

US tv series (1977-82). Universal/CBS-TV. Created by Kenneth Johnson (executive prod), starring Bill Bixby, Lou Ferrigno, Jack Colvin. Prods included Nicholas Corea, James D. Parriott, Charles Bowman, Bob Sherman. Dirs included Johnson, Bowman, Kenneth Gilbert, Jeffrey Hayden, Reza Badiyi, Jack Colvin. Writers included Johnson, Parriott, Corea, Karen Harris and Jill Sherman, Richard Christian MATHESON. 5 seasons, 2 100min pilots plus 79 50min episodes. Colour. The series is based on the MARVEL COMICS character of the same name. Mild-mannered scientist Dr David Banner (Bixby) subjects himself to gamma radiation and turns temporarily into a violent, green, 7ft (2.15m) hulk (Ferrigno), a condition that repeats itself whenever he is under stress. The Hulk persona never speaks. Banner has many adventures while on the run, trailed by abrasive investigative reporter McGee (Colvin), who suspects the truth. Only a handful of episodes - notably the 2-part "Prometheus", which involves a meteor freezing Banner/Hulk into an intermediate state - have any sf components aside from the initial SUPERHERO premise. In this formulaic but popular series the Hulk is much more polite (and lacklustre) than his frenzied comic-book counterpart. The 2 pilots and a further 2-episode story were syndicated in the USA and released as movies elsewhere: The Incredible Hulk (1977), Return of the Incredible Hulk (1977; a retitling of "Death in the Family") and Bride of the Incredible Hulk (1978; a retitling of "Married"). 2 made-for-tv movies, both dir Bill Bixby, are Trial of the Incredible Hulk (1979) and Death of the Incredible Hulk (1990). [PN/JB]

INCREDIBLE MELTING MAN, THE

Film (1977). Quartet Productions/AIP. Written and dir William Sachs, starring Alex Rebar, Burr DeBenning, Ann Sweeny, Michael Aldredge. Additional dialogue Rebecca Ross. 84 mins. Colour. By 1977 the idea of an astronaut returning to Earth after being contaminated by some space infection was well and truly a CLICHE subgenre of the MONSTER MOVIE, an early example being The QUATERMASS XPERIMENT (1955). This time the infection causes great strength, the desire to eat human flesh, and an unfortunate skin disease that gives the astronaut a strong resemblance to man-shaped porridge. Some sequences are rather good, but the special effects are laughable. [PN]

INCREDIBLE SHRINKING MAN, THE

Film (1957). Universal. Dir Jack ARNOLD, starring Grant Williams, Randy

Stuart, April Kent. Screenplay Richard MATHESON, based on his own *The Shrinking Man* (1956). 81 mins. B/w. This is one of the few truly classic sf films of the 1950s. The basic premise is unscientific, but that does not detract from the power of this story about a man (Williams) who becomes contaminated by a radioactive cloud and starts to shrink. What were once safe and comforting to him become increasingly threatening as he continues to diminish. There is severe sexual anxiety as his wife (Stuart) looms ever larger above him (and patronizes him). In due course his cat becomes a monster and the prosaic confines of his own basement, into which he escapes, become a surrealist jungle. Eventually he disappears completely as the wind blows through autumn leaves and the stars glitter above in a curiously joyful epiphany. Matheson's mature script is intelligently handled by Arnold. Clifford Stine's special effects are a paradigm for how these things should be done. A supposedly comic partial remake starring Lily Tomlin, *The Incredible Shrinking Woman* (1981), dir Joel Schumacher, purports to be a SATIRE on the consumer society. [PN/JB] See also: GREAT AND SMALL; HONEY, I SHRUNK THE KIDS; HUGO; MUTANTS; PARANOIA.

INCREDIBLE SHRINKING WOMAN, THE The INCREDIBLE SHRINKING MAN .

INFINITY

Original paperback anthology series ed Robert HOSKINS, published by Lancer Books, and presented as a lineal descendant of the magazine *INFINITY SCIENCE FICTION* (1955-8), whose editor, Larry T. SHAW, was also connected with Lancer; the covers bore the slogan "New Writings in Speculative Fiction". I was a competent but not outstanding series. Regular contributors included Poul ANDERSON, Barry N. MALZBERG and Robert SILVERBERG; Alan BRENNERT and George ZEBROWSKI made their debuts in its pages. *Infinity One* (anth 1970) reprinted Arthur C. CLARKE's "The Star" (1955) from the first issue of its spiritual ancestor; all other stories were originals. Later volumes were *Infinity Two* (anth 1971), *Three* (anth 1972), *Four* (anth 1972) and *Five* (anth 1973). The series was terminated when its publisher went bankrupt. [MJE/PN]

INFINITY SCIENCE FICTION

US DIGEST-size magazine. 20 issues Nov 1955-Nov 1958, published by Royal Publications, ed Larry T. SHAW; irregular, with 4 months between some issues, 1 month between others. ISF was one of the most interesting of the flood of new sf magazines in the early and mid-1950s. Its first issue featured Arthur C. CLARKE's HUGO-winning story "The Star", and the magazine went on to publish other good stories by such authors as Isaac ASIMOV, James BLISH, Algis BUDRYS, Damon KNIGHT and C.M. KORNBLUTH; Harlan ELLISON made his debut here with "Glow Worm" (1956). Robert SILVERBERG was another regular - and sometimes prolific-contributor; #20 contained book reviews by him and also 3 of his stories (including "Ozymandias", published as by Ivar Jorgenson). Damon Knight had earlier been ISF's regular critic; much of the material in *In Search of Wonder* (1956; rev 1967) originated in ISF. After the first issue, all the covers were painted by Ed EMSHWILLER. The original anthology series *INFINITY* described itself as the "lineal descendant" of ISF. [MJE]

ING, DEAN

(1931-) US writer whose work makes effective use of his years in the Air Force (1951-5) and in the engineering profession (1957-70), and reflects in its pragmatic tone - though not in its plotting, which can be pixilated - his training in behavioural psychology (PhD in speech, 1974). Much of his fiction can be described as SURVIVALIST, insofar as military tales set in a post- HOLOCAUST USA necessarily inhabit survivalist terrain; but the violence of his better work is relatively restrained, and the libertarianism (LIBERTARIAN SF) which underpins his conception of proper behaviour cannot be described as unthinking. Collections like High Tension (coll 1982) and Firefight 2000 (coll 1987), the latter including both fiction and nonfiction, amply demonstrate the cogency of his concerns. DI began writing sf with "Tight Squeeze" for ASF in 1955, though he became active only in the late 1970s. His first novel, Soft Targets (1979), interestingly copes with terrorism in a NEAR-FUTURE setting, though a besetting weakness for melodrama diverts attention from the serious points he makes about the fatal precariousness of societies in the advanced Western World. DI is, in fact, much less interested in that precariousness than in its consequences, and his most significant work, the Ted Quantrell sequence-Systemic Shock (1981), Single Combat (1983) and Wild Country (1985) - is set in a desolated and paranoid post-Bomb USA under the thumb of a theocracy. (The similarity of this setting to Robert A. HEINLEIN's Future History is sufficiently obvious to count as a homage.) Quantrell's life, as he matures, presents a model of and argument for the individual who admits no restraints upon his behaviour but his own recognizance. That Quantrell does not behave poorly derives, perhaps, more from the author's decency than from any notion that near-absolute autonomy makes one fully human. Other titles of interest include several novels written as with Mack REYNOLDS, who died in 1983, based on complete first drafts written by Reynolds; they are Eternity (1984), Home Sweet Home: 2010 A.D. (1984), The Other Time (1984), in which an archaeologist uses TIME TRAVEL to help the Aztecs defeat the Spanish, The Lagrangists (1983), Chaos in Lagrangia (1984), Trojan Orbit (1985) and Deathwish World (1986). His solo books include Anasazi (coll of linked stories 1980), Pulling Through (coll 1983), which comprises a short ROBINSONADE and a series of survivalist articles designed to add verisimilitude to the course of the main story, and The Big Lifters (1988), a HARD-SF tale in which entrepreneurship wins the day. In general, DI presents what might be called the acceptable face of survivalism. [JC]Other works: Blood of Eagles (1986), associational; The Ransom of Black Stealth One (1989) and its sequel, Butcher Bird (1993); Cathouse * (fixup 1990), tales set in Larry NIVEN's Man-Kzin universe; The Nemesis Mission (1991); Silent Thunder (1991 chap dos).About the author: The Work of Dean Ing: An Annotated Bibliography and Guide (1990 chap) by Scott A. Burgess. See also: COLONIZATION OF OTHER WORLDS; IMMORTALITY; SOCIAL DARWINISM.

INGHAM, FREDERICK

Edward Everett HALE.

INGREY, DEREK

(1929-) UK writer whose post- HOLOCAUST sf novel, Pig on a Lead (1963),

describes the dead-end life of the last surviving humans in the UK - two men, who soon kill each other, and a boy, who survives in the company of a young Eve-figure and the eponymous pig. Told in a remarkable pot pourri of styles, the book makes effective use of many black-humour routines. [JC]

INGRID, CHARLES
Rhondi VILOTT.

INGS, SIMON (DAVID)
(1965-) UK writer who began publishing sf with "Blessed Fields" in *Other Edens III* (anth 1989) ed Christopher EVANS and Robert HOLDSTOCK; and who has become moderately prolific as an author of short stories. His first novel, *Hot Head* (1992), heatedly and congestedly, and with moments of CYBERPUNK-ish brilliance, presents the life-story and adventures-in VIRTUAL REALITY and other realms-of a lesbian Muslim wanderer in the early 21st century. SI's 2nd novel, *City of the Iron Fish* (1994), significantly differs from the first novel. The eponymous city, whose physical existence seems as arbitrary as all other physical phenomena in the world of the novel, is reminiscent of such fantasy edificial concentrations as Mervyn PEAKE's *Gormenghast*, or M. John HARRISON's *Viriconium*. But the surreal dance of speculation-about cosmology in general, as well as the reality-making function of ART in a world which lacks natural meaning-distinguishes this novel apart from its models. SI may prove to be one of the writers to capture the 1990s. [JC]

INNER SPACE

In sf TERMINOLOGY, an antonym to "outer space". The term was probably first used in the sf field by Robert BLOCH in a speech at the 1948 Worldcon, but was not widely disseminated at that time. However, in "They Come from Inner Space" (1954 *The New Statesman*) - an essay he later included in *Thoughts in the Wilderness* (coll 1957) - J.B. PRIESTLEY more conspicuously suggested that sf mistakenly attempted to explore "the other side of the Sun rather than . . . the hidden life of the psyche". "Beyond all these topical tales, fables and legends" lay "deep feelings of anxiety, fear, and guilt" which themselves required exploration. "Having ruined this planet," he continued, "we take destruction to other planets. This very extension in space of our activities is desolating, at least to minds that are not entirely childish, because it is a move, undertaken in secret despair, in the wrong direction." Whether J.G. BALLARD's first use of the term in 1962 was a separate coining or reflected a memory of this essay, it is clear that he intended to designate something not dissimilar. (It is also possible that he had read "Invasion from Inner Space" [1959 *Star Science Fiction #6*] by Howard Koch, a story about sceptical COMPUTERS revolutionizing society, but this is obviously a rather different usage.) The term soon became a commonplace, especially with reference to NEW-WAVE writers (like Ballard) who came into prominence in the mid-1960s. [JC/PN]See also: GREAT AND SMALL; MUSIC.

INNERSPACE

Film (1987). Amblin/Warner Bros. Steven SPIELBERG as an executive prod. Dir Joe DANTE, starring Dennis Quaid, Martin Short, Kevin McCarthy, Fiona Lewis, Meg Ryan. Screenplay Jeffrey Boam, Chip Proser, based on a story by

Proser. 120 mins. Colour. In this parody of FANTASTIC VOYAGE (1966), tough test pilot Tuck (Quaid) is accidentally injected into feeble Jack (Short) while in a miniaturized state. Tuck, though tiny, can to a degree control Jack. In a confused and sometimes unfunny plot, villainous industrial spies pursue a microchip MCGUFFIN and a miniaturized killer is also injected into Jack. Adventures happen. All Dante's films have delightful moments, but this, an attempt to make good commercially after the debacle of EXPLORERS (1985), seems oddly impersonal while at the same time trying too hard. The inside-the-body effects are good. The technical adviser on the movie was Gentry LEE. [PN] See also: CINEMA.

INTELLIGENCE

Intelligence is necessarily one of the issues discussed in the entries on ANTI-INTELLECTUALISM IN SF, CYBERNETICS, MUTANTS and SUPERMAN. MACHINE intelligence is discussed under COMPUTERS and ROBOTS. This entry is restricted to stories in which the emphasis is on the actual workings of intelligence in living beings. Much sf refers to intelligence, but a surprisingly small amount gives a good idea of what the workings of a superior or different intelligence would feel like or even look like. In many stories of abnormally intelligent supermen or mutants we have to take the intelligence on trust. Such intelligences were favourites with A.E. VAN VOGT, but their workings are often less than transparent to the reader, as is the case with the hero of his *The World of A* (1945 ASF; rev 1948; rev vt *The World of Null-A* 1970), whose blinding leaps of non-Aristotelian logic are frequently incomprehensible and on the face of it rather silly. The first sf story of any significance about intelligence was probably *The Curse of Intellect* (1895) by Frank Challice Constable, in which an ape is given human intelligence (APES AND CAVEMEN); the first of real importance was *The Hampdenshire Wonder* (1911; vt *The Wonder US*) by J. D. BERESFORD, in which the focus of interest is on the feelings of a superintelligent child growing up in a world of what seem to him subnormals. A colder and harsher reworking of the same theme was twice undertaken by Olaf STAPLEDON, in *Odd John* (1935), about an abnormally intelligent human whose spiritual powers are also highly developed, and in *Sirius* (1944), about an intelligent dog. In some ways the latter work is the more successful, perhaps because of the problem in stories of this kind of finding a form of language appropriate to describing an experience which by its very nature cannot be fully comprehended by either the reader - or indeed the writer. One way around the problem of increasing intelligence is to begin with an animal or a moron, so that the higher intelligence is not hopelessly out of reach of our own. This strategy has been adopted in several GENRE-SF stories, of which the two best known are *Brain Wave* (1954) by Poul ANDERSON and "Flowers for Algernon" (1959) by Daniel KEYES, later much exp as *FLOWERS FOR ALGERNON* (1966). The latter, filmed as *CHARLY* (1968), is a moving story, told largely through his own diaries, of intelligence artificially induced in a moron. Sadly, the

process is only temporary; while hero and reader are given a glimpse, surprisingly convincing, of what genius must feel like, the gates of the golden city are soon barred, and the story ends with an itching discomfort in the subnormal mind of the hero and an almost intolerable feeling of loss in the reader's. Superintelligence is often pictured as going along with what seems to ordinary humans a cold indifference and a casual amorality. Perhaps this demonstrates a sour-grapes syndrome. We do not like the thought of being relegated to a minor place in the evolutionary scheme; and, as EVOLUTION is traditionally carried out by a "Nature red in tooth and claw", we half expect that a race of geniuses would treat us cruelly. A prototype of this kind of story is John TAINÉ's *Seeds of Life* (1931 AMZ; 1951), in which an accident with radiation transforms a surly laboratory technician into a cruel, glowing supermind in the body of an Adonis; the sense we are given of the workings of his mind is vivid enough to transcend the pulp crankiness of the story's ideas of evolution. Here, too, the growth of intelligence is reversible. Many adults are ready enough to see even normal children as essentially ALIEN creatures, and a flourishing subgenre has been the story of the superchild (*CHILDREN IN SF*), often turning on his or her relationship with parents or guardians. Henry KUTTNER reverted to this theme several times, as in "Mimsy Were the Borogoves" (1943, as Lewis Padgett), in which a teaching machine from the future has frightening effects on children, and "When the Bough Breaks" (1944, again as Padgett), in which a peculiarly nauseating superbaby gives his parents a hard time. "Star Bright" (1952) by Mark CLIFTON is a typically pulp version of the intelligence theme in which the manifestations of high intelligence in children - where the real interest of the story might have lain - rapidly develop into what are in effect magical powers. The two most thoughtful and mature novels in this subgenre are probably *Children of the Atom* (1948-50 ASF; fixup 1953) by Wilmar H. SHIRAS, which incorporates the classic story "In Hiding" (1948), in which an extremely intelligent boy attempts, in self-protection, to behave just like any other child, but is discovered, and *The Fourth "R"* (1959; vt *The Brain Machine*) by George O. SMITH, in which the intelligence of a 5-year-old has been trained artificially by a machine which reinforces learning mechanisms in the brain. Both books deal sensitively with the contrast between intellectual maturity and emotional immaturity, and are surprisingly plausible in their scenarios of ways in which superintelligence might show itself in action. Two other relevant stories from the 1950s are C.M. KORNBLUTH's "The Marching Morons" (1951), a vividly unpleasant story of a future which has become polarized between morons and geniuses, the former in much greater numbers because the middle classes know more about contraception (an interesting not-very-hidden assumption here), and *The Black Cloud* (1957) by Fred HOYLE, in which a cloud-intelligence in space indirectly kills scientists who try to take on board its entire knowledge of the universe, their human intellects being too fully programmed and inflexible to cope with the new data. Something similar happens to the people in the film *FORBIDDEN PLANET* (1956) who subject themselves to the intelligence-raising machinery of the Krel. A number of stories have hinged on the COLONIZATION OF OTHER WORLDS under an imagined future law which states that the worlds of intelligent beings must be either left alone or at least treated with great care. Thus the

measurement of alien intelligence becomes a question of politics. H. Beam PIPER's *Little Fuzzy* (1962) is of this kind, as is Joseph GREEN's *Conscience Interplanetary* (1965-71 var mags; fixup 1972), though Green does not really develop the potential of the theme. Perhaps the most interesting novel about surveying the nature of alien life and intelligence is Naomi MITCHISON's *MEMOIRS OF A SPACEWOMAN* (1962). Other variations on the intelligence theme include: Olof JOHANNESSON's *Sagan om den stora datamaskinin* (1966; trans as *The Big Computer: A Vision* 1968 UK; vt *The Tale of the Great Computer: A Vision* 1968 US; vt *The End of Man?* 1969 US), which is actually a history of intelligence, written in the future, seeing human intelligence as an evolutionary step towards machine intelligence; "The Planners" (1968) by Kate WILHELM, about the acceleration of the genetic transmission of intelligence in apes; and "Eurema's Dam" (1972) by R.A. LAFFERTY, about a genius whom the author disingenuously describes as stupid. This last story is one of a long line of genre-sf yarns about idiots savants who construct various marvellous machines and theories without having the least idea about what they are doing. A major work on the evolution of intelligence is Thomas M. DISCH's *CAMP CONCENTRATION* (1968), a highly structured novel which describes, through a series of recurrent images and thematic leitmotifs, an experiment in drug-induced raising of intelligence among deserters and conscientious objectors in a prose whose increasing richness and difficulty reflect the ever-increasing intelligence of the narrator. Oscar ROSSITER's *Tetrasomy 2* (1974) is a black comedy about a young doctor in whom a sudden acceleration of intelligence is catalysed by a vegetable-like superbeing; the doctor's inability to use his improved mind with any social sang froid poses a problem not generally considered in this type of story. The question of intelligence testing comes up in many UTOPIAS and DYSTOPIAS, and is analysed interestingly in "Intelligence Testing in Utopia" by Carolyn H. Rhodes in *EXTRAPOLATION*, Dec 1971. Among the works she discusses in which this theme is central are *The Messiah of the Cylinder* (1917; vt *The Apostle of the Cylinder*) by Victor ROUSSEAU, *Player Piano* (1952; vt *Utopia 14*) by Kurt VONNEGUT Jr, *The Rise of the Meritocracy* (1958) by Michael YOUNG, *The Child Buyer* (1960) by John HERSEY and *World out of Mind* (1953) by J.T. MCINTOSH. Two sf novelists whose work consistently speculates on the nature of intelligence and the various directions in which it may evolve are Frank HERBERT and Ian WATSON, both heavily committed to the possibility of some form of transcendent intelligence. In Herbert's work the theme is seen most clearly in the *Dune* series and in *The Dosadi Experiment* (1977), though it appears in all his novels. As with van Vogt, however, it is not always clear exactly how his "other" intelligences operate. With Herbert, much depends on enigmatic hints and clues, as if he knew more than he's telling; this is reflected in his plots, which combine abstruse metaphysical speculation with conspiratorial, cloak-and-dagger manipulations in a sometimes confusing way. Nonetheless, Herbert has at times evoked the difference of evolved intelligences with great feeling. Where Herbert hints, Watson analyses and chips patiently away at his recurrent theme, approaching it from a slightly different angle in each of his novels of the 1970s and in some later ones. Unlike those sf writers who seem to fear the thought of a transcendent intelligence, Watson desires it, while recognizing how such

an evolution may be quite alien to our present selves. Bringing to bear an impressive arsenal of analytic tools taken from ANTHROPOLOGY, CYBERNETICS, LINGUISTICS, PSYCHOLOGY, semiotics and neurology, he is ready to tackle ambitious projects; in particular he has attempted, with partial success but sometimes drily, to evoke the feeling of a supermind whose processes are more lateral, analogizing and synthesizing than sequential in the traditional mode of human logic. Examples can be found in *The Embedding* (1973), *The Martian Inca* (1977) and *Alien Embassy* (1977). Similarly, Damien BRODERICK's *The Judas Mandala* (1982; rev 1990) is notable for the intellectual arabesques produced by its evolved intelligences, hovering just this side of comprehensibility. In the 1980s the intelligence theme became less important in genre sf, though Stephen KING's *The Tommyknockers* (1987) has a lively if pulp-style treatment of a popular notion in sf - that contact with aliens or their artefacts may cause a rapid evolution of our intelligence - most famously evoked in the film *2001: A SPACE ODYSSEY* (1968). In King's novel the artefact is an ancient spacecraft dug up in Maine. Robert SILVERBERG's *At Winter's End* (1988) features a FAR-FUTURE primitive tribe whose apparently human intelligence is the result of an experiment in primate evolution. In *The Divide* (1990) by Robert Charles WILSON a man whose superintelligence was created by a hormonal experiment during his childhood attempts to cope with his alienation by splitting his mind; this creates two wholly different personalities, one apparently average. But generally the emphasis of 1980s sf has shifted away from intelligence examined in isolation towards the nature of consciousness and the workings of the mind in general. This is one of the recurrent themes in Greg BEAR's work. His *Blood Music* (1985) has a transformation of humanity brought about by intelligent microorganisms, and *Queen of Angels* (1990) envisages a society in which most people are "therapied" by molecule-scale machines made possible by developments in NANOTECHNOLOGY; the same book features direct exploration/mapping of the mind and its subroutines, consciousness alteration through voodoo ("voodoo"), and the growth to self-consciousness of an AI. The idea of biological engineering of the mind appears also in Geoff RYMAN's *The Child Garden* (1989), in which almost the whole of humanity is educated by the direct importation of tailored DNA into the brain through viral infection. Ironically the heroine, who is immune to viruses, is very intelligent, and the book makes an important distinction between knowledge and intelligence, emphasizing how the conventional "grammars" of thought create a conformism antipathetic to true creativity. In this case (and often, no doubt, in the real world) education can muffle intelligence. [PN]

INTERNATIONAL FANTASY AWARDS

UK awards, made annually 1951-7 (not 1956). The idea came from four UK enthusiasts, including John Beynon Harris (John WYNDHAM). The IFAs were presented to the authors of the best fantasy or sf book of the year, with a second category for the best nonfiction book likely to be of interest to sf readers; the nonfiction class was dropped after 1953. Winners were selected by a panel of prominent sf personalities; from 1952 the panel was international. The award took the form of a trophy. Once the HUGOS had been successfully launched, some of the *raison d'etre* for the IFAs was gone, but in their time they were given to some excellent and

imaginatively chosen works, most of which would have had almost no chance of winning any of the major US AWARDS. The first IFA was presented at the 1951 UK sf CONVENTION, the last at the London Worldcon in 1957.

INTERZONE

UK magazine, current, #1 Spring 1982, small- BEDSHEET (A4) format, saddle-stapled, continuously numbered, on slick paper from #41, Nov 1990, quarterly to #24, Summer 1988; bimonthly to #34, Mar/Apr 1990; monthly thereafter. IZ was first published and edited by a collective made up of John CLUTE, Alan Dorey, Malcolm EDWARDS, Colin GREENLAND, Graham James, Roz KAVENEY, Simon Ounsley and David PRINGLE. This group shrank: James left after #2, Edwards after #4, Kaveney after #7, Clute and Dorey after #10, and Greenland after #12. From #13, Autumn 1985, the only editors were Ounsley and Pringle, although some previous editors continued to act as advisory editors. Since #25, Sep/Oct 1988, when the magazine went bimonthly, the sole editor (and publisher) has been David Pringle, who had been from the outset, along with Edwards, one of the two major figures behind its publication. IZ had reached #95 by May 1995. Begun as an idealistic exercise by a group of fans and writers at a time when the UK had almost no market for sf short stories, it has grown into by far the most distinguished UK sf magazine since NEW WORLDS and SCIENCE FANTASY. In appearance and content it is a fully professional magazine, although its comparatively low circulation (by US standards) of around 4,500 requires it to be classed as a SEMIPROZINE in HUGO voting. IZ published perhaps too many downbeat stories in its early issues, hoping rather too obviously to revive something of the feeling of Michael MOORCOCK's NW and its NEW-WAVE glories. However, it slowly developed - certainly by 1985-6 - a real personality of its own. From #13 (Autumn 1985) Nick Lowe has contributed a sophisticated film-review column; from #16 (Summer 1986) John Clute has been the featured and inimitable senior book reviewer. Since then the nonfiction component has continually improved: a second book-review column

by Paul J. MCAULEY was added from #23 (Spring 1988), and Mary GENTLE has reviewed with increasing frequency, as have, more recently, Chris Gilmore and Gwyneth JONES. Good interviews have appeared regularly, as well as literary and market analysis in the interesting Big Sellers series; Wendy Bradley began (and later ceased) to review, amusingly, both tv shows and fantasy fiction; David LANGFORD began to publish monthly a condensed version of ANSIBLE, his well-known news-oriented FANZINE and Charles PLATT and Bruce STERLING (separately) contributed occasional columns of (deliberately) controversial polemics. All of this gave the magazine a good bone structure on which the skin and musculature of the fiction could be adequately supported. It has slowly become clear that this one magazine, despite its slender resources and comparatively small readership, has been largely (if not solely) responsible for catalysing a second new wave of UK sf. Its younger UK authors have included Paul J. McAuley, Steve BAXTER, Keith BROOKE, Eric BROWN, Richard Calder (1955-), Neil FERGUSON, Nicola Griffith, Simon D. Ings (1965-), Ian Lee (1951-), Ian MCDONALD, Ian R. MacLeod, Kim NEWMAN and Charles Stross, among many others, coming in to join already established writers like Brian W. ALDISS, J.G. BALLARD, Barrington J. BAYLEY, M. John HARRISON, Gwyneth JONES, Garry KILWORTH, Keith ROBERTS, Brian M. STABLEFORD and Ian WATSON. Australian Greg EGAN has been an especially notable contributor, as has, though more seldom, the Canadian Geoff RYMAN. Good US contributors have included Greg BEAR, Michael BLUMLEIN, Scott BRADFIELD, Paul Di Filippo, Thomas M. DISCH, Karen Joy FOWLER, Richard KADREY, Geoffrey A. Landis, Pat MURPHY, Rachel POLLACK and Michael SWANWICK. This represents, so far as UK sf writing is concerned, a spectacular upturn in both the quality and the quantity of sf by new writers, after long years of near-stagnation in the 1970s and early 1980s. It is not so much the UK writers' uniform brilliance - they are by no means always brilliant - as the sense of vigour and community they arouse by their regular appearance together in this magazine; this is what has revitalized UK sf, and incidentally encouraged the starting up of many other small UK semiprozines in IZ's wake. Pringle as editor has occasionally, and somewhat unfairly, been accused of playing it too safe and commercial in recent years, after publishing much experimental fiction early on. More commonly he is regarded as having got the balance between SOFT SF and HARD SF, the experimental and the old-style fast-paced narrative, about right. In the late 1980s and the 1990s, IZ has been intelligently eclectic. Both cover art and interior art have been of uneven quality. The most notable artist consistently associated with Interzone - he was Art Editor for a time - is Ian MILLER. In Oct 1994 IZ merged with the small-press magazine SF Nexus, with the result that Paul Brazier, editor of the latter, became graphic designer for IZ. The result, according not just to the elderly and conservative, has been a design of striking ugliness in the name of modernism. [PN]See also: INTERZONE: THE ANTHOLOGY.

INTERZONE: THE ANTHOLOGY

UK anthology series, mainly reprint (from the magazine INTERZONE), part original, 5 vols to date. These are Interzone: The 1st Anthology (anth 1985) ed David PRINGLE with John CLUTE and Colin GREENLAND, The 2nd Anthology (anth 1987) ed Pringle with Clute and Simon Ounsley, The 3rd

Anthology (anth 1988) ed Pringle with Clute and Ounsley, The 4th Anthology (anth 1989) ed Pringle with Clute and Ounsley, and The 5th Anthology (anth 1991) ed Pringle with Clute and Lee Montgomerie. Original stories have appeared in #1 (1 story), #4 (3 stories) and #5 (2 stories), their authors including Geoff RYMAN and Cherry WILDER. [PN]

INVADERS, THE

US tv series (1967-8). A Quinn Martin Production for ABC TV, created by Larry COHEN. Prod Alan Armer. Writers included Don Brinkley, Dan Ullman, Jerry SOHL, Robert Collins. Dirs included Joseph Sargent, Paul Wendkos, Sutton Roley. 43 50min episodes. Colour. Roy Thinnes stars as a man who has witnessed a landing by ALIENS in a UFO but is unable to get anyone to believe him. The aliens, from a doomed planet, are trying to take over Earth by infiltration: able to take on human form, they can be distinguished only by the odd angle of their little fingers; when dead their bodies evaporate leaving only a pile of ashes, so lasting proof of their existence is almost impossible to establish. The rigid formula - in each episode the hero discovers and foils a new alien plot, but remains unable to convince the authorities - meant that there was little variation, and the series was cancelled after the second season. Larry Cohen, whose idea the series was, later became celebrated for his low-budget independent films, usually, as here, featuring an ordinary man facing horrible incursions on the one hand and an uncaring, unimaginative or conspiratorial establishment on the other. Perhaps TI came too late: it belonged, in spirit, to the PARANOID sf version of the Communist-spy scares of the 1950s, as in Robert A. HEINLEIN's *The Puppet Masters* (1951), the tv serial *QUATERMASS II* (1955) and the film *INVASION OF THE BODY SNATCHERS* (1956). Two short series of books based on TI were published in the USA (3 books) and the UK (4 books). The 2 to appear in both series are *The Invaders* * (1967; vt *The Meteor Men* UK as by Anthony LeBaron) by Keith LAUMER, #1 in the USA and #2 in the UK; and *The Halo Highway* * (1967; vt *Army of the Undead* US) by Rafe BERNARD, #1 in the UK and #3 in the USA. *Invaders* #2 in the USA was *Enemies from Beyond* * (1967) by Laumer; #3 and #4 in the UK were *The Night of the Trilobites* * (1968) and *The Autumn Accelerator* * (1969), both by Peter LESLIE. Two further ties to the series were hardbound juveniles, *Alien Missile Threat* * (1967) by Paul S. Newman, and *Dam of Death* * (1967) by Jack Pearl. [JB/PN]

INVADERS FROM MARS

1. Film (1953). National Pictures/20th Century-Fox. Dir William Cameron Menzies, starring Jimmy Hunt, Helena Carter, Arthur Franz, Leif Erickson. Screenplay Richard Blake (and John Tucker Battle, uncredited). 78 mins (82 mins in Europe). Colour. A small, disturbing, curiously memorable film by the director of *THINGS TO COME* (1936), made for children but capable of terrifying them. Through a little boy's eyes we see ALIENS from a UFO take over the minds of everyone in a town, beginning with the boy's own parents. The army moves in, there is an underground battle and the aliens are defeated. The boy wakes up and realizes that it was all a dream . . . but then he once again sees the UFO land behind his house. (Extra footage was shot for the European print to substitute for the all-a-dream ending, which it was felt would be unpopular; more recent prints have combined

both versions.) Although IFM was cheaply made, Menzies produced - through the use of mildly expressionistic sets (reinforcing the dream idea) and a camera placed to give us a child's-eye view - a powerful sf metaphor for the loneliness and alienation of a child whose world seems subtly wrong. The image of human bodies concealing incomprehensible and menacing alien motives was, in its PARANOIA, an important one in US sf cinema, especially during the 1950s Communist-spy phobias. 2. Film (1986). Cannon. Prods Menahem Golan, Yoram Globus. Dir Tobe Hooper, starring Hunter Carson, Karen Black, Timothy Bottoms, Louise Fletcher. Screenplay Dan O'Bannon, Don Jakoby, based on original. 99 mins. Colour. Disappointing (although astonishingly faithful) remake by a director more at home with exploitation horror movies. The more sophisticated special effects (Martians created by Stan Winston) and the updating of the setting serve only to throw the original's flaws into high relief. What carried eerie conviction on the small screen becomes merely silly on the big one, especially as Hooper's direction sinks into near-incoherence in the pacing of the finale. The best bits, unsurprisingly, are straight from the HORROR genre: possessed parents chewing horribly burnt bacon, a malicious schoolteacher eating a live frog, etc. [PN/JB] See also: INVASION; MONSTER MOVIES.

INVADERS FROM THE DEEP STINGRAY.

INVASION

Futuristic fiction in the UK was given a tremendous boost by the success of George T. CHESNEY's clever piece of propaganda, *The Battle of Dorking* (1871), which put the case for army reform and rearmament by offering a dramatic illustration of the ease with which the UK might fall to an invading German army. This became the foundation-stone of a subgenre of future- WAR stories whose history is described in I.F. CLARKE's excellent *Voices Prophesying War 1763-1984* (1966). Significant exercises in similar alarmism published in the run-up to WWI included *The Great War in England in 1897* (1894) by William LE QUEUX, *The Riddle of the Sands* (1903) by Erskine CHILDERS, *The Invasion of 1910* (1906) by Le Queux and *When William Came* (1913) by SAKI. P.G. WODEHOUSE's early novel, *The Swoop!* (1909), was a parody of the subgenre. The invaders were usually German, but stories of French invasion were frequently used as cautionary tales against the folly of building a Channel Tunnel, such as Max PEMBERTON's *Pro Patria* (1901). UK SCIENTIFIC ROMANCE was to a large extent an outgrowth and elaboration of this kind of fiction; and a crucial CONCEPTUAL BREAKTHROUGH was made by H.G. WELLS in *THE WAR OF THE WORLDS* (1898), which imagined that an invasion of the Earth by technologically superior ALIENS might appear to Britons in much the same light as the eventually genocidal invasion of Tasmania by Europeans had appeared to the luckless Tasmanians (see also *The WAR OF THE WORLDS*). Although it was (very narrowly) anticipated in some respects by Kurd LASSWITZ's *Auf zwei Planeten* (1897; cut trans as *Two Planets* 1971), Wells's novel was far more influential in making the role of invader central to the fictional image of the alien for the next half-century. Mundane invasions remained fairly commonplace in UK fiction between the wars, although the fear of occupation per se was outweighed

and largely superseded by the fear of the aerial bombardment which might be its prelude; in the UK such stories far outnumbered stories of alien invasion, although there were some notable examples of the latter: G. McLeod WINSOR's *Station X* (1919) and Bohun LYNCH's *Menace from the Moon* (1925), as well as the Martian invasion included in Olaf STAPLEDON's future history *LAST AND FIRST MEN* (1930). This general dearth of alien-invasion stories is understandable. Separated from continental Europe by a mere 22 miles, the UK was especially vulnerable to the threat of invasion - and Britons understood how narrowly such a fate had been averted in 1588 and again in Napoleonic times. The USA was far less vulnerable to such anxieties - although they found expression in such novels as Thomas DIXON's *The Fall of a Nation* (1916) and Floyd GIBBONS's *The Red Napoleon* (1929), as well as in various lurid accounts of the "Yellow Peril", including Parabellum's (Ferdinand GRAUTOFF's) *Bansai!* (1909), Philip Francis NOWLAN's Buck Rogers stories (1928-9) and the series begun by Arthur Leo ZAGAT with "Tomorrow" (1939) - but in general the possibility of alien invasion probably seemed to US citizens not too much more remote than the probability of invasion by another nation. Early pulp melodramas of alien invasion include J. Schlossel's "Invaders from Outside" (1925), Nictzin Dyalhis's "When the Green Star Waned" (1925), Edgar Rice BURROUGHS's *The Moon Maid* (1926), Edmond HAMILTON's "The Other Side of the Moon" (1929) and John W. CAMPBELL Jr's *Invaders from the Infinite* (1932 *AMZ Quarterly*; 1961). An interesting story by P. Schuyler MILLER in which the "invasion" is by spores rather than sentient beings is "The Arrhenius Horror" (1931), a theme which he recapitulated in "Spawn" (1939); a later development of it was Jack FINNEY's *The Body Snatchers* (1955; vt *Invasion of the Body Snatchers*), filmed twice as *INVASION OF THE BODY SNATCHERS*. Alien-invasion stories quickly became a staple of the specialist sf pulps, and Campbell went on to conduct a sober and rather peculiar analysis of the idea of alien conquest and the subjugation of humankind in four of his "Don A. Stuart" stories: "The Invaders" (1935), "Rebellion" (1935), "Out of Night" (1937) and "The Cloak of Aesir" (1939) - stories somewhat at odds with his later conviction that humanity was destined to get the better of any and all alien species. One of the side-effects of this later human chauvinism was Campbell's de-emphasizing of alien-invasion stories in *ASTOUNDING SCIENCE-FICTION* - it is surprising how few such stories appeared in ASF in the decade separating *The Dark Destroyers* (1938 as "Nuisance Value"; 1959) by Manly Wade WELLMAN from "Late Night Final" (1948) by Eric Frank RUSSELL, even though such stories could certainly (as did both the examples cited) champion the human against the nonhuman. Joseph J. MILLARD's *The Gods Hate Kansas* (1941; rev 1964) is a notable example from elsewhere. A sparse but interesting line of stories featuring invasions launched from *UNDER THE SEA* runs from Owen Oliver's antique "Out of the Deep" (1904) and Eden PHILLPOTTS's *The Owl of Athene* (1936) to John WYNDHAM's *The Kraken Wakes* (1953; vt *Out of the Deep* US) and Murray LEINSTER's *Creatures of the Abyss* (1961). These often bring the typical features of mundane and alien invasion stories into uneasy combination. Hypothetical Asian invasion continued to crop up occasionally in *GENRE SF* - as in Robert A. HEINLEIN's *Sixth Column* (1941 ASF as by Anson MacDonald; 1949; vt *The Day after Tomorrow*) and C.M. KORNBLUTH's *Not this August* (1955; vt *Christmas Eve UK*) - although they

were easily outnumbered by attempted and successful conquests of a more exotic kind, even if most of these were featured in the less prestigious magazines. Invasions came not only from outer space but from other DIMENSIONS, as in Murray LEINSTER's "The Incredible Invasion" (1936 ASF; 1955 dos as The Other Side of Here), from the microcosm, as in "Invaders from the Atom" (1937) by Maurice G. Hugi (1904-1947), and eventually from the future, as in Invasion from 2500 (1964) by Norman Edwards (Terry CARR and Ted WHITE). Among the more bizarre alien invasions is Fredric BROWN's "The Waveries" (1945), in which electrical energy-beings hijack our airwaves. Despite the sobering conclusion of THE WAR OF THE WORLDS, in which lowly bacteria must compensate for human impotence, confidence in human ability to repel alien invaders sooner or later always ran high in pulp sf, one lone man occasionally being adequate to the task, as in A.E. VAN VOGT's "The Monster" (1948). In some stories, of course, humans are themselves the alien invaders of other worlds, and works of this kind (which rarely appeared in ASF) were often fiercely critical of such human follies as racism and imperialism; examples range from Edmond Hamilton's "A Conquest of Two Worlds" (1932) through Robert Silverberg's Invaders from Earth (1958 dos) and Downward to the Earth (1970) to Ursula K. LE GUIN's THE WORD FOR WORLD IS FOREST (1972 in Again, Dangerous Visions ed Harlan ELLISON; 1976). From their earliest inception, stories of invasion featured a paranoid anxiety that the invaders might already be lurking undetected in our midst. William Le Queux was an indefatigable propagator of the notion that a Fifth Column of German agents was already in the UK, preparing to play its part in open conflict, and many US Yellow-Peril novels likewise featured Fifth Columnists. This kind of PARANOIA could be taken to extremes in sf, where aliens could easily be credited with the power to masquerade as humans. The notion was understandably attractive to low-budget film-makers, and it was extravagantly deployed in the magazines and in the CINEMA during the McCarthy witch-hunts of the early Cold War period. The new wave of paranoid alien-invasion stories was launched by Murray Leinster's The Brain-Stealers (1947 Startling Stories as "The Man in the Iron Cap"; 1954) and Ray BRADBURY's "Zero Hour" (1947), but it really hit its stride with Heinlein's The Puppet Masters (1951), quickly followed by INVADERS FROM MARS (1953), Eric Frank RUSSELL's Three to Conquer (1955), Invasion of the Body Snatchers (1956) and I MARRIED A MONSTER FROM OUTER SPACE (1958). By this time, however, the comic potential of alien invasion was being more widely exploited, too, in such works as Fredric Brown's Martians Go Home! (1955) and Richard WILSON's The Girls from Planet 5 (1955). The possibility of benign invasions was considered, notably by Arthur C. CLARKE in CHILDHOOD'S END (1953), by Algis BUDRYS in "Silent Brother" (1956) and (somewhat perversely) by Theodore STURGEON in The Cosmic Rape (1958). By the 1960s the alien-invasion story appeared to be old hat, fit for cynical display in such stories as Thomas M. DISCH's The Genocides (1965), in which humans are relegated to the status of irrelevant vermin, and his Mankind under the Leash (1966; vt The Puppies of Terra UK), in which they become pets; or surreal parody, in such works as Keith LAUMER's The Monitors (1966) and Philip K. DICK's and Ray NELSON's The Ganymede Takeover (1967); or romantic nostalgia in such works as Robert SILVERBERG's Nightwings (fixup 1969). Serious treatments of the theme were rare: William BURKETT's

Sleeping Planet (1965) and Piers ANTHONY's Triple Detente (1968 ASF as "The Alien Rulers"; exp 1974) do not quite qualify, although Gordon R. DICKSON's The Alien Way (1965) and John BRUNNER's The Day of the Star Cities (1965; rev vt Age of Miracles 1973) might. More recent attempts to revitalize the theme have been relatively few in number; by far the most determined and most successful is Footfall (1985) by Larry NIVEN and Jerry POURNELLE, a conscientiously controlled melodrama. Other notable examples include Jack CHALKER's Dancers in the Afterglow (1978) and the "invasion" subplot of Gregory BENFORD's Across the Sea of Suns (1984). A notable theme anthology of early genre stories is Groff CONKLIN's Invaders of Earth (anth 1952). [BS/DP]

INVASION

Film (1966). Merton Park/AIP. Dir Alan Bridges, starring Edward Judd, Valerie Gearon, Yoko Tani, Lyndon Brook. Screenplay Roger Marshall, based on a story by Robert Holmes. 82 mins. B/w. This interesting UK film tells of two humanoid aliens who crash-land on Earth outside a country hospital. It turns out that one is a prisoner of the other. Further aliens, members of an extraterrestrial police force, arrive and demand that the hospital doctor hand over the prisoner; when their request is refused they place an impenetrable FORCE FIELD around the hospital, but are finally outwitted by the protective doctor. Bridges creates a powerfully strange atmosphere despite a very small budget. [JB/PN]

INVASION EARTH 2150 AD

DALEKS - INVASION EARTH 2150 AD.

INVASION OF ASTRO-MONSTER

GOJIRA; RADON.

INVASION OF PLANET X

GOJIRA; RADON.

INVASION OF THE BEE GIRLS

Film (1973). Centaur/Sequoia. Dir Denis Sanders, starring William Smith, Anita Ford, Victoria Vetri, Rene Bond. Screenplay Nicholas Meyer. 85 mins. Colour. This softcore erotic movie - perhaps inspired by The WASP WOMAN (1959) - has deservedly developed a minor cult reputation for the outrageousness of its tacky if typical exploitation premise, that SEX is death. A woman becomes a nymphomaniacal but sterile "queen bee", and conscripts housewives and other women to join the group; they are covered with jelly and irradiated, and emerge as beautiful human-seeming ALIENS, wearing dark glasses to conceal their insect eyes. They kill their male victims through repeated induction of orgasm. The story hinges on the murder investigation. Part parody, the film is intermittently amusing and arguably perversely proto-FEMINIST. Meyer went on to cowrite The NIGHT THAT PANICKED AMERICA (1975), to write and direct TIME AFTER TIME (1979), to direct STAR TREK II: THE WRATH OF KHAN (1982), to direct The DAY AFTER (1983), to cowrite STAR TREK IV: THE VOYAGE HOME (1986), and to cowrite and direct STAR TREK VI: THE UNDISCOVERED COUNTRY (1992). He has also written excellent Sherlock Holmes pastiches (Sir Arthur Conan DOYLE.)

[PN]

INVASION OF THE BODY SNATCHERS

1. Film (1956). Allied Artists. Prod Walter Wanger. Dir Don Siegel, starring Kevin McCarthy, Dana Wynter, Carolyn Jones, King Donovan. Screenplay Daniel Mainwaring, Sam Peckinpah (uncredited), based on The Body Snatchers (1955) by Jack FINNEY. 80 mins. B/w. PARANOIA was the dominant theme running through much sf cinema of the 1950s. Nowhere was it better realized than in this subtle and sophisticated movie, directed by B-film veteran Siegel, about vegetable pods from outer space that turn into emotionless replicas of human beings, in the process replacing the usually sleeping originals. Whether the film reflects right-wing paranoia about a secret takeover by communists or left-wing paranoia about the increasing power of the McCarthyists has been much argued; either way, the theme is loss of individual identity and of human feeling. The original downbeat ending, in which the pods are victorious, was diluted by the addition of a prologue and epilogue set in hospital, the latter showing the authorities finally believing in the existence of the pods. These scenes are often cut in modern prints. The film has been very highly praised: it is possibly the most discussed B-movie in the history of US film, and was the first of many 1950s sf films to be remade.

2. Film (1978). Solofilm/United Artists. Dir Philip Kaufman, starring Donald Sutherland, Brooke Adams, Leonard Nimoy, Veronica Cartwright, Jeff Goldblum. Screenplay W.D. Richter, based on the Finney novel. 115 mins. Colour. This unusually interesting remake shifts the emphasis from political to sociological, from cohesive small town to alienating big city (San Francisco), where it is more difficult at the best of times to tell who is a pod and who isn't, a point made by the psychiatrist (Nimoy). The script is witty, making satirical points about Californian society in the late 1970s, so intent upon development and change that becoming a pod is almost a logical next step. Kaufman's direction is confident, but sometimes too ominous. [PN]

3. A second remake was BODY SNATCHERS (1993), (which see). See also: CINEMA; INVASION; MONSTER MOVIES.

INVENTION OF DESTRUCTION VYNALEZ ZKAZY.

INVISIBILITY

The fantasy of being able to make oneself invisible is a common childhood daydream. As with all such daydreams, literary treatments of the theme tend to be cautionary tales; the three-decker novel The Invisible Gentleman (1833) by James Dalton is the most extravagant example. No good comes of it in such early sf stories as Edward Page MITCHELL's "The Crystal Man" (1881), H.G. WELLS's classic The Invisible Man (1897) and Jack LONDON's "The Shadow and the Flash" (1903), though C.H. HINTON was unconcerned with moralizing in "Stella" (1895). Almost as common as

stories of being invisible are stories of confrontation with invisible adversaries, in which feelings of fear and insecurity with no immediate and obvious cause are dramatically symbolized. Many stories in this vein inhabit the borderland between supernatural fantasy and sf; notable examples include Fitz-James O'BRIEN's "What Was It?" (1859), Guy de Maupassant's "The Horla" (1887), Ambrose BIERCE's "The Damned Thing" (1893), George Allan ENGLAND's "The Thing from Outside" (1923), H.M. Egbert's *The Sea Demons* (1925; Victor ROUSSEAU), Edmond HAMILTON's "The Monster-God of Mamurth" (1926), H.P. LOVECRAFT's "The Dunwich Horror" (1929), Eric Frank RUSSELL's *Sinister Barrier* (1939; 1943; rev 1948) and Murray LEINSTER's *War with the Gizmos* (1958). Invisibility is a staple of cinematic special effects, displayed to good effect in the classic *The INVISIBLE MAN* (1933) - based on Wells's novel and borrowing some inspiration from Philip WYLIE's *The Murderer Invisible* (1931) - but not so well in its inferior sequels, and with varying success in 3 tv series, all likewise called *The INVISIBLE MAN*, featuring invisible crime-fighters and secret agents. In more recent sf, invisibility - sometimes more metaphorical than literal - is usually deployed symbolically. An invisible manned bomb-carrier is featured in "For Love" (1962; vt "All for Love") by Algis BUDRYS. In Damon KNIGHT's "The Country of the Kind" (1956) and Robert SILVERBERG's "To See the Invisible Man" (1963) criminals are "exiled" from society in that people simply refuse to see them, so that they suffer agonies of loneliness; the notion is inverted in Gardner R. DOZOIS's "The Visible Man" (1975), in which other people become invisible to the outcast. The idea of unnoticed communities existing in the interstices of everyday society is developed by Fritz LEIBER in *The Sinful Ones* (1950 *Fantastic Adventures* as "You're All Alone"; exp 1953; rev 1980) and Christopher PRIEST's *THE GLAMOUR* (1984). Stories in which people fade from original inconsequentiality into literal or metaphorical invisibility include Charles BEAUMONT's "The Vanishing American" (1955), Harlan ELLISON's "Are You Listening?" (1958) and Sylvia Jacobs's "The End of Evan Essant" (1962). More extensive and elaborate accounts of the existential politics of individual invisibility can be found in H.F. SAINT's *Memoirs of an Invisible Man* (1987), filmed as *MEMOIRS OF AN INVISIBLE MAN* (1992), and Thomas BERGER's *Being Invisible* (1988). A pseudo-technological essay at achieving invisibility is depicted in *The PHILADELPHIA EXPERIMENT* (1984). A theme anthology is *Invisible Men* (anth 1960) ed Basil DAVENPORT.

[BS]

INVISIBLE AGENT, THE
The INVISIBLE MAN .

INVISIBLE BOY, THE
Film (1957). Pan/MGM. Dir Herman Hoffman, starring Richard Eyer, Philip Abbott, Diane Brewster, Harold J. Stone. Screenplay Cyril Hume, based on "The Invisible Boy" (1956; vt "The Brain Child") by Edmund COOPER. 90 mins. B/w. In this well written and made film for children, a 10-year-old boy (Eyer) assembles a ROBOT from pieces brought back from the future by a time-traveller, and ends up with Robby the Robot, who had won the hearts of audiences in *FORBIDDEN PLANET* (1956). Robby comes under the influence of a malign, fully aware supercomputer - probably the first such in movies

- and somewhat irresponsibly makes the boy an INVISIBILITY potion. More importantly, he helps the COMPUTER - which is planning to conquer the world - by implanting electronic receivers in the brains of prominent men, but redeems himself at the end when he ignores the computer's command to kill the boy and instead destroys the computer, with the implicit moral that machines shaped like men are more trustworthy than machines shaped like MACHINES. [JB/PN]

INVISIBLE MAN, THE

1. Film (1933). Universal. Dir James Whale, starring Claude Rains, Gloria Stuart, Henry Travers, William Harrigan, Una O'Connor. Screenplay R.C. SHERRIFF, Philip WYLIE, based on The Invisible Man (1897) by H.G. WELLS.

71 mins, cut to 56 mins. B/w. This excellent black comedy tells of a scientist who discovers a drug that causes INVISIBILITY but whose side-effect is megalomania. Wearing black goggles over a face wrapped in bandages, he is memorably menacing. After a series of crimes he is trapped by police (his footprints in the snow betray his presence) and shot, slowly regaining visibility as his life ebbs away. Whale's direction is full of his usual idiosyncratic touches, with much humour derived from baffled minor characters. John Fulton's special effects are very sophisticated for the period, and were widely imitated. One of the most successful Wells adaptations, this made Claude Rains a star almost purely on the basis of his mellifluous voice. TIM is archetypal in its not-unsympathetic portrait of the SCIENTIST as over-reacher - it contains the much-copied line: "I meddled in things that Man must leave alone."

2. Universal's progressively inferior and silly variations on the theme - not true sequels - were The Invisible Man Returns (1940), The Invisible Woman (1940), The Invisible Agent (1942), The Invisible Man's Revenge (1944) and Abbott and Costello Meet the Invisible Man (1951). Over 30 other films use the invisibility theme, some crediting Wells's novel as a source. 3. UK tv series (1958-9). ATV. Created and prod Ralph Smart, starring the voice of Tim Turner. 2 seasons, 26 25min episodes. B/w. In this un-Wells-like version, the unfortunate hero divides his time between seeking an antidote for his condition and fighting crime. Lisa Daniely and Deborah Watling played the hero's sister and niece. 4. US tv series (1975-6). Universal TV for NBC. Created and prod Harve Bennett, Steve Bochco. Dirs included Robert Michael Lewis, Alan Levi, Sigmund Neufeld Jr. Writers included Bochco, James D. Parriott. 1 season, 75min pilot plus 12 50min episodes. Colour. David McCallum stars as a scientist who discovers a way of turning himself invisible but cannot regain visibility. A plastic-surgeon friend makes him a skin-coloured mask identical with his pre-invisibility face.

The pilot episode concerns his attempts to keep the formula from the military; in later episodes the plots revolve, tepidly, around his work as a secret agent. 5. The above series had mediocre ratings, so in 1976 Universal replaced McCallum with Ben Murphy, changed the title to Gemini Man, and started the story again from the beginning. 1 season, 75min pilot plus 11 50min episodes (only 5 broadcast by NBC). Colour. Murphy plays a secret agent who can control his invisibility with a wristwatch-like device, but can remain safely invisible for only 15 minutes a day. This version flopped, too, and was cancelled before all completed episodes were shown. The producer, Harve Bennett, was having greater success elsewhere

with The SIX MILLION DOLLAR MAN . [PN/JB]

ION DRIVE

A common item of sf TERMINOLOGY derived from a theoretical means of ROCKET propulsion. Chemically fuelled rockets are hampered by the necessity of carrying large burdens of fuel. Other systems, including the ion drive, propose using much lighter fuels, compensating for the decrease in the mass available for propulsion by ejecting it at correspondingly higher velocities. Ions (charged particles) can be accelerated to enormous velocities using a magnetic field, and so would seem an ideal fuel. Also, since all elements can be ionized (albeit with varying degrees of difficulty), ion-drive rockets could theoretically make use of pretty well any substance to hand. Although an ion drive would produce only a small acceleration because of the relatively tiny masses involved, this could be maintained for months or years, so that very high terminal velocities could be achieved. The first tests in space of such a system began in 1971 with the SERT (Space Electric Rocket Test) satellites; the propellant was ionized mercury and the electric power was derived from solar cells. IONNESCU, DEMETRIU G.
[r] ROMANIA.

IRELAND, DAVID

(1927-) Australian writer whose *A Woman of the Future* (1979 US), his best known work, depicts a bizarre but positively conceived future which his protagonist finds congenial. *City of Women* (1981 UK), on the other hand, presents a FEMINIST vision of separatism whose ending befits its *Alice in Wonderland* style, as the vision turns out to be the hallucination of a lonely woman. *Archimedes and the Seagle* (1984), a fantasy, presents the memoirs of a dog. [JC]

ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE

US DIGEST-size magazine. Quarterly from Spring 1977, bimonthly from Jan/Feb 1978, monthly from Jan 1979, 4-weekly from Jan 1981. Published by Davis Publications; ed George H. SCITHERS Spring 1977-Feb 1982, Kathleen Moloney Mar 1982-Dec 1982, Shawna MCCARTHY Jan 1983-Feb 1986, Gardner DOZOIS Mar 1986 to date. IASFM was sold to Dell Magazines, part of the BANTAM/ DOUBLEDAY/Dell publishing group, early in 1992; the first redesigned version under the new management was Nov 1992, and the title became at that time Asimov's Science Fiction. (This Encyclopedia will continue to use the abbreviation IASFM, since ASFis already in use for ANALOG.) The magazine had reached #231 (Vol 19, no 6) by May 1995. Asimov was named as "Editorial Director" of this sf magazine, which was titled to take advantage of his popularity; the first 3 issues featured his photograph on the cover, and he contributed a great many chatty editorial

articles. IASFM was commercially successful - at least relative to other sf magazines - from the outset, though its contents under Scithers's editorship were on the whole light and undemanding. However, it continued to mature, especially under McCarthy and then Dozois, until by the mid- and late 1980s it was clearly the most accomplished and vigorous magazine on the US market, with an extraordinarily high number of its stories nominated for, and winning, various awards. Through the 1980s its circulation was similar to, although in most years somewhat lower than, that of the market leader, its sister publication Analog (ASTOUNDING SCIENCE-FICTION), which Davis Publications had bought in 1980. The circulations of sf magazines generally dropped steadily during the 1980s, and again in the 1990s, so even IASFM, by a long way the best of them, limped along with about 69,000 in 1994 (75,000 for Analog), down from almost 109,000 in 1978. IASFM is popular with fans. Scithers was awarded the HUGO for Best Professional Editor in 1978 and 1980, McCarthy in 1984, and Dozois in every year from 1988 to 1993; all of these are effectively awards for the magazine. New writers who have made their debuts in its pages, or at least had much of their early work published there, included, under Scithers alone, Barry B. LONGYEAR and S.P. SOMTOW, both of whom, in successive years, won the JOHN W. CAMPBELL AWARD for best new sf writer of the year. Hugo- and NEBULA-winning stories have been Longyear's *Enemy Mine* (1979; 1989 chap dos), "Fire Watch" (1982) by Connie WILLIS, "Hardfought" (1983) by Greg BEAR, "The Peacemaker" (1983) by Dozois, "Speech Sounds" (1983) by Octavia E. BUTLER, "PRESS ENTER" (1984) by John VARLEY, "Bloodchild" (1984) by Butler, "Twenty-four Views of Mount Fuji, by Hokusai" (1985) by Roger ZELAZNY, "Fermi and Frost" (1985) by Frederik POHL, "Sailing to Byzantium" (1985) by Robert SILVERBERG, "Portraits of His Children" (1985) by George R.R. MARTIN, "Gilgamesh in the Outback" (1986) by Silverberg, "R? into the Sky" (1986) by Kate WILHELM, "Eye for Eye" (1987) by Orson Scott CARD, "Why I Left Harry's All-Night Hamburgers" (1987) by Lawrence WATT-EVANS, "The Blind Geometer" (1987) by Kim Stanley ROBINSON, "Rachel in Love" (1987) by Pat MURPHY, "The Last of the Winnebagos" (1988) by Willis, "Ripples in the Dirac Sea" (1988) by Geoffrey A. Landis, "Enter a Soldier. Later: Enter Another" (1989) by Silverberg, "Boobs" (1989) by Suzy McKee CHARNAS, THE HEMINGWAY HOAX (1990) by Joe HALDEMAN, "The Manamouki" (1990) by Michael D. RESNICK, "Bears Discover Fire" (1990) by Terry BISSON, STATIONS OF THE TIDE (1991) by Michael SWANWICK, "Beggars in Spain" (1991) by Nancy KRESS, "A Walk in the Sun" (1991) by Geoffrey A. Landis, "Danny Goes to Mars" (1992) by Pamela SARGENT, "Even the Queen" (1992) by Connie Willis, "Barnacle Bill the Spacer" (1992) by Lucius Shepard and "The Nutcracker Coup" (1992) by Janet KAGAN. This density of award-winning is without precedent in sf-magazine publishing, and says much for Dozois's editorial discernment and skill. Indeed, if Dozois can be criticized at all, it is perhaps on the grounds that he chooses stories first for their literary quality and only second for their generic positioning: IAFSM may in the 1970s have been a HARD-SF magazine, but under Dozois it has on the whole been quite the reverse, with many of the stories being only marginally sf or fantasy (so that sometimes IASFM can look like *The New Yorker*), being as little bound by rigid generic expectations as was, say, NEW WORLDS under Michael MOORCOCK. In the case

of Dozois, this does not seem to have brought about any substantial backlash from conservative readers, though the magazine's circulation cannot be said to be in rude health. The nonfiction features of IASFM have ranged through, inter alia, editorial musings by Isaac Asimov, an excellent mathematical column by Martin GARDNER, book reviews by Baird SEARLES - later joined by a separate and very energetic books column from Norman SPINRAD - literary articles by James E. GUNN in earlier issues, poems by various hands, notably Robert FRAZIER, and a games column (GAMES AND TOYS) by Matthew J. Costello. [PN] .See also: JAPANA short-lived companion magazine in BEDSHEET format was Asimov's SF Adventure Magazine, designed to capture the feeling of the old-time sf adventure pulps. It ran for four quarterly issues Fall 1978-Fall 1979, with Winter 1979 omitted.

ISAAC'S OUTPUT

By the time of his death in 1992, Isaac Asimov had published more than 450 books. This amazing output included not only science fiction novels and stories, but also anthologies and children's books. While it took him 30 years to publish his first hundred books, the second hundred followed after only a decade, and a third hundred came just five years later. As his career rocketed, Asimov began to write about science literature, history...and anything else that interested him. He was also a college professor and an intrepid public speaker. Many feel that Asimov became the voice of science fiction. At the very least, he communicated his enthusiasm and converted a growing mass audience to the joys and challenges of SF.

ISLAND AT THE TOP OF THE WORLD, THE Ian CAMERON; LOST WORLDS.

ISLAND OF DR MOREAU, THE

Film (1977). Cinema 77/AIP. Dir Don Taylor, starring Burt Lancaster, Michael York, Nigel Davenport, Barbara Carrera. Screenplay John Herman Shaner, Al Ramrus, based on The Island of Dr Moreau (1896) by H.G. WELLS. 98 mins. Colour. In this slow-moving and trite remake of ISLAND OF LOST SOULS (1932), a young castaway (York) on a remote ISLAND learns that Dr Moreau (Lancaster), resident SCIENTIST, is carrying out experiments to give animals human characteristics; some of the resulting hybrids live in the jungle and worship Moreau as a god. Unlike the novel and the first film, where the hybrids were cruelly created by vivisection, these are formed by GENETIC ENGINEERING; thus this version's Wellsian references to the House of Pain become puzzlingly irrelevant. The novelization (so much for Wells!) is The Island of Dr Moreau * (1977) by Joseph Silva (Ron GOULART). [JB/PN]

ISLAND OF LOST SOULS

Film (1932). Paramount. Dir Erle C. Kenton, starring Charles Laughton, Richard Arlen, Leila Hyams, Kathleen Burke, Bela Lugosi, Alan Ladd, Randolph Scott. Screenplay Waldemar Young, Philip WYLIE, based on The Island of Dr Moreau (1896) by H.G. WELLS. 72 mins. B/w. Though somewhat altered from the Wells original, and adding such Hollywood touches as a seductive Panther Girl, this memorable film incorporates much of the novel's moody atmosphere. A young man is marooned on an ISLAND where he is found by his fiancée and where the leering, whip-cracking Moreau

(Laughton), by means of vivisection and other cruel medical techniques, is trying to turn animals into men. (Wells disliked the depiction of his twisted idealist, Moreau, as a sadist.) The pathetic beast-men - rendered with first-rate and often horrific make-up - are kept in check by their belief that Moreau is a god. But, when they see him murdering his human assistant and thereby breaking one of his own commandments, their fear of him dissolves and they carry him off to the House of Pain - the laboratory where they were all created - and wreak bloody, surgical vengeance. A remake was *The ISLAND OF DR MOREAU* (1977). [JB] See also: **MONSTER MOVIES**.

ISLAND OF MUTATIONS

L' ISOLA DEGLI UOMINI PESCE.

ISLAND OF TERROR

(vt *Night of the Silicates*) Film (1966). Planet/Universal. Dir Terence Fisher, starring Peter Cushing, Edward Judd, Carole Gray, Eddie Byrne. Screenplay Alan Ramsen, Edward Andrew Mann. 89 mins. Colour. This is one of the 3 films with an sf theme made for Planet by Terence Fisher, best known for his **HORROR** movies, of which this, despite its sf trappings, is one. (The others are *The EARTH DIES SCREAMING* [1964] and *NIGHT OF THE BIG HEAT* [1967].) Giant mutated viruses, the product of cancer research gone wrong, get loose on a small island and kill their victims by sucking their bones out of their bodies. There are some well choreographed shocks. As the monsters, which look like animated piles of porridge, can move only slowly, it is unclear how they overtake their prey. [JB/PN]

ISLAND OF THE BURNING DAMNED

NIGHT OF THE BIG HEAT.

ISLANDS

Islands play a crucial role in imaginative fiction, providing geographical microcosms in which the consequences of various types of scientific or political hypotheses may be incarnated and made available for inspection by visitors from the world at large. An archetypal island venue is *ATLANTIS*, mentioned as early as the time of ancient Greece by the philosopher *PLATO*. Many an island has played host to a *UTOPIA*, including Thomas *MORE*'s *Utopia* itself (1516 in Latin; trans 1551), Austin Tappan *WRIGHT*'s *Islandia* (1942) and *Jacquetta HAWKES*'s *Providence Island* (1959); not very many have harboured *DYSTOPIAS*. Islands also feature extensively in *SATIRE*, notably those displayed in Jonathan *SWIFT*'s *Gulliver's Travels* (1726). Although rarely fantastic, the islands featured in *ROBINSONADES* are also of some significance in the history of *PROTO SCIENCE FICTION*. Islands are the natural refuge of weird lifeforms in many early fantasies of *EVOLUTION*, including William Hope *HODGSON*'s "The Voice in the Night" (1907). An island was the natural "laboratory" for the daring scientific experiment carried out in H.G. *WELLS*'s *The Island of Dr Moreau* (1896), the prototypic island-sf story and the significant inspiration of such later works as S. Fowler *WRIGHT*'s *The Island of Captain Sparrow* (1928), the 1940 title story of Adolfo *BIOY CASARES*'s *The Invention of Morel and Other Stories* (trans 1964), and-of course - Brian W. *ALDISS*'s *Moreau's Other Island* (1980; vt *An Island Called Moreau US*). A very different experiment - an attempt to produce super- *INTELLIGENCE* (by somewhat fraudulent means)

in a child cut off from the world - is carried out on M.P. SHIEL's *The Isle of Lies* (1909). An artificial island is featured in Jules VERNE's *L'île à hélice* (1895; trans as *The Floating Island* 1896; vt *Propeller Island*). Early pulp sf made considerable use of islands in its thought-experiments. Notable weird lifeforms are featured in "Fungus Isle" (1923) by Philip M. Fisher and in "Nightmare Island" (1941) by Theodore STURGEON. Even more exotic fauna appear in Edgar Rice BURROUGHS's *The Land that Time Forgot* (1924), Stanley G. WEINBAUM's "Proteus Island" (1936) and Edmond HAMILTON's "The Isle of Changing Life" (1940). However, the scope for the deployment of undiscovered islands in fiction shrank dramatically during the early part of the century, and although such defiant-minded authors as Lance SIEVEKING, in *The Ultimate Island* (1925), would not be put off, most writers transferred their more extravagant thought-experiments to remoter locations. Apparently innocuous islands continued to be used, however, as bases for the hatching of nefarious schemes in many NEAR-FUTURE thrillers, ranging from Edmund SNELL's *Kontrol* (1928) to Ian FLEMING's *Dr No* (1962), and for such social experiments as those carried out in Aldous HUXLEY's *Island* (1962) and Scott Michel's *Journey to Limbo* (1963). Extraterrestrial islands play a significant role in many sf stories about watery worlds, notably the floating islands of VENUS in C.S. LEWIS's *Perelandra* (1943) and the "islands" thrown up by the sentient ocean in Stanislaw LEM's *SOLARIS* (1961; trans 1970). The symbolic significance of the word "island" has maintained its prominence in stories which treat artificial satellites, SPACE HABITATS, asteroids, planets or even galaxies as islands in the void, and it continues to supply neat titular metaphors to such novels as Raymond F. JONES's *This Island Earth* (1952), filmed as *THIS ISLAND EARTH* (1954), Marta RANDALL's *Islands* (1976) and Bruce STERLING's *ISLANDS IN THE NET* (1988). A series of particularly ingenious metaphorical changes have been rung by Gene WOLFE in "The Island of Dr Death and Other Stories" (1970), which has been assembled with "The Death of Dr Island" (1973), "The Doctor of Death Island" (1978) and "Death of the Island Doctor" in *The Wolfe Archipelago* (coll 1983). Exotic robinsonades continue to be written, often ironically; examples include "The Terminal Beach" (1964) and *Concrete Island* (1974), both by J.G. BALLARD. Because islands supply a strictly delimited space, rather like a stage set, in which a plot may develop, they are ideal for certain kinds of narrative exercise. Even if it were not for their specific "laboratory function", therefore, they would have a significant continuing role to play in sf. Recent works illustrative of this role include Hilbert SCHENCK's *A ROSE FOR ARMAGEDDON* (1982) and *Chronosequence* (1988) and Garry KILWORTH's *Cloudrock* (1988), in which an atoll is left high and dry after the surrounding ocean has vanished. The Galapagos islands, which played a crucial role in guiding Darwin to the theory of evolution by natural selection, are afforded a key symbolic role in Kurt VONNEGUT Jr's bitter futuristic fantasy *Galapagos* (1985). [BS/DP]

ISOLA DEGLI UOMINI PESCE, L'

(vt *Island of Mutations*; vt *Screamers*) Film (1978). Dania-Medusa/New World. Dir Sergio Martino (and Joe DANTE, US version only), starring Barbara Bach, Claudio Cassinelli, Richard Johnson, Beryl Cunningham, Joseph Cotten (and Cameron Mitchell, Mel Ferrer, US version only).

Screenplay Martino, Sergio Donati, Cesare Frugoni. 99 mins, cut to 91 mins. Colour. This is a wild Italian schlock picture, seemingly inspired by the flop *The ISLAND OF DR MOREAU* (1977). In 1891 a shipwrecked doctor (Cassinelli) encounters a tribe of man/fish hybrids, created for sound ethical reasons by a mad SCIENTIST (Cotten) but being exploited by a vintage Victorian villain (Johnson) to recover the sunken treasures of ATLANTIS. A heroine strutting in riding boots (Bach) and the villain's voodoo priestess mistress (Cunningham) play roles in a demented story which contains an immensely enjoyable collection of Boy's Own CLICHES. For US release (as *Screamers*) the film was slightly recut by Roger CORMAN's New World and given a much gorier prologue dir Joe Dante, with guest stars Ferrer and Mitchell - neither a stranger to Italian exploitation - being chomped by MUTANT leftovers from *Humanoids from the Deep* (1980). [KN]

ISRAEL

Israel's traditional orientation towards the West, the initially UTOPIAN character of Zionism - partly inspired by founding Zionist ideologue Binyamin Zev (Theodor) Herzl's polemic *Der Judenstaat* (1896; trans as *The Jewish State* 1946) and short novel *Altneuland* (1902; trans as *Old-New Land* 1947) - and the country's adherence to its own form of democracy ought to have made it a promised land for speculative literature. But, despite the seminal influence within the genre of Jewish writers and editors, sf has never attained more than marginal stature within Israel. Survival in this pressure-cooker region has stunted the capacity of many Israelis to contemplate alternate realities. Indeed Hebrew, the new lingua franca of Israel, seems ill suited to sf. Unlike Yiddish, whose rich cadences nourished the dreamlike imageries of an Isaac Bashevis Singer (1904-1991), modern Hebrew is leaner and less fanciful. Redeemed from a language hitherto used for liturgical purposes, it was also more limited, early on, in its ability to describe TECHNOLOGY. Indeed, merely agreeing a Hebrew term for sf (initially *mada dimioni* ["imaginary science"] and ultimately, in the late 1970s, *mada bidioni* ["science fabrication"]) severely challenged the semantic abilities of Israel's small sf community. In the 1950s, brief forays by publishers tantalized would-be fans with a few Hebrew translations of novels by Robert A. HEINLEIN and Fredric BROWN before ending in bankruptcy. So too ended three plunges into sf magazine publishing with *Mada Dimioni* (1958, 13 issues), *Cosmos: Sipurei Mada Dimioni* ["*Cosmos: Stories of Science Fiction*"] (1958, 4 issues) and *Flash Gordon* (1963, 7 issues); none published work by local authors. The only Israeli sf writer of note in this period, Mordecai ROSHWALD, had his apocalyptic novels *Level Seven* (1959 UK) and *A Small Armageddon* (1962 UK) published abroad; neither was translated into Hebrew, and Roshwald, whose work is unrecognized in Israel, eventually settled in the UK. The election to power of the Likud bloc in 1977 heralded a period of consumerism in Israel that permitted a brief boom in sf. Encouraged by young Israelis' new spending power and by the success of such films as *STAR WARS* (1977), publishers embarked upon ambitious schedules of mostly translated sf. By the onset of the long recession following the 1982 invasion of Lebanon, nearly 200 of the classic books of modern sf had been translated. Of several new sf magazines, few survived long, but *Fantazia 2000* merits special notice. Launched in 1978, it nourished a group of local writers

and a small, vigorous fan community during its 44-issue, six-year life. Among its writers was Hillel Damron, author of the critically well received *Milchemet Ha'minim* ["The War of the Sexes"] (1982), set in a post- HOLOCAUST underground colony where a society of sexual equals devolves into full-scale subjugation of males. Before the Lebanon War, Israeli sf tended to be reticent on POLITICS, but the 1982 watershed altered this. Another Fantazia graduate, David Melamed, whose first collection, *Tsavua B'Corundy* ["A Hyena in Corundy"] (coll 1980), contains stories with little immediate relevance to Israel, powerfully recounted in his third novel, *Ha'Halom Ha'Rivi'i* ["The Fourth Dream"] (1986) - unequalled for its nightmare tones if not for its narrative drive - the travails of an Israeli refugee in Germany after a NEAR-FUTURE fall of the Jewish state. Melamed's dystopian excursion followed two other landmark works. In 1983 the prominent left-wing columnist Amos Kenan published *Ha-Derech L'Ein Harod* (1983; trans as *The Road to Ein Harod* 1986), which postulated a NEAR-FUTURE military takeover of Israel. It was not his first speculative novel - that being the more surreal *Shoah II* ["Holocaust II"] (1973) - but it was the only Israeli sf novel ever awarded a peace prize by the Palestine Liberation Organization. Although the book embraces well known sf and TECHNOTHRILLER tropes, Kenan vehemently denied its genre roots, no doubt because of the Israeli literary establishment's low esteem of sf. A second significant DYSTOPIA was written by the established novelist Binyamin Tammuz (d1990): *Pundako Shel Yermiyahu* ["Jeremiah's Inn"] (1984) is a broad comic SATIRE about an Israel taken over by religious zealots. A grimmer version of the future is Yitzhak Ben-Ner's *Ha'malachim Ba'im* ["Angels are Coming"] (1987), in which world atomic apocalypse has spared Israel, but by the 21st century life within the theocratic state is characterized by street violence, persecution of the secular minority and widespread alienation. *Zirnat Ha'hachamim* ["Genes for Genius, Inc."] (1982) and *Luna: Gan Eden Geneti* ["Luna: The Genetic Paradise"] (1985) by geneticist Ram Moav, about GENETIC ENGINEERING of humans, inspired accusations of fascism on the part of the author, who had written the two books while terminally ill. Ruth Blumert's *Ha'Tzariach* ["The Turret"] (1983) is a fantasy reminiscent of Mervyn PEAKE's Gormenghast trilogy. Israel is not an important centre for sf film-making. The most notable foreign production has been Menachem Golan's low-budget, post- HOLOCAUST feature *America 3000* (1985; video release only), dir David Engelbach with a cast of comely Israeli and US Amazons. Poet and avant-garde film-maker David Avidan directed *Sheder Min Ha'atid* (1981; vt *Message from the Future*) in English about future humans visiting present-day Israel; it is execrable. Ricki Shelach's James BLISH-influenced short film *Ishur Nehita* ["Permission to Land"] (1978) tells of a visiting alien. Both films may have reflected that SENSE OF WONDER inspired among Israelis by the visit of Egypt's President Anwar Sadat. The 1989 adaptation, shot in English, of Amos Kenan's 1983 novel as *Freedom: The Voice from Ein Harod* failed to achieve Western distribution. Directed by prolific producer/director Doron Eran and shot for \$2 million, *Freedom* was one of the most expensive films ever produced domestically, but suffered from the Israeli army's refusal to donate the use of military materiel; the peculiar lead casting of US actor Anthony Peck and Italian model Alessandra Mussolini (granddaughter of Il Duce) also detracted from

its believability. In 1990 the Israeli film-maker Avi Nesher wrote and directed a Los-Angeles-shot \$7 million technothriller, *Nameless* (vt *Timebomb*), as yet unreleased. A small body of sf criticism emerged in the 1980s, the first regular column outside the sf magazines being Sheldon TEITELBAUM's in the *Jerusalem Post* (1981-5). Orzion Bartana, a professor of literature at Tel Aviv University, published Israel's first critical book on sf: *Ha'fantazia b'siporet Dor Hamdina: Fantasy in Israeli Literature in the Last Thirty Years* (1989). The vagaries of the sf scene are discussed in "Sociological Reflections on the History of Science Fiction in Israel" (*SCIENCE-FICTION STUDIES* Mar 1986) by Nachman Ben Yehuda, a Hebrew University sociologist and early contributor to *Fantazia* 2000. [ST]

ITALY

To trace an Italian sf tradition is not easy, because of the well established split in Italy between scientific language and "literary culture". It is of doubtful relevance to read DANTE ALIGHIERI's great poem *La divina commedia* (c1304-1320 in manuscript; trans as *The Divine Comedy*) as a sort of sf journey; Dante used his theological allegory to create a world that in terms of medieval consciousness was perfectly real. It may be more fruitful to consider as PROTO SCIENCE FICTION the chronicle of Marco Polo's marvellous voyage to India, China and Japan, *Milione* ["One Million Stories"] (1298): the meeting of the Venetian merchant with the alien Eastern world does have the flavour of a First Contact. In his *Le citta invisibili* (1972; trans as *Invisible Cities* 1974), Italo CALVINO rewrites Marco Polo's work as a Borgesian catalogue of mysterious and fascinating towns, conceived by an endless imaginative process. FANTASTIC VOYAGES and UTOPIAN landscapes are the most effective contributions of Italian literature to the development of a genre that would eventually merge into sf, as in the Renaissance poem *Orlando Furioso* (1506) by Ludovico Ariosto (1474-1533), based on the mythical history of Charlemagne and his Paladins. In this the palace of the wizard Atlante is a bewitched place of unrequited desires and bitter delusions, and the knight Astolfo, in his search for the brain of mad Orlando, rides on the wings of the Hippogriff to the Moon, where he visits a large valley, the land of forgotten dreams and wasted passions. A century later the philosopher Tommaso CAMPANELLA evoked the City of the Sun, whose utopia is after the political ideas of PLATO. The male inhabitants have abolished private property, own all in common (women included) and believe in natural RELIGION, not in historical Christianity. This tale, first written though not first published in Italian, was *Citta del sole* (written 1602-12; 1623 in Latin as *Civitas Solis*; trans in *Ideal Commonwealths* 1885 as "The City of the Sun"). In the 18th century - the Age of Reason, but also of a keen interest in exotic worlds - Italian culture enthusiastically hailed the satirical-fantastical mood of Jonathan SWIFT's *Gulliver's Travels* (1726; rev 1735) and VOLTAIRE's *Candide* (1759). Among the manifold imitators of Swift (and of his French disciple, the Abbe Desfontaines [1685-1745]) was the Venetian-Armenian Zaccaria Seriman, whose lively account of the fantastic voyage of a British hero is *Viaggi di Enrico Wanton alle terre incognite australi ed ai regni delle scimmie e dei cinocefali* ["*Enrico Wanton's Travels to the Unknown Lands of the Southern Hemisphere and to*

the Kingdoms of the Monkeys and of the Dog-Headed People"] (1764). Although issued in French, Giacomo CASANOVA's huge novel *Icosameron* (1788) was partly drafted in Italian. Beyond its encyclopedic farrago of scientific and philosophical meditations, *Icosameron* establishes a well known imaginative pattern: two young protagonists (brother and sister) discover an underground world where total harmony rules the lives of the Megamicro ("Big-Littles"). Italian Romanticism was not deeply involved in the industrial and scientific upheavals of the 19th century. There was no Italian equivalent of Mary SHELLEY's *Frankenstein* (1818; rev 1831) or of the Faustian short stories of Edgar Allan POE and Nathaniel HAWTHORNE. (The main literary problems of Italy were connected with the struggle for national independence, achieved in 1861, and the need for a common language.) All the same, the major Italian Romantic poet Giacomo Leopardi (1798-1837), inspired by the example of Galileo Galilei (1564-1642), did deal with the relationship between the scientific and the literary imagination, as shown in the fabulous scenery of some of his *Operette morali* (coll 1827; preferred trans Patrick Creagh as *Moral Tales* 1988 UK). One of the most fascinating operette is the dialogue between the anatomist Federico Ruysch and his mummies, reborn at the beginning of a new cosmic cycle. Although Italy had neither a Jules VERNE nor an H.G. WELLS, the end of the 19th century did offer a minor literature of extraordinary journeys into the future, such as the utopian world explored in *L'Anno 3000: Sogno* ["The Year 3000: A Dream"] (1897) by Paolo Mantegazza. The enormously popular Emilio Salgari (1862-1911), creator of the Malayan pirate Sandokan, also published futuristic tales such as *Le meraviglie del duemila* ["The Marvels of the Year 2000"] (1907). Fantasy, both in the GOTHIC form and in the sphere of the wonderful and the whimsical, appeals to the modern Italian reader much more than the cognitive rhetoric of GENRE SF; this is certainly why Giacinto Spagnoletti, a well known scholar of Italian literature, has labelled native sf "neo-fantastico". The tradition is a long one. Outstanding examples of fantasy appear in the fin de siècle works of the so-called "Scapigliati" ["The Dishevelled Ones"], a Milanese cultural movement fighting against tradition and provincialism; in the "metaphysical" fiction of Massimo Bontempelli (1884-1960), whose *Eva ultima* ["The Ultimate Eve"] (1923) was inspired by De Chirico's painting; and, more recently, in the hallucinatory world of Dino BUZZATI's short stories and his novel of military life in a forgotten fortress, *Il deserto dei Tartari* (1940; trans as *The Tartar Steppe* 1952). Critics detect a "true" sf production in Italian only from the period after WWII. Much of this specialized sf was arguably not culturally Italian, in that it was heavily influenced by the US-UK canon as enthusiastically presented by publishers, notably the *Romanzi di Urania* series published since 1953 by Arnoldo Mondadori under the editorship of Giorgio Monicelli (inventor of the neologism "fantascienza" for "science fiction"). Even today some of the younger Italian authors, especially those groomed by the main Italian sf-publishing house, Editrice Nord, employ traditional US-UK sf formulae, sometimes with the addition of fashionable brushstrokes taken from J.R.R. TOLKIEN or Jorge Luis BORGES: Luigi Menghini and Vittorio Catani are examples. But a more Italian trend has been advocated since the 1960s by a group of writers who, while basically accepting the formulaic conventions of sf, emphasize the need for psychological insight, a "human" perception

of the alien and a (somewhat sceptical) moral probing into the triumphs of technology. Among them Lino Aldani - an accomplished and witty storyteller, as in *Quarta dimensione* ["Fourth Dimension"] (coll 1963) - Sandro Sandrelli, Inisero Cremaschi and Gilda Musa are certainly worth mentioning. All four cooperated in the clever monthly review *Il Futuro* ["Future"] (1963-4); this and other Italian sf magazines (notably *Gamma* in the mid-1960s and *Robot* in the mid-1970s) were short-lived and, except for *Il Futuro*, had to rely heavily on US-UK material. Other novelists from the 1960s and 1970s, employing mainly formulaic devices, are Roberta Rambelli, Ugo Malaguti, Gianni Montanari, Roberto Vacca - one of the very few with a scientific background, author of *Il robot e il minotauro* ["The Robot and the Minotaur"] (1959) - and Vittorio Curtoni, who is also the author of an informative history of modern Italian sf, *Le frontiere dell'ignoto* ["Frontiers of the Unknown"] (1977). Unquestionably, the proper tool for Italian writers to use in combining the scientific imagination, on the one hand, with the subjective universe(s) of fantasy, on the other, is the short story, as is evidenced by such representative anthologies as *I labirinti del terzo pianeta* ["The Labyrinths of the Third Planet"] (anth 1964), ed I. Cremaschi and G. Musa, and *Universo e dintorni* ["Universe and Surroundings"] (anth 1978), ed I Cremaschi. In the 1980s the emergence of a group of young women sf writers in Italy confirmed an international development. Daniela Piegai, perhaps the best of them, creates in *Il mondo non è nostro* ["The World is Not Ours"] (1989) a technological version of KAFKA's castle, whose inhabitants are entrapped in a sort of temporal vortex, unable to return to the external world. Contemporary non-genre Italian sf exists: some of the best of those postwar novelists usually thought of as MAINSTREAM WRITERS have shown a highly original imagination in handling sf themes and symbols. A mad astronaut is imprisoned in a living starship in Tommaso LANDOLFI's *Cancroregina* (1950; in *Cancerqueen and Other Stories* coll trans 1971 US); the achievements of scientific progress are ironically explored by Primo LEVI in *Storie naturali* ["Tales of the Natural World"] (coll 1966), whose contents make up part of *The Sixth Day* (coll trans 1990 US); wandering on an untouched Earth from which mankind has suddenly disappeared, a solitary survivor lives his grotesque and suicidal loneliness in Guido Morselli's posthumously published *Dissipatio H.G.* ["Disappearance of the Human Race"] (1977); the impact of the scientific imagination, and the history of science, help shape the fantastic narrative of *Il pendolo di Foucault* (1988; trans William Weaver as *Foucault's Pendulum* 1989 US) by Umberto ECO. One outstanding sf writer - although he did not like to be referred to as such - was Italo CALVINO, as when he shaped his complicated web of scientific fables and myths in *Le Cosmicomiche* (coll of linked stories 1965; trans William Weaver as *COSMICOMICS* 1968 US). Contemporary non-genre sf seems obsessed by theological and religious themes. In 1994: *La nudità e la spada* ["Year 1994: The Nakedness and the Sword"] (1990), Ferruccio Parazzoli builds up an anti-Catholic coup-d'état in a grim, NEAR-FUTURE Italy, while in *Ascolta, Israele* ["Hearken, Israel!"] (1991) Ugo Bonanate creates an ALTERNATE WORLD where Judaism is the only Western religion, early Christian communities have been wiped out, and the Gospels are buried in a hidden place until their sensational discovery by a team of astonished international scholars . . . Italian cinema inclines more towards HORROR

than sf but, hovering between the two, a few quite good Italian films play on the theme of cosmic catastrophe, as in *La morte viene dallo spazio* (1958; vt *Death from Outer Space*; vt *The Day the Sky Exploded*), dir Paolo Heusch, and *Il PIANETA DEGLI UOMINI SPENTI* ["Planet of the Soulless People"] (1961; vt *Battle of the Worlds*; vt *Planet of the Lifeless Men*), dir Anthony Dawson (Antonio Margheriti). Another sf/horror blend, *TERRORE NELLO SPAZIO* (1965; vt *Planet of the Vampires*), dir Mario Bava, was in some ways a predecessor of *ALIEN* (1979). More commonly, Italian sf films exploit already successful foreign films: *CONTAMINATION: ALIEN ARRIVA SULLA TERRA* (1981; vt *Contamination*) mimics *Alien*; 1990: *I GUERRIERI DEL BRONX* (1982; vt 1990: *Bronx Warriors*) owes a lot to *ESCAPE FROM NEW YORK* (1981); and *L' ISOLA DEGLI UOMINI PESCE* (1978; vt *Island of Mutations*; vt *Screamers*) seems inspired by *The ISLAND OF DR MOREAU* (1977). Possibly the one real contribution of Italian cinema to sf lies in the field of satire and parody, exemplified by Tinto Brass's *Il disco volante* (1964; vt *The Flying Saucer*), Elio Petri's *La DECIMA VITTIMA* (1965; vt *The Tenth Victim*), based on a story by Robert SHECKLEY, and Mario Bava's *DIABOLIK* (1967; vt *Danger: Diabolik*). Italian sf criticism is stronger on the utopian tradition and modern *DYSTOPIA* than it is on *GENRE SF*, owing perhaps to the activities of Vito Fortunati, founder of the Centre for Utopian Studies in Bologna, and to the publications of A. Monti and C. PAGETTI on H.G. Wells and of D. Guardamagna and S. Manferlotti on Aldous HUXLEY, George ORWELL and Anthony BURGESS. A handful of critics deal with contemporary sf: C. Pagetti with *Il senso del futuro* ["The Sense of the Future"] (1970; rev edn projected), F. Ferrini with *Che cosa e la fantascienza* ["What is SF?"] (1970), S. Solmi with *Saggi sul fantastico* ["Essays on Fantastic Literature"] (coll 1978), which includes his seminal essay on sf published in 1953, R. Giovannoli with *La scienza della fantascienza* ["Science and Science Fiction"] (1982), S. Salvestroni with *Semiotica dell'immaginazione* ["Semiotics of the Imaginary"] (1984), on Russian sf, A. Caronia with *Il Cyborg* ["Cyborgs"] (1985), on the artificial human in sf, O. Palusci with *Terra di Lei* ["Herland"] (1990), on the female imagination in sf, and F. La Polla on sf cinema and tv. [CP]

IT CAME FROM BENEATH THE SEA

Film (1955). Clover/Columbia. Prod Charles H. Schneer. Dir Robert Gordon, starring Kenneth Tobey, Faith Domergue, Donald Curtis. Screenplay George Worthing Yates, Hal Smith, based on a story by Yates. 77 mins. B/w. In this *MONSTER MOVIE* a giant octopus is affected by atomic radiation - as so often in the genre - and goes on a destructive rampage, attacking San Francisco and demolishing various landmarks, including the Golden Gate Bridge, before being destroyed by an atomic torpedo. The film, unimportant in itself, marks the beginning of the long partnership between producer Schneer and special-effects supervisor Ray HARRYHAUSEN, who was limited here by the small budget: his animated octopus, for instance, has only six tentacles. [JB/PN]

IT CAME FROM OUTER SPACE

Film (1953). Universal. Dir Jack ARNOLD, starring Richard Carlson, Barbara Rush, Charles Drake. Screenplay Harry Essex, based on a screen treatment by Ray BRADBURY. 80 mins. 3-D. B/w. This was Arnold's, and

Universal's, first venture into the sf/ HORROR genre; it was also the first sf film to exploit a desert location (here the Mojave Desert), and the first 3-D film released in wide-screen format. Research by Bill WARREN, in Keep Watching the Skies! Volume 1 (1982), shows conclusively that much more of Bradbury's original treatment was used than for many years had been thought the case, and that Bradbury's creative input was greater than screenwriter Essex's. This is a genuinely alarming film about an ALIEN spaceship that crashlands in the desert. The shapeshifting aliens, more frightened - it turns out - than inimical, and needing assistance to repair their ship, begin duplicating local inhabitants. Not quite a classic, but historically important, ICFOSS is a well made, moody film. The human-duplication theme was to become a cinematic CLICHE (MONSTER MOVIES; PARANOIA). [PN/JB]

IT CONQUERED THE WORLD

Film (1956). Sunset/American International. Prod and dir Roger CORMAN, starring Peter Graves, Lee Van Cleef, Beverly Garland. Screenplay credited to Lou Rusoff, actually by Charles B. Griffith. 71 mins. B/w. This film only just survives its ridiculous monster (cone-shaped with fangs) and the usual hurried air of a Corman production, but there's plenty of interest in the tale of an idealistic but weak scientist (Van Cleef) who brings a Venusian to Earth, where it proceeds to let him down badly by embarking on conquest. The scheme (Earth people reduced to subservient zombies by the bites of small batlike things generated by the monster) is foiled by another scientist (Graves), and there is a subtext about loss of individuality and emotion similar to that in the better-known INVASION OF THE BODY SNATCHERS (also 1956). [PN]

IT HAPPENED HERE

Film (1966). Rath/Lopert. Dir Kevin Brownlow, Andrew Mollo, starring Pauline Murray, Sebastian Shaw, Fiona Leland, Honor Fehrson. Screenplay Brownlow, Mollo. 99 mins, cut to 93 mins. B/w. ALTERNATE-WORLD stories are rare in sf cinema. This UK film is an exception; it shows what might have happened had Nazi Germany successfully invaded the UK (HITLER WINS). Shot in a realistic, documentary-like style, it is a remarkable achievement when one takes into account that it is virtually an amateur film, made over a period of years by Brownlow and Mollo working mainly at weekends and using nonprofessional talent. Its release date, 1966, is three years later than the copyright date. Sadly, it was never widely shown. [JB]

IT LIVES AGAIN

(vt It's Alive II) Film (1978). Larco/Warner Bros. Prod and dir Larry COHEN, starring Frederic Forrest, Kathleen Lloyd, John P. Ryan, John Marley. Screenplay Cohen. 91 mins. Colour. This sequel to IT'S ALIVE (1974) has the MUTANT child's father from the previous film warning another young couple that the pregnant wife may also produce a mutant baby and that the government is systematically terminating all such pregnancies, even though he has learned that the monsters will respond to parental affection. There follows a continuing clash between, on the one hand, the group determined to save the babies and, on the other, a government group - including another father of a mutant baby - equally determined to kill them. Apart from being a devastating study in marital stress, the film also asks (but

does not answer) questions of an sf kind about the possible purpose of this apparently horrible mutation. Primarily, however, the mutants symbolize the way in which families and society as a whole can be torn apart by diversions from the norm. Like most of Cohen's films, *ILA* is deeply subversive of the conventional social pieties. The exploration of these ideas is continued in the further sequel, *It's Alive III: Island of the Alive* (1986), which blends schlock horror with extraordinary sensitivity in Cohen's typical but unsettling manner. Here the mutants have been isolated on an island contaminated by radioactivity, two of them producing a child of their own, while once again a father (Michael Moriarty) has to come to terms with his abhorrent role as star in a media freak show. [PN]See also: MONSTER MOVIES.

IT'S A BIRD! IT'S A PLANE! IT'S SUPERMAN!
SUPERMAN.

IT'S ALIVE

Film (1974). Larco/Warner Bros. Prod and dir Larry COHEN, starring John Ryan, Sharon Farrell, Andrew Duggan, Guy Stockwell. Screenplay Cohen. 91 mins. Colour. A MUTANT baby (the mother has taken a new drug) kills all the medical staff in the delivery room and leaps through a skylight to go on a rampage, killing a woman, a milkman and several policemen. Although the plot is evidently ludicrous, as a witty, low-budget MONSTER MOVIE *IA* is more than satisfactory. The baby, wisely presented in a series of fast, almost subliminal shots, is disturbing because it does what all babies do - crawl around on the floor. Far more disturbing is the transition from seeing the baby as monstrous menace to seeing it as somebody's child. The father (Ryan), who joins the hunt, tries unsuccessfully to protect his offspring in a curiously moving though absurd climax set in Los Angeles' storm drains, deliberately evoking the finale of *THEM!* (1954). The two sequels are *IT LIVES AGAIN* (1978; vt *It's Alive II*) and *It's Alive III: Island of the Alive* (1986). [JB/PN] See also: CINEMA.

IT'S ALIVE II
IT LIVES AGAIN.

IT'S ALIVE III: ISLAND OF THE ALIVE
IT LIVES AGAIN.

IT! THE TERROR FROM BEYOND SPACE

Film (1958). Vogue/United Artists. Dir Edward L. Cahn, starring Marshall Thompson, Shawn Smith, Kim Spalding. Screenplay Jerome BIXBY. 69 mins. B/w. In this largely mediocre film there are good, tense moments. The crew of a spaceship returning from Mars discover that "something" has stowed away: a monster which attacks crew members (for their blood and soft parts) and stores their bodies in the ship's ventilation system as future snacks. The survivors are slowly forced to retreat, section by section, as the seemingly invulnerable creature takes over the ship. An effective build-up of suspense takes place so long as the monster is kept vague and shadowy. The ending (the crew don spacesuits then asphyxiate the monster by draining the craft of oxygen) is one of several plot similarities to the later *ALIEN* (1979), but *IT!* itself cannot claim great originality, being reminiscent of A.E. VAN VOGT's (uncredited) "The Black Destroyer"

(1939). [JB]

IVERSON, ERIC G.
Harry TURTLEDOVE.

YUGOSLAVIA.

SF?

JABLOKOV, ALEXANDER

(1956-) US writer who began publishing sf with "Beneath the Shadow of her Smile" for IASFM in 1985, and who has since been fairly prolific in short forms, several stories being set in a future Boston, comprising a central element of Future Boston (anth 1994) ed David Alexander SMITH, which is in fact a BRAIDED novel; other stories appear in The Breath of Suspension (coll 1994). In its darkly suave competence, his first novel, Carve the Sky (1991), demonstrates the benefits of this work. The story, which opens on a clement, richly complex, low-tech Earth, soon begins to argue that a viable human culture might consciously wish to inhabit a PLANETARY-ROMANCE venue, and indeed so legislate. Later portions of the tale, set on an outward-bound spaceship and introducing an elaborate set of metaphors linking art (ARTS) to the structure of the Universe, are marginally less impressive. His second novel, A Deeper Sea (1989 ASFM; exp 1992), is a very much harsher exploration of a NEAR FUTUREvenue: a savage world war in which dolphins with implants are extensively (and brutally) used to reconnoitre and to destroy. The denouement once again invokes an outward-bound spaceship, and is rich in images of escape and resolution. His third novel, Nimbus (1993), is a noir tale, involving mind/machine interfaces, also in a near future Earth venue. AB's work is both rounded and exploratory, and this - in conjunction with his disinclination to write sequels - generates the sense that an important sf career has gotten well underway. [JC]See also: SPACE FLIGHT.

JACKSON, BASIL

(1920?-) Canadian author of several unremarkable NEAR-FUTURE sf novels, mostly for ROBERT HALE LIMITED: Epicenter (1976 UK), Supersonic (1976 UK), Rage Under the Arctic (1977 UK), The Night Manhattan Burned (1979 US) and Spill! (1979 UK). [JC]

JACKSON, SHIRLEY

(1919-1965) US short-story writer and novelist, married from 1940 to the literary critic Stanley Edgar Hyman (1919-1970), with whom she wrote (but was solely credited for) Life Among the Savages (1953) and Raising Demons (1957), two light memoirs of family life whose effect was radically dissimilar to that of her fiction, none of which is sf in any orthodox sense. Much of her work - like her first story, "Janice" (1937) - comprises psychological studies of women at the end of their tether. She became famous for one story, "The Lottery" (1948), which established her reputation as an author of GOTHIC fiction; the ritual stoning which climaxes the tale is perhaps more easily explicable in terms of HORROR than of sf, but the New England in which the event occurs betrays the

profile of a land suffering the aftermath of the some vast CATASTROPHE. Most of the remaining stories assembled in *The Lottery, or The Adventures of James Hardis* (coll 1949) are fantasies of alienation. Unnamed but tangible catastrophe is the explicit subject of *The Sundial* (1958), in which 12 of her New England characters await the END OF THE WORLD. *The Haunting of Hill House* (1959), filmed as *The Haunting* (1963) by Robert WISE, is a superb ghost story. [JC] Other works: *Hangsaman* (1951); *We Have Always Lived in the Castle* (1962); *Come Along with Me* (coll 1968); *The Lottery*; *The Haunting of Hill House*; *We Have Always Lived in the Castle* (omni 1991).

JACOBI, CARL (RICHARD)

(1908-) US writer; also editor of several journals, including the *Minnesota Quarterly*. His insinuatingly evocative short fiction is mainly of horror and fantasy interest, much of it appearing in *Weird Tales*, though he also produced some sf, mostly SPACE OPERA. He began publishing with "The Haunted Ring" for *Ghost Stories* in 1931, and collected some of his large output in *Revelations in Black* (coll 1947; vt *The Tomb* from *Beyond* 1977 UK), *Portraits in Moonlight* (coll 1964), *Disclosures in Scarlet* (coll 1972), *East of Samarinda* (coll 1989) and *Smoke of the Snake* (coll 1994). [JC]

JACOBS, HARVEY

(1930-) US writer whose work, much of it taking on a MAGIC-REALIST glow, generally depicts the nature and fate of the urban Jew, especially in New York. His more fable-like tales, many of which appear in *The Egg of the Glak and Other Stories* (coll 1969), are not dissimilar to some of Bernard MALAMUD's. The title story (1968) and "In Seclusion" (1968), with which he began publishing stories in the sf magazines, typically demonstrate HJ's sharply sardonic use of sf elements to make moral points about man's inhumanity to man in a cold world. *Beautiful Soup: A Novel for the 21st Century* (1993) is an sf SATIRE about NEAR FUTURE life in urban and suburban America - a mode more frequently found in 1950s and 1960s titles - and follows the life of a man who loses his official identity when he is imprinted with a barcode in a supermarket accident. [JC]

JACOBSON, DAN

(1929-) South African novelist, in the UK from the early 1950s. Moral fervour and a harsh eloquence about his tortured homeland characterize novels like *The Trap* (1955). *The Confessions of Joseph Baisz* (1977) is set in a tyrannical DYSTOPIA, and *Her Story* (1987) is an examination in sf and feminist terms of a desolate post- HOLOCAUST environment. [JC]

JACOMB, CHARLES ERNEST

(1888-?) UK journalist and editor, author of one sf novel, *And A New Earth* (1926), which combines the UTOPIAN and future- WAR genres: an elitist, eugenic society is forced to defend itself with advanced weaponry against the major powers. Civilization is destroyed by a comet, and post- HOLOCAUST culture develops again very slowly. [JE]

JADE, SYMON

Pseudonym of US writer Michael Eckstrom (? -), responsible for the *Starship Orpheus* sequence of sf adventures: *Return from the Dead* (1982),

Cosmic Carnage (1983) and Alter Evil (1983). [JC]

JAEGER, MURIEL

(c1893-?) UK writer who took an English degree at Oxford and was a minor member of a group of women writers including Winifred HOLTBY and Dorothy L. Sayers (1893-1957). Her first sf work, *The Question Mark* (1926), depicts a UTOPIAN UK of 200 years hence (as witnessed by a waker from a cataleptic trance; *SLEEPER AWAKES*) and shows strongly the influences of H. G. WELLS and William MORRIS. In *The Man with Six Senses* (1927) a weakly youth, endowed with unrefined ESP talents, is helped towards maturity by a sympathetic girlfriend; the promise of originality shown in this novel was never realized, perhaps because of discouraging sales. *Hermes Speaks* (1933) follows the consequences, in the worlds of POLITICS and ECONOMICS, of adherence to the prophecies of a fake medium. *Retreat From Armageddon* (1936), a peripheral future- WAR novel in which a group of people withdraw from the ensuing conflagration to a remote country house where they philosophize on Man's shortcomings, is notable for its advocacy of GENETIC ENGINEERING. It, too, met with little success, and MJ stopped writing fiction. [JE]About the author: *Dangerous by Degrees: Women at Oxford and the Somerville College Novelists* (1989) by Susan J. Leonardi. See also: *LEISURE*; *SUPERMAN*.

JAFFERY, SHELDON (R.)

(1934-) US attorney, editor and bibliographer. In the latter capacity he has concentrated on fantasy and horror, beginning with *Horror and Unpleasantries* (1982), an ARKHAM HOUSE bibliography, later incorporated into his *The Arkham House Companion* (1989). His guides to *WEIRD TALES-The Collector's Index to Weird Tales* (1985) with Fred Cook - and to *DAW BOOKS - Future and Fantastic Worlds* (dated 1987 but 1988) - are also useful tools, as is *Double Trouble: A Bibliographic Chronicle of Ace Mystery Doubles* (1992). He has edited *Sensuous Science Fiction from the Weird and Spicy Pulp*s (anth 1982), *Selected Tales of Grim and Grue from the Horror Pulp*s (anth 1987) and *The Weirds: A Facsimile Selection of Fiction from the Era of the Shudder Pulp*s (anth 1987). [JC]

JAHN, MIKE

Working name of US writer Joseph Michael Jahn (1943-), most of whose work of sf interest has been in ties for the tv series *The SIX MILLION DOLLAR MAN : Wine, Women, and War* * (1975), *The Rescue of Athena One* * (1975), *The Secret of Bigfoot Pass* * (1976) and *International Incidents* * (1977). *The Invisible Man* * (1975) is another tv tie. MJ has also contributed *Omega Sub* * (1991) and *City of Fear* * (1991) to the *Omega Sub* sf adventure series under the house name J.D. CAMERON. *The Olympian Strain* (1980) and *Armada* (1981) are singletons. [JC]

JAHNSSON, EVALD FERDINAND

[r] FINLAND.

JAKES, JOHN (WILLIAM)

(1932-) US writer best known for sf and fantasy before his Bicentennial series of novels, which traces the fictional history of a US family over the past 200 years; it achieved extraordinary bestsellerdom, undoubtedly justifying, at least financially, his decision to retire from the genre.

Most of his shorter work, beginning with "The Dreaming Trees" for *Fantastic Adventures* in 1950, was written by the 1960s - a good selection appearing as *The Best of John Jakes* (coll 1977) ed Martin H. GREENBERG and Joseph D. OLANDER - and he published his last sf novel in 1973. He generally displayed competence, but his early work lacked bite and his later novels, though sharper, were published in some obscurity. He was in any case from the first actively involved in other genres, and published at least 20 books, including several historicals as by Jay Scotland, before *When the Star Kings Die* (1967), the first volume in the Dragonard series of *SPACE OPERAS*, marked his full-scale entry into the field. The 3 novels in the sequence - the others are *The Planet Wizard* (1969) and *Tonight We Steal the Stars* (1969 dos) - follow the adventures of the Dragonard clan as they guard II Galaxy and its corporate "star kings" against various perils. His second series, the Brak the Barbarian *SWORD-AND-SORCERY* epic, includes *Brak the Barbarian* (coll of linked stories 1968), *Brak the Barbarian versus the Sorceress* (1963 *Fantastic* as "Witch of the Four Winds"; exp 1969; vt *Brak the Barbarian - The Sorceress* 1970 UK; vt *The Sorceress* 1976 UK), *Brak the Barbarian versus the Mark of the Demon* (1969; vt *Brak the Barbarian - The Mark of the Demons* 1970 UK; vt *The Mark of the Demons* 1976 UK), *Brak: When the Idols Walked* (1964 *Fantastic Stories*; exp 1978) and *The Fortunes of Brak* (coll 1980). The deep debt of these stories to Robert E. HOWARD's Conan tales was acknowledged in the publication of *Mention my Name in Atlantis* (1972), an amusing pastiche of the subgenre. Out of the several sf novels JJ published 1969-73, three stand out. *Six-Gun Planet* (1970) depicts a deliberately archaic colony planet called Missouri complete with ROBOT gunfighters, just as in the later film *WESTWORLD* (1973). *Black in Time* (1970) presents vignettes from Black history dramatized through a *TIME-TRAVEL* plot device. *On Wheels* (1973), set about a century hence, tautly depicts a mobile US subculture whose members live, breed and die on wheels, whether in large trailers or on their own vehicles, never leaving the Interstate highway system, never dropping below 40mph (65kph). Their god is the Texaco Firebird, which they see only at the moment of death. As *SATIRE* the story is simple but gripping, like most of JJ's best work. [JC] Other works: *The Asylum World* (1969); *The Hybrid* (1969); *Secrets of Stardeep* (1969) and *Time Gate* (1972), both juveniles, later brought together as *Secrets of Stardeep*, and *Time Gate* (omni 1982); *The Last Magicians* (1969); *Mask of Chaos* (1970); the Gavin Black novels, being *Master of the Dark Gate* (1970) and *Witch of the Dark Gate* (1972); *Monte Cristo #99* (1970); *Conquest of the Planet of the Apes ** (1974); *Excalibur!* (1980) with Gil Kane. See also: *COLONIZATION OF OTHER WORLDS*; *SOCIOLOGY*; *TRANSPORTATION*.

JAKOBER, MARIE

(1941-) Canadian writer whose only sf novel, *The Mind Gods* (1976 UK), confronts on another planet a materialist, tolerant society with a repellent spiritual creed. With some subtlety the outcome is shown to be not altogether, morally, on the side of the liberals. [PN]

JAKOBSSON, EJLER

(1911-1986) Finnish-born editor, in the USA from 1926. He became a *PULP-MAGAZINE* writer in the 1930s and joined the staff of one of the pulp

chains, Popular Publications, in 1943. He briefly had responsibility for ASTONISHING STORIES and SUPER SCIENCE STORIES, but both magazines were already in the process of closing down due to paper shortages and Frederik POHL's departure. EJ remained with the company and became editor on its revival in 1949 of Super Science Stories, a position he retained until the magazine again (and finally) ceased publication in 1951; Damon KNIGHT was his assistant for part of this period. EJ returned to SF-MAGAZINE editing in 1969, when he took over the editorship of GALAXY SCIENCE FICTION and IF - again in succession to Pohl. With the assistance of Judy-Lynn DEL REY and Lester DEL REY, he attempted to make the magazine more contemporary and trendy, with mixed results, though Robert SILVERBERG praised his work. He was succeeded as editor by Jim BAEN in mid-1974. During EJ's editorship the following anthologies were published (his name did not appear on their title pages): The Best from Galaxy Vol I (anth 1972) ed The Editors of Galaxy Magazine; The Best from If (anth 1973) ed anon; The Best from Galaxy Vol II (anth 1974) ed The Editors of Galaxy Magazine; The Best from If Vol II (anth 1974) ed The Editors of If Magazine. [MJE]

JAKUBOWSKI, MAXIM

(1944-) UK writer, critic, publisher, bookseller, translator and anthologist. He was educated in France and writes in both French and English. After some time as a company director in the flavour industry, he turned to publishing, becoming Managing Director of Virgin Books (1980-83) and then taking up directorships of Zomba and Rainbird. Since 1988 he has run the Murder One bookshop, London, specializing in mysteries; since 1991 this has incorporated the New Worlds sf outlet. As a writer he has published about 25 books, those in English mostly concerning rock music and the mystery field. Generally more at ease in short-story length, in both French and English, he began publishing fiction of genre interest in English with "Lines of White on a Sullen Sea" for NW in 1969, which took place in the Jerry Cornelius SHARED WORLD opened by Michael MOORCOCK for contributors to the magazine. MJ's sf has tended to be marginal, and his preoccupation with doomed love, music, sex and death has more often been expressed in mainstream fiction. A prolific anthologist in France (9 vols), he has also edited several English-language anthologies: Travelling towards Epsilon: An Anthology of French Science Fiction (anth trans Beth Blish and MJ 1977), Twenty Houses of the Zodiac: An Anthology of International Science Fiction (anth 1979), Lands of Never (anth 1983) and Beyond Lands of Never (anth 1984), the latter two being original fantasy. Most of his later anthology releases have been in the mystery field, though The Mammoth Book of Erotica (anth 1994) contains material of genre interest. With Malcolm EDWARDS he wrote The Complete Book of Science Fiction and Fantasy Lists (1983; rev vt The SF Book of Lists 1983 US), and with Edward JAMES he edited The Profession of Science Fiction (anth 1992), a selection of pieces taken from the journal FOUNDATION: THE REVIEW OF SCIENCE FICTION. As Charlotte Stone he wrote Cheon of Weltanland: The Four Wishes (1983 US). [MJ/PN/JC]

JALES, MARK

[r] ROBERT HALE LIMITED.

JAMES, DAKOTA

Pseudonym used for his fiction by US academic Bernard (Joseph) James (1922-), whose sf novels *Greenhouse* (1984) and its sequel, *Milwaukee the Beautiful* (1987), are set in a Wisconsin gradually isolated from the rest of a balkanized USA by the greenhouse effect. In the first DJ riskily assumes that the effect will be gravely consequential by 1997; but the second, set further in the future, agilely explores the implications of a Latin American invasion of independent Milwaukee. [JC]

JAMES, EDWARD (FREDERICK)

(1947-) UK academic and editor who began teaching at University College, Dublin, in 1970, and moved to York University in 1978, where he became Director of the Centre for Medieval Studies in 1992; he was appointed Professor of History at the University of Reading, as of September 1995. He has been the editor of *FOUNDATION: THE REVIEW OF SCIENCE FICTION* since 1986; in that capacity he has compiled an *Index to Foundation*, 1-40 (1988) and edited with Maxim JAKUBOWSKI *The Profession of Science Fiction* (anth 1992), which assembles autobiographical pieces first published in the journal. *Science Fiction in the Twentieth Century* (1994), though designed as an introductory survey to the field, has much to say which is of use to his fellow scholars as well. [JC]

JAMES, EDWIN

[s] James E. GUNN.

JAMES, LAURENCE

(1942-) UK paperbacks editor and then writer active under his own name and under at least 9 pseudonyms and house names, including Jonathan May, in various genres including Westerns, thrillers, historical romances and soft-core pornography. Over one four-year period he averaged about a book a month. As LJ he began publishing sf with "And Dug the Dog a Tomb" for *New Worlds Quarterly* 3 (anth 1972), an sf development of Samuel Beckett's *Waiting for Godot* (trans 1954), though under his own name he is best known for a series of paperback *SPACE OPERAS* featuring Simon Rack and his Galactic Security Service Comrades: *Earth Lies Sleeping* (1974), *Starcross* (1974; vt *War on Aleph* 1974 US), *Backflash* (1975), *Planet of the Blind* (1975) and *New Life for Old* (1975). These are swiftly told but otherwise unremarkable. The *Dark Future* series of post- *HOLOCAUST* adventures for a young-adult audience includes *The Revengers* (1992), *Beyond the Grave* (1992), *The Horned God* (1992) and *The Plague* (1992). For adults and as James Axler he wrote the *SURVIVALIST-FICTION* *Death Lands* post-holocaust military-sf series: *Death Lands #1: Red Holocaust* (1986 Canada), #2: *Pilgrimage to Hell* (1987 Canada), #3: *Neutron Solstice* (1987 Canada), #4: *Crater Lake* (1987 Canada), #5: *Northstar Rising* (1988 Canada), #6: *Pony Soldiers* (1988 Canada), #7: *Dectra Chain* (1988 Canada), #8: *Ice and Fire* (1988 Canada), #9: *Red Equinox* (1989 Canada), #10: *Time Nomads* (1989 Canada), #11: *Latitude Zero* (1991 Canada), #12: *Seedling* (1991 Canada) and #13: *Dark Carnival* (1992 Canada). As James McPhee he wrote the similar *Survival 2000* sequence, dealing with events after an *ASTEROID* strikes Earth: *Survival 2000 #1: Blood Quest* (1991), #2: *Renegade War* (1991) and #3: *Frozen Fire* (1991). [JC] Other works: *Electric Underground - A City Lights Reader* (anth 1973); the *Witches* sequence, all as by James Darke, comprising *The Prisoner* (1983), *The Trial* (1983), *The Torture* (1983), *The*

Escape (1984), The Feud (1986) and The Plague (1986).

JAMES, PHILIP

[s] (1) Lester DEL REY; (2) James CAWTHORN.

JAMES, P(HYLLIS) D(OROTHY)

(1920-) UK writer whose detective novels, beginning with Cover Her Face (1962) and generally featuring Commander Adam Dalgliesh of Scotland Yard, comprise a literate, conservative, elegiac defense of traditional English life; her one sf novel, The Children of Men (1992), carries that bent of mind into a 21st century Britain crippled by universal human infertility and dominated by a dictatorial "Warden". The ending-couched in guardedly Christian terms-offers some chance of redemption. [JC]

JAMES, R. ALAN

[r] ROBERT HALE LIMITED.

AWARDS.

JAMESON, FREDRIC

[r] POSTMODERNISM AND SF.

JAMES TIPTREE, JR. AWARD

AWARDS.

JAMESON, MALCOLM

(1891-1945) US writer who began producing fiction only after cancer forced him to retire from a nonwriting life which had included a career in the US Navy. He began publishing sf with "Eviction by Isotherm" for ASF in 1938, and wrote prolifically until his death. His books were all posthumously published. Atomic Bomb (1944 Startling Stories as "The Giant Atom"; rev 1945) is a NEAR-FUTURE story of an atomic explosion. Bullard of the Space Patrol (1940-45 ASF; coll of linked stories 1951; omitting "The Bureaucrat" cut 1955) is a set of SPACE-OPERA tales for juveniles ed Andre NORTON. In Tarnished Utopia (1943 Startling Stories; 1956) two people awaken from SUSPENDED ANIMATION to find themselves in conflict with a dictatorship. [JC]See also: ASTEROIDS; DYSTOPIAS; NUCLEAR POWER.

JAMESON, (MARGARET) STORM

(1891-1986) UK novelist, the first woman to gain a BA from Leeds University (1912), known mainly for family-chronicle novels such as those assembled as The Triumph of Time (omni 1932). Her sf novels derive from her interest in the POLITICS of change, and extrapolate extremist political "solutions" into the NEAR FUTURE. In the Second Year (1936) projects a fascist UK. In Then We Shall Hear Singing (1942) a victorious German Reich dominates an unnamed country, but is unable to eliminate the resistance of the individual consciousness (HITLER WINS). Set after an off-stage atomic HOLOCAUST, The Moment of Truth (1949) describes a UK ruled by communists. Only in The World Ends (1937) as by William Lamb does SJ permit herself some elegiac tranquillity: in this novel the world ends quietly (but thoroughly) flooded, and a patriarchy comes into being. [JC]

JANE, FRED T.

Working name of UK writer and illustrator Frederick Thomas Jane (1865-1916), best known for founding the Jane's Fighting Ships series (from 1898). Blake of the "Rattlesnake", or The Man who Saved England (1895) is a NEAR-FUTURE story in which, through a series of engagements, modern torpedoes save the UK from the Russians and the French. Artificially created according to an ancient Egyptian formula, the protagonist of The Incubated Girl (1896) upsets the contemporary UK with her soulless purity, her vegetarianism and her goddesslike charisma. To Venus in Five Seconds: An Account of the Strange Disappearance of Thomas Plummer, Pillmaker (1897) takes its kidnapped narrator to VENUS, where he sets off a conflict between the natives - intelligent giant insects - and the ancient Egyptians who have been resident there for some time, including his lady kidnapper; the humorous effects in this tale are clearly intentional. The Violent Flame: A Story of Armageddon and After (1899) features a mad SCIENTIST who brings about the END OF THE WORLD - which, Gaia-like, is a living entity - with a disintegrator ray. The narrator and his wife survive to be a new ADAM AND EVE. FTJ's fiction, though crude, conveys a genuine speculative impact; his ILLUSTRATIONS, not only of his own work but also of future-war novels by George GRIFFITH and E. Douglas FAWCETT, focus on WAR and WEAPONS, though some more interesting sequences, like "Guesses at Futurity" (1894-5 Pall Mall Magazine), show a wide-ranging visual sense of things to come. He was also of note as an illustrator of some of Arthur Conan DOYLE's Sherlock Holmes stories. [JC/PN]See also: CRIME AND PUNISHMENT; HISTORY OF SF; MATTER TRANSMISSION; TRANSPORTATION.

JANIFER, LAURENCE M(ARK)

(1933-) US writer - in several genres - and performing musician. Born Larry Mark Harris - a name used on his fiction until 1963 - he reverted to the old family name, which had been discarded by an immigration officer when LMJ's grandfather had gained entry to the USA from Poland. Some of his non-sf books - mostly erotica - appeared under the pseudonyms Alfred Blake and Barbara Wilson. His first sf publication was "Expatriate" for Cosmos in 1953. Much of his sf has been written in collaboration, including early works with Randall GARRETT and some later ones with S.J. TREIBICH. With Garrett he wrote a bawdy mythological fantasy, Pagan Passions (1959), as by Randall Garrett and Larry M. Harris, for the Beacon Books series of GALAXY SCIENCE FICTION NOVELS and 3 novels as Mark PHILLIPS featuring confrontations between a secret-service agent and various PSI-POWERED individuals: Brain Twister (1959 ASF as "That Sweet Little Old Lady"; 1962), The Impossibles (1960 ASF as "Out Like a Light"; 1963) and Supermind (1960-61 ASF as "Occasion for Disaster"; 1963).LMJ's first solo novel was Slave Planet (1963). The Wonder War (1964), though credited to Janifer alone, appears from the dedication to have been written in collaboration with Michael KURLAND. You Sane Men (1965; vt Bloodworld 1968) describes a world where sadism is the aristocratic way of life. A Piece of Martin Cann (1968) features psi-assisted psychotherapy. LMJ's most ambitious novel is Power (1974), a study of the POLITICS of rebellion; similar themes are tackled in Reel (1983). The lively Knave series - Survivor (1977) and its sequels Knave in Hand (1979) and Knave and the Game (coll of linked stories 1987) - feature an interplanetary

troubleshooter, Knave, who is somewhat in the mould of Keith LAUMER's Retief. LMJ's 3 novels with Treibich, the Angelo di Stefano series, are comedies: Target: Terra (1968), The High Hex (1969) and The Wagered World (1969). A collection of his short fiction is Impossible? (coll 1968). LMJ edited the anthology Masters' Choice (anth 1966; vt in 2 vols SF: Master's Choice 1968 UK; vt 18 Greatest Science Fiction Stories 1971 US). [BS]See also: MUSIC.

JANSON, HANK

Initially a personal pseudonym of Stephen FRANCES but eventually a house name used by other UK writers for various publishers. Authors writing as HJ included Harry Hobson (1908-), Harold Ernest Kelly (1900-1969), James MOFFATT, Victor NORWOOD and Colin Simpson. Most HJ titles were thrillers. [JC]See also: ADAM AND EVE.

JANUS/AURORA

US feminist sf FANZINE (1975-90) ed from Madison, Wisconsin, by Jan Bogstad, Jeanne Gomoll and Diane Martin (#1-#3 by Bogstad, #4-#17 by Bogstad and Gomoll, #18-#26 by Martin). Janus (which became Aurora with #19) was born as FEMINISM began making itself felt in sf in the mid-1970s. It carried articles by Samuel R. DELANY, Suzette Haden ELGIN, Joanna RUSS and Jessica Amanda Salmonson (1950-), and interviews with Octavia E. BUTLER, Suzy McKee CHARNAS, Jo CLAYTON, Elizabeth A. LYNN, Clifford D. SIMAK, John VARLEY, Joan D. VINGE and Chelsea Quinn YARBRO. Through reviews and articles, J/A examined critically the depiction of sexuality in sf, WOMEN AS PORTRAYED IN SCIENCE FICTION, sf by women, women in fandom and the feminist SMALL PRESSES. Right up to its demise it worked to prevent the contribution of WOMEN SF WRITERS being ignored. In the penultimate issue Gomoll wrote an "Open Letter to Joanna Russ" pointing out that the dismissal of 1970s sf by CYBERPUNK writers was the sort of attempt to erase the contribution of women that Russ had highlighted in How to Suppress Women's Writing (1983). Many, such as Delany and Sarah LEFANU, who used J/A extensively in her own researches into sf and feminism, agreed. J/A is likely to remain one of the best sources for research into the discourse between sf and feminism that took place in the 1970s and 1980s. [RH]

JANVIER, IVAN or PAUL

[s] Algis BUDRYS.

JANVIER, THOMAS A(LLIBONE)

(1849-1913) US novelist who was also active as a journalist. His lost-race (LOST WORLDS) novel, The Aztec Treasure House (1890), didactically describes a surviving remnant of the Aztec empire. In The Women's Conquest of New York (1894), published anon, Tammany Hall misguidedly enfranchises females, who run amok until threatened with physical violence by their aroused spouses. In the Sargasso Sea (1898) is a ROBINSONADE in which a shipwrecked sailor survives aboard his disabled vessel in a maze of seaweed, finds a treasure trove, and escapes. In Great Waters (coll 1901) contains fantasies. [JC]See also: ANTHROPOLOGY.

JAPAN

It seems that the continuing attention the Japanese people give to their

ancient legends and fantastic stories has made them receptive to modern fantasies and sf, and the rationalization of a chaotic Universe which such stories offer. Appropriately, the history of Japanese sf begins during the 1870s, a period of violently rapid modernization in Japan, with translations of the works of Jules VERNE. The native Japanese sf writers of this era, such as Shunro Oshikawa (1877-1914), show his strong influence. One of Oshikawa's most popular books is Kaitei Gunkan ["Undersea Warship"] (1900), a future- WAR novel about a conflict between Japan and Russia, which effectively predicted the actual war of 1904-5. Between the two World Wars, new writers of straight sf and fantasy began to appear, the most popular and capable among them being Juza Unno (1897-1949), who wrote stories influenced by the newly developing US sf; stories of his such as Chikyu Tonan ["The Stolen Earth"] (1936) and Yojigen Hyoryu ["Marooned in the 4-D World"] (1946) were, although not highly regarded as literature, loved by young readers. It was only after WWII, however, that sf became widely popular. A few ambitious publishers attempted series of translated sf stories, though most of these experiments failed due to limited sales. Notable among them were a series of 7 anthologies from Amazing Stories (all 1950) and 20 volumes of the Gengensha SF Series (1956-7); these began the process of establishing an sf audience in Japan. This audience was soon catered for by the first successful venture, the Hayakawa SF Series (1957-74), published by Hayakawa Publishing Co., which issued 318 volumes, mostly of translations but also including about 50 Japanese originals; another paperback series, Hayakawa SF Bunko (1970-current), reached its 940th volume in 1991 (all translations), including reprints from the earlier series. The same company's Hayakawa JA Series of original works (1973-current) has reached about 340 volumes. Hayakawa has also published hardback sf series. In competition with Hayakawa, the Tokyo Sogensha Co. began its own translation series (1963-current), which has reached some 300 volumes; early on it featured Edgar Rice BURROUGHS's Barsoom books and E.E. "Doc" SMITH's works. Asahi Sonorama's series of Japanese originals (1975-current) numbers over 500, most of them sf. Sanrio Co. published almost 200 titles in Sanrio SF Bunko (1978-84). Other publishers, such as Kadokawa Shoten, Kodansha, Shinchosa, Shueisha and Seishinsa, publish both translated and original sf or fantasy on a smaller scale. The NEW WAVE in the 1960s and CYBERPUNK in the 1980s affected Japanese sf and stimulated several writers to work in these styles. In 1957 the FANZINE Uchujin ["Cosmic Dust"] was founded, and began publishing original Japanese work; nearly half of the sf writers in Japan today started there. With 190 issues and a circulation of about 1000, Uchujin remains Japan's leading fanzine. In 1960 the first successful professional sf magazine in Japan was launched by Hayakawa: SF Magazine began as a reprint vehicle for FSF, but shortly began to publish original material, which soon predominated. SF Magazine proved a success, celebrating its 400th issue in Oct 1990 with a lavish special issue. The second professional sf magazine, Kiso-Tengai ["Fantastic"], began in 1975 and has folded twice, each time being revived by a fresh publisher; by 1990 it had reached almost 100 issues. SF Adventure (1979-current), published by Tokuma Shoten, has reached its 145th issue, and Shishioh ["Lion King"] (1985-current), published by Asahi Sonorama, has reached its 69th. Three Japanese versions of US magazines,

ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE, titled SF Hoseki ["SF Jewels"] (1979-81), STARLOG (1979-87) and OMNI (1982-9), and two quarterly SEMIPROZINES, SF-ISM (1981-5) and SF No Hon ["SF Books"] (1982-6), also attracted readers, but not enough to survive. Though magazine circulation figures are classified in Japan, the best estimate is that the top magazine sells about 50,000 copies. Today, in the early 1990s, about 400 Japanese original and 150 translated sf books are published each year (excluding reprints, game books and juveniles), a figure that varies according to criteria for distinguishing between sf and non-sf. (The term "sf" is in Japanese rather inclusive, embracing much that an occidental sf purist would reject. The numbers cited therefore include light fantasies, which have recently been popular.) Though the borderline between hardback and paperback publication is difficult to determine in the Japanese system, probably about a quarter of these are hardbacks. Paperbacks generally sell about 20-30,000 copies in the first print run, though there are many exceptions. As in other countries, most Japanese sf readers are of secondary-school/university age. Japanese FANDOM began to reveal itself in 1962 with the first Japanese sf CONVENTION in Tokyo, attended by about 200 fans; the 30th convention, i-con, was held in Kanazawa, Ishikawa-Prefecture, in 1991 with about 1700 attendees; the 1983 convention, Daicon-4, held in Osaka, was the biggest to date, with about 4000. The site selection for conventions is presided over by the Federation of Science Fiction Groups of Japan, founded 1965, which also regulates the voting for the Sei'un AWARDS, the Japanese equivalent of the HUGOS, established in 1970. The categories are: Novel (Japanese and translation), Short Story (Japanese and translation), Media Presentation, Comics, Nonfiction, and Artist. The Nippon SF Taisho ("Taisho" means "Big Award"), the Japanese equivalent of the NEBULA, begun in 1980, is given to the single most prominent product of Japanese sf in the preceding year. The first Japanese sf film was GOJIRA (1954; vt Godzilla). It was followed by many other MONSTER MOVIES such as RADON (1956; vt Rodan), MOSURA (1961; vt Mothra), DAIKAIJU GAMERA (1966; vt Gamera) and GOJIRA 1985 (1985; vt Godzilla 1985), and also by straight sf offerings like CHIKYU BOEIGUN (1957; vt The Mysterians), BIJO TO EKITAI NINGEN (1958; vt The H-Man), NIPPON CHINBOTSU (1973; vt The Submersion of Japan; cut vt Tidal Wave), FUKKATSU NO HI (1981; vt Virus) and SENGOKU JIEITAI (1981; vt Time Slip). Most of these were from Toho-Eiga or Kadokawa-Eiga Co. (Eiji Tsuburaya [1901-1970], who worked with Toho-Eiga, was famous for his special effects.) Monster and sf-adventure series flooded TELEVISION, too, but were less successful than animated tv series like Tetsuwan Atom (1963-5; vt Astroboy), the first of them, and Gatchaman (1972-4) and Uchusenkan Yamato ["Space Battlecruiser Yamato"] (1974-5). Many of these series have also been shown abroad. Recently, full-length animated feature films, such as Hayao Miyazaki's Kaze no Tano no Nausica (1984; vt Nausica) and Tonari no Totoro (1988; vt My Neighbour Totoro) and Katsuhiro OTOMO's AKIRA (1987), have been highly regarded by the general public as well as sf fans. Most such animations are derived from COMICS (by the same authors), comics being an important form of publication not only for children but also for young adults in Japan. Among Japanese sf authors, the best known abroad is Kobo ABE, author of Dai-Yon Kampyoki (1959; trans as Inter Ice Age 4 1970); he is, however, fundamentally a writer of mainstream

literature. Other stories by popular MAINSTREAM WRITERS have been highly regarded in sf circles. Two such, by Hisashi Inoue in 1981 and Makoto Shiina in 1990, won the Nippon SF Taisho in their respective years. The reputation of Haruki MURAKAMI - whose work includes *Hitsuji o meguru boken* (1982; trans Alfred Birnbaum as *A Wild Sheep Chase* 1989 US) and *Sekai no owar to hard-boiled wonderland* (1984; trans Alfred Birnbaum as *Hard-Boiled Wonderland and the End of the World* 1991 US)-is also spreading widely. Osamu TEZUKA, the writer/artist for *Astroboy*, is regarded as a kind of Japanese Walt Disney: he produced the first animated film series for tv in Japan and is a top name in sf and other comics. Other important writer/artists in comics are Fujio Fujiko (1933-), Shotaro Ishinomori (1938-), Reiji Matsumoto (1938-), Go Nagai (1945-) and Katsuhiro Otomo. Shin'ichi HOSHI has written more than 1000 short stories, with many translated into other languages. His "*Bokkochan*" (1958; trans FSF June 1963) was the first Japanese sf story to be translated into English. Hoshi's work was critical in the popularization of sf in the early days in Japan. Sakyo KOMATSU is a sort of symbol of Japanese sf. Many of his novels are panoramic in scope, dealing in broad strokes with the destiny of the Universe and with *Homo sapiens*'s place in it. He is best known abroad as the author of *Nippon Chinbotsu* (1973; cut trans 1976 as *Japan Sinks*), which sold about 4 million copies in Japan alone and, as mentioned above, was filmed. Yasutaka Tsutsui (1934-) is noted for his sharply satirical comic situation fantasies - sometimes called slapstick sf - such as *Vietnam Kanko Kosha* ["*The Vietnam Sightseeing Co.*"] (1967), but his recent bestselling stories are considered mainstream rather than sf. Ryo Hammura (1933-) won the Naoki Award - the most prestigious Japanese literary prize - in 1974. He is best known for his earlier fantasy books, which created a fictitious history of ancient Japan, but a more recent bestseller, *Misaki Ichiro no Teiko* ["*The Resistance of Ichiro Misaki*"] (1988), is centrally sf, describing the tragedy of a SUPERMAN. Hammura also wrote the novel on which was based the film *SENGOKU JIETAI*. Ryu Mitsuse (1928-) combines a HARD-SF surface with poetic form in such perceptive novels as *Hyakuoku no Hiru to Sen'oku no Yoru* ["*Ten Billion Days, a Hundred Billion Nights*"] (1967), an sf variation on the Buddhist theme of transience. Taku Mayumura (1934-) is noted for his serious attempts to create a future history (HISTORY IN SF), a representative work being *Shiseikan* ["*Governors of the Worlds*"] (1974), a book in a series describing the rise and fall of a galactic government. Among the younger authors, Masaki Yamada (1950-) is a born sf writer, one of the second generation of Japanese sf authors. His first story, the novella "*Kami-Gari*" ["*God Hunters*"] (1974), deals with the fight against the unseen and ruthless government of Almighty God. Baku Yumemakura (1951-) became a bestselling sf writer through violent adventure novels, but his recent *Jogen no Tsuki o Taberu Shishi* ["*The Lion that Ate the Crescent Moon*"] (1989) is highly poetic and symbolic; he won both the Sei'un Award and the Nippon Sf Taisho with this novel. Chohei Kambayashi (1953-) could be called a typical VIRTUAL-REALITY writer. His novel *Sento-Yosei Yukikaze* ["*Fairy Fighter Yukikaze*"] (1984) deals with the man-machine interface when a ROBOT fighter plane fights an alien machine race. Yoshiki Tanaka (1952-) writes a variety of historical fantasies. The most popular among them is *Ginga Eiyu Densetu* ["*The Legend of Galactic Heroes*"] (1982), which

tells of a space war and is based on the ancient Chinese story "Three Kingdoms". Among women sf writers, perhaps Motoko Arai (1960-) is the most typical, with her rather easy-to-read style of fantasy. Quite different is Mariko Ohara (1959-), who writes CYBERPUNK stories. Kaoru Kurimoto (1953-) is prolific in the field of HEROIC FANTASY. Many other women writers of light fantasy have enjoyed popularity in recent years. A study in English is Japanese Science Fiction: A View of a Changing Society (1989) by Robert Matthew. Several of the writers mentioned above are represented in translation in The Best Japanese Science Fiction Stories (anth 1989 US) ed John L. Apostolou with Martin H. GREENBERG. The most important bibliographer of Japanese sf is Fujio Ishihara, whose major bibliographies are (using an English version of their Japanese titles) SF Grand Annotated Catalogue 1946-70 (1982) and SF Grand Annotated Catalogue 1971-1980 (five vols 1989-1991); these works are in Japanese. [TSh/PN].

JARRY, ALFRED

(1873-1907) French writer who carried the fruits of his scientific education into his surreal avant-garde writing, particularly the influence of the French evolutionary philosopher Henri Bergson (1859-1941). AJ's famous play Ubu roi (1896; trans 1951 UK) and its several sequels - including Ubu enchainé (1900; trans B. Keith and G. Legman as King Turd 1953 UK) - helped found the THEATRE of the absurd, and he created the mock-science of 'pataphysics (IMAGINARY SCIENCE), which studies exceptions rather than laws and aspires to provide imaginary solutions to practical problems. H.G. WELLS's THE TIME MACHINE (1895) inspired him to write the speculative essay "How to Construct a Time Machine" (1899) (TIME TRAVEL). His most sciencefictional work is Le surmale (1901; trans Barbara Wright as The Supermale 1964 UK; rev 1968), a comic fantasy featuring a SUPERMAN who, nourished on superfood, wins an extraordinary bicycle race against a six-man team and performs astonishing feats of erotic endurance before perishing in the passionate embrace of an amorous MACHINE. Also of interest is the disorganized and extravagant "neoscientific romance" Gestes et opinions du docteur Faustroll, 'Pataphysician (1911; trans as "Exploits and Opinions of Dr Faustroll, 'Pataphysician" in Selected Works of Alfred Jarry ed Roger Shattuck and Simon Watson-Taylor, coll 1965 UK). There are minor fantastic elements in his hallucinatory first novel, Les jours et les nuits (1897; trans Alexis Lykiard as Days and Nights 1989 in an edition which also includes the mythological extravaganza L'autre Alceste [1947 chap] trans Simon Watson-Taylor as "The Other Alcestis") and in his bawdy historical romance Messaline (1901; trans John Harman as Messalina 1985 UK). AJ's influence on modern sf writers (ABSURDIST SF; FABULATION) is best exemplified by J. G. BALLARD's "The Assassination of John Fitzgerald Kennedy Considered as a Downhill Motor Race" (1967), which echoes AJ's "Commentair pour servir a la construction pratique de la machine a explorer le temps" (1900), most familiar in trans as "The Crucifixion of Christ Considered as an Uphill Bicycle Race" (1965). [BS]Other works: Caesar-Antichrist (1895; trans Antony Melville as Caesar Antichrist 1992 UK).

JARVIS, E.K.

ZIFF-DAVIS house name used 1942-58 on AMZ, Fantastic Adventures and

Fantastic for over 45 stories, primarily by Robert Moore WILLIAMS, who used the name as a personal pseudonym until the 1950s, when Paul W. FAIRMAN, Harlan ELLISON and Robert SILVERBERG - 1 identified story each - also wrote as EKJ. [JC]

JARVIS, SHARON

(1943-) US writer whose fiction has all been written with collaborators under joint pseudonyms. As Jarrod Comstock she published with Ellen M. Kozak the These Lawless Worlds sequence of mildly erotic sf: The Love Machine (1984) and Scales of Justice (1984). As Johanna Hailey she published with Marcia Yvonne Howl (1947-) three elf fantasies: Enchanted Paradise (1985), Crystal Paradise (1986) and Beloved Paradise (1987). As H.M. Major she published with Kathleen Buckley the Alien Trace sf sequence, equally mild in its eroticism: The Alien Trace (1984) and Time Twister (1984). As SJ, she edited Inside Outer Space: Science Fiction Professionals Look at their Craft (anth 1985). [JC]

JASON, JERRY

George H. SMITH.

JAVOR, FRANK A.

Working name of US writer Francis Anthony Jaworski (1916-), who has written an estimated 10,000 "how to" articles for service magazines. He has appeared infrequently in sf magazines from 1963, his first story being "Patriot" for ASF; three tales were included in the Judith MERRIL Year's Best S-F series of anthologies. The Eli Pike series of sf novels - The Rim-World Legacy (1967; exp as coll vt The Rim-World Legacy and Beyond 1991), Scor-Sting (1990) and The Ice Beast (1990) - comprises 3 capably framed intrigues on RIMWORLDS, where Pike must maintain some sort of order. The series manages, despite the quarter-century gap between episodes, to remain fresh. [JC]

JAY, MEL

John E. MULLER.

JAY, PETER

(1937-) UK writer, economist and former diplomat who served as the UK Ambassador to the USA 1977-9. His future HISTORY, Apocalypse 2000: Economic Breakdown and the Suicide of Democracy (1987) with Michael STEWART, was inefficient as fiction but acute about the pleasures and miseries of late capitalism. [JC]

JEAN, ALBERT

Maurice RENARD.

JEEVES, (BYRON) TERRY

[r] Mike ASHLEY.

JEFFERIES, (JOHN) RICHARD

(1848-1887) UK naturalist and novelist. The son of a farmer, he showed remarkable powers of observation when writing about Nature, describing it in a poetic style from an animist viewpoint that was devoid of sentimentality. This was particularly noticeable in his first fantasy novel, Wood Magic: A Fable (1881; cut vt Sir Bevis: A Tale of the Fields

1889); semi-autobiographical, it features a young boy who has the ability to communicate with animals, birds and plants, and was primarily concerned with the social and political structure of the local animal kingdom and the struggles of a contender for the throne. A sequel, the famous *Bevis: The Story of a Boy* (1882), appeared a year later, but with the emphasis on the pleasures and intrigues of childhood rather than the hero's supernatural abilities. For the last six years of his life RJ's health was severely in decline, and his thoughts turned to the future and to speculation. The result was *After London, or Wild England* (1885), a post-HOLOCAUST novel which describes, from the viewpoint of a future historian, an England reverted to rural wilderness: the novel's first part describes the lapse into barbarism, the specific reasons for the disaster being deliberately kept vague, and the second details the medieval-style society that has come into being and tells of a voyage of discovery on a great inland lake that now covers the centre of England. *After London* is a first-class example of Victorian sf and proved very popular at the time; its influence can be traced through W.H. HUDSON's *A Crystal Age* (1887) to John COLLIER's *Tom's A-Cold* (1933; vt *Full Circle: A Tale US*). RJ's earlier political SATIRE, *Jack Brass: Emperor of England* (1873), can loosely be construed as fantasy. [JE]See also: CITIES; HISTORY OF SF; PASTORAL; POLLUTION; UTOPIAS.

JEFFERSON, IAN
L.P. DAVIES.

JEFF HAWKE

UK COMIC strip created by writer Eric Souster and artist Sidney Jordan (1930-). Some scripts were written by William Patterson and many of the later ones by Jordan. JH first appeared in 1954 in the *London Daily Express*, and ceased in 1974. During its lifetime it was the UK's leading sf comic strip. The overall scenario depicted Earth as a primitive planet on the periphery of a highly advanced galactic civilization, whose deposed emperor, Chalcedon, was a frequent adversary. Individual stories, of which there were over 60, contained standard sf concepts interspersed with plots based on theories similar to those of Erich von DANIKEN (Vishnu and Shiva as interplanetary visitors, Aladdin's lamp as a dead space-pilot's communicator, etc.). The storylines were original for a comic strip, and kept abreast of contemporary technological progress. Softcover reprints have been published as *Jeff Hawke Book 1* (graph coll 1985) and *Jeff Hawke Book 2: Counsel for the Defence* (graph coll 1986), with covers by Brian BOLLAND, who also worked briefly on the strip; hardcover collections have appeared in Italy. JH also appeared briefly in 1955-6, drawn by Ferdinando Tacconi, in the children's colour comic *Express Weekly*. [JE/RT]

JENKINS, WILL F.
[r] Murray LEINSTER.

JENNINGS, PHILLIP C.

(1946-) US writer who began publishing work of genre interest with "Tadcaster's Doom" for FSF in 1986, and who during the next few years published over 30 often pyrotechnical stories, several of which described a world dominated by "bugs" - personalities in electronic storage. Some of

the best of these stories are assembled as *The Bug Life Chronicles* (coll 1989). PCJ's first novel, *Tower to the Sky* (1988), set in the same universe, explosively depicts a human campaign in 3700CE to escape the crowded Solar System and the Gatekeepers who bar us from the stars, via the eponymous skyscraper; this contains much of humankind within it, is tall enough to reach into space, and is convertible into a starship. PCJ's exuberance is intermittently chaotic, but he now seems to be exercising greater control over his material; the next years may see work of very considerable worth. [JC]

JENNISON, JOHN W(ILLIAM)

(? -?1969) UK writer, one of several who became active as mass-producers of genre fiction for UK paperback houses and who remained reticent about personal details during their careers. From about 1945 to the year in which it is thought he may have died, JWJ seems to have written over 100 novels under at least 40 pseudonyms, mostly thrillers and Westerns. He began to publish his routine but occasionally engaging sf with two novels as Edgar Rees Kennedy, *Conquerors of Venus* (1951) and *The Mystery Planet* (1952). Working for CURTIS WARREN, he then published: under the house name Neil CHARLES, *Para-Robot* (1952); under the Gill HUNT name, *Station 7* (1952) and *Zero Field* (1952); and under the King LANG name, *Spaceline* (1952). After *Invasion from Space* (1954) as Matthew C. Bradford, however, he ceased producing sf for some time, returning in the mid-1960s with the marginal *Supercar* in the *Black Diamond Trail* (1965) as JWJ. Generally as John Theydon, a name he had used since 1946 for non-sf tales, he then published a sequence of STINGRAY tv ties - *Stingray* * (1965), *Stingray: Danger in the Deep* * (1965) as JWJ, and *Stingray and the Monster* * (1966) - a sequence of THUNDERBIRDS tv ties - *Thunderbirds* * (1966), *Calling Thunderbirds* * (1966), *Thunderbirds: Ring of Fire* * (1966), *Thunderbirds: Lost World* * (1966) as JWJ, and *Lady Penelope: The Albanian Affair* * (1967) - and a sequence of *Captain Scarlet* tv ties (*CAPTAIN SCARLET AND THE MYSTERONS*) - *Captain Scarlet and the Mysterons* * (1967; vt *Captain Scarlet* 1989) and *Captain Scarlet and the Silent Saboteur* * (1967). JWJ's last known sf book, again as Theydon, was another tv tie, *The Angels and the Creeping Enemy* * (1968). [JC]

JENS, WALTER

[r] GERMANY.

JENSEN, AXEL

(1932-) Norwegian writer, active since 1955. His DYSTOPIAN sf novel, *Epp* (1965; trans anon 1967 UK), describes in chillingly grey, fragmented prose a world where people live isolated from one another in cells and file reports on their similarly treacherous, alienated "neighbours". [JC]

JENSEN, JOHANNES V(ILHELM)

(1873-1950) Danish poet, novelist and essayist, awarded the Nobel Prize for Literature in 1944. He is best known for *Den Lange Rejse* (6 vols 1908-22 Denmark; all but vol 5 trans Arthur G. Chater, vols 1-2 as *The Long Journey: Fire and Ice* 1922 UK, vols 3-4 as *The Cimbrians: The Long Journey II* 1923 UK, and vol 6 as *Christopher Columbus: The Long Journey III* 1924 UK; vol 5, *Skibet* ["The Ship"] [1912], remains untranslated), an

epic myth spanning humanity's development from its origins in a temperate Scandinavian Eden before the Ice Age through to the threshold of modern times with the explorations of Christopher Columbus. The translated portions were later released in 1 vol as *The Long Journey* (omni 1933 US). J.V.J. also published several collections of "myths" that remain untranslated. [JE] See also: ANTHROPOLOGY; ORIGIN OF MAN.

JENSEN, KRIS

(1953-) US writer who began publishing sf with her first novel, the Ardel sequence comprising *FreeMaster* (1990), *Mentor* (1991) and *Healer* (1993), in which an unscrupulous interstellar corporation is baulked from exploiting a mineral-rich planet inhabited by ALIENS with PSI POWERS. Of greatest interest are the detailed descriptions of the strange BIOLOGY of the Ardellans, which help give the sequence its PLANETARY-ROMANCE flavour. [JC]

JENSEN, NORMAN

[r] ROBERT HALE LIMITED.

JEPPSON, J.O.

[r] Janet ASIMOV.

JEPSON, EDGAR (ALFRED)

(1863-1938) UK schoolteacher and writer, prolific in various popular genres from 1895; some of his books are of sf interest. Half- RURITANIA, half- DYSTOPIA, the imaginary land-locked Asian country in *The Keepers of the People* (1898) has been ruled for generations by Englishmen; the novel encroaches on sf from several angles. *The Horned Shepherd* (1904) and *No. 19* (1910; vt *The Garden at 19* 1910 US) are both fantasies, the first about a new incarnation of a god which has also been Pan, the second about the attempts of a magus (who resembles Aleister Crowley [1875-1947]) to summon Pan. In *The Moon Gods* (1930), a lost-race (LOST WORLDS) tale, 20th-century aviators discover a Carthaginian city in the African desert. [JC/BS]

JEROME, OWEN FOX

Oscar J. FRIEND.

JERSILD, P(ER) C(HRISTIAN)

(1935-) Swedish writer whose translated sf novels - *En levande sjal* (1980; trans Rika Lesser as *A Living Soul* 1988 UK) and *Efter Floden* (1982; trans Lone Thygesen Blecher and George Blecher as *After the Flood* 1986 US) - are both DYSTOPIAS, the latter a post- HOLOCAUST tale of some ferocity. [JC]

JESCHKE, WOLFGANG

(1936-) German editor and writer, winner of the 1987 Harrison AWARD for achievements in international sf. He began to publish sf with "Die Anderen" ["The Others"] in 1959, but first became strongly involved with the genre in 1969 when, while working as co-editor of *Kinders Literaturlexikon* he edited as a freelancer the *Science Fiction fur Kenner* series for Lichtenberg Verlag. In 1973 he took over Heyne Verlag's sf publishing line, a job he retains (1992) and in which he has been responsible for introducing many important works to the German market. He

has also edited more than 100 anthologies, from 1970 on, many containing material translated from the English. WJ's first novel was *Der Letzte Tag der Schopfung* (1981; trans Gertrud Mander as *The Last Day of Creation* 1982 UK), in which a US group uses TIME TRAVEL to acquire Middle Eastern oil, evading the problems posed by modern-day local governments; *TIME PARADOXES* ensue. In *Midas* (1987; author's trans 1990 UK), set on a NEAR-FUTURE Earth which has suffered severe ecological damage, a primitive matter-replication technique has been discovered, but the copies of humans thus produced are crude and cannot live longer than a few months. WJ's writing is humanist in orientation and strongly (on occasion overbearingly) ironic in tone, but is sometimes betrayed by a certain lack of subtlety and originality. [NT]See also: CLONES; GERMANY; POWER SOURCES.

JESSEL, JOHN

[s] Stanley G. WEINBAUM.

JE T'AIME, JE T'AIME

Film (1967). Parc/Fox Europa. Dir Alain Resnais, starring Claude Rich, Olga Georges-Picot, Anouk Ferjac. Screenplay Resnais, Jacques STERNBERG. 94 mins, cut to 82 mins. Colour. A failed suicide is co-opted into a dangerous scientific experiment; he is to be sent back into the past for one minute. The experiment has proved safe for mice, but humans are conscious of time and memory in a way that animals are not, and the protagonist is trapped in a series of not-quite-random time oscillations around the point of an unhappy love affair. Where Resnais's previous study of time and memory, *Last Year at Marienbad* (1961), was a triumph for the cameraman, this film is a triumph for the editor. Some of the oscillations last only seconds, some minutes, sometimes replaying the same scene (with subtle variations) several times over, sometimes visiting fantasy events as if this second time around they were real - memory, with its distortions, carrying the same metaphysical weight as fact. The TIME MACHINE itself is organic and womb-like, and from it the hero emerges into the amniotic fluid of the sea. This is a very striking sf film, though only almost incidentally sf; it uses the idea of TIME TRAVEL to explore the extent to which we can, or cannot, withdraw ourselves from our own pasts, and hence from the processes of time. The screenwriter, Sternberg, is an sf writer of distinction and sophistication. [PN]See also: CINEMA.

JETEE, LA

(vt *The Jetty*; vt *The Pier*) Short film (1963). Argos/Arcturus Films. Produced, written and dir Chris Marker, starring Helene Chatelain, Jacques Ledoux, Davos Hanich. 29 mins. B/w. This celebrated French short film is often seen as a breakthrough in sf narration that has yet to be equalled. With voice-over narration and composed entirely of still photographs (though there is one brief sequence - a close-up of a girl winking - that gives the impression of movement) the film is nearer in theme and approach to the NEW-WAVE sf of the 1960s than to traditional TIME-TRAVEL stories in the CINEMA or in literature. Set in a post- HOLOCAUST Paris where the concept of passing time is disappearing and the principle of cause-and-effect is therefore being lost, this subtle and complex film shows an attempt being made to send back in time a man obsessed by his memory of a woman's face, since the existence of memory suggests that time

still exists for him. He is also sent into the future where he finds the remembered face is a witness to his own death. [JB/PN]

JETER, K(EVIN) W.

(1950-) US writer of importance as an author of horror novels, the highly charged claustrophobia of his style fitting the essential affect of that genre rather better than it does sf. His early work, generally conceived in sf terms, gives off an air of hectic congestion which sometimes interferes with the presentation of ideas, the articulation of a barrier through which to penetrate; for him, as for most HORROR writers, CONCEPTUAL BREAKTHROUGHS tend to end in tears. Nevertheless, his first published novel, *Seeklight* (1975 Canada), fascinatingly combines tried-and-true narrative conventions (its protagonist is the scion of an ex-leader, whose rivals need to kill the lad) with exorbitant reality-twists (a sociologist intermittently uses advanced technology to intervene and to make queries about the action). *The Dreamfields* (1976 Canada) similarly juxtaposes contrasting realities, in this case a land of dreams occupied by ALIENS but dominated by sick human teenagers. *Morlock Night* (1979) is a sequel to H.G. WELLS's *THE TIME MACHINE* (1895) which both extends the original story and, by conveying a Morlock invasion backwards in time to the sewers of late 19th-century-London, may well constitute the first significant STEAMPUNK novel, long before the flush period of that subgenre in the late 1980s. But *Soul Eater* (1983), KWJ's first outright horror novel, is more accomplished than any of these. KWJ's most significant sf may lie in the thematic trilogy comprising *Dr Adder* (1984) - his first novel (written 1972), long left unpublished because of its sometimes turgid violence - *The Glass Hammer* (1985) and *Death Arms* (1987 UK). Philip K. DICK read *Dr Adder* in manuscript and for years advocated it; and it is clear why. Though the novel clearly prefigures the under-soil airlessness of the best urban CYBERPUNK, it even more clearly serves as a bridge between the defiant reality-testing PARANOIA of Dick's characters and the doomed realpolitiking of the surrendered souls who dwell in post-1984 urban sprawls. In each of these convoluted tales, set in a devastated Somme-like NEAR-FUTURE USA, KWJ's characters seem to vacillate between the sf traditions of resistance and cyberpunk quietism. In worlds like these, the intermittent flashes of sf imagery or content are unlasting consolations. Although sometimes technically sf, KWJ's later novels have altogether abandoned the consolations of sf. *Dark Seeker* (1987) is a horror novel about DRUGS which invokes Charles Manson. *Infernal Devices: A Mad Victorian Fantasy* (1987) is another steampunk tale, quite hilarious at points, but not reassuring in its use of sf devices that its protagonist signally misunderstands. *Mantis* (1987) is again horror, as are *In the Land of the Dead* (1989 UK), *The Night Man* (1990) and *Wolf Flow* (1992). Only *Madlands* (1991), set in a parodic, ENTROPY-choked Disneyland-like Los Angeles, and *Farewell Horizontal* (1989), set in the FAR FUTURE, are sf, and their technical adventurousness does not dispel the sense that KWJ is making a slow farewell to the genre. [JC]Other works: *Alien Nation #2: Dark Horizon* * (1993); *Star Trek: Deep Space Nine #3: Bloodletter* * (1993). About the author: *A Checklist of K.W. Jeter* (1991 chap) by Tom Joyce and Christopher P. STEPHENS. See also: CRIME AND PUNISHMENT; FANTASY; GOTHIC SF; MEDICINE; PSYCHOLOGY.

JEURY, MICHEL
FRANCE.

JEWISH WRITERS

It's well known that many female SF writers had to use pseudonyms in order to get work published. It's less known that Jewish SF writers were pressured to use less Jewish-sounding names for their bylines. John W. Campbell, editor of Astounding, even tried to convince Isaac Asimov to adopt a less "foreign-sounding" byline. However, Campbell was among the few who allowed writer Horace Gold to use his own name on his stories. The reason? Gold had taken the pseudonym "Clyde Crane Campbell" and John Campbell didn't want someone with his own name in the pages of Astounding.

J. LLOYD EATON AWARD
AWARDS.

J. LLOYD EATON COLLECTION

In 1969 the late Donald Wilson, University Librarian at the University of California, Riverside Library (now the Tomas Rivera Library), purchased a COLLECTION of 7500 volumes of sf and fantasy from the estate of J. Lloyd Eaton MD. Eaton had for several decades collected many rare and unusual monographs of sf, including such items as Varney the Vampire (1847) and Frank AUBREY's King of the Dead (1903), ceasing his active interest in the field about 1956. For the first decade after its purchase, the collection remained in storage, uncatalogued and inaccessible to researchers. In 1978 Robert REGINALD and George Edgar SLUSSER successfully proposed an annual conference centred on the Eaton Collection, and in 1979 Slusser was appointed Curator. Simultaneously the Rivera Library began actively cataloguing the newer parts of the collection, while making retrospective purchases of missing items and adding current materials. Cataloguing of the old books was completed with a federal grant in the late 1980s; unfortunately, the Dictionary Catalog of the J. Lloyd Eaton Collection of Science Fiction and Fantasy Literature, University of California, Riverside (3 vols 1982) was compiled long before the task had been completed. The collection now includes 100,000+ items, having been supplemented with the acquisition of the Douglas MENVILLE collection (10,000 paperbacks and esoterica), the Terry CARR collection (20,000 FANZINES), the Rick Sneary (1927-1990) collection (40,000 fanzines) and the manuscripts of several contemporary sf writers, plus 10,000 superhero COMICS, 10,000 boys' books, 500 shooting scripts of sf and fantasy films, the Michael CASSUTT collection of screenplays and teleplays, and some foreign-language material. Access to this, the largest academic library collection of fantastic literature, is available to legitimate scholars and to members of the university community. [RR]

JOE 90

UK tv series (1968-9). A Century 21 Production for ITC/ATV. Devised by

Gerry and Sylvia ANDERSON, prod David Lane (with Reg Hill as executive prod). Script editor Tony Barwick. Dirs included Peter Anderson, Leo Eaton, Alan Perry, Desmond Saunders. Writers included Barwick, Shane Rimmer, Gerry and Sylvia Anderson. 30 25min episodes. Colour. This was the last and one of the least popular of the sf animated-puppet series made for children in "SuperMarionation" by the Andersons - though TERRAHAWKS (1983-6), in which the puppets were electronically operated in a process Anderson called "Supermacromation", was still to come. The hero, Joe, is a 9-year-old boy whose scientist father has devised a method of transferring specialist brain patterns into his mind, armed with which (looking innocent) he becomes a test pilot, a brain surgeon and so on, working as a special agent for the World Intelligence Network. J90 collapsed after 1 season, perhaps because it appeared more childish than most of its immediate predecessors in the SuperMarionation tv shows. There were two novelizations: Joe 90 and the Raiders * (1968) by Tom Sullivan and Joe 90 in Revenge * (1969) by Howard Elson. [PN]

JOHANNESON, OLOF

Pseudonym of Swedish scientist and writer Hannes Olof Gosta Alfven (1908-1995), winner of the 1970 Nobel Prize for Physics. His sf novel, Sagan om den stora datamasknen (1966; trans as The Big Computer: A Vision 1968 UK; vt The Tale of the Great Computer: A Vision 1968 US; vt The End of Man? 1969 US) purports to be a history of Earth written in the future by a COMPUTER (or perhaps by a human). Its drily witty fundamental premise is that mankind is merely an intermediate step in the EVOLUTION of MACHINES. [JC/PN] Other works: Varlden-spegelvarlden: Kosmologi och antimateria (1966 trans as Worlds-Antiworlds: Antimatter in Cosmology 1966 US), as by H. Alfven, nonfiction. See also: AUTOMATION; CYBERNETICS; INTELLIGENCE.

JOHANSSON, GEORGE

[r] SCANDINAVIA.

JOHNS, AYRESOME

George LOCKE.

JOHNS, KENNETH

Pseudonym used for collaborations between Kenneth BULMER and John NEWMAN on a long series of science-fact articles for NW and Nebula 1955-61. [JC]

JOHNS, MARSTON

R.L. FANTHORPE; John E. MULLER.

JOHNS, [Captain] W(ILLIAM) E(ARLE)

(1893-1968) UK writer who began producing boys' action adventures in 1930; his total output exceeded 200 volumes. He became famous in particular for the 80 or more Biggles novels, of which two - Biggles Hits the Trail (1935) and Biggles - Charter Pilot: The Adventures of Biggles ? Co on a World-Wide Cruise of Scientific Investigation (1943) - have some sf content. Of WEJ's other works, of particular sf interest is the "Tiger" Clinton sequence: Kings of Space (1954), Return to Mars (1955), Now to the Stars (1956), To Outer Space (1957), The Edge of Beyond (1958), The Death Rays of Ardilla (1959), To Worlds Unknown (1960), The Quest for the

Perfect Planet (1961), Worlds of Wonder (coll 1962) and The Man who Vanished into Space (1963). These novels feature "Tiger" Clinton, his son Rex and Professor Brane, the first humans in space, who meet strange new races and become caught up in interplanetary war. [AC/JC]

JOHNSON, DENIS

(1949-) US writer whose second novel, Fiskadoro (1985), is set in post-HOLOCAUST Key West, where an aged inhabitant confuses the desolate USA with Vietnam, where she lived during the US action. For sf readers, that is likely to be the only innovation apparent in this intensely conceived tale, but it is striking. [JC]

JOHNSON, GEORGE CLAYTON

(1929-) US writer who wrote 3 sf stories for GAMMA 1963-5 and was co-author with William F. NOLAN of Logan's Run (1967), which was filmed as LOGAN'S RUN (1976) and inspired a tv series. Scripts and Stories Written for The Twilight Zone (coll 1977) and Writing for The Twilight Zone (coll 1981) assemble scripts created for that programme. He also wrote at least one script for STAR TREK. [JC]See also: OVERPOPULATION.

JOHNSON, JAMES B(LAIR)

(1944-) US writer who began publishing sf with his first novel, Daystar and Shadow (1981), in which a post- HOLOCAUST USA is depicted. More interesting, though the voltage of innovation remains low, is Trekmaster (1987), set on a rediscovered colony planet whose inhabitants are divided over the issue of reunion with the Galactic Federation; included are some dynastic romance, a rite of passage and a cohabiting ALIEN species. Further novels in the same general vein, though showing an increasing competence, are Mindhopper (1988), Habu (1989) and A World Lost (1991). [JC]

JOHNSON, KEN

Working name of US bibliographer Kenneth R. Johnson (? -), whose main work, undertaken with Jerry BOYAJIAN, has been a series of indexes to the SF MAGAZINES: Index to the Science Fiction Magazines 1977 (1982 chap), 1978 (1982 chap), 1979 (1981 chap), 1980 (1981 chap), 1981 (1982 chap), 1982 (1983 chap) and 1984 (1985 chap). Both authors also began an associated enterprise comprising Index to the Semi-Professional Fantasy Magazines, 1982 (1983 chap) and Index to the Semi-Professional Magazines, 1983 (1984 chap). With Hal W. HALL and George Michaels he compiled The Science Fiction Magazines: A Bibliographical Checklist of Titles and Issues through 1983 (1983 chap).KJ is not to be confused with the UK horror writer Kenneth R(ayner) Johnson (? -), author of Zoltan, Hound of Dracula * (1977; vt Hounds of Dracula 1977 US; vt Dracula's Dog 1977 US), The Succubus (1979) and The Cheshire Cat (1983 US). [JC]

JOHNSON, L(EROY) P(ETER) V(ERNON)

(1905-) UK writer whose In the Time of the Thetans (1961) features unpleasant Thetans, who resemble starfish. [JC]

JOHNSON, OWEN M(cMAHON)

(1878-1952) US writer in various genres. The protagonist of The Coming of the Amazons: A Satiristic Speculation on the Scientific Future of

Civilization (1931) finds on awakening in AD2181 from SUSPENDED ANIMATION that women rule and that a simple sex-role reversal accounts for humiliating changes in masculine behaviour. He resists vigorously, but without success. Unlike most stories on this theme, the book treats women with some sympathy. [JC]

JOHNSON, SAMUEL

(1709-1784) UK poet, critic, lexicographer and author of one novel, *The Prince of Abissinia: A Tale* (1759; rev 1759; vt *The History of Rasselas, Prince of Abissinia: An Asiatic Tale* 1768 US; vt *The History of Rasselas, Prince of Abissinia: A Tale* 1787 UK), written to pay for his mother's funeral (he got ps100 for the first printing). It is of interest to the student of PROTO SCIENCE FICTION for its sustained meditation on the nature of and chances of obtaining human happiness (see also UTOPIAS; DYSTOPIAS). The initial setting of the tale is a secret valley, from which Rasselas hopes to escape in a flying machine (in the event it fails - SJ's spirit was inimical to unsustained flights of fancy); also featured is an astronomer who believes himself responsible for weather control. The book is an archetypal example of the important sf theme of CONCEPTUAL BREAKTHROUGH. The most attractive 20th-century critical edition was ed 1927 by R.W. Chapman; a useful recent critical edition was ed 1977 by Geoffrey Tillotson and Brian Jenkins. [JC/PN] See also: ASTRONOMY; FANTASTIC VOYAGES.

JOHNSTONE, D(AVID) LAWSON

(? -?) UK writer, mostly of novels for older children, including *The Mountain Kingdom* (1888), a Jules VERNE-style LOST-WORLD tale whose young protagonists travel into the Kingdom of the Smoking Mountains (in Tibet), which is inhabited by descendents of ancient Greeks; our heroes thwart a rebellion against the monarch. *The Paradise of the North* (1890; cut 1894) similarly uncovers a lost world, but this time at the North Pole and inhabited by Norsemen. *The White Princess of the Hidden City* (1898) uncovers yet another, now in Central America and inhabited by Whites whose claim to the Americas - in accordance with 19th-century fantasies of racial justice - is found to antedate that of the Amerindians. [JC]

JOHNSTONE, WILLIAM W.

(1938-) US writer who has written at least 85 novels since his first in 1980, being best known for Westerns; he has also written some horror. His Ashes sequence of SURVIVALIST-FICTION military post- HOLOCAUST sf novels comprises *Out of the Ashes* (1983), *Fire in the Ashes* (1984), *Anarchy in the Ashes* (1984), *Blood in the Ashes* (1985), *Alone in the Ashes* (1985), *Wind in the Ashes* (1986), *Smoke from the Ashes* (1987), *Danger in the Ashes* (1988), *Valor in the Ashes* (1988), *Trapped in the Ashes* (1989), *Death in the Ashes* (1990), *Survival in the Ashes* (1990), *Fury in the Ashes* (1991), *Courage in the Ashes* (1992), *Terror in the Ashes* (1992), *Battle in the Ashes* (1993), *Vengeance in the Ashes* (1993), *Flames from the Ashes* (1993), *Treason in the Ashes* (1994) and *D-Day in the Ashes* (1994). The premise of the first volume is, perhaps, surprisingly frank: shocked by the imposition of gun control, a group of patriotic US citizens bring about the nuclear holocaust in the expectation that a better world will, phoenix-style, be born. The remaining volumes of the sequence attempt to

demonstrate how right they were. [JC]Other works: The Devil series, comprising The Devil's Kiss (1980), The Devil's Heart (1983), The Devil's Touch (1984) and The Devil's Cat (1987); Wolfsbane (1982); The Uninvited (1982); Crying Shame (1983); Nursery (1983); Sweet Dreams (1985); Cat's Cradle (1986); Jack-in-the-Box (1986); Rockinghorse (1986); Baby Grand (1987) with Joseph E. Keene; Sandman (1988); Carnival (1989); Cat's Eye (1989); Darkly the Thunder (1990); Watchers in the Woods (1991); The Devil's Laughter (1992); Them (1992); Bats (1993); Night Mask (1994).

JOHN W. CAMPBELL AWARD

Award for the best new sf writer of the year, selected by votes of sf fans and presented at the World Sf CONVENTION during the HUGO ceremony. Sponsored by Conde-Nast, publishers of Analog, the JWCA was instituted in 1972 in tribute to John W. CAMPBELL Jr, its celebrated editor, who died in 1971. Davis Publications continued the sponsorship when Analog passed into their hands. The anthology series NEW VOICES, ed George R.R. MARTIN, was devoted to printing original novellas (written a few years later) by, in each volume, a given year's finalists; it ceased after 5 vols. Several of the winners were at the time of receiving the JWCA primarily fantasy writers. [PR/PN]Winners:1973: Jerry POURNELLE1974: Lisa TUTTLE and Spider ROBINSON1975: P.J. Plauger1976: Tom REAMY1977: C.J. CHERRYH1978: Orson Scott CARD1979: Stephen R. DONALDSON1980: Barry B. LONGYEAR1981: Somtow Sucharitkul (S.P. SOMTOW)1982: Alexis GILLILAND1983: Paul O. JOHN W. CAMPBELL MEMORIAL AWARD

Created by Harry HARRISON and Brian W. ALDISS, this is given annually in July for the best sf novel of the previous year published in English, selected by a committee of academic critics and sf writers. The membership of the jury has undergone a number of changes, and the award has been variously administered from first the USA, then the UK, Ireland, Sweden and then back to the USA at the University of Kansas at Lawrence in 1979, since when the committee has been chaired by James E. GUNN. The selections have at times been criticized as overintellectual; the first was judged by some to be untrue to the memory of Campbell. (In response, one judge commented that it was no good trying to guess what Campbell would have chosen; the only honest thing to do was to choose for oneself: "You can't second-guess the dead.") The award, which has not been well publicized, got off to a shaky start, but there is certainly room for an award voted on by a small panel of experts, as opposed to fans (the HUGO) or writers (the NEBULA). The winning books have generally been in interesting contrast to the Hugo and Nebula winners, and include distinguished work that might otherwise have largely escaped notice. [PN]Winners:1973: Barry N. MALZBERG, Beyond Apollo; special trophy for excellence in writing to Robert SILVERBERG1974: Arthur C. CLARKE, RENDEZVOUS WITH RAMA, and Robert MERLE, Malevil (tie)1975: Philip K. DICK, Flow My Tears, the Policeman Said1976: Wilson TUCKER, The Year of the Quiet Sun (special retrospective award)1977: Kingsley AMIS, The Alteration1978: Frederik POHL, GATEWAY1979:

Michael MOORCOCK, Gloriana 1980: Thomas M. DISCH, ON WINGS OF SONG 1981: Gregory BENFORD, TIMESCAPE 1982: Russell HOBAN, RIDDLEY WALKER 1983: Brian W. JOKAI, MOR or MAURUS

(1825-1904) Very prolific Hungarian novelist, the dominant literary figure of 19th-century HUNGARY, frequently translated and still very highly regarded. Many of his 100 or more novels are violent historical tales, full of catastrophic incident. *Az aranyember* (1872; trans Mrs H. Kennard as *Timar's Two Worlds* 1888 UK), which contrasts a hectic and hysterical urban life with an idyllic UTOPIA established on an "ownerless island" in the Danube, is not really sf, despite the title of its first English translation. MJ did, however, write a number of anticipations in novels and in short fiction, few of which have been translated into English but many into German. *Tales from Jokai* (coll trans R. Nisbet Bain 1904 UK) contains "The City and the Beast" (1858), which deals with ATLANTIS and its destruction, plus three contes cruels. An untranslated novel, *Oceania* (1846), is also about Atlantis. The most important sf by MJ, likewise untranslated into English, is *A jovo szazad regenye* ["The Novel of the Next Century"] (1872), a dazzlingly inventive 3-vol novel of the future. *Egesz az eszaki polusig* ["All the Way to the North Pole"] (1876) is also sf, featuring SUSPENDED ANIMATION; *Ahol a penz nem Isten* ["Where Money is not a God"] (1904) is a utopian ROBINSONADE; *Fekete gyemantok* (1870; trans A. Gerard as *Black Diamonds* 1896) has a scientist seeking to create a utopia; it is partly set in an Arctic sea. [PN/JC] Other work: *Told by the Death's Head* (trans 1902 of *Egy hirhedett kalandor a tizenhetedil szazadbol* 1904).

JONES, D(ENNIS) F(ELTHAM)

(1917-1981) UK writer who served as an officer in the Royal Navy in WWII and was variously employed afterwards. He began publishing sf with the first - and best - volume of his *Colossus* trilogy, *Colossus* (1966), effectively filmed as *COLOSSUS, THE FORBIN PROJECT* (1969). In both book and film, Charles Forbin has helped to create a master COMPUTER designed to coordinate all the defences of the Western World; however, the Soviets have been building a similar computer, *Guardian*. In an impressive scene, the two computers exchange information. Soon *Colossus* gains consciousness and takes over the world. The sequels, *The Fall of Colossus* (1974 US) and *Colossus and the Crab* (1977 US), expand from the first volume (in the process diluting its admonitory impact) by introducing complicated plots, religious sects that worship *Colossus*, and irritated Martians; ultimately everything comes to a transcendental stop. Some of DFJ's other novels are of interest. In *Implosion* (1967) most women have become sterile, those who remain fertile being tied to a grimly DYSTOPIAN regime. *Denver is Missing* (1971 US; vt *Don't Pick the Flowers* 1971 UK) subjects the city to

geological devastation. *Earth Has Been Found* (1979 US; vt *Xeno* 1979 UK) burdens an unsuspecting Earth with an alien **INVASION**. All these later novels succumb with excessive ease to a slick gloominess, caught in which his characters show little scope for action or development, and by the end of his career his work had lost most of its initial glum panache.

[JC]Other works: *The Floating Zombie* (1975); *Bound in Time* (1981). See also: **DISASTER**.

JONES, DIANA WYNNE

(1934-) UK writer whose name is sometimes incorrectly rendered as Diana Wynne-Jones, although not on her books; probably the premier UK writer of children's **FANTASY** today. She began her writing career as a playwright, with three plays produced in London 1967-70, then published her first novel (for adults and not sf), *Changeover* (1970). Her second, *Wilkin's Tooth* (1973; vt *Witch's Business* 1974 US), was for children (as opposed to teenagers), as were her next half-dozen or so. She hit her stride with her third novel, *The Ogre Downstairs* (1974), which is very funny indeed about the results of children playing with a magic alchemy set while at the same time dealing honestly and movingly with some quite difficult human problems. DWJ went on to write stories which, no matter how indirect or devious their plots, always maintain an extraordinarily clear-sighted directness about sometimes painful human relationships. All her work for children is fantastic, and most is shot through with **HUMOUR**; some is fantasy with sf elements (precognition, **ALTERNATE WORLDS**); some is borderline sf; some is sf proper. *Dogsbody* (1975), borderline sf, features the incarnation of the star Sirius, exiled for an alleged murder, into the body of a terrestrial dog. *The Homeward Bounders* (1981) features a child trapped in a seemingly endless series of **PARALLEL WORLDS**. Perhaps DWJ's best sf novel is *Archer's Goon* (1984), a splendidly convoluted mystery involving **TIME PARADOXES**, alternate worlds, **PARANOIA**, writer's block and a cheerful thug; it was dramatized by the BBC as a six-part tv serial in 1992. *A Tale of Time City* (1987), her most overtly sciencefictional story, concerns a city outside time having trouble with the fabric of reality as it sends patrollers up and down the time-stream. Fine fantasies from the 1970s include: *Eight Days of Luke* (1975), which has Norse gods amusingly manifest on Earth; the Dalemark sequence, comprising *Cart and Cwiddler* (1975), *Drowned Ammet* (1977), *The Spellcoats* (1979) - one of her best books, being set in the mythic prehistory of the other two - and *The Crown of Dalemark* (1993); and *Power of Three* (1976), which regards humans from an alien (or fairy) perspective. Through the 1980s DWJ's target audience seemed, mostly, to become older. This is the case with *The Time of the Ghost* (1981), perhaps her darkest work, and especially of her moving reworking of the old ballad "Tam Lin" in *Fire and Hemlock* (1985). Other good books of the period include the intricate *Howl's Moving Castle* (1986) and its sequel *Castle in the Air* (1990). Her best-known series is the Chrestomanci sequence: *Charmed Life* (1977), *The Magicians of Caprona* (1980), *Witch Week* (1982) and *The Lives of Christopher Chant* (1988 US); Chrestomanci is an enchanter who polices **MAGIC** across the parallel worlds. *Black Maria* (1991; vt *Aunt Maria* 1991 US) has children trapped in a seaside town held under the magical sway of their appalling aunt. *Hidden Turnings* (anth 1989) is an **ORIGINAL ANTHOLOGY** of fantasy stories for

teenagers. A new departure is DWJ's fantasy for adults *A Sudden Wild Magic* (1992 US), in which an alternate world planet has been using Earth as a testing ground, thus generating much of the strife and tragedy of Earth's history. [PN] Other works: *Who Got Rid of Angus Flint?* (1978 chap); *The Four Grannies* (1980 chap); *Warlock at the Wheel, and Other Stories* (coll 1984), containing a Chrestomanci story; *The Skivers' Guide* (1984); *Wild Robert* (1989 chap); *Chair Person* (1989 chap); *Hexwood* (1993); *Fantasy Stories* (anth 1994), containing reprints. See also: CHILDREN'S SF; GODS AND DEMONS; MILFORD SCIENCE FICTION WRITERS' CONFERENCE; MYTHOLOGY.

JONES, EDDIE

(1935-) UK illustrator. One of the most prolific UK sf artists, EJ is also one of the few in the field to be self-taught. His first professional work was published in 1958 in *Nebula* and *NW*. He illustrated part-time until 1969, when he became art director for *VISION OF TOMORROW*. He has done sf covers for many publishers in the UK and Germany - notably Sphere Books in the UK and Bastei Verlag, Fischer and Pabel in Germany - as well as elsewhere, including the USA. His style is representational and uses rich, glowing colours; he is best known for SPACESHIPS and other forms of space hardware. [JG]

JONES, (THOMAS FREDERICK) GONNER

(? -) UK writer of *The Dome* (1968), in which the eponymous brain is in charge of a future city. [PN]

JONES, GWYNETH (ANN)

(1952-) UK writer who became best known in the 1980s for three complex adult sf novels, though most of her books have been juveniles, beginning with *Water in the Air* (1977), a fantasy. From her fourth novel, *Dear Hill* (1980), she has written sf and fantasy exclusively. *Ally Ally Aster* (1981) and *The Alder Tree* (1982), both as by Ann Halam, exploit Norse and Gothic material. *King Death's Garden* (1986), as by Halam, is a darkly subtle, smoothly stark ghost story set in Brighton, where GJ lived. Set in post-HOLOCAUST Inland, which is governed on deep-ecology lines by women, the Zanne series - *The Daymaker* (1987), *Transformations* (1988) and *The Skybreaker* (1990), all as by Halam - is bracingly sf. Young rebellious Zanne slowly learns to control her innate rapport with the forbidden high-tech artifacts of the old patriarchal world-destroying hegemony, and becomes, willy-nilly and by protracted stages, an active agent in the sane preservation of Inland. GJ's only 1980s juvenile under her own name, *The Hidden Ones* (1988), is a contemporary urban fantasy. In *Dinosaur Junction* (1992), as Halam, the young protagonist is confronted with dilemmas relating to TIME TRAVEL and meets a dinosaur. GJ's first novel for adults, *DIVINE ENDURANCE* (1984), remains her most widely admired. Like the Zanne books, it is set in a post-holocaust land governed by a matriarchy, but neither setting nor premise are presented with the clarity appropriate in a juvenile text. No dates are given, but GJ's enormously complex Southeast Asia venue has a dying-Earth (FAR FUTURE) feel; and the matriarchical society she depicts is riven by profound ambivalences. The protagonist, a female android named Chosen Among the Beautiful, and the eponymous cat which accompanies her, dangerously agitate the scene by arriving in it, and a civil conflict begins to devastate the long polity of the land. The

hard melancholy and sustained density of the book are unique in recent sf. Technically a sequel, *Flowerdust* (1993) - the title refers to a drug - expands a background episode from the first book. *Escape Plans* (1986) attempts some of the same density of effect through an acronym-heavy style and a bruising presentation of the COMPUTER-run DYSTOPIAN world in which the action takes place, but the sacrificial descent from other-world luxury of the female protagonist and her implication in an inevitable revolt have little of the resonance of her predecessor's structurally identical gift of self. *Kairos* (1988), along with the first two books - *Flowerdust* is a sidebar title, and should not be considered part of the pattern being described - makes up a kind of thematic trilogy featuring profoundly divided women who descend into the world and redeem it - is set in a NEAR-FUTURE UK degenerating into fascism or anarchy. The title of the book is a theological term designating the moment of fullness in time when Christ appears, and clearly glosses the dramatic centre of each volume of the implied trilogy. In this case the female protagonist descends into the disintegrating UK's netherworld through ingesting a drug, *Kairos*, which literally recasts reality around her. The world she creates is cleansed of the grosser forms of evil. *WHITE QUEEN* (1991) moves beyond the pattern of the previous books, confronting its protagonists (and the planet) with an INVASION of ALIENS who themselves rewrite human perceptions of, and therefore the rules that bind, reality. In 1992 the book shared the first James Tiptree, Jr. Award with Eleanor ARNASON's *A WOMAN OF THE IRON PEOPLE* (1991). A sequel, *North Wind* (1994), reworks the basic thematic material some decades further into the ambivalent engagement of human and alien. In her adult novels GJ is a writer of nearly unforgiving intensity, and on occasion an incompetent story-teller; her very occasional short fiction, assembled as *Identifying the Object* (coll 1993 chap US), confirms a sense that she is most comfortable at lengths which give her room to think hard, and perhaps recklessly. But the rewards for understanding her are so considerable that the task of learning how to do so seems light enough. [JC]Other works: *The Influence of Ironwood* (1978) and *The Exchange* (1979), associational juveniles. See also: AUTOMATION; CYBORGS; INTERZONE; WOMEN AS PORTRAYED IN SCIENCE FICTION.

JONES, LANGDON

(1942-) UK short-story writer, editor and musician, strongly associated with *NEW WORLDS* during its NEW-WAVE period both as contributor - he published all his sf stories there, beginning with "Storm Water Tunnel" in 1964 - and in various editorial capacities. His most memorable work, most of it experimental in form and characterized by a strongly angular narrative style, appears in *The Eye of the Lens* (coll 1972). LJ's wide taste as an editor was demonstrated in *The New SF* (anth 1969); he also collaborated with Michael MOORCOCK in assembling *The Nature of the Catastrophe* (anth 1971), which contained a number of Jerry Cornelius stories from NW written by Moorcock and others. The first published version of Mervyn PEAKE's *Titus Alone* (1959) had been heavily edited because of Peake's degenerative illness, and LJ was responsible for the reconstruction work resulting in the posthumous 1970 publication of the definitive version of the book. [JC]See also: ARTS; MUSIC.

JONES, MARGARET

(? -) UK writer and lecturer in human communication studies. In *The Day They Put Humpty Together Again* (1968; vt *Transplant* 1968 US) prosthetic-surgery techniques are used to wire an artist's head to a criminal's libidinous torso. *Through the Budgerigar* (1970) is a fantasy. [JC]

JONES, MERVYN

(1922-) UK writer best known for his many novels outside the sf field and for journalism with the political magazine *New Statesman*. *On the Last Day* (1958) is a NEAR-FUTURE story about attempts during WWII to build a new intercontinental missile. [JC]

JONES, NEIL R(ONALD)

(1909-1988) US writer who until his retirement in 1973 worked as a New York State unemployment insurance claims investigator. His first story, "The Death's Head Meteor" (the first sf story to use the word "astronaut") for *Air Wonder Stories* in 1930, shares with almost all his fiction a very generalized common background, a future HISTORY-one of the earliest seen in US genre sf - which is given some explanation in "Time's Mausoleum" (1933), a story from the Professor Jameson series. Against a background of epic advances and conflicts in the 24th and 26th centuries, Professor Jameson arranges for his corpse to be preserved indefinitely in orbit. After millions of years, long after all other humans have died, he is woken by the ROBOT Zoromes, which encase his brain in metal and give him the chance to travel the Universe in search of knowledge and adventure. He embraces the opportunity. The first Jameson story, "The Jameson Satellite", dates from 1931. Most of the pre-WWII stories in the series appeared in *AMZ*, and most of the somewhat inferior later instalments in *Super Science Stories* and *Astonishing Stories*. The first 16 stories of the sequence were collected much later as *The Planet of the Double Sun* (coll 1967), *The Sunless World* (coll 1967), *Space War* (coll 1967), *Twin Worlds* (coll 1967) and *Doomsday on Ajiat* (coll 1968 including 2 previously unpublished stories). The stories that did not reach book form are "The Cat-Men of Aemt" (1940), "Cosmic Derelict" (1941), "Slaves of the Unknown" (1942), "Parasite Planet" (1949), "World without Darkness" (1950), "The Mind Masters" (1950) and "The Star Killers" (1951); of the 7 further hitherto-unpublished stories "Exiles from Below" appeared in the SEMIPROZINE *Astro-Adventures* in 1987. NRJ was a vigorous, straightforward writer whose style and concerns were typical of the first blossoming of sf at the end of the 1920s. [JC] See also: CYBORGS; IMMORTALITY; UNDER THE SEA.

JONES, RAYMOND F.

(1915-1994) US writer, very active for about 15 years after he first appeared in *ASF* in 1941 with "Test of the Gods". He was virtually silent in the 1960s; some novels appeared in the 1970s. His best-known short story is the witty "Noise Level" (1952), an archetypal *ASF* tale of CONCEPTUAL BREAKTHROUGH, scientific advance taking place through destruction of a previous paradigm: SCIENTISTS are told that ANTIGRAVITY exists, and so proceed to invent it. The story had two sequels, "Trade Secret" (1953) and "The School" (1954). During his most prolific - and

most exciting - period he wrote 1 story, "Utility" (1944), under the pseudonym David Anderson. Two collections, *The Toymaker* (coll 1951) and *The Non-Statistical Man* (coll 1964), gather much of this work. RFJ's first novel, also from that time, is probably his best. *Renaissance* (1944 ASF; 1951; vt *Man of Two Worlds* 1963) is a long, complicated PARALLEL-WORLDS adventure with an exciting narrative - WAR, superscience and echoes of nuclear HOLOCAUST - and a number of lively variations on favourite sf themes. *The Alien* (1951), the story of the discovery of an ancient ALIEN artifact in the ASTEROID belt, likewise displays strong narrative drive. *This Island Earth* (1949-50 TWS; fixup 1952) begins with beleaguered ALIENS secretly using human scientists in order to resist an enemy in an intergalactic war which threatens to engulf Earth. The protagonist finally persuades them that, by allowing their tactics to be dictated by vast COMPUTERS, they have become predictable to the enemy. But he may be too late. The film version, *THIS ISLAND EARTH* (1954), begins well but loses interest when it diverges - perhaps inevitably - from the book. RFJ's 1950s juveniles are also good. They are *Son of the Stars* (1952), *Planet of Light* (1953) and *The Year when Stardust Fell* (1958). After *The Secret People* (1956; vt *The Deviates* 1959) and *The Cybernetic Brains* (1950 *Startling Stories*; 1962) RFJ became comparatively inactive, and more recent novels, like *Syn* (1969) and *Weeping May Tarry* (1978), the latter with Lester DEL REY, show a much diminished energy. Though not generally an innovator in the field, RFJ, during his first period of activity, produced solid, well crafted HARD-SF adventures. [JC/PN] Other works: *Voyage to the Bottom of the Sea* * (1965), a tie to the tv series *VOYAGE TO THE BOTTOM OF THE SEA*; *Moonbase One* (1971); *Renegades of Time* (1975 Canada); *The King of Eolim* (1975 Canada); *The River and the Dream* (1977 Canada). See also: ASTOUNDING SCIENCE-FICTION; CYBERNETICS; CYBORGS; DISCOVERY AND INVENTION; DYSTOPIAS; GREAT AND SMALL; ISLANDS; PHYSICS; POWER SOURCES; SUSPENDED ANIMATION.

JONES, RICHARD GLYN
[r] Richard GLYN JONES.

JONES, ROBERT F(RANCIS)
(1934-) US journalist (with *Time-Life*) and writer whose sf novel, *Blood Sport: A Journey up the Hassayampa* (1974; vt *Ratnose* 1975 UK), follows a man and his son up the Hassayampa River, along whose banks the future, the present and the past exist simultaneously, together with every imaginable culture as well as the villain *Ratnose*, against whom the protagonists must prove themselves. [JC]

JONG, ERICA (MANN)
(1942-) US poet and novelist, best known for the FEMINIST energy of her first novel, *Fear of Flying* (1971). Her only tale of genre interest, *Serenissima* (1987), is a timeslip fantasy with some sf language inattentively buttressing the premise. The protagonist, haunted amid the playfully sketched glitterati of the Venice film festival, slips back to the 16th century (*TIME TRAVEL*), where she meets a vacationing Shakespeare and has sex with him. Dying, she is - anticlimactically - reborn in the here and now. [JC/JG]

JORDAN, SIDNEY
[r] JEFF HAWKE.

JORGENSEN, IVAR

Floating PSEUDONYM first used in the ZIFF-DAVIS magazines AMAZING STORIES and FANTASTIC, subsequently used in IF, IMAGINATION and IMAGINATIVE TALES. Its main user was Paul W. FAIRMAN (whom see for details), who employed it for 3 books: Ten from Infinity (1963; vt The Deadly Sky 1971; vt Ten Deadly Men 1976), Rest in Agony (1963; vt The Diabolist 1972) and Whom the Gods Would Slay (1951 Fantastic Adventures; 1968). One of Fairman's stories as by IJ, "Deadly City" (1953 If), was filmed as TARGET EARTH! (1954). Other writers who may have used the name IJ include Harlan ELLISON, Randall GARRETT and Robert SILVERBERG, although IJ should not be confused with Ivar Jorgenson, a later pseudonym of Silverberg's. [BS]

JORGENSON, IVAR

[s] Robert SILVERBERG.

JOSEPH, M(ICHAEL) K(ENNEDY)

(1914-1981) UK-born and Oxford-educated New Zealand writer and professor of English; his first novels were not sf. The Hole in the Zero (1967 UK) begins as an apparently typical SPACE-OPERA adventure into further dimensions at the edge of the Universe, but quickly reveals itself as a linguistically brilliant, complex exploration of the nature of the four personalities involved as they begin out of their own resources to shape the low-probability regions into which they have tumbled. Ultimately the novel takes on allegorical overtones. As an examination of the metaphorical potentials of sf language and subject matter, it is a significant contribution to the field. In 1969 MKJ also produced a scholarly edition of Mary SHELLEY's Frankenstein(1818). [JC]Other works: The Time of Achamoth (1977).See also: FANTASTIC VOYAGES; NEW ZEALAND.

JOSIKA, MIKLOS

[r] HUNGARY.

JOURNAL OF THE FANTASTIC IN THE ARTS

US academic critical journal sponsored by the International Association for the Fantastic in the Arts, current, theoretically quarterly but irregular after the first 4 issues (1988), with a further 6 issues during 1989-1991. Then the schedule became more regular, and the journal had reached #21 (Vol 6, no 1) by 1994. Vol 1 #1-#4 published M.E. Sharpe, Inc., New York, subsequent issues by Orion Publishing, New York. Executive ed Carl B. YOKE; other eds Marshall B. TYMN, Roger SCHLOBIN and Robert A. Collins and later Charles A. Meyer.This comparatively recent addition to the specialist academic journals dealing with sf (EXTRAPOLATION; FOUNDATION; SCIENCE-FICTION STUDIES) has, on the whole, been vigorous and (mostly) eschews excessive critical jargon. Because its remit includes the whole range of the fantastic, including not only sf but also FANTASY, HORROR and FABULATION, it has a certain amplitude the others lack - usefully so in a period of literary history when generic boundaries are rapidly dissolving - but by the same token it sometimes appears unfocused. However, some of the issues have been thematic, vol 1 #4 being about POSTMODERNISM, vol 2 #2 about CINEMA, vol 2 #3 about Doris LESSING and vol

3 #1 about art, for example. The portfolios of fantastic art have been largely disastrous, but otherwise JOTFITA seems a promising addition to the field. [PN]

JOURNAL WIRED

Semi-annual SEMIPROZINE from a SMALL PRESS in paperback-book form ("bookazine"), Winter 1989-Summer/Fall 1990, 3 issues only, published and ed from California and Colorado by Andy Watson and MARK V. ZIESING. This hip, elegant and short-lived periodical ran fiction by a mixture of interesting new writers and better known names (like Paul Di Filippo, Colin GREENLAND, Rudy RUCKER and Lewis SHINER), interviews (William BURROUGHS and others) and commentary by Lucius SHEPARD and others on politics, rock'n'roll, movies and even sf. At 363pp, the last issue was very big. Some stories are sf. If the term NEW WAVE were still used, this would have been a new-wave magazine. [PN]

JOURNEY INTO SPACE

Charles CHILTON; RADIO.

JOURNEY THROUGH THE BLACK SUN

SPACE 1999.

JOURNEY TO THE CENTER OF THE EARTH

Film (1959). 20th Century-Fox. Prod Charles Brackett. Dir Henry Levin, starring Pat Boone, James Mason, Arlene Dahl, Thayer David, Peter Ronson, Diane Baker. Screenplay Walter Reisch, Brackett, based on Voyage au centre de la terre (1864) by Jules VERNE. 132 mins. Colour. A lively and literate screenplay (cowritten by producer Brackett, one of the Hollywood giants), vigorous if stereotyped characterization, good performances and a charming duck called Gertrud make this superior among the numerous Verne adaptations of the 1950s. There is a real SENSE OF WONDER in some of the underground sequences - which involve labyrinthine caverns, a great ocean at the centre of the HOLLOW EARTH, the remains of ATLANTIS and statutory dinosaurs (iguanas with fins attached) - though the special effects are uneven. The escape from the centre riding a lava jet on an Atlantean altar of serpentine up a presumably 3,900-mile (6,250km) volcanic shaft is merely absurd; but, despite plot changes - including a rival expedition led by a satisfyingly villainous Icelander played by David - JTTTCOTE, set in the 1880s, is true in spirit to its stirring original. [PN]

JOURNEY TO THE CENTER OF TIME

Film (1967). Borealis/Dorad. Dir David L. Hewitt, starring Scott Brady, Gigi Perreau, Anthony Eisley, Abraham Sofaer. Screenplay David Prentiss. 82 mins. Colour. Hewitt had been co-screenwriter and special-effects director of The TIME TRAVELERS (1964), dir Ib Melchior, and JTTTCOT is a remake of the earlier film. A pointless, low-budget exercise, certainly no better than the original, it does contain an additional sequence - a battle against a dinosaur - set in the past. [PN]

JOURNEY TO THE FAR SIDE OF THE SUN

DOPPELGANGER.

J.S. OF DALE

Pseudonym of F.J. Stimson. Robert GRANT.

JUBILEE

Film (1978). Waley-Malin Production/Megalovision. Written and dir Derek Jarman, starring Jenny Runacre, Little Nell, Toyah Willcox, Jordan, Orlando, Richard O'Brien, Ian Charleson, Adam Ant. 104 mins. Colour. This was the first solo film by Jarman, one of the doyens of gay, experimental and gender-bending cinema in the UK. The film, which displays a strong sense of irony about the glories of England, was made to be released just in time for Queen Elizabeth II's Jubilee celebrations. Queen Elizabeth I (Runacre) is given the power to glimpse the future. This is (for us) a NEAR-FUTURE London which is decayed, punk and anarchic, though retaining a certain youthful energy (most characters being in their early 20s). The forced decadence of the action is more middle-class Chelsea than streetwise, and the film - with all its orgies, its castrations, its shootings and its music arranged by Brian Eno - is theatrical high camp. [PN]

JUDD, CYRIL

Pseudonym used for their 2 collaborative novels by C.M. KORNBLUTH and Judith MERRIL (both of whom see for further details): Outpost Mars (1952; rev vt Sin in Space 1961) and Gunner Cade (1952). [BS]

JUDGE DREDD
