Judge (Joe) Dredd is an ultra-tough, mean, ruthless, granite-jawed lawman of the future Mega-City One. The strip of which he is the HERO (or maybe antihero) was created by Pat Mills, John Wagner and Carlos Ezquerra (artist). It first appeared in 2,000 AD #2 (5 Mar 1977), drawn by Mike McMahon, and more than 800 issues later continued to dominate that COMIC. In a world after the atomic HOLOCAUST, the millions of survivors are crowded into vastly overpopulated Mega- CITIES whose soaring crime rate is dealt with by the Judges, a breed of genetically selected men and (rarely) women. Dressed in black leather with massively chunky insignia and exaggerated elbow-, knee- and shoulder-pads, riding heftily armoured motorcycles with ultra-wide wheels, these law officers have the power to dole out on-the-spot sentences ranging from multi-credit fines to life sentences in far-flung penal colonies. Early stories featured an occasional sidekick, Walter the Wobot, a ROBOT valet with a speech defect. The story-lines, mostly by John Wagner and Alan Grant (variously credited to them under their own names and a number of their pseudonyms), quickly established a high standard of plotting and characterization, with a significant thread of grittily humorous social SATIRE. From this fertile source flowed a rich succession of original ideas that served to establish JD as one of the most popular comic-strip characters ever created. Among the Wagner-Grant collaborations has been "The Apocalypse War" (25 episodes, 1982), as by T.B. Grover. Throughout, both storytelling and characterization have been enriched by a strong element of continuity introduced by Pat Mills, who has also written a number of the stories, including 19 episodes of "The Cursed Earth" (25 episodes, 1978). Artists on JD have included Brian BOLLAND, Esquerra, Ian Gibson, John Higgins, Can Kennedy, Brendan McCarthy, McMahon, Colin MacNeil, Ron Smith and a host of others. A few of JD's colleagues have become prominent enough to feature in spin-off strips of their own: Judge Anderson of PSI Division, a female

Judge with PSI POWERS; Judge Death, a Judge from another DIMENSION where all lifeforms have been sentenced to death, a verdict he has been empowered to enforce throughout the universes; and Judge Armour, JD's equivalent in the city called Brit Cit. The phenomenal popularity of JD has led to a proliferation of spin-off publications, including among others 2 monthly black-and-white reprint titles (Best of 2,000 AD Monthly, which does not focus on JD, and The Complete Judge Dredd, which does) and more recently a monthly Judge Dredd, The Megazine, with mostly full-colour painted artwork, published in different formats for the UK and US editions and featuring serial stories, some starring JD, which cross over with the parent comic. Reprint books have been published by Titan Books in the The Chronicles of Judge Dredd series (begun 1981) and the Judge Dredd Graphic Paperbacks series (begun 1988), with further material constantly being added; there are also annuals, yearbooks and other titles. A separate company, Eagle Comics, was set up to exploit JD in the USA, reprinting his early 2,000 AD adventures but in colour and adapted for the US comic-book format; the practice was taken over by Quality Comics. Both enterprises overcame the problem of incompatible page proportions by stretching the image on a laser copier; this had the effect of making all the characters appear tall and skinny. JD took a further ponderous step across the international stage with the publication of a DC COMICS/Fleetway collaboration, Judgement on Gotham (graph 1991), featuring a Judge Dredd/Batman team-up; this was written by the Wagner-Grant team and painted by the talented high-flier Simon Bisley. In 1993 series of novels featuring JD was begun with The Savage Amusement * (1993) by David Bishop, Deathmasks * (1993) by Dave Stone and Dreddlocked * (1993) by Stephen Marley, and it was reported that a film, starring Sylvester Stallone, was in production. JULES VERNE'S ROCKET TO THE MOON
FROM THE EARTH TO THE MOON.

JUNGER, ERNST
(1895-) German writer whose early works reflected his experiences in WWI. *Auf den Marmorklippen* (1939; trans Stuart Hood as *On the Marble Cliffs* 1947 UK as by Ernst Juenger) - though its status as a classic of resistance to Nazism has been somewhat shaken by analysis of its broodingly passive austerity regarding political action - is a peculiarly resonant allegory of the destruction of a civilized country by an incursion of vandal-like conquerors. *Glaserne Bienen* (1957; trans Louise Bogan and Elizabeth Mayer as *The Glass Bees* 1960 US as by Ernst Juenger) also applies an allegorical mode to the story of the creation and use of ROBOT bees for industrial work. *Heliopolis* (1949), an ironical UTOPIA, remains untranslated. [JC]Other Works: *Aladins Problem*(1983; Joachim

JUPITER

Jupiter's importance in sf is derived from its status as the largest planet in the Solar System and also the most accessible - because nearest to Earth - of the GAS GIANTS. Its four major moons - Ganymede, Callisto, Io and Europa - were discovered by Galileo, but it was not until 1892 that the US astronomer Edward Barnard (1857-1923) discovered the fifth. About a dozen others have been discovered in the 20th century. The visible "surface" of Jupiter is an outer layer of a very dense, deep atmosphere and is thus fluid, though it does have one enigmatic feature that has endured at least since 1831: the Great Red Spot. Jupiter was included in various interplanetary tours inspired by the religious imagination, and is prominent in several 19th-century interplanetary novels, including *A World of Wonders* (1838) by Joel R. Peabody, the anonymously published *The Experiences of Eon and Eona* (1886; by J.B. Fayette) and John Jacob ASTOR's *A Journey in Other Worlds* (1894), in which it is a "prehistoric" version of Earth, replete with dinosaurs, etc. It is a parallel of Earth in *A Fortnight in Heaven* (1886) by Harold Brydges (1858-1939) and in the anonymous *To Jupiter via Hell* (1908). As astronomical discoveries were popularized, however, the credibility of an Earthlike Jupiter waned rapidly. The last significant novel to use a Jovian scenario for straightforward UTOPIAN modelling was Ella SCRYMSOUR's *The Perfect World* (1922), though pulp-sf writers squeezed a little more melodramatic life out of the notion. Edmond HAMILTON's "A Conquest of Two Worlds" (1932) tells the harrowing tale of the human invasion of Jupiter, and Edgar Rice BURROUGHS sent John Carter there to fight the eponymous "The Skeleton Men of Jupiter" (1943). Many exotic romances set beyond the orbit of Mars employ the satellites of Jupiter. Ganymede is featured in E.E. "Doc" SMITH's *Spacehounds of IPC* (1931 AMZ; 1947) and in Leigh BRACKETT's "The Dancing Girl of Ganymede" (1950), and Io features in two notable early pulp-sf stories: Stanley G. WEINBAUM's "The Mad Moon" (1935) and Raymond Z. GALLUN's "The Lotus Engine" (1940). John W. CAMPBELL Jr required contributors to *ASTOUNDING SCIENCE-FICTION* to pay more attention to what was actually known about the planets. Early applications of this new realism to Jupiter are "Heavy Planet" (1939) by Lee Gregor (Milton A. Rothman; Tony ROTHMAN) and "Clerical Error" (1940) by Clifford D. SIMAK. Simak revisited Jupiter in his curious "Desertion" (1944), in which humans undergo biological metamorphosis in order to enjoy a paradisaical existence there. Isaac ASIMOV set one of his earliest stories, "The Callistan Menace" (1940), in the neighbourhood, then turned his attention to Jupiter itself in "Not Final!" (1941), in which hostile aliens are discovered there, and in "Victory Unintentional" (1942), in which Jovians fail to realize that their visitors are ROBOTS rather than men. Two classic magazine sf stories dealing with conditions on Jupiter are James BLISH's "Bridge" (1952 ASF; incorporated into *They Shall Have Stars* fixup 1956; vt Year 2018!), in which a colossal experiment to test hypotheses tests also the psychological resilience of the experimenters, and Poul ANDERSON's "Call Me Joe" (1957), about the everyday life of an artificial centaur-like creature designed for the Jovian environment. Anderson later made use of a similar background in *Three Worlds to Conquer* (1964) - the

worlds being Jupiter, Ganymede and Earth - in which Ganymede comes into focus as a possible site for a colony, a notion developed also by Robert A. HEINLEIN in *Farmer in the Sky* (1950), Anderson again in *The Snows of Ganymede* (1955 *Startling Stories*; 1958) and Robert SILVERBERG in *Invaders from Earth* (1958). Blish, however, recognized that such COLONIZATION would require considerable GENETIC ENGINEERING (which he called PANTROPY), as displayed in "A Time to Survive" (1956 *FSF*; incorporated into *THE SEEDLING STARS*, fixup 1957). Although it has become obvious that humans could never live on Jupiter, the idea of a descent into its atmosphere continues to attract attention. Such descents are featured in Isaac Asimov's *Lucky Starr and the Moons of Jupiter* (1957 as by Paul French; vt *The Moons of Jupiter*), the brothers STRUGATSKI's "Destination: Amaltheia" (1960; trans 1962), Arthur C. CLARKE's "A Meeting With Medusa" (1971) and its elaboration as *The Medusa Encounter* (1990) by Paul PREUSS, Ben BOVA's *As on a Darkling Plain* (1972) and Gregory BENFORD's and Gordon EKLUND's "The Anvil of Jove" (1976; incorporated into *If the Stars are Gods*, fixup 1977). Several of these stories cling to the hope that Jupiter might harbour alien life of some kind, albeit nothing remotely humanoid, as does Benford's juvenile novel *Jupiter Project* (1975; rev 1980). By far the most spectacular use to which Jupiter has recently been put, however, is in Arthur Clarke's *2010: Odyssey Two* (1982), in which it is elevated to the status of a second sun by monolithic di ex machina in order to give a crucial boost to evolution on Europa - an idea echoed in Charles L. HARNESS's *Lunar Justice* (1991). Europa (as revealed by the Voyager probes) is also the centre of attention in Charles SHEFFIELD's *Cold as Ice* (1992). A relevant theme anthology is *Jupiter* (anth 1973) ed Frederik and Carol POHL. [BS]

JUPITER AWARD AWARDS.

JURASSIC PARK

Film (1993). Amblin Entertainment/Universal. Dir Steven SPIELBERG, prod Kathleen Kennedy and Gerald R. Molen; screenplay Michael CRICHTON and David Koepp, based on *JURASSIC PARK* (1990) by Crichton; starring Sam Neill, Laura Dern, Jeff Goldblum, Richard Attenborough, Bob Peck, Joseph Mazello and Ariana Richards. 127 mins. Colour. A theme park on an island off the coast of Costa Rica has been stocked with dinosaurs cloned from DNA that was found within mosquitos preserved in amber. A male palaeontologist Dr Alan Grant (Neill), a woman palaeobotanist Dr Ellie Sattler (Dern) and a male mathematical expert in chaos theory Ian Malcolm (Goldblum) are invited by the entrepreneur who had the place built, John Hammond (Attenborough), to give their opinions of his success. Also present are Hammond's two grandchildren, Tim and Lex (Mazello and Richards). A criminal scheme from the chief of the park's computer systems combines with an oncoming storm so that the security systems break down while all these characters but Hammond, along with a nasty lawyer, are on a tour of the park in automated cars whose power fails. The dinosaurs are loose, the characters are stranded in the wind, rain and darkness, and a tyrannosaurus rex is not far away. The rest of the film is a jolly roller-coaster ride with only subsidiary characters getting killed (unlike

the book), and an astonishing display of convincing dinosaur animation-these dinosaurs will be definitive in the history of special effects-climaxing back in the park's headquarters with velociraptors out to get the kids. This, unsurprisingly from Spielberg, the man who directed E.T.: THE EXTRATERRESTRIAL (1982), cost \$60 million to make, was the blockbuster of its year and, internationally, the highest grossing film ever made. Although it easily won a HUGO in 1994, and was hugely enjoyed by almost everyone, it did not escape criticism. Nearly all intellectual toughness has been leached out of Crichton's original novel: the Luddite chaos theoretician who explains why things are bound to go wrong when technology is on the loose has nearly all his lines cut in the film, which leaves him little to do; the theme-park designing capitalist, rather nasty in the book, is rendered as cuddly as Santa Claus; a miscellaneous collection of narrative loose ends points towards what must have been gargantuan script difficulties never adequately resolved. In rendering the film not too scary for kids and not too critical of the entertainment business, the film is softened. The relationships play it cute, notably child-hating Grant having to take care of the two children, and becoming a sentimentalist. There has been much discussion of who first had the idea of cloning dinosaurs from DNA; it appeared in an exploitation film of the same year, Carnosaur (1993), based on the 1984 horror novel by Harry Adam Knight (John BROSAN) which predates Crichton's, but in fact it has been a repeated theme in sf, an early example being "The Hunting Season" (1951 ASF) by Frank M. ROBINSON. But a more direct and obvious source for both book and movie is Crichton's own film WESTWORLD (1973), which was also about a theme park whose inhabitants-in this case robot gunslingers-become homicidal. But criticisms cannot harm this state-of-the-art sf extravaganza, for the heroic abilities of the myriad special-effects designers and the cinematographer (Dean Cundey), far outweigh the shortcomings of the script for nearly all viewers. After all, it is primarily a film for children. [PN]

JUST IMAGINE

Film (1930). Fox. Dir David Butler, starring El Brendel, Frank Albertson, Maureen O'Sullivan, John Garrick. Screenplay David Butler, Ray Henderson, G.G. DeSylva, Lew Brown. 113 mins. B/w. The failure of this expensive sf blockbuster - one of a flood of musicals that appeared after the advent of sound in movies - may help explain why Hollywood kept clear of sf subjects (except in the context of horror) for so long afterwards, but it was the whimsicality of the silly story, rather than its sf content, that led to JI's failure. A man is struck by lightning while playing golf in 1930 and wakes to find himself in New York in 1980. Thereafter he acts as comic relief. There follow a stowing-away on a spaceship, a beautiful Martian princess, and a romantic-triangle plot between two 1980 men and a 1980 woman (who like everyone else in 1980 have numbers rather than names), all interspersed with banal musical numbers. The special effects are good for their period, and the sets by art directors Stephen Goosson and Ralph Hammeras are spectacular, in particular the huge, futuristic model, which cost \$250,000 to build, of New York City. This city of the future is imaginatively designed and just as memorable as its obvious progenitor, the one in METROPOLIS (1926). [JB] See also: MUSIC.

JUVENILE SF CHILDREN'S SF.

JUVENILE SERIES

When dime novels (DIME-NOVEL SF) declined and disappeared in the 1900s - partly because of public outcry against their supposed evil effect on boys, and partly because of increasing competition from the PULP MAGAZINES, which had become comparable in price - the torch of juvenile sf was taken up by a new format, illustrated hardcover juvenile book series, and the ideas in these began to range more widely. The Great Marvel series (9 books 1906-35) by Roy ROCKWOOD - the first hardcover sf series on record - began featuring interplanetary explorations and discoveries with Through Space to Mars, or The Longest Journey on Record (1910), and was surpassed in quality as juvenile-series sf only by Carl H. CLAUDY's later Adventures in the Unknown series (1933-4), the 4 vols of which told of TIME TRAVEL, journeys into the fourth DIMENSION and discoveries of ALIEN intelligences on MARS and in the Earth's crust. Although their plots were at least as strong as those of the contemporary GERNSBACK magazine stories, they proved less popular than the tales of the Earthbound TOM SWIFT (1910-41). In the years 1910-40 there were dozens of other book series aimed at teenage boys and many had themes of scientific invention - natural enough at a time when Edison and Ford were two of the greatest US heroes (EDISONADE) - but those named above are the most fondly remembered. In the 1930s juvenile series began to appear in a new format, the Big Little Books, squat, card-bound 3in x 4in (7.5cm x 10cm upright) volumes which alternated full-page illustrations with text pages. Derived from the COMICS, they included novelizations of BUCK ROGERS IN THE 25TH CENTURY, FLASH GORDON and SUPERMAN. Their demise came in the late 1940s, at which time Robert A. HEINLEIN's juveniles were becoming successful, heralding a new wave of hardcover CHILDREN'S SF series, some of which were novelized adventures derived from popular TELEVISION series. Tom Swift (or, more accurately, his son) reappeared in the 1950s together with TOM CORBETT: SPACE CADET, Rip Foster and others, all united by their interplanetary settings, a feature shared by Isaac ASIMOV's Lucky Starr series (1952-8; originally as by Paul French) and by E.C. ELIOTT's Kemlo series (1954-63). [JE/PN]

SF?

KADREY, RICHARD

(1957-) US writer, rock musician and illustrator; he did the cover for INTERZONE #9 and the vigorous though somewhat derivative collage illustrations for Dream Protocols (coll 1992 chap) by sf poet Lee Ballentine (1954-); he has also contributed articles to SCIENCE FICTION EYE and Whole Earth Review. His first published sf was "The Fire Catcher" (Interzone 1985; Omni 1986). Not wholly assimilated influences like CYBERPUNK and J.G. BALLARD give an element of pastiche to his early work, including his novel Metrophage (1988), but the latter transcends it in a vigorous and inventive tale of a mean-streetwise drug pusher's problems in a NEAR-FUTURE Los Angeles that is being eaten alive by urban decay, police

corruption and corporate cynicism. It reads like a supercharged arcade game that appals even its creator. Covert Culture Sourcebook: A Guide to Fringe Culture (1993) surveys similar territory from a non-fiction point of view. [PN]

KAEMPFERT, WADE

House pseudonym (pronounced Kemfer) used by the editors of ROCKET STORIES: Lester DEL REY on the first 2 issues and Harry HARRISON on the #3. [PN]

KAFKA, FRANZ

(1883-1924) Czech novelist, not usually or profitably considered a writer of fantasy or sf, though some of his stories - such as In der Strafkolonie (1919 chap; trans 1933; trans Willa and Edwin Muir as title story in The Penal Colony coll 1948 US; vt In the Penal Settlement 1949 UK) and Die Verwandlung (1915; trans A.L. Lloyd as The Metamorphosis 1937 chap UK) - present through a prose of hallucinated transparency a world radically displaced from normal reality (FABULATION). The former tells of an execution machine which incises moral slogans on the victim's body; the latter is a horrifying allegory of alienation in which a young man is transformed overnight into a huge beetle. Other fables are included in The Great Wall of China (coll trans Willa and Edwin Muir 1933 UK) and The Transformation and Other Stories: Works Published during Kafka's Lifetime (coll trans Malcolm Pasley 1992 UK), which presents a new version of Die Verwandlung plus other material whose release FK sanctioned. His most famous works - none finished and all published posthumously (and despite his apparent wishes that they be destroyed on his death) - are his three novels: Amerika (written 1911-14; 1927; trans Willa and Edwin Muir 1938 UK), Der Prozess (written 1914-15; 1925; trans Willa and Edwin Muir as The Trial 1937 UK) and Das Schloss (written 1921-22; 1926; trans Willa and Edwin Muir as The Castle 1930 UK). Though all share a vision of the menacing absurdity of the world (ABSURDIST SF), when read in chronological order of writing they present an illuminating sequence from the persecuted innocence of Amerika's protagonist (literally displaced into a surrealistic New World) to the confidence-man ingenuities of K., the protagonist of The Castle, who seems almost capable of forcing the 20th-century world to give him meaning and a room. FK's work is Modernist, its fable-like quality indefinably dreamlike; his influence, which has been enormous, permeates much of modern sf's attempts to get at the quality of life in dislocated, totalitarian, surrealistic or merely inscrutable venues. [JC]About the author: The literature on FK is enormous. A recent study of interest is Franz Kafka (1990) by Pietro Citati. See also: AUSTRIA; FANTASY; MONSTERS; PARANOIA.

KAGAN, JANET

(1946-) US writer who began publishing sf with "Faith-of-the Month" for ASF in 1982, and who won a 1993 HUGO Best Novelette Award for "The Nutcracker Coup" (1992). Her first sf book was a STAR TREK tie, Uhura's Song * (1985), reckoned to be one of the better novels attached to that enterprise. Her second novel, Hellspark (1988), carries some of the same digestible competence into an sf adventure whose heroine (attended by a sentient AI) must defend the inhabitants of a valuable planet from a

predatory corporation, helped in her task by her very considerable competence in kinesics and LINGUISTICS. More interesting is Mirabile (coll of linked stories 1991), a loosely linked portrait of the eponymous planet, colonized by humans who import flora and fauna whose DNA has been genetically engineered to provide the new colony with all sorts of lifeforms. However, the records (of what will sprout from what) have been lost, and the heroine must cope with a variety of comic crises. [JC]

KAGAN, NORMAN

(? -) US writer whose occasional sf stories, from "The Mathenauts" for If in 1964, have sometimes dealt vigorously and amusingly with MATHEMATICS as a subject, and tend to feature extroverted mathematicians as protagonists. NK also wrote The Cinema of Stanley Kubrick (1972; exp 1989). [JC]See also: DIMENSIONS; FANTASTIC VOYAGES.

KAGARLITSKI, JULIUS (IOSIFOVICH)

(1926-) Russian critic and professor of European drama at the State Theatrical Institute in Moscow. JK, one of the leading Russian critics to have a strong interest in sf, published the first and most comprehensive study in the then USSR of an individual sf author: Herbert Wells (1963; trans as The Life and Thought of H.G. Wells 1966 UK; considerably rev and exp vt Vggiadyvaias v Griadusheie ["Staring into the Future"] 1989). He later edited a 15-vol set of Wells's collected works (1965). Tchto Takoie Fantastika? ["What is the Fantastic?"] (1974) is a popular history of the genre, and has been translated into several languages (not English). JK won, unusually, the Chief Award of the Polish Ministry of Culture, and, again unusually, in 1972 the PILGRIM AWARD for services to sf studies. [PN/VG]See also: CRITICAL AND HISTORICAL WORKS ABOUT SF; RUSSIA.

KAHN, JAMES

(1947-) US physician and writer who began publishing sf with "Mobius Trip" in 1971, but who has been most active as a novelist, usually of film adaptations. His New World trilogy - World Enough, and Time (1980), Time's Dark Laughter (1982) and Timefall (1987) - initially depicts a fantasy-like FAR-FUTURE Earth in which GENETIC ENGINEERING on the part of the self-destructing human race has generated vampires, centaurs, semi-sentient cats, ANDROIDS and other creatures, all of which roam through a transfigured California. The first volume floridly introduces the cast, with some Grand Guignol episodes. The second, perhaps the most interestingly baroque, carries its human protagonist through a love affair, the begetting of a goddesslike child who wantonly transfigures the world in her death-throes, and his return (with the child's mother) through time to Eden. The third volume, set in Colombia, fails to bring the complex structure of the sequence into clear focus, though the power of the JK's imagery remains vivid in the reader's mind. The Echo Vector (1988) is a medical thriller that verges on sf. JK's novelizations are competent. [JC]Film novelizations: Poltergeist * (1982) and its sequel, Poltergeist II: The Other Side * (1986); Star Wars: Return of the Jedi * (1983), novelizing RETURN OF THE JEDI (1983); Indiana Jones and the Temple of Doom * (1984); The Goonies * (1985).See also: MESSIAHS.

KAMIKAZE

1. Variant title of the film KAMIKAZE 1989 (1982).2. Film (1986). Les Films du Loup/ARP/Gaumont. Dir Didier Grousset, starring Richard Bohringer, Michel Galabru, Dominique Lavanant, Riton Liebman, Kim Masee, Harry Cleven. Screenplay Luc Besson, Grousset. 89 mins. Colour. An amusingly black film with a serious point, K tells of a brilliant unemployed scientist, obsessed with tv, who invents a ray-gun which, when pointed at the screen, can kill anyone appearing live on it. When slimy presenters on French afternoon tv start getting blasted mid-announcement, a ruffled flic (Bohringer), with the help of a roomful of boffins, sets out to hunt the killer. This French film is something of a throwback to the international 1970s cycle of sf-tinged PARANOIA movies. Like *The Parallax View* (1974) and *Winter Kills* (1979), or the home-grown *Ecoute Voir* (1979), K mixes bizarre assassination hardware and computerized complications with the traditional down-at-heel strengths of the policier as it follows its two central characters down their own labyrinths. Galabru is outstanding as the murderer, starting out as a sympathetic loser but becoming a psychopath who whites his face and dresses up as a Mishima-style samurai. [KN]

KAMIKAZE 1989

(vt Kamikaze; vt Kamikaze '89) Film (1982). Regina Ziegler/Trio/Oase/ZDF. Dir Wolf Gremm, starring Rainer Werner Fassbinder, Boy Gobert, Gunther Kaufmann, Nicole Heesters, Franco Nero. Screenplay Robert Katz, Gremm, based on *Mord pa 31* (1965; trans as *Murder on the 31st Floor* 1966) by Per WAHLOO. 106 mins. Colour. In the Germany of 1989 people have no problems. They are entertained around the clock by a gigantic multimedia corporation, operating from a 30-floor building. Police Lieutenant Jansen (Fassbinder), investigating a bomb threat against the corporation, discovers the existence of a 31st floor where idealistic journalists are developing plans to make people more intellectual. Their plans are never realized: the corporation keeps an eye on all free-thinkers. Fassbinder's very physical performance, his last (he died in 1982), is all that makes this worth seeing more than once. The rest of this playful West German adaptation of Wahloo's DYSTOPIAN novel mixes sf and mystery elements with no great individuality. Fassbinder had earlier directed an sf film, the made-for-tv *WELT AM DRAHT* (1973). [JK]

KAMIN, NICK

Pseudonym of US writer Robert J. Antonick (1939-), whose sf novels *Earthrim* (1969 dos), a heavily plotted melodrama set on a tyrannized Earth, and *The HEROD Men* (1971), both feature adventure plots somewhat

awkwardly presented. [JC]

KANDEL, MICHAEL

(1941-) US writer, translator and book editor, best known until the late 1980s for his brilliant translations from the Polish of works by Stanislaw LEM, among them a pyrotechnic rendering of the novella "Kongres Futurologiczny" (1971 Poland) as The Futurological Congress (1974 US), many of whose wordplays are of necessity MK's. The Cosmic Carnival of Stanislaw Lem (coll 1981), which MK assembled, contains excerpts from previously translated novels plus some stories. MK's own novels reflect, perhaps, his immersion in the Eastern European tradition. STRANGE INVASION (1989) describes, with dissecting humour, an alien tourist invasion of Earth. In Between Dragons (1990) subjects a fantasy-game-like universe to an equally wry analysis. Captain Jack Zodiac (1991), in a fashion reminiscent of the way post- HOLOCAUST traumas were surreally ignored in The BED-SITTING ROOM , exposes its zany cast to a USA gone terminally insane after the Bomb has been dropped. [JC]

KANE, PABLO

Zack HUGHES.

KANE, WILSON

House name used by ZIFF-DAVIS on 4 stories 1958-9 in AMZ and Fantastic; at least 1, unidentified, was by Robert BLOCH. [PN]

KANER, H(YMAN)

(1896-1973) Romanian-born UK writer and civil servant who published his own books from Llandudno in Wales. Of them, two full-length novels stand out: People of the Twilight (1946), a PARALLEL-WORLDS tale, and The Sun Queen (1946), which features instantaneous TRANSPORTATION and a race of beings dwelling within the SUN. [JC]Other works: Squaring the Triangle (coll 1944 chap); Fire-Watcher's Night (coll 1944 chap); Hot Swag (coll 1945 chap); The Cynic's Desperate Mission (coll 1946 chap); Ape-Man's Offering (coll 1946 chap); The Naked Foot (coll 1946 chap); The Terror Catches Up (coll 1946 chap); Ordeal by Moonlight (coll 1947 chap).

KANTO, PETER

Zack HUGHES.

KANTOR, MacKINLAY

(1904-1977) US writer best known for such works outside the sf field as Andersonville (1955), a long novel set during the US Civil War, the area of his deepest concern. That war is also the setting for If the South had Won the Civil War (1961), the ALTERNATE-WORLDS thesis of the title being a favourite crux for US writers in the genre. [JC]

KAPITAN MORS DER LUFTPIRAT

See Der LUFTPIRAT UND SEIN LENKBARES LUFTSCHIFF.

KAPLAN, ALINE BOUCHER

(1947-) US marketing executive and writer who began publishing sf with Khyren (1988), in which the protagonist finds herself transported from her conventional existence into a world where female worth is measured by fertility; the FEMINIST implications of the tale are not heavily

underlined. ABK's second novel, set in the same universe, is World Spirits (1992). [JC]

KAPP, COLIN

(1928-) UK writer and worker in electronics. He began publishing sf with "Life Plan" for NW in 1958, where his best work soon appeared, including "Lambda 1" (1962), which gave its title to the John CARNELL collection, Lambda 1 (anth 1964), and Transfinite Man (1964 US; vt under the 1963 mag title The Dark Mind 1965 UK), in which a fierce unkillable SUPERMAN protagonist pits himself against the corrupt Failway [sic] Terminal in duels extending through various DIMENSIONS - access to which the Terminal attempts to control. Despite CK's otherwise unextraordinary plotting, the combination of invulnerability and rage in the tale generates a sense of nearly uncontrollable energy, imparting to this one book something of the exhilaration of Keith LAUMER and a touch of the complexity of Alfred BESTER, whose Gully Foyle - from Tiger! Tiger! (1956 UK) - is clearly evoked. The enjoyable The Wizard of Anharitte (1972), though less energetic, features an intriguing sf power struggle on a backward planet, with the protagonist (who finds himself on the wrong side) repeatedly frustrated by the "wizard's" ingenious technological trickery. CK's later publications include a sequence of problem-solver tales assembled as The Unorthodox Engineers (coll of linked stories 1979), a short series comprising The Patterns of Chaos (1972) and The Chaos Weapon (1977 US), the former featuring a SUPERHERO implausibly capable of manipulating chaos, and the Cageworld sequence of SPACE OPERAS centred on a DYSON SPHERE: Cageworld (1982; vt Search for the Sun! 1983 US), The Lost Worlds of Cronus (1982) and The Tyrant of Hades (1982). [JC] Other works: The Wizard of Anharitte (1973); The Survival Game (1976 US); Manalone (1977); The Ion War (1978 US); The Timewinders (1980). See also: NEW WORLDS; NEW WRITINGS IN SF; TRANSPORTATION.

KARAGEORGE, MICHAEL

[s] Poul ANDERSON.

KAREL AWARD

WORLD SF.

KARIG, WALTER

(1898-1956) US journalist and novelist, a pseudonymous author for many years of the Nancy Drew detective series and others. War in the Atomic Age? (1946 chap) compresses into very few pages a sequence of 21st-century superscience duels between the USA and Galaxia - they include atomic warfare, FORCE FIELDS, biological WEAPONS and underwater ROBOT tanks. The USA wins hands down. In his sf fantasy, Zotz! (1947), a man - given the ancient power to kill by pointing his hand and saying "Zotz!" - is frustrated by bureaucracy in his attempts to help the USA win WWII; the effect is mildly satirical. [JC]

KARIMO, AARNO

[r] FINLAND.

KARINTHY, FRIGYES

(1887-1938) Hungarian writer and translator, best known for his work

outside the sf field, mostly humorous SATIRES first published in newspapers; he also translated works by Jonathan SWIFT and Mark TWAIN, among others, into Hungarian. His two continuations of Swift's Gulliver's Travels (1726) - Utazás Faramidobába (1916) and Capillaria (1921) - were assembled as Voyage to Faramido/Capillaria (omni trans Paul TABORI 1965 Hungary). The first carries FK's version of Gulliver to a ROBOT society, the second to one ruled by women. Sharp-tongued and convincingly Swiftian, they are impressive introductions to his melancholy, sometimes savage view of the 20th century. His career, and his prescient use of robots as symbols of the dawning new age, were similar to Karel CAPEK's, but he pulled fewer punches. FK was a dangerous writer. [JC]See also: FANTASTIC VOYAGES; HUNGARY.

KARP, DAVID

(1922-) US writer whose sf novel One (1953; vt Escape to Nowhere 1955) is a notable MAINSTREAM use of sf modes as a way of expressing DYSTOPIAN views about the future. Though distinctly less convincing than such predecessors as Arthur KOESTLER's Darkness at Noon (1940) and George ORWELL's NINETEEN EIGHTY-FOUR (1949), it does present a salutarily grim and sharply described vision of a totalitarian future USA and the brutal mind-control that must be imposed if the state is to survive. Part of the novel's interest lies in its sometimes sympathetic insight into the mind of inquisitor as well as victim. The Day of the Monkey (1955) is a fantasy. [JC]See also: POLITICS.

KASACK, HERMANN

[r] GERMANY.

KASTEL, WARREN

ZIFF-DAVIS house name used on magazine stories by Chester S. GEIER and possibly others 1948-50, and by Robert SILVERBERG in 1957. [JC]

KASTLE, HERBERT D(AVID)

(1924-1987) US writer best known outside the genre. He began publishing sf with "The York Problem" for If in 1955. His one sf novel, The Reassembled Man (1964; exp vt Edward Berner is Alive Again! 1975; vt The Three Lives of Edward Berner 1976 UK) depicts without excessive originality the transformation by aliens of a human into a sexually supercharged SUPERMAN. [JC]

KAUL, FEDOR

(? -?) German writer. His sf novel, Die Welt ohne Gedächtnis (trans Winifred Ray as Contagion to this World 1933 UK), begins conventionally enough with a deformed SCIENTIST, thwarted in love, determining to revenge himself on the world by releasing dangerous bacteria he has developed; these turn out to have a memory-erasing effect on humans. The scientist's love-affair forgotten, the novel becomes a post- HOLOCAUST vision in which the remnants of mankind mutate into a roving race of giants in harmony with Nature. The scientist grows old and - remarkably - dies forgiven. [JC]

KAVAN, ANNA

Name under which French-born, much travelled UK writer born Helen Woods

Edmonds (1901-1968) wrote her fiction from 1940, having previously signed herself under her married name, Helen Ferguson; the orphaned protagonist of *Let Me Alone* (1930) and *A Stranger Still* (1935) is named Anna Kavan, and Edmonds eventually became AK by deed poll. Her life, which ended in suicide, was tragically complicated by heroin addiction, and in most of her work fantasy and mental illness surreally intermingle. She was well known for work outside the sf field, though her last work, the sf novel *Ice* (1967), is as familiar to readers as anything she wrote. It depicts, through compulsively intense imagery which links her with Franz KAFKA and the Surrealists generally, a post- HOLOCAUST search for a woman through a world increasingly shadowed by an approaching ice age. An earlier novel, *Eagles' Nest* (1958), traverses the same quest landscape, though in fantasy terms. Later editions of *Ice* carry an introduction by Brian W. ALDISS, in which he claims AK as one of the great sf writers; he also edited the posthumous *My Madness: The Selected Writings of Anna Kavan* (coll 1990). [JC]Other works: *Asylum Piece and Other Stories* (coll 1940); *House of Sleep* (1947 US; vt *Sleep has his House* 1948 UK); *A Bright Green Field* (coll 1958); *Julia and the Bazooka* (coll 1970); *My Soul is in China* (coll 1975). See also: END OF THE WORLD; WOMEN SF WRITERS.

KAVANNE, RISTO
[r] FINLAND.

KAVENEY, ROZ
(1949-) UK critic, editor and writer. Her sf criticism, beginning in the late 1970s (before 1980 as by Andrew Kaveney), has appeared in specialist journals like FOUNDATION and in non-genre outlets like the Washington Post and Books and Bookmen; it is marked by a seemingly off-hand general erudition and a knowing sharpness about the field. Much of her non-sf writing has concentrated on issues like FEMINISM, gay rights and censorship. She began publishing sf with "A Lonely Impulse" in *Temps: Volume One* * (anth 1991), "devised by" Neil GAIMAN and Alex Stewart. She edited *Tales from the Forbidden Planet* (anth 1987) and *More Tales from the Forbidden Planet* (anth 1990) as well as three SHARED-WORLD anthologies: *The Weerde* * (anth 1992), *Villains* * (anth 1992) and *The Weerde: Book 2* (anth 1993), all with Mary GENTLE. [JC]See also: BIG DUMB OBJECTS; INTERZONE.

KAY, SAMUEL M.
Charles DE LINT.

KAYE, MARVIN (NATHAN)
(1938-) US writer, usually of fantasy and horror, noted here primarily for the *Masters of Solitude* sf sequence: *The Masters of Solitude* (1978) and *Wintermind* (1984), both written with Parke GODWIN (whom see for details). The supernatural novel *A Cold Blue Light* (1983), also with Godwin, is less successful; and its sequel, *Ghosts of Night and Morning* (1987), by MK alone, is neither sf nor supernatural. Early in his career, MK wrote some stories with Brother Theodore (Theodore Gottlieb, long thought to be an MK pseudonym). [JC]Other works: *The Umbrella/Fillmore* fantasy sequence, comprising *The Incredible Umbrella* (fixup 1979) and *The Amorous Umbrella* (1981); *The Possession of Immanuel Wolf and Other*

Improbable Tales (coll 1981); Fantastique (1992), a fantasy elaborately constructed around Hector Berlioz's *Symphonie Fantastique*. As Editor: *Brother Theodore's Chamber of Horrors* (anth 1975) with Brother Theodore; *Fiends and Creatures* (anth 1975); *Ghosts* (anth 1981) with Saralee Kaye; *Masterpieces of Terror and the Supernatural* (anth 1985) with S. Kaye; *Devils and Demons* (anth 1987) with S. Kaye; *Weird Tales: The Magazine that Never Dies* (anth 1988) with S. Kaye; *Witches and Warlocks* (anth 1990); *Haunted America: Star-Spangled Supernatural Stories* (anth 1991); *Lovers and Other Monsters* (anth 1992); *Fantastique* (1992).

KDO CHCE ZABIT JESSIE

(vt Who Would Kill Jessie?) Film (1965). Filmstudio Barrandov. Dir Milos Macourek, Vaclav Vorlicek, starring Jiri Sovak, Dana Medricka, Olga Schoberova, Karel Effa, Juraj Visny. Screenplay Macourek, Vorlicek. 80 mins. B/w. This very funny Czechoslovak film was conceived for children, but the makers realized that the idea had satirical potential. An overworked professor (Sovak) becomes obsessed with a newspaper comic strip featuring a voluptuous heroine, Jessie (Schoberova), who is constantly being pursued by two villains - a malicious cowboy (Effa) and a displeasing analogue of SUPERMAN (Visny). He dreams a lot about Jessie. The straitlaced wife of the professor (Medricka), also a scientist, has invented a dream-manipulator with which she hopes to eradicate her husband's lascivious dreams, but it malfunctions and the three comic-book characters materialize in their apartment, causing upheaval. This exhilarating, well made film deserves wider distribution. [JB/PN]

KEA, NEVILLE

[r] ROBERT HALE LIMITED.

KEARNEY, (ELFRIC WELLS) CHALMERS

(1881-1966) Australian-born writer, in the UK most of his life, author of the nonfiction *Rapid Transit in the Future* (only 2nd edn recorded, 1911). His *UTOPIA, Erone* (1943; rev 1945), an old-fashioned love-story set in a rather sentimentalized communist society on Uranus, had some popular success, though now forgotten. A short pamphlet, *The Great Calamity* (1948 chap), itemizes the destruction of most of the world. [JC]

KEATING, H(ENRY) R(EYMOND) F(ITZWALTER)

(1926-) UK writer, almost exclusively of detective novels, notably those featuring Inspector Ghote of the Bombay CID. His two sf novels are *The Strong Man* (1971), a *DYSTOPIAN* tale of a dictator and the ambiguous consequences of his removal, and *A Long Walk to Wimbledon* (1978), in which a man treks laboriously across London to visit his wife just after a *DISASTER* has devastated the capital. [JC]

KEAVENEY, JAMES R.

Arthur H. LANDIS.

KEE, ROBERT

(1919-) UK broadcaster and writer. *A Sign of the Times* (1955) is set in the *NEAR FUTURE*, where regimentation rules along lines familiar in post-WWII UK fiction. [JC]

KEENE, CAROLYN

Harriet S. ADAMS.

KEENE, DAY

(1904-1969) US writer, mostly of detective novels and film and tv scripts. In his sf novel, *World without Women* (1960) with Leonard PRUYN, the few remaining women find themselves in DYSTOPIAN circumstances. [JC]

KEITH, LEIGH

[s] Horace L. GOLD.

KELLAR, VON

House name used for 2 routine sf adventures published by CURTIS WARREN: *Ionic Barrier* (1953) by Dennis HUGHES and *Tri-Planet* (1953), whose authorship has not been ascertained. [JC]

KELLEAM, JOSEPH E(VERIDGE)

(1913-1975) US writer and civil servant, an occasional contributor to the sf field since publishing his first story, "Rust", in ASF in 1939. His first novel, *Overlords from Space* (1956 dos), is a routine tale in which ALIEN conquerors of Earth are defeated at last. *The Little Men* (1960) and its sequel, *Hunters of Space* (1960), whose characters are derived from European MYTHOLOGY, traces the fight between Jack Odin and the villainous Grim Hagen, first under the Earth, then in space; various princesses and dwarfs attend. In *When the Red King Woke* (1966), which may be sf, a mysterious monarch sleeps off-planet in a bubble; as readers of Lewis CARROLL might expect, when the king awakes the planet dies. [JC] See also: ROBOTS.

KELLEHER, VICTOR (MICHAEL KITCHENER)

(1939-) Australian lecturer in English and now full-time writer. Born in London, VK spent 20 years in Africa before emigrating to New Zealand (1973) and then Australia (1976). VK's major theme in the sf and FANTASY (he makes no sharp distinction between the two genres) for adolescents for which he is best known is the tension between cyclic/seasonal time and linear time. His sf includes *The Green Piper* (1984), *Taronga* (1986) and *The Makers* (1987); his fantasy includes *Master of the Grove* (1982) - Australian Children's Book of the Year - *Baily's Bones* (1988), *The Red King* (1989), *Brother Night* (1990), *Del-Del* (1991), *To the Dark Tower* (1992), and also his early novels *Forbidden Paths of Thual* (1979) and *The Hunting of Shadroth* (1981). *Papio* (1984) is an adventure story. His post-HOLOCAUST novel for adults, *The Beast of Heaven* (1985), won a Ditmar AWARD for best Australian sf. He has written four non-sf books for adults. [JW]See also: AUSTRALIA; CHILDREN'S SF.

KELLER, DAVID H(ENRY)

(1880-1966) US writer, physician and psychiatrist, deeply involved in the last capacity in WWI work on shell shock; he published a great deal of technical work in his professional role. As a writer of fantasy and sf he was active but unpublished for many years before the period 1928-35, his first sf sale being "The Revolt of the Pedestrians" (DYSTOPIA) to AMZ in 1928. For the next decade he appeared widely in *Weird Tales* and other PULP MAGAZINES, including *AMAZING STORIES*, where he published "The Metal Doom" (1932), in which advanced civilization ends when all metal begins to rust.

He fell out of wide public notice with the onset of the GOLDEN AGE OF SF, whose optimism about the workability of the Universe he clearly did not share. He remained active in FANDOM, however, and - it is rumoured - wrote a large number of stories, some of which appeared in the 1940s; others were published in the 1970s in response to the continuing appeal of his apparently primitive fiction. DHK's sf is probably inferior to his horror and fantasy work. *The Thing in the Cellar* (1932 *Weird Tales*; 1940 chap), for instance, works almost as a hydraulic metaphor (in the Freudian manner) of the relationship between the upstairs daylight of consciousness and the blind tide of unconsciousness beneath our floors. It is much superior to the sf story published as his first book, *The Thought Projector* (1930 chap). His sf was conservative - against the spirit of the age - in its presentation of the risks inherent in all science; the eponymous detective of the *Taine of San Francisco* sequence of sf stories (1928-47) generally operates so as to conceal, rather than expose, the truth behind things. Much of DHK's sf concerns dilemmas created by GENETIC ENGINEERING - the stories in Brian M. STABLEFORD's *Sexual Chemistry* (coll 1991) are readable as a direct rebuttal to DHK's unvarying pessimism - and tends to end in arbitrary apocalypse. His novels are similar. In his first, *The Human Termites* (1929 *Science Wonder Stories*; 1979 chap), the human race is almost seen off by invading social insects. Other early novels have not reached book form. In "Life Everlasting" (1934 AMZ), which appears in *Life Everlasting and Other Tales of Science, Fantasy and Horror* (coll 1947), the human race must choose between IMMORTALITY and fertility. The second (and considerably longer) title in *The Solitary Hunters*; and *The Abyss* (coll 1948) again demonstrates, by detailing the terrible consequences of any removal of human repressions, DHK's sense of the fragility of the psychic order. Several of his full-length books were story collections, with some sf included in a preponderantly fantasy mix. They include *At the Sign of the Burning Hart* (coll of linked stories 1938 France; with appendix added, vt *At the Sign of the Burning Hart: A Tale of Arcadia* 1948 US), which is UTOPIAN, *Tales from Underwood* (coll 1952), *The Folsom Flint and Other Curious Tales* (coll 1969), *The Street of Queer Houses and Other Tales* (coll 1976) and *The Last Magician: Nine Stories from "Weird Tales"* (coll 1978 chap). [JC] Other works: *Wolf Hollow Bubbles* (?1934 chap); *Men of Avalon* (1935 chap dos); *The Waters of Lethe* (1937 chap); *The Television Detective* (1938 chap); *The Devil and the Doctor* (fixup 1940), in which Satan is a HERO-figure; *The Eternal Conflict* (1939 *Les Primaires*, part only; 1949); *The Homunculus* (1949); *The Final War* (1949 chap); *The Lady Decides* (1950); *A Figment of a Dream: A New Allegorical Fantasy* (1962 chap). See also: AIR WONDER STORIES; AUTOMATION; BIOLOGY; HIVE-MINDS; MACHINES; MEDICINE; PSYCHOLOGY; ROBOTS; SMALL PRESSES AND LIMITED EDITIONS; TECHNOLOGY; TRANSPORTATION.

KELLERMANN, BERNHARD

(1879-1951) German writer whose sf novel, *Der Tunnel* (1913; trans anon as *The Tunnel* 1915 UK), tells the epic story, sometimes in heartfelt terms, of the construction of a transatlantic tunnel. It was the basis of the German film *Der TUNNEL* (1933) and its UK remake, *The TUNNEL* (1935). [JC] See also: GERMANY; TRANSPORTATION.

KELLEY, LEO P(ATRICK)

(1928-) US novelist, for some time also an advertising copywriter. He began publishing sf with "Dreamtown, U.S.A." for If in 1955. Several of his sf novels likewise concentrate on societies which invidiously dominate their inhabitants by psychological means, as in his second, *Odyssey to Earthdeath* (1968). His first, *The Counterfeits* (1967), as by Leo F. Kelley, similarly puts sociological sf into a routine adventure frame. An oddly affectless baroque style sometimes jars against the stories he tells, pretending an urgency it fails to convey through plots of a fashionable grimness; but he has been a readable contributor to the genre. [JC]Other works: *Time Rogue* (1970); *The Accidental Earth* (1970); *The Coins of Murph* (1971); *Brother John ** (1971); *Time: 110100* (1972; vt *The Man from Maybe* 1974 UK); *Mindmix* (1972); *Mythmaster* (1973); *The Earth Tripper* (1973); a series of short juveniles, comprising *Time Trap* (1977 chap), *Star Gold* (1978 chap; vt *Alien Gold* 1983), *Backward in Time* (1979 chap), *Death Sentence* (1979 chap), *Earth Two* (1979 chap), *Prison Satellite* (1979 chap), *Sunworld* (1979 chap), *Worlds Apart* (1979 chap), *Night of Fire and Blood* (1979 chap), *Dead Moon* (1979 chap), *King of the Stars* (1979 chap), *On the Red World* (1979 chap), *Where No Sun Shines* (1979 chap), *Vacation in Space* (1979 chap) and *Good-bye to Earth* (1979 chap). As Editor: *Themes in Science Fiction* (anth 1972); *Fantasy, the Literature of the Marvelous* (anth 1973); *The Supernatural in Fiction* (anth 1973).

KELLEY, THOMAS P.

(?1905-1982) Ex-prizefighter and, in his own description, "King of the Canadian pulp writers", author mostly of adventure fiction and "true crime", as well as of the sf novel "*A Million Years in the Future*" (1940 *Weird Tales*), which never reached book form. Four fantasy novels are *I Found Cleopatra* (1938 *Weird Tales*; cut 1946), *The Face that Launched a Thousand Ships* (fixup 1941), *Tapestry Triangle* (1946 UK), featuring an immortal Chinese and a race of Amazons, and *The Gorilla's Daughter* (1950). He contributed under pseudonyms, including Gene Bannerman, Roy P. Devlin and Valentine North, to the Canadian UNCANNY TALES and wrote 40 scripts for *Out of the Night*, a radio programme specializing in supernatural tales. [PN/JC]See also: CANADA; WEAPONS.

KELLEY, WILLIAM MELVIN

(1937-) US writer whose celebrated short novel *A Different Drummer* (1959) is a borderline-sf fable telling of Black history in an imaginary southern state of the USA, and ending with a mass emigration of all Blacks from the state in 1957. [PN]Other works: *Dem* (1967); *Dunsford Travels Everywhere* (1970). See also: POLITICS.

KELLOGG, MARJORIE BRADLEY

(1946-) US scenery designer and writer who published her first three novels as by M. Bradley Kellogg to avoid confusion with another Marjorie Kellogg, but from 1991 used her full name. Her first novel, *A Rumor of Angels* (1983), is unexceptional, but the *Lear's Daughters* sequence - *The Wave and the Flame* (1986) and *Reign of Fire* (1986), both written with NASA climatologist William B(rigance) Rossow (1947) and assembled as *Lear's Daughters* (omni 1987) - somewhat more interestingly devotes much attention

to the ECOLOGY and violent climatic extremes of a potential colony planet, though the conflict between the advocates of exploitation and those of alliance with the pacific cave-dwelling weather-predicting natives lacks originality. MBK's fourth novel, *Harmony* (1991), is a large and ambitious tale set on an Earth dominated by centuries of POLLUTION, with almost all humans now living in large, strictly controlled domes. But some artists - here MBK again shows an untoward softness of mind - have somehow managed to live in the open, and the book moves slowly towards a wholesome resolution of the conflict between ensuring safety and embracing the world. [JC]

KELLY, FRANK K(ING)

(1914-) US writer who began to publish sf with "The Light Bender" for *Wonder Stories* in 1931, and who rapidly became known for SPACE-OPERA tales of some bleakness, though later titles were infused with an idealistic glow. He stopped writing sf in 1935, turning to non-genre fiction and political histories, and it was not until 45 years later that his sf work became available again, with the release of *Starship Invincible* (coll 1979). FKK cofounded the Center for the Study of Democratic Institutions in 1959, and the Nuclear Age Peace Foundation in 1982. [JC]

KELLY, HAROLD ERNEST

(1899-1969): UK writer and publisher, founder with his brother, Hector Kelly, of *Everybody's Books*, and later of *RobinHood Press* and *Hector Kelly Ltd*, for which he wrote many crime novels - being best known for those as by Darcy Glinto - and westerns, along with some sf and horror. In the 1960s, he wrote crime under the house name Hank JANSON. As Eugene Ascher he wrote the Lucius Carolus series of occult detective novels: *There Were No Asper Ladies* (1944; vt *To Kill a Corpse* 1959), *Uncanny Adventures* (coll 1944 chap), and *The Grim Caretaker* (1944 chap). As Preston Yorke he wrote *The Astounding Crime* (1943 chap), *The Gamma Ray Murders* (1943), which was sf, and other crime tales. *Space-Time Task Force* (1953), also as by Yorke, was set in the distant future, where the robot-like "syntho-selectives" who rule Earth turn to the Primitives, who are true humans, to defend against an alien invasion. [SH]

KELLY, JAMES PATRICK

(1951-) US writer who began to publish after attending his first CLARION SCIENCE FICTION WRITERS' WORKSHOP in 1974. With "Dea Ex Machina" for *Gal* in 1975, the first of about 40 tales to 1992, he began very quickly to establish himself as an author whose work contained, within a sometimes sober demeanour, considerable pyrotechnical charge. In the selfconscious 1980s controversy between CYBERPUNK and "Humanist" modes of sf discourse, he was located with the latter, but like most "Humanists" he has disavowed the distinction - and indeed published a story, "Solstice" (1985), in Bruce STERLING's *Mirrorshades* (anth 1986). Some of his short work is collected in *Heroines* (coll 1990). He is perhaps best known for *Freedom Beach* (fixup 1985) with John KESSEL - an author with whom he has also collaborated on separate stories. In the book several characters find themselves in an interzone in which "reality" and dreamwork wed surreally, and must make sense of their surroundings. The control they exercise can be seen as allegorical of the creative act. Of greater interest are JPK's

solo novels, *Planet of Whispers* (1984) and *Look into the Sun* (1989), which start the open-ended *Messengers Chronicles*. Whatever message is carried by the various species who link the Galaxy into a communications network has not been revealed so far. The first tale, set on the planet Aseneshesh, explores in voluminous detail the native race of near-immortal bearlike beings whose mental workings are derived from the attractive hypotheses developed by Julian Jaynes in *The Origin of Consciousness in the Breakdown of the Bicameral Mind* (1976). In Jaynes's book, and in JPK's novel, pre-conscious sentients - i.e., preliterate humans, including Homer - "hear" right-brain "whispers" which they understand to be the voices of the gods, and in this fashion hallucinate normative diktats which shape their culture. No humans appear in the novel. In the second volume, set partly on a depleted Earth, a young architect is recruited by Messengers to travel to Aseneshesh, being engineered en route into the semblance of an Asenesheshian, with a computer-implant substituting for the right-brain voice of God. Aseneshesh is vividly depicted in the two books, in a PLANETARY-ROMANCE style reminiscent at times of Jack VANCE; but the plotting has a slow rigour typical of all JPK's work, an incremental power which transcends the FIXUP structure of *Wildlife* (1991 IASFM as "Mr. Boy"; fixup 1994), a complex and - at points - singularly cruel analysis of the relationship between a child artificially re-engineered each time he nears puberty and his extraordinary mother. JPK stands at the verge of recognition as a major writer. [JC] See also: CHILDREN IN SF; GODS AND DEMONS.

KELLY, ROBERT

(1935-) Extremely prolific US poet; a professor of English. His novel *The Scorpions* (1967) has been read as sf because of its baroque rendering of a psychiatrist's conviction that a rich patient does in fact have contact with the Scorpions, a race of ultraviolet people. However, like *Cities* (1971 chap), the book is more plausibly viewed as a FABULATION, depicting US life after the fashion of Harry Mathews (1930-) and Thomas PYNCHON. In the 1980s RK began to publish short fiction in the same vein, collected in *A Transparent Tree: Fictions* (coll 1985). [JC]

KELLY, WILLIAM PATRICK

(1848-1916) UK writer in whose *Doctor Baxter's Invention* (1912) it proves possible to transfer insanity and homicidal behaviour from one person to another via blood transfusions. [JC]

KEMLO

E.C. ELIOTT.

KEMP, EARL

An associate of William L. HAMLING (whom see for details) and recipient of a 1961 fan-writing HUGO. [JC]

KENAN, AMOS

[r] ISRAEL.

KENDALL, GORDON

S.N. LEWITT; Susan SHWARTZ.

KENDALL, JOHN

Pseudonym of UK writer Margaret Maud Brash (1880-?), author of Unborn Tomorrow (1933), a futuristic DYSTOPIA describing dehumanization, regimentation and subsequent revolution in the UK under communism. [JE]See also: POLITICS.

KENDALL, MAY
[r] Andrew LANG.

KENEALLY, THOMAS (MICHAEL)
(1935-) Australian writer best known for Bring Larks and Heroes (1967 UK) and for Schindler's Ark (1982 UK), vtSchindler's Listwhich won the Booker Prize, but who has several times edged into generic displacements to contain a remarkably intense and occasionally visionary imagination. His first novel, The Place at Whitton (1964 UK), is horror. Blood Red, Sister Rose (1974 UK) is an historical fantasy. Victim of the Aurora (1977), which can be read as a detection, feels like sf in that it depicts Antarctica exactly as an sf writer might depict an alien planet. Ned Kelly and the City of the Bees (1978 UK) is juvenile sf. The eponymous human foetus in Passenger (1979 UK) has been transformed by laser-scan into a conscious and articulate being. [JC]

KENNAWAY, JAMES
Pseudonym of Scottish writer James Ewing Peebles (1928-1968), best known for such works outside the sf field as Tunes of Glory (1956). His borderline sf novel is The Mind Benders * (1963), which applies MAINSTREAM tactics to a story about brainwashing and the psychological consequences of overexposure to experimental conditions of sensory deprivation. The book was written from his script for the 1963 film of the same name. [JC]See also: PSYCHOLOGY.

KENNEALY, PATRICIA
Working name of US writer Patricia Kennealy-Morrison (1946-), "married" to rock singer Jim Morrison (1943-1971); she appeared in a cameo role in Oliver Stone's film The Doors (1991). Her sf oscillates - in a manner common to much 1980s work - between fantasy and sf, in the end seeming more the former than the latter. However, her Keltiad sequence - The Copper Crown (1985), The Throne of Scone (1986) and The Silver Branch (1988) - is set in space, being an expansive SPACE-OPERA reworking of the Arthurian Cycle. A second sequence, the Tales of Arthur, beginning with The Hawk's Gray Feather (1990) and The Oak Above the Rings (1994) as by Patricia Kennealy-Morrison, is set 1000 or so years before the first; the tale is set on a single world and a PLANETARY-ROMANCE idiom dominates, so it is hard to read the book as sf. The marriage of modes, however, remains of genuine potential interest. [JC]

KENNEALY-MORRISON, PATRICIA
Patricia KENNEALY.

KENNEDY, EDGAR REES
John W. JENNISON.

KENNEDY, LEIGH
(1951-) US writer, in the UK since 1985; married to Christopher PRIEST from 1988. Her sf stories, beginning with "Salamander" for ASF in 1977,

combine generic sharpness of address and a "literary" density. "Her Furry Face" (1983), perhaps her best-known single work, exemplifies this duality of effect in a striking presentation of love between species, human and primate (APES AND CAVEMEN); it was assembled, with very various companions, in Faces (coll 1986). The Journal of Nicholas the American (1986) depicts with alarming exactitude the anguish of paranormal empathy (ESP), which drives the young man who inherits the gift almost to insanity. [JC]Other work: Saint Hiroshima (1987), associational.

KENNEDY, R.A.

(? -?) UK metaphysical writer whose curious sf work, written as by "The Author of Space and Spirit" is The Triuneverse: A Scientific Romance (1912). Set in the future, after the destruction of Mars and other events, it has only a thin narrative, being mainly taken up with cosmological speculations about the fabric of the Universe. [JC]See also: COSMOLOGY; GREAT AND SMALL; LIVING WORLDS.

KENT, BRAD

House name used on 4 routine sf adventures published by CURTIS WARREN, 3 by Dennis HUGHES and Out of the Silent Places (1952) by Maurice G(aspard) Hugli (1904-1947). [JC]

KENT, KELVIN

Pseudonym used on the Pete Manx series in Thrilling Wonder Stories (1939-44), individually by Arthur K. BARNES (4 stories) and Henry KUTTNER (6 stories), and on the 2 they wrote in collaboration: "Roman Holiday" (1939) and "Science is Golden" (1940). [PN]

KENT, MALLORY

[s] Robert A.W. LOWNDES.

KENT, PHILIP

Kenneth BULMER.

KENTON, L.P.

R. Lionel FANTHORPE.

KENWARD, JAMES (MACARA)

(1908-) UK author, mostly of nonfiction studies and memoirs. Summervale (1935) is a tale in which a man is transformed into a dog. The framing narrative of The Story of the Poor Author (coll of linked stories 1959) is sf; it involves SPACESHIPS. [JC]

KENYON, ROBERT O.

[s] Henry KUTTNER.

KEPLER, JOHANNES

(1571-1630) German astronomer, one-time assistant to Tycho Brahe (1546-1601) and later imperial mathematician and astrologer to the Holy Roman Emperor Rudolph II. JK's contribution to ASTRONOMY - most notably his 3 laws of planetary motion - provided vital groundwork for Newton's cosmological synthesis. In 1593 JK prepared a dissertation on the heliocentric theory, which explained how events in the heavens would be seen by an observer stationed on the MOON; a new draft, in which the

observer is conveniently placed on the Moon by a demon conjured up by his mother, was prepared in 1609 (the manuscript was stolen in 1611 and JK later had to defend his own mother against an accusation of witchcraft, a charge which may have been encouraged by the literary device). Between 1620 and 1630 he annotated the essay extensively, but he died while it was being prepared for publication; it finally appeared as *Somnium* (1634 in Latin; definitive trans in Kepler's "*Somnium*" by Edward Rosen 1967; a cut trans had earlier appeared in *Beyond Time and Space*, anth 1950 ed August W. DERLETH). The last section constructs a hypothetical ECOLOGY for the Moon, a significant pioneering exercise in the imagination of LIFE ON OTHER WORLDS. [BS]See also: BIOLOGY; COSMOLOGY; FANTASTIC VOYAGES; GERMANY; HISTORY OF SF; PROTO SCIENCE FICTION; SPACE FLIGHT.

KEPPEL-JONES, ARTHUR (MERVYN)

(1909-) South African-born writer, in Canada from 1959, whose *When Smuts Goes: A History of South Africa from 1952 to 2010* (1947) takes a gloomy view of the apartheid-ridden future of that country. It is a respectable - though minor - contribution to the future- HISTORY genre. [JC]See also: POLITICS.

KERN, GREGORY

E.C. TUBB.

KERR, KATHARINE

(1944-) US writer, best known for her substantial contributions to modern fantasy (see Other Works below); she became of interest as an author of sf with *Polar City Blues* (1990), which is set on a desert world populated by a wide ethnic mix of humans, and boxed in by 2 conflicting interstellar empires. The main characters, good and ill, have PSI POWERS, which allies the tale with KK's shaman-dominated fantasies; but there is a genuine hard-edged sf-like feel, and consequentiality, to the novel. *Resurrection* (1992) is a novella set in a NEAR-FUTURE (or perhaps ALTERNATE WORLD) San Francisco, where a brain-damaged protagonist, after suffering lengthy rehabilitation after a near-fatal crash, must sort out her distressed perception that something is profoundly awry. The tale is due to appear as well in *Freeze Frames* (coll of linked stories, dated 1994 but 1995). [JC]Other Works: the Kingdom of Deverry sequence, comprising *Daggerspell* (1986; rev 1993), *Darkspell* (1987; rev 1994), *The Bristling Wood* (1989; vt *Dawnspell: The Bristling Wood* 1989 UK) and *The Dragon Revenant* (1990; vt *Dragonspell: The Southern Sea* 1990 UK); and the connected Westlands Cycle, comprising *A Time of Exile* (1991), *A Time of Omens* (1992 UK), *A Time of War: Days of Blood and Fire* (1993 UK; vt *Days of Blood and Fire: A Novel of the Westlands* 1993 US) and *A Time of Justice: Days of Air and Darkness* (1994 UK; vt *Days of Air and Darkness* 1994 US); *Weird Tales from Shakespeare* (anth 1994) with Martin H. GREENBERG.

KERR, MICHAEL

Robert HOSKINS.

KERSH, GERALD

(1911-1968) UK writer-born in the county of Middlesex, despite stories that he was born in Russia-active from the mid-1930s, very prolific in shorter forms; known mainly for such work outside the sf field as *Night*

and the City (1938) and They Die with their Boots Clean (1941). Many of his numerous short stories are sf or fantasy, and had their original book appearance in collections such as The Horrible Dummy and Other Stories (coll 1944), The Battle of the Singing Men (coll 1944 chap), Neither Man nor Dog (coll 1946), Sad Road to the Sea (coll 1947), The Brighton Monster (coll 1953), Men without Bones (coll 1955 UK; with differing contents, rev 1962 US), The Ugly Face of Love (coll 1960), The Terribly Wild Flowers (coll 1962) and The Hospitality of Miss Tolliver (coll 1965). Two US compilations, On an Odd Note (coll 1958 US) and Nightshade and Damnations (coll 1968 US), the latter ed Harlan ELLISON, conveniently abstract some of GK's fantasies and sf from his other short stories, which often take the shape of anecdotes told to a narrator (sometimes identified as GK himself), so that much of his work tends to verge upon the tall-tale or CLUB-STORY genre; The Best of Gerald Kersh (coll 1960) is more general. In "Whatever Happened to Corporal Cuckoo?" (1953) the corporal tells GK of his 500 years of soldier life following a mysterious cure given to him about 1537 (IMMORTALITY). "Voices in the Dust of Annan" (1947) is a post-HOLOCAUST tale starring fairies. In "Men without Bones" a tropical explorer tells us of a species of loathsome invertebrates, adding the hypothesis that we are really Martians. GK's novels are perhaps less impressive. The Weak and the Strong (1945) grotesquely carries its cast - trapped underground - into claustrophobic fantasy realms, and An Ape, a Dog, and a Serpent: A Fantastic Novel (1945) fabulates a history of film-making with borderline sf elements. The Great Wash (1953; vt The Secret Masters 1953 US) is an sf novel in which the usual narrator - GK - becomes gradually involved in a plot to inundate most of the world and to rule the remains on authoritarian lines. The subplot of Brock (1969) revolves around a new form of nuclear explosive. But GK's strengths as an author are everywhere evident: a strong and vivid sense of character, a colourful style and a capacity to infuse his stories with a deep emotional charge (sometimes sentimentalized). He has strong admirers. [JC] See also: HORROR IN SF; HUMOUR.

KESHISHIAN, JOHN M.

(1923-) US doctor of medicine and writer whose sf novel, with Jacob HAY (whom see for details), is Autopsy for a Cosmonaut (1969; vt Death of a Cosmonaut 1970 UK). [JC]

KESSEL, JOHN (JOSEPH VINCENT)

(1950-) US academic and writer who began publishing sf with "The Silver Man" for Galileo in 1978, and whose short fiction rapidly established him as an author of cunningly pastiche-heavy, erudite stories. His two best known early tales - both assembled with other work in Meeting in Infinity: Allegories ?

Park and Lock It!" (1981) and Another Orphan (1982 FSF; 1989 chap dos), which won a NEBULA in 1982; in both, an urgent extremism of metaphor tends to enforce allegorical readings. This extremism with the materials of genre sf also dominates much of JK's first novel, Freedom Beach (1985) with James Patrick KELLY, a tale whose characters find themselves occupying allegorical venues construed according to the styles of various authors, from Aristophanes to Groucho Marx. Of greater interest, perhaps,

is his first solo novel, GOOD NEWS FROM OUTER SPACE (fixup 1989), a sustained but dizzying look at the human animal as the millennium approaches, identity crises eat into men and women, the dead are medically reawoken, and dreams of redeeming ALIENS rattle the large cast. There are echoes of Philip K. DICK, but a gonzo Dick, and of Barry N. MALZBERG's allegorized urban desolation (and black wit) - but JK's desolation, very frighteningly and very movingly, is populous with human faces, however fractured. JK seems to be one of the writers capable of bending the tools of sf inward upon the human psyche. [JC]See also: END OF THE WORLD; The MAGAZINE OF FANTASY AND SCIENCE FICTION .

KESTEVEN, G.R.

Pseudonym of UK teacher and writer Geoffrey Robins Corsher (1911-), some of whose stories for children have been published under his own name. Of sf interest is The Pale Invaders (1974), a post- HOLOCAUST tale set in the FAR FUTURE and describing the impact upon an isolated valley culture of the discovery of technologies which reveal much hitherto hidden history. The Awakening Water (1977) has less impact. [JC]

KETTERER, DAVID (ANTHONY THEODOR)

(1942-) UK-born Canadian academic (with a DPhil from the University of Sussex) based at Concordia University, Montreal. His New Worlds for Old: The Apocalyptic Imagination, Science Fiction, and American Literature (1974) interestingly, though in rather academic terminology, links apocalyptic themes in US MAINSTREAM literature with similar obsessions in genre sf. The Rationale of Deception in Poe (1979) covers the whole of Edgar Allan POE's writing, including the PROTO SCIENCE FICTION; a briefer work on Poe is Edgar Allan Poe: Life, Work, and Criticism (chap 1989). Frankenstein's Creation: The Book, the Monster, and Human Reality (1979) is another of DK's later works which, to a degree, enlarge on the thesis of his first. DK's critical work is widely respected and by no means "one-note", but it does often return to the idea of "metaphorical transcendence". The Science Fiction of Mark Twain (coll 1984) ed DK contains 120pp of Introduction and critical apparatus. DK attracted much attention with Imprisoned in a Tesseract: The Life and Work of James Blish (1987). Canadian Science Fiction and Fantasy (1992US) is an important critical and historical survey of both English and French Canadian sf literature, and includes a bibliography. [PN]See also: CANADA; CRITICAL AND HISTORICAL WORKS ABOUT SF; DEFINITIONS OF SF; SENSE OF WONDER; WOMEN AS PORTRAYED IN SCIENCE FICTION.

KETTLE, LEROY

[r] John BROSANAN.

KETTLE, (JOCELYN) PAMELA

(1934-) UK writer, author of a historical novel, Memorial to the Duchess (1968) as by Jocelyn Kettle, and of the sf novel The Day of the Women (1969), in which sex-role reversal is instituted - and deplored. [JC]

KEY, ALEXANDER (HILL)

(1904-1979) US writer who began publishing novels for children with The Red Eagle (1930), and who moved into CHILDREN'S SF with the Sprockets

sequence: Sprockets: A Little Robot (1963), Rivets and Sprockets (1964) and Bolts - A Robot Dog (1966). These books were not likely, however, to seize a wide audience, and it was only with the Witch Mountain sequence - Escape to Witch Mountain (1968) and Return from Witch Mountain * (1978) - that AK's easy sentimentality was attached to a narrative strong enough to bear it, as two orphan children on the run gradually come to realize that they are in fact ALIENS with powers (and memories) foreign to their ignorant hosts. Both stories were filmed by Walt Disney, in 1975 and 1978 respectively, both dir John Hough. An earlier alien orphaned on Earth had featured in The Forgotten Door (1965). Other singletons of interest include The Golden Enemy (1969), set thousands of years hence when the descendants of the survivors of nuclear HOLOCAUST must face their human nature, and Flight to the Lonesome Place (1971), where a young mathematical genius flees his oppressors into a space to which only he can understand the route. [JC]Other works: The Incredible Tide (1970); The Preposterous Adventures of Swimmer (1973); The Magic Meadow (1975); Jagger, the Dog from Elsewhere (1976); The Sword of Aradel (1977); The Case of the Vanishing Boy (1979). See also: SMALL PRESSES AND LIMITED EDITIONS; SUPERMAN.

KEY, EUGENE G(EORGE)

(1907-1976) US author whose sf collection, Mars Mountain (coll 1936), published by William L. CRAWFORD's semi-professional company Fantasy Publications, was the first full-length book to appear from any US publishing house specializing in sf, and so the precursor of great things to come. Otherwise the 3 stories assembled are unremarkable. [JC]

KEYES, DANIEL

(1927-) US writer and university lecturer in English. He began his sf career as associate editor of MARVEL SCIENCE FICTION, Feb-Nov 1951, and it was in that magazine that his first published story, "Precedent" appeared (1952). He is known mainly for one excellent novel, FLOWERS FOR ALGERNON (1959 FSF; exp 1966), winner of a 1960 HUGO in its magazine form and of a 1966 NEBULA for the full-length book version, on which was based the film CHARLY (1968). It is the story, largely in the first person, of Charlie Gordon, whose INTELLIGENCE, starting at IQ 68, is artificially increased to genius level (MEDICINE; SUPERMAN). The mouse Algernon has preceded him in this course, but Algernon soon dies, and Gordon's main contribution to science is his working out of the "Algernon-Gordon Effect", by which "artificially induced intelligence deteriorates at a rate of time directly proportional to the quantity of the increase". The last pages of the novel, detailing the loss of Charlie's faculties, are extremely moving. His treatment as an object of scientific curiosity throughout his ordeal underlines the book's points about deficiencies in the scientific method as applied to human beings. The Touch (1968; vt The Contaminated Man 1977 UK), a borderline-sf tale about the psychological consequences of an industrial accident involving radioactive contamination, has received less attention. After a long silence in the sf field, a new novel from DK was projected for the early 1990s. [JC] See also: ALIENS; CINEMA; CONCEPTUAL BREAKTHROUGH; The MAGAZINE OF FANTASY AND SCIENCE FICTION ; NUCLEAR POWER;

PSYCHOLOGY; RADIO.

KEYES, THOM

(1943-) UK writer whose sf novels, *The Battle of Disneyland* (1974) and *The Second Coming* (1979), apply the tools of sf SATIRE, without excessive energy, to a NEAR-FUTURE USA. [JC]

KEYHOE, DONALD E.

[r] DR. YEN SIN; EARTH VS. THE FLYING SAUCERS; UFOS.

KEYNE, GORDON

[s] H. BEDFORD-JONES.

KHAN, OBIE

Robert E. VARDEMAN.

von KHUON, ERNST

[r] GERMANY.

KIDD, (MILDRED) VIRGINIA

(1921-) US literary agent and writer, married to James BLISH 1947-63, who began to publish professionally in the early 1950s, writing at least 1 story with Blish; her first solo sf story, "Kangaroo Court", did not appear until much later, in *Orbit 1* (anth 1966) ed Damon KNIGHT. She edited 3 strong ORIGINAL ANTHOLOGIES: *Millennial Women* (anth 1978; vt *The Eye of the Heron, and Other Stories* 1980 UK), *Interfaces* (anth 1980) with Ursula K. LE GUIN, and *Edges* (anth 1980), also with Le Guin. As a literary agent from 1965, she became known for her FEMINIST views and - although she did not handle only WOMEN WRITERS - for representing a highly capable range of feminist authors, including Carol EMSHWILLER, Le Guin, Josephine SAXTON and James TIPTREE Jr. [JC]

KILIAN, CRAWFORD

(1941-) US-born writer, in Canada from 1967, who began publishing sf with *The Empire of Time* (1978 US), the first volume of the Chronoplane Wars sequence. This sequence - which continued with *The Fall of the Republic* (1987 US) and *Rogue Emperor: A Novel of the Chronoplane Wars* (1988 US) - is dominated by the discovery in a savagely declining NEAR-FUTURE USA of the I-Screens, through which travel to a series of ALTERNATE WORLDS is possible. Each Earth is located uptime or downtime of our base reality but, ominously, uptime is uninhabitable, seemingly because of the effects of an alien INVASION; the protagonist gradually uncovers a seamy truth. Perhaps more interestingly, *Icequake* (1979) and its sequel *Tsunami* (1983) - the latter set in Vancouver - depict an Earth very much closer to home, with the ozone layer gone and the Antarctic icecap beginning to melt disastrously. *Eyas* (1982) moves into the very FAR FUTURE, where the eponymous primitive gingers his tribe into readiness for the dawn of a new age. *Brother Jonathan* (1985 US) describes the effect of experiments which permit human-animal interfaces, these soon being invaded by AIs in typical CYBERPUNK fashion. *Lifter* (1986 US) is a fairly unserious tale about ANTIGRAVITY and *Gryphon* (1989 US) somewhat unadventurously deals with an alien invasion. CK's work can be analysed in terms of its Canadianness, its emphasis on themes of survival (CANADA); but he slips too often into generic dogpaddling for this kind of analysis

to be entirely fruitful. [JC]Other works: Wonders, Inc. (1968), a juvenile; Greenmagic (1992), a fantasy.

KILLDOZER

Made-for-tv film (1974). Universal TV/ABC. Dir Jerry London, starring Clint Walker, Carl Betz, Neville Brand. Teleplay Richard Mackillop, Theodore STURGEON, based on Sturgeon's "Killdozer" (1944). 74 mins. Colour. Though derived from Sturgeon's own well known story about a huge bulldozer that becomes possessed by a seemingly ALIEN force - actually a semi-intelligent entity fabricated, aeons earlier, by a pre-human terrestrial civilization - this tv movie does not live up to its potential. The story is a tightly constructed description of the battle between the machine and a group of men on a Pacific island; the film pads this material out with cliched emotional conflicts between the human characters. [JB]

KILLOUGH, (KAREN) LEE

(1942-) US writer and Chief Technologist at the Department of Radiology, Kansas State University Veterinary Medical Teaching Hospital. She began publishing sf with "Caveat Emptor" for ASF in 1970, and since then has published about 30 stories, perhaps most notably the tales assembled as Aventine (coll of linked stories 1982), set in an artist's colony in a decadent future whose resemblance to that depicted in J.G. BALLARD's Vermilion Sands (1971 US) led some critics to brand it as merely derivative, though others accepted it as a homage. Her first novel, A Voice out of Ramah (1979) - set on a planet where 90 per cent of males are ritually slaughtered at puberty - is typical of much of her work in its plumping for unexceptionable presentations of various issues (FEMINISM in this case) while at the same time tending to stumble over the generic working-out of those presentations. The Doppelganger Gambit (1979) and its sequels, Spider Play (1986) and Dragon's Teeth (1990), are police procedurals starring Janna Brill and Mama Maxwell and set in a USA that must be wary of COMPUTERS; and Blood Hunt (1987) and its sequel Bloodlinks (1988) are police-procedural fantasies dealing with a cop's confrontation of the fact that he has become a vampire. In both series there is a recurring sense that unexamined plots have tended to dominate proceedings. LK's singletons are various. The Monitor, the Miners, and the Shree (1980) amiably deals with the issue of human exploitation of alien planets. Deadly Silents (1981) again involves the police, though this time on another world. The Leopard's Daughter (1987) is a vibrant fantasy set in Africa. [JC]Other work: Liberty's World (1985). See also: ARTS; CRIME AND PUNISHMENT.

KILPI, VOLTER

[r] FINLAND.

KILWORTH, GARRY (DOUGLAS)

(1941-) UK writer who began to publish sf and fantasy stories and novels in the mid-1970s on retiring after 18 years' service as a cryptographer in the RAF; raised partly in Aden, he has travelled and worked in the Far East and the Pacific. He published his first sf story, "Let's Go to Golgotha" with the Sunday Times Weekly Review in 1974, having won the

associated competition, and some of his many stories have been assembled as *The Songbirds of Pain* (coll 1984), *In the Country of Tattooed Men* (coll 1993) and *Hogfoot Right and Bird-Hands* (coll 1993 US). He has written novels as Garry Douglas. His first sf novel, *In Solitary* (1977), is set on an Earth whose few remaining humans have for over 400 years been dominated by birdlike ALIENS, and deals with a human rebellion whose moral impact is ambiguous; the novel is the first of several combining generic adventurousness-indeed opportunism, for GK seldom accords his full attention to the raw sf elements in his tales - and an identifiably English dubiety about the roots of human action. Consequences of such action in a GK novel are seldom simple, rarely flattering. *The Night of Kadar* (1978) places humans whose culture has an Islamic coloration, and who are hatched from frozen embryos on an alien planet where they must attempt to understand their own nature. *Split Second* (1979) similarly isolates a contemporary human in the mind of a Cro-Magnon. *Gemini God* (1981) again uses aliens to reflect the human condition. *A Theatre of Timesmiths* (1984) isolates a human society in an ice-enclosed city (POCKET UNIVERSE) as computers fail and questions about the meaning of human life must be asked. *Cloudrock* (1988) pits brothers - GK often evokes kinship intimacies - against themselves and each other in a further pocket-universe setting. *Abandonati* (1988), set in a desolate NEAR-FUTURE London, reflects grittily upon the implications for the UK of the last decades of this century. GK's non-genre novels (see listing below) follow the same pattern; of them, *Witchwater Country* (1986), among his finest works, has autobiographical elements. At the end of the 1980s, in an apparent break with his sf career, he began to publish animal fantasies: *Hunter's Moon: A Story of Foxes* (1989; vt *The Foxes of First Dark* 1990 US), *Midnight's Sun: A Story of Wolves* (1990) and *Frost Dancers: A Story of Hares* (1992), in all of which he scrutinized nonhuman terrestrial life with an unblinking eye. He has also moved into contemporary HORROR with *Angel* (1993) and its sequel, *Archangel* (1994). Much of his short fiction is uneven; but in his novels GK has developed into an observer whose reports are both subtle and frank. [JC]Other works: *Spiral Winds* (1987), *In the Hollow of the Deep-Sea Wave: A Novel and Seven Stories* (coll 1989) and *Standing on Shamsan* (1992), all containing some fantasy elements; a juvenile series comprising *The Wizard of Woodworld* (1987) and *The Voyage of the Vigilance* (1988); *Trivial Tales* (coll 1988 chap); *The Rain Ghost* (1989), *Dark Hills, Hollow Clocks: Stories from the Otherworld* (coll 1990), *The Drowners* (1991), a ghost story, *The Third Dragon* (1991), associational, *Billy Pink's Private Detective Agency* (1993), *The Electric Kid* (1993) and *The Phantom Piper* (1994), all juveniles. As Garry Douglas: *Highlander ** (1986), a film novelization; *The Street* (1988), horror. See also: INTERZONE; ISLANDS; MESSIAHS; RELIGION; TIME TRAVEL.

KIMBERLY, GAIL

(1937-) US writer who began publishing work of genre interest with "The Prince and the Physician" for *Medical Opinion* ? has been moderately productive in short forms ever since. She has written young-adult adventure novels under the house name Dayle Courtney and a Gothic, *Secret of the Abbey* (1980) as by Alix Andre. Her sf novel is *Flyer* (1975), a meditative tale of an Earth occupied by MUTANTS who fly and

swim. Dracula Began (1976) is horror. [JC]

KIMBRIEL, KATHARINE ELISKA

(1956-) US writer whose work of sf interest - though she has published some fantasy stories - is restricted to the Nuala sequence: Fire Sanctuary (1986), Fires of Nuala (1988) and Hidden Fires (1991). Threatened by mutations (caused by high radioactivity in the planetary crust) and by intergalactic war, the inhabitants of the eponymous long-lost colony planet must cope with intrigues, spies, dynastic disputes and an extremely harsh climate. The plots are sometimes congested, but KEK's sense of local colour and her capacity to create genuinely engaging characters have made the sequence into something more than routine. [JC]

KING, ALBERT

[r] or CHRISTOPHER Paul CONRAD.

KING, JOHN

Ernest L. MCKEAG.

KING, JOHN ROBERT

(1948-) UK writer whose Bruno Lipshitz and the Disciples of Dogma (1976) rather uneasily juggles a number of ingredients in a complex plot: an ALIEN invasion, a strange RELIGION, interpersonal conflicts and dollops of adventure. [JC]

KING, PAULA

Paula E. DOWNING.

KING, STEPHEN

(1947-) US writer of HORROR fiction. With over 80 million books in print already-his first book was published less than 20 years ago-he is probably the most successful bestseller novelist in history; the example of his success has revolutionized the horror-fiction business, which is considerably more flourishing in 1990 than it was in 1975. At first he was attracted to sf, beginning with the unpublished novel The Aftermath (written when he was 16) and, commercially, with "The Glass Floor" for Startling Mystery Stories in 1967. Night Shift (coll 1978) collects much of his early short fiction, his main market then being Cavalier; it includes some grisly sf in the pulp style. He was perhaps diverted from a conventional sf career by the response of Donald A. WOLLHEIM to his first novel submission: "We here at Ace Books are not interested in negative Utopias." SK has since concentrated on horror/fantasy with occasional sf grounding, as exemplified by the focus on PSI POWERS, notably TELEKINESIS, in his first published novel, Carrie (1974), successfully filmed as CARRIE (1976). Other paranormal talents feature in The Dead Zone (1979) (precognition) and Firestarter (1980) (pyrokinesis), both also filmed (The DEAD ZONE and FIRESTARTER). While SK does not have the analytical approach of the HARD-SF writer, and is not especially interested in "explanations" of his GOTHIC creations, he has a down-to-earth quality which gives even his purely supernatural fiction a true sf "feel"; he eschews the nebulous; he describes and specifies with some exactness. Under his own name SK has written two further novels which are sf by any measure (though both incorporate elements from other genres). The earlier and

better is *THE STAND* (abridged from manuscript 1978; with text largely restored, rev 1990 UK), a long and intelligent story of the HOLOCAUST AND AFTER in the USA, beginning with the accidental release of a germ-warfare virus by the US military; in the second half of the book a supernatural struggle between powers of light and darkness weakens the impact from an sf point of view, but the novel remains a very superior example of its genre, clearly owing something to George R. STEWART's *EARTH ABIDES* (1949), but not imitative of it. *THE STAND* (1994) is an unusually strong tv miniseries that deals well with this long and complex story. *The Tommyknockers* (1987) is gothic horror dressed in sf clothes, a lurid, eminently readable tale of an alien SPACESHIP buried for millions of years and now dug up, and of the effects it has on people nearby: sudden technological brilliance, physiological changes and a melding into a group mind. A four-hour ABC tv miniseries dramatization, also called *The Tommyknockers*, was broadcast in May 1993, and is available on videotape. *The Talisman* (1984), with Peter Straub, is an uneasy collaboration in which two very strong individual voices seem to muffle one another; primarily a fantasy quest, it uses the sf device of PARALLEL WORLDS, as does the ongoing *Dark Tower* fantasy series by SK alone: to date *The Dark Tower: The Gunslinger* (1982), #2: *The Drawing of the Three* (1987) and #3: *The Waste Lands* (1991); different in tone from most of SK's work - and perhaps more demandingly inventive than usual - these have an undeniable mythic charge, partly because of the alienated-adolescent theme that runs through them. As the series continues, and especially in the third volume, it has looked more like sf and less like pure FANTASY, both in its post-holocaust imagery and in its use of a self-aware AI as a major threat to the protagonists. SK wrote four early novels (the first three before *Carrie* came out) subsequently published as paperback originals as by Richard Bachman: *Rage* (1977), *The Long Walk* (1979), *Roadwork* (1981), and *The Running Man* (1982). Shortly after the publication of a fifth, *Thinner* (1984), Bachman's cover was blown, and an omnibus edition of the first four out-of-print Bachman titles was published as *The Bachman Books: Four Early Novels* by Stephen King (omni 1985; vt *The Bachman Books: Four Novels* by Stephen King UK). *The Long Walk* and *The Running Man* are both fringe sf about futuristic sadistic sports events, the first a marathon walk where those who fall behind are shot, the second duelling to the death as a tv game show; the latter was filmed as *The RUNNING MAN* (1987). It is generally held that most films based on SK's novels, stories and original screenplays are poor. In fact *Carrie*, *The Shining* (1980), *The Dead Zone* (1983), *Cujo* (1983), *Stand By Me* (1986) and *Misery* (1990) are all strong films, although SK dislikes the second. *The Shawshank Redemption* (1994), neither sf nor horror, is a fine prison buddy movie based on a novella from *Different Seasons*. Fantasy/horror films aside from those already mentioned are *Salem's Lot* (tv miniseries 1979), *Creepshow* (1982), *Christine* (1983), *Cat's Eye* (1984), *Children of the Corn* (1984), *Silver Bullet* (1985), *Creepshow II* (1987), *Pet Sematary* (1989), *Graveyard Shift* (1990) and *It* (tv miniseries 1990). *Return to Salem's Lot* (1987) dir Larry COHEN is "based on characters created by Stephen King". *Tales from the Darkside: The Movie* (1990), an anthology film based on the tv series of the same name, contains an adaptation of SK's "The Cat from Hell" (1977). The eight-hour tv anthology miniseries *The Golden Years of Stephen*

King(1991) was a ratings flop, and was re-released on videotape in 1992 with a new ending and cut to 236 mins. The Dark Half (1991 but released 1993 because of Orion Pictures' financial problems), dir George ROMERO, is a valiant attempt to dramatize a not wholly satisfactory original. SK rightly repudiated the sf film The LAWNMOWER MAN (1992), allegedly based on a short story by him, as having nothing to do with his work, and won a lawsuit demanding that his name be removed from the credits. He wrote an original screenplay for the uneven vampire film Sleepwalkers (1992; vt Stephen King's Sleepwalkers). Children of the Corn II: The Final Sacrifice(1992) is a sequel to a film based on an SK story, but otherwise has no connection with him. Stephen King's "Sometimes They Come Back" (1993) is a 97-min tv movie adaptation dir Tim McLoughlin. Needful Things (1994), 120 mins, dir Fraser C. Heston is less satisfyingly apocalyptic than the original novel. One film adaptation of a story by SK - "Trucks" (1973) - was directed by King himself from his own screenplay: Maximum Overdrive (1986). Though not as bad as some critics stated, it flopped commercially. Technically sf, it has Earth passing through the tail of a comet that mysteriously gives self-awareness to MACHINES (trucks, lawnmowers, hairdryers, electric carving knives, etc.), which then revolt against humans. This paranoid fantasy is crudely made with very broad stereotypes, but at least one sequence, of a boy cycling through a quiet township littered with bodies, suggests latent cinematic talent. SK's occasional critical commentaries, the reverse of academic in style, are usually observant and interesting. Danse Macabre (1981), a study of horror in books, films and comics, won a HUGO for Best Nonfiction Book in 1982. SK's pungent prose, his sharp ear for dialogue, his disarmingly laid-back, frank style, along with his passionately fierce denunciations of human stupidity and cruelty (especially to CHILDREN), put him among the more distinguished of "popular" writers. [PN]Other works: 'Salem's Lot (1975); The Shining (1977); The Monkey (1980 chap); Cujo (1981); The Raft (1982 chap); The Plant (1982 chap); Creepshow (coll 1982); Different Seasons (coll 1982); Pet Sematary (1983), one of SK's finest works; Christine (1983; text differs slightly in UK edition); Cycle of the Werewolf (1983; exp as coll with film screenplay "Silver Bullet" 1985); The Eyes of the Dragon (1984; rev 1987); Skeleton Crew (coll 1985; exp by 1 story 1985); It (1986; the 1st edn was the German translation as Es [1986]); Misery (1987); My Pretty Pony (1988 chap); Dolan's Cadillac (1989 chap); The Dark Half (1989 UK); Four Past Midnight (coll 1990); Needful Things (1991); Gerald's Game (1992); Nightmares and Dreamscapes (coll 1993); Insomnia (1994). Nonfiction includes: Nightmares in the Sky (1988), a book of photographs by "F-Stop Fitzgerald" with minimal contribution by SK; Bare Bones: Conversations on Terror with Stephen King (coll 1988); Feast of Fear: Conversations with Stephen King (coll 1989). About the author: Fear Itself: The Horror Fiction of Stephen King (coll 1982) ed Tim UNDERWOOD and Chuck MILLER; Stephen King: The Art of Darkness (1984; rev 1986) by Douglas E. Winter; The Stephen King Companion (coll 1989) ed George Beahm; many others, including at least 10 from STARMONT HOUSE. See also: CINEMA; CLICHES; DISASTER; DISCOVERY AND INVENTION; EC COMICS; ESP; FRANCE; INTELLIGENCE; MEDIA LANDSCAPE; MUSIC.

KING, T(HOMAS) JACKSON (Jr)

(1948-) US archaeologist and writer, married to Paula E. DOWNING. He began publishing sf with his first novel, *Retread Shop* (1988), a somewhat congested but pleasingly vivid tale of the upbringing of a young human in the SPACE HABITAT of the title, and of his complicated dealings with alien merchants and crises of various sorts. The energy of the telling constitutes a forecast of much further work. [JC]

KING, VINCENT

Pseudonym of UK writer, artist and teacher Rex Thomas Vinson (1935-), who worked in Cornwall and began publishing sf with "Defence Mechanism" for *New Writings in SF* No 9 (anth 1966) ed E.J. CARNELL. His more successful novels, like *Light a Last Candle* (1969 US) and *Candy Man* (1971 US), tend to combine elements of epic and grotesque sf adventure with a characteristically English darkness of emotional colouring and a tendency towards downbeat conclusions. [JC] Other works: *Another End* (1971 US); *Time Snake and Superclown* (1976).

KINGDOM OF THE SPIDERS

Film (1977). Arachnid Productions/Dimension. Dir John "Bud" Cardos, starring William SHATNER, Tiffany Bolling, Woody Strode. Screenplay Richard Robinson, Alan Caillou, from a story by Jeffrey M. Sneller, Stephen Lodge. 95 mins, cut to 90 mins. Colour. In its modest way, this is one of the better films in the revenge-of-Nature cycle (MONSTER MOVIES). Near a small town in Arizona, tarantulas whose ECOLOGY has undergone changes because of crop-dusting sprays are migrating north in large numbers and apparently acting with communal intelligence (HIVE-MINDS). Starting small and building to local apocalypse, the film is crisply made, the masses of spiders (normal size) are believable, and the end, though clearly echoing Hitchcock's *The BIRDS* (1963), offers a genuine minatory thrill with its vision of a whole town cocooned in spider-silk, its occupants now preserved as food. Shatner plays the vet trying to puzzle out why the normally solitary spiders are acting in concert. [PN]

KING-HALL, LOU

Working name of UK writer Louise (variously Luise) Olga Elisabeth King-Hall (1897-), whose *Fly Envious Time* (1944) posits a NEAR-FUTURE world in which eugenics dominates and women have achieved full equality; WWII follows rather rapidly, in 1999. Her brother was Stephen KING-HALL. [JC]

KING-HALL, (WILLIAM) STEPHEN (RICHARD)

(1893-1966) UK naval officer, writer and politician; brother of Lou KING-HALL. His military experiences (1914-29) influenced his work as a writer, especially the long series of admonitory newsletters he published from 1936 for 30 years, first as the K-H News Service and later under other names. *Posterity* (1927 chap), a play, is fantasy; it appears also in *Three Plays and a Plaything* (coll 1933) along with "The Republican Princess", a RURITANIAN spoof. In *Post-War Pirate* (1931) a submarine uses a newly invented gas to disable shipping. *Bunga-Bunga* (1932) is a SATIRE set on an ISLAND where anything is permitted. *Number 10 Downing Street* (1948), a play which depicts an occupied UK, takes place in the mid-1950s. His last novel, *Men of Destiny* (1960; vt *Moment of No Return* 1961 US), is

KING KONG

1. Film (1933). RKO. Dir Merian C. Cooper, Ernest B. Schoedsack, starring Fay Wray, Robert Armstrong, Bruce Cabot. Screenplay James A. Creelman, Ruth Rose, from a story by Cooper, with credit also given to Edgar WALLACE. Special effects designed and supervised by Willis H. O'BRIEN. 100 mins. B/w. The classic MONSTER MOVIE. On a remote island inhabited by unfriendly natives and prehistoric MONSTERS, of which the most powerful is a giant APE called Kong, a young actress (Wray) from a visiting film unit is kidnapped by tribesmen and offered to Kong, a gift which he eagerly accepts. She is rescued and Kong is captured and taken to New York, where he is exhibited, escapes, rampages, recaptures the girl (for whom he appears to cherish strong feelings), and makes a last defiant stand on top of the Empire State Building before being machine-gunned down by a squadron of biplanes. Although KK is an early film, its special effects are still very convincing today, many being the product of the technique of stop-motion photography that had been pioneered by O'Brien in *The LOST WORLD* (1925). The classic status of KK, which has become one of the great mythopoeic works of the 20th century, has probably to do with the ambiguous feelings - much as with its fairy-tale model, "Beauty and the Beast" - created by the film towards Kong himself: terror at his savagery; admiration for his strength, naturalness and effortless regality in his primeval surroundings; and pity for his squalid end - the most memorable of all cinematic images of Nature destroyed in the city. This ending is also an image of the great destroyed by the small: the humans are dwarfed by the ape and indeed by the city they have created, a feeling emphasized by the ambience of the Great Depression, with a bored, impoverished populace ready to grasp at any ersatz marvel but panicking when it finds itself faced with the real thing. Yet another polarity is that of innocence destroyed by sophistication, a feeling enhanced by the crucial story-element of Kong's capture being to do with the shooting of a movie. The narrative moves with elan, and the film has been almost as popular with critics as with the general public. There is a GRAPHIC NOVEL version of the tale: *King Kong: The Greatest Adventure Story of All Time* * (graph 1970) illus Alberto Giolitti. The disappointing sequel was *SON OF KONG* (1933). Another Willis O'Brien giant ape, not quite so big, starred in *MIGHTY JOE YOUNG* (1949; vt Mr Joseph Young of Africa).

2. Film (1976). Dino De Laurentiis/Paramount. Dir John Guillermin, starring Jessica Lange, Jeff Bridges, Charles Grodin, Ed Lauter. Screenplay Lorenzo Semple Jr, based on the 1933 screenplay. 134 mins. Colour. In this lavish and heavily publicized remake, it is an oil-company executive who leads the expedition to Kong's island. Kong is taken back to the USA in an oil supertanker. His last stand is on top of the World Trade Center, and he is shot dead by a group of helicopter gunships. This version did not use model animation and was therefore more restricted - and indeed more primitive - in its effects: most shots of Kong show a man in an ape suit. The original set-piece battles between Kong and prehistoric monsters are gone. The vigorous narrative of the original is here slowed down by didactic, moralizing scenes in a manner which suggests that the new Hollywood has a much lower opinion of the intelligence of the public than the old one did.

The delicate balance of the original between pity and terror is here shifted towards pity, and Kong is softened. Tragedy becomes at best pathos, yet many scenes remain moving, and the startlingly vulgar heroine (now feminist and tough, no longer a limp screamer) has a more interesting role than her original. In a flurry of self-contradiction, KK seems designed to be spoof, tragedy, nostalgia-epic, spectacle and allegory about "the rape of the environment by big business" - all rolled into one. KING KONG TAI GOJIRA
GOJIRA.

KING KONG VS. GODZILLA
GOJIRA.

KINGSBURY, DONALD (MacDONALD)
(1929-) US-born academic and writer, in Canada from 1948, a teacher of mathematics at McGill University from 1956 until his retirement in 1986. He began publishing sf with "Ghost Town" for ASF in 1952; although he produced relatively little for nearly 30 years, his intermittent appearances in ASF, with both fiction and nonfiction, were generally noticed. What could not have been noted - because of the sparseness of his production and the wide-ranging nature of his underlying construct - was that almost everything he wrote shared a common future HISTORY, somewhere into the middle of which his first novel, COURTSHIP RITE (1982 US; vt Geta 1984 UK), fitted smoothly; indeed, the polished sweep and exuberance of this large epic PLANETARY ROMANCE must have owed something to DK's long familiarity with its sustaining Universe. The planet Geta is a venue which amply contains: several warring cultures for whom all aspects of life are agonistic; complicated group marriages; an elaborate ethical and ecological justification of cannibalism in a world of terrible scarcity (ECOLOGY); and the highly productive worship of a God in the sky (in fact, in a standby orbit, the starship that seeded the world) who rewards worship by raining down computer chips full of precious data. The plot, involving the forced courtship of a woman from another culture by members of a group marriage, is perhaps less convincing than the background; but the pace is sufficient to intrigue and to engage even those readers who might be dubious about the Libertarian assumptions underlying certain elements of the unrelenting agons of Geta. DK's second novel, The Moon Goddess and the Son (1979 ASF; exp 1986), is set so early in his Future History that the NEAR-FUTURE setting of certain parts of the tale seems directly extrapolative of current thinking about space technologies. The HARD-SF arguments, about the design and construction of space stations capable of grappling space freighters into dock, are as gripping as this sort of narrative can sometimes be; and later sections, featuring the eponymous Diana a generation or so further on, adequately point a way forward into romance. A third novel, "The Survivor", forms the bulk of Man-Kzin Wars IV * (anth 1991) in the Larry NIVEN Man-Kzin Wars SHARED-WORLD enterprise; it is bleak and exorbitant, and constitutes a self-sufficient tale. DK is a writer whose energy is conspicuous, and whose imagined Universe does not lack ambition. At the time of writing, further connective tissue is still wanting, but can be hoped for. [JC]See also:

ANTHROPOLOGY; CANADA; GODS AND DEMONS.

KING-SIZE PUBLICATIONS FANTASTIC UNIVERSE.

KINGSMILL, HUGH

Working name of UK writer and anthologist Hugh Kingsmill Lunn (1899-1949), who remains best known for *An Anthology of Invective and Abuse* (anth 1929). *The Dawn's Delay* (coll 1924) contains "The End of the World", of interest for its vision of a Solar System populated by various species, and "W.J.", about a future WAR in 1966-72. *The Return of William Shakespeare* (1929) presents within a sketchy sf frame the thoughts and activities of a Shakespeare reconstituted in the 20th century (ARTS; REINCARNATION). In revised form both of these volumes were assembled as *The Dawn's Delay* (omni 1948). With Malcolm Muggeridge (1903-1990), HK wrote two SATIRES rendering NEAR-FUTURE doings in the form of newspaper stories: *Brave Old World: A Mirror for The Times* (1936) and *Next Year's News* (1938). A much-loved figure, HK appears in novels and reminiscences of writers like William GERHARDI and Lance SIEVEKING. [JC] See also: END OF THE WORLD; SUN.

KINGSTON, JEREMY

1. Full name Jeremy Hervey Spencer Kingston (1931-), UK writer, mostly of plays. His novel, *Love Among the Unicorns* (1968), a surreal fantasy set in South America, features a LOST WORLD. 2. Pseudonym under which John Gregory BETANCOURT wrote Robert Silverberg's *Time Tours #6: Caesar's Time Legion ** (1991). [JC]

KINLEY, GEORGE Edmund COOPER.

KINROSS, ALBERT

(1870-1929) UK writer in various genres whose *The Fearsome Island* (1896), most of which takes the form of a recently discovered 16th-century manuscript, describes its protagonist's experiences after being shipwrecked on an unknown ISLAND full of alarms and delights - including a huge mechanical man, an ominous castle which has many perilous marvels, and a Caliban-like native. The maker of all this, it turns out, is a cruel Spanish inventor who left his homeland long ago on a pre-Columbian expedition to the Americas. Some of the stories in *Within the Radius* (coll 1901) are sf. [JC]

KINVIG

UK tv series (1981). London Weekend Television. Created and written by Nigel KNEALE. Prod and dir Les Chatfield; starring Tony Haygarth, Patsy Rowlands, Colin Jeavons, Prunella Gee. 7 25min episodes. Colour. This most recent of Kneale's many sf plays and series for tv was a sitcom, fuelled apparently by a certain animus against sf FANDOM, about two lunatic fans living seedy urban lives, one of whom (Haygarth) has a fat wife (Rowlands) and a fat dog, and is entranced by an ALIEN from Mercury (Gee) in the guise of a beautiful customer at his electrical repair shop. He has adventures with her (she wearing a variety of sexy catsuits) and helps ward off an INVASION of Earth by the alien Xux. The scripts lacked the

precision required for decent farce, and the invasive canned laughter did not help. Kneale's belief that sf fans are typologically identical with UFO cultists, and that both have an obsessive need for alien glamour to lighten their ghastly lives, was offensive to some viewers. [PN]

KIPLING, ARTHUR WELLESLEY

(? -) UK author, possibly pseudonymous, of 2 future- WAR novels. *The New Dominion* (1908) pits the USA triumphantly against Japan and *The Shadow of Glory* (1910) visualizes a worldwide conflict, mainly naval. [JC]

KIPLING, (JOSEPH) RUDYARD

(1865-1936) UK poet, short-story writer and novelist, known mainly for such works outside the sf field as *Plain Tales from the Hills* (coll 1888 India) and *Kim* (1901). He won the Nobel Prize for Literature in 1907. Before the age of 27, RK wrote a considerable number of stories containing elements of fantasy and horror. Some, like "The Strange Ride of Morrowbie Jukes" (1885), are to be found in *The Phantom Rickshaw, and Other Tales* (coll 1888 India; rev 1890 UK), the title story of which is also fantasy; others appear in *Life's Handicap, Being Stories of Mine Own People* (coll 1891) and *Many Inventions* (coll 1893), which includes "The Lost Legion" (1892). *The Brushwood Boy* (1895; 1899 chap) is fantasy, as are the various linked and unlinked stories assembled in *The Jungle Book* (coll 1894) and *The Second Jungle Book* (coll 1895), while *Just So Stories for Little Children* (coll 1902) contains classic children's fables. "They" (1905 chap) is a ghost story. *Puck of Pook's Hill* (coll 1906) and its sequel, *Rewards and Fairies* (coll 1910), contain a series of stories about the formation and growth of Britain as told by Puck to two children. In several of his late stories, all of which are complex, elliptic, highly crafted and deeply pessimistic, RK made some ambiguous use of supernatural principles of explanation; of these, "A Madonna of the Trenches" and "The Wish House", both from 1924, are assembled along with "The Gardener" in *Debits and Credits* (coll 1926), which has a claim to being his finest collection. These tales are not comfortably amenable to either sf or fantasy reading, but they demonstrate the power of hinted supernatural themes in writing of high virtuosity. *The Complete Supernatural Stories of Rudyard Kipling* (coll 1987) conveniently assembles this category of his output, as does *Kipling's Fantasy* (coll 1992) ed John BRUNNER. *Thy Servant a Dog: Told by Boots* (1930 chap), not included in either collection, is an animal fantasy of almost perverse fervour. Sf proper appears infrequently in RK's work, though "The Finest Story in the World" (1891), whose narrator encounters a case of REINCARNATION, and "A Matter of Fact" (1892), about a modern sea-serpent sighting - both assembled in *Many Inventions* - are arguably sf, as are "The Ship that Found Herself" (1895) and "007" (1897) from *The Day's Work* (coll 1898). Other early tales include "Wireless" (1902; in *Traffics and Discoveries* [coll 1904]), in which amateur-radio experiments make communication possible between a shop assistant and John Keats; "The House Surgeon", in *Actions and Reactions* (coll 1909), explains a ghost in terms of PSI POWERS; "In the Same Boat" (1911), in *A Diversity of Creatures* (coll 1917), suggests a prenatal cause for bouts of irrational dread; "The Eye of Allah", in *Debits and Credits*, describes the ALTERNATE HISTORY that is almost generated when a microscope

falls into the hands of medieval English churchmen; and "Unprofessional" (1930), assembled in *Limits and Renewals* (coll 1932), suggests that planetary "tides" may affect human tissue. RK's most notable and unmistakably sf stories are perhaps *With the Night Mail: A Story of 2000 A.D.* (1905 McClure's Magazine; 1909 chap US) and its sequel, "As Easy as A.B.C." (1912), which was collected in *A Diversity of Creatures*. Both tales revolve about the Aerial Board of Control, or A.B.C., which dominates the world. The first is a dramatized travelogue, depicting some incidents on a dirigible journey from London to Quebec, and is accompanied by an appendix of futuristic advertisements; in the second - a somewhat DYSTOPIAN vision of centralized government probably based on Wellsian models - agents of the A.B.C. fly to Chicago to deal with a revolt of the local underclass, whose demands for a return of democracy have generated attacks by the rest of the population. The A.B.C. - though not necessarily the political views it stands for - has influenced writers as far apart as Michael ARLEN and Rex WARNER. Although its reprint of *With the Night Mail* is incomplete, Kipling's *Science Fiction* (coll 1992; vt *The Science Fiction Stories of Rudyard Kipling* 1994) ed John Brunner is otherwise thorough in its coverage of this part of RK's work. Although RK was not an sf writer by inclination, his intense, somewhat feverish talent makes even the least characteristic of his works of more than peripheral interest to the sf reader. [JC] About the author: Literature on RK is extensive. Charles Carrington's *Rudyard Kipling* (1955) is the definitive biography, while J.M.S. Tompkins's *The Art of Rudyard Kipling* (1959) very competently surveys both prose and poetry. RK's own posthumous, sanitized autobiographical fragment, *Something of Myself* (1937), is of some interest. Angus WILSON's *The Strange Ride of Rudyard Kipling* (1977) combines biography and criticism in a sustained, intense study. Also interesting is *Rudyard Kipling and his World* (1977) by Kingsley AMIS. See also: APES AND CAVEMEN (IN THE HUMAN WORLD); DISCOVERY AND INVENTION; HISTORY OF SF; PREDICTION; TRANSPORTATION.

KIPPAX, JOHN

Pseudonym of UK writer John Charles Hynam (1915-1974). He was a regular contributor to the UK sf magazines during 1955-61, publishing over 30 stories in that time. His first two stories appeared in Dec 1954: "Dimple" in *Science Fantasy* and "Trojan Hearse" in *NW*. The latter was a collaboration with Dan MORGAN, with whom he also published a SPACE-OPERA series - *A Thunder of Stars* (1968), *Seed of Stars* (1972 US), *The Neutral Stars* (1973 US) and, by JK alone, *Where No Stars Guide* (1975) - about the Space Corps team of the *Venturer Twelve*. [JC]

KIRBY, JACK

(1917-1994) US comic-book illustrator, born Jacob Kurtzberg. One of the giants in the COMICS industry, he began his 50+-year career in 1935 working on newspaper comic strips (with a break in 1936, animating Popeye cartoons for Max Fleischer). He later broke into the comic-book field, creating *Captain America* with Joe Simon in 1941 for *Timely Comics* (later MARVEL COMICS); he also worked on *CAPTAIN MARVEL*. His main claim to fame, however, was his work in the 1960s for *Marvel Comics*, by then under the direction of Stan LEE. In 1961 JK created *The Fantastic Four* (a group of

SUPERHEROES), one of the most popular series in the history of the genre. He also created, or helped create, dozens of other superheroes, including The Incredible Hulk, which helped launch Marvel to the top of the business. He left the Lee organization in 1970 and for a while worked for DC COMICS, where he produced an interesting group of four interconnected superhero comics, including New Gods (referred to as "Kirby's Fourth World"), before returning to Marvel. JK's style is blocky, almost primitive, but with a power and sense of drama that many other comics artists lack. His use of motion-picture techniques (such as still-frame storytelling) and dramatic perspectives has influenced most of today's comics artists. His work is reproduced in Origins of Marvel Comics (1974), Son of Origins of Marvel Comics (1975) and Bring on the Bad Guys (1976), all ed Stan Lee, and in many more recent and accessible collections, including #2-#4, #6-#8, #13 and #14 of the Marvel Masterworks series (1986 onwards). [JG/RH/PN]

KIRBY, JOSH

(1928-) UK illustrator, trained at Liverpool School of Art. JK's work in sf began with covers for the 1956 paperback of Ian FLEMING's Moonraker (1955) and for Authentic Science Fiction. Most of his art has been for paperback covers, for publishers including Corgi, Panther and New English Library and, in the USA, ACE BOOKS, BALLANTINE BOOKS, DAW BOOKS and Lancer Books. His style is colourful and intricate, and often designed on a small scale: the painting is frequently no larger than the book cover itself. His trademark is the grotesquerie of his creations. He belongs to a tradition derived more obviously from grotesque fantasists like Arthur Rackham than from sf illustrators. JK's work has been strongly identified, in the 1980s and since, with both hardcover and paperback editions of the novels of Terry PRATCHETT, with whom he shares a cover credit for the richly illustrated Eric (1990) - even Pratchett imitators often get JK covers. A portfolio of his work is Voyage of the Ayeguy (1981). The Josh Kirby Poster Book (1989), in large format and introduced by Pratchett, contains 13 posters. JK's most substantial and recent book is In the Garden of Unearthly Delights (1991), 159 paintings by JK with intro by Brian W. ALDISS. [JG/PN] See also: FANTASY.

KIRCHER, ATHANASIUS

(1602-1680) German priest and scientist who predicted the germ theory of disease. For his relevance to sf, MARS, MERCURY, OUTER PLANETS, RELIGION and VENUS, in each of which entries there is reference to AK's speculative, visionary round-trip to the planets, Itinerarium Exstaticum ["A Journey in Rapture"] (1656 Rome). [PN]

KIRK, RICHARD

Robert P. HOLDSTOCK; Angus WELLS.

KIRKHAM, NELLIE

(? -) UK writer whose sf novel, Unrest of Their Time (1938), used contrasting colours of type to represent the simultaneity of lives lived in different periods by the one protagonist. [JC]

KIRKUP, JAMES (FALCONER)

(1923-) UK poet and writer whose first book, The Cosmic Shape: An

Interpretation of Myth and Legend with Three Poems and Lyrics (coll1946) with Ross Nichols, is at times foggy, but at times illuminating. The True Mystery of the Passion (1961) is a fantasy play; Tales of Hoffmann (coll trans 1966) is a good selection; and Queens Have Died Young and Fair: A Fable of the Immediate Future (1993) is an sf SATIRE whose imprecations encompass sex, politics, and culture. [JC]

KIRST, HANS HELLMUT

(1914-1989) German writer best known for his novels about WWII. His NEAR-FUTURE sf novel, Keiner Kommt Davon (1957; trans Richard Graves as The Seventh Day 1959 US; vt No One Will Escape 1960 UK), deals with the period directly preceding WWII and with the atomic HOLOCAUST that then kills off the cast. [JC]

KISS ME DEADLY

Film (1955). Parklane. Prod and dir Robert Aldrich, starring Ralph Meeker, Albert Dekker, Paul Stewart, Maxine Cooper, Gaby Rogers, Chloris Leachman. Screenplay A.I. Bezzerides, based remotely on Kiss Me Deadly (1952) by Mickey Spillane. 105 mins. B/w. This extraordinary film noir, now recognized as one of the greatest of its period, substitutes a boxful of radioactivity - a kind of surrogate atom bomb - for the packet of narcotics everyone seeks control of in Spillane's original. In a sadly tarnished world, the lethal Pandora's Box takes on a glamour which literally shines out - destroying the world - at the apocalyptic climax. Painful and furious, KMD gives an extraordinarily abrasive quality to the stereotypes of the private-eye genre, but it is the box itself that dominates the movie, growing from an apparent MCGUFFIN into an icon of a menacing future, the object of worship in an impoverished present which, by implication, yearns for the hard white light that abolishes all shadows. KJELGAARD, JIM

[r] David A. DRAKE.

KLASS, PHILIP

[r] William TENN.

KLEIN, GERARD

(1937-) French writer, anthologist, critic and editor. An economist by profession, GK is one of the few European sf writers known in the USA. He has used the pseudonyms Gilles d'Argyre, Francois Pagery and Mark Starr. His first stories, heavily influenced by Ray BRADBURY, appeared in 1955 when he was only 18 years old, and he soon made a major impact on the field in France, publishing over 40 delicately crafted stories 1956-62 (60 by 1977), while also establishing himself as a forceful and literate critic of the genre with a series of 30 penetrating essays in various publications. His first novel, Le gambit des etoiles (1958; trans C.J. Richards as Starmaster's Gambit 1973 US), a clever and wide-ranging adventure yarn, shows the increasing influence that US GENRE SF was having on GK, a trend which comes strongly to the fore in novels like Le temps n'a pas d'odeur (1963; trans P.J. Skolowski as The Day before Tomorrow 1972 US) and Les seigneurs de la guerre (1971; trans John BRUNNER as The Overlords of War 1973 US); these, though well conducted and interesting,

lack the poetic invention of his early work. From 1969, GK edited the *Ailleurs et Demain* imprint for publisher Robert Laffont, where he was instrumental in introducing some of the major modern US-UK sf writers to the French public while also encouraging the better local authors - Philippe CURVAL, Michel Jeury, Christian LEOURIER, Andre Ruellan and Stefan WUL. Many of GK's works feature an imagery and even a structure influenced by chess. [MJ]Other works: *Agent galactique* ["Galactic Agent"] (1958) as by Mark Starr; *Embuches dans l'espace* ["Ambushes in Space"] (1958 as by Francois Pagery); *Les perles du temps* ["Pearls of Time"] (coll 1958); *Chirurgiens d'une planete* ["Planet-Surgeons"] (1960) as by Gilles d'Argyre; *Les voiliers du soleil* ["Sailors of the Sun"] (1961) as by d'Argyre; *Le long voyage* ["The Long Journey"] (1964) as by d'Argyre; *Les tueurs du temps* (1965; trans C.J. Richards as *The Mote in Time's Eye* 1975 US), as by d'Argyre in France, GK in USA; *Le sceptre du hasard* ["The Sceptre of Chance"] (1966) as by d'Argyre; *Un chant de pierre* ["Stone Song"] (coll 1966); *La loi du talion* ["The Law of Retaliation"] (coll 1973); *Histoires comme si* ["Stories as If"] (coll 1975); *Anthologie de la science-fiction francaise* (anth in 3 vols 1975, 1976, 1977) with others; *Le Livre d'or du Gerard Klein* ["The Book of Gold of Gerard Klein"] (coll 1979). See also: CRITICAL AND HISTORICAL WORKS ABOUT SF; FRANCE; GALACTIC EMPIRES; GAMES AND SPORTS; LIVING WORLDS.

KLINE, OTIS ADELBERT

(1891-1946) US songwriter, author and literary agent, active in music before beginning to write popular fiction in several genres, predominantly fantasy, in the early 1920s, most notably for *Weird Tales* and *The Argosy*. With the exception of marginal sf tales like "The Bride of Osiris" (1927) and space adventures such as "Race Around the Moon" (1939), most of his genre work is HEROIC FANTASY, and is generally thought to have been written in competition with (and slavishly derived from) Edgar Rice BURROUGHS's PLANETARY ROMANCES. The Robert Grandon sequence is typical: comprising *The Planet of Peril* (1929), *The Prince of Peril* (1930) and *The Port of Peril* (1932 *Weird Tales* as "Buccaneers of Venus"; 1949), it carries the swashbuckling Grandon to VENUS, where he rises from slavery to marry a princess; the later adventures expand upon this. Linked to this series through the character of Dr Morgan - a scientist who makes interplanetary transfers easy - are *The Swordsman of Mars* (1933 *Argosy*; 1960) and its sequel, *The Outlaws of Mars* (1933 *Argosy*; 1960). In *Maza of the Moon* (1930) the P'an-ku who rule the MOON bomb Earth after Earth bombs them. *Call of the Savage* (1931 *Argosy* as "Jan of the Jungle"; 1937; vt *Jan of the Jungle* 1966) and its sequel *Jan in India* (1935 *Argosy*; 1974) again ape Burroughs, the target this time being Tarzan. In his later years, OAK's time was almost entirely taken up by his literary agency. Violently coloured, crudely racist and sniggeringly sexist, his tales represent pulp fiction at its worst, but they retain a raw compulsiveness. [JC]Other works: *The Man who Limped and Other Stories* (coll of linked stories 1946); *Tam, Son of the Tiger* (1931 *Weird Tales*; 1962); *Bride of Osiris and Other Weird Tales* (coll 1975 chap). See also: COMICS; MARS; PUBLISHING.

KNEALE, (THOMAS) NIGEL

(1922-) UK author and screenwriter, married to Judith Kerr (1923-), a

well known children's author. After attending the Royal Academy of Dramatic Art and working as an actor, NK began writing short stories, 26 of which - some horror or fantasy - appear in *Tomato Cain and Other Stories* (coll 1949). Since then most of his writing work has been for TELEVISION and film, often using sf themes, most commonly consisting of scientific rationalizations of ancient motifs from HORROR fiction and MYTHOLOGY. His first major tv success was in 1953 with a serial, *The QUATERMASS EXPERIMENT*. In 1954 he successfully adapted George ORWELL's *NINETEEN EIGHTY-FOUR* (1949) for BBC TV; it caused much controversy. Two more Quatermass serials for BBC TV were *QUATERMASS II* (1955) and *QUATERMASS AND THE PIT* (1958-9). All three were adapted into feature films by Hammer Films, as *The QUATERMASS XPERIMENT* (1955; vt *The Creeping Unknown*), *QUATERMASS II* (1957; vt *Enemy from Space*) and *QUATERMASS AND THE PIT* (1968; vt *Five Million Years to Earth*). NK coscripted the second of these films, and scripted the third. The tv scripts were published as *The Quatermass Experiment: A Play for Television in Six Parts* * (1953 BBC TV; rev 1959), *Quatermass II: A Play for Television in Six Parts* * (1955 BBC TV; rev 1960) and *Quatermass and the Pit: A Play for Television in Six Parts* * (1958-9 BBC TV; rev 1960). NK also scripted *FIRST MEN IN THE MOON* (1964) and the horror film *The Witches* (1966), adapted from novels by H.G. WELLS and Peter Curtis respectively. Three further tv plays, "The Road" (1963), "The Year of the Sex Olympics" (1969) and "The Stone Tape" (1972) have been collected in *The Year of the Sex Olympics and Other TV Plays* (coll 1976). The first is an 18th-century ghost story in which the ghosts are apparitions of 20th-century TECHNOLOGY; the second deals satirically with a future tv-watching population and improved methods of apathy control; the third again combines Gothic horror with messages across time. In 1971 "The Chopper", about a biker's ghost, was televised as part of the *OUT OF THE UNKNOWN* series. The 1975 ATV tv series *Beasts* was scripted by NK, the beasts in question ranging from psychological to supernatural. In 1979 Quatermass returned, this time to ITV, in a new tv serial (4 parts) entitled *QUATERMASS*. An edited-down version, retitled *The Quatermass Conclusion*, was intended for cinema release, but in the UK was released only on videotape. It had in fact been written a decade earlier for BBC TV, and its plot (featuring mystically inclined flower children about to be harvested by ALIENS via messages beamed through stone circles) seemed curiously old-fashioned. The book version by NK, *Quatermass* (1979), which appeared concurrently, is not a novelization, and diverges in detail from the tv series. A more sinister version of the same theme appears in NK's script for the film *HALLOWEEN III: SEASON OF THE WITCH* (1983), in which microchips made out of a Stonehenge monolith are used to booby-trap children's Halloween masks with a hideous destruction device, this being the plot of a madman who wishes (as perhaps NK does) that the true meaning of Halloween had not been vulgarized. It had now become clear from NK's sf/horror work that he had little interest in, or even knowledge of, sf proper, a genre about which he has consistently expressed contempt (sf being "very disappointing and horribly overwritten" and sf fans, he said in a 1979 interview, being either fat with wispy wives or wispy with fat ones); it is interesting, for example, that the two films he repudiated as having vulgarized his scripts, *Quatermass II* - which he has kept from circulation for years - and *Halloween III*, are among the better ones. With

hindsight, there is a clear pattern in NK's work of ordinary people being seen as stupid and ignorant, and ready prey for the supernatural or sciencefictional forces that will almost inevitably attempt to control them. There is a seigneurial, Edwardian element in this, a recoiling from the vulgar. It is worth labouring the point, because he is certainly a much better than average scriptwriter - the Quatermass series especially is exemplary - and his scripts have been, paradoxically, very influential on sf, at least at the GOTHIC and irrational margin of the genre where sf meets fantasy and horror (and particularly among film and tv producers, who never expect sf to make sense anyway). NK's revulsion against what he saw sf as standing for came into gloomy focus with the 1981 tv series KINVIG, which attempts to call forth derisory laughter at the granting (through the introduction of a very beautiful ALIEN) of two sf fans' romantic longings for mysteries in a mundane world; it is a sitcom notable for its contemptuous treatment of the leading characters. [PN] See also: MUSIC; PSEUDO-SCIENCE; SUPERNATURAL CREATURES.

KNEBEL, FLETCHER

(1911-1993) US journalist and novelist, most of whose books are political thrillers, not excepting his borderline-sf books. *Seven Days in May* (1962), with Charles W. BAILEY, later filmed (John FRANKENHEIMER), describes an attempted military coup in the USA. *Night of Camp David* (1965) tells of a NEAR-FUTURE President of the USA who goes mad and almost destroys the country. *In Trespass* (1969), set in 1973, a Black activist group takes over White properties and upsets the FBI. [JC/PN]

KNEIFEL, HANS

[r] GERMANY; PERRY RHODAN.

KNIGHT, DAMON (FRANCIS)

(1922-) US writer and editor; his third marriage was to Kate WILHELM. Like many sf writers, DK became involved in sf FANDOM at an early age, and by 1941 was a member of the FUTURIANS in New York, where he shared an apartment with Robert A.W. LOWNDES and met James BLISH, C.M. KORNBLUTH, Frederik POHL and others. (In *The Futurians: The Story of the Science Fiction "Family" of the 30's that Produced Today's Top SF Writers and Editors* [1977] he published a candid history of the group and its era.) His first professional sale was a cartoon to AMZ. His first story was "Resilience" (1941) in *STIRRING SCIENCE STORIES*, edited by another Futurian, Donald A. WOLLHEIM; but DK's career as a short-story writer lay fallow for several years. In 1943 he became an assistant editor with Popular Publications, a PULP-MAGAZINE chain. Later he worked for a literary agency, then returned to Popular Publications as assistant editor of *SUPER SCIENCE STORIES*. In 1950-51 he was editor of *WORLDS BEYOND*, but the magazine ran for only 3 issues; later he edited *IF* for 3 issues 1958-9. DK made his initial strong impact on the field as a book reviewer, and is generally acknowledged to have been the first outstanding GENRE-SF critic. His very first piece - a fanzine review (in Larry SHAW's *Destiny's Child*) of the 1945 ASF serial version of A.E. VAN VOGT's *The World of A* (1948) - remains perhaps his best known; it is in any case one of the most famous works of critical demolition ever published in the field, inspiring considerable revisions in the published book, and being credited (perhaps

a touch implausibly) for van Vogt's eventual slide from pre-eminence. DK later reviewed books for a number of amateur and professional magazines, notably INFINITY and The MAGAZINE OF FANTASY AND SCIENCE FICTION , expressing throughout a sane and consistent insistence on the relevance of literary standards to sf. His early reviews were collected in In Search of Wonder (coll 1956; rev 1967), and won him a HUGO in 1956. He stopped reviewing entirely when FSF declined to print a negative response to Judith MERRIL - the review of The Tomorrow People (1960) which appears in In Search of Wonder. In 1975 he received a retrospective PILGRIM AWARD from the SCIENCE FICTION RESEARCH ASSOCIATION. DK's 1940s stories - including occasional collaborations with Blish, once using the collaborative pseudonym Donald Laverty, and 3 times as Stuart Fleming - were of only mild interest until the release in 1949 of his ironic END OF THE WORLD story "Not With a Bang" in one of the first issues of FSF. This magazine, and GALAXY SCIENCE FICTION even more so, now provided markets in which DK could develop his urbane and darkly humorous short stories-including the famous "To Serve Man" (1950), "Four in One" (1953), "Babel II" (1953), "The Country of the Kind" (1955) and "Stranger Station" (1956) - though as the decade advanced, and as his perspectives on the human enterprise darkened, even these markets proved too narrow, and he was forced to publish some of his finest work in lesser journals, where his scouring, revisionary, anatomical rewrites of the genre's already sclerotic conventions could appear in safe obscurity. DK's reputation as a writer has primarily rested on the short stories published during the 1950s and, to a lesser extent, the 1960s; they are adult and sane and have not dated. His best work has been assembled in various collections, including Far Out (coll 1961), In Deep (coll 1963; cut 1964 UK), Off Center (coll 1965 dos; exp vt Off Centre 1969 UK), Turning On (coll 1966; exp 1967 UK) and Rule Golden (coll 1979); later collections like Late Knight Edition (coll 1985), One Side Laughing: Stories Unlike Other Stories (coll 1991) and God's Nose (coll 1991) tend to mix early and later work. From the first, novels presented something of a difficulty for DK. Most of them - like his first, HELL'S PAVEMENT (fixup 1955; vt Analogue Men 1962), a DYSTOPIAN story of a future society with humanity under psychological control, Masters of Evolution (1954 Gal as "Natural State"; exp 1959 chap dos) and The Sun Saboteurs (1955 If as "The Earth Quarter"; 1961 dos) - were expanded from stories, losing in the process the compressed drivenness of his short work. Of them all, only The People Maker (1959; rev vt A for Anything 1961 UK) and the late The World and Thorinn (fixup 1981), a scintillating picaresque derived from some 1960s tales, seem comfortably to fill the longer format; and by the mid-1960s he appeared to have turned his attention permanently elsewhere. Like Frederik Pohl, DK became adept at all aspects of the writing business, having worked as magazine editor, short-story writer, novelist and critic. He now involved himself in formalizing the professional collegiality so important to the sf field, first by cofounding, with Blish and Merrill, the MILFORD SCIENCE FICTION WRITERS' CONFERENCE in 1956, which he ran (soon with Wilhelm) for over 20 years, later participating in its spiritual offspring, the CLARION SCIENCE FICTION WRITERS' WORKSHOP writing seminar, for which he edited The Clarion Writers' Handbook (anth 1978; rev as Creating Short Fiction 1981; rev under that title 1985); and second by

being responsible for founding the SCIENCE FICTION WRITERS OF AMERICA, serving as its first president 1965-7. At about the same time he began to issue well conceived reprint ANTHOLOGIES like A Century of Science Fiction (anth 1962), First Flight (anth 1963; vt Now Begins Tomorrow 1969; exp vt First Voyages 1981 with Martin H. GREENBERG and Joseph D. OLANDER), Tomorrow x 4 (anth 1964), A Century of Great Short Science Fiction Novels (anth 1964) and many others. He also translated a number of French sf stories, some for publication in FSF, and collected them as 13 French Science-Fiction Stories (anth 1965). But his greatest editorial achievement during these years was the ORBIT series of ORIGINAL ANTHOLOGIES that he began in 1966, and which would become the longest-running and most influential series of that sort yet seen in the field; among writers strongly identified with Orbit were Gardner DOZOIS, R.A. LAFFERTY, Kate WILHELM and Gene WOLFE. In the 1980s, after the end of Orbit, DK became more active as a writer again, though without making a huge impression on a new generation of readers. But if The Man in the Tree (1984) seems unduly slack and irony-poor in its presentation of a contemporary MESSIAH figure, DK returned to something like form, though without quite the energy of earlier efforts, in the wickedly UTOPIAN sequence comprising CV (1985), The Observers (1988) and A Reasonable World (1991), about ALIEN parasites who turn out not to be the PARANOIA-justifying plague of 1950s sf but moralistic symbionts who enforce something like rational behaviour upon humanity's leaders; in the third volume, a plethora of sf devices and utopian appeals somewhat weakens the pleasurable sting, but the series as a whole seems young at heart, and DK's cognitive energy remains clearly evident - as also demonstrated by the autumnal ironies of Why Do Birds (1992), in which the world is brought to an end. There is still a sense that he may have a mind to continue to shock the sf world. In 1995, he was granted the NEBULA Grand Master Award. [MJE/JC] Other works: Beyond the Barrier (1964); The Rithian Terror (1953 Startling Stories as "Double Meaning"; exp 1965 dos); Mind Switch (1965; vt The Other Foot 1966 UK); Three Novels (omni 1967; vt Natural State and Other Stories 1975 UK); World without Children, and The Earth Quarter (coll 1970) including The Sun Saboteurs as "The Earth Quarter", its magazine title; Two Novels (omni 1974) presenting The Rithian Terror and The Sun Saboteurs, both under their magazine titles; THE BEST OF DAMON KNIGHT (coll 1976); Better than One (coll 1980) with Kate Wilhelm; Rule Golden/Double Meaning (omni 1991) presenting the collection Rule Golden plus The Rithian Terror as Double Meaning. Nonfiction: Charles Fort: Prophet of the Unexplained (1970); Turning Points: Essays on the Art of Science Fiction (anth 1977), critical essays. As Editor: Beyond Tomorrow (anth 1965); The Dark Side (anth 1965); The Shape of Things (anth 1965); Cities of Wonder (anth 1966); Nebula Award Stories 1965 (anth 1966); Science Fiction Inventions (anth 1967); Worlds to Come (anth 1967); The Metal Smile (anth 1968); One Hundred Years of Science Fiction (anth 1968); Toward Infinity (anth 1968); Dimension X (anth 1970; in 2 vols, the 2nd vol vt Elsewhere x 3 1974 UK); A Pocketful of Stars (anth 1971); First Contact (anth 1971); Perchance to Dream (anth 1972); Science Fiction Argosy (anth 1972); Tomorrow and Tomorrow (anth 1973); The Golden Road (anth 1973); A Shocking Thing (anth 1974); Happy Endings (anth 1974); Science Fiction of the Thirties (anth 1975); Monad 1:

Essays on Science Fiction (anth 1990),Monad 2: Essays on Science Fiction (anth 1992) and Monad 3: Essays on Science Fiction (anth 1994).The Orbit anthologies: Orbit 1 (anth 1966); Orbit 2 (anth 1967); Orbit 3 (anth 1968); Orbit 4 (anth 1968); Orbit 5 (anth 1969); Orbit 6 (anth 1970); Orbit 7 (anth 1970); Orbit 8 (anth 1970); Orbit 9 (anth 1971); Orbit 10 (anth 1972); Orbit 11 (anth 1972); Orbit 12 (anth 1973); Orbit 13 (anth 1974); Orbit 14 (anth 1974); Orbit 15 (anth 1974); Orbit 16 (anth 1975); Orbit 17 (anth 1975); Best Stories from Orbit: Volumes 1-10 (anth 1975); Orbit 18 (anth 1976); Orbit 19 (anth 1977); Orbit 20 (anth 1978); Orbit 21 (anth 1980).About the author: "All in a Knight's Work" by James Blish, Speculation 29, 1971; "Knight Piece" by DK in Hell's Cartographers (anth 1975) ed Brian W. ALDISS and Harry HARRISON.See also: ANTI-INTELLECTUALISM IN SF; ARTS; COMMUNICATIONS; COSMOLOGY; CRIME AND PUNISHMENT; CRITICAL AND HISTORICAL WORKS ABOUT SF; DEFINITIONS OF SF; DISCOVERY AND INVENTION; ECOLOGY; ECONOMICS; EVOLUTION; GENETIC ENGINEERING; IMMORTALITY; INVISIBILITY; MONSTERS; NEBULA; PARASITISM AND SYMBIOSIS; SF MAGAZINES; SCI FI; SPACE HABITATS; TABOOS; TRANSPORTATION.

KNIGHT, HARRY ADAM
John BROSNAN.

KNIGHT, NORMAN L(OUIS)
(1895-1972) US writer and pesticide chemist for the Department of Agriculture until his retirement in 1963. He was not a prolific writer, publishing only 11 stories altogether, the first of which was the novella "Frontier of the Unknown" for ASF in 1937. He made his main contribution by collaborating with James BLISH on A Torrent of Faces (1967). This novel - whose UNDER-THE-SEA sequences and amphibious Tritons (genetically engineered humans; GENETIC ENGINEERING) are taken from NLK's first story and from "Crisis in Utopia" (1940 ASF) - depicts an ambiguously UTOPIAN Earth whose trillion people (OVERPOPULATION) must face up to the challenge of an approaching meteor. [JC]See also: ASTEROIDS.

KNIGHT RIDER
Glen A. LARSON.

KNIGHT, ROBERT
Christopher EVANS.

KNOWLES, W(ILLIAM) P(LENDERLEITH)
(1891-) UK writer whose Jim McWhirter (1933), set in 1953, advances towards a not unusual socialist UTOPIA via a sequence of very violent catastrophes, including an emission of poison gases from within the crust of the Earth. [JC]

KNOX, CALVIN M.
Robert SILVERBERG.

KNOX, G.D.
[r] T.C. WIGNALL.

KNOX, [Monsignor] RONALD A(RBUTHNOTT)
(1888-1957) UK Roman Catholic priest (converted 1917, ordained 1919) and

extremely prolific writer. Among his many books are several then-popular detective novels, volumes of parodies, a new translation of the Testaments, and some genre work. *A Still More Sporting Adventure!* (1911) with Charles R.L. Fletcher (1857-1934), published anon, takes two women back in time to spy on Queen Dido in Carthage, thus parodying *An Adventure* (1911) by Charlotte Moberly and Eleanor Jourdain, a bestselling nonfiction tale of the authors' experiences via supposed timeslip in Versailles. *Absolute and Abitofhell* (1915 chap), as by R.A.K., is a fantasy poem about Noah's Ark; with further material, some of genre interest, it was republished in *Essays in Satire* (coll 1928). *Memories of the Future: Being Memoirs of the Years 1915-1972 Written in the Year of Grace 1988* by Opal, *Lady Porstock* (1923) satirizes the type of evolutionary UTOPIA most closely identified with H.G. WELLS. The story is perhaps too cleverly told, and its imitation of the genteel memoir too exact in places. *Other Eyes than Ours* (1926), which features an apparatus for communicating with the dead, is in fact hoax sf, the device having been concocted to bring an obsessive to his senses; *The Rich Young Man: a Fantasy* (1928 chap) is a Christian fantasy. [JC]

KNYE, CASSANDRA

Thomas M. DISCH; John T. SLADEK.

KOCH, ERIC

(1919-) German-born writer and tv producer, in Canada from 1935, three of whose novels are of some sf interest. In *The French Kiss: A Tongue in Cheek Political Fantasy* (1969), set in a NEAR-FUTURE Canada threatened - as usual - by separatism, a reincarnated colleague of Napoleon muses on De Gaulle's similarity to the long-dead Emperor. *The Leisure Riots: A Comic Novel* (1973) suggests that, in 1980, the enforced leisure of the executive class will trigger riots. In *The Last Thing You'd Want to Know* (1976) a "witch" becomes US President, sweeping all before her except one tortured ex-Nazi. EK was sometimes amusing, but fatally inattentive to questions of verisimilitude. [JC]

KOESTLER, ARTHUR

(1905-1983) Hungarian-born author and journalist who narrowly avoided execution in the Spanish Civil War and spent the rest of his life in the UK and France, becoming a naturalized UK citizen in 1940. All his books after the famous *DYSTOPIA Darkness at Noon* (trans Daphne Hardy 1940) were written in English. Several of the speculative, philosophical works of his later career have a direct interest for sf readers and have probably been influential on sf writers. They include *The Sleepwalkers: A History of Man's Changing Vision of the Universe* (1959), *The Act of Creation* (1964), *The Case of the Midwife Toad* (1971) - about the "Lamarckian" inheritance of acquired characteristics (EVOLUTION; PSEUDO-SCIENCE) - and *The Roots of Coincidence* (1972). His play, *Twilight Bar: An Escapade in Four Acts* (written 1933; English version 1945), is a UTOPIAN fantasia set on a world- ISLAND visited by ALIENS who threaten to destroy human life unless we better ourselves immediately. *The Age of Longing* (1951), is NEAR-FUTURE sf, a discussion novel set in France; it distils his intimate experience with European thought and POLITICS into a prediction of the nature of our response to a threatened INVASION from the East. *The Call Girls: A*

Tragi-Comedy (1972) is a discussion novel on sf-related themes. AK was an important speculative thinker, many of whose ideas challenged (sometimes with some success) "orthodox" scientific and social thought. He several times expressed contempt for sf. [JC]See also: THEATRE.

KOHOUT, PAVEL

(1928-) Czech poet, playwright, novelist and, since his emigration in 1968, emigre activist. Though his early poetry had been pro-communist, his politics changed and his work remained unpublished in Czechoslovakia in the period 1968-89; some was published there in 1990. His sf novel, which deals with the political persecution of a man who can control ANTIGRAVITY, is *Bila kniha o kauze Adam Juracek, profesor telocviku a kresleni na Pedagogicke skole v K., kontra Sir Isaac Newton, profesor fyziky na univerzite v Cambridge* (written 1970 and circulated in samizdat form; 1978 Canada; trans Alec Page as *White Book: Adam Juracek, Professor of Drawing and Physical Education at the Pedagogical Institute in K., vs. Sir Isaac Newton, Professor of Physics at the University of Cambridge 1977 US*). [JO]See also: CZECH AND SLOVAK SF; THEATRE.

KOLCHAK: THE NIGHT STALKER

US tv series (1974-5). Francy Productions for Universal TV/ABC. Created Jeff Rice. Executive prod Darren McGavin. Prod Paul Playton, Cy Chermak. Story consultant David Chase. 20 50min episodes. Colour. This fondly remembered series was a spin-off from a successful made-for-tv movie, *The Night Stalker* (1972), prod Dan Curtis and written Richard MATHESON, about a vampire in contemporary Las Vegas. This led to a feature-length sequel, *The Night Strangler* (1973), also written by Matheson, about a youth serum produced from murdered women. The tv series was partly sparked off by the enthusiasm of McGavin, star of the two movies, who became K:TNS's executive producer. He again played the reporter, Kolchak, who each week uncovered some fantastic threat. Unable to persuade anyone in authority of its existence, he was usually obliged to combat the menace alone. Most episodes featured supernatural creatures; sf-related episodes were "They Have Been, They Will Be, They Are" (ALIEN intervention), "The Energy Eater" (invisible creature feeds on radioactivity), "Mr. R.I.N.G." (government-created killer ROBOT), "The Primal Scream" (cells from the Arctic grow into a prehistoric ape-creature) and "The Sentry" (lizardlike monster). The series was entertaining and atmospheric, but too unvarying in its rigidly formulaic stories. [JB]

KOLUPAYEV, VIKTOR (DMITRIEVICH)

(1936-) Russian writer who made a striking debut in 1966, soon becoming a leading author of SOFT SF; his work has been likened to that of Ray BRADBURY. His lyrical short stories are assembled in *Slutchitsia Zhe S Tchelovekom Takoie!* ["What Can Happen to a Man?"] (coll 1972), *Katcheli Otshel'nika* (coll 1974; trans Helen Saltz Jacobson with somewhat differing contents as *Hermit's Swing* 1980 US) and *Poiushii Les* ["The Singing Forest"] (coll 1984). VK's only novel is the controversial and somewhat unsuccessful *Firmenny Poezd "Fomitch"* ["The 'Fomitch' Special Train"] (1979). [VG]

KOMAN, VICTOR

(1944-) US writer who began publishing sf with "When it Worked" for New Libertarian Notes in 1976. Much of his subsequent output has emphasized material and points of view that could be characterized under the LIBERTARIANISM rubric. After publishing Saucer Sluts (1980), and collaborating with Andrew J. OFFUTT under the joint pseudonym John CLEVE for two Spaceways sf adventures, #13: Jonuta Rising! (1983) and #17: The Carnadyne Horde (1984), VK released his first novel of substance, The Jehovah Contract (1985 Germany, trans as Der Jehova-Vertrag; 1987 US), in which a Los Angeles private eye is commissioned, in 1999, to kill God; the ensuing events might be considered blasphemous by some readers. In Solomon's Knife (1989) abortions are averted through a medical technique which allows the transfer of fetuses into the wombs of infertile women who want a child. The Prometheus Meltdown (1990) is a round-robin libertarian tale whose other contributors were Brad LINAWEAVER, J. Neil SCHULMAN, Robert SHEA, L. Neil SMITH and Robert Anton WILSON. [JC]

KOMARCIC, LAZAR
[r] YUGOSLAVIA.

KOMATSU, SAKYO

(1931-) Japanese novelist and essayist regarded as the premier sf writer of his country. His main novels consistently deal with large subjects: the destiny of the Universe and Homo sapiens's place within it. They are highly regarded for their panoramic vision and the encyclopedic knowledge they display. A graduate of Kyoto University, SK worked at many jobs from factory manager to comedy writer. His first sf was the novelette "Chi Niwa Heiwa Wo" ["Peace on Earth"] (1961); nominated later for the Naoki Award, Japan's most prestigious literary prize, it was reprinted in Chi Niwa Heiwa Wo (coll 1963) along with other early short fiction. His most popular work is the DISASTER novel Nippon Chinbotsu (1973; trans Michael Gallagher, cut by one-third, as Japan Sinks 1976 US; vt Death of the Dragon 1978). It sold about four million copies in JAPAN and was filmed by Toho Eiga as NIPPON CHINBOTSU (1973) with a very limited release in the West as The Submersion of Japan; the film was later rereleased in the West as Tidal Wave (1974), cut to two-thirds and with new scenes added by producer Roger CORMAN. In the novel the Japanese archipelago begins to slide inexorably into the Japan Trench. Beyond its well worked-out geological basis, Japan Sinks is effective as an obviously deeply felt elegy for Japan herself in all her physical and cultural fragility: the story has no heroes or villains, the main focus of our attention being the dying of the country. SK's novel Sayonara Jupiter ["Goodbye Jupiter"] (1982) was also filmed by Toho Eiga, in 1984 (vt, tastelessly, Bye-Bye Jupiter), prod and dir SK himself, who also wrote the screenplay. It features a scheme to turn Jupiter into a small Sun to render the outer Solar System habitable; the book predated Arthur C. CLARKE's 2010: Odyssey Two (1982), which uses the same central image. SK's most recent novel, Kyomu Kairo ["Gallery of Nothingness"] (1987), has an immortal "Artificial Existence" (developed in an AI laboratory) riding a spaceship to research a mysterious "SS"(super-structure), a cylinder 1.2 light years in diameter and 2 light years in length, which suddenly appears 5.8 light years from Earth (BIG DUMB OBJECTS). SK's other main works include Nippon

Apache-Zoku ["Japanese Apache"] (1964), Fukkatso No Hi ["The Day of Resurrection"] (1964), filmed as FUKKATSO NO HI (1981; vt Virus), Hateshi Naki Nagare No Hateni ["At the End of Endless Flow"] (1966), an extraordinary tale of PARALLEL WORLDS and human EVOLUTION, Tsugu Nowa Dareka? ["Who Succeeds Humanity?"] (1972), which won the Sei'un AWARD, and Shuto Shoshitsu ["The Disappearance of Tokyo"] (1985), which won the Nippon SF Taisho. SK is active also as a journalist and publicist - for example, as a consultant for and organizer of Expos. In 1970 he conducted the "International SF Symposium", recognized as the first truly worldwide gathering of sf authors, including 5 delegates from the USSR as well as Brian W. ALDISS, Arthur C. CLARKE and Frederik POHL. [TSh/JC]

KONEC SRPNA V HOTELU OZON

(vt The End of August at the Hotel Ozone) Film (1966). Ceskoslovensky armadni film. Dir Jan Schmidt, starring Ondrej Jariabek, Beta Ponicanova, Magda Seidlerova, Hana Vitkova. Screenplay Pavel Juracek. 87 mins. B/w. This Czech film is set in a desolate landscape 15 years after a nuclear HOLOCAUST. A band of brutalized women survivors live primitively (in what looks to Western eyes like an art-film version of an exploitation movie), not really understanding the occasional remnants they come across of the old world. One such survival is a deserted hotel; another is its proprietor, who alas for him is too old to be of any use to them. The film's bleakness is monotonous. [PN]

KOONTZ, DEAN R(A Y)

(1945-) US writer of much fiction under various names. He began his career with a number of sf novels; since 1975 he has concentrated on HORROR, becoming one of the bestselling authors in that genre, and a figure of genuine significance for his well crafted and very various work, though he lacks Peter Straub's panache and Stephen KING's compelling sense of locality. Much of his horror output first appeared (see listing below) as by Brian Coffey, Deanne Dwyer, K.R. Dwyer, Leigh Nichols, Anthony North, Richard Paige and Owen West; from the 1980s, these titles when reprinted are acknowledged as by DRK or Dean Koontz (on many of his more recent books the middle initial is omitted). Sf titles have appeared also as by David Axton, John Hill and Aaron Wolfe. DRK began publishing work of genre interest in 1966 with "Kittens" for Writers ? in 1967 with "Soft Come the Dragons" for FSF, which with other stories was collected in Soft Come the Dragons (coll 1970 dos). His first novel, Star Quest (1968 dos), was followed by at least 20 more sf novels within half a decade. The sensibility that would find horror congenial quickly revealed itself in a tendency to write stories in which, cruelly and effectively, the boundaries of human identity were stretched. Monstrous children - who classically embody a horror at the potential aliens beneath the human skin - appear in Beastchild (1970; text restored 1993) and Demon Seed (1973), filmed as DEMON SEED (1977); and MUTANTS and CYBORGS and ROBOTS appear throughout, notably in books like Anti-Man (1970) and A Werewolf Among Us (1973). As an sf writer, DRK managed frequently to transcend the plotting conventions he seemed to obey and the forced "darkness" of imagery and style to which he was prone, and to create worlds of invasive mutability. Of those novels written within a more normal sf frame, Nightmare Journey

(1975) stands out; though overcomplicated, it impressively depicts a world 100,000 years hence when humanity, thrust back from the stars by an incomprehensible ALIEN intelligence, goes sour in the prison of Earth, where radioactivity has speeded mutation, causing a religious backlash. DRK's large body of work contains some surprises; there are comic novels like *The Haunted Earth* (1973), drolleries like *Oddkins* (1988), and several fantasies. Some of his horror novels - like *Night Chills* (1976) and *Lightning* (1988) - are plotted around sf premises, but the use of these is clearly subordinate to the mode within which they fit as arbitrary enabling devices; they are best discussed as HORROR. In the end, the effect of his work is oddly diffuse. After 50 books, the portrait of the artist remains blurred. [JC]Other works: *The Fall of the Dream Machine* (1969 dos); *Fear that Man* (1969 dos); *Dark Symphony* (1970); *Dark of the Woods* (1970 dos); *Hell's Gate* (1970); *The Crimson Witch* (1971); *A Darkness in My Soul* (1972); *Warlock!* (1972); *Time Thieves* (1972 dos); *The Flesh in the Furnace* (1972), *Starblood* (1972); *Hanging On* (1973); *After the Last Race* (1974); *The Vision* (1977); *Whispers* (1980); *Phantoms* (1983); *Darkness Comes* (1984 UK; vt *Darkfall* 1984 US); *Twilight Eyes* (1985; exp 1987 UK); *STRANGERS* (1986); *Watchers* (1987); *The House of Thunder* (1988 UK); *The Shadow Sea* (1988); *Midnight* (1989); *The Bad Place* (1990); *Cold Fire* (1991); *Three Complete Novels* (omni 1991), assembling *The Servants of Twilight* (under its vt *Twilight*), *Darkfall* and *Phantoms*; *Hideaway* (1992); *Lightning/Midnight/The Bad Place* (omni 1992 UK); *Three Complete Novels* (omni 1992), containing *Shattered*, *Whispers* and *Watchers*; *Dragon Tears* (1993); *Trapped* (graph 1993) adapted by Ed Gorman, illus Anthony Bilau; *Mr Murder* (1993 UK); *Dean Koontz Omnibus* (omni 1993 UK), containing *Cold Fire*, *The Face of Fear* and *The Mask*; *Three Complete Novels* (omni 1993), containing *Lightning*, *The Face of Fear* and *The Vision: Dark Rivers of the Heart* (1994); *Three Complete Novels* (omni 1994), containing *STRANGERS*, *The Voice of the Night* and *The Mask*; *Dean Koontz Omnibus* (omni 1994), containing *Hideaway* and *The Vision: Winter Moon* (1994); *Strange Highways* (coll 1995). As David Axton: *Prison of Ice* (1976); rev vt *Icebound* 1995 as DK), sf. As Brian Coffey: *Blood Risk* (1973); *Surrounded* (1974); *Wall of Masks* (1975); *The Face of Fear* (1977; 1978 UK as K.R. Dwyer; 1989 UK as DRK); *The Voice of the Night* (1980; 1989 UK as DRK). As Deanne Dwyer: *Demon Child* (1971); *Legacy of Terror* (1971); *Children of the Storm* (1972); *The Dark of Summer* (1972); *Dance with the Devil* (1973). As K.R. Dwyer: *Chase* (1972; 1988 UK as DRK); *Shattered* (1973; 1989 UK as DRK); *Dragonfly* (1975). As John Hill: *The Long Sleep* (1975), sf. As Leigh Nichols: *The Key to Midnight* (1979; 1990 UK as DRK); *The Eyes of Darkness* (1981; 1989 as DRK); *The House of Thunder* (1982; 1988 as DRK); *Twilight* (1984; vt *The Servants of Twilight* 1985 UK; under original title, 1988 US as DRK); *Shadowfires* (1987; 1990 as DRK). As Anthony North: *Strike Deep* (1974), not sf/fantasy. As Richard Paige: *The Door to December* (1985; 1987 UK as Leigh Nichols; 1991 UK as DRK; rev 1994 US). As Owen West: *The Funhouse ** (1980; with new afterword 1992 as DK), film novelization; *The Mask* (1981; 1988 as DRK). As Aaron Wolfe: *Invasion* (1975 Canada), sf. Nonfiction: *Writing Popular Fiction* (1972); *How to Write Best Selling Fiction* (1981), which incorporates parts of the earlier book. About the author: *A Checklist of Dean R. Koontz* (last rev 1990 chap) by Christopher P. STEPHENS. See also: **BIOLOGY**; **GOTHIC SF**; **MEDIA LANDSCAPE**; **MONSTERS**.

KORNBLUTH, C(YRIL) M.

(1923-1958) US writer. A member of the FUTURIANS fan group, he published prolifically during the years 1940-42 in magazines edited by fellow Futurians Donald A. WOLLHEIM and Frederik POHL. His first sf publication was "Stepsons of Mars" with Richard WILSON, writing together as Ivar TOWERS, for *Astonishing Stories* in 1940; his first solo sf story was "King Cole of Pluto" for *Super Science Stories* as S.D. GOTTESMAN, also in 1940. He used many other pseudonyms, both for solo work and for work written in collaboration with Pohl (and sometimes others, including Robert A.W. LOWNDES); these included Arthur COOKE, Cecil Corwin, Walter C. Davies, Kenneth Falconer, Paul Dennis Lavond and Scott MARINER. (He also wrote 1 non-sf novel in the early 1950s as Simon Eisner and 4 as Jordan Park.) After WWII, in which he served as an infantryman and was decorated, CMK went into journalism. He resumed writing sf in 1947, using his own name, and quickly established himself as a brilliant short-story writer. His classic works include "The Little Black Bag" (1950), about the misuse of a medical bag timeslipped from the future (MEDICINE), and the controversial SATIRE "The Marching Morons" (1951), about a future where the practice of birth control by the intelligentsia has had a spectacularly dysgenic effect (INTELLIGENCE). Such stories as "With These Hands" (1951) and "The Goodly Creatures" (1952) are delicate and sensitive, but much of his work is deeply ingrained with bitter irony. "The Cosmic Charge Account" (1956) is a black comedy about a little old lady who finds the power to remake her environs. "Shark Ship" (1958) is an early alarmist fantasy about OVERPOPULATION and POLLUTION. The ALTERNATE-WORLD story "Two Dooms" (1958) is one of the better studies of a world in which the Nazis won WWII (HITLER WINS).CMK wrote two routine novels in collaboration with Judith MERRIL as Cyril JUDD: *Outpost Mars* (1952: rev vt *Sin in Space* 1961), about the colonization of MARS, and *Gunner Cade* (1952), about a future in which WAR is a spectator sport (GAMES AND SPORTS). His first solo sf novel, *Takeoff* (1952), is a weak NEAR-FUTURE story about the building of the first Moon ROCKET; but when CMK began working again in collaboration with Frederik Pohl they produced a classic, *THE SPACE MERCHANTS* (1952 Gal as "Gravy Planet"; 1953), about a world run by advertising agencies in the service of capitalist consumerism. This became the archetype of a whole generation of sf novels which showed the world of the future dominated by one particular institution or power group. Two other collaborations with Pohl - the episodic satirical comedy *Search the Sky* (1954; rev by Pohl 1985) and *Gladiator-at-Law* (1955) - belong to the same subspecies. The last novel CMK wrote with Pohl was *Wolfbane* (1957; rev by Pohl 1986), in which the Earth is moved out of its orbit by ALIENS who capture humans in order to use their bodies in a vast COMPUTER complex. CMK and Pohl also wrote two non-sf novels, *A Town is Drowning* (1955) and *Presidential Year* (1956). Collaborative stories continued to appear for four years after CMK's premature death, and Pohl wrote some more stories from CMK's ideas in the early 1970s, one of which - "The Meeting" (1972) - won a HUGO. Some of the collaborative short stories are reprinted in the overlapping collections *The Wonder Effect* (coll 1962), *Critical Mass* (coll 1977) *Before the Universe* (coll 1980) and *Our Best* (coll 1986). CMK's other solo novels are undistinguished: *The Syndic* (1953) ironically depicts a future

USA run by organized gangsterism in a semi-benevolent fashion; Not this August (1955; vt Christmas Eve 1956 UK; exp by Pohl under first title 1981) describes a revolution in a future USA which has been conquered by communists. The best of CMK's short work is collected in *The Explorers* (coll 1954; with 1 story cut and 4 added, vt *The Mindworm and Other Stories* 1955 UK), *A Mile Beyond the Moon* (coll 1958; paperback omits 3 stories) and *The Marching Morons* (coll 1959). Eclectic selections from these volumes are *Best SF Stories of Cyril M. Kornbluth* (coll 1968) and *The Best of C.M. Kornbluth* (coll 1976), the latter ed Pohl. A selection of early stories originally signed Cecil Corwin is *Thirteen O'Clock and Other Zero Hours* (coll 1970) ed James BLISH. CMK's essay "The Failure of the Science Fiction novel as Social Criticism" (in *The Science Fiction Novel* coll 1959 intro by Basil DAVENPORT) is an important early piece of sf criticism, sharply pointing out the genre's shortcomings. His widow, Mary Kornbluth, compiled *Science Fiction Showcase* (anth 1959) as a memorial. [BS]Other work: *Gunner Cade, Plus Takeoff* (omni 1983). See also: ANTI-INTELLECTUALISM IN SF; ARTS; COLONIZATION OF OTHER WORLDS; CYBERNETICS; DYSTOPIAS; ECOLOGY; ECONOMICS; GALAXY SCIENCE FICTION; GOLDEN AGE OF SF; HEROES; HISTORY IN SF; HISTORY OF SF; INVASION; LEISURE; LIBERTARIANSF; *The MAGAZINE OF FANTASY AND SCIENCE FICTION*; MEDIA LANDSCAPE; OPTIMISM AND PESSIMISM; PARANOIA; PSYCHOLOGY; SF IN THE CLASSROOM; SCIENTISTS; SOCIOLOGY; SPACE HABITATS; SUPERNATURAL CREATURES; TIME TRAVEL; UFOS; VENUS.

KORNWISE, ROBERT

[r] Piers ANTHONY.

KORZYBSKI, ALFRED (HABDANK SKARBK)

(1879-1950) Polish-born aristocrat (a count) sent after WWI to the USA as an artillery expert. He remained, and wrote a quasiphilosophical text, *Science and Sanity* (1933), which became the basic handbook of the GENERAL SEMANTICS movement, later to prove so influential on the writer A.E. VAN VOGT. With the support of a Chicago millionaire, AK set up the Institute of General Semantics in 1938. [PN]About the author: *Fads and Fallacies in the Name of Science* (1957; rev exp vt of *In the Name of Science* 1952) by Martin GARDNER. See also: PSEUDO-SCIENCE.

KOSINSKI, JERZY (NIKODEM)

(1933-1991) Polish writer whose harrowing experiences as a child in WWII are reflected in his first novel, *The Painted Bird* (1965; rev 1976), a hallucinated picaresque set in the surrealistic landscape of war-devastated Poland; its child protagonist - like JK himself - is driven mute by his experiences. JK regained the power of speech at the age of 15, moved to the USA in 1958, and wrote all his fiction in English. Most of his novels are shaped as mosaics of deracination (FABULATION), and tales like *Cockpit* (1975) displace these chips of reality in an sf direction. His nearest approach to sf proper, *Being There* (1970), treats the US political system as one from which any meaning has been evacuated; its vacant-minded protagonist, named Chance, reflects through his media-shaped emptiness the desires and delusions of the world, while at the same time

being selected to run for high office; it was filmed as *Being There* (1979). JK's later years were not happy. Illness, accusations that he had made excessive and unacknowledged use of helpers's work (F. Gwynplaine MACINTYRE, for instance, ghost-wrote part of *Pinball* (1984), giving one of the characters his own middle name), distressingly close examinations of the background behind the childhood experiences he claimed to have suffered, and (it may be) the fatalism that has often afflicted survivors of the Holocaust attended him. He committed suicide. [JC]About the author: Jerzy Kosinski: *The Literature of Violation* (1991) by Welch D. Everman. See also: ABSURDIST SF.

KOTANI, ERIC

Pseudonym used by US astrophysicist and writer Yoji Kondo (1933-) for all his fiction. He has been professor of astrophysics at the University of Oklahoma (1972-7), the University of Houston (1974-7), the University of Pennsylvania (from 1978) and concurrently the George Mason University (from 1989), with over 100 scientific papers to his credit. He has edited the journal *Comments on Astrophysics* since 1979, was President of the International Astronomical Union Commission on Astronomy from Space 1985-8, and received a NASA Medal for Exceptional Scientific Achievement in 1990. Compared with the evident achievements of his academic career, his fiction has been quite deliberately lightweight, though vigorously speculative within those limits, consisting in general of adventures substrated by HARD-SF concerns. He is perhaps best known for a NEAR-FUTURE sequence written in collaboration with John Maddox ROBERTS: *Act of God* (1985), *The Island Worlds* (1987) and *Between the Stars* (1988). The action is at times congested, and is somewhat unrelentingly military in orientation, but the vision that unfolds of a bustling and expanding Solar System frequently exhilarates. *Delta Pavonis* (1990), also with Roberts, is again an sf adventure; and *Supernova* (1991) with Roger MacBride ALLEN, probably his most interesting novel to date, recounts with gripping verisimilitude the scientific process involved in discovering that a nearby star is due to go nova and flood Earth with hard radiation - which happens. [JC]Other works: *Requiem: New Collected Works* by Robert A. Heinlein (coll 1992) ed as Yoji Kondo.

KOTLAN, C.M.

[r] G.C. EDMONDSON.

KOTZWINKLE, WILLIAM

(1938-) US writer who began his career with several novels for children (see listing below); his genre-crossing FABULATIONS - some of them making use of sf material - created something of a literary stir in the 1970s. These early tales for adults - like *Hermes 3000* (1972), *Fata Morgana* (1977), set in the Paris of 1871 and plausibly describable as proto-STEAMPUNK, and *Herr Nightingale and the Satin Woman* (1978) - tend to treat genre boundaries as thresholds through which characters pass from more or less everyday realities into fantastic or sf-like worlds which rewrite those realities in allegorical terms, sometimes feyly. *Doctor Rat* (1976), on the other hand, never shifts from one plane, and seems all the more extraordinary for that consistency. The tale is mostly narrated by an elderly laboratory rat, his mind jumbled by too much maze-running, who

sees himself as an active collaborator with the human experimenters; the destiny of the animal world, he feels, is that it be subjected to such experiments for the ultimate good. Crises in the ECOLOGY, however, drive the brutalized animals to form a global consciousness, and war ensues between Man and animals; Doctor Rat heroically quells revolt in the lab, until eventually he is the only animal left alive. WK is best known in the sf world for some excellent film ties. They include E.T., The Extra-Terrestrial, in his Adventure on Earth * (1982) - which appeared at the same time as a text for younger readers, E.T., The Extra-Terrestrial Storybook * (1982 chap) - and E.T., The Book of the Green Planet * (1985; cut for younger readers 1985 chap), based on a story by Stephen SPIELBERG (E.T.: THE EXTRA-TERRESTRIAL) and designed to work as a bridge between the first E.T. film and its yet-unmade successor. It too was accompanied by a text for younger readers, E.T., The Storybook of the Green Planet: A New Storybook * (1985 chap), probably derived from the cut version of the main title. A further tie, Superman III * (1983), is perhaps less memorable. At the same time WK continued to produce fabulations, including Christmas at Fontaine's (1982), Great World Circus (1983), Queen of Swords (1984), The Exile (1987), in which a contemporary US actor is transported back to Nazi Germany, where he gets involved in black-market activities, and The Midnight Examiner (1989), a perhaps overbroad comedy in which a journalist - an ideal kind of protagonist for the typical WK novel - becomes tangled in a world of Mafia revenges, voodoo and other sorceries. Short work has been assembled in Elephant Bangs Train (coll 1971), Trouble in Bugland: A Collection of Inspector Mantis Mysteries (coll 1983) - Sherlock Holmes pastiches for younger readers - Jewel of the Moon (coll 1985), Hearts of Wood and Other Timeless Tales (coll 1986 chap) - mostly fairytales - and The Hot Jazz Trio (coll 1989), which contains 3 long stories, each involving a transgressive journey from "normal" reality into other worlds, including the Land of the Dead. Because he crosses genres with such ease, WK could fairly be accused of frivolity; but the charge itself seems frivolous when his harsher texts are looked at square.

[JC/PN]Other works for children: The Fireman (1969); The Ship that Came Down the Gutter (1970); Elephant Boy: A Story of the Stone Age (1970); The Oldest Man and Other Timeless Stories (coll 1971); The Supreme, Superb, Exalted, and Delightful, One and Only Magic Building (1973); The Leopard's Tooth (1976 chap); The Ants who Took away Time (1978 chap), in which the Solar System must be searched for the ant-dismembered Watch which keeps Time together; Dream of Dark Harbor (1979); The Nap Master (1979); The Empty Notebook (1990).

KRENKEL, ROY G(ERALD Jr)

(1918-1983) US illustrator. A lifelong resident of New York, he studied at Burne Hogarth's School of Visual Arts after WWII and started his career at EC COMICS, where he became friends with Frank FRAZETTA. A great deal of his art, heavily influenced by the work of J. Allen ST JOHN and also by the Australian artist Norman Lindsay (1879-1969), was published in the SWORD-AND-SORCERY fanzine Amra (George H. SCITHERS), where it came to the attention of Donald A. WOLLHEIM of ACE BOOKS. Ace were planning to reprint many of the works of Edgar Rice BURROUGHS, and Krenkel's style fitted perfectly. RGF did about 20 of these Burroughs covers, and because of their popularity won a 1963 HUGO as Best Professional Artist; when he could not meet all the deadlines, he got Wollheim to ask Frazetta onto the project, thus launching Frazetta's sf career. Krenkel also did covers for DAW BOOKS, some interior work for sf magazines and, most celebratedly, cover and interior illustrations for several Robert E. HOWARD collections published by Donald M. Grant. Though his covers were good, it was with his pen-and-ink work, his first love, that he was most at home; it is both delicate and spirited. All his best work was in the field of HEROIC FANTASY. A book of his work is Cities ? (1974). [JG/PN]See also: COMICS.

KRESS, NANCY (ANNE)

(1948-) US writer who began publishing sf with "The Earth Dwellers" for Gal in 1976, and whose first novels were fantasies like The Prince of Morning Bells (1981), a quest tale during which, surprisingly, the young princess involved ages into an old woman before the close, and The Golden Grove (1984), which, again surprisingly, treats Greek myth with something of the iron darkness it merits. After a further fantasy novel, The White Pipes (1985), and an intermittently rewarding collection, Trinity and Other Stories (coll 1985), which includes the NEBULA-winning "Out of All Them Bright Stars" (1985), NK moved forthrightly into sf with her fourth novel, the slow-moving but cumulatively impressive AN ALIEN LIGHT (1988), set on a planet inhabited by two sets of irreconcilably opposed humans, the descendants of the people from a starship that crashed there centuries earlier after a battle with the ALIEN Ged. All knowledge of this history has been lost, and the Ged set up a huge technological honey-trap to entice humans inside for study, as they have found the territoriality and attendant aggressiveness of Homo sapiens baffling. What they learn from the two sets of stranded humans does not lead them to feel that they will win the war against a species whose savagery seems ultimately unopposable. Brain Rose (1990), just as impressively, presents an extremely grim NEAR-FUTURE Earth whose inhabitants are harassed by an AIDS-like disease which eats memory; the protagonists of the tale sign up for medically dubious Previous Life Access Surgery (MEDICINE), which is intended somehow to counter the dimming out of the world itself through a "genuine" return to the past. Beggars in Spain (1991), a novella, is set within a framework familiar to most sf readers: a group of specially bred children who need no sleep must band together to defend themselves against the

jealousy and oppressive behaviour of normal humans. But within this frame NK embeds speculations about not only GENETIC ENGINEERING but also the ethical consequences of "superiority" (SUPERMAN) in a world which demands an "ecology of help" to survive; the novella version won a NEBULA, and the full-length version, *Beggars in Spain* (1992) which expands the novella into an ironic saga set partly in space, is almost certainly her best work yet; with *Beggars* ?

scope - and to encounter some of the difficulties of focus - of genuine Future HISTORY. Her recent fiction - much of which makes virtuoso use of sf devices, but from an angle of vision which gives the impression that the author deems them irremediably belated - appears in *The Aliens of Earth* (coll 1993). There seem few subjects that NK, in an already fascinating career, will be unable to assimilate. [JC]Other Works:*The Price of Oranges* (1992 chap).See also: ANTHROPOLOGY; ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE; The MAGAZINE OF FANTASY AND SCIENCE FICTION .

KRING, MICHAEL K.

(1952-) US writer whose Space Mavericks series of SPACE OPERAS - *The Space Mavericks* (1980) and *Children of the Night* (1981) - carries its protagonists through various adventures but not to their destination planet: the conclusion to the series was never published, due to difficulties experienced by MKK's publisher, Leisure Books. [r] BENELUX.

KRONOS

Film (1957). Regal/20th Century-Fox. Prod and dir Kurt Neumann, starring Jeff Morrow, Barbara Lawrence, John Emery. Screenplay Laurence Louis Goldman, from a story by Irving Block. 78 mins. B/w.A scientist is possessed by an alien lifeform of pure energy. Shortly afterwards (the incidents are connected) an "asteroid" (actually a flying saucer) deposits a huge mechanical creature on a Mexico beach. When activated, it moves across the countryside, crushing anything and anyone in its path: its aim is to destroy power stations and absorb their energy, too much of which ultimately causes it to explode after it has been deliberately short-circuited. The script of this low-budget MONSTER MOVIE is mediocre, but Kronos itself is such an unusual monster that it stands out among all the giant reptiles, giant insects, etc., of the 1950s sf boom. Prod/dir Kurt Neumann's other sf films include *ROCKETSHIP X-M* (1950) and the very successful *The FLY* (1958). [JB/PN]

KUBE-McDOWELL, MICHAEL P.

Pseudonym of US writer Michael Paul McDowell (1954-), who attached his wife's name, Kube, in 1975; some years later this proved useful when both he and Michael M. McDowell were writing scripts for the tv series *Tales from the Darkside*. His first published sf story, "The Inevitable Conclusion" for AMZ in 1979, also marked the inception of his Trigon Disunity sequence, comprising his first three novels - *Emprise* (1985), *Enigma* (1986) and *Empery* (1987) - along with other tales like "Antithesis" (1980). Though failing to rise above some of the less attractive assumptions held by popular writers in the sf field about the comical

incompetence of politicians compared to the world-changing nerve of scientific entrepreneurs (EDISONADE), the series triumphs through the expansive exuberance of its premise: that an earlier wave of humanity had long ago colonized the Galaxy, and that the apparent ALIENS whose probing has reawakened contemporary humanity's interest in the stars - and revitalized a decaying planet - are in fact our own cousins; the final volume moves, less convincingly, into a vision of the human species melding its differences through a form of communion. Alternities (1988) similarly combines efficient action, in this case among a number of ALTERNATE WORLDS, and marginally vapourish speculations about the human species; but THE QUIET POOLS (1990), MPK-M's best novel to date, successfully coordinates action and thought in a story about the ambiguous nature of humanity's drive outwards to the stars, carried through the troubled consciousness of a man who is genetically incapable - just as most of humanity has always been - of denying the planet, of leaping into space. The book's genetic determinism, which is much too explicit to have been inadvertent, is both bleak and bracing. Rather more baldly, Exile (1992) takes the sclerotic China of 1988's Tiananmen Square massacre as a model for the construction of a rigid, terraformed colony world in the throes of a tragic confrontation with its own youth. MPK-M has become, quite suddenly, one of the authors to watch. [JC]Other works: Photon: Thieves of Light * (1987) as Michael Hudson, a tv adventure tie; Isaac Asimov's Robot City #1: Odyssey * (1987), the first of the tied ROBOT sequence. See also: COMMUNICATIONS.

KUBIN, ALFRED
[r] AUSTRIA.

KUBRICK, STANLEY
(1928-) US film-maker, resident in the UK. Born in New York, the son of a doctor, he early became obsessed with photography; Look magazine hired him as soon as he left school. Motion pictures became his dominant interest, and he left Look after four years to make two short films with his own money and then two feature films, Fear and Desire (1953) and Killer's Kiss (1955), borrowing the production money from relatives. By then he had also become a fully qualified cameraman. In 1956 he made The Killing, which attracted the attention of critics, and his reputation was further enhanced by Paths of Glory (1957); he directed most of Spartacus (1960). In 1961 he moved to the UK and, with Lolita (1962), began the cycle of films that have made him internationally famous. In 1963 he made his first sf film, DR STRANGELOVE OR: HOW I LEARNED TO STOP WORRYING AND LOVE THE BOMB, and at the end of 1965 he started work on 2001: A SPACE ODYSSEY, which he completed in 1968. His next film was also sf - the controversial A CLOCKWORK ORANGE (1971). Breaking away from sf but remaining true to his concerns, SK's continued his slim output with Barry Lyndon (1975), from W.M. Thackeray's novel The Luck of Barry Lyndon (1844; 1852), The Shining (1980), from Stephen KING's bestselling The Shining (1977), and Full Metal Jacket (1987), from The Short Timers (1979), a Vietnam novel by Gustav Hasford (1947-). Having avoided direct involvement in Peter Hyam's 2010, the sequel to 2001, SK is currently (1992) planning a return to sf with an adaption of Brian W. ALDISS's

"Super-Toys Last All Summer Long" (1969).SK is one of the few film-makers who has succeeded in maintaining control over all aspects of his films (Spartacus was the exception), and his personal style is stamped on all his work, its most obvious characteristic being a cool and ironic wit. His films manifest a formidable intelligence, unusual in a maker of high-budget spectaculars. SK is reported to have an almost obsessive desire for perfection, which shows itself in a fastidious attention to detail. Critics have emphasized the intellectual authority of SK's work - though some see him as merely cold-bloodedly stylish - but he is also, and perhaps primarily, a consummate showman. His sf work is notable for distasteful, ultimately impotent protagonists dwarfed or cowed by enigmatic, dehumanizing TECHNOLOGY; but his main theme, older than sf, appears to be Original Sin. [JB/KN/PN]See also: CINEMA; COMMUNICATIONS; MUSIC; ORIGIN OF MAN; PARANOIA.

KUCZKA, PETER

(1923-) Hungarian publisher and critic who, beginning in the 1960s, was a powerful force in the renaissance of Hungarian sf, even during a period of Hungarian history not conducive to literary experiment (though the situation was liberalized in the 1970s). In 1968 PK took over as controller and editor of the publisher Mora's brand-new sf imprint Kozmosz Fantasztikus Konyvek, which was and remains the most important sf publisher in HUNGARY in terms of both original Hungarian sf and translations. In 1972 Mora followed this paperback series with the magazine Galaktika, ed PK, first as a quarterly and now as a monthly with a circulation of about 50,000; it has several times won awards as the best sf magazine in Europe. He also introduced sf into the Hungarian Writers' Association (no easy task in a country whose literati and academics have often regarded sf with revulsion), has been from the outset (1972) connected with the Eurocons (trans-European sf CONVENTIONS), and is a director of WORLD SF. Like all impresarios he has been criticized, but he has done more for Hungarian sf than any other individual. He has published a variety of essays on sf, many in Hungarian, some in English, and is the author of the entry on HUNGARY in this encyclopedia. [PN]

KUNETKA, JAMES

[r] Whitley STRIEBER.

KUPPORD, SKELTON

Pseudonym of UK writer J. Adams (? -?), whose sf novel, A Fortune from the Sky (1903), features several inventions that are all linked to "panergon", which is capable of generating a profitable sky-writing ray but which its inventor soon uses, more conventionally, as a DEATH RAY. Soon the UK is ringed with victims, mostly innocent ones. In the end, world peace is enforced. [JC]

KUPRIN, ALEXANDER (IVANOVICH)

[r] RUSSIA.

KURD LASSWITZ AWARD AWARDS.

KURLAND, MICHAEL (JOSEPH)

(1938-) US writer who began publishing sf in 1964 with "Elementary" with Laurence M. JANIFER for FSF and Ten Years to Doomsday (1964) with Chester ANDERSON. The latter is a lightly written alien- INVASION novel, full of harmless violence in space and on other planets. MK then participated in the writing of an unusual trilogy comprising The Butterfly Kid (1967) by Anderson, The Unicorn Girl (1969) by MK and The Probability Pad (1970) by T.A. WATERS. The books all feature the various authors as characters. The Unicorn Girl deals with a number of sf themes in a spoof idiom which is sometimes successful; MATTER TRANSMISSION and invasions abound. Although MK has perhaps gained most recognition for his suspense novel A Plague of Spies (1969), which won an Edgar Allan Poe Scroll from the Mystery Writers of America, his later sf has admirers for its briskness and its bright touristic promenades through various venues. Transmission Error (1970) is an adventure set on a colourful planet. Pluribus (1975), a post- HOLOCAUST novel, though breaking no new ground makes effective use of its US locations. The Whenabouts of Burr (1975) is an ALTERNATE-WORLDS tale featuring Aaron Burr (1756-1836). The Princes of Earth (1978), a crowded juvenile, takes its young backwater-planet protagonist to school on Mars. The Last President (1980) with S.W. Barton (pseudonym of Barton Stewart Whaley [1928-]) posits the survival of a Nixon-like President in office and his subsequent destruction of democracy. Star Griffin (1987), another tale whose main flaw is crowdedness, sets its protagonist a series of detective puzzles on an overpopulated Earth choked with sects, some of which may be opposing the development of a FASTER-THAN-LIGHT vehicle. Perchance (1989) initiates a projected sequence of humorous TIME-TRAVEL tales, to be called The Chronicles of Elsewhen. Unlike many lesser (and some more significant) writers, MK puts the themes and venues of sf to work in a professional manner, with no radical innovations but always imparting a sense of secure competence. [JC] Other works: The War, Inc series, sf, comprising Mission: Third Force (1967), Mission: Tank War (1968) and A Plague of Spies; Tomorrow Knight (1976); two Sherlock Holmes pastiches, being The Infernal Device * (1979) and Death by Gaslight * (1982); Psi Hunt (1980); First Cycle (coll 1984) with H. Beam PIPER; a fantasy series set in the Lord Darcy universe created by Randall GARRETT, comprising Ten Little Wizards * (1988) and A Study in Sorcery * (1989), the latter again invoking Sherlock Holmes; Button Bright (1990), borderline sf.

KURTEN, BJORN (OLAF)

(1924-1988) Finnish palaeontologist and writer; his fiction appeared in Swedish. His sf novels - Den svarta tigern (1978 Sweden; trans BK as Dance of the Tiger 1980 US with foreword by Stephen Jay Gould) and Mammutens raddare (1984 Sweden; trans BK as Singletusk 1986 US) - fascinatingly apply late-20th-century speculations about EVOLUTION to the old subgenre of prehistoric sf (ANTHROPOLOGY; ORIGIN OF MAN), offering the suggestion that blond and burly Neanderthals fell fatally in love with their Black, beautiful, neotenous Cro-Magnon neighbours, bringing them home to engage in sterile matches. Neoteny can be defined as an indefinite prolongation of childlike behaviour and physical proportions; the notion that our ancestors rose to preeminence through cuteness is intriguing. [JC]

KURTZ, KATHERINE (IRENE)

(1944-) US writer employed in various fields including oceanography and cancer research, as well as a stint as instructional designer for the Los Angeles Police Department. Her fiction, basically FANTASY, has been dominated from the beginning by the unfolding Chronicles of the Deryni sequences, all set in a highly detailed, coherent ALTERNATE WORLD whose society is hierarchical and in many of its aspects medieval Welsh. By internal chronology they are: The Legends of Camber of Culdi, comprising Camber of Culdi (1976), Saint Camber (1978) and Camber the Heretic (1980); The Heirs of Saint Camber, comprising The Harrowing of Gwynedd (1989), The Chronicles of the Deryni (omni 1985) - which assembles her first novel, Deryni Rising (1970), Deryni Checkmate (1972) and High Deryni (1973) - King Javan's Year (1992) and The Bastard Prince (1994); and The Histories of King Kelson, comprising The Bishop's Heir (1984), The King's Justice (1985) and The Quest for Saint Camber (1986). These chronicles tell the history of a group of humans whose witchlike PSI POWERS, the explanation for which hovers between sf and mysticism, cause them to be persecuted by a medieval Church. The first novel is perhaps the best, but the whole is generally much above average for HEROIC FANTASY and is well characterized, although sometimes archaic and modern language clash. Appended to the series are 2 supplementary volumes: The Deryni Archives (1986) and Deryni Magic: A Grimoire (1991). Her other work of interest includes The Legacy of Lehr (1986), juvenile sf. [JC/PN]Other works: Lammas Night (1983); the Adam Smith sequence comprising The Adept (1991) with Deborah Turner Harris (1951-),The Adept: The Lodge of the Lynx (1992) with Harris, and The Adept: The Templar Treasure (1994) with Harris. See also: DEL REY BOOKS; MAGIC.

KUTTNER, HENRY

(1915-1958) US writer. His interest in WEIRD TALES early led him to correspond with H.P. LOVECRAFT and others; his first sale to the magazine was a poem, followed by "The Graveyard Rats" (1936). His stories for it included a Robert E. HOWARD-like SWORD-AND-SORCERY series collected as Elak of Atlantis (1938-41; coll of linked stories 1985). He began to publish sf stories in 1937 with "When the Earth Lived" for TWS. His early sf work included a series about the movie business of the future: "Hollywood on the Moon" (1938), "Doom World" (1938), "The Star Parade" (1938), "The Energy Eaters" (1939) and "The Seven Sleepers" (1940), the last two in collaboration with Arthur K. BARNES. (He and Barnes also wrote together as Kelvin KENT.) HK achieved a certain notoriety with the slightly risqué stories he wrote for MARVEL SCIENCE STORIES, notably "The Time Trap" (1938). He used many pseudonyms in this part of his career, and even more after marrying C.L. MOORE in 1940, when the two wrote very many stories in collaboration; these names included Paul Edmonds, Noel Gardner, Keith Hammond, Hudson Hastings, Robert O. Kenyon, C.H. Liddell, K.H. Maepen, Scott Morgan and Woodrow Wilson Smith. HK also published stories under various house names, including James Hall and Will Garth, as though he wrote "Dr Cyclops" (1940 Thrilling Wonder Stories) under his own name a novelette confusingly unconnected with the novelization as by Will Garth (probably Alexander SAMALMAN) of that same year's film DR CYCLOPS; HK's tale was reprinted as the title story of Dr Cyclops (anth 1967) ed anon (

Will GARTH for more details). After their marriage in 1940, most of HK's and Moore's works were to some extent joint efforts - it is said that each could pick up and smoothly continue any story from wherever the other had left off. Moore seems to have been the more fluent and perhaps the more assiduous (indeed, talented) writer, but HK's wit, deftly audacious deployment of ideas and neat exposition complemented her talents very well. During WWII they became part of John W. CAMPBELL Jr's stable of writers working for ASTOUNDING SCIENCE-FICTION. It was then that they devised their best known pseudonyms, Lewis Padgett and Lawrence O'Donnell, much of their best work appearing initially under these names. The Padgett stories are ingenious and slickly written, often deploying offbeat HUMOUR. HK was the sole author of the Padgett Galloway Gallagher series collected as Robots Have No Tails (1943-8; coll of linked stories 1952 as by Padgett; 1973 as HK; paperback as by HK; vt The Proud Robot: The Complete Galloway Gallagher Stories 1983 UK). Other notable Padgett stories include "The Twonky" (1942), filmed as The TWONKY (1952), and the classic "Mimsy Were the Borogoves" (1943), about educative toys timeslipped from the future. Two Padgett short novels, Tomorrow and Tomorrow ? Chessmen (1946-7; coll 1951; 1st story published separately as Tomorrow and Tomorrow 1963 UK; 2nd story published separately vt Chessboard Planet 1956 US and vt The Far Reality 1963 UK), are intensely recomplexed tales in the tradition of A.E. VAN VOGT, whose influence is also evident in the Baldy series about persecuted SUPERMEN, assembled as MUTANT (1945-53; fixup 1953 as by Padgett; 1954 UK as HK). Most of the O'Donnell stories were Moore's work, including the remarkable "Clash By Night" (1943), whose sequel Fury (1947 as by O'Donnell; 1950; vt Destination Infinity 1958 US) was a collaboration. HK and Moore wrote many colourful novels for STARTLING STORIES during the 1940s. "When New York Vanished" (1940) and The Creature from beyond Infinity (1940 as "A Million Years To Conquer"; 1968) are slapdash sf probably by HK alone, but subsequent works - which became archetypes of the hybrid genre SCIENCE FANTASY - neatly fused HK's vigorous plotting with Moore's romanticism. These included The Dark World (1946 as by HK; 1965 as by HK), Valley of the Flame (1946 as by Keith Hammond; 1964 as by HK), "Lands of the Earthquake" (1947 as by HK), The Mask of Circe (1948 as by HK; 1971), The Time Axis (1949 as by HK; 1965), Beyond Earth's Gates (1949 as "The Portal in the Picture" by HK; 1954 dos as by Padgett and Moore) and Well of the Worlds (1952 as by HK; as a GALAXY SCIENCE FICTION NOVEL by Padgett 1953; vt The Well of the Worlds as by HK 1965 US). The first, second and fifth were combined in The Startling Worlds of Henry Kuttner (omni 1987). Earth's Last Citadel (1943 Argosy as by HK and Moore; 1964 as by Moore and HK) also belongs to this sequence, although one other Startling Stories novel, "Lord of the Storm" (1947 as by Hammond), does not. For Startling's companion THRILLING WONDER STORIES HK wrote the humorous Hogben series about an ill assorted family of MUTANT hillbillies: "Exit the Professor" (1947), "Pile of Trouble" (1948), "See You Later" (1949) and "Cold War" (1949). In 1950 HK and Moore went to study at the University of Southern California; they wrote a number of mystery novels thereafter but very few sf stories. HK graduated in 1954 and went on to work for his MA, but died of a heart attack before it was completed. During his career HK rarely received the credit his work merited, and was to an extent overshadowed by his own pseudonyms. His

reputation as one of the most able and versatile of modern sf writers has risen steadily since. His influence on the young Ray BRADBURY was considerable, and many later writers have acknowledged their debt to him. His short stories are distributed over numerous overlapping collections: A Gnome There Was (coll 1950 as by Padgett), Ahead of Time (coll 1953), Line to Tomorrow (coll 1954 as by Padgett), No Boundaries (coll 1955 as by HK and Moore), Bypass to Otherness (coll 1961), Return to Otherness (coll 1962), The Best of Kuttner, Volume 1 (coll 1965 UK) and Volume 2 (coll 1966 UK), THE BEST OF HENRY KUTTNER (coll 1975) with intro by Ray Bradbury, Clash by Night and Other Stories (coll 1980 UK as by HK and Moore), Chessboard Planet and Other Stories (coll 1983 UK as by HK and Moore) and Secret of the Earth Star and Others (coll 1991). Another early sword-and-sorcery series was collected in Prince Raynor (1939 Strange Stories; coll 1987 chap), while 3 early non-sf stories are in Kuttner Times Three (coll 1988 chap). [MJE/BS]See also: ANTI-INTELLECTUALISM IN SF; ATLANTIS; AUTOMATION; CHILDREN IN SF; COLONIZATION OF OTHER WORLDS; COMICS; CRIME AND PUNISHMENT; DIMENSIONS; DISCOVERY AND INVENTION; ECOLOGY; ECONOMICS; ESP; FANTASY; FAR FUTURE; GAMES AND SPORTS; GODS AND DEMONS; GOLDEN AGE OF SF; INTELLIGENCE; MESSIAHS; OUTER PLANETS; PARALLEL WORLDS; PSI POWERS; RECURSIVE SF; RELIGION; ROBOTS; SCIENTISTS; SUPERMAN [character]; TIME TRAVEL; UFOS; UNDER THE SEA; VENUS.

al-KUWAYRI, YUSUF

[r] ARABIC SF.

KYLE, DAVID A(CKERMAN)

(1919-) US sf fan, writer, illustrator, owner of several radio stations, and publisher. DK is a member of "first fandom", having been active in the field since 1933. Until the 1970s his writing activities were only occasional. His first published sf was "Golden Nemesis" for *Stirring Science Stories* in 1941. In 1948, with Martin GREENBERG, he founded the fan publishing company GNOME PRESS, which maintained what were probably the highest standards of any of the SMALL PRESSES of the period; DK designed several of the book jackets. For much of the 1970s DK was resident in the UK, where he wrote two well and lavishly illustrated coffee-table-style books on sf, the first dealing primarily with the HISTORY OF SF and the second with sf's dominant themes: *A Pictorial History of Science Fiction* (1976) and *The Illustrated Book of Science Fiction Ideas and Dreams* (1977). Both are descriptive rather than analytic, and the main interest of their texts, which are conservatively skewed towards HARD SF of the so-called GOLDEN AGE OF SF, is in their well informed data about sf PUBLISHING. When E.E. "Doc" SMITH's *Lensman* books were reissued in the early 1980s, new novels were published by other hands, continuing and infilling the series. DK, who had been a friend of Smith, wrote 3 of these: *The Dragon Lensman* (1980), *Lensman from Rigel* (1982) and *Z-Lensman* (1983). The second, perhaps the most interesting, is about an ALIEN who has progressed to the level of Second Stage Lensman. DK succeeded to a degree in capturing the flavour of Smith, but not his compulsiveness. [PN]See also: BRITISH SCIENCE FICTION AWARD; FUTURIANS;

ILLUSTRATION; NEW WAVE.

SF?

LACH-SZYRMA, W(LADISLAW) S(OMERVILLE)

(1841-1915) UK Anglican clergyman and author who began writing his series of interplanetary romances featuring the travels around the Solar System of the winged Venusian Aleriel in a magazine story in 1865; this was incorporated into *A Voice from Another World* (1874 as by WSL-S; exp vt Aleriel, or *A Voyage to Other Worlds* as by the Rev. W.S. Lach-Szyrma 1883). Aleriel's further travels were chronicled in his anonymous *Letters from the Planets* series in *Cassell's Family Magazine*, 9 stories (1887-93) which were reprinted in *Worlds Apart* (anth 1972) ed George LOCKE. Under *Other Conditions* (1892), which belongs to the series, tells of another Venusian's adventures on Earth. These rather preachy stories concentrate on sightseeing and ethics, but fair-mindedly stress that other planetary conditions may lead to other customs. Lach-Szyrma could be considered a minor forerunner to C.S. LEWIS. [PN]See also: MARS; MOON; VENUS.

LACKEY, MERCEDES

[r] C.J. CHERRYH; Anne MCCAFFREY; Andre NORTON.

LADY AND THE MONSTER, THE

Film (1944). Republic. Prod and dir George Sherman, starring Vera Ralston, Richard Arlen, Erich von Stroheim, Sidney Blackmer. Screenplay Dane Lussier, Frederick Kohner, based on *Donovan's Brain* (1943) by Curt SIODMAK. 86 min. B/w. This is the first of the 3 film versions of Siodmak's novel; the others are *DONOVAN'S BRAIN* (1953) and *VENGEANCE* (1963; vt *The Brain*). Financial wizard W.H. Donovan is killed when his plane crashes in the desert. An obsessive SCIENTIST (von Stroheim), whose laboratory is nearby, removes the undamaged brain and keeps it alive in a glass tank, but it gradually takes over the minds of those around it, forcing them to commit a series of evil deeds. The photography is atmospheric, but the film overall is routine GOTHIC melodrama. [JB/PN]See also: CINEMA.

LAFARGUE, PHILIP

Pseudonym of UK writer and physician Joseph Henry Philpot (1850-1939), whose *The Forsaken Way: A Romance* (1900) depicts the UK at the close of the 20th century as a romantic ruin. After falling in love, the protagonist leaves his monastery and starts a new life. [JC]

LAFAYETTE, RENE

[s] L. Ron HUBBARD.

LAFFERTY, R(APHAEL) A(LOYSIUS)

(1914-) US writer who worked in the electrical business until retiring in 1971; he came to writing only in his 40s, publishing his first sf, "Day of the Glacier", with *The Original Science Fiction Stories* in 1960. Over the next 25 years (he reportedly retired from writing at the age of about 70) he produced many stories - about 200 have been published - and a number of novels. The extremely active SMALL-PRESS interest in his work gave birth to a large number of titles in the late 1980s, most of them short collections, but much RAL material remains apparently in manuscript,

including several of the titles mentioned in *The Complete Book of Science Fiction and Fantasy Lists* (1983) by Malcolm EDWARDS and Maxim JAKUBOWSKI. There are reasons for this apparent neglect of a writer whose originality and whose value to the sf/fantasy world have never been questioned. From the first, RAL demonstrated only the slenderest interest in making his stories conform to any critical or marketing definition of either sf or fantasy. He has fairly been described as a writer of tall tales, as a cartoonist, as an author whose tone is fundamentally oral; his conservative Catholicism has been seen as permeating every word he writes (or has been ignored); he has been seen as a ransacker of old MYTHOLOGIES, and as a flippant generator of new ones; he delights in a vision of the world as being irradiated by conspiracies both godly and devilish, but at times pays scant attention to the niceties of plotting; he has been understood by some as essentially light-hearted and by others as a solitary, stringent moralist; he is technically inventive, but lunges constantly into a slapdash sublime; his skill in the deploying of various rhetorical narrative voices is manifest, but these voices are sometimes choked in baroque flamboyance. He was awarded a 1973 HUGO for Best Short Story for "Eurema's Dam" (1972); and in the 1960s and 1970s, partly through his (in retrospect tenuous) association with the NEW WAVE, he was seen as a figure of looming eccentricity and central import. For his career's sake, it was certainly unfortunate that his response to renown seems to have been an intensification of the oddness of his product; final judgement on the effect of this failure to observe normal canons of writing still awaits a coherent presentation of his work as a whole.

However, though many stories remain uncollected, RAL did assemble several volumes which grant some view of the entirety, including *NINE HUNDRED GRANDMOTHERS* (coll 1970), *Strange Doings* (coll 1972), *Does Anyone Else Have Something Further to Add?* (coll 1974), *Ringing Changes* (coll 1984; 1st published in Dutch trans as *Dagan van Gras, Dagan van Stro* ["Days of Grass, Days of Straw"] 1979), *Golden Gate and Other Stories* (coll 1982), *Through Elegant Eyes: Stories of Austro and the Men who Know Everything* (coll 1983), and *Lafferty in Orbit* (coll 1991), which puts together all the work originally published in Damon KNIGHT's *ORBIT* series of original anthologies (1967-80). Many other stories have been printed as chapbooks (see listing below). RAL's first three novels, *Past Master* (1968), *The Reefs of Earth* (1968) and *Space Chantey* (1968 dos), all appeared within a few months of one another, causing some stir. Pre-publication praise for *Past Master* (accolades from New-Wave writers Samuel R. DELANY, Roger ZELAZNY and Harlan ELLISON) demonstrated the impact his work was beginning to have, and, though it can be said that the US New Wave amounted more to an iconoclastic tone of voice than a programme, its generally sardonic air proved bracing to such mature writers as RAL, whose entry at age 45 into the field seemed to betoken its growing maturity. *Past Master* places Sir Thomas More on the planet Astrobe, where he is tricked into becoming World President and suffers once again a martyr's death: the contrasts between UTOPIA and life are laid down without the normal derision. *Space Chantey* retells HOMER's *Odyssey* as *SPACE OPERA*, very rollickingly, and is the most representative of RAL's attempts to liberate sagas by transposing them into a rambunctious, myth-saturated, never-never-land future. In *The Reefs of Earth* (RAL's first-completed novel) a passel of ALIEN children

bumptiously attempt to rid Earth of humans, and fail. More complexly, *FOURTH MANSIONS* (1969), possibly RAL's most sustained single novel, articulates with some clarity the basic underlying bent of his best work: a protagonist (or several) finds a pattern of flamboyant, arcane, dreamlike clues to a conspiracy (or conspiracies) between Good and Evil whose outcome will determine the moral nature of reality to come; and enters the fray joyously (though confusingly) upon the side of the angels. Though much of RAL's work shares characters, and plot segments shuttle back and forth from book to book, he has written only one explicit genre series, the Argos Mythos: Archipelago: *The First Book of The Devil is Dead Trilogy* (1979), *The Devil is Dead* (1971), *Promontory Goats* (1988 chap Canada), *How Many Miles to Babylon?* (1989 chap Canada), *Episodes of the Argo* (coll 1990 chap Canada), which contains part of the conclusion of the long-written third part of the series, the More than Melchisedech sequence, now finally published in full, in 3 vols, as *Tales of Chicago* (1992), *Tales of Midnight* (1992 chap Canada) and *Argo* (fixup 1992 Canada). The Argos Mythos treats a group of WWII buddies as reincarnations of Jason's Argonauts, and engages them in a long, myth-saturated battle against Evil. Later novels, like *Arrive at Easterwine: The Autobiography of a Ktistec Machine* (1971), the life story of a COMPUTER which also features in some stories as well, begins to evince a tangledness that comes, at times, close to incoherence. "The Three Armageddons of Enniscorthy Sweeny", the second novel-length tale assembled in *Apocalypses* (coll 1977), suggests that the comprehensive power of opera (MUSIC) might, in an alternate world, stop war. *Dotty* (1990 chap Canada), though not directly part of the Argos Mythos and ostensibly not sf or fantasy at all, embraces the "mundane" world, sf, fantasy, Jason, the Argonauts and much else in 96 packed pages. Even now the full explication of the extremities of RAL's large universe remains impossible; for it seems there is more to come. [JC]Other works: *The Fall of Rome* (1971); the *Coscuin Chronicles*, historical novels transfigured into fable, of which have been published *The Flame is Green* (1971) and *Half a Sky* (1984); *Okla Hannali* (1972), historical; *Not to Mention Camels: A Science Fiction Fantasy* (1976); *Funnyfingers ? Horns on their Heads* (1976 chap); *Aurelia* (1982); *Annals of Klepsis* (1983); *Snake in his Bosom and Other Stories* (coll 1983 chap); *Four Stories* (coll 1983 chap); *Heart of Stone, Dear and Other Stories* (coll 1983 chap); *Laughing Kelly and Other Verses* (coll 1983 chap); *The Man who Made Models and Other Stories* (coll 1984 chap); *Slippery and Other Stories* (coll 1985 chap); the first two chapters of *My Heart Leaps Up* (1920-28) (1986 chap), followed by chapters 3 and 4 (1987 chap), 5 and 6 (1987 chap), 7 and 8 (1988 chap) and 9 and 10 (1990 chap), making up the first volume of the projected *In a Green Tree* sequence, the second volume of which, *Grasshoppers ?* (1928-1942), was continued on the same basis, starting with chapters 1 and 2 (1992 chap); *Serpent's Egg* (1987 UK; 1 story added to the limited issue to make coll 1987); *The Early Lafferty* (coll 1988 chap Canada) and *The Early Lafferty II* (coll 1990 chap Canada); *East of Laughter* (1988 UK; with 1 story added to the limited issue to make coll); *Strange Skies* (coll 1988 chap Canada), verse; *The Back Door of History* (coll 1988 chap Canada); *The Elliptical Grave* (1989; with 1 story added to the limited issue to make coll 1989); *Sindbad: The 13th Voyage* (1989); *Mischief Malicious* (and

Murder Most Strange) (coll 1991 chap Canada), which contains work from as early as 1961; Iron Tears (coll 1992). Nonfiction: It's Down the Slippery Cellar Stairs (coll 1984 chap); True Believers (coll 1989 chap); Cranky Old Man from Tulsa: Interviews with R.A. Lafferty (coll 1990 chap Canada). About the author: An R.A. Lafferty Checklist (1991 chap) by Dan Knight. See also: CITIES; END OF THE WORLD; FANTASTIC VOYAGES; HEROES; HUMOUR; INTELLIGENCE; LINGUISTICS; MESSIAHS; PERCEPTION; REINCARNATION.

LAGRANGE POINT

In 1772 the French mathematician Joseph Louis Lagrange (1736-1813) calculated that in the orbit of Jupiter around the Sun there would be two stable positions, one 60deg ahead of the planet, the other 60deg behind, where a comparatively tiny mass would remain in stable orbit around the Sun rather than being swept up Jupiter's gravitational field. (More than a century later two groups of ASTEROIDS, the Trojans, were found at these positions in Jupiter's orbit.) This is a general principle, part of what is sometimes called the three-body problem, although usually more than 3 bodies must be considered; for example, if planning to site a SPACE HABITAT at one of the Lagrange Points (or Lagrangian Points) of the Earth-Moon system, one must take into account also the gravitational presence of the Sun (the mass of the habitat itself can be discounted as trivially small). There are 5 Lagrange Points in the Earth-Moon system; they are not absolutely fixed in relation to the Earth and Moon but, because of the Sun's influence, slowly circle "Lagrange Regions". They are numbered L1 to L5. The Princeton physicist Gerard K. O'Neill (1927-1992), an important propagandist for space colonies, argued in *The High Frontier* (1977) that good sites for such colonies would be L4 and L5, 60deg ahead of and behind the Moon in its orbit. He particularly liked L5, and this region soon became something of an sf CLICHE as the site for fictional space cities consisting of clusters of habitats. [PN]

LIDLAW, MARC

(1960-) US writer who began publishing work of genre interest with "A Hiss of Dragon" with Gregory BENFORD for Omni in 1978. Though he published solo stories with some frequency in the 1980s, his best known short work is perhaps the group of mathematically oriented tales written with Rudy RUCKER, such as "Chaos Surfari" (1989). ML's first novel, *Dad's Nuke* (1985), is a SATIRE of suburban life and Christian fundamentalism set in a NEAR-FUTURE community effectively sealed off from the rest of the disintegrating USA; ritual technological fixes for anxiety include having a personal nuclear power plant and a baby adapted (GENETIC ENGINEERING) to recycle the wastes into her lead-lined diapers. ML's second novel, the amusing *Neon Lotus* (1988), follows the consequences of the REINCARNATION of a Tibetan Buddhist sage as a young girl in a highly technologized USA. *Kalifornia* (1993) is a further satire, and *The Orchid Eater* (1994) is associational. [NT] See also: TECHNOLOGY; WEAPONS.

LAING, ALEXANDER (KINNAN)

(1903-1976) US writer, editor and academic, noted for his books on the sea, for editing *The Haunted Omnibus* (anth 1937; vt *Great Ghost Stories of the World* 1939), and for his murder novel, *The Cadaver of Gideon Wyck*, by a Medical Student (1934), which hinges on horrific changes to the human

body. Two further books with fantastic elements are *Dr Scarlett: A Narrative of his Mysterious Behavior in the East* (1936) and its sequel, *The Methods of Dr Scarlett* (1937). In collaboration with Thomas PAINTER, AL wrote an sf thriller, *The Motives of Nicholas Holtz, Being the Weird Tale of the Ironville Virus* (1936; vt *The Glass Centipede, Retold from the Original Sources* 1936 UK). Persuasively authentic in its use of biological data, it is a well told story of the creation of artificial life in the form of a deadly virus, and of the dangers that beset the man who investigates the ensuing deaths. [PN]See also: MONSTERS.

LAKE, DAVID J(OHN)

(1929-) Indian-born Australian writer (he emigrated in 1967), originally a UK citizen; his education (a Jesuit school in India, a BA in English at Cambridge, a diploma in linguistics and a PhD in English) is reflected in the texture of his sf work, as is his teaching in Vietnam, Thailand and India (1959-67). After publishing several works of criticism, including the strongly argued, somewhat controversial *The Canon of Thomas Middleton's Plays* (1975) and a volume of poetry, *Hornpipes and Funerals* (coll 1973), which deals with some of the themes of his fiction, he began publishing sf with the first of his *Breakout Novels* sequence, *Walkers on the Sky* (1976 US). It was followed by *The Right Hand of Dextra* (1977 US) and *The Wildings of Westron* (1977 US), both set on Dextra; by *The Gods of Xuma, or Barsoom Revisited* (1978 US) and *Warlords of Xuma* (1983 US), which constitute a riposte to the sexism and crudity of E.R. BURROUGHS's *Barsoom* novels; and by *The Fourth Hemisphere* (1980), set on yet another planet. All the books in the sequence share certain fundamental premises: in WWIV (AD2068) Earth destroys itself, and by AD2122 the colonies of the Moon are also in the throes of terminal conflict; but, before the final collapse, interstellar ships break out of the Solar System in search of suitable planets for COLONIZATION. The novels to date are set on various of these planets and share comparatively simple, action-packed surface narratives matched with considerable complexity of implication, some of it Jungian. *Walkers on the Sky*, set AD12117, entertainingly carries a young man across a terraformed world irradiated by planes of force whose operation explains the dreamlike behaviour indicated by the title. *The Right Hand of Dextra*, set earlier, in AD2687, intermingles biological, religious and colonization themes in the story of the reconciliation between incompatible forms of biological organization on a planet whose human colonists are religious fundamentalists insensitive to the vital questions surrounding Dextra's weird ECOLOGY. Of books lying outside this central sequence, the most interesting is perhaps *The Man who Loved Morlocks* (1981). Ostensibly a sequel to H.G. WELLS's *THE TIME MACHINE* (1895), it also works as a sustained and loving critique of that book, of its author and of the late-19th-century mind-sets which shaped both. *Ring of Truth* (1982; vt *The Ring of Truth* 1984 US) is a POCKET-UNIVERSE tale of surreal intensity whose climax - unusually for this sort of book - provides no soothing explanation for the shape of the world. *The Changelings of Chaan* (1985) and *West of the Moon* (1988) are juveniles. Despite an occasional truculent stiffness of diction, DJL is a writer of fully realized fictions whose work, almost always, flows with thought. [JC]See also: ALIENS; AUSTRALIA; COSMOLOGY; EVOLUTION; GRAVITY; SOCIOLOGY; TIME TRAVEL;

TRANSPORTATION.

LALLI, CELE G.

[r] Cele GOLDSMITH.

LA MASTER, SLATER

(1890-?) US writer whose Cupid Napoleon (1928 Argosy-All-Story as "Lockett of the Moon"; 1934) is a delusional interplanetary romance whose satirical effects are seriously jumbled. The Phantom in the Rainbow (1929) is marginal sf. [JE/JC]

LAMB, WILLIAM

Storm JAMESON.

LAMBE, DEAN R.

[r] Michael A. BANKS.

LAMBERT, S.H.

Neil BELL.

LAMBOURNE, JOHN

Form of his name used on books by UK writer John Battersby Crompton Lamburn (1893-?), brother of Richmal Crompton (1890-1969), authoress of the Just William children's books. JL's The Kingdom that Was (1931) and its sequel The Second Leopard (1932) are mildly allegorical, subduedly humorous works describing how, 50,000 years ago, the apathetic rulers of the animal kingdom were led to abdicate in favour of mankind. JL also wrote The Unmeasured Place (1933), about a female vampire-cum-were-leopard. [JE]

LAMPLUGH, LOIS

(1921-) UK editor and writer whose Mandog * (1972) novelizes Peter DICKINSON's script for a tv tale for children. [JC]

LAMPTON, CHRIS

Working name of US writer Christopher Lampton (1950-), who began writing sf with The Seeker (1976 Canada) with David F. BISCHOFF. He continued with two further competent sf adventures, Cross of Empire (1976 Canada) and Gateway to Limbo (1979). [JC]

LANCE, KATHRYN

(1943-) US writer. Much of her work has consisted of non-sf tales for children, often as by Lynn Beach (see listing below). Her sf has been restricted to the Pandora sequence - Pandora's Genes (1985) and Pandora's Children (1986) - set in a post- HOLOCAUST world where pluck and luck seem set to ensure a viable future. [JC] Other works, as Lynn Beach: contributions to the Find your Fate: G.I. Joe sequence, including G.I. Joe: Operation Jungle Doom * (1986), G.I. Joe: Operation Time Machine * (1987) and Invisibility Island * (1988); H.O.W.L. High (1991); the Phantom Valley sequence of fantasy adventures starring a warlock boy, comprising Phantom Valley #1: The Evil One (1991), #2: The Dark (1991) and #3: Scream of the Cat (1992); other titles, variously attached to juvenile fantasy series, include Secrets of the Lost Island * (1984 chap), The Attack of the Insecticons * (1985 chap), Conquest of the Time Master * (1985), The

Haunted Castle of Ravencurse * (1985) and Invaders from Darkland * (1986).

LANCOUR, GENE

Working name of Gene Lancour Fisher (1947-), US author of the SWORD-AND-SORCERY Dirshan series about Dirshan the God-Killer, a barbarian warrior: The Lerios Mecca (1973), The War Machines of Kalinth (1977), Sword for the Empire (1978) and The Maneaters of Cascalon (1979). GL's next book was sf: The Globes of Llarum (1980) puts a mercenary on the side of rebel independents against a giant corporation on a frontier planet; complications routinely ensue. [PN]

LANDIS, ARTHUR H(AROLD)

(1917-1986) US author and editor. While editing for Dealer's Voice, a motorcycle magazine, AHL convinced his publisher to begin a new fantasy magazine, Coven 13, which AHL edited for 4 issues Sep 1969-Mar 1970 before the title passed to William L. CRAWFORD. The 4-part serial "Let There Be Magick" in Coven 13, by AHL as James R. Keaveney, became A World Called Camelot (1969-70; rev 1976) as by AHL, and was followed in the same series by Camelot in Orbit (1978), The Magick of Camelot (1981) and Home - To Avalon (1982). In the first novel a cultural engineer, or "Adjuster", is sent from Earth to the second planet of Fomalhaut, known as Camelot, a world where MAGIC works, rather as in Christopher STASHEFF's Warlock series. Sf meets SWORD AND SORCERY in a whimsical manner throughout the series, whose quality deteriorates. The final volume is set on a different world. [PN]

LANDIS, GEOFFREY A.

(1955-) US writer of poems and stories, his first story of sf interest being "Elemental" for ASF in 1984. A wide sampling of his poetry appears in Time Frames: A Speculative Poetry Anthology (anth 1991 chap) ed Terry A.Garey; a relatively limited selection of his adventurous and various short fiction is assembled as Myths, Legends, and True History (coll 1991). [JC]

LANDIS, MARIE

[r] Brian HERBERT.

LAND OF THE GIANTS

US tv series (1968-70). An Irwin Allen Production for 20th Century-Fox TV/ABC. Created Irwin ALLEN, also executive prod. Writers included Bob and Esther Mitchell, Bob and Wanda Duncan, Richard Shapiro, Dan Ullman, William Welch. Dirs included Harry Harris, Nathan Juran, Sobey Martin, Irwin Allen (1st episode only). Regular cast Gary Conway, Kurt Kaszner, Don Marshall, Heather Young, Don Matheson, Deanna Lund, Stefan Arngrim. Special effects L.B. Abbott, Art Cruickshank, Emil Kosa Jr. 2 seasons, 51 50min episodes. Colour. Carrying on in the tradition of such films as DR CYCLOPS and The INCREDIBLE SHRINKING MAN (GREAT AND SMALL) as well as an earlier tv series, WORLD OF GIANTS, the first episode showed 7 people aboard a future "stratocruiser" passing through a space/time-warp into a world similar to 20th-century Earth, but where all things, including people, are 12 times larger. The series concerned their predictable encounters with giant people and giant props. Three novelizations by Murray LEINSTER are Land of the Giants * (1968), Land of the Giants #2:

The Hot Spot * (1969) and #3: Unknown Danger * (1969). Others were Land of the Giants: Flight of Fear * (1969) by Carl Henry RATHJEN and Land of the Giants: The Mean City * (1969) by James Bradwell. [JB/PN]

LANDOLFI, TOMMASO

(1908-1979) Italian writer, active as an author of short fictions from 1929. Three selections have appeared in English: Gogol's Wife and Other Stories (coll trans Raymond Rosenthal, John Longrigg and Wayland Young 1963 US), Cancerqueen and Other Stories (coll trans Raymond Rosenthal 1971 US) - which includes the short title novel, Cancroregina (1950; first trans Jack Murphy as "Cancroregina" 1950 Botteghe Oscure), about a mad astronaut imprisoned in a living starship - and Words in Commotion and Other Stories (coll trans Kathrine Jason 1986 US), a volume taken mostly from La piu belle pagine di Tommaso Landolfi ["The Best Pages of Tommaso Landolfi"] (coll 1982), a compilation introduced by Italo CALVINO, who compares TL to writers like VILLIERS DE L'ISLE-ADAM. TL's laconic, surreal, testing FABULATIONS, which also resemble those of Jorge Luis BORGES and Franz KAFKA, clearly influenced Calvino in turn. [JC]

LAND THAT TIME FORGOT, THE

Film (1975). Amicus. Dir Kevin Connor, starring Doug McClure, John McEnery, Susan Penhaligon. Screenplay Michael MOORCOCK, James CAWTHORN, adapted from The Land that Time Forgot (1924) by Edgar Rice BURROUGHS. 95 mins. Colour. This UK film was the first of 3 LOST-WORLD Burroughs adaptations produced by Amicus, the others being AT THE EARTH'S CORE (1976) and The PEOPLE THAT TIME FORGOT (1977). A German U-boat - with a contingent of male Germans, Britons and one American, plus a young woman - discovers Caprona, a long-lost landmass near the South Pole. It is crawling with prehistoric monsters and cavemen who do their best to destroy the invaders, with little success. The film ends with a volcanic eruption and the marooning of the hero and heroine. The various monsters are unconvincing. The script by Moorcock and Cawthorn was altered extensively by the producers. [JB]

LANE, JANE

Pseudonym of UK writer Elaine Dakers (1905-1978), author of many esteemed historical novels. Her post- HOLOCAUST sf novel, A State of Mind (1964), is set in an ORWELL-like DYSTOPIA. [JC]

LANE, JOHN

Dennis HUGHES.

LANE, MARY E. BRADLEY

(? -?) US writer of whom nothing is known other than that she may have been the author of Mizora: A Prophecy: A Mss. Found Among the Private Papers of Princess Vera Zarovitch: Being a True and Faithful Account of her Journey to the Interior of the Earth, with a Careful Description of the Country and its Inhabitants, their Customs, Manners and Government (Cincinnati Commercial 1880-81; 1890 anon; 1975, with 2 prefaces, as by Mary E. Bradley Lane). This obscure, part-radical, part-conservative UTOPIA is set mainly within a HOLLOW EARTH, where an all-woman society (FEMINISM) whose children are produced by parthenogenesis has an advanced technology and stringent laws: they have eliminated brunettes and all men,

and by eugenics have produced a race of blonde superwomen. With men gone, crime is gone. The book is notable for the ruthlessness of its social speculations, quite extreme for 19th-century utopian writing. [PN]

LANG, ALLEN KIM

(1928-) US writer who began publishing sf with "Machine of Klamugra" for Planet Stories in 1950 and wrote a good number of action stories in the following decade. Wild and Outside (1966) sends a US baseball shortstop to subdue a planet of alien musclemen. [JC]

LANG, ANDREW

(1844-1912) Scottish man of letters well known for a wide range of literary activity, including novels, poetry, belles-lettres, anthropology, children's books and (perhaps most familiar to current readers) anthologies of traditional fables and tales retold for children, with some added hagiographical and historical material, much of the work being done by his wife; numerous volumes followed the first of these, The Blue Fairy Book (anth 1889). The rather delicate fantasy content of many of his children's tales gives them a nostalgic interest for some adults today; representative are: The Princess Nobody: a Tale of Fairy Land (1884 chap; rev vt In Fairyland 1979 chap US); The Gold of Fairnilee (1888); Prince Prigio (1889) and Prince Ricardo of Pantouflia: Being the Adventures of Prince Prigio's Son (1893), which has a trip to the Moon on a flying horse, both titles being assembled as My Own Fairy Book (omni 1895); and Tales of a Fairy Court (coll 1906), which contains more Prince Prigio stories. Some of AL's adult fiction contains more bracing material, however, though Much Darker Days (1884; rev 1885) as by A. Huge Longway, which parodies Dark Days (1884) by Hugh Conway (1847-1885), does so without venturing into the sensational fantasies of its target, and That Very Mab (1885), written with May Kendall - the pseudonym of Emma Goldworth (1861-?1931) - and published anon, is a rather feeble SATIRE involving the return of the fairy queen to a 19th-century England where (we discover incidentally) interplanetary travel exists. The title story of In the Wrong Paradise and Other Stories (coll 1886) is less ineffectual in its dramatization of the dictum that one man's paradise is another man's hell. In the same volume, "The Romance of the First Radical" is an early example of anthropological sf (ANTHROPOLOGY; ORIGIN OF MAN), predating H.G. WELLS's "A Story of the Stone Age" (1897) by more than a decade. Why-Why, a revolutionary Ice Age citizen, falls in love with Verva, asks intolerable questions of his tribe, and comes to a sad end. "The End of Phaeacia" (same volume) is a lost-race (LOST WORLDS) tale in which a missionary is shipwrecked on a South Sea ISLAND that turns out to be the Homeric Phaeacia. The Mark of Cain (1886) introduces, late in the action, a flying machine as deus ex machina to solve a court case. Some of the pieces collected in Old Friends: Essays in Epistolary Parody (coll 1890) represent a forerunner format for the writing of RECURSIVE SF. Considerably more durable is AL's collaboration with his friend H. Rider HAGGARD, whose She (1887) he parodied in He (1887), written with Walter Herries Pollock (1850-1926) and published anon. After this, AL joined with Haggard to write The World's Desire (1890), a novel which combines Haggard's crude, sometimes haunting vigour and AL's chastely

pastel classicism; despite occasional longueurs, the resulting tale of Odysseus's last journey to find Helen in Egypt is a moving, frequently eloquent romance, coming to a climax with Odysseus's discovery that Helen is the avatar of Ayesha (of Haggard's *She*) and his death at the hands of his son. *The Disentanglers* (coll of linked stories 1901 chap US; much exp 1902 UK), AL's last book of adult fiction, is fundamentally uncategorizable, though its sections have some resemblance to the *CLUB STORY*; some of its episodes deal with submarines, occult sects, spectres and so forth, all used - as Roger Lancelyn GREEN noted in the best work on AL, *Andrew Lang* (1946) - to replace the traditional "magical devices of the fairy tale" with the latest scientific developments, though retaining the magical function. Copious, but flawed by a disheartening dilettantism, AL's work lies just the wrong side of major ranking in the sf/fantasy field, just as in his other areas of concentration. [JC]Other works: *Pictures at Play, or Dialogues of the Galleries* (coll 1888) with W.E. Henley (1849-1903), as by Two Art-Critics; *A Monk of Fife: A Romance of the Days of Jeanne d'Arc* (1895); *When it was Light: A Reply to "When it was Dark"* (1906), an anon response to Guy THORNE's 1903 novel; *Tales of Troy and Greece* (coll 1907).

LANG, FRITZ

(1890-1976) Austrian film-maker who, after trouble with the Nazis, left Germany for France in 1933 and emigrated to the USA in 1934. He was originally trained as an architect but preferred the graphic arts; during the years before WWI he supported himself as a cartoonist and caricaturist. He turned to writing after being wounded during WWI, producing several popular thrillers and fantasy romances. After WWI ended he entered the German film industry and began directing a series of lavish melodramas, such as *Die Spinnen* (1919; vt *The Spiders*), many of which were sf-related, involving lost races (*LOST WORLDS*), technology-driven plots to take over the world, etc. In this vein was the first Dr Mabuse film, *DR MABUSE, DER SPIELER* (1922; vt *Dr Mabuse, the Gambler*). In 1923-4 he made a majestic 6hr fantasy, based directly on the myth rather than on Wagner: *Die Nibelungen* (released as 2 separate films, *Siegfrieds Tod* [vt *Siegfried*] and *Kriemhilds Rache* [vt *Krimhild's Revenge*]). Like all FL's German films, this was cowritten with his wife, Thea VON HARBOU. In 1925 he started work on another epic, his first real sf film, *METROPOLIS* (1926); it is deservedly the most celebrated of all sf films of the silent period. Von Harbau novelized the script as *Metropolis* * (1926; trans anon 1927 UK). FL's other major sf film was *Die FRAU IM MOND* (1929; vt *The Girl in the Moon*); von Harbou's novelization, *Frau im Mond* * (1928; trans Baroness von Hutten as *The Girl in the Moon* 1930 UK; cut vt *The Rocket to the Moon*; From the Novel, *The Girl in the Moon* 1930 US) was published in Germany before the film was released. FL's German films of the 1930s included the famous murder movie *M* (1931), which introduced Peter Lorre, and *Das Testament des Dr Mabuse* (1933; vt *The Testament of Dr Mabuse*). The latter, parts of which were interpreted as anti-Nazi, involved the master criminal operating through hypnotic powers and even undergoing a form of REINCARNATION, transferring his mind into the body of the director of the lunatic asylum in which he had been locked up at the end of the previous film. FL directed 22 films during his first 25 years in the USA, mostly

low-budget though often impressive thrillers, such as *Fury* (1936), *You Only Live Once* (1937) and *The Big Heat* (1953). The nearest thing to another sf film he ever directed was his last film, made back in Germany, *Die TAUSEND AUGEN DES DR MABUSE* (1960; vt *The Thousand Eyes of Dr Mabuse*; vt *The Diabolical Dr Mabuse*). The influence of FL's harsh, expressive style on genre cinema, especially on thrillers, psychological thrillers and sf films, has been incalculable. He was a master at depicting the compulsiveness and the politics of power, and most film critics regard him as a great director. [PN/JB]Further reading: *The Cinema of Fritz Lang* (1969 US) by Paul M. Jensen; *Fritz Lang* (1976 UK) by Lotte Eisner; *Fritz Lang: The Image ?*
CITIES; COMICS; GERMANY; ROCKETS.

LANG, HERRMANN

(? -?) Ostensibly a German writer and professor in the Polytechnic School at Karlsruhe, with publications in chemistry. However, there seems to have been no German edition of his sf novel, *The Air Battle: A Vision of the Future* (ostensibly trans 1859), and HL is most likely the pseudonym of a UK writer. The novel presents in short compass a remarkable portrait of a world several millennia hence, long after European civilization has been destroyed by floods and earthquakes; the peace-loving Black rulers of the country of Sahara dominate Africa, and in a final battle with other powers utilize their great heavier-than-air machines to establish a beneficial hegemony over the world. Remarkably for a novel of this period, miscegenation is strongly approved of, and the White woman whose adventures the plot traces is destined to marry a Black man. [JC]See also: HOLOCAUST AND AFTER; POLITICS; WAR.

LANG, KING

House name used by CURTIS WARREN on several sf novels: five by David GRIFFITHS and 1 each by George HAY, Brian HOLLOWAY, John William JENNISON and E.C. TUBB. [JC]

LANG, SIMON

Pseudonym of US screenwriter and author Darlene Hartman (1934-). SL's *SPACE OPERAS* - *All the Gods of Eisernon* (1973) and continuing with *The Elluvon Gift* (1975) - constitute a loose series, both featuring the Terran starship *Skipjack* and both set in the same galactic venue. The first novel is the more ambitious, presenting in the planet Eisernon an idyllic picture of an ALIEN race ecologically integrated with Nature. More formally, as *Voyages of the Skipjack*, the sequence continues with *The Trumpets of Tagan* (1992), *Timeslide* (1993) and *Hopeship* (1994). Aliens, friendly and otherwise, are frequently met; and in general the *Skipjack* books do sometimes suffer from some resemblance to *STAR TREK*, for which SL had written. [JC]

LANGART, DARREL T.

Randall GARRETT.

LANGE, HELLMUTH

[r] GERMANY.

LANGE, JOHN

Michael CRICHTON.

LANGE, OLIVER

(1927-) A pseudonym. In OL's Vandenberg (1971; vt Defiance: An American Novel 1984) the eponymous hero fights to the death against Soviet takeover of the USA, retreating to the Rocky Mountains to die undefeated. [JC]

LANGELAAN, GEORGE

(1908-) French-born UK writer and journalist, active for many years in the USA before returning to France. His collection of sf/horror stories, Out of Time (coll 1964 UK), includes "The Fly" (1957), a macabre story of an unsuccessful experiment in MATTER TRANSMISSION, in which the scientist ends up with the head of a fly. It was filmed as The FLY (1958), with various sequels. He has published several works in French, including Nouvelles de l'anti-monde ["Tales of the Anti-World"] (coll 1962) and Le vol de l'anti-g ["The Flight of Anti-G"] (1967). [JC/PN]

LANGFORD, DAVID (ROWLAND)

(1953-) UK writer, critic and sf fan, in the latter capacity recipient of 8 HUGO awards for fan writing - some of the best of his over 450 pieces are assembled as Let's Hear It for the Deaf Man (coll 1992 chap US) ed Ben Yalow - plus 1 Best FANZINE Hugo for his self-produced news magazine, ANSIBLE. DL began to publish sf with "Heatwave" for New Writings in SF 27 (anth 1975) ed Kenneth BULMER. His first book-length fiction, An Account of a Meeting with Denizens of Another World, 1871 (1979) as by William Robert Loosley and ed DL, centres on a spoof 19th-century report of a Close Encounter; its main narrative was summarized as if factual, without permission or payment, by Whitley STRIEBER in his "fiction based on fact", Majestic (1989). In DL's one serious novel, The Space Eater (1982), emissaries from a devastated Earth are sent by an unpleasant form of MATTER TRANSMISSION to a distant colony planet, where they must stop the local military from ripping the fabric of the Universe. The Leaky Establishment (1984), borderline sf, hilariously examines a crisis involving lost nuclear warheads at what many readers have assumed is Aldermaston Atomic Weapons Research Establishment (where DL, who has an MA in physics, worked 1975-80). In Earthdoom! (1987) with John Grant (Paul BARNETT), a parody of the DISASTER-novel genre and of countless sf CLICHES, a multitude of catastrophes afflicts the world, more or less simultaneously. The Dragonhiker's Guide to Battlefield Covenant at Dune's Edge: Odyssey Two (coll 1988) assembles parodies of sf and fantasy writers. Though some of his short fiction is entirely serious, DL remains best known for the witty and ironic humour of his fan writing - perhaps best distilled in the fanzine Twll Ddu (1976-83) - and most of his full-length fiction, although it is sometimes over-broad. It is surprising that a writer so obviously gifted has as yet produced so little sf of real substance. DL has also written, often in collaboration, a variety of nonfiction texts of sf interest, all imaginatively conceived and soundly based: War in 2080: The Future of Military Technology (1979), Fact and Fallacies: A Book of Definitive Mistakes and Misguided Predictions (1981) with Chris MORGAN, The Science in Science Fiction (1982) with Peter NICHOLLS and Brian STABLEFORD, Micromania: The Whole Truth about Home Computers (1984), which is a reworking for the UK market of Charles

PLATT's *Micromania: The Whole-Truth Home Computer Handbook* (1984), and *The Third Millennium (A History of the World: AD 2000-3000)* (1985) with Stableford. [JC/NT]Other works: *The Necronomicon* (anth 1978) ed George HAY, DL's contribution being to construct a hoax history of the "lost occult text" invented by H.P. LOVECRAFT; *The Transatlantic Hearing Aid* (1985 chap), nonfiction; *A Novacon Garland* (coll 1985 chap dos), fiction and nonfiction; *Critical Assembly: The First 50 White Dwarf Columns* (coll 1987), book reviews; *Platen Stories* (coll 1987 chap); *Critical Assembly II: The Rest of the White Dwarf (and GM, and GMI) Review Columns* (coll 1992), book reviews; *Irrational Numbers* (coll 1994 chap US). LANIER, STERLING E(DMUND)

(1927-) US editor and writer. SEL did 6 years' graduate work at the School of Anthropology and Archeology at the University of Pennsylvania before working as an editor, mainly for Chilton Books for periods during 1961-7; he persuaded the firm to publish Frank HERBERT's *DUNE* (fixup 1965). He subsequently turned freelance, working as a sculptor and jeweller and as a writer. His first published story was "Join our Gang?" for ASF in 1961, but the majority of his short work belongs to the Brigadier Ffellowes series published in FSF. Like Lord DUNSANY's Jorkens stories or Arthur C. CLARKE's *Tales from the White Hart* (coll 1957), the Ffellowes tales are examples of the CLUB STORY, as narrated by the eponymous brigadier; they mostly involve the irruption of mythical creatures into the real world. They are assembled in *The Peculiar Exploits of Brigadier Ffellowes* (coll 1972) and *The Curious Quest of Brigadier Ffellowes* (coll 1986). SEL's first novel was a good children's fantasy, *The War for the Lot* (1969), about a young boy telepathically selected to defend a tract of wilderness from city rats. His second remains his most important: *Hiero's Journey* (1973) - and its sequel, *The Unforsaken Hiero* (1983), both being assembled as *Hiero Desteen* (omni 1984) - is a long and inventive quest tale set in a teeming post- HOLOCAUST world 5000 years after an atomic war. Radiation dangers and recidivist mutant SCIENTISTS still haunt this venue, threatening Hiero, who treks down from Canada searching for a mythical COMPUTER which might help reconstruct things. In the second volume, which returns to the plot of *The War for the Lot*, Hiero telepathically marshals some animal allies and fights off an invasion of the Unclean Masters. Not precisely innovative, the sequence succeeds through its author's fluent and ingeniously varied cast of characters. A later singleton, *Menace under Marswood* (1983), tamely repeats some of the same material on a terraformed MARS. [JC/MJE] See also: FANTASTIC VOYAGES; MUTANTS; MYTHOLOGY.

LAO SHE
[r] CHINESE SF.

LARGE, E(RNEST) C(HARLES)

(? -1976) UK plant pathologist and occasional fiction writer. Sugar in the Air (1937) is a notable and original sf novel bitterly describing the conflicts which arise between scientific and commercial interests during the development of an industrial process of artificial photosynthesis. Its sequel, Asleep in the Afternoon (1939), is a SATIRE whose frame narrative about the tribulations of an author is interwoven with a frivolous sf story about a device for inducing sleep. In the more adventurous sarcastic fantasy Dawn in Andromeda (1956) God translocates a representative sample of humanity by way of experiment; the political evolution of the community and the spontaneous regeneration of RELIGION confound the UTOPIAN schemes of the original group but cannot suppress mechanical progress. [BS]See also: DISCOVERY AND INVENTION; SCIENTISTS; SOCIOLOGY.

LARSON, GLEN A.

(1937-) US TELEVISION producer, perhaps best known as producer of BATTLESTAR GALACTICA (from 1978). However, GL had been long involved with tv previously, being responsible for Quincy, McCloud, BJ and the Bear and other non-sf programmes before he turned to sf. All the sf tv series that GAL has produced have been simplistic, grossly formulaic, and generally contemptuous of science; in interviews he has adopted a cavalier attitude about the various SCIENTIFIC ERRORS pointed out to him. However, he remained loyal to sf/fantasy programming on tv for a number of years. Subsequent series of this kind for which he received the "Created by" credit include: the Battlestar Galactica sequel-series GALACTICA 1980 (1980); BUCK ROGERS IN THE 25TH CENTURY (1979-81); his most successful series, Knight Rider, 4 seasons, 83 episodes 1982-6, starring David Hasselhoff as Michael Knight, the former police officer almost killed in an accident who is given a new identity and groovy futuristic car controlled by a COMPUTER called KITT (Knight Industries Two Thousand), to help him catch bad people as a kind of licensed vigilante; Manimal, 8 episodes 1983, about a shapeshifting crimefighter, Jonathan Case (Simon MacCorkindale), who catches bad people by adopting the guise of panther, eagle, etc.; Automan, 11 episodes 1983-4, starring Desi Arnaz Jr as the computer expert who creates Automan (Chuck Wagner), the world's first living holographic image, to catch bad people; and The Highwayman, 10 episodes 1987-8, another road-movie series in which future law enforcers, Highwaymen, use futuristic vehicles to catch bad people, starring Sam Jones. GL was given cover credit for writing, always in collaboration, the Battlestar Galactica series of tied novels, including Battlestar Galactica * (1978) with Robert THURSTON, Battlestar Galactica #2: The Cylon Death Machine * (1979) with Thurston, #3: The Tombs of Kobol * (1979) with Thurston, #4: The Young Warriors * (1980) with Thurston, #5: Galactica Discovers Earth * (1980) with Michael RESNICK, #6: The Living Legend * (1982) with Nicholas Yermakov, #7: War of the Gods * (1982) with Yermakov, #8: Greetings from Earth * (1983) with Ron GOULART, #9: Experiment in Terra * (1984) with Goulart, #10: The Long Patrol * (1984) with Goulart, #11: The Nightmare Machine * (1985) with Thurston, #12: "Die, Chameleon!" * (1986) with Thurston, #13: Apollo's War * (1987) with Thurston and #14: Surrender the Galactica! * (1987) with Thurston. With Roger Hill, GL wrote a series of Knight Rider ties: Knight Rider * (1983), #2: Trust Doesn't

Rust * (1984), #3: Hearts of Stone * (1984),#4: The 24-Carat Assassin * (1984 UK).and#5: Mirror Image * (1985 UK) [PN/JC]Other works: The Hardy Boys and Nancy Drew Meet Dracula * (1978) with Michael Sloan.

LA SALLE, VICTOR

House name used on early paperback sf novels published by John Spencer ? Co. (later BADGER BOOKS). Menace from Mercury (1954) was the first-published novel of the prolific R.L. FANTHORPE (his only VLS title). Dawn of the Half-Gods (1953) and Twilight Zone (1954) were by John S. GLASBY. The remainder were: The Black Sphere (1951) by Gerald EVANS, After the Atom (1953) by Leonard G. FISH, and Assault from Infinity (1953), The Seventh Dimension (1953) and Suns in Duo (1953), all by Tom W. WADE. [SH/MJE]

LASERBLAST

Film (1978). Irwin Yablans. Prod Charles BAND. Dir Michael Rae, starring Kim Milford, Cheryl Smith, Gianni Russo. Screenplay Franne Schacht, Frank Ray Perilli. 80 mins. Colour.In this ill made, low-budget exploitation movie a miserable teenager finds in the desert an amulet and a laser left by ALIENS. The amulet makes his eyes glow red; taken over by the alien persona, he revenges himself with the laser on people who pick on him, also exploding many cars and a Star Wars poster before the returning aliens get him. [PN]

LASER BOOKS

Canadian sf imprint initiated in 1975 by Harlequin Books, the US publisher of Mills ?

The books were restricted to a formula which specified a male protagonist, an upbeat ending, no sex or atheism, and a minimum of long words. All Laser Book covers were the work of Frank Kelly FREAS. The series was suspended early in 1977 after 57 books had appeared. The Laser formula made it unlikely that books of any literary quality would be published, but some were interesting, including K.W. JETER's debut, Seeklight (1975), and Ray NELSON's Blake's Progress (1975; rev vt Timequest 1985 US). [MJE]

LASKI, MARGHANITA

(1915-1988) UK writer, one of the most prolific contributors of material (over 250,000 wordslips) to the Oxford English Dictionary. Though she was not an avowed author of sf, her work often edged snappishly into the fantastic, and she early demonstrated an uncircumscribed sense of good writing in The Patchwork Book: A Pilot Omnibus for Children (anth 1946), whose sf contents included several stories by H. Rider HAGGARD, Edgar Allan POE, Jules VERNE and others. Love on the Super-Tax (1944) borders on sf in its depiction of a wartime transformation of the UK. Tory Heaven (1948) is a class-ridden spoof UTOPIA set in an ALTERNATE-WORLD UK in which the Conservative Party has won the 1945 election. The Victorian Chaise Longue (1953) is a fantasy in which two invalids, 100 years apart, switch identities. The Offshore Island (written 1954; 1959 chap) is a strongly pacifist sf play set in a UK continuing to suffer the effects of nuclear HOLOCAUST after 10 years of war. It stingingly condemns (while linking) the sexual prudery and political ruthlessness of the great powers. Two volumes of nonfiction - Ecstasy (1961) and Everyday Ecstasy

(1980) - deal sympathetically with categories of experience often used within the genre as agents or symbols of transition to a better world.
[JC]Other works: *The Tower* (1974 chap US).

LASSWITZ, KURD

(1848-1910) German Kantian philosopher, historian of science, novelist and short-story writer. As the first major sf writer in German, he holds the same place in GERMANY as do H.G. WELLS in the UK and Jules VERNE in France. He taught philosophy for many years at the *Gymnasium Ernestinum* in Gotha, and it is symptomatic of 19th-century German intellectual culture that he irradiated his fiction with theoretical speculation; there is no KL fiction without a lesson. In "German Theories of Science Fiction" (1976 *Science-Fiction Studies*) William B. Fischer claims on KL's behalf that many of his ideas directly prefigure later critics' use of terms like "extrapolation" and "analogue", and translates as follows from KL's introduction to the short-story collection *Bilder aus der Zukunft* ["Images of the Future"] (coll 1878): "Many inferences about the future can be drawn from the historical course of civilization and the present state of science; and analogy offers itself to fantasy as an ally." The seriousness of KL's didactic impulse can be seen in the strong emphasis he places in his fiction on establishing a plausible imaginary world whose hypothetical nature will be governed, and given verisimilitude, by the resemblance to scientific method evident in its realization. Unsurprisingly, the stories that embody these overriding concerns tend to be more effective as broad technological and scientific canvases than as studies in character. The tales collected in *Bilder aus der Zukunft* read consequently almost like illustrated tours of various "superior terrestrial cultures located in the future". (A short story from this volume was published in *Overland Monthly* in 1890 as "Pictures of the Future".) Further short stories are collected in *Seifenblasen* ["Soap Bubbles"] (coll 1890), 2 stories from this volume appearing (trans Willy LEY 1953 and 1955) in *FSF*, and *Nie und Nimmer* ["Never, Ever"] (coll 1902); 2 sf novels, *Aspira* (1906) and *Stermentau* ["Star Dew"] (1909), have not been translated into English. KL's major work is his long sf novel, *Auf zwei Planeten* (1897; cut 1948; cut again 1969; trans Hans J. Rudnick, much cut, as *Two Planets* 1971 US), in which mankind confronts a superior Martian culture when a Martian SPACE HABITAT is discovered above the North Pole along with an enclave at the pole itself. After useless defiance of the Martians, Earth is put under a benign protectorate, and humans gradually begin a process of self-improvement at the same time that the Martians on Earth become decadent. Ultimately mankind rebels, equality between the two planets is established, and Earth seems destined to a UTOPIAN future. The book incorporates much technological speculation, including details about life on MARS - based on the theories of Percival Lowell (1855-1916) - possible alien forms of biology (XENO BIOLOGY), and the nature of mankind, actual and potential. It was deeply influential upon at least two generations of German youth, as the epigraph to the 1971 translation by Wernher von Braun (1912-1977) attests; and E.F. BLEILER has speculated that it was important in shaping Hugo GERNSBACH's "technologically based liberalism". In 1981, the Kurd Lasswitz AWARDS were established to honour, in a fashion meant to reflect the HUGO, the best German sf published during the previous year. [JC]See

LAST BATTLE, THE
Le DERNIER COMBAT .

LAST DAYS OF MAN ON EARTH, THE
The FINAL PROGRAMME .

LAST MAN ON EARTH, THE
L' ULTIMO UOMO DELLA TERRA.

LAST STARFIGHTER, THE

Film (1984). Lorimar/Universal. Dir Nick Castle, starring Lance Guest, Dan O'Herlihy, Catherine Mary Stewart, Norman Snow, Robert Preston. Screenplay Jonathan Betuel. 101 mins. Colour. In this cheerful, derivative wish-fulfilment story, Alex (Guest), who lives in a trailer park, is a teenage whiz at computer arcade games. Attaining the highest-ever score on the Starfighter game, he is conscripted (though at first refusing) by its inventor, an alien (Preston), to play a real-life version of the game in a real starfighter and so save the Galaxy from the invasion of the Ko-Dan Empire. While he is offworld, his place on Earth is taken by a robot simulacrum; this leads to amusing problems. Made for a juvenile audience, TLS is achieved with such good humour (and interesting computer animation for the space battles) that it survives its silliness to become quite a good film. The novelization is *The Last Starfighter* * (1984) by Alan Dean FOSTER. (For further discussion of computer-game/real-life confusions CYBERSPACE; VIRTUAL REALITY.) [PN]

LAST WOMAN ON EARTH

Film (1960). Filmgroup. Prod and dir Roger CORMAN, starring Antony Carbone, Betsy Jones-Moreland, Edward Wain (pseudonym of Robert Towne). Screenplay Towne. 71 mins. Colour. For unexplained reasons (war?) the world is drained of oxygen for several hours; the lone survivors (as far as we know) are three scuba divers: two men (one wealthy and aggressive, one effete and intellectual) and the first man's wife. Scientifically silly and poorly acted, with scriptwriter Towne - later celebrated for *Chinatown* (1974) and other films-called in to play the intellectual part at the last minute, LWOE still has compelling moments. For a quickie-movie the script is remarkably mannered; yet it may be a sharper, less sentimental film than the more famous *The World, The Flesh and The Devil* (1959), on which it was presumably modelled. [PN]

LATHAM, PHILIP

Pseudonym used for his sf by US astronomer Robert Shirley Richardson (1902-1981). He began publishing sf in the magazines in 1946 with "N-Day" for ASF, and continued to 1977, with 20 or so stories in all; many had astronomical themes (ASTRONOMY). The most anthologized is "The Xi Effect" (1950), in which Earth is found to be in a segment of the Universe that is contracting. Many of the later stories, oddly, are as much about MAGIC as they are HARD SF. PL wrote two CHILDREN'S SF stories: *Five against Venus* (1952) and *Missing Men of Saturn* (1953), and around the same time also wrote scripts for the juvenile tv series *CAPTAIN VIDEO*. As Robert S. Richardson he wrote astronomical articles for sf magazines, the story "Kid

Anderson" (1962), the semifictional Second Satellite (1956), and over 10 books on astronomy, including the juvenile Exploring Mars (1954; vt Man and the Planets UK). [PN]See also: DISASTER; OUTER PLANETS; PHYSICS; SCIENTISTS; SUN; VENUS.

LATHE OF HEAVEN, THE

Made-for-tv film (1980). TV Laboratory WNET/13, New York, for PBS. Prod and dir David R. Loxton and Fred Baryzk, starring Bruce Davison, Kevin Conway, Margaret Avery. Teleplay Roger E. Swaybill, Diane English, based on *The Lathe of Heaven* (1971) by Ursula K. LE GUIN. 120 mins. Colour. Made outside the commercial system for Public Television, this may be the best sf tv-movie ever made, with innovative use of existing reality (futuristic high-rises in Dallas, for example) substituting for expensive sets. The visual consultant was Ed EMSHWILLER. The story of George Orr (Davison), who can dream permanent changes to reality, is both here and in Le Guin's chilling original a moral fable rather like the fairy-tales about three wishes. Orr's talent is exploited by an ambitious psychiatrist (Conway), but every time he tries to dream a better world something frightful goes wrong, OVERPOPULATION being cured by plague or, later, racism cured by everybody turning grey. The deliquescence of reality, whose binding glue is ultimately in danger of dissolving (the ending is ambiguous), is subtly caught, and the viewer has to be observant to register every change. [PN]See also: VIRTUAL REALITY.

LATIN AMERICA

Although deeply influenced by US-UK sf, modern sf in Latin America is also affected by the fantastic traditions of Indian and colonial times, and in some instances by a conscious decision to depart from English-speaking traditions. "Anglo-Saxon sf explores in one way: the way in which Anglo-Saxons think and feel," writes Argentinian critic and author Claudio Omar Noguero. "Latin-American sf explores as only a person immersed in the turbulence of Latin America can do it." Since the continent produces very little technology and scientific research but is a consumer (and sometimes victim) of technological advance, its sf has stressed the social, economic and political costs of progress. In that respect, Latin-American sf has paralleled the NEW-WAVE movement of the 1960s in the US and UK, with the added advantage (albeit dubious) of not being restricted by the market pressures of pulp publishing: in most Latin-American countries publishers have yet to exploit the commercial potential of sf. Sf as a literary pursuit is more notable than in countries where mass-marketability is a requisite. Sf novels are relatively scarce; sf is more often than not in the form of short fiction and, frequently, POETRY. Its authors are commonly social scientists or professional writers, only a very few coming from the ranks of the hard sciences. Latin-American sf is also very close to the political turmoil that surrounds it, and has frequently been the only available channel for social criticism when and where military dictatorships have been in control. Therefore, although there is a certain overall Latin-American identity, it is not always easy to generalize. Argentina, Cuba and Mexico, for instance, have such widely different histories, geographies, political systems and inhabitants that sometimes the Spanish language (and some

universal aspirations) are the only common ground shared by their literature; in the case of Portuguese-speaking Brazil there is also the language barrier. Unfortunately, US and UK market conditions have made it almost impossible for Spanish- or Portuguese-language sf writers to publish in those countries. Argentina Under the influence of such writers of the fantastic as Macedonio Fernandez (1874-1952), the Uruguayan-born Horacio Quiroga (1878-1937), Roberto Arlt (1900-1942) and Leopoldo Lugones (1874-1938) - as well as the undefinable work of Jorge Luis BORGES, which often borders on unconventional sf - and of sf precursors such as E.L. Holmberg (1852-1937), author of Viaje maravilloso del señor Nic Nac ["The Wonderful Voyage of Mr Nic Nac"] (1875), the magazine Mas alla ["Beyond"] (1953-7) published 48 issues featuring the work of the first modern generation of sf writers in the country. The second generation - heralded by the short-lived magazine Revista de ciencia ficcion y fantasia ["Magazine of Science Fiction and Fantasy"] (1977)-arrived in the 1970s and 1980s and has been especially interested in social issues as well as language; sf's rebirth was in part due to the downfall of the military regime. This allowed the creation of the Circulo Argentino de Ciencia Ficción y Fantasia ["Argentinian Circle of Science Fiction and Fantasy"] and the publishing of several FANZINES (Unicornia azul, Nuevomundo, Clepsidra and Sinergia, among others, plus Axxon, published in diskette form) as well as professional magazines, like Parsec and Minotauro, and scores of books. Argentina hosts the annual South-American sf and fantasy convention, Consur. Among the best known Argentinian authors are Borges, Adolfo BIOY CASARES and Angelica Gorodischer (1929-), whose 2-vol Kalpa Imperial ["Imperial Kalpa"] (coll vol 1 1983, vol 2 1984) is one of the best stylistic examples of modern Latin-American sf, though she sometimes veers towards pure fantasy. Other books by her are Opus dos ["Opus Two"] (coll 1967), Bajo las jubeas en flor ["Under the Flowering Jubeas"] (coll 1973) and Casta luna electronica ["Chaste Electric Moon"] (coll 1977). The work of Eduardo Goligorski (1931-), author of A la sombra de los barbaros ["Under the Shadow of the Barbarians"] (coll 1977), is closer to conventional sf. He became one of the few Latin-American writers to publish in FSF - with "When the Birds Die" (1967)-and edited the most representative 1960s Argentinian sf anthology, Los argentinos en la Luna ["Argentines on the Moon"] (anth 1968). Other writers include: Carlos Gardini, author of Mi cerebro animal ["My Animal Brain"] (1983) and Sinfonia cero ["Zero Symphony"] (1984); Magdalena Moujan Otano; Emilio Rodrigue, author of Plenipotencia ["Full Powers"] (coll 1967); Alberto Vanasco (1925-), who collaborated with Goligorski in Memorias del futuro ["Memories of the Future"] (anth 1966) and Adios al manana ["Goodbye to Tomorrow"] (anth 1966); Daniel Barbieri (1951-), author of Domun (1991); Spanish-born Marcial Souto (1947-), author of Para bajar a un pozo de estrellas ["To Go Down a Well of Stars"] (coll 1985); and Sergio Gaut vel Hartman (1947-), author of Cuerpos descartables ["Disposable Bodies"] (coll 1985). Cuba Sf in Cuba originated in the poetry of Oscar Hurtado (1919-1977), as in La ciudad muerta de Korad ["The Dead City of Korad"] (1964), and the stories and novels of Angel Arango (1926-), which include (?A donde van los cefalomos? ["Where do the Cephalhoms Go?"]) (coll 1964), El planeta negro ["The Black Planet"] (coll 1966), Robotomaquia ["Robotomachy"] (coll 1967), El arco iris del mono ["The Monkey's

Rainbow"] (coll 1980), Transparencia ["Transparency"] (coll 1982) and Coyuntura ["Juncture"] (coll 1984). Cuban sf has been influenced both by Caribbean magical traditions and by Soviet sf-there were no real precedents for Cuban sf before the 1959 revolution. Although no specialized Cuban sf magazines exist, sf stories were well received in most periodical publications and dozens of titles were published every year until, in 1990, Cuban publishing began to suffer severe problems owing to lack of paper. Cuban sf began to find its own identity through the work of Arango and of Miguel Collazo (1936-), author of El libro fantastico de Oaj ["The Fantastic Book of Oaj"] (1966), El viaje ["The Journey"] (1968), Onoloria and El arco de Belen ["The Arch of Bethlehem"]. It has a strongly political trend but also, less expectedly, purely fantastic and clearly erotic traits, best exemplified by the work of Daina Chaviano (1957-), first winner in the sf category (established 1979) of the national literary award, the David, with her short-story collection Los mundos que amo ["The Worlds I Love"] (coll 1980). Her other books to date are Amoroso planeta ["Loving Planet"] (coll 1983), Historias de hadas para adultos ["Fairytale for Adults"] (coll 1986), Cuentos de una abuela extraterrestre ["Stories from an Extraterrestrial Grandmother"] (1988) and El abrevadero de los dinosaurios ["The Waterhole of the Dinosaurs"] (coll 1990). Other Cuban sf writers to be noted are: Gregorio Ortega (1926-), author of Kappa

LA TOURETTE, AILEEN

(1946-) US-born writer, in the UK from 1968, whose advocacy of a radical FEMINISM informs most of her work, all of which is sophisticatedly told. Her sf novel, Cry Wolf (1986), however, assays a somewhat jumbled moral scan of the events leading up to a nuclear HOLOCAUST in language both too ornately self-referential and too abstract to convey much of the subsequent shattered world as it attempts to sort truth from myth and to build anew. [JC]

LAUMER, (JOHN) KEITH

(1925-1993) US writer who used his experiences in the US armed forces and Diplomatic Corps to considerable advantage in his sf work. He served in the army 1943-5, studied architecture and graduated with a BScArch from the University of Illinois in 1952, served in the USAF 1953-6, and then joined the US Foreign Service. He rejoined the USAF as a captain in 1960. He began publishing sf in 1959 with "Greylorn" for AMZ, and for more than a decade remained extremely prolific, producing three major series and two minor ones along with a number of independent novels; after 1973, affected by illness, he published more sparingly. The most interesting of KL's series is the Imperium sequence, comprising his first novel, Worlds of the Imperium (1962 dos; with 2 stories added to make coll, rev 1982), The Other Side of Time (1965) and Assignment in Nowhere (1968) - both assembled as Beyond the Imperium (omni 1981) - and Zone Yellow (1990). The Imperium dominates a complex nest of PARALLEL-WORLDS universes, and strives to maintain the stability of its chosen time-stream. As opposed to the grimmer and perhaps more plausible versions of the same task expressed in novels like Barrington BAYLEY's The Fall of Chronopolis (1974 US), KL takes an essentially optimistic view of this kind of situation, treating

it in a no-nonsense, problem-solving manner. Also related, if only thematically, to the Imperium series is *Dinosaur Beach* (1971), a tale of TIME PARADOXES in which a role similar to that of the Imperium is played by Nexx Central. A second series, the parallel-worlds comic novels featuring Lafayette O'Leary - *The Time Bender* (1966), *The World Shuffler* (1970), *The Shape Changer* (1972) and *The Galaxy Builder* (1984) - attempts to replay a similar scenario in terms of slapstick, with only moderate success. KL's other major series depicts the adventures of interstellar diplomatic troubleshooter Jaime Retief on a variety of alien worlds: *Envoy to New Worlds* (coll 1963; exp vt Retief: *Envoy to New Worlds* 1987), *Galactic Diplomat* (coll 1965), *Retief's War* (1966), *Retief and the Warlords* (1968), *Retief: Ambassador to Space* (coll 1969), *Retief of the CDT* (coll 1971), *Retief's Ransom* (1971; with new title story added to make coll, rev vt Retief and the *Pangalactic Pageant of Pulchritude* 1986), *Retief: Emissary to the Stars* (1975; exp 1979), *Retief: Diplomat at Arms* (coll 1982), *Retief to the Rescue* (1983), *The Return of Retief* (1984), *Retief in the Ruins* (coll 1986) and *Reward for Retief* (1989). Retief's unchanging role is to mediate between the residents of alien worlds, some of them nefarious, and his bumbling superiors in the Terran Diplomatic Corps, and to solve various sticky problems, almost all couched in comic terms, sometimes amusingly. Here as elsewhere, the KL bibliography is tangled; putting aside titles which partially replicate earlier titles, Retief collections assembled entirely from earlier volumes include *Retief at Large* (coll 1978) and *Retief Unbound* (omni 1979), containing Retief's Ransom plus 5 stories from *Envoy to New Worlds*. KL's singletons are varied, ranging from broad HUMOUR like *The Monitors* (1966), filmed as *The MONITORS* in 1969, to taut, efficient sf thrillers whose structures amalgamate SPACE OPERA and the favourite sf theme of the coming to awareness of the SUPERMAN. Best of them is *A Plague of Demons* (1965), in which a tough human is biologically engineered into a sort of superman so that he can deal with a threat to Earth, and finds - after a long, remarkably sustained chase sequence ending in his capture by some singularly efficient aliens - that for centuries Earth has been being despoiled of its best fighting men, who, like himself, are taken off-planet and surgically transformed into command centres for gigantic, armed fighting machines embroiled in an eons-long interstellar war. In this CYBORG form, he regains autonomy, organizes a revolt of his fellow cyborg-supertanks and prepares to carry - fabulously armed - his message of freedom to the stars. Thematically associated with this novel are the Bolo books - *Bolo: The Annals of the Dinochrome Brigade* (coll of linked stories with new linking material 1976) and *Rogue Bolo* (coll of linked stories 1986), both assembled, with 1 piece missing, as *The Compleat Bolo* (omni 1990), plus the weak *The Stars Must Wait* (1990) - which recount the long history of a military unit of constantly upgraded quasisentient tanks. In *A Plague of Demons*, and in other novels such as *A Trace of Memory* (1963), *The Long Twilight* (1969), *The House in November* (1970; with 1 story added to make coll, rev 1981), *Dinosaur Beach* and *The Infinite Cage* (1972), the essential KL superman takes shape: often an orphan, usually a loner, he discovers the world to be a persecuting snare and delusion, and gradually comes to realize that his PARANOIA is justified, for his frustrated human competence is no more than a cloak disguising his true - at times godlike

- superiority. Once he has become a superman he is able to transcend the world of normals, and often takes that world over, though behind the scenes. It is for novels in which this wish-fulfilment version of the superman is expressed that KL will be best remembered, though his tendency to repeat earlier inspirations in slackened form seems to have damaged his later efforts even in this favourite mode; books such as *The Ultimax Man* (1978) or *End as a Hero* (1985) are significantly weak by comparison with his early work. But at his best KL wrote polished and succinct daydreams of sf transcendence that served as models of their kind. [JC]Other works: *The Great Time Machine Hoax* (1964); *Embassy* (1965), an associational novel whose protagonist, Brion Bayard, shares his name but no other circumstances with the hero of the Imperium sequence; *Catastrophe Planet* (1966; with added pieces to make coll, rev vt *The Breaking Earth* 1981); *Earthblood* (1966) with Rosel George BROWN (whom see for details); *Nine* by Laumer (coll 1967); *Galactic Odyssey* (1967); *Planet Run* (1967; with 1 story by each added to make coll, rev 1982) with Gordon R. DICKSON; *The Day Before Forever* and *Thunderhead* (coll 1968); *The Invaders ** (coll 1967; vt *The Meteor Men* UK) as by Anthony LeBaron and *Enemies from Beyond ** (coll 1967), adapting stories from *The INVADERS* ; *The Afrit Affair ** (1968), *The Drowned Queen ** (1968) and *The Gold Bomb ** (1968), adapting stories from *The AVENGERS* ; *Greylorn* (coll 1968; vt *The Other Sky* 1968 UK); *It's a Mad, Mad, Mad Galaxy* (coll 1968); *Time Trap* (1970); *The Star Treasure* (1971; with stories added to make coll, rev 1986); *Once There was a Giant* (coll 1971), a different book from *Once There was a Giant* (coll 1984), the first title containing 8 stories, the second 2 novellas; *Timetracks* (coll 1972); *The Big Show* (coll 1972); *Night of Delusions* (1972; with 2 stories added to make coll, rev vt *Knight of Delusions* 1982); *The Glory Game* (1973); *The Undefeated* (coll 1974); *The Best of Keith Laumer* (coll 1976); *Star Colony* (fixup 1982); *Chrestomathy* (coll 1984); *Judson's Eden* (1991); *Alien Minds* (coll 1991); *Back to the Time Trap* (1992).As Editor: *Five Fates* (anth 1972).About the author: Keith Laumer, *Ambassador to Space: A Working Bibliography* (last rev 1990 chap) by Gordon BENSON Jr and Phil STEPHENSEN-PAYNE. See also: **ALTERNATE WORLDS; GODS AND DEMONS; HIVE-MINDS; INVASION; PSI POWERS; PSYCHOLOGY; ROBERT HALE LIMITED; WEAPONS.**

LAURIE, ANDRE

Pseudonym of Paschal Grousset (1845-1909), French politician and author. His first political novel, *Le reve d'un irreconciliable* ["Dream of a Diehard"] (1869) and several political works were published under his real name, but thereafter he used the AL pseudonym. While living as a communard exile in London, AL wrote the original version of the book which was later published as *The Begum's Fortune* (1879) as by Jules VERNE. Laurie legally renounced title to the story, as he did with *The Southern Star Mystery* (1884), rewritten and published as by Verne. Both authors put their name to *L'epave du Cynthia* (1885; trans as *Salvage from the Cynthia* 1958 UK). It was a strange collaboration, AL being politically a long way to the left of Verne. Of AL's several sf novels, 5 have been translated into English. The best known is *Les exiles de la Terre*, *Selene Company Limited* (1887; trans anon as *The Conquest of the Moon: A Story of the Bayouda* 1889

UK), in which the MOON is drawn from its orbit to land in the Sahara desert. AL wrote of the discoveries of scientifically advanced societies in *The Secret of the Magian, or The Mystery of Ecbatana* (1890 France; trans 1891 UK) and *Atlantis* (1895; trans L.A. Smith as *The Crystal City Under the Sea* 1896 UK; vt *The Crystal City* 1896 US), and of a transatlantic tunnel in *De New York a Brest en sept heures* (1888; trans anon as *New York to Brest in Seven Hours* 1890 UK). His most critically acclaimed work, *Spiridon le muet* ["Spiridon the Mute"] (1909 France), remains untranslated. [JE/PN]Other works: *Axel Ebersson, the Graduate of Upsala* (1891 France; trans 1892 UK).See also: BOYS' PAPERS; NEAR FUTURE; UNDER THE SEA.

LAVERS, NORMAN

(1935-) US writer whose sf novel, *The Northwest Passage* (1984), engages in an experiment (POSTMODERNISM) familiar to readers of the modern novel: the book comprises a "text", complete with a scholarly apparatus which is itself, of course, part of the "text". In this case, a far-future editorial apparatus surrounds the late-20th-century scholarly edition of an 18th-century manuscript. The title proves to have a more than geographical context. [JC]

LAVERTY, DONALD

Pseudonym used by James BLISH and Damon KNIGHT in collaboration. [JC]

LAVOND, PAUL DENNIS

[s] C.M. KORNBLUTH; Robert A.W. LOWNDES; Frederik POHL.

LAWHEAD, STEPHEN R.

(1950-) US writer of Christian sf and fantasy, beginning with the *Dragon King* fantasy trilogy: *In the Hall of the Dragon King* (1982), *The Warlords of Nin* (1983) and *The Sword and the Flame* (1984). Of sf interest are *Dream Thief* (1983) and the *Emphyrion* sequence: *The Search for Fierra* (1985) and *The Siege of Dome* (1986), both titles being assembled as *Emphyrion* (omni 1990 UK). A further fantasy sequence, the *Pendragon Cycle* - *Taliesin* (1987), *Merlin* (1988), *Arthur* (1989) and *Pendragon* (1994) - Christianizes (or re-Christianizes) Arthurian legends. The catechizing impulse evident in earlier titles seems to have been moderated in later productions. [JC]Other works: *Howard Had a Spaceship* (1986), juvenile; the *Song of Albion* sequence comprising *The Paradise War* (1991), *The Silver Hand* (1992) and *The Endless Knot* (1993).

LAWNMOWER MAN, THE

Film (1992). Allied Vision Lane Pringle/Fuji Eight Co. Dir Brett Leonard, starring Jeff Fahey, Pierce Brosnan, Jenny Wright, Geoffrey Lewis. Screenplay Leonard, Gimel Everett. 108 mins. Colour.The full title is Stephen King's *The Lawnmower Man*, but the film has been repudiated by KING, angry at the cynicism whereby his old (1975) short story was purchased to exploit the marketing power of his name and then effectively discarded through being altered out of recognition. In this dumb rewrite of both *FRANKENSTEIN* (1931) and *CHARLY* (1968), an obsessive SCIENTIST (Brosnan) uses a VIRTUAL-REALITY hook-up, along with intelligence-raising drugs, to change the local handyman (Fahey), an affable simpleton, into a homicidal SUPERMAN with telekinetic powers who ultimately downloads

himself into the USA's information networks in order to "cleanse this diseased planet". The film's concepts and dialogue are uniformly contemptible - noting in awe that his creation has learned Latin in two hours, the brilliant scientist says: "It took me a year just to learn the Latin alphabet!" The virtual-reality effects on which the film relies (the suggestion being that computer-generated scenery makes you clever) are not remotely like reality, and are routine in execution. [PN]

LAWRENCE

Lawrence Sterne STEVENS.

LAWRENCE, HENRY L(IONEL)

(1908-) UK writer whose *The Children of Light* (1960) deals with the effects of radiation. It was used as the basis for a 1961 film, *The DAMNED*. [JC/PN]

LAWRENCE, J(UDITH) A(NN)

(? -) US writer and artist, long resident in Greece, married to James BLISH from 1964 until his death in 1975, collaborating with him (sometimes without credit) on some of the later ties he wrote for the STAR TREK enterprise. She was credited as co-author of *Star Trek 12* * (coll 1977 US) and was solely responsible for *Mudd's Angels* * (1978 US). [JC]See also: MILFORD SCIENCE FICTION WRITERS' CONFERENCE; NEBULA.

LAWRENCE, JIM

Working name of US writer James Duncan Lawrence (1918-), whose sf consists of the unremarkable *Man from Planet X* sequence - *The Man from Planet X #1: She-Beast* (1975) and *#2: Tiger by the Tale* (1975), both as by Hunter Adams - and 2 novels tied to SHARED-WORLD franchises: *ESP McGee* and *The Haunted Mansion* * (1983 chap) for the *ESP McGee* series, and *The Cutlass Clue* * (1986) for the *A.I. Gang* series. [JC]

LAWRENCE, LOUISE

Pseudonym of Elizabeth Rhoda Wintle (1943-), UK writer who began publishing sf for young adults with *Andra* (1971), and who early became noted for the marked and sensitive intelligence of her settings and characters. *The Power of Stars* (1972), in which an extraterrestrial force transfixes human teenagers, and *Star Lord* (1978; rev 1987), in which a boy protects the eponymous alien from the government, are characteristic; as are *The Wyndcliffe* (1974) and its sequel, *Sing and Scatter Daisies* (1977), an intricate romance fantasy. Her shorter work is assembled in *Extinction is Forever and Other Stories* (coll 1990). [JC]Other works: *The Earth Witch* (1981); *Calling B for Butterfly* (1982); *Children of the Dust* (1985); *Moonwind* (1986); *The Warriors of Taan* (1986); *Ben-Harran's Castle* (1992; vt *Keeper of the Universe* 1993 US); *The Dispossessed* (1994 UK; vt *The Patchwork People* 1994 US).See also: STARS.

LAWRENCE, STEPHEN

Lawrence Sterne STEVENS.

LAZARUS, HENRY

(? -?) UK writer, active in the 1890s, whose *The English Revolution of the Twentieth Century: A Prospective History* (1894), caused some stir through its advocacy of a welfare state following a revolution led by the

forces of Labour. [JC]

LAZENBY, NORMAN A(USTIN)

(1914-) UK pulp writer, prolific as an author of Westerns and detective novels, and a minor contributor to GENRE SF. He began publishing sf with "A Matter of Size" for Fantasy in 1946, and continued to publish stories under various names for several years, and then again for a few years after 1970. The Coming of the Beetle Men (coll 1949 chap; the cover title was Terror Trap) contains 1 sf story. His only sf novel is The Brains of Helle (fixup 1953) as by Bengo Mistral. [SH]

LEA, HOMER

(1876-1912) US writer in whose "Yellow Peril" tale, The Valor of Ignorance (1909), a racially contaminated USA - riddled also with FEMINISTS-must attempt to gird its loins against a Japanese INVASION. But Japan wins, gaining California and other Pacific regions. In 1942, the book enjoyed the unusual privilege of being reprinted in both Japan and the USA. [JC]

LEACOCK, STEPHEN (BUTLER)

(1869-1944) Canadian economist and writer of many books of humorous sketches, the most famous being perhaps Sunshine Sketches of a Little Town (coll 1912). Sf often featured as the target of the more fantastical of these sketches, beginning with spoofs like "The Man in Asbestos", which parodies H.G. WELLS's THE TIME MACHINE, and other stories in Nonsense Novels (coll 1911 UK). The Iron Man and the Tin Woman, with Other Such Futurities: A Book of Little Sketches of To-day and Tomorrow (coll 1929 US) and Afternoons in Utopia: Tales of the New Time (coll 1932 US) contain the highest proportion of this sort of material - UTOPIAS being a favourite target-but examples can be found in many of his collections. [JC]Other works: Moonbeams from the Larger Lunacy (coll 1917 UK); Frenzied Fiction (coll 1918 UK); The Hohenzollerns in America, With the Bolsheviks in Berlin, and Other Impossibilities (coll 1919 UK); Winsome Winnie and Other New Nonsense Novels (coll 1920 UK).See also: CANADA.

LEAHY, JOHN MARTIN

(1886-1967) US PULP-MAGAZINE author and illustrator who contributed sf to Science and Invention and Weird Tales, in which latter appeared Drome (1927; 1952), a LOST-WORLD tale set in caves under California. [JE/EFB]

LEBAR, JOHN

Harold Bell WRIGHT.

LeBARON, ANTHONY

Keith LAUMER.

LeCALE, ERROL

Wilfred Glassford MCNEILLY.

Le CLEZIO, J(EAN)-M(ARIE) G(USTAVE)

(1940-) Mauritius-born French writer, known primarily for his work outside the sf field; he took his degree in literature at Nice University. He is a major contemporary author in the ABSURDIST tradition, his work often bordering on sf and the surreal through a minute examination of

physical phenomena and aspects of reality. His hallucinatory scrutiny of manifestations of madness in the world at large is best demonstrated in *Les geants* (1973; trans Simon Watson-Taylor as *The Giants* 1975 US), set in Hyperbolis, a nightmare shopping complex in a futuristic city. [MJ]Other works include: *Le proces-verbal* (1963; trans Daphne Woodward as *The Interrogation* 1964 US); *La fievre* (coll 1964; trans Daphne Woodward as *Fever* 1966 US); *Le deluge* (1965; trans Peter Green as *The Flood* 1967 US); *Terra Amata* (1967; trans Barbara Bray 1969 US); *Le livre des fuites* (1969; trans Simon Watson-Taylor as *The Book of Flights* 1972 US); *La guerre* (1970; trans Simon Watson-Taylor as *War* 1973 US); *Voyages de l'autre cote* ["*Journeys on the Other Side*"] (1975). See also: MEDIA LANDSCAPE.

LEE, DAVID

David S. GARNETT.

LEE, GENTRY (B.)

(1942-) US writer who held several important posts in NASA's deep-space exploration programme and was a screenwriter for Carl SAGAN's *Cosmos* tv series. His sf has been written exclusively in collaboration with Arthur C. CLARKE (whom see for details); at least initially, the senior partner provided outlines based on ideas generated by both writers, and then the books themselves were written by GL. *Cradle* (1988), the first and weakest, is a First-Contact drama exhibiting little of Clarke's economy or intensity. Following on from Clarke's solo *RENDEZVOUS WITH RAMA* (1973), the Rama sequence - *Rama II* (1989 UK), *The Garden of Rama* (1991) and *Rama Revealed* (1993) - shows a continual improvement. GL has proved competent at conveying technical information, though tending to lapse into an "airport novel" approach when it comes to dealing with human beings. [NT]

LEE, MATT

[s] Sam MERWIN.

LEE, ROBERT

[s] Paul W. FAIRMAN.

LEE, SHARON

[r] Steve MILLER.

LEE, STAN

(1922-) US COMIC-book writer and executive, born Stanley Leiber; his name has been legally changed to Lee. Before WWII he began to establish himself in the New York comics publishing world, in 1939 joining Timely Comics, Inc., the firm for which Jack KIRBY invented Captain America. SL remained with Timely - which soon became Atlas Comics, then MARVEL COMICS in 1963, without changing its corporate identity - for the whole of his career, serving as its editor 1942-72, and as its publisher and editorial director from 1972, concentrating on film productions after 1978. His career was not of particular importance for the student of sf until 1961, when - with Kirby, who had spent many years away from Marvel - he began to create a new type of comic-book SUPERHERO, with titles like *The Fantastic Four* (from 1961) and *The Incredible Hulk* (from 1962); other comics created at this time included *Spiderman* (initiated in *Amazing Fantasy* in 1962) as drawn by Steve Ditko, whose angular, repressed style greyly evoked the

pedestrian urban life which the hero tried to transcend. Over the next half decade SL (usually with Kirby) initiated a number of similar comic books including The Avengers (from 1963), into which Kirby reintroduced his Captain America, X-MEN (from 1963) and Thor (separate comic from 1966, character introduced in Journey into Mystery in 1962). These comics, most of them scripted by SL-according to the "Marvel Method", which involved much initial collaboration between artist and writer-were remarkable for eschewing the template structures of previous work in the field (characters neither ageing nor suffering significant change). SL's protagonists grew up, aged, suffered, exhibited human frailties and changed their minds about things; their superpowers were often explicitly seen as compensatory wish-fulfillments, allowing them - though never permanently - to transcend their personal problems. In hindsight, SL's 1960s work was a major influence on the creation of the GRAPHIC NOVEL in the 1980s, especially perhaps the work from about 1965 on, when his continuing storylines began to develop space-operatic complexities; most memorable were those episodes of The Fantastic Four in which the heroes became involved in intergalactic disputes with the planet-devouring (but rather sympathetic) Galactus and his moody sidekick, the Silver Surfer, a nonhuman rider of space imprisoned by Galactus within Earth's atmosphere where, misunderstood and reviled, he time and again (as featured in The Silver Surfer 1968-70) saved humanity from itself. The above account should be read in the context of Jack Kirby's repeated claims during the 1980s that SL was an administrator rather than a writer - indeed, that he actually wrote none of the comics for which he received writing credit. The editors of this encyclopedia are not in a position to evaluate those claims. In 1970 Kirby left Marvel; though he would return later, it is arguable that SL's domination of the comic-book world, as both editor and writer, began to slip from about this time. For instance, it was Roy Thomas who fruitfully introduced into Marvel's generic mix a number of themes and characters from HEROIC FANTASY (including Robert E. HOWARD's Conan in Conan the Barbarian from 1970), and though Marvel Comics featured ever more spectacular and sf-like situations, there was a sense of decreasing ebullience; routine situations began to predominate. SL is not to be confused with the Stan Lee who has written novels such as The God Project (1990), a NEAR-FUTURE thriller with metaphysical import. [JC] See also: SUPERMAN.

LEE, TANITH

(1947-) UK writer, first of fantasies for children, beginning with The Dragon Hoard (1971), and then, after The Birthgrave (1975 US), primarily of fantasies for adults. Both these areas of concentration lie outside our proper remit, but it can be said that she is an inventive and fertile writer, that she has encompassed her primary theme - the ethical and sexual initiation of an adolescent character into a volatile world s/he herself will shape, often through renunciation - in a wide variety of modes, and that, although her work differs vastly in tone and subject matter from that of C.J. CHERRYH, both writers share a daunting comprehensiveness. TL, however, has not (yet) assembled her various singletons and series into one shared universe. The Birthgrave and its sequels, Vazkor, Son of Vazkor (1978 US; vt Shadowfire 1978 UK) and Quest

for the White Witch (1978 US), are sf by virtue of the ending of the first volume, in which Earthmen arrive in a spaceship to tell the albino heroine the true, non-supernatural explanation for the compulsions she feels and the voices she hears inside her head - and, having awoken with amnesia in the heart of a volcano and wreaked considerable damage upon the world with her untutored powers, she is by this time sorely in need of some reassurance. The second and third volumes deal primarily with her son, who must deal with his own powers and learn that his mother is not evil. At trilogy's end, immortal and forgiving, they commit incest. Don't Bite the Sun (1976 US) and Drinking Sapphire Wine (1977 US), both assembled as Drinking Sapphire Wine (omni 1979), form a genuine sf sequence set in a FAR-FUTURE world somewhat resembling that in Michael MOORCOCK's Dancers at the End of Time series, treated in this case as a DYSTOPIA whose citizens, superficially free to shape-change and cavort, are in fact prisoners of the protectiveness of their artificial environment. Electric Forest (1979 US) depicts the rite of passage of an ugly child on a planet where her appearance is shocking. Day by Night (1980 US) is set on non-rotating mirror-worlds unconscious of each other's existence. Sabella, or The Blood Stone (1980 US) and its sequel, Kill the Dead (1980 US) - both assembled as Sometimes, After Sunset (omni 1980 US) - associate vampirism with Mars. The Silver Metal Lover (1981 US) concerns a love affair between a woman and a ROBOT or ANDROID. Days of Grass (1985 US) is set a century or so after an ALIEN invasion. TL's sf, though she is clearly conversant with its instruments, makes such individual use of the normal displacements of the genre that nothing - from robots to cosmogony - fails to serve her primary impulses as a storyteller. For TL, sf is a kind of metaphysical pathos: it illustrates her children. Of her several volumes of stories, some of which are exceptional, the most far-ranging are probably Dreams of Dark and Light: The Great Short Fiction (coll 1986 US), Forests of the Night (coll 1989) and Women as Demons: The Male Perception of Women through Space and Time (coll 1989). [JC]Other works: Juvenile fantasies: Princess Hynchatti and Some Other Surprises (coll 1972); Animal Castle (1972); Companions on the Road (1975) and The Winter Players (1976), both assembled as Companions on the Road and The Winter Players: Two Novellas (omni 1977 US); East of Midnight (1977); The Castle of Dark (1978); Shon the Taken (1979); Prince on a White Horse (1982), assembled with The Castle of Dark as Dark Castle, White Horse (omni 1986 US). Adult fantasies: The Betrothed (1968 chap); Volkhavaar (1977 US); the Tales from the Flat Earth sequence, comprising Night's Master (1978 US), Death's Master (1979 US) and Delusion's Master (1981 US), all assembled as Tales from the Flat Earth: The Lords of Darkness (omni 1987 US), plus Delirium's Mistress: A Novel of the Flat Earth (1986 US) and Night's Sorceries (coll 1987 US), both assembled as Tales from the Flat Earth: Night's Daughter (omni 1987 US); the Wars of Vis sequence, comprising The Storm Lord (1976 US) and Anackire (1983 US), both assembled as The Wars of Vis (omni 1984 US), plus The White Serpent (1988 US); Lycanthia, or The Children of Wolves 1981 US); Unsilent Night (coll 1981 chap US); Cyrion (coll of linked stories 1982 US); Sung in Shadow (1983 US); Red as Blood, or Tales from the Sisters Grimmer (coll 1983 US); The Beautiful Biting Machine (1984 chap); USTamastara, or The Indian Nights (coll 1984 US); The Gorgon and Other Beastly Tales (coll 1985 US); Madame Two Swords (1988 US); A Heroine of

the World (1989 US); the Secret Book of Paradys sequence, comprising The Book of the Damned (coll of linked stories 1988) and The Book of the Beast (1988), both assembled as The Secret Book of Paradys (omni 1991 US), plus The Book of the Dead (coll 1991 US) and The Book of the Made (coll 1993 US), both assembled as The Secret Books of Paradys III ? The Blood of Roses (1990); Black Unicorn (1991 US) and its sequel, Gold Unicorn (1994); Into Gold (1986 IASFM; 1991 chap); the Blood Opera sequence, comprising Dark Dance (1992) Personal Darkness (1993) and Darkness, I (1994), with further volumes projected; Heart-Beast (1992), a werewolf novel; Elephantasm (1993); Nightshades: Thirteen Journeys into Shadow (coll 1993); Eva Fairdeath (1994). See also: CHILDREN'S SF; DAW BOOKS; FEMINISM; RADIO; SUPERNATURAL CREATURES.

LEE, THOMAS

(? -?) UK writer, active in the late 19th century, identified by Darko SUVIN in Victorian Science Fiction in the UK (1983) as a North London plasterer and publican. TL's sf novel, Falsivir's Travels: The Remarkable Adventures of John Falsivir, Seaman, at the North Pole and in the Interior of the Earth (1886), is a HOLLOW-EARTH tale. The narrator discovers a race of giants oppressed by a race of normal-sized humans, along with other features that E.F. BLEILER has suggested mark the author's attempts to satirize the UK of the 19th century. [JC]

LEE, WALT(ER WILLIAM)

(1931-) US film-writer and consultant with a 1954 BS in physics. His monumental self-published Reference Guide to Fantastic Films: Volume 1 A-F (1972), Volume 2 G-O (1973) and Volume 3 P-Z (1974) contains upwards of 20,000 entries. Fantasy, occult and horror films feature more largely than pure sf, but the latter is dealt with thoroughly. The work remains a useful research tool for anyone dealing with sf CINEMA, although commentary on the actual content of the films it covers is very minimal. He later collaborated with Richard DELAP on an sf horror novel about a shape-changing ALIEN, Shapes (1987). [PN]

LEE, WILLIAM

William S. BURROUGHS.

LEESON, ROBERT (ARTHUR)

(1928-) UK editor and writer, active from the mid-1940s. He began publishing his books for children, in which he has since specialized, with Beyond the Dragon Prow (1973), an historical romance. Of sf interest is the Time Rope sequence - Time Rope (1986), Three Against the World (1986), The Metro Gangs Attack (1986) and At War with Tomorrow (1986) - in which a sharp social awareness of the contemporary world is focused through a TIME-TRAVEL plot with ample conflicts; and the Zarnia Experiment sequence - comprising Landing in Cloud Valley (1991; vt The Zarnia Experiment: Phase 1: Landing 1993), Fire on the Cloud (1991; vt The Zarnia Experiment: Phase 2: Fire! 1993), The Zarnia Experiment: Phase 3: Deadline (1993), #4: Danger Trail (1993), #5: Hide and Seek (1993) and #6: Blast Off! (1993). [JC] Other works: The Third Class Genie (1975); Slambash Wangs of a Compo Gormer (1987); Landing in Cloud Valley (1991), which begins the projected Cloud Valley sequence.

LEE TUNG

(? -) Indian writer whose interesting sf novel, *The Wind Obeys Lama Toru* (1967), is a complex story about OVERPOPULATION in which fertility and sterility drugs act and counteract, driving the population up and down disastrously. [JC]

LEFANU, SARAH

(1953-) UK academic whose *Despatches from the Frontiers of the Female Mind* (anth 1985), ed with Jen Green (1954-), provided a forum for WOMEN SF WRITERS. The FEMINISM illustrated in that book could serve readers as a backdrop for *In the Chinks of the World Machine* (1988; vt *Feminism and Science Fiction* 1989 US), a solid nonfiction analysis of the work of several contemporary sf writers, most notably Suzy McKee CHARNAS, Ursula K. LE GUIN, Joanna RUSS and James TIPTREE Jr. Through readings of some acuteness, SL argues that GENRE SF has provided a conceptual opportunity for women writers to speak in their own autonomous voices, unimprisoned by the patriarchal modes dominant in more "normal" literatures. [JC]

LEGER, RAYMOND

[r] Raymond MACDONALD.

LEGION OF SUPER-HEROES

COMIC-book series about a group of superpowered youths in the 30th century, published by DC COMICS. The LOS-H first appeared in *Adventure Comics* #247 (April 1958) in a Superboy story written by Otto Binder (Eando BINDER) and then featured in various SUPERMAN titles (ed Mort WEISINGER) before gaining their own series in *Adventure Comics* #300. Writers have included Jerry SIEGEL, Edmond HAMILTON, Paul Levitz and Jim Shooter, whose first story appeared when he was only 13, a logical extension of Weisinger's policy of incorporating reader suggestions. Many LOS-H characters were designed by fans, and its leadership was regularly decided by readers' votes. LOS-H appeared in *Adventure Comics* #300-#380 (Sep 1962-May 1969), then in *Action Comics* #378-#392 (July 1969-Sep 1970); it then became a regular back-up feature in Superboy, appearing Mar 1971-Aug 1977 in #172-#173, #176, #183-#184, #188, #190-#191, #193, #195 and #197-#230. At this point there was a title change. Superboy became Superboy and the Legion of Super-Heroes from #231 (Sep 1977), and this became just Legion of Super-Heroes for #259-#313 (Jan 1980-July 1984). Then there began a new "deluxe" series, produced on higher-quality stock; also called Legion of Super-Heroes, it ran from #1 to #63 (July 1984-Aug 1989). The older title of the same name was from #314 renamed *Tales of the Legion of Super-Heroes*, featuring new material to #325 (July 1985) and thereafter reprinting the "deluxe" title on a one-year-behind schedule. A new series, again called Legion of Super-Heroes, began with #1 (Nov 1989) 3 months after the last issue of the old, and (1991) is current. The present writers are Tom and Mary Bierbaum. Much of LOS-H's sf content was quaint even when it first appeared, but sf continues as an important and evolving part of the series, even if in uneasy balance with its SUPERHERO basis. [ZB/BF]

LE GUIN, URSULA K(ROEBER)

(1929-) US writer, based in Portland, Oregon. Her first novel was

published in 1966; by 1970 she was spoken of as one of the most important writers within the field. Her reputation has extended far beyond the readership of GENRE SF, while within the genre she has been honoured with 5 HUGOS and 4 NEBULAS; more attention has been paid to her by the academic community than to any other modern sf writer. UKLG is the daughter of Dr Alfred and Theodora Kroeber, the former a celebrated anthropologist who has published much work on Native Americans, the latter a writer best known for *Ishi in Two Worlds* (1961). UKLG was thus brought up in academic surroundings; her own education, with an undergraduate degree from Radcliffe and a master's degree from Columbia, was in Romance Literatures of the Middle Ages and Renaissance, particularly French. She wrote POETRY (some of it collected in *Wild Angels* [coll 1975 chap]) and a number of unpublished realistic novels, mostly set in an imaginary Central European country, before turning to sf. (It is generally assumed that her two Orsinia books, both set in 19th-century "Orsinia", *Orsinian Tales* [coll of linked stories 1976] and *Malafrena* [1979] - neither sf or fantasy - are reworkings of this 1950s Central European material.) Typically, UKLG's tales set a man in an alien (and perhaps alienated) world, and follow him on a quest, until he makes a CONCEPTUAL BREAKTHROUGH and proves an agent for the reconciliation of the sundered parts; the quest often takes the form of a winter journey. All her early published genre stories were bought by Cele GOLDSMITH for AMZ and *Fantastic*, her first published genre piece being "April in Paris" for *Fantastic* in 1962; like much of her early work this is more FANTASY than sf, though she makes no rigorous distinction between the two, as she notes in "A Citizen of Mondath" (1973) and other essays in *The Language of the Night: Essays on Fantasy and Science Fiction* (coll 1979; rev with biblio omitted 1989 UK) ed Susan WOOD. Much of UKLG's earlier work, generally known as the Hainish series, is set in a common universe. The people from the planet Hain once seeded the habitable worlds of our part of the Galaxy with human life; this has resulted in great cultural variety, useful for a writer who grew up with ANTHROPOLOGY as an everyday discipline. Five novels, two novellas and several short stories belong to the sequence, which covers about 2500 years of future HISTORY, beginning 300-400 years from now. UKLG's first three novels come late in the sequence's internal chronology. They are *Rocannon's World* (1966 dos; text corrected 1977), *Planet of Exile* (1966 dos) and *City of Illusions* (1967), and were collected as *Three Hainish Novels* (omni 1978). In *Rocannon's World* an ethnographer is marooned on a primitive planet with which he comes to terms only with difficulty; finally, in giving himself to the planet, he receives in return the gift of "mindspeech" or telepathy (ESP). *Planet of Exile*, set over 1000 years later, has mindspeech in normal use; a Terran colony is struggling to survive on a planet whose natives they despise; under pressure the two communities are finally able to merge. *City of Illusions* is set on a cowed Earth ruled by the human-seeming but alien Shing invaders who have the hitherto unknown art of "mindlying". The amnesiac hero turns out, when his memory is restored, to be a messenger from the planet of the previous book; able to detect mindlying, he will be the agent of destruction for the malign Shing. Perhaps the generic structures of these books are too conventional to sustain fully the weight of meaning they are required to bear. But, though apprentice work, all show, well developed, the typical UKLG

strategy of shaping a story around recurrent motifs, which gain in richness and density as the action juxtaposes them in new patterns, until it might almost be said that the motifs are the story. Many of these are the simple archetypal symbols that have always dominated myth and poetry: darkness and light, root and branch, winter and spring, submission and arrogance, language and silence. These are not seen by UKLG as polarities or opposed forces; rather, they are twin parts of a balanced whole, each deriving meaning from the other. UKLG's dualism, insofar as it exists, is not so much in the Western philosophical tradition (where progress is often seen to derive from the tension of antitheses, as in Marxist dialectics) as in the Eastern Taoist tradition, where the emphasis is on balance, mutuality (as in yin and yang) and an ordered wholeness. However, while Jungian archetype and the tenets of Taoism play a central role in all UKLG's work, critical commentaries on UKLG have emphasized them almost too much; they are by no means the whole story. The first work of UKLG's maturity as a writer is *THE LEFT HAND OF DARKNESS* (1969), which won both Hugo and Nebula awards for best novel. The story is told in a prose notable for its clarity and evocative precision. Once again an ethnologist visits a planet, this time Gethen, whose people are androgynous; normally neuter, they have the capability of becoming either male or female at the peak of their sexual cycle; the world itself is snow-bound. The professional observer cannot hold aloof from events; in the novel's most moving sequence, a long, lonely journey across the ice, he reaches a painful understanding with, and a reciprocated love for, the Gethenian protagonist. Because the Gethenians appear initially to be like us, the reading experience - a gradual understanding of the differences between Gethenians and us - invites thoughtfulness about the nature of SEX and sexism in our world, and of cultural chauvinism generally. These four Hainish novels were reprinted along with "The Word for World is Forest" (see below) as *Five Complete Novels* (omni 1985). The next two important items in the Hainish sequence are novellas: "Vaster than Empires and More Slow" (1971) and *THE WORD FOR WORLD IS FOREST* (1972 in *Again, Dangerous Visions* ed Harlan ELLISON; 1976). The former story, its title taken from Andrew Marvell's "To his Coy Mistress", is set just after the action of *Rocannon's World*, and the latter, which won a 1973 Hugo as Best Novella, rather earlier. Both set humans on alien planets; the first (*LIVING WORLDS*) is inhabited by only a sentient plant network (the previous line of the Marvell poem is "My vegetable love should grow"); the second planet is occupied by a much-exploited native race, in a situation clearly made to articulate parallels with the Vietnam War. In both cases a kind of union is gained through human surrender to otherness, and alienation is imaged as violence, madness and ravaging egoism. UKLG's stories are remarkably persuasive and consistent in their outlook, although the answers tend to come less easily in the work of her middle period, whose major work was the fifth and last novel in the Hainish sequence. This was *THE DISPOSSESSED: AN AMBIGUOUS UTOPIA* (1974), which won a Hugo and a Nebula, and is widely regarded as UKLG's most richly textured sf work. This is not a book in which difficulties are readily surmounted; a central image is the wall. The novel stands at the head of the Hainish sequence, for it tells the life of a physicist whose new MATHEMATICS (by another conceptual breakthrough) will result in the *ANSIBLE*, the

instantaneous-communication device (FASTER THAN LIGHT) necessary if the League of All Worlds - the galactic network about which the sequence is constructed - is to come into being. Two inhabited worlds, one a moon of the other, have different systems of POLITICS: one is an anarchy (reminiscent of that proposed in real life by Kropotkin), the other is primarily capitalist. The hero, Shevek, is not completely at home in either society. The book has been read as pitting a UTOPIA against a DYSTOPIA, but, as the book's subtitle implies, there are seldom absolutes in UKLG's work; the attractive anarchist society is in some ways blinkered and emotionally regimented (with the willing collaboration of its people). Ideationally the novel is very strong, but a slight didactic dryness in the telling-which, perhaps deliberately, hinders any simple emotional identification with the hero - alienated some readers. Nonetheless, it is a deeply imagined work of art. The short story "The Day before the Revolution" (1974) is an introduction to the anarchist society of The Dispossessed, being the tired, unromantic last memories of that society's founder; it, too, won a Nebula. One interesting non-Hainish novel was published before The Dispossessed. Set in the imaginative territory generally associated with Philip K. DICK, The Lathe of Heaven (1971) tells of a man who through his dreams can bring alternate reality structures into being. In its interest in METAPHYSICS, it is of a piece with her other work, including her fantasy (see below). It was intelligently dramatized for US tv as The LATHE OF HEAVEN .Through all this period (1962-74), UKLG also wrote non-Hainish fiction, including the Hugo-winning "The Ones who Walk Away from Omelas" (1973), a bitter, deft parable about the cost of the good life, and "Nine Lives" (1969), a moving story of CLONES mining an alien planet. With the exception of THE WORD FOR WORLD IS FOREST, all UKLG's early short fiction can be found in THE WIND'S TWELVE QUARTERS (coll 1975; UK paperback in 2 vols), her first and best collection. UKLG has published fewer sf short stories since then. One of them, The New Atlantis (1975 as title story of The New Atlantis ed Robert SILVERBERG; 1989 chap dos), is a dark NEAR-FUTURE story, in which a ruined ECOLOGY is causing the USA (along with its frightened and frightening state apparatus) to sink into darkness just as ATLANTIS's white towers re-emerge above the sea; it ends ambiguously - as much of UKLG's later fiction does - with the cry of the Atlanteans: "We are here. Where have you gone?" This is one of the stories in UKLG's second collection, The Compass Rose (coll 1982), an occasionally whimsical book which had a mixed critical reception, as did the novella The Eye of the Heron (1978 in Millennial Women ed Virginia KIDD; 1982 UK), an over-diagrammatic political fable whose translucent simplicity approaches self-parody. Buffalo Gals and Other Animal Presences (1971-87 var mags; coll 1987) contains stories and poems about animals, many being previously collected, but featuring the first book appearance of "Buffalo Gals, Won't You Come Out Tonight?"; this Hugo-winning story recounts a human girl's meeting with incarnations of Native American spirit animals (including Coyote); it was later released as a graphic novel, Buffalo Gals, Won't You Come Out Tonight? (graph 1994). A Fisherman of the Inland Sea (coll 1994) continues to reflect UKLG's increasing absorption in tales which - while difficult to define generically - range comprehensively over the terrains of the fantastic. It became clear in UKLG's fiction after The Dispossessed

(including the Orsinia sequence) that her strongly utopian impulse was taking over. This is unusual in postwar sf, whether genre sf or mainstream. Because utopian fiction tends not to be plot-driven, much of her fiction since 1974 has seemed a little static: it consciously demands a more contemplative kind of attention than that dictated by most sf. It is a difficult, quixotic demand, since it requires that the reader will accept a cultural re-education. The clearest example is the most recent and biggest of her sf novels, *ALWAYS COMING HOME* (1985). This is an experiment: a collage of verse, reports, tales, drawings by Margaret Chodos, an associated cassette of music by Todd Barton, and even recipes, all relating to the matriarchal society of the Kesh, who live in California's Napa Valley in a future long after some catastrophic event has sunk the coastal cities. An intermittent narrative tells of a woman who marries into, then flees from, a masculine, aggressive society. Utopia is here approached by way of a fictional anthropology, which focuses on its society not by asking the sf question, "How did it get that way?", but simply asking: "What is it?" UKLG's *FANTASY* stories may be her most personal work, and have given some of her readers more pleasure than anything she has written. The *Earthsea* trilogy, austere but vivid, is a major work whose appeal goes far beyond the teenagers at whom in the first instance it was aimed: *A Wizard of Earthsea* (1968), *The Tombs of Atuan* (1971) and *The Farthest Shore* (1972; slightly cut 1973 UK), collected as *Earthsea* (omni 1977; vt *The Earthsea Trilogy* 1979). Set on *ISLANDS* in an ocean world, the trilogy tells of training in a *MAGIC* so rigorous in its principles as to be easily understood as a form of alternate science. The books recount episodes in the apprenticeship, the full-powered maturity and the final death-quest of a magician, Ged. A grave joyfulness pervades the trilogy, which is perhaps more maturely thoughtful (while remaining exciting) than the comparable *Narnia* series of C.S. LEWIS. However, over the next decade a certain backlash against UKLG became evident from the women's movement. It was alleged that, especially in this trilogy, Le Guin saw men as the actors and doers in the world (magicians are male) while women remain the still centre, the well from which they drink. UKLG's *FEMINISM* certainly altered in nature over the next two decades (as evident in *ALWAYS COMING HOME*), and she also made a kind of restitution by writing a fourth novel in the *Earthsea* series: *Tehanu: The Last Book of Earthsea* (1990). It is a sad, powerful, quiet book about the strength of women (and the ultimate impotence of Ged); it won a Nebula. *Earthsea Revisioned* (1992 lecture given as "Children, Men and Dragons"; 1993 chap) considers some issues raised within - and by - the sequence. UKLG has edited 4 anthologies: *Nebula Award Stories 11* (anth 1976); *Interfaces* (anth 1980) and *Edges* (anth 1980), both with Virginia Kidd; and *The Norton Book of Science Fiction: North American Science Fiction, 1960-1990* (anth 1993) with Brian Attebery, assisted by Karen Joy FOWLER. She also published a second collection of nonfiction pieces, mostly literary essays and reviews, *Dancing at the End of the World: Thoughts on Words, Women, Places* (coll 1989). In 1989 she received the *PILGRIM AWARD* for services to sf criticism. The limpid, serene clarity of her fables, whether in fantasy, sf or even the quasihistorical fiction of her Orsinia stories, is powerful, and has won her many loyal friends, even in the genre readership which some see her as having abandoned. Why else would this group continue to

award her Hugos and Nebulas through to the end of the 1980s? It is possible that UKLG has been overpraised, but she has given much to the genre, not least by showing (through example) how the traditional novelist's interest in questions of character and moral growth need not be alien to sf. John CLUTE once wrote of her as "eminently sane, humanitarian, concerned" but went on to lament her "fatal lack of risk". This may be overstatement, but it points to a quality in her work that has been observed by other critics. It is true that UKLG's demure certainties could, perhaps, be more open to the random and the unpredictable. But can self-confidence justly be evidenced as a flaw? [PN]Other works: From Elfland to Poughkeepsie (1973 chap), a critical pamphlet; Dreams Must Explain Themselves (coll 1975 chap), a pamphlet which has a story, an essay, a speech and an interview; The Water is Wide (1976 chap); Very Far Away from Anywhere Else (1976; vt A Very Long Way from Anywhere Else 1976 UK), a contemporary love story, not sf, directed at teenagers; Walking in Cornwall: A Poem for the Solstice (1976 chap); Leese Webster (1979 chap), for children; The Beginning Place (1980; vt Threshold 1980 UK), a poignant fantasy novel for young adults about an ambiguously desirable alternate world; Gwilan's Harp (1977 Redbook; 1981 chap); Hard Words and Other Poems (coll 1981 chap); the Adventures in Kroy sequence for children, comprising The Adventures of Cobbler's Rune (1982 chap) and Solomon Leviathan's Nine Hundred and Thirty-First Trip around the World (1983 chap); In the Red Zone (1983 chap); The Visionary: The Life Story of Flicker of the Serpentine (1984 chap dos), a pre-published excerpt from ALWAYS COMING HOME (1985); King Dog: A Screenplay (1985 dos), based on Hindu myth; Wild Oats and Fireweed . . . New Poems (coll 1988 chap); A Visit from Dr Katz (1988 chap), for children; Catwings (1988 chap), Catwings Return (1989 chap) and Wonderful Alexander and the Catwings (1994 chap), all for children; Fire and Stone (1989 chap) with illustrator Laura Marshall, for children; Way of the Water's Going: Images of the Northern California Coastal Range (1989) with Ernest Waugh and Allan Nicholson, nature photographs printed with excerpts from ALWAYS COMING HOME; The Lathe of Heaven/The Dispossessed/The Wind's Twelve Quarters (omni 1991); The Eye of the Heron ? Searoad: The Chronicles of Klatsand (coll 1991), not sf/fantasy, 10 short stories set on the Oregon coast; Nine Lives (1969 Playboy; 1992 chap); Fish Soup (1992 chap); A Ride on the Red Mare's Back (1992 chap); Blue Moon over Thurman Street (1992 chap); Going Out with Peacocks and Other Poems (coll 1994 chap).About the author: SCIENCE-FICTION STUDIES, Nov 1975, is a Le Guin issue, concentrating on the sf; The Farthest Shores of Ursula K. Le Guin (chap 1976) by George Edgar SLUSSER; Ursula K. Le Guin (anth 1979) ed M.H. GREENBERG and J.D. OLANDER; Ursula K. Le Guin: Voyager to Inner Lands and to Outer Space (anth 1979) ed Joe De Bolt; Ursula K. Le Guin (1984) by Charlotte Spivack; Ursula K. Le Guin (anth 1986) ed Harold Bloom, in which most notes and documentation from the original essays have been unaccountably dropped; Ursula K. Le Guin's The Left Hand of Darkness (anth 1987) ed Bloom. LEHMANN, RUDOLF CHAMBERS

(1856-1929) UK politician, lawyer and writer, involved in the journal Punch 1890-1919 and composing for initial publication there "Mr Punch's" Prize Novels (coll 1892), which includes parodies of H. Rider HAGGARD, Jules VERNE and the future- WAR subgenre. A later volume, The Adventures of Picklock Holes (coll 1901), contains at least 1 sf story in addition to its parodies of Arthur Conan DOYLE. [JC]

LEHR, PAUL

(1930-) US illustrator. After graduation, PL studied illustration at the prestigious Pratt Institute, and sold his first sf painting to Satellite in 1958. Since then he has done hundreds of book-cover paintings as well as covers for ASF, Omni and non-sf magazines such as Saturday Evening Post, Life and Time. Over the 30-plus years PL has been involved with sf his art has become less realistic, and the greys that dominated his early work have been replaced by more vivid colours. His paintings often contain strange, egg-shaped objects, and sometimes his people seem insignificant and symbolic. With the increasing reliance on realism in sf ILLUSTRATION during the 1980s, PL's sf artwork became less in demand from publishers. [JG]

LEHTIMAKI, KONRAD

[r] FINLAND.

LEIBER, FRITZ (REUTER Jr)

(1910-1992) US writer, father of Justin LEIBER. FL majored in psychology and physiology at the University of Chicago, then spent a year at a theological seminary. His subsequent career included periods as an editor (chiefly with Science Digest) and as a drama teacher. He became interested in writing through voluminous correspondence with a college friend, Harry Fischer; it was Fischer who in 1934 suggested the characters of Fafhrd and the Gray Mouser, whose HEROIC-FANTASY adventures were central to FL's career. Both men worked intermittently on embellishments to the saga, as described in detail by FL in his essay "Fafhrd and Me" (included in The Second Book of Fritz Leiber coll 1975) and further discussed in Fafhrd ? Me (coll 1991 chap); Fischer was important to FL as both a friend and an inspiration, and was the model for the Gray Mouser, FL viewing himself as Fafhrd. In 1939 "Two Sought Adventure", the first published story of the sequence and FL's first story, appeared in Unknown; he was still adding to the series half a century later. It comprises Swords and Deviltry (coll 1970), Two Sought Adventure (coll 1957; exp and rev vt Swords Against Death 1970) and Swords in the Mist (coll 1968) - all assembled as The Three Swords (omni 1989) - plus Swords Against Wizardry (coll 1968), The Swords of Lankhmar (1961 Fantastic as "Scylla's Daughter"; exp 1968) and Swords and Ice Magic (coll 1977; with 6 of the 8 stories cut vt Rime Isle 1977) - all assembled as Swords' Masters (omni 1990) - plus The Knight and Knave of Swords (coll 1988). From fairly prosaic beginnings the series

developed into a complex and enjoyable cycle owing little to the standard clichés of its subgenre (for which FL is credited with coining the widely used description SWORD AND SORCERY). The mood varies from sombre introspection to broad comedy, and there is a very wide range of invention. On its original publication, the long story *Ill Met in Lankmar* (1970 in *Swords and Deviltry*; 1990 dos) won both HUGO and NEBULA awards. *The Swords of Lankmar*, which adds a strong element of sophisticated fetishistic sex to its other virtues - as does the book-length title story in *The Knight and Knave of Swords*-has strong claims to be considered the best modern HEROIC-FANTASY novel, as well as FL's own best novel. FL was noted also for his fantasies in modern settings, and was almost certainly the most influential model for the sudden creation in the 1980s of the subgenre of Contemporary (or Urban) Fantasy. FL's examples include: "Smoke Ghost" (1941); *Conjure Wife* (1943 Unknown; assembled in *Witches Three*, omni 1952, ed Fletcher PRATT; as a solo book 1953), a novel of 20th-century witchcraft which has twice been filmed - as *Weird Woman* (1944) and *Burn, Witch, Burn* (1961; vt *Night of the Eagle*) - as well as being adapted for tv; "The Man who Made Friends with Electricity" (1962); and *Our Lady of Darkness* (1977), a subtle and touching Gothic with strong autobiographical elements. Other fantasy tales include "Gonna Roll the Bones" (1967), published in *DANGEROUS VISIONS*, which won a Hugo and a Nebula and later appeared, with other tales of interest, in *The Ghost Light* (coll 1984); in it a compulsive gambler finds himself playing dice with the Devil, the stake being his soul. "Belsen Express" (1975) won both the Lovecraft Award and the August Derleth Award. FL's further awards for fantasy included the 1975 Grand Master of Fantasy (Gandalf) Award and the 1976 Life Achievement Lovecraft Award; the 1981 Grand Master Nebula Award was presented for his work as a whole. He won altogether 6 Hugos (2 for novels), 4 Nebulas and about 20 other awards. FL's first important work of sf was *GATHER, DARKNESS!* (1943 ASF; 1950), in which a religious dictatorship (RELIGION) is overthrown by rebels who disguise their superscience (colourfully, if by far-fetched logic) as witchcraft. *Destiny Times Three* (1945 ASF; 1957) is a neglected ALTERNATE-WORLDS variant. In the early 1950s he became a regular contributor to *GALAXY SCIENCE FICTION*, for which he wrote a number of notable stories, chiefly social SATIRE. Paramount among these is "Coming Attraction" (1950), depicting an unpleasantly decadent future USA. *The Green Millennium* (1953) shows some similar thematic concerns, particularly regarding sexual mores. He then fell silent for four years, through alcoholism (about which he was candid). His return to sf in 1958 was vigorous, his first stories introducing the *Change War* series, built around a TIME-PARADOX war being fought through time and space and ALTERNATE WORLDS by two factions, the "Spiders" and the "Snakes". The sequence comprises *THE BIG TIME* (1958 Gal; 1961 dos) along with most of *The Mind Spider and Other Stories* (coll 1961 dos; rev 1976), this material being variously reassembled as *The Change War* (coll of linked stories 1978; cut vt *Changewar* 1983). *THE BIG TIME*, which takes place entirely in one room (an R ? Place, sited beyond normal realities) is suggestive of a play in prose form, and thus reflects FL's background in theatre; both his parents were Shakespearean actors and his father appeared in many films, and FL himself acted on both stage and screen, including a small part in the Greta Garbo

film *Camille* (1936). *THE BIG TIME* won a Hugo as Best Novel, as did his most ambitious sf work, *THE WANDERER* (1964), a long *DISASTER* novel telling of the havoc caused by the arrival of a strange planet in the Solar System. Its mosaic narrative technique, through which events are observed through a multiplicity of viewpoints, foreshadowed the profusion of such novels and films in the 1970s. FL won a further Hugo for "Ship of Shadows" (1969), a novella first published in a special FL issue of *FSF*, and completed the double of Hugo and Nebula awards for the third time with "Catch that Zeppelin!" (1975), a vivid if inconclusive *PARALLEL-WORLDS* story. Selections of his best short fiction include *THE BEST OF FRITZ LEIBER* (coll 1974 UK), *The Worlds of Fritz Leiber* (coll 1976), *The Ghost Light* (noted above) and *The Leiber Chronicles: Fifty Years of Fritz Leiber* (coll 1990) ed Martin H. GREENBERG. Despite his many awards FL never quite established an identity as an sf writer in the way he had for his fantasy; for this reason his work has sometimes been undervalued. His work reflected his various enthusiasms - cats, chess and the theatre are all recurrent motifs - and beliefs, notably a distaste for sexual repression and hypocrisy; but the variety of his approaches was considerable. His prose is ebullient; its idiosyncrasies occasionally appear mannered, but its baroque and colourful qualities are usually prevented from becoming slapdash by the precision with which he used words, and by the appositeness of his imagery, at least in his fantasies. FL was never quite as comfortable in sf, where a straining for effect is more often noticeable. Many of his sf works, he revealed, were fantasies rewritten when the fantasy market began to contract. By refusing to create an easily recognizable template for his sf and then adhering to it, he may have sacrificed some popularity; in compensation, he was the only sf and fantasy writer of his generation to be still developing and producing his best work in the late 1970s. [MJE/JC] Other works: *Night's Black Agents* (coll 1947; cut vt *Tales from Night's Black Agents* 1961; original text with 2 stories added, exp 1978); *The Sinful Ones* (1950 *Fantastic Adventures* as "You're All Alone"; exp by other hands as title story of the *Universal Giant Edition #5* anth 1953; cut vt as title story of *You're All Alone* coll 1972; text restored 1980); *The Silver Eggheads* (1958 *FSF*; exp 1962), an example of *RECURSIVE SF*; *Shadows with Eyes* (coll 1962); *Ships to the Stars* (coll 1964 dos); *A Pail of Air* (coll 1964); *Tarzan and the Valley of Gold* * (1966), one of only 2 *Tarzan* spin-offs ever authorized by the Edgar Rice BURROUGHS estate (the other being by Joan D. VINGE); *The Night of the Wolf* (coll 1966); *The Secret Songs* (coll 1968 UK); *Night Monsters* (coll 1969 chap dos; exp 1974 UK); *A Specter is Haunting Texas* (1969), discussed more fully under *SPACE HABITATS*; *The Demons of the Upper Air* (coll 1969 chap), poetry; *The Book of Fritz Leiber* (coll 1974); *Heroes and Horrors* (coll 1978); *Sonnets to Jonquil and All* (coll 1978 chap), poetry; *Bazaar of the Bizarre* (coll 1978); *Ship of Shadows* (coll 1979 UK), not to be confused with *Ship of Shadows* (1969 *FSF*; 1989 chap dos), which reprints only the title story; *Ervool* (1980 chap); *The World Fantasy Awards 2* (anth 1980) with Stuart David Schiff; *Riches* ? *The Mystery of the Japanese Clock* (1982 chap), nonfiction; *In the Beginning* (1983 chap); *Quicks around the Zodiac: A Farce* (1983 chap); *Conjure Wife/Our Lady of Darkness* (omni 1991); 2 *Fafhrd and the Gray Mouser* *GRAPHIC-NOVEL* versions by Howard V. CHAYKIN, *Fafhrd and the Gray*

Mouser Book 1 (graph 1991) and Book 2 (graph coll 1991); Kreativiy for Kats and Other Feline Fantasies (coll 1992).About the author: The special FL edition of FSF, July 1969; "The Profession of Science Fiction: XII: Mysterious Islands" by FL in FOUNDATION 11/12 (1977); Fritz Leiber (1980 chap) by Jeff Frane; Fritz Leiber (1983) by Tom Staicar; Fritz Leiber, Sardonic Swordsman: A Working Bibliography (last rev 1990) by Gordon BENSON Jr and Phil STEPHENSEN-PAYNE; Witches of the Mind: A Critical Study of Fritz Leiber (1991) by Bruce Byfield. LEIBER, JUSTIN (FRITZ)

(1938-) US academic and writer, son of Fritz LEIBER. A Professor of Philosophy at the University of Houston, JL has used sf as a medium for speculation in his field of interest, the philosophy of the mind. His first novel, *Beyond Rejection* (1980), which begins the Beyond sequence, deals in considerable detail with the problems associated with transplanting the recorded mind of a man into the body of a woman (who has a prehensile tail). In *Beyond Humanity* (1987) JL contrasts human INTELLIGENCE with those of COMPUTERS and enhanced-intelligence chimpanzees (APES AND CAVEMEN) as humans, computer and chimpanzee cooperate to contact extraterrestrial intelligence. The sequence concludes with *Beyond Gravity* (1988), set in 22nd-century Houston and Oxford. JL has also written a number of academic books on similar themes, including *Can Animals and Machines Be Persons?* (1985), which uses an sf scenario - a legal case between a space-exploration company and a Civil Liberties Union over whether a chimpanzee and a computer used on a space station should be treated as tools or as employees. [TA]Other works: The Saga of the House of Eigin sequence, comprising *The Sword and the Eye* (1984) and *The Sword and the Tower* (1985).

LEIGH, STEPHEN (WALTER)

(1951-) US writer and musician who began publishing sf with "A Rain of Pebbles" for ASF in 1977, and who sometimes releases short stories as Lee Stevens. The first novel of his Neweden sequence - *Slow Fall to Dawn* (1981), *Dance of the Hag* (1983) and *A Quiet of Stone* (1984)-brought him into some prominence through its depiction of the attractive feudal culture obtaining upon the eponymous planet, whose name seemed, initially, only moderately ironic. Later episodes, however, demonstrate the fragility of Neweden mores in a SPACE-OPERA context that dissipates the network of mutual obligations that makes the thieves' guild at the sequence's heart so attractive a vehicle for sf adventures. Further sf novels of interest include: *The Bones of God* (1986), an interplanetary tale pitting a solitary prophet against the oppressive Judeo-Christian RELIGION that dominates Old Earth; *Crystal Memory* (1987), a complex novel in which

problems typical of sf adventures - a female space-freighter pilot attempts to recover her erased memories and to avenge the death of her young son - are placed in a context featuring interestingly depicted MARS colonies, ALIEN incursions, zombies, intrigue and loss; and *The Abraxis Marvel Circus* (1990), a humorous fantasy, choked with variously comic characters and rock musicians, about reviving the dead. SL has written several ties in recent years, and his career has consequently lost some focus. [JC]Other works: *Dr Bones #1: The Secret of the Lona* * (1988); *Isaac Asimov's Robot City: Robots and Aliens #1: The Changeling* * (1989); *The Next Wave #2: Alien Tongue* (1991), including an essay by Rudy RUCKER; volumes in the Byron PREISS package in which Ray BRADBURY "presents" a series of time-travel tales: *Dinosaur World* * (1992), *Dinosaur Planet* * (1993), *Dinosaur Samurai* * (1993) with John J. Miller, and *Dinosaur Warriors* *(1994).

LEIGHTON, EDWARD
G.J. BARRETT.

LEINSTER, MURRAY

Pseudonym under which US writer William Fitzgerald Jenkins (1896-1975) was best known in the sf field, and under which he wrote almost all his work in the genre; exceptions were a few stories in magazines, mainly those in the Bud Gregory series as by William Fitzgerald, and a small number as by Will F. Jenkins. He remained active as an sf writer from 1919, when his first story, "The Runaway Skyscraper", about a building falling backwards through time, was published in *Argosy*, until about 1970. Like most contributors to the pre-WWII US sf PULP MAGAZINES, he published a great deal of material that did not reach book form until after 1945. His first book publication, *Murder Madness* (1931), as its title indicates did not aim directly at the sf market (then still nascent in the USA), though the book is in fact sf. *The Murder of the U.S.A.* (1946; vt *Destroy the U.S.A.* 1950 Canada) as by Will F. Jenkins was again directed as much to the mystery as to the sf market, though its plot (the hero solves the mystery of who dropped 300 A-bombs on US cities) is more sf than locked-room. Because of the pile-up of magazine material, many of ML's post-WWII book publications contained or reworked early stories, and were often rather dated in plotline and character development; ironically, it was at this time that he was publishing his best work in the magazines, stories that competed on equal terms with those by writers 20 years newer to the field. ML's first series was the set of 4 off-beat *Masters of Darkness* or Preston-Hines superscience-blackmail stories contributed to *The Argosy*, 1929-30, and never collected in book form. The more widely known Bud Gregory series comprises the 3 stories in *Out of this World* (coll 1958) and "The Seven Temporary Moons" (1948); all 4 were originally published in TWS. Bud is a hillbilly whose intuitive knack with high technology allows him to solve various superscience problems. Of more interest is the Med Service sequence, *S.O.S. from Three Worlds* (coll 1967), *The Mutant Weapon* (1959 dos), *Doctor to the Stars: Three Novelettes of the Interstellar Medical Service* (coll 1964) and *This World is Taboo* (1961); all but *Doctor to the Stars* were assembled as *The Med Series* (omni 1983). In these stories and novels, Calhoun and the "being" Murgatroyd act

as troubleshooters in various far-flung crises; the tales are robust and adventurous, but rudimentary compared to the inventiveness of James WHITE's Sector General tales (see also MEDICINE). The Joe Kenmore novels - Space Platform (1953), Space Tug (1953), and City on the Moon (1957) - make up a juvenile series about the crisis-ridden first years of the near-future US space effort, told in melodramatic terms that have not worn well. ML's best years as an sf writer were undoubtedly the decade following WWII, a period during which his finest short stories were published, among them "First Contact" (1945), "Doomsday Deferred" (1949) as by Jenkins, "The Lonely Planet" (1949), "If You Was a Moklin" (1951) and "Exploration Team" (1956), which won the 1956 HUGO for Best Novelette and became part of Colonial Survey (1955-6 ASF; fixup 1956; vt Planet Explorer 1957), perhaps his most enjoyable single volume, though his individual short stories are generally superior to his book-length work. When ML did contrive FIXUPS of short material, the result was often disappointing. His first classic story, for instance, "The Mad Planet" (1920), on being incorporated into The Forgotten Planet (1920-53 var mags; fixup 1954), exposed to view implausibilities that may have been tolerable in a 1920 short story but which, 30 years later in book form, failed to convince. His novels, which were frequently unambitious and repetitive, generally stretched beyond their proper span, and seemed written for a less demanding market than his best stories (which appeared in many journals, including ASF and Gal). A good selection of these tales can be found in Monsters and Such (coll 1959); The Best of Murray Leinster (coll 1976 UK) ed Brian Davis is much inferior to The Best of Murray Leinster (coll 1978) ed J.J. PIERCE. The last decade of ML's career boasted numerous publications, but no substantial works were conceived after the mid-1950s - though The Pirates of Zan (1959 dos), a competent but unremarkable space opera, won some praise. In this book, and in almost every full-length title ML published after WWII, the Galaxy serves as a template which scamps and engineers tinker with to their own advantage, and to the advantage of small communities on Earth or elsewhere. "According to the fiction tapes," as ML puts it in The Pirates of Zan, "the colonized worlds of the galaxy vary wildly from one another. In cold and unromantic fact, it isn't so. Space travel is too cheap and sol-type solar systems too numerous to justify the settlement of hostile worlds." It is perhaps revealing that variations, in this quote, are seen as innately hostile. In any case, the ML universe had little room for CONCEPTUAL BREAKTHROUGH, and the similarities in background from one novel to another were sufficiently numerous that his later books made up one loose series. Allied to this template view of the Universe was a deepening political simplicity of view, rather right-wing in orientation (a viewpoint common to many sf writers of his generation), which led to the frequent depiction of cartoon-like confrontations between the USA and underhanded enemies, in the resolving of which means tended to dominate ends. In Timeslip! * (1967) and The Time Tunnel * (1967), based on episodes from the tv series TIME TUNNEL - another ML novel, Time Tunnel (1964), is confusingly unrelated to this series - the past is paradoxically restructured by executive fiat to make life safe for democracy. But the paradox seems unconscious. The high and only superficially simple competence of the stories remains as ML's memorial. In this work he speaks with a directness

to the heart of magazine sf and its readership with a craftsmanship and consistency that warrant the nickname he was given: the Dean of SF.

[JC]Other works: *Fight for Life* (1947 *Startling Stories*; 1949); *The Last Space Ship* (1946-7 TWS; fixup 1949); *Sidewise in Time* (coll 1950); *Conquest of the Stars* 1952 (chap Australia); *The Unknown* (1952 chap Australia); *The Black Galaxy* (1949 *Startling Stories*; 1954); *The Brain-Stealers* (1947 *Startling Stories* as "The Man in the Iron Cap"; 1954 dos); *Gateway to Elsewhere* (1950 *Fantasy Book*; 1952 *Startling Stories* as "Journey to Barkut"; 1954 dos); *Operation: Outer Space* (1954); *The Other Side of Here* (1936 ASF as "The Incredible Invasion"; rev 1955 dos); *War with the Gizmos* (1958); *Four from Planet 5* (1959); *The Monster from Earth's End* (1959); *The Aliens* (coll 1960); *Men into Space* * (1960), based on the tv series; *Twists in Time* (coll 1960); *Creatures of the Abyss* (1961; vt *The Listeners* 1969 UK); *The Wailing Asteroid* (1960); *Operation Terror* (1962); *Talents, Incorporated* (1962); *The Duplicators* (1964 dos); *The Greks Bring Gifts* (1964); *Invaders of Space* (1964); *The Other Side of Nowhere* (1964); *Get Off my World!* (coll 1966); *Space Captain* (1966 dos); *Checkpoint Lambda* (1966); *Miners in the Sky* (1967); *Space Gypsies* (1967); ties based on the tv series *LAND OF THE GIANTS*, comprising *Land of the Giants* * (1968), #2: *The Hot Spot* * (1969) and #3: *Unknown Danger* * (1969); *A Murray Leinster Omnibus* (omni 1968), assembling *Operation Terror*, *Checkpoint Lambda* and *Invaders of Space*; *Last Murray Leinster Interview* (1983 chap) with Ronald Payne. As Editor: *Great Stories of Science Fiction* (anth 1951). About the author: *Murray Leinster (Will F. Jenkins): A Bibliography* (1970 chap) by Mark OWINGS. See also: *ALIENS*; *ALTERNATE WORLDS*; *AMAZING STORIES*; *ASTEROIDS*; *ASTOUNDING SCIENCE-FICTION*; *COLONIZATION OF OTHER WORLDS*; *COMMUNICATIONS*; *CRIME AND PUNISHMENT*; *FASTER THAN LIGHT*; *GREAT AND SMALL*; *HIVE-MINDS*; *INVASION*; *INVISIBILITY*; *LIVING WORLDS*; *LONGEVITY (IN WRITERS AND PUBLICATIONS)*; *MACHINES*; *MOON*; *OUTER PLANETS*; *PARALLEL WORLDS*; *PARASITISM AND SYMBIOSIS*; *SPACE FLIGHT*; *SPACESHIPS*; *TIME PARADOXES*; *TIME TRAVEL*.

LEISURE

The gradual AUTOMATION of industry and the progressive reduction of working hours has already extended the amount of leisure time which citizens of the developed nations have, and most contemporary images of the future assume that everyone will have even more of it in times to come. The majority of people, for whom work is a necessary but unpleasant burden, regard this as a highly desirable outcome; but sociologists and sf writers tend to be more sceptical. UTOPIAN satires like Muriel JAEGER's *The Question Mark* (1926) and Aldous HUXLEY's *BRAVE NEW WORLD* (1932) offer horrified and disapproving visions of the people of the future giving themselves over to frivolous and intellectually vacuous pursuits, all in the worst possible taste. Had Huxley lived to see contemporary tv, *Torremolinos* and Euro-Disney he would undoubtedly have said "I told you so", as he did with regard to far less garish spectacles in *Brave New World Revisited* (coll 1958). GENRE-SF writers, who are themselves part of the entertainment industry, might be expected to look upon leisure with a kinder eye, but for the most part they have not. E.M. FORSTER's censorious

question about what happens when "The Machine Stops" (1909) is echoed even in such pulp melodramas as Miles J. BREUER's "Paradise and Iron" (1930) and Laurence MANNING's and Fletcher PRATT's strikingly vivid "The City of the Living Dead" (1930). Frederik POHL's and C.M. KORNBLUTH's biting SATIRE on consumerism, THE SPACE MERCHANTS (1953), kicked off a whole series of similar sarcastic fantasies, notably Shepherd MEAD's The Big Ball of Wax (1954), Pohl and Kornbluth's Gladiator-at-Law (1955) and Harold LIVINGSTON's The Climacticon (1960). The most thoughtful and carefully focused of these was probably James E. GUNN's The Joy Makers (1954-5; fixup 1961), in which a cult of hedonism gradually takes over the world; it concludes with a vision more refined but every bit as striking as that in Manning's and Pratt's story, in which the vast majority of people live cocooned in life-support systems experiencing nothing but engineered dreams. Tomorrow's World (1956; vt Tomorrow and Tomorrow) by Hunt Collins (Evan HUNTER) is exceptional in defending the supporters of Vicarious Experience against their puritanically inclined opponents, and is one of the few sf stories to assume that the people of the future will sensibly accept the Epicurean dictum that pleasure, despite being the only true end of human experience, ought to be taken in moderation. Other images of technologically supported total escapism are featured in Arthur C. CLARKE's "The Lion of Comarre" (1949), John D. MACDONALD's "Spectator Sport" (1950), John T. SLADEK's "The Happy Breed" (1967) and Mack REYNOLDS's Perchance to Dream (1977) and After Utopia (1977). The majority opinion seems to be that such escapists need to be brought back to reality whether they like it or not, and that those appointed to achieve that end need not be overly scrupulous in so doing. The leisure pursuits traditionally associated with cultural elites inevitably get a better press in sf's images of the future than do those associated with the lower orders; comparison of the works considered in the entries on the ARTS and GAMES AND SPORTS will readily confirm this, but even stories about the finer arts often deal in images of enervated decadence, like those featured in J.G. BALLARD's stories of Vermilion Sands (coll 1971). A great many sf stories propose that sadistic spectator "sports" of the kind which went on in the Roman arena are likely to make a comeback in the future, their lapse into apparent obsolescence being a temporary imposition of censorship rather than a permanent refinement of feeling. Indeed, the current popularity of sf war games (GAMES AND TOYS; GAME-WORLDS; VIRTUAL REALITY) has led to the production of TIES in which entire GALACTIC EMPIRES become writ-large arenas for carefully staged and extraordinarily bloody conflicts. Robert SHECKLEY's neatly satirical stories about sadistic futuristic games, including "Seventh Victim" (1953; filmed as La DECIMA VITTIMA [1965]) and "The Prize of Peril" (1958), were inflated by popular demand into the film-associated melodrama The Tenth Victim * (1966) and ultimately into the series of novels including Victim Prime (1987) and Hunter/Victim (1988), whose narrative dispiritedness might be seen as an ironic comment on the awful absurdity of their saleability. When they are not revisiting the past, sf images of future leisure tend to be firmly anchored in the trends of the present - as witness the recent rash of stories about the Theme Parks of the future, including the series begun by Larry NIVEN and Steven BARNES with Dream Park (1981) as well as Michael CRICHTON's JURASSIC PARK (1991). The extension of the MEDIA

LANDSCAPE to take in mass-produced dreams, as featured in many stories - including Chelsea Quinn YARBRO's *Hyacinths* (1983) and James MORROW's *The Continent of Lies* (1984) - is seen by most writers as a natural extrapolation of the trend towards privacy and subjection to personal whim which led from cinema to tv to the VCR; and stories involving such technologies frequently echo - often calculatedly-contemporary disputes about the uses and alleged abuses of these media. The unfortunate correlates of leisure are, of course, boredom and purposelessness. The threat of boredom is seen by very many sf stories as something so likely to spoil the experience of IMMORTALITY as to make it almost worthless - a contention which is surely breathtaking in its closed-mindedness. Many sf stories similarly argue that, because the use of TECHNOLOGY to supply all our basic needs would rob our lives of a sense of purpose, we would be far better off engaged in a constant struggle for existence. HARD SF has characteristically adopted and adapted the frontier mythology of US history in order to extrapolate the struggle for existence onto a galactic stage, thus ducking the question of excessive leisure altogether, although on occasion hard-sf writers are inclined to take it for granted that time liberated from more vulgar forms of work will naturally be devoted, by all those capable of such intellectual effort, to scientific inquiry. (Indeed, many hard-sf writers seem unable to devise suitably sciencefictional leisure-time activities for their characters. In many books the protagonists seem to entertain themselves either by dabbling in quantum physics or by engaging in sex, with very little - such as reading thrillers or going to the movies - in between.) Aside from four-dimensional chess or a hobby of dabbling in xenoarchaeology, Sf novels which depict in some detail and without disapproval the leisure pursuits of imaginary cultures generally do so in connection with low-tech cultures whose leisure is both limited and evidently purposive; the works of Jack VANCE offer many examples, although the single most elaborate exercise in this vein is Ursula K. LE GUIN's *ALWAYS COMING HOME* (1985). It is arguable that one of the great failures of the sciencefictional imagination has been the inability to envision laudable ways in which the leisured classes of the future might make use of that leisure. Even stories which depict all-powerful immortals successfully keeping boredom at bay generally assume that their projects and methods will be essentially silly, like those of the central characters of Michael MOORCOCK's *Dancers at the End of Time* series (1972-7). Godlike beings in sf usually behave like spoiled children - although perhaps this is not entirely surprising, given that the gods people have actually believed in have mostly behaved in much the same fashion. Perhaps, on the other hand, the concept of "leisure" is implicitly ambiguous; if so, sciencefictional accounts of future leisure can do little else but unpack that ambiguity, exposing its paradoxicality for purposes of lamentation or mockery, according to taste. [BS/DP]

LEITHAUSER, BRAD

(1953-) US poet and novelist whose sf novel, *Hence* (1989), is a near-future FABULATION - itself told as from a point considerably further into the future - in which a boy plays against a COMPUTER for the world chess championship. Style and matter are at times reminiscent of the work

LEM, STANISŁAW

(1921-) Polish writer, critic and polymath, winner of numerous awards including the 1973 Polish State Literary Award. Born in Lwow, he has described his childhood and adolescence charmingly in the autobiographical *Wysoki zamek* ["High Castle"] (1966 Poland). SL's study of medicine was interrupted in WWII by the Nazi occupation, when he worked as a car mechanic and welder; these experiences closely inform his first-written novel (not sf), *Szpital Przemienienia* (1957 Poland; trans William Brand as *Hospital of the Transfiguration* 1988 US). In 1946 he moved to Cracow, received his MD and wrote lyrical verse and essays on scientific methodology until he ran foul of the Soviet state's adulation of the Lamarckian biological theories of T.D. Lysenko (1898-1976) (EVOLUTION; PSEUDO-SCIENCE), and was research assistant in a scientific institute. Another "naturalistic" novel, *Czas nieutracony* ["Time Saved"] (1955), depicts an intellectual finding his way from solitude to sociopolitical meaning; it likewise was written in the 1940s. In the meantime SL had switched to sf; he has published over two dozen books so far, with translations into at least 30 languages and several million copies sold. His early sf novels, *Astronauci* ["The Astronauts"] (1951 Poland) and *Obłok Magellana* ["The Magellan Nebula"] (1955 Poland), are works of a beginner and limited by some of the conventions of "socialist realism", but are still interesting and contain a number of SL's constant themes (the threat of global destruction and militarism; human identity); their UTOPIAN naivety is shaped by the committed humanism characteristic of one axis of his work. His other axis, a black grotesque, appears in *Dzienniki Gwiazdowe* (coll 1957 Poland; gradually exp until by 1971 there were 14 "voyages" and 8 other Ijon Tichy stories; trans in 2 vols, the second of which is an expansion rather than simply a continuation of the first: vol 1 trans Michael KANDEL as *The Star Diaries* 1976 US, vol 2 trans Joel Stern and Maria Swiecicka-Ziemianek as *Memoirs of a Space Traveler: Further Reminiscences of Ijon Tichy* 1982 US), which develops into a parable-like expression. The dozen years after the "Polish October" of 1956 were the golden noon of SL. He published 17 books: 5 sf novels; 10 partly overlapping books of sf short stories including the *Pirx the Pilot* cycle (see below), the "robotic fairy tales" of *Bajki robotow* (coll 1964 Poland) and the *Trurl-Klapaucius* or *Cyberiad* cycle (see below); *Noc księżycowa* (coll 1963 Poland), 1 sf play and 3 tv plays; nonfiction including the "cybernetic sociology" of *Dialogi* (1957 Poland); and the crown of SL's speculation and key to his fiction, *Summa technologiae* (1964 Poland), a breathtakingly brilliant and risky survey of possible social, informational, cybernetic, cosmogonic and biological engineering in Man's game with Nature. *Eden* (1959 Poland; trans Marc E. Heine as *Eden* 1989 US), *SOLARIS* (1961 Poland; trans Joanna Kilmartin and Steve Cox [from French trans] 1970 US), *Niezwycięzony* (1964 Poland; trans Wendayne Ackerman [from German trans] as *The Invincible* 1973 US) and *Opowiesci o pilocie Pirxie* (coll 1968 Poland; trans Louis Tribarne as *Tales of Pirx the Pilot* 1979 US and Louis Tribarne and Magdalena Majcherczyk as *More Tales of Pirx the Pilot* 1982 US) use the mystery of strange beings, events and localities to educate their protagonists into understanding the limitations and

strengths of humanity; SOLARIS was filmed as SOLARIS (1971). These parables for our age are fittingly open-ended: their tenor is that no closed reference system is viable in the age of CYBERNETICS and rival political absolutisms; the protagonists are redeemed by ethical and aesthetic insight rather than by hardware, abstract cognition or power - thence SL's strong, at times oversimplifying but salutary critique of English-language sf in his *Fantastyka i futurologia* (1970 Poland; excerpts trans with other material as coll *Microworlds: Writings on Science Fiction and Fantasy* 1985 US) for abusing the potentials of the new in gimmicks and disguised fairytales. His critique of equally anthropomorphic banalities in Soviet sf was effected by means of his immense popularity and liberating influence there. In between the two leviathans, SL used the experience of Central European intellectuals (ALBANIA, BULGARIA, CZECHOSLOVAKIA, HUNGARY, POLAND, ROMANIA, RUSSIA, SOVIET UNION) to fuse a bright, humanistic hope with a bitter, historical warning. This double vision subverts both the "comic inferno" approach and a deterministic utopianism by juxtaposing the black flickerings of the former with the bright horizons of the latter. Such a style of wit places SL in the contes philosophiques tradition of Jonathan SWIFT and VOLTAIRE. Even his grotesque stories, where no "cruel miracles" redeem the often disgusting limits of Man - such as *Cyberiada* (coll 1965 Poland; trans Kandel as *The Cyberiad* 1974 US), collecting many of the Trurl-Klapaucius stories - are informed by such humanizing fun, black SATIRE or allegorical iconoclasm. Signs of an ideological dead-end, if not exhaustion, showed in about 1968, prompting further formal experimentation and a furious brilliance in SL's writing. In *Glos pana* (1968 Poland; trans Kandel as *His Master's Voice* 1983 US), SL's radical doubts about human self-determination and sovereignty, and therefore about possibilities of COMMUNICATION with other people (not to mention other civilizations), began threatening to distort the fictional form of the novel into solipsist musings, lectures and ideational adventure. His *Master's Voice* may have avoided that by a tour de force of narrative tone, but SL learned some lessons from this near-escape: he turned to a brilliantly innovative series of briefer second-order glosses at the borderland of fiction and treatise. *Doskonala prozina* (coll 1971 Poland; trans Kandel as *A Perfect Vacuum* 1978 US) - mainly composed of reviews of nonexistent books, which simultaneously characterize and persiflage their targets - and *Wielkosc urojona* (coll 1973 Poland; trans Marc E. Heine with 2 pieces from *Golem XIV* [coll 1973] as *Imaginary Magnitude* 1984 US) range from thumbnail sketches of grisly futuristic follies to developments of *Summa technologiae* ideas on "intellectronics" (artificially heightened intelligence) and "phantomatics" (illusory existence). We find the latter in the most grimly hilarious and longest work of this period, a further Ijon Tichy story, "*Ze Wspomnien Ijona Tichego: Kongres Futurologiczny*" "*Kongres Futurologiczny*" (in coll *Bezsennosc* 1971 Poland; trans Kandel as *The Futurological Congress* 1974 US), as well as SL's deeply rooted though atheistic theologico-cosmogonic obsessions. Only in the 1980s, with the awkward but ferocious assault upon human cognitive pretensions contained in *Fiasko* (1986 Poland; trans Kandel as *Fiasco* 1987 US), did he return to novel-length structures. SL's overflowing linguistic inventiveness, matching his controversial ideational plenty, is partly

lost in translation, though the short stories assembled as *Mortal Engines* (coll trans 1977 US), *The Cosmic Carnival of Stanislaw Lem* (coll trans Kandel 1981) and *One Human Minute* (coll trans Catherine S. Leach 1986 US) reveal some of the exuberance of the writing. Nonetheless, SL's peculiar geopolitical vantage-point - enabling him effectively to transcend both cynical pragmatism and abstract utopianism - his stubborn warnings against static "final solutions", his position at the crossroads of major European cultures and ethics, joined to an intense internalization of problems from cybernetics and information theory, his fusion of dilemmas from ultramodern science and the oldest cosmogonic heresies, his dazzling formal virtuosity - all mark him as one of the most significant sf writers of our century, and a distinctive voice in world literature. [DS]Other works: *Czlowiek z Marsa* (1946 Poland, apparently only as episodes in a weekly); *Sezam* ["Sesame"] (coll 1955 Poland); *Sledztwo* (1959 Poland; trans Adele Milch as *The Investigation* 1974 US), ontological mystery rather than sf; *Inwazja z Aldebarana* ["Invasion from Aldebaran"] (coll 1959 Poland); *Powrot s gwiazd* (1961 Poland; trans Barbara Marszal and Frank Simpson as *Return from the Stars* 1980 US); *Pamietnik znaleziony w wannie* (1961 Poland; trans Michael Kandel and Christine Rose as *Memoirs Found in a Bathtub* 1973 US); *Ksiega robotow* ["The Book of Robots"] (coll 1961 Poland); *Wejscie na orbite* ["Getting into Orbit"] (coll 1962 Poland), essays on technology and fiction; *Polowanie* ["The Hunt"] (coll 1965 Poland); *Ratujmy kosmos* (coll 1966 Poland); *Opowiadania* (coll 1969 Poland); *Rozprawy i szkice* (coll 1974 Poland), essays on literature, sf and science; *Katar* (1977 Poland; trans anon as *The Chain of Chance* 1978 UK); *Wisja Lokalna* ["The Scene of the Crime"] (1982), an Ijon Tichy novel; *Prowokacja* ["Provocation"] (1984 Poland); *Pokoj na Ziemi* (1987 Poland; trans Elinor Ford with Michael Kandel as *Peace on Earth* 1994 US); *Ciemnosc i plesn* ["Darkness and Mildew"] (1988 Poland). About the author: "To My Readers" by Stanislaw Lem, *Poland* 5, 1973; "Language and Ethics in Solaris" by Edward Balcerzan, *Science-Fiction Studies: Selected Essays on Science Fiction 1973-1975* (1976) ed R.D. MULLEN and Darko SUVIN; "Stanislaw Lem, Rationalist and Sensualist" by Jerzy Jarzebski, *SCIENCE-FICTION STUDIES* July 1977; "Lem in Review (June 2238)" by Michael KANDEL, *Science-Fiction Studies* Mar 1977; "Stanislaw Lem on Men and Robots" by Kandel, *EXTRAPOLATION* Dec 1972; *New Worlds for Old* (1974) by David KETTERER; "European SF" by Ursula K. LE GUIN, *Science-Fiction Studies* Spring 1974; "The Open-Ended Parables of Stanislaw Lem and SOLARIS" by Darko Suvin, afterword to *SOLARIS* (trans 1970) and rev for 1976 edn; *Stanislaw Lem* (1985) by Richard E. Ziegfeld; special SL issue of *Science Fiction Studies* (vol 13, part 3, whole #4, 1986). See also: ALIENS; ASTRONOMY; AUTOMATION; CONCEPTUAL BREAKTHROUGH; CRITICAL AND HISTORICAL WORKS ABOUT SF; DISCOVERY AND INVENTION; HUMOUR; ISLANDS; LIVING WORLDS; MACHINES; METAPHYSICS; PERCEPTION; PHYSICS; ROBOTS; SCIENCE FICTION WRITERS OF AMERICA; SPACE HABITATS; SPACESHIPS; SUPERNATURAL CREATURES.

L'ENGLE, MADELEINE

Working name of US actress and writer Madeleine L'Engle Camp (1918-), whose first play, *18 Washington Square, South* (1944), was produced in

1940, and who performed on the stage during the early 1940s. Her first novel, *The Small Rain* (1945), and some of its successors are non-genre fictions for adult audiences, but from *And Both Were Young* (1949) most of her work has been for children. She gained immediate and lasting acclaim for *A WRINKLE IN TIME* (1962), which was both her first sf novel and the first volume of the Meg Murray sequence, which includes also *A Wind in the Door* (1973), *A Swiftly Tilting Planet* (1978), *Many Waters* (1986) and *An Acceptable Time* (1989). *A WRINKLE IN TIME*, which won the 1963 Newbery Medal and various later awards, follows the adventures of the children of Dr Murray, a scientist abducted to a distant planet where he is held in thrall to a central COMPUTER intelligence. The tight plot and ample moral scope of the tale make Meg Murray's rescue of her father into one of the more memorable moments in CHILDREN'S SF. Later novels similarly expose the Murray family to adventures and stresses, and develop a telling portrait of complex young people. The Canon Tallis sequence - *The Arm of the Starfish* (1965) and *The Young Unicorns* (1968) - is also of interest. ML'E's singletons include *Dance in the Desert* (1969) and *The Sphinx at Dawn* (coll of linked stories 1982). [JC]

LENGYEL, PETER
[r] HUNGARY.

LEONARD, FRANCOIS
[r] BENELUX.

LEONARD, GEORGE H.
(1921-) US writer whose two sf novels, *Beyond Control* (1975) and *Alien* (1977; vt *Alien Quest* 1981 UK), explore competently - but without much energy - the conventions of the sf-adventure tale; the latter is unconnected with the 1979 film of the same name. GHL is also the author of a classic work of PSEUDO-SCIENCE (or possibly spoof), *Someone Else is on Our Moon* (1976), which explains many features of the lunar landscape in terms of the mighty engineering feats of ALIEN colonists - and, inter alia, characterizes Galileo as a "feisty pioneer". [JC/JGr] See also: UFOS.

LEOPARDI, GIACOMO
[r] ITALY.

LEOURIER, CHRISTIAN
(1948-) French writer, author of *Les montagnes du soleil* (1971; trans anon as *The Mountains of the Sun* 1973 US), an interesting socio-anthropological novel mapping the rediscovery of Earth after a cataclysmic deluge. CL has since written principally for children. [MJ]

LE PAGE, RAND
House name used by CURTIS WARREN for some routine SPACE OPERAS. Authors included William Henry Fleming BIRD, John S. GLASBY, Brian HOLLOWAY, Dennis HUGHES and David O'BRIEN. *Beyond These Suns* (1952) was by Cyril Protheroe. On the wrappers, RLP was described as "the French master of modern science fiction". [SH/JC]

L'EPY, HELIOGENES de
Pseudonym of an unidentified 17th-century UK writer whose *A Voyage into Tartary, Containing a Curious Description of that Country* (1689) depicts,

perhaps for the first time, the discovery of a LOST WORLD. The circular city of Heliopolis in central Asia, inhabited by descendants of ancient Greeks, is a republican UTOPIA which maintains remarkable control over its own advanced technologies; a museum contains relics of flying machines and other devices. [JC]About the author: "L'Epy's A Voyage into Tartary. An Enlightenment Ideal Society" by E.F. BLEILER in *Extrapolation* (summer 1988) records Bleiler's pioneering investigation of this author and his text.

LE QUEUX, WILLIAM (TUFNELL)

(1864-1927) French-born UK journalist and author of over 100 books in a variety of genres, though most of his most popular works were espionage thrillers in the vein of E. Phillips OPPENHEIM - he claimed, unconvincingly, to be a spy himself - and detective novels, often with oriental colouring. He wrote a number of fantasies in the vein of H. Rider HAGGARD, with some immediate but no lasting success, and a number of romances, like *Stolen Souls* (1895), whose generic definition shifts between suspense and the occult. He is best remembered today for his two future- WAR/ INVASION novels: *The Great War in England in 1897* (1894) and *The Invasion of 1910: With a Full Account of the Siege of London* (1906; cut vt *The Invasion 1910*), the latter written with the anon collaboration of H(erbert) W(rigley) Wilson (1866-1940). Both books were serialized in English newspapers before being separately published, and both aroused considerable stir, particularly the latter, with its letter of commendation from the distinguished soldier and statesman Lord Roberts (1832-1914), who shared WLQ's anti-German views (and collaborated with him on two nonfiction dreadful-warning books, *The Great War* [1908] and *Spies of the Kaiser* [1909]). Though both novels were told with every trick WLQ had acquired in his years of journalism, and though the latter is replete with diagrams of the threatened invasion from Germany, the ultimate effect of each book is of a laboured turgidity of effect. A further tale whose title hints at similar contents, *England's Peril* (1899), is fundamentally an espionage thriller. WLQ persistently utilized Germany as the opponent in his work; even after WWI, stories like *The Terror of the Air* (1920) attempt to present a world in constant danger of Teutonic aggression. The sf of WLQ's last years is consistently routine. He is fundamentally a figure of pre-WWI interest. [JC]Other works: *Zoraida: A Romance of the Harem and the Great Sahara* (1895); *The Great White Queen: A Tale of Treasure and Treason* (1896); *The Eye of Istar: A Romance of the Land of No Return* (1897), one of several lost-race novels (LOST WORLDS); *A Madonna of the Music Halls* (1897; vt *A Secret Sin* 1913); *The Veiled Man* (coll 1899); *The Sign of the Seven Sins* (1901); *The Closed Book* (1904); *The Unknown Tomorrow: How the Rich Fared at the Hands of the Poor* (1910); *The House of Whispers* (1910); *The Great God Gold* (1910); *No 70 Berlin* (1915); *The Mystery of the Green Ray* (1915); "Cinders" of Harley Street (coll 1916), featuring a doctor with PSI POWERS; *The Zeppelin Destroyer: Being some Chapters of Secret History* (1916); *The Unbound Book* (1916); *The Bomb-Makers* (1917); *The Rainbow Mystery: Chronicles of a Colour-Criminologist* (coll 1917); *The Little Blue Goddess* (1918); *The Voice from the Void* (1922); *The Gay Triangle* (1922), featuring a car with collapsible wings; *Tracked by Wireless* (1922); *The Broadcast Mystery*

(1925); Double Nought (1927); The Chameleon (1927; vt Poison Shadows 1927 US); The Secret Formula (1928). See also: DYSTOPIAS; WEAPONS.

LERANGIS, PETER

(? -) US writer of a variety of titles, including 3 titles in the Byron PREISS Time Machine sequence - The Amazing Ben Franklin * (1987 chap), The Last of the Dinosaurs * (1988) and Time Machine, Special Edition: World War II Code Breaker * (1989) - a STAR TREK novel, Star Trek IV, the Voyage Home * (1986 chap) (STAR TREK IV: THE VOYAGE HOME), and a Find Your Fate - G.I. Joe tale, The Sultan's Secret * (1988). [JC]

LEROUX, GASTON

(1868-1927) French writer of mystery novels who remains best known for *Le Fantome de l'Opera* (1910; trans Alexander Teixeira de Mattos as *The Phantom of the Opera* 1911 UK), a tale of horror filmed in 1925 (rereleased with sound 1930), 1943, 1962, 1983 (for tv), 1989 and 1990 (for tv) and used as the basis for a highly successful 1986 musical. His first novel of direct genre interest, *La Double Vie de Theophraste Longuet* (1904; trans anon as *The Double Life* 1909 US; new trans Edgar JEPSON as *The Man with the Black Feather* 1912 UK), is a horror fantasy. *Balao* (1912; trans Alexander Teixeira de Mattos 1913 UK) is an sf tale featuring a Missing Link in a detective role (APES AND CAVEMEN). *L'Espouse de Soleil* (1913; trans anon as *The Bride of the Sun* 1915 US) ventures into LOST-WORLD territory. *Le Capitaine Hyx* (1920; trans Hannaford Bennett as *The Amazing Adventures of Carolus Herbert* 1922 US and its sequel *The Veiled Prisoner* (trans Hannaford Bennett 1923 UK), recount the exploits of a mysterious captain and his super-submarine in WWI. *Le Machine a assassiner* (1924; trans anon as *The Machine to Kill* 1935 US) features a ROBOT murderer. GL's use of sf material was opportunistic; a fair estimate of his skill as a novelist almost certainly awaits better translations. [JC] Other works: *Le Fauteuil hante* (1911; trans anon as *The Haunted Chair* 1931 US); *Le Coeur cambriole* (coll 1922; trans Hannaford Bennett as *The Burgled Heart* 1925 UK; vt *The New Terror* 1926 US), which includes some contes cruels; *La Poupee Sanglante* (1924; trans anon as *The Kiss That Killed* 1934 US). .

LERTETH, OBEN

[s] R.L. FANTHORPE.

LESLIE, DESMOND (PETER ARTHUR)

(1921-) UK writer, son of Shane Leslie and best known for co-authoring with George Adamski (1891-1965) the famous UFO book *Flying Saucers have Landed* (1954; exp by Leslie 1970). Of sf interest is *Angels Weep* (1948), a right-wing DYSTOPIA, and *The Amazing Mr Lutterworth* (1958), in which ALIENS avert the destruction of the planet through a device which provides unlimited energy: a Time of Splendour ensues. [JC] Other work: *How Britain Won the Space Race* (1982) with Patrick MOORE, illustrated spoof account of a 19th-century UK space programme. See also: MUSIC.

LESLIE, O.H.

[s] Henry SLESAR.

LESLIE, PETER

(1922-) UK author, journalist and actor, most of whose books have been

borderline-sf ties contributed to tv spin-off series, beginning with 2 titles for the INVADERS sequence: #3: The Night of the Trilobites * (1968) and #4: The Autumn Accelerator * (1969). His tales for the MAN FROM U.N.C.L.E. series included: The Finger in the Sky Affair * (1966), which is #5 in the UK and #23 in the US numbering; The Radioactive Camel Affair * (1966), #7 UK and #7 US; The Diving Dames Affair * (1967), #10 UK and #9 US; The Splintered Sunglasses Affair * (1968), #14 UK and #16 US; and The Unfair Fare Affair * (1968), #17 UK and #18 US. For the GIRL FROM U.N.C.L.E. series he wrote #4: The Cornish Pixie Affair * (1967). [JC/PN]Other work: Hell for Tomorrow (1966).

LESSER, DERWIN
[s] Charles D. HORNIG.

LESSER, MILTON
(1925-1988) US writer, more recently author of many crime novels and a few sf stories under what he eventually took as his real name, Stephen Marlowe. His sf mostly appeared in the ZIFF-DAVIS magazines, including his first story, "All Heroes are Hated" (1950), but he was an active fan for some years before that. His other pseudonyms for sf included Adam CHASE, C.H. Thames (27 times), Christopher Thames (once), and the house name S.M. TENNESHAW; he has also written thrillers as Thames, Andrew Frazer and Jason Ridgway, as well as an Ellery Queen novel, Dead Man's Tale (1961). He wrote the juvenile sf novels Earthbound (1952), The Star Seekers (1953), Stadium Beyond the Stars (1960) and Spacemen Go Home (1961). Novels reprinted from magazines are Recruit for Andromeda (1953 Imagination as "Voyage to Eternity"; exp 1959), Secret of the Black Planet (1952 AMZ as "Secret of the Black Planet" and "Son of the Black Chalice"; fixup 1965), and The Golden Ape (1957 AMZ as "The Quest of the Golden Ape" by Adam Chase and Ivar JORGENSEN; 1959 as by Chase), which latter he wrote in collaboration with Paul W. FAIRMAN. ML also edited the anthology Looking Forward (anth 1953). He abandoned sf in the early 1960s, but some of his recent thrillers, notably the supernatural horror story Translation (1976) and The Valkyrie Encounter (1978), both as Marlowe, have fantastic elements; these are much more effective than his routine action-adventure sf. [BS]See also: GENERATION STARSHIPS.

LESSING, DORIS
(1919-) Persian (Iranian)-born Southern Rhodesian (Zimbabwean) writer, in UK from 1949. She is best known for her searching examinations of the position of women in the world in such novels as The Golden Notebook (1962). The 5 vols of her Children of Violence sequence deal more expansively with the same problems, and The Four-Gated City (1969), which ends the series, moves in its final pages rapidly into the NEAR FUTURE, providing in this fashion a somewhat apocalyptic perspective on the preceding volumes from a viewpoint tinged with Sufi mysticism. This Persian form of Islam, influenced by Indian religions, is centrally concerned with the union of the soul with a Higher Being, in terms which are at times surprisingly literal, invoking a kind of drama of the steps one may take in order to achieve transcendence and the permanence of the soul. Much of DL's later work, especially the Canopus in Argos: Archives sequence, can be seen as exegetical of Sufist precepts. Before and after

the latter series, however, DL wrote four singletons of some sf interest. Briefing for a Descent into Hell (1971) puts a schizophreniac through a mythic journey. The Summer Before the Dark (1973) submits to a similar voyage of external/internal discovery a woman at a point of crisis in her life. In The Memoirs of a Survivor (1974) a woman watches the end of urban civilization from her window, never leaving her room, while a young girl grows up beside her, giving some muted hope for human continuity; it was filmed as MEMOIRS OF A SURVIVOR (1981). The Fifth Child (1988 US) explores with considerable intensity the consequences of giving birth to an infant so destructive of the humans around him that he seems to be a genuine changeling. Far more expansively than these "domestic" novels, the Canopus in Argos: Archives books place the crises of human self-striving into a metaphysically conceived interstellar frame. Each individual novel in the sequence - Re: Colonised Planet 5, Shikasta (1979 US), The Marriage Between Zones Three, Four, and Five (1980 US), The Sirian Experiments (1981 US), The Making of the Representative for Planet 8 (1982 US) and The Sentimental Agents in the Volyen Empire (1983 US) - depicts an exemplary drama of the soul, as inhabitants of various planets, under the distant aegis of the Canopan Empire, attempt to come to terms with sexuality, politics, mortality and transcendence. Shikasta is Earth; the other novels make use of other venues. Everywhere the drive - sometimes thwarted - is towards literal union with universal principles (or God). The series exudes, at times, a piety not normally associated with sf; but at others the perspectives it opens are illuminating. In DL's hands, the instruments of sf become parables. [JC] Other work: No Witchcraft for Sale: Stories and Short Novels (coll 1956 Russia). About the author: Doris Lessing (1983 chap) by Lorna Sage; Doris Lessing (1985) by Mona Knapp; Unexpected Universe of Doris Lessing (1985) by Katherine Fishburn. See also: ADAM AND EVE; DISASTER; MAINSTREAM WRITERS OF SF; MUSIC; WOMEN SF WRITERS.

LESSNER, ERWIN (CHRISTIAN)

(1898-1959) US writer in whose Phantom Victory: The Fourth Reich 1945-1960 (1944) an underground cadre of Nazi officers successfully conspires to conquer the world in the name of a resurgent Germany (HITLER WINS). [JC]

LESTER, ANDREW

Terry GREENHOUGH.

LESTER, EDWARD

(1831-1905) UK clergyman and writer in whose The Siege of Bodike: A Prophecy of Ireland's Future (1886) the separation of Ireland from the ruling UK is prevented in large part by the narrator, in a BALLOON; and the landlords return. [JC]

LESTER, IRVIN

[s] Fletcher PRATT.

L'ESTRANGE, MILES

Pseudonym of an unidentified late-19th-century UK writer whose What We are Coming To (1892) describes in satirical terms its narrator's response to a rationalized England where women have been emancipated. Platonica: A Tale of Other Worlds (1893) rather more interestingly presents its

narrator with an ancient design for a spacecraft which takes him to the eponymous planet, located this side of Mars, where an oddity of the atmosphere permits telescopic perusal of our world as it was 100 years before. [JC]

LETHEM, JONATHAN (ALLEN)

(1964-) US writer who began publishing sf with "The Cave Beneath the Falls" for *Aboriginal* in 1989, and who has published at least 35 stories since, the best known of them probably being "The Happy Man" (1991). His first novel, *Gun, With Occasional Music* (1994), meticulously rehabilitates the noir narrative voice CYBERPUNK writers notoriously acquired from writers like Dashiell Hammett and Raymond Chandler, not only through the exactitude of the stylistic miming involved, but also because the setting, characters and overall ambience of the tale directly homage the earlier masters. The setting is a cloistral NEAR FUTURE California; and the main character (who narrates) is a private eye in a world which has been reduced-rather than liberated-by the recursiveness of a culture near the end of its tether. In the terrified, shrinking world of *Gun, With Occasional Music*, it is socially unacceptable to ask personal questions; drugs like Forgettol continue to reduce the mental spaces available to humanity; a weary dictatorial police state gives thugs in its employ the right to punish citizens by reducing their "karmic points" until they have none, and are sent to deepfreeze; animals and babies, transmogrified by "evolution therapy", walk and talk. The nightmarishness of the book derives, perhaps, from a sense that JL has-as accurately as or Steve ERICKSON-captured the surreal underlying bleakness of any future Hammett or Chandler might actually have imagined. JL's next novel, *Amnesia Moon* (1995), is eagerly awaited. [JC]

LEVACK, DANIEL J.H.

(? -) US bibliographer and critic, author of several author BIBLIOGRAPHIES including *Fantasms: A Bibliography of the Literature of Jack Vance* (1978 chap with Tim UNDERWOOD; rev vt *Fantasms II* 1979 with Underwood and Kurt Cockrum; rev 1979), *PKD: A Philip K. Dick Bibliography* (1981; rev 1988), *Amber Dreams: A Roger Zelazny Bibliography* (1983) and *Dune Master: A Frank Herbert Bibliography* (1988). The leisurely production schedules of some academic firms in the sf field may account for the failure of the Frank HERBERT bibliography or of the Philip K. DICK text in its 1988 "revision" to incorporate posthumous data. [JC]

LEVEN, JEREMY

(1941-) US writer whose two sf novels, *Creator* (1980) and *Satan: His Psychotherapy and Cure by the Unfortunate Dr Seymour Kassler, J.S.P.S.* (1982), both apply a sometimes portentous mainstream sensibility to generic conceits. In the first, the attempted creation of a CLONE to replace a dead wife activates considerable brooding about a variety of issues. In the second a COMPUTER turns out to house the eponymous Principle, invoking thoughts about the mind and the brain. [JC]See also: PSYCHOLOGY; RELIGION.

LEVENE, MALCOLM

(1937-) UK writer whose *Carder's Paradise* (1968) describes the mixed

blessings of a completely automated society whose inhabitants are kept busy by complex entertainments. [JC]

LEVENE, PHILIP

[r] J.L. MORRISSEY.

LEVETT, OSWALD

[r] AUSTRIA.

LEVI, PRIMO

(1919-1987) Italian survivor of Auschwitz, industrial chemist, autobiographer, essayist and writer of fiction: one of the most distinguished men of letters of his generation, winning international fame late in life. In much of his work - e.g., *Il sistema periodica* (1975; trans Raymond Rosenthal as *The Periodic Table* 1984 US) - metaphors drawn from science illuminate subjects normally thought of as literary or historical, in a manner unusual in Europe generally and especially unusual for a writer in ITALY, a country where the gap between the two cultures is especially wide. This is true also of his sf stories, mostly sharp, ironical fables, almost reductionist, that nevertheless often metamorphose into direct affirmations of the values of life in a way unusual in sf anywhere. Many feature a discomfiting exploitation of strange inventions, or a distancing alien perspective on human life. PL's sf stories appear in 2 Italian collections, *Storie naturali* (coll 1966) as by Damiano Malabaila, and *Vizio di forma* (coll 1977), collected together in English as *The Sixth Day and Other Tales* (trans Raymond Rosenthal omni 1990 US). A typical story is "Excellent is the Water", where a gradual increase in the viscosity of water in an Italian river spreads to become a worldwide phenomenon, thereby serving as an image of the torpor and lethargy of the heart's flow in our 20th-century world. [PN]Other works: *La Chiave a Stella* (1978; trans William Weaver as *The Monkey's Wrench* 1986 US; vt *The Wrench* 1987 UK) contains embedded fabular tales. See also: CLONES.

LEVIATHAN

Film (1989). Gordon Co./Filmauro. Dir George P. Cosmatos, starring Peter Weller, Richard Crenna, Amanda Pays. Screenplay David Peoples and Jeb Stuart, based on a story by Peoples. 98 mins. Colour. One of several undersea- ALIEN movies of the period, L most resembles (and improves on) DEEPSTAR SIX (1988), especially in the near-identical finale. In this efficiently scary but routine horror-adventure film, miners at an undersea base discover a sunken Russian submarine which turns out to have been the jettisoned arena for dangerous experiments in genetic manipulation. Two of the miners, infected, mutate into a shapeshifting MONSTER of familiar format, like a downmarket cross between the menaces in ALIEN and the 1982 remake of The THING . Few survive. [PN]See also: MONSTER MOVIES.

LEVIE, REX DEAN

(1937?-) US businessman and writer whose *The Insect Warriors* (1965) deals with problems humans face on a world where they are the size of insects. [JC]

LEVIN, IRA

(1929-) US playwright and novelist whose first book, *A Kiss Before Dying*

(1953), is an extremely impressive chiller. He is best known for the fantasy *Rosemary's Baby* (1967), in which the Devil impregnates a young woman; the book was filmed by Roman Polanski in 1968. IL moved into sf proper with *This Perfect Day* (1970), a DYSTOPIAN view of a cybernetically regimented future (COMPUTERS), and *The Stepford Wives* (1972), which was soon filmed (*The STEPFORD WIVES*), a horrific morality tale about a US suburb whose men have turned their womenfolk into compliant ROBOTS. The last 3 titles were assembled as *Three* by Ira Levin (omni 1985). His most impressive book is perhaps *The Boys from Brazil* (1976), filmed as *The BOYS FROM BRAZIL* , a complex story involving the cloning (CLONES) of cells from Adolf Hitler's body in order to later impregnate a number of women with young Hitlers, whom a Brazilian neo-Nazi group headed by Dr Josef Mengele tries to raise in environments as close as possible to that in which the Fuhrer himself was raised. IL applies to sf themes meticulous style and plotting, along with a certain fascination with the multitude of ways in which women can be violated. [JC]Other works: *Nightmares: Three Great Suspense Novels* (omni 1981), assembling *A Kiss Before Dying*, *Rosemary's Baby* and *The Stepford Wives*; *Sliver* (1991), associational. See also: HISTORY OF SF; SATIRE.

LEVY, DAVID

(1913-) US film executive and writer in whose *The Gods of Foxcroft* (1970) the protagonist awakes from SUSPENDED ANIMATION to find the world of 500 years hence suffering under ecologically disastrous circumstances which have forced humans into cramped habitats; meanwhile, ALIENS are observing us from space. [JC]

LEWIN, LEONARD C(ASE)

(1916-) US writer whose spoof paper, *Report from Iron Mountain: On the Possibility and Desirability of Peace* (1967), presents the conclusions of a US Government commission formed to consider the economic and political threat of world peace. In a tone of cunningly egregious Realpolitik, the commission urges that the world be kept on a continual WAR-footing. *Triage* (1972) is a NEAR-FUTURE novel about growing political oppression in the USA; the government secretly applies the wartime medical practice of triage to social "problems" with the aim of eliminating them - literally (OVERPOPULATION). [JC]

LEWIS, ANTHONY R(ICHARD)

(1941-) US bibliographer who compiled, solo and with others, various indexes for the New England Science Fiction Association, including *The N.E.S.F.A. Index to the Science Fiction Magazines and Original Anthologies*, 1966 (1969 chap), 1967 (1968 chap), 1968 (1969 chap), 1969 (1970 chap), 1966-1970 (1971 chap), 1971-1972 (1973 chap) with Andrew Adams WHYTE, 1973 (1974 chap) with Whyte, 1974 (1975 chap) with Whyte and George Flynn, 1975 (1976 chap) with Whyte, 1976 (1977 chap) with Whyte and Jerry BOYAJIAN, 1977-78 (1983 chap) with Whyte, 1979-1980 (1982 chap) with Whyte, 1981 (1982 chap) with Whyte, 1982 (1983 chap) with Whyte, 1983 (1984 chap) with Whyte, 1984 (1985 chap), 1985 (1986 chap), 1986 (1988 chap) and *The N.E.S.F.A. Index to Short SF*, 1987 (1989 chap). Other works have included *The Best of Astounding* (anth 1978) as by Tony Lewis, *Concordance to Cordwainer Smith* (1984 chap) and, most interestingly, *An*

Annotated Bibliography of Recursive Science Fiction (1990 chap). [JC]See also: BIBLIOGRAPHIES; RECURSIVE SF.

LEWIS, BRIAN

(1929-1978) UK illustrator. A skilled painter whose work dominated UK sf magazine covers in the mid- and late 1950s, BL often showed a strong influence from Surrealists such as Paul Klee (1879-1940) and Max Ernst (1891-1976), perhaps partly mediated through the book-cover illustration of Richard POWERS. This style was encouraged for a time by the editor John CARNELL in Science Fiction Adventures (19 covers), NW (41 covers) and Science Fantasy (21 covers), although some of these were representational, a manner BL adopted when it was required of him. His colours were strong and plain and seemed laid on thickly, an impression few other illustrators give. Besides his work in sf magazines, BL drew COMIC strips in newspapers (for a time he worked on DAN DARE - PILOT OF THE FUTURE) and then went into stop-motion film animation and children's puppet films. [JG/PN]See also: ILLUSTRATION.

LEWIS, CAROLINE

Harold BEGBIE.

LEWIS, CHARLES

Roger DIXON.

LEWIS, C(LIVE) S(TAPLES)

(1898-1963) UK author and critic, born in Belfast; Fellow of Magdalen College, Oxford, 1925-54, and finally Professor of Medieval and Renaissance English at Cambridge. Most of his writing, whether directly or indirectly, was Christian apologetics; this was as true of his autobiography Surprised by Joy (1955) as of the fantasy The Screwtape Letters (1942; exp vt The Screwtape Letters and Screwtape Proposes a Toast 1961), in which an older devil writes letters of advice to a younger, devising various means of winning human souls. In Oxford CSL was friendly with Charles WILLIAMS (another Anglican) and J.R.R. TOLKIEN (a Roman Catholic). All three were Christian moralists with a strong interest in allegory or fantasy, and (with others) they formed a casual society, the Inklings, during whose meetings they read to each other from works in progress. CSL's most popular fiction is for children, and is allegorical FANTASY, although it uses many sf devices, including TIME TRAVEL, other DIMENSIONS and PARALLEL WORLDS. The kingdom of Narnia, to which various human children travel, is ruled by a lion, Aslan, who is "crucified" by a wicked witch. There are many excitingly described perils, most with a direct Christian allegorical application. Widely loved by children as straightforward fantasy, the series is: The Lion, the Witch and the Wardrobe (1950), Prince Caspian (1951), The Voyage of the "Dawn Treader" (1952), The Silver Chair (1953), The Horse and his Boy (1954), The Magician's Nephew (1955), which comes first in terms of the internal chronology, and The Last Battle (1956); omnibuses include Prince Caspian ? The Voyage of the Dawn Treader (omni 1990) and Tales of Narnia: The Silver Chair ? Great Divorce (1945 chap), a minor allegory about Heaven and Hell, and Till We Have Faces (1956), a dark retelling of the myth of Cupid and

Psyche which some of his admirers consider his best work. CSL's primary contribution to sf proper is the Cosmic Trilogy (or Ransom Trilogy) about the linguist Dr Ransom, who like Christ is at one point offered as a ransom for mankind: *OUT OF THE SILENT PLANET* (1938), *Perelandra* (1943; vt *Voyage to Venus* 1953), and *That Hideous Strength* (1945; cut 1955; cut version vt *The Tortured Planet* 1958 US). The first two novels are *PLANETARY ROMANCES* with elements of medieval mythology. Each planet is seen as having a tutelary spirit; those of the other planets are both good and accessible, while that of Earth is fallen, twisted and not known directly by most humans. These two books are powerfully imagined, although their scientific content is intermittently absurd. The effect of lesser *GRAVITY* on Martian plant and animal life is rendered with great economy and vividness, as is Ransom's first sight of the water world of Venus, a rich exercise in *PERCEPTION*; in a passage as purely evocative of a sense of alien wonder as anything in sf, Ransom's human eyes cannot at first make sense of the strangeness about him. The religious allegory of *Perelandra*, however, in which an evil *SCIENTIST* plays Satanic tempter to the female ruler of Venus, a new Eve, is deeply conservative and also - in its courtly, romantic (and some may think dehumanizing) view of womanhood - sexist. Lewis's ideology of gender is spelled out in detail in a number of essays and in the critical book *A Preface to Paradise Lost* (1942), which can be seen as a template for *Perelandra*. The third volume, *That Hideous Strength*, is set on contemporary Earth, and is more directly occult in its genre machinery than either of its predecessors. The fury of CSL's attack on scientific "humanism" or "scientism" (science directed towards purely worldly ends) is very nearly unbalanced, and leads to grossly melodramatic caricature of scientists and government-supported research units in general, and of H.G. WELLS in particular, here grotesquely envisaged as a vulgar cockney journalist, Jules. The book's attack on government indifference to *ECOLOGY* won it a new audience in the late 1960s. CSL's attitude towards any form of modernism was neatly encapsulated by a remark he made during a lecture on medieval poetry in 1938: "And then the Renaissance came and spoiled everything." The three books are collected in *The Cosmic Trilogy* (omni 1990). Some of CSL's minor essays in and about sf, including a transcript of a talk with Brian W. ALDISS and Kingsley AMIS, can be found in the posthumous *Of Other Worlds* (coll 1966) ed Walter Hooper, which includes 2 stories originally published in *FSF*. A later posthumous work is *The Dark Tower and Other Stories* (coll 1977) ed Hooper. It has been strongly suggested by Kathryn Lindskoog (1934-) in *The C.S. Lewis Hoax* (1988) that the Reverend Hooper - CSL's secretary for only one month - forged various items of posthumously published CSL material included in *The Dark Tower*, a charge which has been strenuously denied. Lindskoog offered a vigorous counter-rebuttal in "The Dark Scandal: Science Fiction Forgery" (1992 *Quantum* #42), but in that year it was revealed that she herself had been forging letters to do with the Hooper issue - indeed, she admitted as much, though she described her 14 forged letters as a lighthearted "prank". What there can be no doubt about is that the works assembled by Hooper have affected readers as being both sexually poisonous and egregiously amateur. [PN] Other works: *Dymer* (chap 1926), a narrative fantastic poem as by Clive Hamilton; *The Pilgrim's Regress: An Allegorical*

Apology for Christianity, Reason and Romanticism (1933; rev 1943); On Stories, and Other Essays in Literature (coll 1982; vt Of This and Other Worlds 1984); Boxen: The Imaginary World of the Young C.S. Lewis (1985).As Editor: Essays Presented to Charles Williams (anth 1947), including the influential "On Fairy-Stories" by Tolkien.About the author: About 50 book-length studies of CSL's life and work exist, perhaps the most distinguished biography being C.S. Lewis: A Biography (1990) by A.N. Wilson. Further biographical material appear in Shadowlands: The Story of C.S. Lewis and Joy Davidman (1985) by Brian Sibley, based on Bill Nicholson's tv drama Shadowlands, which was also a successful stage play. This was in turn filmed as Shadowlands (1993), dir Richard Attenborough, screenplay by Nicholson, with Anthony Hopkins as CSL and Debra Winger as Joy. Other studies include: Shadows of Imagination: The Fantasies of C.S. Lewis, J.R.R. Tolkien and Charles Williams (anth 1969; exp 1979) ed Mark R. HILLEGAS, which contains an entertaining and passionate attack on CSL by the Marxist biologist and author J.B.S. HALDANE; The Longing for a Form: Essays on the Fiction of C.S. Lewis (coll 1977) ed Peter J. Schakel; The Literary Legacy of C.S. Lewis (1979) by Chad Walsh; C.S. Lewis: His Literary Achievement (1987) by C.N. MANLOVE. See also: ALIENS; ANTI-INTELLECTUALISM IN SF; CHILDREN'S SF; CONCEPTUAL BREAKTHROUGH; ESCHATOLOGY; FANTASTIC VOYAGES; GODS AND DEMONS; HORROR IN SF; ISLANDS; LIFE ON OTHER WORLDS; LINGUISTICS; LIVING WORLDS; The MAGAZINE OF FANTASY AND SCIENCE FICTION ; MAGIC; MAINSTREAM WRITERS OF SF; MARS; MESSIAHS; MYTHOLOGY; RELIGION; SOCIAL DARWINISM; VENUS.

LEWIS, IRWIN

(1916-) US writer who began publishing sf with "To Invade New York" for ASF in 1963. This story's basic idea was incorporated into his first novel, The Day They Invaded New York (1964), in which invading ALIENS confuse New Yorkers by fouling the transportation systems of the great city. A second novel, The Day New York Trembled (1967), creates its chaos through a pain-relieving drug and its unexpected consequences. [JC]

LEWIS, OSCAR

(1893-1992) US editor and writer whose ALTERNATE-WORLD novel, The Lost Years (1951), depicts the last years of Abraham Lincoln in a world where he was never assassinated. [JC]

LEWIS, (ERNEST MICHAEL) ROY

(1913-) UK novelist and journalist, editor of New Commonwealth 1953-4, later with the Economist and The Times, and the author of several political/sociological studies. His sf novel, What We Did to Father (1960; vt The Evolution Man 1963; vt Once Upon an Ice Age 1979; vt The Evolution Man; or, How I Ate my Father 1992), amusingly concentrates human cultural EVOLUTION during the Pleistocene into the hands of one man, the narrator's father, all of whose discoveries are seen in terms of their extrapolated effects. Not surprisingly, the parricide which ends the book is nothing if not proto-neo-Freudian. The Extraordinary Reign of King Ludd: An Historical Tease (1990) is an ALTERNATE WORLD story, a utopian SATIRE in which Queen Victoria abdicates in 1849 and International Socialism triumphs. A Walk

with Mr Gladstone (1991 chap) is a gaslight romance featuring the UK prime minister and other characters, some historical, some RECURSIVE. [JC]See also: ORIGIN OF MAN.

LEWIS, (HARRY) SINCLAIR

(1885-1951) US writer, highly esteemed in the 1920s and 1930s for such novels as *Main Street* (1920) and *Babbitt* (1922) and first US winner of the Nobel Prize for Literature (1930), but with much diminished reputation today. His first novel, *Hike and the Aeroplane* (1912) as by Tom Graham, is a juvenile centred on a futuristic 200mph (320kph) aircraft; *Arrowsmith* (1925) is not so much sf as fiction about science, contrasting the idealism of the research SCIENTIST with the avarice and greed of the medical profession in general. SL's sf novel, *It Can't Happen Here* (1935), warns of how a Nazi-like regime could come to power in the USA. SL pays little attention to the nature of political institutions in this book, but that is not to say that he is guilty of political naivety (POLITICS): his analysis of how fascist regimes can come to power largely through the "little man's" apathy and perceived powerlessness is a potent example of the dreadful-warning tale. His NEAR-FUTURE scenario contrasts interestingly with Gordon EKLUND's very similar portrait of 1930s authoritarianism in *All Times Possible* (1974), though in the latter case there is an ALTERNATE-WORLDS framework. [JC]

LEWIS, (PERCY) WYNDHAM

(1884-1957) UK writer and painter, known in the latter capacity as the instigator of Vorticism. His illustrations for Naomi MITCHISON's *Beyond This Limit* (1935 chap) constitute a co-creation of the book, which she acknowledged. As an author, he was responsible for determinedly Modernist manifestos such as *The Caliph's Design: Architects! Where is Your Vortex?* (1919 chap) and novels such as *The Apes of God* (1930). Of particular sf interest is *The Human Age*, a trilogy comprising *The Childermass* (1928; rev 1956), *Monstre Gai* and *Malign Fiesta*, the two latter novels being first published together as *The Human Age: Book Two Monstre Gai, Book Three Malign Fiesta* (1955). Like Philip Jose FARMER's *Riverworld* series, though with greater impact, *The Human Age* depicts the posthumous existence of various characters. Pulley and Satters, the two freshly deceased protagonists of *The Childermass*, observe and join in the jousting, linguistic and intellectual, that surrounds the Bailiff, a sort of doorkeeper who decides the eligibility of applicants to the Magnetic City, and who, in *Monstre Gai*, takes them into the Third City, a DYSTOPIA based on the post-WWII UK and its Welfare State. Finding life difficult there, they all go on to Matapolis in *Malign Fiesta*, but Matapolis is Hell, and punishments abound; there is a sense of suffocating evil. A fourth volume, *The Trial of Man*, in which the two protagonists were to be transported to Heaven, remained unwritten. The arduousness of *The Childermass*, a major 20th-century novel, has kept many readers from its much more clear-cut sequels. WL is much less read than read about, a situation to be deplored. [JC]See also: ROBERT HALE LIMITED.

LEWITT, S.N.

Working name of US writer Shariann Lewitt (1954-); the N. stands for "Nothing". She began publishing sf with "St Joey the Action" in *Perpetual*

Light (anth 1982) ed Alan Ryan. After First and Final Rites (1984), a fantasy novel published as by Shariann Lewitt, she released the first of the military SPACE OPERAS with which she soon became identified: White Wing (1985) with Susan M. SHWARTZ, writing together as Gordon Kendall. Angel at Apogee (1987), her first book as SNL and perhaps her best, features a complicated (at times congested) PLANETARY-ROMANCE plot in which much fighting co-exists with the author's punk sensibility; it tells the story of a female pilot who must come to terms with the two submerged races which revolt against her father's hegemony over the planet in question. Other novels which similarly stretch the conventions of military sf include Cyberstealth (1989) - and its sequel Dancing Vac (1991) - and Blind Justice (1991). Her ties in the U.S.S.A. SHARED-WORLD enterprise, U. S.S.A. Book 2 * (1987) and Book 4 * (1987), are of less interest, but Cybernetic Jungle (1992), set in a near-future CYBERPUNK Brazil, is a complex (although perhaps not entirely original) tale, and Songs of Chaos (1993) provides something of the same mix, though this tale of a "normal" human in a population otherwise modified through GENETIC ENGINEERING moves eventually into interstellar space. [JC]

LEY, WILLY

(1906-1969) German-born scientist and scientific writer who emigrated to the USA in 1935. In Germany he had been part of a small group which, early on, had believed in the potential of rocket propulsion (some went on to become famous for the construction of the V2). His first book was Die Fahrt ins Weltall ["Journey into Space"] (1926); his second, Die Moglichkeit der Weltraumfahrt ["The Possibility of Interplanetary Travel"] (1928), was to be one of the inspirations behind the film (and book) Die FRAU IM MOND (1929; vt The Girl in the Moon). In the USA his well researched, precise science articles became a notable feature of the SF MAGAZINES, especially ASTOUNDING SCIENCE-FICTION (from 1937) and AMAZING STORIES (from 1940). He became Science Editor of GALAXY SCIENCE FICTION in Sep 1952, having in March of that year begun there a science column which would last until his death. During the brief period when science-fact articles were a HUGO category, he received 2. He wrote 3 sf stories as Robert Willey. WL was also a prolific author of books on science, especially on ROCKETS and SPACE FLIGHT. Perhaps his best-known (and certainly most beautiful) book was The Conquest of Space (1949), with splendid illustrations, many in colour, by Chesley BONESTELL; it won the nonfiction category of the INTERNATIONAL FANTASY AWARD in 1951. Lands Beyond (1952) with L. Sprague DE CAMP, a historical account of strange explorations and discoveries, won the same award in 1953. Of the science-fact writers intimately connected with GENRE SF, only De Camp, Arthur C. CLARKE and Isaac ASIMOV could rival WL. One of the Moon's craters is named in his honour. [PN]Other works (all nonfiction): The Lungfish and the Unicorn (1941; rev vt The Lungfish, the Dodo and the Unicorn 1948); The Days of Creation (1941; rev 1952); Shells and Shooting (1942); Rockets (1944; rev vt Rockets and Space Travel 1947; rev vt Rockets, Missiles and Space Travel 1951; rev 1957; rev vt Rockets, Missiles and Men in Space 1968); Dragons in Amber (1951); Engineer's Dreams (1954); Salamanders and Other Wonders (1955); The Exploration of Mars (1956; vt Project Mars 1962 UK) with Wernher von Braun (1912-1977),

illus Bonestell; Satellites, Rockets and Outer Space (1958; rev 1962); Space Stations (1958); Space Travel (1958); Exotic Zoology (1959) featuring rearranged selections from his previous books on natural history; Watchers of the Skies (1963); Beyond the Solar System (1964) illus Bonestell; Missiles, Moonprobes and Megaparsecs (1964); Ranger to the Moon (1965); On Earth and in the Sky (coll 1967); Another Look at Atlantis (coll 1969); The Drifting Continents (1969); Events in Space (1969); Gas Giants: The Largest Planets (1969); Visitors from Afar: The Comets (1969). See also: SPACE HABITATS; SUN.

LEYDENFROST, A(LEXANDER)

(1889-1961) US illustrator born in Hungary, where he lived until he was 34; his father was a Dutch illustrator. Although forgotten by most fans today, AL was one of the best sf artists of the 1940s, particularly when elements of fantasy or horror were required. His often grotesque, heavily shadowed and hideous forms sprawled across the pages of such magazines as Planet Stories, Super Science Stories, Astonishing Stories and Famous Fantastic Mysteries. While AL's black-and-white ILLUSTRATIONS were strong and dynamic with expressive lines and stark contrasts, his colour work, which included 2 covers for Planet Stories, was strained and awkward. In the 1920s and 1930s he had worked as an interior designer and commercial artist, and many of his later illustrations were for the "slicks", notably Esquire and Life. His sons Bob and Harry both briefly illustrated for Planet Stories in the mid-1940s. [JG/PN]

L5

LAGRANGE POINT.

LIBERTARIAN SF

A political movement (POLITICS) originating in and largely confined to the USA, libertarianism is a form of anarchism - or "minarchism", the desire for an extremely limited state - which emphasizes (nonviolent) competition rather than the voluntary cooperation proposed by the older strand of anarchist thinking, as exemplified by the writings of such theorists as Peter Kropotkin (1842-1921) or, in the sf field, by Ursula K. LE GUIN's The Dispossessed (1974). The libertarian branch is generally characterized as a "right-wing" type of anarchism (in the sense that the [traditional] anarcho-syndicalists are "left-wing") through the premise that voluntarily entered contracts are the only form of social interaction that can be literally enforced (as opposed to, for example, state taxation as a way of funding a democratically elected government). A common libertarian assumption is that, in the absence of government intervention, the free market will bring about almost unlimited growth in available technology and personal wealth, thus solving any problems of human poverty. These views are frequently associated with a belief in "positive thinking" and a fundamental OPTIMISM about human potential. Uniquely among political movements, many of libertarianism's most influential texts have been by sf writers. Books from both inside and outside the genre which strongly affected the early development of the movement include Ayn RAND's Atlas Shrugged (1957), most of the early works of Robert A. HEINLEIN (up to, and culminating in, THE MOON IS A HARSH MISTRESS [1966]) and, to a lesser extent, C.M. KORNBLUTH's The Syndic (1953). These works could be

said to be "proto-libertarian" in nature - a description which applies particularly to Rand, founder of the allied Objectivist philosophy. Explicitly libertarian fictions, with their characteristically detailed alternative societies and economic systems, did not begin to appear until the 1970s, with the publication of J. Neil SCHULMAN's *Alongside Night* (1979) and the *Illuminatus!* trilogy (1975) by Robert SHEA and Robert Anton WILSON. This trilogy - along with associated texts such as the Schrodinger's Cat books from 1981 - probably represents the best of libertarian sf. Other recent novels of significance have been F. Paul WILSON's *An Enemy of the State* (1980) and the long series of mildly comic adventures by L. Neil SMITH beginning with *The Probability Broach* (1980). Authors currently writing from a libertarian perspective include Melinda SNODGRASS (the *Circuit* trilogy), James P. HOGAN (notably in *Voyage from Yesteryear* [1982]), Victor KOMAN, Brad LINAWEAVER, Victor MILAN, Jerry POURNELLE and Vernor VINCE. The Prometheus and Prometheus Hall of Fame trophies (AWARDS) are given annually by the Libertarian Futurist Society for, respectively, the best libertarian novel of the year and the past novel most worth retrospective attention. While nonsympathizers may be repelled by libertarian sf's frequent concentration on adventure rather than character, its sometimes casual attitude towards violence, and its loose association with the principles of SOCIAL DARWINISM, the libertarian writers themselves might argue that they have made a genuine and deep-felt commitment to their vision of human freedom. It seems likely that the influence of the movement within sf will grow. [NT]

LIBRARIES OF SF COLLECTIONS.

LICHTENBERG, JACQUELINE

(1942-) US writer who began publishing sf with "Operation High Time" for *Worlds of If* in 1969, but soon concentrated on fan fiction set in the OPEN UNIVERSE permitted by the owners of STAR TREK; *Star Trek Lives!* (1975) with Sondra MARSHAK and Joan Winston is a famous nonfiction description of the early days of Star Trek fandom. Her first book was *House of Zeor* (1974), the initial volume of the Sime/Gen sequence, also an open-universe series, which continued with *Unto Zeor*, *Forever* (1978), *First Channel* (1980) with Jean LORRAH, *Mahogany Trinrose* (1981), *Channel's Destiny* (1982) with Lorrhah, *RenSime* (1984) and *Zelerod's Doom* (1986) with Lorrhah. The series is set 1000 years after a mutation has split the human race into Gens and Simes; the latter survive by sucking life force ("selyn") from the former, a process that is fatal unless effected through a specially mutated Sime called a Channel. *First Channel* and *Channel's Destiny* describe the first appearance of Channels in a society which has been reduced to near-barbarism by undeclared war between the two subspecies. *House of Zeor* and later volumes (in terms of internal chronology) follow the gradual evolution of a compromise, and move toward a sense that the two subspecies together may form a whole greater than the sum of the parts. The considerable success of the series may be partially due to the sexual connotations of the Sime/Gen relationship, particularly the Simes' use of remarkably phallic tentacles to (sometimes forcibly) acquire selyn. A second sequence, the *Molt Brothers* series - *Molt Brother*

(1982) and *City of a Million Legends* (1985) - deals with relationships between humans and members of a reptilian species (the Kren) who must choose special companions to guard them when they moult. The Dushau trilogy - *Dushau* (1985), *Farfetch* (1985) and *Outreach* (1986) - tells the story of a rebellion against a repressive galactic empire by the human heroine and a group of alien empaths who establish rapport with planetary ecologies. Although JL's prose is sometimes undistinguished and her backgrounds are routine, she has acquired many dedicated readers through writing about intensely emotional cross-species relationships based on mutual affection and need. [NT] Other works: *Those of My Blood* (1988) and its sequel, *Dreamspy* (1989). See also: ECOLOGY.

LIDDELL, C.H.
[s] Henry KUTTNER.

LIEBERMAN, ROBERT (HOWARD)
(1941-) US writer who worked initially as a teacher of mathematics and physics at university level until becoming a full-time writer in 1979. His third novel, *Baby* (1981), tells of the consequences when an elderly spinster gives virgin birth to a child with a beautiful singing voice. *Perfect People* (1986) sets its post-holocaust DYSTOPIA in an underground city. [JC]

LIFE AFTER DEATH
ESCHATOLOGY; REINCARNATION.

LIFEFORCE
Film (1985). Cannon. Dir Tobe Hooper, starring Steve Railsback, Peter Firth, Frank Finlay, Mathilda May, Patrick Stewart. Screenplay Dan O'Bannon, Don Jakoby, based on *The Space Vampires* (1976) by Colin WILSON. 101 mins. Colour. Astronauts exploring Halley's Comet discover three humanoid ALIEN bodies in suspended animation in crystal containers in a derelict alien spacecraft, and recover them. All but one of the astronauts die; the strange bodies awaken back in London, and prove to be shapeshifting vampiric lifeforms which, by sucking the lifeforce from people, turn them into withered zombies who themselves can pass on the zombie infection. Soon London becomes a zombie city. The narrative borders on incoherence, non sequiturs abound, and the film is a melodramatic travesty, especially the performance of Finlay as a "thanatologist" (student of death). And yet it has its virtues. John Dykstra, famous for his work in *STAR WARS* (1977), produces arresting special effects, and Hooper, best known for *The Texas Chainsaw Massacre* (1974), directs with an intensity verging on the hysterical. The film, though a mess (partly through being based on Wilson's heavily philosophical but muddled novel), is original and, despite all the zombies, avoids cliché. May's nude performance as the female alien is striking. [PN]

LIFE ON OTHER WORLDS
Early interplanetary travellers invariably discovered worlds which were markedly akin to Earth. Without a theory of EVOLUTION for a guide, let alone any but the most primitive awareness of ECOLOGY, the imaginative creation of other-worldly life was inevitably a haphazard and arbitrary process. One notable exception is Johannes KEPLER's attempt to imagine

lunar life in the last pages of *Somnium* (1634). There is little in most other pre-20th-century accounts to distinguish other worlds from the strange Earthly lands featured in many travellers' tales and romances (ANTHROPOLOGY; FANTASTIC VOYAGES; LOST WORLDS). Camille FLAMMARION was the first writer to apply Lamarckian and Darwinian ideas to the construction of hypothetical ALIEN worlds, in *Les mondes imaginaires et les mondes reels* (1864; trans as *Real and Imaginary Worlds* 1865 US) and *Lumen* (1872; exp 1887); and his later romance of other-worldly reincarnation, *Urania* (1890), offers a description, albeit relatively undetailed, of the Martian biosphere. Flammarion's contemporary, C.I. DEFONTENAY, gave a comprehensive description of life on another world in *Star, ou Psi de Cassiopee* (1854; trans as *Star* 1975 US), but biological speculation was muted. Most late-19th-century interplanetary romances similarly feature pseudo-human races and are vehicles for political and sociological rather than biological hypothesis. Exotic milieux are used merely to provide local colour for interplanetary tourists, as in George GRIFFITH's *A Honeymoon in Space* (1901). Edgar FAWCETT's *The Ghost of Guy Thyrlé* (1895) takes some trouble to convey an impression of the multifariousness of life on other worlds, but does not pause for detailed description. Even H.G. WELLS, a writer whose biological training qualified him to take on the job of designing an alien life-system, shirked the task; the Selenite society in *THE FIRST MEN IN THE MOON* (1901) is given only the most cursory supportive ECOLOGY. Wells's French contemporary J.H. ROSNY aine was similarly shy until 1922, when he included a fairly elaborate description of an alien life-system in his LOST-WORLD story *L'etonnant voyage de Hareton Ironcastle* (1922; rewritten rather than trans by Philip Jose FARMER as *Ironcastle*, 1976). The favourite abode of other-worldly life in early sf was MARS, and an approximate consensus image of the Martian biosphere slowly grew up, much encouraged by Mars as the *Abode of Life* (1908) by the eccentric US astronomer Percival Lowell (1855-1916). The red deserts and the canals became CLICHES but, whether Mars was seen as a decadent world or as a primitive one, its biosphere tended to be somewhat stripped-down. A lush Mars is featured in Edwin Lester ARNOLD's daydream fantasy *Lieut. Gullivar Jones: His Vacation* (1905; vt *Gulliver of Mars*), the first of many novels to use the red planet as a backcloth for a swashbuckling adventure story, but Arnold and his successor in this vein, Edgar Rice BURROUGHS, were understandably uninterested in serious biosphere-design. A similar blithe disregard for matters of rational plausibility is exhibited not only by the great legion of Burroughs imitators - Otis Adelbert KLINE, Ralph Milne FARLEY, J.U. GIESY, Lin CARTER, Gardner F. FOX, Alan Burt Akers (Kenneth BULMER) et al. - but also by less derivative sf writers who adapted the underlying philosophy to their own purposes. Leigh BRACKETT, Ray BRADBURY and C.L. MOORE have helped to maintain a calculatedly nonrealistic image of Mars long beyond its natural lifespan, and Bradbury's curious amalgam of impossible romanticism and heavy nostalgia, exhibited in *THE MARTIAN CHRONICLES* (coll 1950; vt *The Silver Locusts*), remains so powerful that it still affects contemporary works like Ian MCDONALD's *Desolation Road* (1988). Indeed, the influence of this romantic image has been so great that it has had quite a marked influence upon supposedly realistic treatments of the planet like

Arthur C. CLARKE's *The Sands of Mars* (1951) and James BLISH's *Welcome to Mars* (1967). Some early GENRE-SF writers did make an effort to introduce more variety and a greater degree of plausibility into their accounts of extraterrestrial life. Laurence MANNING's "The Wreck of the Asteroid" (1932), Jack WILLIAMSON's "The Moon Era" (1932) and Leslie F. STONE's "The Hell Planet" (1932) all show enterprise in this regard, but the story most remembered today as a crucial turning-point in the sophistication of other-worldly melodrama is "A Martian Odyssey" (1934) by Stanley G. WEINBAUM. Weinbaum went on to write a whole series of adventure stories set against the backgrounds of various weird alien ecologies, but no one seemed able to take up where he left off. John W. CAMPBELL Jr's *Penton and Blake* series (1936-8; fixup as *The Planetees* 1966) is imitative of Weinbaum but much weaker. In 1939 Clifford D. SIMAK began a series intended to deal in a realistic manner with conditions on each of the planets in turn; of the 4 stories he completed the last, "Tools" (1942), is the most notable. Eric Frank RUSSELL, in the course of his own series of exploration stories-collected in *Men, Martians, and Machines* (coll of linked stories 1956) - produced the memorable "Symbiotica" (1944), but did little more in this line. Outside genre sf, very few writers tackled the problem of describing life on worlds unlike Earth. Olaf STAPLEDON's *STAR MAKER* (1937) is admirably wide-ranging but short on detail, save for one long description of a very Earthlike world. The fullest descriptions of other-worldly life offered by non-genre writers are to be found, oddly enough, in allegories inspired by the religious imagination: David LINDSAY's *A VOYAGE TO ARCTURUS* (1920) and C.S. LEWIS's *OUT OF THE SILENT PLANET* (1938) and *Perelandra* (1943; vt *Voyage to Venus*). The sophistication of post-WWII sf encouraged attempts to tackle the problem of constructing strange alien life-systems more realistically. "Grandpa" (1955) by James H. SCHMITZ is a notable study of a complex marine lifecycle on an Earth-type planet. Conscientious attempts to design ecologies for unearthly physical circumstances were regularly made by Hal CLEMENT, most notably in *MISSION OF GRAVITY* (1953 ASF; 1954), *Cycle of Fire* (1957) and *Close to Critical* (1958 ASF; 1964), and by Poul ANDERSON, especially in "Call me Joe" (1957), *War of the Wing-Men* (1958; vt *The Man who Counts*) and *Three Worlds to Conquer* (1964). Anderson also produced a nonfiction work, *Is There Life on Other Worlds?* (1963), an early popularization of the speculative science of XENO BIOLOGY - the study of extraterrestrial life. Isaac ASIMOV wrote essays on this subject, and one of its leading exponents, Carl SAGAN, has also written sf. One of the most intriguing nonfictions in the field is *Extraterrestrial Encounter* (1979) by Chris BOYCE, another sf writer. One writer of the post-WWII period whose name is particularly associated with the detailed presentation of alien worlds is Jack VANCE, whose interest in alien ecology is linked to a strong concern for cultural ANTHROPOLOGY. His alien worlds usually have human populations cleverly adapted to and integrated into the native ecology, and his works carefully combine romanticism and earnest speculation (see also *PLANETARY ROMANCE*); outstanding among his many novels in this vein are *Son of the Tree* (1951 TWS; 1964), *Big Planet* (1952 *Startling Stories*; 1957), *The Houses of Izm* (1954 *Startling Stories*; 1964), *The Languages of Pao* (1958), *THE DRAGON MASTERS* (1963), *The Blue World* (1966) and *EMPHYRIO* (1969). There also grew up in this post-WWII period, in calculated

opposition to the romantic school of other-worldly adventures, a school of fiction which represented human life on other worlds as a grim and terrible battle against implacably hostile circumstances (COLONIZATION OF OTHER WORLDS). Popularization in the 1960s of the notion of impending ecological crisis in the real world brought about a significant change in emphasis in sf. The notion of "conquering" other worlds and mastering harsh environments by hard work and sheer determination - which reached its peak in such novels as Tom GODWIN's *The Survivors* (1958; vt *Space Prison*) and Harry HARRISON's *Deathworld* (1960) - found new ideological opposition in many stories emphasizing the notion of harmonious order (ECOLOGY). Alien ecospheres possessing such perfection are often depicted, with mankind featuring either as an unthinking destroyer or as a candidate for membership whose case has yet to be judged. Such stories often embody a strong element of mysticism (RELIGION; MYTHOLOGY). The representation of alien ecospheres as problematic Gardens of Eden has since become so commonplace as to be almost ritual; notable examples of the careful extension of this metaphor include Mark CLIFTON's *Eight Keys to Eden* (1960), Richard M. MCKENNA's "Hunter Come Home" (1963), John BOYD's ironic *The Pollinators of Eden* (1969), Ursula K. LE GUIN's *THE WORD FOR WORLD IS FOREST* (1972; 1976), Neal BARRETT's *Highwood* (1972), Brian STABLEFORD's *The Paradise Game* (1974) and *The Gates of Eden* (1983), Stanislaw LEM's *Edem* (1959; trans as *Eden* 1989 US) and Michael D. RESNICK's *Paradise* (1989). Many of these works echo the forest fantasies of the great pioneer of ecological mysticism, W.H. HUDSON. The 1960s also produced two thorough and detailed accounts of human populations in alien environments which are particularly impressive: Frank HERBERT's *DUNE* (fixup 1965), with its description of life on the desert world Arrakis, and Ursula K. Le Guin's *THE LEFT HAND OF DARKNESS* (1969), which describes the life of hermaphroditic humans on the world of Winter. The scope which sf offered for much more detailed and considered modelling of alien environments was increased considerably during this period by virtue of the popularity of series novels, and, although interest remained focused almost exclusively on life-systems native to planets habitable by humankind, the foundations of various notable exercises in long-term "worldbuilding" were laid down. Marion Zimmer BRADLEY's *Darkover* series and Anne MCCAFFREY's *Pern* series provided models for various subsequent endeavours on a smaller scale. Much of this work is so heavily romanticized that it exists on the borderline between sf and FANTASY, being little more realistic in its speculative components than the Burroughsian romances which it has largely replaced, but the most competent writers in this vein of planetary romance bring considerable intelligence to bear on their work; one who has been consistently ambitious is C.J. CHERRYH, whose descriptions of other-worldly life in such novels as *The Faded Sun* (3 vols 1979-80) and *Serpent's Reach* (1980) are outstanding. The depiction of authentically alien life-systems has always been handicapped by the problems involved in using such systems as backgrounds to entertaining stories. An enormous amount of work goes into the design of an entire alien world, and it is not easy to blend that kind of artistry with the less esoteric creation of sensitive characterization and well-made plots. The most conscientious efforts of writers like Hal Clement and those who have followed in his footsteps - including Robert L. FORWARD in *The Flight of the Dragonfly*

(1984; exp vt Rocheworld 1990) and Larry NIVEN in *The Integral Trees* (1984) and *The Smoke Ring* (1987) - run into acute problems in trying to integrate the enormous amounts of information they must get across with some kind of suspenseful narrative; Forward's novel was drastically cut for its first publication in the interests of finding a reasonable balance; its later reissue, restoring the additional information for the benefit of purists, required appendices full of graphs and diagrams. Novels which attempt to present an image of everyday life on alien worlds, without the benefit of human observers - notable examples include John BRUNNER's *The Crucible of Time* (1984), Brian HERBERT's *Sudanna*, *Sudanna* (1985) and Charles L. HARNESS's *Redworld* (1986) - suffer inevitable problems of reader-identification, and tend to take on an ironic, if not outrightly satirical, edge even if that was not the author's primary intention. Given these difficulties, it is not entirely surprising that the most memorable images of other-worldly life are often highly artificial, contained in stylized narratives whose main purpose is allegorical. LIFT, DE

(vt *The Lift*) Film (1983). Sigma Films. Dir Dick Maas, starring Huub Stapel, Willeke Van Ammelrooy. Screenplay and music Maas. 99 mins. Colour. This neat Dutch horror film with an sf rationale, dubbed atrociously into English, tells of a homicidal lift (elevator) in a high-rise office building. The lift is controlled by an organic, living computer (biochip), manufactured in Japan, which has run amuck and reprogrammed itself. The film belongs to the anti-technology tradition of killer MACHINES, common in sf cinema, to which also belong *DEMON SEED* (1977) and *RUNAWAY* (1984). [PN]

LIGHT, JOHN

(1943-) UK writer of unremarkable sf novels, the first for ROBERT HALE LIMITED: *The Well of Time* (1981), *The Legend of Melgor Erdin* (1991) and *Death on Dorado* (1993 chap). [JC]

LIGHTNER, A(LICE) M(ARTHA)

(1904-1988) US writer and entomologist who began publishing her sf, all of which is for children, with "A New Game" for *Boy's Life* in 1959. Her first published novel, *The Rock of Three Planets* (1963) - its sequels were *The Planet Poachers* (1965) and *The Space Ark* (1968) - was followed by several other effective juveniles, though she came to general sf notice only with *The Day of the Drones* (1969), a post- HOLOCAUST story set half a millennium after a nuclear WAR. (This was actually her first-written novel; originally written for adults, it had been revised for publication as a juvenile.) As in Margot BENNETT's *The Long Way Back* (1954), *Black Africa* has survived. The two young protagonists, sent north on an exploratory mission, discover that the White remnants of UK civilization have evolved into a hive society (HIVE-MINDS), and at a high cost save one (male) drone, who may (or may not) prove acceptable to the Black society back home. AML also wrote a number of nonfiction books of dramatized natural science as Alice L. Hopf, her married name. [JC]Other works: *Doctor to the Galaxy* (1965); *The Galactic Troubadours* (1965); *The*

Space Plague (1966); The Space Olympics (1967); The Thursday Toads (1971); Star Dog (1973); Gods or Demons? (1973); The Space Gypsies (1974); Star Circus (1977). See also: CHILDREN'S SF.

LIMITED EDITIONS

SMALL PRESSES AND LIMITED EDITIONS.

LINAWEAVER, BRAD

(1952-) US writer who came to general notice with his first novel, Moon of Ice (1982 AMZ; exp 1988), set in an ALTERNATE WORLD where a Nazi-controlled Europe and a freedom-loving USA confront each other in a nuclear standoff (HITLER WINS). The original novella (itself revised in 1986) conveys considerable impact in its description of the confrontation between the supremely pragmatic and practical Joseph Goebbels and a mystical inner circle of the SS which plans to replace humanity by Übermenschen. The novel, which also contains the story of Goebbels's daughter's life as an anarchist revolutionary and the portrait of an explicitly LIBERTARIAN US citizen, adds little to the original. [NT]

LINCOLN, MAURICE

Pseudonym of a UK writer, apparently born in 1887, whose two sf novels display an uneasy bantering tone and slyly cluttered plots which make his or her identification of some potential interest. In Nothing Ever Happens (1927) two young UK men are transported to an unlocatable island run by an impossibly old Master - it is possible T.H. WHITE's similar The Master (1957) owes some debt to this book - where they are induced to breed with his daughters and discover that he himself breeds ANDROIDS. In The Man from Up There (1929) a similar duo discovers - and attempts to profit from - a Cyclopean giant from the Moon, whose arrival on Earth has stopped all radio transmissions for days. Eventually the giant goes home. [JC]

LINDBOHM, DENIS

[r] SCANDINAVIA.

LINDGREEN, JORGEN

[r] DENMARK.

LINDHOLM, MEGAN

Pseudonym of US writer Margaret Astrid Lindholm Ogden (1952-) who began publishing short stories for children in her late teens, and whose first work of genre interest was "Bones for Dulath" in Amazons (anth 1979) ed Jessica Amando Salmonson, and the characters from which featured in her first novel, Harpy's Flight (1984), itself the first volume of the Windsingers fantasy sequence, whose further instalments are The Windsingers (1984) and The Limbreth Gate (1984), all 3 volumes being assembled as The Windsingers (omni 1985 UK); plus Luck of the Wheels (1989). Almost all her 1980s work is fantasy (see Other Works below), most outstandingly perhaps in Wizard of the Pigeons (1986). Alien Earth (1992), however, is sf, set initially in what may resembles a GENERATION STARSHIP environment, though the ship turns out in fact to be sentient and under the control of an alien boss. Humans are cargo, but the protagonists begin to make revolutionary discoveries about themselves, and their home planet, which they must reinvigorate. ML also writes as Robin Hobb. [JC]Other

Works: the Reindeer People sequence, comprising *The Reindeer People* (1988) and *Wolf's Brother* (1988), both assembled as *A Saga of the Reindeer People* (omni 1989); *Cloven Hooves* (1991); *The Gypsy* (1992) with Stephen BRUST; *Silver Lady and the Fortyish Man* (1989 IASFM; 1994 chap); *Assassin's Apprentice* (1995) as by Robin Hobb.

LINDNER, ROBERT (MITCHELL)

(1914-1956) US psychoanalyst and prison psychologist who reported on his work in the latter capacity in *Rebel Without a Cause* (1944). "The Jet-Propelled Couch", a long narrative essay which appears in *The Fifty-Minute Hour: A Collection of True Psychoanalytic Tales* (coll 1955; vt *The Jet-Propelled Couch UK*), absorbingly examines and analyses the sf-based fantasies of one of his patients, who retreated from an intolerable childhood, adolescence and adulthood through progressive immersion in an elaborate SPACE-OPERA universe, to which he believed he was regularly transported and in which he was the ruler of a planet. His rationalization of his role in this universe was impeccably couched in sf terms, with alternate time-streams playing a considerable role, and provides an explanation in extremis for sf's imaginative power over adolescents. Also of interest is one effect of RL's curative strategy: he pretended to enter into his patient's universe with him, and eventually was himself fascinated and almost ensnared by it. Roger ZELAZNY's *THE DREAM MASTER* (1966) develops the implications of RL's experience in bravura fashion. [JC]See also: PARANOIA; PSYCHOLOGY.

LINDSAY, DAVID

(1876-1945) UK writer remembered today almost entirely for his first novel, *A VOYAGE TO ARCTURUS* (1920), in which he rather high-handedly makes use of a range of sf and fantasy devices to transport a man to the planet Tormance, where he is destined to undergo a series of baroque adventures.

In fact the journey to this planet is a mystical inner passage into a state where ethical precepts, and all the other slings and arrows to which the protagonist's soul is vulnerable, are embodied in the extraordinary Tormance lifeforms. The metaphysic thus unfolded is of a compelling ornateness, and may - it has been suggested - have inspired C.S. LEWIS's *Cosmic Trilogy*. *The Haunted Woman* (1922) is a more conventional FANTASY in which a similarly allegorical reading of the *Ocean of Story* is constantly underlined. *The Adventures of M. de Mailly* (1926; vt *A Blade for Sale* 1927 US) is a historical novel, while *Sphinx* (1923), *Devil's Tor* (1932) and *The Violet Apple* ?

Apple (1978) contains only the first tale. [JC]About the author: *The Strange Genius of David Lindsay* (anth 1970) by J.B. Pick, E.H. VISIAK and Colin WILSON; *David Lindsay* (1982 chap) by Gary K. WOLFE. See also: CONCEPTUAL BREAKTHROUGH; DIME-NOVEL SF; ESCHATOLOGY; FANTASTIC VOYAGES; GODS AND DEMONS; HISTORY OF SF; LIFE ON OTHER WORLDS; MYTHOLOGY; PERCEPTION.

LINDSAY, RICHARD

[r] ROBERT HALE LIMITED.

LINDSAY, (NICHOLAS) VACHEL

(1879-1931) US poet, the clanging primitivism of whose best known work, the poems assembled in *The Congo and Other Poems* (coll 1914), may have been ingenuous. Of sf interest is *The Golden Book of Springfield*, being the Review of a Book that will Appear in the Autumn of the year 2018, and an Extended Description of Springfield, Illinois, in that Year (1920), a prose work in which a world government is envisioned. [JC]

LINGUISTICS

Linguistics is the study of language, how languages work, what their function is, how they are constructed and whence they are derived. As a discipline it has leapt to academic prominence since the 1960s. Languages play a surprisingly important role in sf, and many stories turn on linguistic issues. The theme overlaps, naturally, with that of COMMUNICATIONS, and also to some extent with those of ANTHROPOLOGY and PERCEPTION, inasmuch as a language tells us a great deal about the culture that uses it and the way that culture perceives the world. This entry concentrates primarily on verbal languages in sf. Other ways of giving information are dealt with under COMMUNICATIONS, and two examples will suffice here. Terry CARR's "The Dance of the Changer and the Three" (1968) is set on an alien planet whose natives are energy forms; their language is dancing; for no clear reason they destroy many humans for whom they seem to feel no enmity, and survival depends on the correct reading of the dance. John VARLEY invents a nonverbal linguistic UTOPIA in the 1978 title story of *THE PERSISTENCE OF VISION* (coll 1978), in which a sighted man enters a community of people who are blind and deaf; they communicate through touch (and sex) in a language more subtle and immediate than he can at first grasp. Much earlier C.S. LEWIS and J.R.R. TOLKIEN both used their considerable philological expertise in their fictions. The former's *OUT OF THE SILENT PLANET* (1938) speaks interestingly of the different grammars and vocabularies of the three Martian languages, and plays some rather facile linguistic tricks to show up what Lewis regarded as the arrogance of humanistic SCIENTISTS. Tolkien's *The Lord of the Rings* (3 vols 1954-5; omni 1968) is unusual in that its very genesis was largely linguistic: Tolkien invented his imaginary languages (carefully glossed and explained in the many appendices) before he wrote the books. If we accept linguistics as a science - it is arguably the "hardest" (or "most scientific") of the SOFT SCIENCES - then we might argue that the fiction of Tolkien, usually regarded as FANTASY, at least approaches sf in its linguistic aspects. Sf stories in which linguistics plays a subsidiary role are very much more common than sf stories actually about linguistics. Most writers who set stories in the future (or in the past, if it comes to that) ignore the problem of language-change, but some have confronted the problem, with various degrees of success; many of these attempts are discussed by Walter E. MEYERS in what is by far the best study of the topic, *Aliens and Linguists: Language Study and Science Fiction* (1980). Although sf writers normally realize that their craft requires a good understanding of the hard sciences (physics, etc.), many have no training in nor understanding of linguistics; and nor, very often, do they seem to feel this as a lack. Thus stories turning on points of ALIEN or future language are often patchy; the ways in which grammar, vocabulary and speech-sounds evolve do not seem to be widely understood. Examples of sf

stories demonstrating linguistic change, whether fanciful or plausible, are: Alfred BESTER's "Of Time and Third Avenue" (1951), Bester being generally very much alive to the forms of language; Robert A. HEINLEIN's "Gulf" (1949), with its future speedtalk; Anthony BURGESS's A CLOCKWORK ORANGE (1962), with its NEAR-FUTURE Russian-derived Nadsat slang; George ORWELL's NINETEEN EIGHTY-FOUR (1949), with its Newspeak, designed to reinforce "proper" social attitudes; Poul ANDERSON's "Time Heals" (1949), with a futurified pronunciation; Felix C. GOTTSCHALK's Growing Up in Tier 3000 (1975), where a great variety of future colloquialisms are evoked; and Michael FRAYN's A Very Private Life (1968), whose future languages are more lively than plausible. A more generalized linguistic gusto is displayed in, for example, Benjamin APPEL's The Funhouse (1959), Arthur Byron COVER's Autumn Angels (1975) and much of the output of R.A. LAFFERTY. A GENRE-SF writer who is always aware of linguistic problems is L. Sprague DE CAMP; his article "Language for Time Travelers" (1938) - similar material is incorporated into his Science-Fiction Handbook (1953; rev 1975) - was probably the first account of linguistic problems in sf. His stories, sometimes rather ploddingly, reflect this interest, as in "The Wheels of If" (1940), set in an ALTERNATE WORLD where the Norman Conquest did not take place and so English has never been Frenchified (although here De Camp gets Grimm's Law of sound-changes quite wrong, in terms of both its effect and the historical period to which it refers), and in the Viagens Interplanetarias series, in which the space pidgin Intermundos is heavily influenced by Brazilian space crews. Orwell's Newspeak, although the most celebrated example of language-control being used by the state to impose social conformity and an unthinking acceptance of the way things are, was by no means the first. Yevgeny ZAMIATIN's We (trans 1924) has a heavily conformist, mechanical language that reflects the regimentation of society. Anthony BOUCHER's interesting TIME-TRAVEL story "Barrier" (1942) likewise features such a language, along with a daffy collocation of future linguists all researching via TIME MACHINES. A tour de force of conformist-language creation is the story told by the Ascian prisoner-of-war in Gene WOLFE's The Citadel of the Autarch (1983), expressing entirely in patriotic slogans a tale of the individual spirit. The whole of Wolfe's Book of the New Sun, indeed, is alive with linguistic invention, not least in its use of words from the classical Greek to express concepts at once futuristic and archaic. Language is an important aspect of the above stories, but is not their raison d'etre. Three kinds of story in which linguistics becomes central are those where humans communicate with animals (1) or with aliens (2), or endeavour to translate dead alien languages (3). Two good examples in the first group are Un animal doue de raison (1967; trans as The Day of the Dolphin 1969) by Robert MERLE and Slave Ship by Frederik POHL, in both of which animals who must be spoken to are used as military weapons. Ursula K. LE GUIN's amusing spoof scientific paper, based on the idea that animals and insects have not only languages but also artforms, "The Author of the Acacia Seeds and Other Extracts from The Journal of the Association of Therolinguistics" (1974), is probably not intended entirely as a joke. Many stories other than Merle's have looked at cetacean-human communication, a subject popularized from 1961 in a series of nonfiction books by the experimental psychologist John C. Lilly. Among such stories

are those in David BRIN's Uplift War sequence, particularly STARTIDE RISING (1983; rev 1985), whose advanced dolphins have undergone GENETIC ENGINEERING, and Ted MOONEY's Easy Travel to Other Planets (1981), in which a love story between woman and dolphin, to which linguistic questions are central, takes place against a backdrop of global Information Sickness. First Contact stories (ALIENS; ANTHROPOLOGY) necessarily involve linguistics unless, as once was frequent, the issue is dodged by the use of some kind of magical translation box. However, there are many such stories that do involve linguistic questions, notably including the series about galactic intelligence agent Coyote Jones by Suzette Haden ELGIN, who spent a decade as a professor of linguistics. John BERRYMAN's "Berom" (1951) has an amusing variant on the theme, in which incomprehensible visiting aliens turn out to be speaking in a UK commercial cable code of the 1920s that they have picked up by radio. The Hoka series by Poul Anderson and Gordon R. DICKSON features aliens who understand language quite literally, with sometimes comic results. Frank HERBERT's Whipping Star (1970) conjures up, in a story of humans making contact with aliens who turn out to be STARS, so intense a miasma of semantic confusions (as recurs regularly in his work) that the narrative structure and human interest of the story are very nearly overwhelmed. Roger ZELAZNY's "A Rose for Ecclesiastes" (1963), a verbally brilliant story with a depth of feeling seldom found in sf, has a poet-linguist chosen to attempt contact with the few remaining Martians, and to translate their high language and their holy texts; his complacency is punctured. Chad OLIVER's The Winds of Time (1957) has some expertly worked-out descriptive field linguistics in operation in a story of interstellar aliens waking from SUSPENDED ANIMATION on Earth. Edward LLEWELLYN's Word-Bringer (1986) is another First Contact story (about an alien ROBOT emissary to Earth) with linguistic ramifications. The film CLOSE ENCOUNTERS OF THE THIRD KIND (1977) ends with a prolonged epiphany when the occupants of a flying saucer () finally consent to make contact, communication being initiated through a linguistic code of flickering lights and a sequence of crashing chords. Another film, ICEMAN (1984), has a prolongedly earnest linguistic sequence about attempted contact with a resuscitated Neanderthal (APES AND CAVEMEN). David I. MASSON, a devoted student of linguistics, may have written the First Contact story with the best-informed linguistic detail in "Not So Certain" (1967), which shows one kind of problem that may bedevil the most well intentioned exo-culture specialists. This was republished in his The Caltraps of Time (coll 1968), which also contains the amusing "A Two-Timer" (1966), in which an inadvertent time traveller from the 17th century describes in his own English what he finds in the 20th - not least, semantic bafflement. Stories of archaeological linguistics are less common. H. Beam PIPER's "Omnilingual" (1957), probably his best story, has a woman seeking a Rosetta Stone with which to interpret the writings of a dead Martian civilization; she ultimately finds it in the periodic table of the elements. Other sf works focusing strongly on linguistics include Hunter of Worlds (1977) by C.J. CHERRYH, herself a linguist; and the Cuckoo series - The Farthest Star (fixup 1975) and Wall Around a Star (1983) - by Frederik Pohl and Jack WILLIAMSON. These are recent and quite sophisticated, but one of the best sf books about linguistic problems was much earlier: Jack

VANCE's *The Languages of Pao* (1958) is one of the most intelligent uses in genre sf of the idea that the perception of reality by different races is reflected in, and to a degree actually determined by, the languages they speak; hence CULTURAL ENGINEERING can be carried out by the teaching of new languages. In real-life linguistics this view is strongly identified with the writings of Dr Benjamin Whorf (1897-1941) in his studies of Native American languages. Whorf's theories of linguistic relativity are most obviously reflected in sf terms in Samuel R. DELANY's *BABEL-17* (1966), a complexly structured novel about communication which takes language itself as the central image; a web of different languages is threaded through the spy-story plot, in which an alien code turns out to be only paradoxically alien. It is *Babel-17*, a perfect analytical language which has no word for "I"; this absence Delany sees as its strength and also its weakness. (Meyers, in his book cited above, admonishes Delany for not then knowing as much about linguistics as the confident tone of *BABEL-17* might suggest.) Delany's interest in language and linguistic philosophy has continued, and is reflected in much of his work, including the curious dialects he created in *NOVA* (1968) and also his critical book, *The Jewel-Hinged Jaw: Notes on the Language of Science Fiction* (coll 1977). The use of linguistic devices in the actual telling of a story, to reflect along Whorfian lines the nature of the human or alien cultures described, is a difficult narrative skill. Suzette Haden Elgin attempts it only occasionally in her series *Native Tongue* (1984) and *The Judas Rose* (1987), but there is considerable interest in her account of the creation of the secret language *Womanspeak* (or "La'Adan") used by a disempowered female underclass as one weapon in their struggle to subvert the self-satisfied world of men. The film *MAD MAX BEYOND THUNDERDOME* (1985), a post- HOLOCAUST exploitation thriller, is the last place one might have expected to find a linguistic thesis, but the devolved language of an isolated community of children is presented with considerable imagination (and a not inconsiderable beauty). The linguistic tour de force of the 1980s, however, was *RIDDLEY WALKER* (1980) by Russell HOBAN, a story of a post-holocaust England actually told in the devolved but vivid language of its inhabitants; the astonishing thing is not so much the attempt - many sf writers have done the same thing on a smaller scale - but its success at novel length. Other sf writers may have had much to say about linguistic concepts, but none has ever so sustainably shown such a language in action, nor so successfully - and movingly - revealed the culture of its speakers in so doing. If Whorf has been the one powerful influence on sf linguistic scenarios, another may come to be Noam Chomsky (1928-), whose view that all human languages share a deep structure which is perhaps genetically determined is to some extent at odds with Whorf's view that our conceptual categorization of the world is determined by our native language; where Whorf stressed diversity, Chomsky stresses unity. Sf had added little to this debate, nor seemed very conscious of it, until 1973, when the ideationally exuberant Ian WATSON first attracted the attention of the sf readership. Most of his novels feature linguistic thought somewhere in their usually complex structure, and his first, *THE EMBEDDING* (1973), is certainly the sf linguistics novel par excellence, with all three of its subplots linking language and PERCEPTION in interweaving stories of alien, South American Indian and computer-imposed

languages, and the differing subjective realities they may or may not succeed in generating. An important essay by Watson is "Towards an Alien Linguistics" (1975 Vector), reprinted in *The Book of Ian Watson* (coll 1985 US), in which he considers questions of epistemology and hazards the thought that there may be "a topological grammar of the universe, which reflects itself in the grammars of actual languages" - Chomsky writes very large indeed. Watson is one of those theorists who have used arguments from quantum mechanics to support the solipsistic view that the Universe exists as an external structure only through the consciousnesses of its participants and observers; language, in Watson's scheme, is reflexive, Nature sending a message to itself - an intellectual position that, if correct, would place linguistics as the scientific discipline right at the heart of sf. [PN]Further reading: Aside from those cited above, two useful texts about linguistics in sf are *Linguistics and Language in Science Fiction-Fantasy* (1975) by Myra Edwards BARNES and an interesting essay on the popular subject of word-coinage by sf writers, "The Words in Science Fiction" by Larry NIVEN in *The Craft of Science Fiction* (anth 1976) ed Reginald BRETNOR.

LINKLATER, ERIC (ROBERT RUSSELL)

(1899-1974) Scottish writer proficient in various genres though best remembered for his novels, beginning with *White Maa's Saga* (1929). Much of his work is fantasy, like *The Devil's in the News* (1934) and many of the stories collected in *God Likes them Plain* (coll 1935), *Sealskin Trousers* (coll 1947) and *A Sociable Plover* (coll 1957). *The Impregnable Women* (1938) is a NEAR-FUTURE rewrite of *Lysistrata* in which the women of Europe band together, go on sexual strike, and end a futile war (WOMEN AS PORTRAYED IN SCIENCE FICTION). Similar in attitude were EL's WWII conversation plays, notably *The Raft* and *Socrates Asks Why* (1942 chap), *The Great Ship* and *Rabelais Replies* (1944 chap) and *Crisis in Heaven: An Elysian Comedy* (1944 chap), which employed fantasy elements as didactic pointers. His two children's novels, *The Wind on the Moon* (1944) and *The Pirates in the Deep Green Sea* (1949), are both attractive fantasies, in the latter of which Davy Jones and all the drowned pirates under the sea are discovered guarding the great knots that tie latitudes and longitudes together to keep the world from splitting. *A Spell for Old Bones* (1949) is a fantasy set in a mythical 1st-century Scotland. In *A Terrible Freedom* (1966) a man finds the characters of his dream world taking over the real one. [JC]See also: *The MAGAZINE OF FANTASY AND SCIENCE FICTION* .

LIN YUTANG

Working name of Chinese-US novelist, essayist and academic Lin Yu-t'ang (1895-1976). In *The Unexpected Island* (1955 UK; vt *Looking Beyond* 1955 US) refugees from several world HOLOCAUSTS establish a conservative UTOPIA on an isolated ISLAND. [JC]

LIONEL, ROBERT R.L. FANTHORPE.

LIPPINCOTT, DAVID (McCORD)

(1925-1984) US writer and advertising executive whose NEAR-FUTURE political thriller *E Pluribus Bang!* (1970) finds the US President involved

in the murder of a Secret Service agent he finds in bed with his wife.
Tremor Violet (1975) is a DISASTER novel about earthquakes in Los Angeles.
[JC]Other works: Voice of Armageddon (1974); The Blood of October (1977);
Black Prism (1980 UK; vt Dark Prism 1981 US).

LIQUID SKY

Film (1982). Z Films. Dir Slava Tsukerman, starring Anne Carlisle, Paula E. Sheppard, Susan Doukas, Otto von Wernherr. Screenplay Tsukerman, Carlisle, Nina V. Kerova. 112 mins. Colour. ALIENS who have landed their tiny flying saucer on the roof of a Manhattan penthouse observe the lives of strange young people: fashionable, drug-using, white-faced Punk/New Wavers. The aliens are attracted to chemicals released when humans use heroin ("liquid sky") and/or achieve orgasm, killing the humans or causing them to disappear at the moment of endorphin saturation. When looking through alien eyes we see this in psychedelic patterns. This elegant, sometimes funny, sometimes obscene art film, something of an anthropological documentary about an alienated, self-brutalized human subculture, was made by a group of Russian emigres in New York - effectively aliens themselves - and features a German (that is, alien) alien-hunter. The novelization is Liquid Sky * (1987) by Anne Carlisle (1956-). [PN]See also: SEX.

LISLE, SEWARD D.
Edward S. ELLIS.

LITTELL, JONATHAN

(?1969-) US writer whose Bad Voltage: A Fantasy in 4/4 (1989) depicts a CYBERPUNK Paris with confused verve. The young protagonist (he is Black; the first edition's cover shows him White) moves from underground criminal activities to the upper world of the rich, which mirrors the lower. The energies of the book are expended scattershot, but attractively. [JC]

LITTLE SHOP OF HORRORS, THE
Roger CORMAN.

LI TUNG

[r] LEE TUNG.

LIVIA, ANNA

[r] ANNA LIVIA.

LIVINGSTON, BERKELEY

(1908-1975) US writer whose sf appeared only in the ZIFF-DAVIS magazines AMZ and Fantastic Adventures. Some 50 stories appeared 1943-50, under either his own name or the house names Alexander BLADE and Morris J. Steele. His only book was Meteor of Death (1954 chap Australia). He is noted for the quantity rather than the quality of his work. [JE/PN]See also: ILLUSTRATION; LEISURE.

LIVINGSTON, HAROLD

(1924-) US writer, often of tv scripts, whose fourth book, The Climacticon (1960), spoofs SEX obsessions in a borderline-sf tale. [JC]

LIVING WORLDS

The notion that a planet might be a living creature is a rather startling one; indeed, it was initially used purely for its shock value. In R.A. KENNEDY's remarkable philosophical extravaganza *The Triuneverse* (1912), MARS begins to reproduce by binary fission and its daughter cells devour much of the Solar System. In "When the World Screamed" (1929) by Arthur Conan DOYLE a hole is drilled through the Earth's "skin" and the living flesh within reacts against the violation. Other attempts to exploit this shock value include Edmond HAMILTON's "The Earth-Brain" (1932), Jack WILLIAMSON's "Born of the Sun" (1934) - in which the Sun is living, the planets are its eggs, and Earth hatches - and Nelson BOND's "And Lo! The Bird" (1950). The perishability of easy shock value inevitably gives rise to an escalation of scale; Laurence MANNING soon took the idea to its extreme in "The Living Galaxy" (1934). The notion of living STARS seems to fascinate sf writers more than that of living planets. Austere stellar intelligences are featured in *STAR MAKER* (1937) by Olaf STAPLEDON, though Stapledon discarded a first draft which featured the exploits of intelligent nebulae; it was later published as *Nebula Maker* (1976). (An intelligent nebula, albeit a very small one, figures also in Fred HOYLE's *The Black Cloud*, 1957.) There are vestiges here of the occasional medieval equation of stars and angels, seen also in William Blake's poem "The Tiger" (1794). More recent examples of living stars are found in Gerard KLEIN's *Starmaster's Gambit* (1958; trans 1973), Frederik POHL's and Jack Williamson's *Starchild* (1965) and *Rogue Star* (1969), Frank HERBERT's *Whipping Star* (1970) and *If The Stars are Gods* (fixup 1977) by Gregory BENFORD and Gordon EKLUND. Living planets have become rare, although visiting spacemen offend one in Ray BRADBURY's "Here There Be Tygers" (1951), but planets whose whole ecospheres are single individuals, often imbued with consciousness, are not uncommon. The planetary spirits in the *Cosmic Trilogy* (1938-45) by C.S. LEWIS are somewhat rarefied, as are the curious world-consciousnesses featured in Theodore STURGEON's "Case and the Dreamer" (1972) and Neal BARRETT's *Stress Pattern* (1974), but more mundane life-systems which comprise single vast organisms are featured in such stories as Murray LEINSTER's "The Lonely Planet" (1949), Doris PISERCHIA's *Earthchild* (1977), M.A. FOSTER's *Waves* (1980), Brian M. STABLEFORD's "Wildland" (1989) and Isaac ASIMOV's *Nemesis* (1989). The most popular model for such integrated ecospheres is the forest, displayed in "Process" (1950) by A.E. VAN VOGT, "The Forest of Zil" (1967) by Kris NEVILLE, and "Vaster than Empires and More Slow" (1971) by Ursula K. LE GUIN. The most impressive presentation of a truly ALIEN world-intelligence is Stanislaw LEM's *SOLARIS* (1961; trans 1970), many features of which are prefigured in his *Edem* (1959; trans as *Eden* 1989). The recent popularization of James Lovelock's "Gaia hypothesis" has encouraged writers to pay more attention to highly integrated ecospheres, but the most radical repersonalization of the Earth is that in David BRIN's *Earth* (1990), in which the planet undergoes metamorphosis into a gargantuan AI - perhaps the most extravagant deus ex machina ever deployed. [BS]See also: BIOLOGY; HIVE-MINDS.

LLEWELLYN, (DAVID WILLIAM) ALUN

(1903-1988) UK writer active in several genres, including political SATIRE. His sf novel *The Strange Invaders* (1934), like John COLLIER's

Tom's A-Cold (1933), builds upon the deeply felt elegiac mood of Richard JEFFERIES's post- HOLOCAUST novel After London (1885). Set in a new ice age and told in an intensely worked, harsh style, it depicts a tribal society in a future USSR where Marx, Lenin and Stalin are revered as saints in a barbarian religion; the world has, long ago, been nearly destroyed by war. The novel's focus is INVASION by great lizard-like successors to humanity, which the inhabitants of a small settlement finally defeat at great cost. [JC]Other works: Confound their Politics (coll1934), political satires set in imaginary countries; Jubilee John (1939).See also: DISASTER.

LLEWELLYN, EDWARD

Working name of Welsh-born Canadian writer and doctor Edward Llewellyn-Thomas (1917-1984), who held professorships variously in pharmacology, medicine, electrical engineering and psychology. Most of his work is set loosely in the same universe, with his first 3 novels - The Douglas Convolution (1979 US), The Bright Companion (1980 US) and Prelude to Chaos (1983 US) - constituting a trilogy about a 22nd-century Earth suffering from widespread female infertility. The muscularly told first volume follows the arrival in this world, via TIME TRAVEL, of an ingenious mathematician, who proves invaluable to the Order of fertile women; the second presents a tour of the world dominated by this Order; the third is a weak prequel. In Salvage and Destroy (1984 US) EL moved into SPACE OPERA, though genetics continues to play a role in a complex plot involving two immortal species of aliens, one of which becomes involved with Earth. Fugitive in Transit (1985 US) similarly confronts humans with representatives of galactic civilization, in this case the Galactic Transit Authority, which is chasing the woman who has discovered a stargate. Word-Bringer (1986) presents its protagonist with the discovery - familiar to readers of Clifford D. SIMAK - that aliens have left on Earth a device which spreads knowledge for free, engendering all sorts of scientific advances. Though he did not seem destined to become a major writer in the field, EL's tales are literate, numerate and attractively marked by their frequent use of active and personable WOMEN as protagonists. [JC]See also: CANADA; ESP; LINGUISTICS.

LLOYD, JOHN URI

(1849-1936) US chemist, author of Etidorhpa, or The End of Earth (1895; rev 1901), a metaphysical FANTASTIC VOYAGE in which the narrator is led by a blind humanoid to a LOST WORLD in the interior of the Earth, where he gains occult enlightenment into the higher forms of love (the title is Aphrodite reversed). Etidorhpa, which went through at least 11 editions, is noteworthy for its bitter attack on the rational sciences. Like other notable HOLLOW-EARTH works of the period, it derives from the theories of John Cleves SYMMES. [JE/JC]

LOBATO, MONTEIRO

[r] LATIN AMERICA.

LOCKE, GEORGE (WALTER)

(1936-) UK writer, one-time pharmacist, antiquarian bookseller and bibliographer. He began publishing sf with "The Human Seed" for Authentic

in 1957, and under the name Gordon Walters published a number of sf stories in the 1960s, but no sf books; his novels, *Pattern of Terror* (1987) and *A Spectre-Room of Fancy* (1989 chap) as by Ayresome Johns, are detective tales of "impossible crimes" and the supernatural. His most important publications have been in the **BIBLIOGRAPHY** of sf and fantasy; though his researches have been far-ranging, the emphasis has been on 19th-century interplanetary romances, which he annotated in *Voyages in Space: A Bibliography of Interplanetary Fiction, 1801-1914* (1975 chap). *Ferret Fantasy's Christmas Annual for 1972* (1972 chap), *Ferret Fantasy's Christmas Annual for 1973* (1974 chap) and *Ferret Fantasy's Christmas Annual for 1974* (1975 chap), which contains inter alia short bibliographies of this material, led to the excellent *Science Fiction First Editions: A Select Bibliography and Notes for the Collector* (1978 chap). *A Spectrum of Fantasy: The Bibliography and Biography of a Collection of Fantastic Literature* (1980), and *A Spectrum of Fantasy II: Acquisitions to a Collection of Fantastic Literature, 1980-1993* (1994), applied the same combination of bibliographic exactitude and anecdotal commentary to a description of his own extremely large library. Many books not previously understood to merit admission to the canon of sf and fantasy were first cited in these volumes. His **SMALL PRESS**, *Ferret Fantasy*, has so far issued 15 books of sf, fantasy and mystery interest. [JC]Other works: *Worlds Apart* (anth 1972), ed, early interplanetary fiction in facsimile; *At the Mountains of Murkiness and Other Parodies* (anth 1973), ed anon; *From an Ultimate Dim Thule* (1973), a study of fantasy illustrator Sidney H. Sime, and *The Land of Dreams* (1975), an illustrated survey of Sime; *The Affair of the Lost Compression and Other Stories* (anth 1975 chap); *Guardians of the Lilac Moon, or The Downfall of Dakeevle the Dire* (1980 chap), a tale for children; *Thirty Years of Dustwrappers: 1884-1914* (1988 chap); *Pearson's Weekly: A Checklist of Fiction 1890-1939* (1990).

LOCKE, RICHARD ADAMS

(1800-1871) US journalist and editor, usually regarded as author of the famous "Moon Hoax". In 1835 several issues of the *New York Sun* carried articles purporting to describe the inhabitants of the MOON and their environs as observed by the distinguished astronomer Sir John Herschel (1792-1871) through a new, high-magnification telescope. It remains unclear which of several variously titled chapbook versions of the original hoax is in fact the original edition. Title variations include *Great Astronomical Discoveries Lately Made by Sir John Herschel at the Cape of Good Hope* and *A Complete Account of the Late Discoveries in the Moon* (both 1835 chap; under first title rev 1841; rev vt *The Moon Hoax, or A Discovery that the Moon has a Vast Population of Human Beings* 1859 US; vt *The Great Moon Hoax of Richard Adams Locke* 1886). The book has also been dubiously ascribed to Joseph Nicolas Nicolle, but the consensus is that the work was indeed RAL's. The effectiveness of the hoax was comparable to the reactions to Edgar Allan POE's "Balloon Hoax" (1844 *New York Sun*), which was purchased for the paper by RAL, then one of its editors, and the Orson Welles broadcast of *The WAR OF THE WORLDS* (1938). *The Moon Hoax, or A Discovery that the Moon has a Vast Population of Human Beings* (anth 1859; exp with new intro by Ormond Seavey 1975) presents the

original text plus later material. [JE]See also: ASTRONOMY.

LOCKHARD, LEONARD

[s] Charles L. HARNESS; Theodore L. THOMAS.

LOCUS

US SEMIPROZINE, 1968-current, ed Charles N. BROWN (calling himself Charlie Brown in earlier days), published by Locus Publications (in Oakland, California, since the 1970s), 412 issues to May 1995. Locus was founded in New York by Brown with Ed Meskys and Dave Vanderwerf as a one-sheet news FANZINE; when Brown's partners dropped out, his then wife Marsha Brown joined him as co-editor. At that time the magazine appeared between fortnightly and monthly. Brown divorced, became sole editor, remarried in 1970, and his new wife Dena Brown became the new co-editor. Locus (and the Browns) moved to the San Francisco area in 1972, a year after winning its first of many Best Fanzine HUGOS. In 1976 Charles Brown gave up his job as an electrical engineer and began to edit Locus full-time (Dena Brown had worked full-time on it 1972-5). He divorced again in 1977, and since then has been sole editor; the magazine effectively became a semiprozine at this point, since Brown was attempting to earn a living from it alone; the first paid employee was hired in 1977. During the 1970s the newsletter became a monthly, increased in size, and began (from 1974) listing all sf books published in the USA. By 1980 the circulation had topped 5000, reaching 7000 in 1984. In 1983 it increased to 48pp an issue and switched to computer setting; it became fully desk-top published with laser typesetting from 1986. By the 1990s Locus (74pp as of June 1992 and varying between 70pp to 86pp more recently) had long been established as the trade newspaper of sf; its paid circulation has varied around 8,100-8,700 between 1988 and 1994, falling off slightly from the high of 1990. Its clear superiority over all other news magazines in the field has been confirmed by the astonishing number of Hugos (17) it has now received: eight for Best Fanzine to 1983, and a further nine 1984-1992 for Best Semiprozine; i.e., a Hugo for the first nine years in which the latter category has been in existence. The predictability of Locus's annual Hugo, which had proved irritating to some in the sf world, proved illusory when SCIENCE FICTION COMMENTARY won in this category in 1993 and 1994. Wholly professional in appearance, Locus excels in its news coverage (with regular columns from overseas, including the UK and much of Europe, Australia, Russia, China and occasionally various Latin American countries). Its book-review coverage is very ample, taking up a large proportion of the magazine. Brown's policy of not printing strongly adverse reviews, while understandable in view of the magazine's reliance on the book trade for advertising, is unfortunate. The policy matters less in practice than in theory, since most reviews are intelligent and well informed, although some readers find them somewhat bland overall. Nonetheless, Locus is indispensable for professionals in the sf field, and was one of the most important references used in the compilation of this encyclopedia. Locus polls its readers annually about their favourites in different categories of sf publishing (AWARDS), and there is a case for arguing that the Locus Awards are more securely based across the sf readership than are the more celebrated Hugos. Locus also surveys annually

its subscribers' ages, occupations, reading habits, etc. Locus Publications also publishes books (for further details of which Charles N. BROWN and William CONTENTO). [PN]

LOCUS AWARDS AWARDS.

LOFTING, HUGH [r] CHILDREN'S SF.

LOGAN, CHARLES

(1930-) UK writer, and nurse for the mentally handicapped. Shipwreck (1975) won the 1975 Gollancz/Sunday Times sf contest jointly with Chris BOYCE's Catchworld (1975). Calmly and inexorably, it tells the story of the inevitable death of a man whose spaceship lands disabled on a planet whose ECOLOGY is unfriendly to human survival. That this grim anti-ROBINSONADE presents the most likely outcome of such an occurrence has not made it any more popular with sf fans. [JC]

LOGAN'S RUN

1. Film (1976). MGM/United Artists. Dir Michael Anderson, starring Michael York, Jenny Agutter, Richard Jordan, Peter Ustinov, Farrah Fawcett-Majors. Screenplay David Zelag Goodman, based on Logan's Run (1967) by William F. NOLAN and George Clayton JOHNSON. 118 Mins. Colour. One of the largest, most "prestigious" sf films of the decade, this was also one of the most sluggish, reducing its lively source, Nolan's and Johnson's novel, to a bland affair whose lavishness is all decoration, no substance. Set in a domed city where no one is allowed to pass their 30th birthday - official killers, "Sandmen", disposing of those who refuse their ritual suicide - the film concerns a renegade Sandman and his girlfriend, who attempt to reach the legendary "Sanctuary" outside. But Sanctuary does not exist; instead they find a mildewed Washington DC, inhabited by the only living old man. They decide that old age is a good thing and return to the dome to spread the news. During interrogation, the reformed Sandman confuses the city COMPUTER to the point where it blows itself up, along with the city. LR's youth autocracy exists in a conceptual vacuum and is riddled with contradiction, and the film's attack on its sterile UTOPIA is - typically of much patronizing sf cinema of the period - simplistic to the point of banality. There are livelier film versions of the theme, one being GAS-S-S-S (1970). 2. US tv series (1977-8), based on the film. An MGM TV Production for CBS. Prod Ben Roberts, Ivan Goff. Executive prod Leonard Katzman. Story editor D.C. FONTANA. Writers included Fontana, Saul David, Harlan ELLISON. Dirs included Paul Krasny, Curtis Harrington. 1 season, 75min pilot plus 13 50min episodes. Colour. The two men who created and produced the popular crime-busting programme Charlie's Angels - both admitted they knew nothing about sf - made this short-lived tv series designed to exploit the film. For budgetary reasons the series was set outside the film's domed city. It concerns the adventures of Logan (Gregory Harrison), Jessica (Heather Menzies) and Rem (Donald Moffat), the latter - a comic ANDROID with nonbiological components - having been hastily introduced to exploit the popularity of the two ROBOTS in STAR WARS (1977). These three characters

search for Sanctuary while pursued by deadly Sandmen from the city, moving from one DYSTOPIAN situation to another, all this portrayed at the level of comic-book stereotype. [JB/PN]

LOGGEM, MANUEL van
[r] BENELUX.

LOGSDON, SYD
(?1950-) US writer whose first sf novel, Jandrax (1979), is a PLANETARY ROMANCE about a sexually active scout who is also tough on planets. SL's second, A Fond Farewell to Dying (1978 Gal as "To Not Go Gently"; exp 1981), is a far more interesting post- HOLOCAUST tale set in 23rd-century India. A longstanding conflict with a Muslim nation to the north frames the humanly complex story of a Westerner's research into cloning (CLONES) to compensate for the post-nuclear sterilization suffered by most of the world. The sense that cloning barbarously parodies Hindu beliefs in REINCARNATION permeates the text, whose very considerable competence makes SL's subsequent silence all the more regrettable. [JC]

LOHRMAN, PAUL
House name used on the ZIFF-DAVIS magazines by Richard SHAVER, Paul W. FAIRMAN and perhaps others on 7 stories 1950-53. "The World of the Lost" (Fantastic Adventures 1950) has been definitely attributed to Shaver. [PN]

LOIS ?
US tv series (1993-). December 3rd Productions/Warner Bros. Developed for television by DeborahJoy LeVine. Exec prods David Jacobs, Robert Singer; co-exec prods Deborah Joy LeVine, Jim Crocker; co-prods Philip J. Sgrucica, Jim Michaels, John McNamara; supervising prods Randall Zisk, Tony Blake ?
dir Robert Butler. Other writers include Crocker, Bryce Zabel, Robert Killebrew, Thania St. John, Dan Levine; other directors include Zisk, Gene Reynolds, Mark Sobel, Robert Singer, James R. Bagdonas. Starring Dean Cain as Clark Kent and Teri Hatcher as Lois Lane; also starring Lane Smith as Perry White, Michael Landes (first season) and Justin Whalen (second season) as Jimmy Olsen, Tracy Scoggins as Cat Grant, K Callan as Martha Kent, Eddie Jones as Jonathan Kent and John Shea as Lex Luthor. Two seasons to date, 1993-1995, one-hour episodes, colour. This is the third live-action tv spin-off from the comic SUPERMAN, the first being The Adventures of Superman (1953-7), and the second being SUPERBOY (1988-91). This is not a particularly revisionist version except perhaps for Superman's outfit being made by his mother. In a formulaic manner each week sees Superman battling against a villain (often a superscientist of some sort), and normally an sf element such as invisibility or a cyborg criminal. The main ongoing suspense is provided, traditionally enough, by the never quite consummated love triangle between Clark Kent, Lois Lane (Hatcher is beautiful but waspish) and Clark's alter ego Superman. The series, which appears slanted towards a teenage audience, has enjoyed mild success in the ratings, and in the US is screened on the ABC network. [PN]

LONDON, JACK
Working name of US writer John Griffith London (1876-1916), known primarily for his work outside the sf field. After leaving school at the

age of 14, JL spent 7 years of adventure and hardship as an oyster pirate, sailor, hobo, prisoner and Klondike gold-seeker. During this period, he gave himself an education steeped in the most influential scientific and philosophic theories of the late 19th century - Darwinism (EVOLUTION; SOCIAL DARWINISM), Nietzscheism and Marxism (ECONOMICS; POLITICS) - which he was to amalgamate in his voluminous writings. These writings consist of adventure tales, socialist essays and fiction, autobiographical narratives, and about 20 works of sf, including 4 novels. His first sf story, "A Thousand Deaths" (1899), combines some key themes of 19th-century sf: a cold-hearted lone SCIENTIST uses his own son in revivification experiments and is then dematerialized by a superweapon invented by the son. "The Rejuvenation of Major Rathbone" (1899) displays a "rejuvenator" extracted from a "lymph compound". "The Shadow and the Flash" (1903) has two competing scientific geniuses attaining INVISIBILITY, one by perfecting a pigment that absorbs all light, the other by achieving pure transparency. In "The Enemy of All the World" (1908) a lone genius invents a superweapon and terrorizes the world. Racism runs through much of JL's sf, most shockingly in "The Unparalleled Invasion" (1910): after the White nations have wiped out the Chinese with an aerial germ-warfare assault, a joyous epoch can begin of "splendid mechanical, intellectual, and art output". One major area of JL's sf is the prehistoric world (ANTHROPOLOGY; ORIGIN OF MAN), which is explored in Before Adam (1906), his first sf novel - which uses a favourite theme, atavism, as a device to project a consciousness into the past - as well as in "The Strength of the Strong" (1911). Atavism appears also in "When the World was Young" (1910), in which a "magnificent" and "yellow-haired" savage shares the body of a successful California businessman, and in The Star Rover (1915; vt The Jacket 1915 UK), a novel based partly on the reported revelations of one Ed Morrell, who had experienced a dissociation of mind from body under torture in San Quentin. In The Scarlet Plague (1912 London Magazine; 1914) human history is viewed as cyclical; the post- HOLOCAUST world of the NEAR FUTURE has reverted to primitive tribal existence. The novella "The Red One" (1918) describes a contemporary stone-age society that has turned a mysterious sphere from outer space into the centrepiece of a death cult. Several of JL's sf works deal with the struggle between the capitalist class, trying to establish a fascist oligarchy, and the proletariat, striving for socialism. "A Curious Fragment" (1908), set in the 28th century, shows one of the ruling oligarchs encountering a severed arm bearing a petition from his industrial slaves, though a more optimistic view appears in "Goliah" (1908), in which a "scientific superman" masters the ultimate energy source, Energon, becomes master of the world's fate, and inaugurates a millennium of international socialism; both stories are assembled in Curious Fragments: Jack London's Tales of Fantasy Fiction ed Dale L. Walker (coll 1975). In "The Dream of Debs" (1909) a near-future general strike brings the capitalist class to its knees. JL's finest achievement in sf, and perhaps his masterpiece, is the DYSTOPIAN The Iron Heel (1907), which predicts a 20th-century fascist oligarchy in the USA and recounts, through documents discovered by scholars in the socialist 27th century, the epic revolutionary struggle of the enslaved proletariat. Many of JL's shorter works can be found reprinted in The Science Fiction of Jack London

ed Richard Gid Powers (coll 1975), which also has a good introduction.
[HBF]About the author: Jack London: A Bibliography (last rev 1973) by H.C. Woodbridge; Jack London (1984 chap) by Gorman Beauchamp. See also: DISASTER; HISTORY OF SF; MEDICINE; PULP MAGAZINES; REINCARNATION; TABOOS.

LONG, CHARLES R (USSELL)

(1904-1978) US writer whose 2 routine sf novels are Infinite Brain (1957) and The Eternal Man (1964). Both are filled with action, the first on a distant planet, the second on an Earth replete with human and alien immortals. [JC]

LONG, DUNCAN

(1949-) US writer and editor of a SURVIVALIST newsletter. His first novel, Anti-Grav Unlimited (1988), features a super-competent tinker/inventor hero (EDISONADE) who - in a post- HOLOCAUST atmosphere almost perfectly designed to serve as an arena for his exploits - uses his ingenious ANTIGRAVITY device to defeat a corporate cabal. The book is well crafted. [JC]

LONG, FRANK BELKNAP

(1903-1994) US writer of sf and fantasy whose working life extended from 1924 to the 1980s; he was married to Lyda Belknap LONG. He produced poetry very early, the best of it appearing in A Man from Genoa and Other Poems (coll 1926) and The Goblin Tower (1935), but is most noted for the weird fantasy he wrote from the beginning of his fiction career, publishing his first stories, "The Desert Lich" and "Death Waters" in WEIRD TALES in 1924. Influenced by H.P. LOVECRAFT, who had promoted the acceptance of his first work and who remained a close colleague until his death in 1937, FBL tended to create worlds in his mentor's style with a slender sf base. He frequently told of his friendship, personal and professional, with Lovecraft, and gave additional details in the valuable introduction and running notes to The Early Long (coll 1976), which assembles stories from 1924-44, the period of his prime as a writer of sf and fantasy. The contents of his first ARKHAM HOUSE volume, The Hounds of Tindalos (coll 1946; cut 1963), were variously excerpted as The Dark Beasts (coll 1963) and The Black Druid and Other Stories (coll 1975 UK); these stories represent the cream of his work. A more recent Arkham collection, The Rim of the Unknown (coll 1972), draws from the same prime material. The post-WWII years saw a change of emphasis in FBL's long career, with much more sf being written and published, beginning with John Carstairs: Space Detective (coll of linked stories 1949) which, with "The Ether Robots" (1942) and "The Heavy Man" (1943), formed a series about John Carstairs, detective and biological expert. Most of FBL's sf deals with future-Earth situations, space travel occurring relatively infrequently (Space Station No 1 [1957 dos] occurs off Earth, but the setting is not too distant), though much of his earlier sf featured TIME TRAVEL. Several of his sf books concentrate on INVASION plots in which aliens menace our world, as in Lest Earth be Conquered (1966; vt The Androids 1969 US) and Journey into Darkness (1967); others, like It was the Day of the Robot (1963) and This Strange Tomorrow (1966), depict intrigue-filled future-Earth societies. Some of his later books, like Survival World (1971) and The

Night of the Wolf (1972), a HORROR fantasy, are among his better works. FBL has published hundreds of short stories over his career, in addition to those collected in his own books; a proper estimate of his stature will have to take them into account, as well as the more routine sf novels of his later years, which for some time obscured the shorter work for which he will finally be remembered. His full-length study, Howard Phillips Lovecraft: Dreamer on the Nightside (1975), is also of interest. [JC]Other works: Woman from Another Planet (1960); The Mating Center (1961); Mars is my Destination (1962); Three Steps Spaceward (1953 Fantastic Universe as "Little Men of Space"; 1963); The Horror from the Hills (1931 Weird Tales; 1963); Odd Science Fiction (coll 1964; vt The Horror from the Hills 1965 UK, not to be confused with the 1963 US title, which prints the novel only); The Martian Visitors (1964); Mission to a Star (1958 Satellite; 1964); So Dark a Heritage (1966); . . . And Others Shall be Born (1968 dos); The Three Faces of Time (1969); Monster from Out of Time (1970); In Mayan Splendor (coll 1977), poetry; When Chaugnar Wakes (1978 chap), poem; Night Fear (coll 1979) ed Roy TORGESON; Rehearsal Night (1981 chap); Autobiographical Memoir (1985 chap).As Lyda Belknap Long:To the Dark Tower(1969)Fire of the Witches(1971)The Shape of Fear(1971)The Witch Tree(1971)Hour of the Deadly Nightshade(1972)Legacy of Evil(1973)andThe Crucible of Evil(1974)See also: LONGEVITY (IN WRITERS AND PUBLICATIONS); PARALLEL WORLDS; ROBERT HALE LIMITED; SMALL PRESSES AND LIMITED EDITIONS.

LONGEVITY

IMMORTALITY.

LONGEVITY (IN WRITERS AND PUBLICATIONS)

A curious phenomenon in GENRE SF is the extreme longevity of some of its writers and many of its publications. In referring to the longevity of writers, we mean their professional lives rather than the span between their births and deaths. Although sf careers spanning more than 50 years are not usual, neither are they especially uncommon. The present records may be those held by Jack WILLIAMSON (1908-), whose first published story was "The Metal Man" (1928) in AMZ and who was still writing at the time of Beachhead (1992), a span of 64 years; and by Frank Belknap LONG (1903-), whose first published story was "The Desert Lich" (1924) in Weird Tales, and who was active at least until 1986, making a span of 62 years. Others to break the 50-year mark have included Lloyd Arthur ESHBACH (1910-), who has published comparatively little fiction but has played an important role in sf publishing, and whose writing career nevertheless runs 60 years from "The Man with the Silver Disc" (1930) to The Scroll of Lucifer (1990); Andre NORTON (1912-), whose first novel, not sf, was The Prince Commands (1934) - her first sf being "The People of the Crater" (1947) as

by Andrew North - and whose most recent book is *Songsmith* (1992) with A.C. CRISPIN, a span of 58 years; Raymond Z. GALLUN (1910-), who began with "The Space Dwellers" (1929) and whose most recent novel was *Bioblast* (1985), a span of 56 years (increased to 62 years if we take into account his sf memoir *Starclimber* [1991]); Clifford D. SIMAK (1904-1988), whose first published sf was "The World of the Red Sun" (1931) and whose last was *Highway of Eternity* (1986), a span of 55 years; L. Sprague DE CAMP (1907-), who began with "The Isolinguals" (1937) and who recently published *The Swords of Zinjaban* (1991) with his wife Catherine A. Crook de Camp, a span of 54 years; Frederik POHL (1919-), who published a slew of short stories under pseudonyms in 1940-41 and whose most recent book is *Mining the Oort* (1992), a span of 52 years; Fritz LEIBER (1910-1992), who began with "Two Sought Adventure" (1939) in *Unknown* and whose late collection *The Leiber Chronicles: Fifty Years of Fritz Leiber* (coll 1990) ed Martin H. GREENBERG announces his writing lifespan on the cover; and Murray LEINSTER (1896-1975), whose first published sf was "The Runaway Skyscraper" (1919) and whose last was *Land of the Giants No 3: Unknown Danger* (1969), a span of 50 years. Among non-genre writers who nevertheless published several books of sf, the prolific Eden PHILLPOTTS (1862-1960) had altogether a 70-year career (1889-1959), and his fantasy writing career ran 54 years from *A Deal With the Devil* (1895) to *Address Unknown* (1949). Even a comparative youngster, in terms of natural lifespan, like Isaac ASIMOV (1920-1992), whose career began when he was very young with "Marooned Off Vesta" (1939), managed a 50-year span up to the solo novel *Nemesis* (1989), and indeed continued to write stories, collaborative novels and articles until only months before his death early in 1992. Robert A. HEINLEIN (1907-1988), even though he began writing quite late, managed 48 years between "Lifeline" (1939) and *To Sail Beyond the Sunset* (1987). The lengths of these professional lives and of others like them are not merely trivial material for the record books. They came about partly because the sf community, made up of writers, editors, publishers, agents, critics and fans, exists as a community - a community which, sometimes sentimentally, and in the face of a clear decline in their writing power, cares for its elders (although surprisingly many have continued to write well, Fritz Leiber being a particularly clear example). It is ironic that the literature of the future is, to a degree, in the hands of men and women of the past; and there is no doubt that many young writers, trying to get published, have cursed the names of Asimov or Heinlein, who not only took up valuable space in the bookstores but also, it must have seemed, would never stop writing. The longevity of these careers is matched by the longevity of the texts. There is no other genre which keeps its classic texts in print or focuses on its past with anything like the same selfconscious zeal as sf does. In sf, work dating as far back as the mid-1930s, like the *Lensman* books of E.E. "Doc" SMITH, was still finding new readers in the 1980s. The writers of the GOLDEN AGE OF SF - Asimov, Heinlein, Simak, James BLISH, A.E. VAN VOGT, Ray BRADBURY, Arthur C. CLARKE and many others - are recycled for each generation (though some, like Simak and van Vogt, seem at last to be fading from sight). The same is true of more recent classics (some of them almost 40 years old now) by Jack VANCE, Frank HERBERT, Philip K. DICK and a host of others. The oddity of this is that contemporary visions of the future exist

side-by-side with rivals that, in the context of our century of rapid change, are ancient history. What confuses the issue further is the tendency of sf, like the Worm Ouroboros, to eat its own tail (or its own parents). There is a strangely conservative self-cannibalism in the sf culture, always redigesting "new" ideas which might easily be 60 years old, and this practice is not restricted to its lower echelons. Of all genres, one might expect sf-with its focus on change and the future - to be the one whose cutting edge would be continually resharpened. But, faced with the actual situation, we might cynically propose that sf is more like a wave, whose constituent molecules - the writers working at any one time - are always changing, but which seems as it approaches us to be exactly the same wave it was while still distant. There are good aspects, however, to the longevity of successful sf texts. Sf's generic stability is a function of its past co-existing with its present, and it is for this reason, too, that sf's icons take on such density and richness, so that it has become the most resonant of all popular literatures. Its words and its metaphors and its narrative structures carry not just the burden of yesterday but also that of some of yesterday's excitement (and these images are not static; they slowly grow and change with the years, like a tree). An sf that was always genuinely new would be intolerable; it would concuss us with future shock. The reward for sf's longevity is that it remains workable; the cost, too often, is that it is also kept familiar and safe. [PN]

LONGWAY, A. HUGH

Andrew LANG.

LONGYEAR, BARRY B(ROOKES)

(1942-) US writer and editor who ran a printing company with his wife before beginning to write in 1977. He soon published his first sf story, "The Tryouts" for IASFM in 1978. Before his 1981 hospitalization for alcoholism and addiction to prescription drugs - an experience which forms the basis of the non-sf novel Saint Mary Blue (1988) - he had already published prolifically, sometimes as by Frederick Longbeard. Most of the short fiction for which he remains best known was soon released, most notably the stories assembled in Manifest Destiny (coll 1980), which explore their shared universe - dominated by a ruthlessly expanding Earth - with considerable intensity. Enemy Mine (1979 IASFM; 1989 chap dos), which appeared in that volume, won both HUGO and NEBULA and was filmed as ENEMY MINE (1985); with the collaboration of David GERROLD, BBL novelized the film version as Enemy Mine * (1985). In both versions, a human and an ALIEN, caught in the bitter conflict occasioned by human expansion, are isolated together on a primitive planet and must cooperate or die. The Tomorrow Testament (1983) is a loose sequel to the tale, reiterating in competently extended form its lessons. At the same time, BBL began to publish his Circus sequence - comprising, in order of internal chronology, City of Baraboo (coll of linked stories 1980), Elephant Song (1982) and Circus World (coll of linked stories 1981) - about the escape of a circus troop from Earth, its misadventures, its colonizing of the planet Momus, and the final triumph of its representatives as an interstellar act. Most of the contents of It Came from Schenectady (coll 1984) had first appeared

by 1981. In 1980 BBL won the JOHN W. CAMPBELL AWARD for Best New Writer. After the gap caused by his hospital experience, BBL returned to active work with a sharp DYSTOPIA about OVERPOPULATION, Sea of Glass (1987), told from the viewpoint of a child whose birth was illegal but promulgated by the COMPUTER which struggles coldly to deal with the huge excess of humans on the planet. Later novels like Naked Came the Robot (1988), The God Box (1989), Infinity Hold (1989) and The Homecoming (1989) are variously of interest, but exhibit some intermittent sense of fatigue. At the same time, the alert clarity and genre cunning of BBL's best work seem potentially available to him, and may surface at any point in the 1990s. [JC] Other works: Science Fiction Writer's Workshop - I: An Introduction to Fiction Mechanics (1980); two Alien Nation tv ties: The Change *(1994), which novelizes an unproduced script, and Slag Like Me*(1994), which novelizes material from a cancelled season. See also: ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE.

LONNERSTRAND, STURE
[r] SCANDINAVIA.

LOOKER

Film (1981). Ladd Co./Warner Bros. Dir Michael CRICHTON, starring Albert Finney, James Coburn, Susan Dey, Leigh Taylor-Young. Screenplay Crichton. 94 mins cut to 90 mins. Colour. L was intended by Crichton as a comedy, but the studio wanted a suspense thriller, and the result falls confusingly between the two. Three models, after having undergone surgery to make them even more beautiful, are murdered, and the plastic surgeon (Finney) wonders why. Villainous company Digital Matrix, whose employees have guns which create time-lapses in the victims, plans to use computer-generated human images (the murder of their human originals is never explained) in a tv advertising campaign designed to exploit the LOOKER (Light Ocular-Oriented Kinetic Emotive Responses) system for mind-control by hypnosis. L seems to be badly cut, since it is full of loose ends and non sequiturs. The sequences of computer imaging are striking, the SATIRE against the advertising business heavy-handed. [PN]

LOOMIS, NOEL (MILLER)

(1905-1969) US writer and editor, active in the magazine field for some time, publishing work under his own name and as Benjamin Miller, and a book as by Silas Water. Though his first novel, Murder Goes to Press (1937), was a thriller, he was most successful as an author of Westerns. In his first sf novel, City of Glass (1942 Startling Stories; exp 1955), based on his first sf story, three men are time-warped into a desolate distant future on Earth; "Iron Men" (1945) is a sequel. A second novel, The Man with Absolute Motion (1955) as by Silas Water, is likewise set in a desolate venue; in this case the Universe is running out of energy. After saving the Universe, the eponymous hero takes an Eve figure back to a depopulated Earth, and plans to breed. [JC]

LOOSLEY, WILLIAM ROBERT
[r] David LANGFORD.

LORAN, MARTIN
John BAXTER.

LORD, GABRIELLE

(1946-) Australian author, mostly of thrillers, who has been publishing novels since 1980. Her fourth, *Salt* (1990), is a routine post- HOLOCAUST novel set in Australia in AD2075, the holocaust having been the product of OVERPOPULATION, POLLUTION and dreadful damage to the ECOLOGY. [PN]

LORD, JEFFREY

Lyle Kenyon ENGEL; Roland GREEN; Ray NELSON; Manning Lee STOKES.

LORD OF THE FLIES

1. Film (1963). Allen-Hodgdon Productions/Two Arts. Dir Peter Brook, starring James Aubrey, Tom Chapin, Hugh Edwards, Roger Elwin. Screenplay Brook, based on *The Lord of the Flies* (1954) by William GOLDING. 91 mins. B/w. Set in the NEAR FUTURE, the film concerns a group of English schoolboys whose plane crash-lands on a remote island. With two exceptions the boys quickly revert to savagery, resulting in the murder of one of them. LOTF can be interpreted in several ways: as a demonstration of the validity of the belief in Original Sin; as a variation on H.G. WELLS's theme that civilization is only skin-deep (also demonstrated by the implication that WWII is taking place elsewhere); or as an indictment of the English public-school system. It is an honest but "literary" (and not very cinematic) rendition of a story that works better as a novel. 2. Film (1990). Castle Rock Entertainment/Nelson Entertainment/A Jack's Camp/Signal Hill production. Dir Harry Hook, starring Balthazar Getty, Chris Furrh, Daniel Pipoly. Screenplay Sarah Schiff, based on the Golding novel. 90 mins. Colour. This updated remake (the boys are US rather than UK) is well made, and its less than reverent adherence to its distinguished source does not hurt it. The main adaptation is to modify the hanged pilot of the original into a badly injured pilot who arrives on the island with the boys, crawls into a cave and comes to be regarded as a MONSTER. [JB/PN]

LORDS OF THE DEEP

Roger CORMAN.

LORINCZ, LASZLO L.

[r] HUNGARY.

LORRAH, JEAN

(c1942-) US writer and academic, professor of English at Murray State University in Kentucky. For the sf reader her writing career has perhaps seemed to lack focus, being broken into three areas of concentration. After fan involvement in the Star Trek OPEN UNIVERSE, she began publishing sf with the first of her collaborations with Jacqueline LICHTENBERG, *First Channel* (1980), a volume in the latter's Sime/Gen sequence; though this and *Channel's Destiny* (1982) and *Zelerod's Doom* (1986) are worthy companions to Lichtenberg's solo efforts, JL was perceived as the junior partner in the enterprise, a perception modified by the publication of her solo venture in the sequence, *Ambrov Keon* (1986). Her second area of concentration was the *Savage Empire* series of fantasies concerning MAGIC: *Savage Empire* (1981), *Dragon Lord of the Savage Empire* (1982), *Captives of the Savage Empire* (1984), *Flight to the Savage Empire* (1986) with Winston

A. Howlett, *Sorcerers of the Frozen Isles* (1986), *Wulfston's Odyssey: A Tale of the Savage Empire* (1987) with Howlett, and *Empress Unborn* (1988). It is with her third focus, novels written for STAR TREK and STAR TREK: THE NEXT GENERATION, that she has become perhaps most identified: *Full Moon Rising* * (1976 chap), *The Night of the Twin Moons* * (1976), *Epilogue, Part 1* * (1979 chap) and *Epilogue, Part 2* * (1979 chap), *Jean Lorrain's Sarek Collection* * (coll 1980), *The Vulcan Academy Murders* * (1984) and *The IDIC Epidemic* * (1988) are contributions to Star Trek proper, and *Survivors* * (1989) and *Metamorphosis* * (1990) contributions to Star Trek: The Next Generation. [JC]

LORRAINE, ALDEN

[s] Forrest J. ACKERMAN.

LORRAINE, LILITH

One of at least 5 pseudonyms of Mary Maude Wright (nee Dunn) (1894-1967), US writer, poet, editor and radio lecturer, who regularly published sf in the 1930s PULP MAGAZINES. *The Brain of the Planet* (1929 chap), from Hugo GERNERBACK's Science Fiction series, is a FEMINIST socialist UTOPIA, as is her "Into the 28th Century" (1930 *Science Wonder Quarterly*). Her favourite themes included classless societies, revised gender roles and ESP. Between 1937 and 1967 she also edited poetry magazines and wrote much verse, including *Banners of Victory* (coll 1937 chap), *Beyond Bewilderment* (coll 1942 chap), *They* (1943 chap), *The Day before Judgement* (coll 1944 chap) and *Trailing Clouds of Glory* (coll 1947 chap), *Call on the Rocks* 1944-47 (coll 1947 chap); *Let the Patterns Break* (omni 1947) assembles the previous volumes. The later *Wine of Wonder* (coll 1951 chap) was advertised as being the first volume of POETRY devoted to sf. It is hard to say that LL had an individual voice, though she did at times effectively translate common poetic idioms into sf terms. In 1940 she founded Avalon, a poetry association. [JD/JC]About the author: "Empress of the Stars" by Steve Sneyd in *Fantasy Commentator* #43, 1992.

LORRAINE, PAUL

House name for CURTIS WARREN used by William Henry BIRD for *Two Worlds* (1952), John Russell FEARN for *Dark Boundaries* (1953) and John S. GLASBY for *Zenith-D* (1952). [PN/JC]

LORY, ROBERT (EDWARD)

(1936-) US public relations adviser and writer who began publishing sf with "Rundown" for *Worlds of If* in 1963; his stories have been assembled as *A Harvest of Hoodwinks* (coll 1970 dos). His sf novels, mostly light, fantasy-laced adventures, are unambitious but competent; they include *Identity Seven* (1974) and *The Thirteen Bracelets* (1974). The Trovo series - *The Eyes of Bolsk* (1969 dos) and *Master of the Etrax* (1970) - and the Shamryke Odell sequence - *Masters of the Lamp* (1970 dos) and *The Veiled World* (1972 dos) - are SCIENCE FANTASY of an undemanding sort. [JC]Other works: 2 horror/fantasy series: the Dracula sequence, comprising *Dracula Returns!* (1973), *The Hand of Dracula* (1973), *Dracula's Brother* (1973), *Dracula's Gold* (1973), *Drums of Dracula* (1974), *The Witching of Dracula* (1974), *Dracula's Lost World* (1974), *Dracula's Disciple* (1975) and *Challenge to Dracula* (1975), featuring an immortal Dracula who has

survived ATLANTIS; the Horrorscope sequence, comprising The Green Flames of Aries (1974), The Revenge of Taurus (1974), The Curse of Leo (1974) and Gemini Smile, Gemini Kill (1975).

LOST ATLANTIS

Die HERRIN VON ATLANTIS .

LOST CONTINENT, THE

Film (1968). Hammer/20th Century-Fox. Dir Michael Carreras, starring Eric Porter, Hildegard Knef, Suzanna Leigh, Darryl Read. Screenplay Michael Nash, based on Uncharted Seas (1938) by Dennis WHEATLEY. 98 mins. Colour. A ramshackle freighter wanders into the Sargasso Sea and becomes trapped in a "lost continent" of seaweed. Passengers and crew then face the onslaught of various menaces, including a giant octopus, a giant crab, carnivorous seaweed and, finally, a lost race (LOST WORLDS) whose people, descended from Spanish conquistadores, travel in BALLOONS. Bad but enjoyable, wholly absurd; good art direction. [JB/PN]

LOST HORIZON

1. Film (1937). Columbia. Dir Frank Capra, starring Ronald Colman, Jane Wyatt, Sam Jaffe, Edward Everett Horton, H.B. Warner. Screenplay Robert Riskin, based on Lost Horizon (1933) by James HILTON. 133 mins, cut to 118 mins, then to 109 mins; but full print now available. B/w. In this memorably sentimental, deft, trite, enormously popular UTOPIAN/ LOST-WORLD film set in the Himalayas, survivors of a plane crash find themselves in the mysterious, tranquil city of Shangri-La. It is ruled by the High Lama, a kindly old buffer, who tells them that war and disease do not exist here and that if they remain in the city they will live for ever. After some time the hero (Colman) leaves with his brother and a Shangri-La woman, who ages with appalling speed away from her home. After a brief return to civilization, Colman realizes that he has abandoned true happiness, and is last seen, hauntingly, struggling through the snow and in long shot, reaching the gate of the forbidden city as the bells ring out and the audience weeps. 2. Film (1973). Columbia. Prod Ross Hunter. Dir Charles Jarrott, starring Peter Finch, Liv Ullman, Sally Kellerman, George Kennedy, Charles Boyer, Michael York. Screenplay Larry Kramer. 150 mins, cut to 143 mins. Colour. Long, lush, sluggish remake with banal songs (by Hal David and Burt Bacharach) and much stilted dialogue in Hollywood's philosophical vein. The original piece of hokum was orchestrated by Capra with skill and conviction; this unmagical version was a box-office failure. [JB/PN]

LOST IN SPACE

US tv series (1965-68). An Irwin Allen Production in association with Van Bernard Productions for 20th Century-Fox Television/CBS. Created Irwin ALLEN, also executive prod. Story consultant Anthony Wilson. Writers included Peter Packer, William Welch, Bob and Wanda Duncan, Carey Wilbur, Barney Slater. Dirs included Harry Harris, Sutton Roley, Nathan Juran, Don Richardson, Sobey Martin. 3 seasons, 83 50min episodes. 1st season b/w; colour from 2nd. LIS was aimed primarily at children. The Robinsons' spacecraft is sabotaged by an enemy agent, causing them to crash-land on a remote planet. The group consists of the family of 5 - the series was

originally to be called Space Family Robinson - along with a young male co-pilot (Mark Goddard) and the whining saboteur, Dr Smith, played with comic but sinister effect by Jonathan Harris; the Robinsons were played by June Lockhart, Guy Williams, Angela Cartwright, Marta Kristen and Billy Mumy. There was also a ROBOT, whose catch-phrase was "That does not compute". Though remote, the planet soon became a stopping-off point for practically every space-travelling alien or monster in the Galaxy, each episode seeing the arrival of some new visitor. After the first season the Robinsons got back into space themselves. As the series progressed the young boy (Mumy) and the ambiguous Dr Smith became the central characters, together with the robot, while the others receded more and more into the background. The stories, at first straight sf, became more and more fantastic. LIS was probably the most enjoyable of Irwin Allen's many excursions into televised sf. Lost in Space * (1967) by Dave VAN ARNAM and Ron Archer (Ted WHITE) is a novelization. [JB/PN]

LOST PLANET, THE

1. Film serial (1953). Columbia. Dir Spencer G. Bennet, starring Judd Holdren, Vivian Mason, Ted Thorpe, Forrest Taylor, Michael Fox. Script George H. Plympton, Arthur Hoerl. This 15-part children's series - Hollywood's last sf serial - featured an investigative reporter, a mad SCIENTIST, a ROBOT and an attempted alien INVASION of Earth. Individual "chapters" had titles like "Blasted by the Thermic Disintegrator" and "Snared by the Prysmic Catapult". 2. UK tv serial (1954). BBC TV. Prod Kevin Sheldon, starring Peter Kerr, Jack Stewart, Mary Law. Script by Angus MacVicar, based on his The Lost Planet (1953). 6 25min episodes. B/w. This was one of the first sf-related BBC TV serials for children; previously it had been a very popular RADIO serial. An atomic-powered spacecraft takes a group, including one child, to the lost planet of Hesikos. A sequel, Return to the Lost Planet, based on MacVicar's Return to the Lost Planet (1954), was produced the following year. We can find no evidence for the assertion in The Encyclopedia of TV Science Fiction (1990) by Roger Fulton that MacVicar is a pseudonym of Andre NORTON. [PN/JB]

LOST RACES

ANTHROPOLOGY; LOST WORLDS.

LOST WORLD, THE

1. Film (1925). First National. Dir Harry O. Hoyt, starring Wallace Beery, Lewis Stone, Bessie Love, Lloyd Hughes. Script Marion Fairfax, based on The Lost World (1912) by Arthur Conan DOYLE. 9700ft (approx 105 mins, cut to 60 mins). B/w, with some tinted sequences. Wallace Beery makes an unlikely Professor Challenger in this slow-moving, wordy (a large number of dialogue frames) silent version of the famous novel about the discovery of an almost inaccessible South American plateau, a LOST WORLD in which prehistoric creatures, including dinosaurs and apemen, still live. The film is relatively faithful to the book, certainly more so than the 1960 remake (see below), though one departure occurs at the climax when the brontosaurus taken back to London by Challenger to confound the snooty doubters of the Royal Society breaks free and goes on a rampage that ends with the destruction of Tower Bridge (in the book it was a small

pterodactyl that escaped), a forerunner of many sequences in later MONSTER MOVIES. The film is interesting chiefly because of its special effects, the work of stop-motion photography pioneer Willis H. O'BRIEN. It was the first feature film to make large-scale use of model animation combined with live action.² Film (1960). 20th Century-Fox. Dir Irwin ALLEN, starring Claude Rains, Michael Rennie, Jill St John, David Hedison, Fernando Lamas. Screenplay Allen, Charles Bennett. 97 mins. Colour. This rather lifeless remake contains all the usual Irwin Allen banalities, with the customary reliance on spectacle to carry the film. The special effects, supervised by L.B. Abbott, are certainly spectacular; this time the various dinosaurs were portrayed using live lizards photographically enlarged, and their death throes, when the plateau is engulfed by volcanic fire, are alarmingly realistic. [JB]

LOST WORLDS

This rubric covers lost races, lost cities, lost lands: all the enclaves of mystery in a rapidly shrinking world that featured so largely in the sf of the late 19th and early 20th centuries. This subgenre was obviously a successor to the FANTASTIC VOYAGES of the 18th century and earlier, but there are important distinctions to be drawn. The earlier tales had belonged to a world which was still geographically "open"; at the time Jonathan SWIFT wrote Gulliver's Travels (1726), Australia had yet to be discovered by Europeans and Africa had yet to be explored. The lost-world story, however, belonged to a cartographically "closed" world: in Jules VERNE's and H. Rider HAGGARD's day unknown territories were fast disappearing. The options were running out, and hence the 19th-century lost lands tended to be situated in the most inaccessible regions of the globe: the Amazon basin, Himalayan valleys, central-Asian and Australian deserts, at the poles, or within the HOLLOW EARTH. These works are also distinguishable from earlier travellers' tales by their much greater "scientific" content. The new sciences of geology, ANTHROPOLOGY and, above all, archaeology had a considerable influence on Verne, Haggard and their successors. For a while, the fiction was concurrent with the reality (at least in the popular mind). From the discoveries of Troy and Nineveh to those of Machu Picchu and Tutankhamun's tomb, there flourished a "heroic age" of archaeology and scientific exploration, of which the fiction was a natural concomitant. The fiction was often based on PSEUDO-SCIENCE rather than real science, for example the many ATLANTIS stories which followed the success of Ignatius DONNELLY's nonfiction Atlantis, the Antediluvian World (1882). Tales of undiscovered worlds within the Earth tended to be based on the crackpot geology of John Cleves SYMMES. Perhaps the best of all inner-world fantasies (though not set in a full-scale Symmesian Hollow Earth) is Voyage au centre de la terre (1863; exp 1867; trans anon as Journey to the Centre of the Earth 1872 UK) by Jules Verne, in which explorers reach a subterranean sea by way of an extinct volcano. Other underground lost worlds include LYTTON's The Coming Race (1871; vt Vril: The Power of the Coming Race 1972 US), William N. HARBEN's The Land of the Changing Sun (1894), John M. LEAHY's Drome (1927 Weird Tales; 1952), Stanton A. COBLENTZ's Hidden World (1935 Wonder Stories as "In Caverns Below"; 1957) and Joseph O'NEILL's Land Under England (1935). The Hollow-Earth story "Black as the Pit, from Pole to Pole" (1977) by Steven

UTLEY and Howard WALDROP is a pastiche of this whole tradition. The archetypes of the lost-race story are, in the main, unrepentantly romantic. Edgar Rice BURROUGHS was an extensive contributor to the subgenre (with, for example, *The Land that Time Forgot* [1918 Blue Book; 1924] and most of his Tarzan novels) but its most famous exponent was a generation earlier: H. Rider Haggard, whose lost-race fantasies include *King Solomon's Mines* (1885), *Allan Quatermain* (1887), *She* (1887) - these two introducing the hugely popular erotic motif of the beautiful queen, or high priestess, who attempts to seduce the hero - *The People of the Mist* (1894), *The Yellow God* (1908) and *Queen Sheba's Ring* (1910); the publication dates of these novels span the period when the species was in its heyday. Other notable examples are William WESTALL's *The Phantom City* (1886), James DE MILLE's *A Strange Manuscript Found in a Copper Cylinder* (1888) and Thomas JANVIER's *The Aztec Treasure House* (1890). The best-known individual work in the genre may be *The Lost World* (1912) by Arthur Conan DOYLE, a perennially popular adventure story about the discovery of surviving prehistoric creatures on a South American plateau (*The LOST WORLD*). The species was popular in the general-fiction pulps but was in decline by the time the first SF MAGAZINES appeared, though lost-world stories by A. MERRITT - *The Face in the Abyss* (1923-30 *Argosy*; fixup 1931) - and by A. Hyatt VERRILL - *The Bridge of Light* (1929; 1950) - proved influential on some later sf writers. John TAINÉ's *The Purple Sapphire* (1924) and *The Greatest Adventure* (1929) have stronger sf elements than usual, though somewhat vaguely described superscientific technology was common enough in the subgenre. Other authors of lost-race stories include Grant ALLEN, Austyn GRANVILLE, Andrew LANG, William LE QUEUX, John MASTIN, S.P. MEEK, Talbot MUNDY, Hume NISBET, Gordon STABLES, Rex STOUT, E. Charles VIVIAN and S. Fowler WRIGHT. Even from the 1930s, when fewer lost-world stories were being published, there were occasional popular successes. The film *KING KONG* (1933) opens in a lost world. James HILTON's mystical Tibetan romance of *IMMORTALITY*, *Lost Horizon* (1933), was a bestseller (*LOST HORIZON*). Later examples can be found in the work of Dennis WHEATLEY, including *The Fabulous Valley* (1934), *Uncharted Seas* (1938), which was filmed as *The LOST CONTINENT*, and *The Man who Missed the War* (1945). Only very occasional lost-race novels have appeared since WWII. Ian CAMERON's *The Lost Ones* (1961; vt *Island at the Top of the World*) is set in the Arctic and was filmed by Disney as *The Island at the Top of the World* (1974) dir Robert Stevenson. *Stones of Enchantment* (1948) by Wyndham MARTYN, *The City of Frozen Fire* (1950) by Vaughan WILKINS, *Lost Island* (1954) by Graham MCINNES and *The Rose of Tibet* (1962) by Lionel DAVIDSON seem rather old-fashioned. Gilbert PHELPS's *The Winter People* (1963), though, is an intelligent novel about an eccentric South American explorer and his discovery of a remarkable tribe. Stephen TALL's *The People beyond the Walls* (1980) is a remarkably late example. Generally, though, postwar lost-race stories edge close to pastiche; several examples are given in the *HOLLOW EARTH* entry. The fact that this species of fantasy was so little influenced by scientific thought may be a result of its being largely anachronistic (and therefore implausible) from its beginnings. Once TRANSPORTATION technology had allowed Phileas Fogg to achieve his object, the lost-race fantasy owed more to the desire that enclaves of mystery should exist than to the likelihood that they did.

Even from the point of view of sociological or political thought-experiments, the genre had surprisingly little to offer. The lost-race story is obviously an opportunity for the setting up of imaginary UTOPIAS and DYSTOPIAS, but these elements are not as common as might be expected, and most of the stories listed above - which include the best-remembered classics of the genre - are quite straightforward romantic adventure. It has been suggested, too, that such stories allow exercises in imaginary cultural ANTHROPOLOGY, but few of these stories are of any real interest in this respect - an exception being the late example *Providence Island: An Archaeological Tale* (1959) by Jacquetta HAWKES - and they have more to offer the student of popular mythology - in which context they are discussed by Brian Street in *The Savage in Literature* (1975). Oddly enough there is more and better cultural anthropology in offworld stories of planetary exploration and COLONIZATION OF OTHER WORLDS (mostly postwar), subgenres that largely superseded the lost-race story, than there are in lost-race stories set on Earth. *Science-Fiction: The Early Years* (1990) by Everett F. BLEILER lists and describes some hundreds of lost-race stories up to 1930, its index allowing a sort by scientific advancement (from barbaric to superscientific), or by location (Antarctic to Siberia), or by racial derivation (from Atlantean via Hebrew and Old Norse to Phoenician). A relevant essay is "Lost Lands, Lost Races: A Pagan Princess of Their Very Own" by Thomas D. CLARESON in *Many Futures, Many Worlds* (anth 1977) ed Clareson. LOTT, S. MAKEPEACE

Working name of UK author Stanley Makepeace-Lott (? -), whose *Escape to Venus* (1956) is an ORWELL-influenced DYSTOPIAN view of a VENUS colony established 60 years after a 1980 world war. [JE]

LOTTMAN, EILEEN

(1927-) US writer of ties, mainly for the *The BIONIC WOMAN* tv series: *The Bionic Woman #1: Welcome Home Jaime* * (1976; vt *Double Identity* 1976 UK as by Maud Willis) and #2: *Extracurricular Activities* * (1977; vt *A Question of Life* 1977 UK as by Maud Willis). Singleton ties include *The Devil's Rain* * (1975) as by Willis and *Through the Looking Glass* * (1976) as by Molly Flute. [JC]

LOUDON, JANE (WEBB)

(1807-1858) UK author of many books on popular natural history and gardening, and of *The Mummy! A Tale of the Twenty-Second Century* (1827; much rev 1828), published anon. Around a somewhat melodramatic plot - the Mummy of Cheops conspires with a Roman Catholic priest in AD2126 to control the choice of the next Queen of England - JL assembles a number of elaborate speculations about inventions of the future, including mechanical farming, movable housing and weather control, among the more plausible. [JC] See also: HISTORY OF SF; NEAR FUTURE; UTOPIAS.

LOVE AND ROCKETS

US COMIC book created in 1981 by the brothers Gilbert (1957-), Jaime and Mario Hernandez. #1, self-published, featured a 40pp future-apocalyptic chase-thriller, "BEM", by Gilbert; it introduced tail-chasing supersleuth

Castle Radium as well as Luba, a continuing star of much of Gilbert's output. Also in #1 were some short pieces by Jaime; one of these, "Mechan-X", introduced the characters Maggie, Hopey and Rand Race, who featured in #2's 40pp story "Mechanics", which told of a group of prosolar mechanics (essentially, super-repairmen) who are trying to fix a crashed rocket-ship in a primordial jungle. Except for later references to Maggie's prosolar job and a brief strip about a little Black girl in outer space ("Rocky"), the sf elements have since disappeared from LAR - a fact often regarded by the magazine's enthusiasts as being all to the good. Fantagraphics has published LAR since reprinting #1 in 1982, and also brought out Jaime's "Mechanics" as a 3-issue colour comic in 1985. [SW]

LOVECRAFT, H(OWARD) P(HILLIPS)

(1890-1937) US writer who spent almost all his life in Providence, RI, maintaining social contacts mainly by mail. He joined the United Amateur Press Association (APA) in 1914 and produced much of his early fiction in connection with this enterprise, which also allowed him to come in touch with Clark Ashton SMITH, Frank Belknap LONG and others. He began to publish professionally with the serial release of Herbert West Reanimator (1922 Home Brew; 1977 chap), but only began to establish himself when he started, with "Dagon" (1923), publishing in WEIRD TALES; his prolific correspondence with many other of its writers made him a key influence on that magazine: without his background presence its highly significant contribution to the development of US weird fiction would have been considerably weakened. His disciples included Robert BLOCH, August W. DERLETH, Henry KUTTNER and E. Hoffman PRICE. Derleth, with assistance from Donald WANDREI, founded ARKHAM HOUSE to reprint HPL's work, and the imprint was later to provide a haven for other writers influenced by HPL, including Ramsey Campbell and Brian Lumley. Colin WILSON is another modern writer who has written Lovecraftian novels, notably *The Philosopher's Stone* (1969). Although HPL's primary reputation is as a HORROR writer, his later works - those of his stories belonging to the Cthulhu Mythos - attempted to develop a distinctive species of "cosmic horror", employing premises drawn from sf: other DIMENSIONS, INVASION by ALIENS, and interference with human cultural and physiological EVOLUTION. He tried to convey a sense that the Universe is essentially horrible and hostile to humankind by means of a distinctive prose style which extends by gradual degrees from a quasiclinical mode into passages of dense, highly adjectival description. A notable essay by HPL on the historical roots of his fiction is *Supernatural Horror in Literature* (first magazine publication 1927; revised magazine publication 1933-35; 1939; 1945). HPL encouraged other writers to use the background of the Cthulhu Mythos; *The Reader's Guide to the Cthulhu Mythos* (1969; rev 1973) by Robert E. WEINBERG and Edward P. Berglund lists many such writers including (in addition to those already cited) Lin CARTER, Robert E. HOWARD, Fritz LEIBER, Robert A.W. LOWNDES and Manly Wade WELLMAN. HPL's principal Cthulhu Mythos stories - which include his best works - are "The Nameless City" (1921), "The Festival" (1925), *The Colour out of Space* (1927; 1982 chap), "The Call of Cthulhu" (1928), "The Dunwich Horror" (1929), "The Whisperer in Darkness" (1931), "The Dreams in the Witch-House" (1933), "The Hunter of the Dark" (1936), *The Shadow over Innsmouth* (1936), "The

"Shadow out of Time" (cut 1936; 1939), *At the Mountains of Madness* (cut 1936; 1939; 1990 chap), *The Case of Charles Dexter Ward* (cut 1941; 1943; dated 1951 but 1952 UK) and "The Thing on the Doorstep" (1937). The first Arkham House HPL collection was *The Outsider and Others* (coll 1939), which contained all his major works except *The Case of Charles Dexter Ward*, which first appeared in book form in the subsequent Arkham volume *Beyond the Wall of Sleep* (coll 1943). *Marginalia* (coll 1944) included some stories HPL had revised for other writers as well as essays, fragments and appreciations; a complete collection of such revisions is *The Horror in the Museum and Other Revisions* (coll 1970; cut vt *Nine Stories from The Horror in the Museum* 1971; vt in 2 vols as *The Horror in the Museum* 1975 UK and *The Horror in the Burying Ground* 1975 UK; rev and corrected 1989). HPL's complete works can be obtained in 3 vols: *The Dunwich Horror and Others* (coll 1963; cut vt *The Colour out of Space, and Others* 1964; full text vt *The Best of H.P. Lovecraft* 1982; corrected text under original title 1985), a title not to be confused with *The Dunwich Horror, and Other Weird Tales* (coll 1945); *At the Mountains of Madness and Other Novels* (coll 1964; cut 1968 UK; again cut 1971 US; corrected text under original title 1985); and *Dagon and Other Macabre Tales* (coll 1965; much cut vt *Dagon* 1967 UK; UK edn again cut, vt *The Tomb* 1969 UK; corrected text of original version 1986). The bibliography of the many other collections drawn from the corpus is inordinately complicated, and is supplemented by many chapbooks recovering all manner of trivia; the most frequently reprinted eclectic selections are *The Haunter of the Dark* (coll 1951 UK), which was a cut version of *Best Supernatural Stories of H.P. Lovecraft* (coll 1945), both ed Derleth, *The Doom that Came to Sarnath* (coll 1971) ed Lin Carter and *Bloodcurdling Tales of Horror and the Macabre: The Best of H.P. Lovecraft* (coll 1982). Several SMALL PRESSES have been and are dedicated to the celebration of his works, most notably the Necronomicon Press, which publishes the journal *Lovecraft Studies* ed S.T. Joshi, and, since 1990, when it took the title over from Cryptic Publications, the long-running *Crypt of Cthulhu* ed Robert M. Price. Several bibliographies of primary and secondary sources have been published, including Joshi's *H. P. Lovecraft: An Annotated Bibliography* (1981). These small presses have given a home to early work by several modern writers of note, including Thomas Ligotti (1953-). Derleth wrote many stories based on fragmentary texts by HPL or on notes for unwritten stories, including the novel *The Lurker at the Threshold* (1945), the stories in *The Survivor and Others* (coll 1957) and 2 stories in *The Shuttered Room and Other Pieces* (coll 1959; cut 1970 UK), which also contains some HPL juvenilia and essays about him; it is not to be confused with *The Shuttered Room* (coll 1971). All the Derleth "collaborations" are assembled in *The Watchers Out of Time and Others* (coll 1974); all but *The Lurker at the Threshold* had been in *The Shadow out of Time and Other Tales of Horror* (coll 1968 UK), along with the 6 which *The Haunter of the Dark* omitted from its parent collection. The Derleth stories are weak exercises in pastiche, and Derleth's editing of HPL's own stories came in for some criticism in the 1980s on the grounds of alleged insensitivity and distortion, necessitating the corrected editions of the 3 Arkham House collections. [BS] Other works: This list is selective, not including all small-press publications, nor items of Lovecraftiana containing little or no actual

fiction by him: Fungi from Yuggoth (coll 1941), poetry, not to be confused with vt of 1963 collection (see below); The Lurking Fear (coll 1947; vt Cry Horror! 1958), not to be confused with either The Lurking Fear (coll 1964 UK) or The Lurking Fear (coll 1971), all 3 with differing contents, or with The Lurking Fear (1928 Weird Tales; 1977 chap), which reprints the story alone; The Curse of Yig (coll 1953); Dreams and Fantasies (coll 1962); The Dream-Quest of Unknown Kadath (1943; 1955), not to be confused with The Dream-Quest of Unknown Kadath (coll 1970) ed Lin Carter; Something about Cats, and Other Pieces (coll 1949), revisions, essays, notes, etc.; Collected Poems (coll 1963; cut vt Fungi from Yuggoth and Other Poems 1971); Selected Letters 1911-1937 (5 vols 1965-76); Uncollected Prose and Poetry (coll 1978) ed S.T. Joshi and Marc Michaud. About the author: Lovecraft: A Look Behind the Cthulhu Mythos (1972) by Lin CARTER; Lovecraft: A Biography (1975) by L. Sprague DE CAMP; Howard Phillips Lovecraft: Dreamer on the Nightside (1975) by Frank Belknap LONG; The Dream Quest of H.P. Lovecraft (1978) by Darrell SCHWEITZER; The H.P. Lovecraft Companion (1977) by Philip A. Schrefler; The Major Works of H.P. Lovecraft (1977) by John Taylor Gatto; H.P. Lovecraft (1982) by S.T. Joshi; H.P. Lovecraft: A Critical Study (1983) by Donald R. Burleson. See also: ASTOUNDING SCIENCE-FICTION; DEVOLUTION; FANTASY; FANZINE; GAMES AND TOYS; GOTHIC SF; INVISIBILITY; METAL HURLANT; MONSTERS; OPEN UNIVERSE; PARALLEL WORLDS; PARANOIA; PSEUDO-SCIENCE; PSYCHOLOGY; PUBLISHING; SUSPENDED ANIMATION.

LOVEJOY, JACK

(1937-) US writer with an advanced degree in Roman history who began publishing work of genre interest with The Rebel Witch (1978), a fantasy for children. His first sf novels, Star Gods (dated 1978 but 1979) and The Hunters (1982), combine sf-adventure routines with some cultural extrapolation. The Vision of Beasts sequence - Creation Descending (1984), The Second Kingdom (1984) and The Brotherhood of Diablo (1985) - is set in a fairly remote post- HOLOCAUST USA, where California has become an archipelago and the mainland is overrun by MUTANTS known as "gunks". [JC] Other works: Magus Rex (1983), a fantasy; Guardians of the Three #4: Defenders of Ar * (1990), a SHARED-WORLD fantasy tie.

LOVELOCK, JAMES (EPHRAIM)

[r] Michael ALLABY; BIOLOGY; ECOLOGY; LIVING WORLDS.

LOVE ROMANCES PUBLISHING CO.

PLANET STORIES; TOPS IN SCIENCE FICTION.

LOVE, ROSALEEN

(1940-) Australian author, science journalist and lecturer in the history and philosophy of science. RL has been publishing short fiction - not all sf - since 1985, and has won a number of Australian MAINSTREAM awards for her stories. The astringent sf FABULATIONS collected in The Total Devotion Machine and Other Stories (coll 1989 UK) and Evolution Annie and Other Stories (coll 1993 UK) are wry, intelligent and often funny; RL's style is straight-faced irony. Her subject matter is often FEMINIST - as in the title story of the second volume, which is a kind of counter-version of Roy LEWIS's What We Did to Father (1960) - or

ecological. [PN]See also: AUSTRALIA.

LOVE WAR, THE

Made-for-tv film (1970). Paramount/ABC-TV. Dir George McCowan, starring Lloyd Bridges, Angie Dickinson, Harry Basch, Dan Travanti. Screenplay Guerdon Trueblood, David Kidd. 74 mins. Colour. Six aliens from two warring planets arrive on Earth for a duel to the death to decide which of those planets is the victor. Four are eliminated; one survivor (Bridges) opts to try to stop the fight, remain on Earth, merge with the natives, and have a relationship with a woman (Dickinson). He promises that they will marry as soon as he can overcome the other survivor, whom he knows to be closing in for the kill. The surprise revelation of his fiancée's true identity will not surprise B-movie and sf fans. This is an unpretentious and entertaining sf thriller. [JB]

LOVIN, ROGER

[r] ROBERT HALE LIMITED.

LOW, A(RCHIBALD) M(ONTGOMERY)

(1888-1956) UK academic, inventor and writer, president of the British Interplanetary Society for a period; in 1917 he invented a flying bomb. In his first sf novel, *Adrift in the Stratosphere* (1934 Scoops as "Space"; 1937), a juvenile, the young protagonists accidentally take off in a professor's rocket-ship. In *Mars Breaks Through* (1937) a scientist possessed by a Martian can bring about world peace, but seems unwilling to. *Satellite in Space* (1956) is a SPACE OPERA in which humans, including an old-time Nazi, meet aliens from the asteroid belt. AML also wrote two nonfiction prognoses, *The Future* (1925) and *It's Bound to Happen* (1950; vt *What's the World Coming To?* 1951 US). [JC]Other works: *Peter Down the Well* (1933), a juvenile. See also: BOYS' PAPERS.

LOWNDES, ROBERT A(UGUSTINE) W(ARD)

(1916-) US writer and editor, often referred to as "Doc" Lowndes, a member of the FUTURIANS fan group and collaborator on several stories with other members of the group under the names Arthur COOKE, S.D. GOTTESMAN, Paul Dennis Lavond and Lawrence WOODS. His first story, "The Outpost at Altark" for *Super Science* in 1940, was written in collaboration with fellow-Futurian Donald A. WOLLHEIM, uncredited. For his solo work in the early 1940s RAWL used the names Carol Grey, Mallory Kent, Wilfred Owen Morley and Richard Morrison; later he added Carl Groener, Robert Morrison, Michael Sherman and Peter Michael Sherman, and once collaborated with James BLISH as John MACDOUGAL. RAWL edited *FUTURE FICTION* and *SCIENCE FICTION QUARTERLY* for Columbia Publications from early 1941 until their demise in 1943, and again throughout their shoestring revival in the early 1950s under various titles. He also edited *DYNAMIC SCIENCE FICTION* (1952-4) and *Science Fiction Stories* (1954-5) for Columbia Publications, continuing to edit the latter under its new name, *The ORIGINAL SCIENCE FICTION STORIES*, from 1955 until the chain folded in 1960, when he began editing for Health Knowledge Inc. He gradually added a number of fantasy magazines to the latter publisher's line, including *The MAGAZINE OF HORROR* in 1963, *Startling Mystery Stories* in 1966, *FAMOUS SCIENCE FICTION* in 1966, *Weird Terror Tales* in 1969 and *Bizarre Fantasy Tales* in 1970, but

all became defunct in 1970. He was also the editor of the Avalon Books sf line 1955-67. RAWL wrote a hectic action-adventure novel in collaboration with Blish, *The Duplicated Man* (1953 Dynamic Science Fiction as by Blish and Michael Sherman; 1959), and later edited the posthumous *THE BEST OF JAMES BLISH* (coll 1979). He also produced three solo novels: *The Mystery of the Third Mine* (1953), which is a juvenile, *The Puzzle Planet* (1961) and *Believers' World* (1952 Space as "A Matter of Faith" as by Michael Sherman; exp 1959); in the third and most interesting of these, inhabitants of three lost colonies have developed an eccentric RELIGION. His best short stories are H.P. LOVECRAFT-like items such as "The Abyss" (1941) and "The Leapers" (1942 as Carol Grey; rev vt "Leapers" 1968). His literary columns from *Famous Science Fiction* were assembled as *Three Faces of Science Fiction* (coll 1973 chap). [BS/PN/JC]

LOXMITH, JOHN
[s] John BRUNNER.

L. RON HUBBARD PRESENTS WRITERS OF THE FUTURE
Original anthology series, ed Algis BUDRYS, made up of stories by entrants to the WRITERS OF THE FUTURE CONTEST and published by Bridge Publications in the USA and New Era in the UK; both publishing houses were originally set up to publish DIANETICS and SCIENTOLOGY textbooks, but had already begun publishing fiction with the novels of L. Ron HUBBARD's unexpected second career in fiction. The contest is quarterly (though an annual award is given also), and most of the anthology stories are first, second or third place-getters. Some fine writers have made their debut in this series (which has survived the controversy surrounding it) - not surprisingly, considering the fairly lavish nature of the awards involved. They include Robert Touzalin (Robert REED), Karen Joy FOWLER, David ZINDELL and Dave WOLVERTON. Anthologies to date, all ed Budrys, are L. Ron Hubbard Presents Writers of the Future (anth 1985), Vol. II (anth 1986), Vol. III (anth 1987), Vol. IV (anth 1988), Vol. V (anth 1989), Vol. VI (anth 1990) and Vol. VII (anth 1991). [PN]

LUCAS, E(DWARD) V(ERRALL)
(1868-1938) UK editor and writer, the author of innumerable "weekend" essays and tamely belletristic travel books. Of his several novels, *The War of the Wenuses* (1898), with C(harles) L(arcom) Graves (1856-1944), is of interest as a mildly sexist parody of H.G. WELLS's *THE WAR OF THE WORLDS* (1898). *Wisdom while You Wait: Being a Foretaste of the "Insidecompletuar Britanniaware"* (1903), also with Graves, mocks the future Americanization of the world in the form of a parody encyclopedia; further joint titles, in a similar vein, include *England Day by Day: A Guide to Efficiency and Prophetic Calendar for 1904* (1903) and *If: A Nightmare in the Conditional Mood* (1908). *Mr Pulteney* (1910 chap) as by E. D. Ward - a pseudonym which is simply EVL's first name - is fantasy, featuring a hotel with an ANTIGRAVITY garden for the use of suicides. Wells and Winston Churchill make appearances. [JC]

LUCAS, F(RANK) L(AURENCE)
(1894-1967) UK writer and critic, better known in the latter capacity. Of his fiction, *The Woman Clothed with the Sun and Other Stories* (coll of

linked stories 1937), like much of the work of F. Britten AUSTIN, presents a didactic rendering of mankind's destiny through a story-sequence, in this case extending from AD53 to 1995, ending in an exemplary cleansing of the human species from the world. [JC]

LUCAS, GEORGE

(1944-) US film-maker. He attended the University of Southern California Film School and as a graduate student made an sf short there entitled THX 1138:4EB (1967), which won film festival awards. Working in 1968 as an assistant to Francis Ford Coppola he made a highly praised documentary about the filming of Coppola's *The Rain People* (1969); then in 1969, with Coppola as executive prod, Lucas began a feature-film version, THX 1138 (1971), of his sf short; it was well received by critics but not a popular success. His second feature, *American Graffiti* (1973) - about small-town Californian teenagers in the 1950s - established him as a commercial film-maker. Nonetheless, GL had difficulty setting up his next film - a project he had been planning for several years. His hardships were amply recompensed when it was released as *STAR WARS* (1977) and had the highest box-office takings of any film to that date. *Star Wars* was singly responsible for the sf film boom (and to a lesser extent the literary boom) of the late 1970s and early 1980s, but GL swiftly announced his intention to retire from directing and stick to producing. He has kept that vow, although the films produced under his aegis bear his obvious personal stamp and his directors' personalities are invariably obscured. *The EMPIRE STRIKES BACK* (1980), dir Irvin Kershner, and *RETURN OF THE JEDI* (1983), dir Richard Marquand, conclude the trilogy, persistently rumoured to be only the middle section of a 9-film triptych GL has long had on the back burner. There have been frequent suggestions that the next trilogy, tentatively entitled *The Clone Wars*, a prequel to the 3 extant films, is due to go into production, but as of 1992 this seems very unlikely. Lucasfilm (GL's company) has made several spinoffs from the *Star Wars* universe, including the tv movies *The EWOK ADVENTURE* (1984; theatrically released overseas as *Caravan of Courage*) and *Ewoks: The Battle for Endor* (1985). GL sanctioned a new series of *Star Wars* spin-off books in the 1990s, beginning with Timothy ZAHN's *Star Wars: Heir to the Empire* * (1991). Although his partnership with his contemporary and rival Steven SPIELBERG has yielded the three commercially successful borderline-fantasy *Indiana Jones* films, GL has otherwise often had trouble away from the *Star Wars* universe, failing to make much impact with his productions of the banal fairytales *Labyrinth* (1986) dir Jim Henson and *Willow* (1988) dir Ron Howard, and scoring a disastrous miss with *Howard the Duck* (1986; vt Howard . . . *A New Breed of Hero*), an adaptation from the comic books. With Francis Ford Coppola and Michael Jackson, GL made *Captain EO*, a short (viewable only in Disneyland, Disneyworld and the EPCOT Center) employing various sophisticated new techniques and rumoured to have cost over \$20 million, despite being only 17 mins long. He has also produced a tv series, *The Young Indiana Jones Chronicles* (begun 1992). With his pack-rat borrowings from sf, fantasy and Hollywood's past - not to mention his conspicuous espousal of the mythical ideas of Joseph Campbell's *The Hero with a Thousand Faces* (1949) - GL undoubtedly opened up the cinema for a wave of big-budget sf movies in the 1980s, even while he ensured that its

level remained juvenile. The novelization THX 1138 * (1971) was by Ben BOVA, and the novelization Star Wars * (1976), attributed to GL, may have been by Alan Dean FOSTER. Many other books have been spun-off from the Star Wars trilogy. [KN/PN]About the film-maker: Skywalking: The Life and Films of George Lucas (1983) by Dale Pollock. See also: CINEMA; SWORD AND SORCERY.

LUCENO, JAMES

(? -) US writer whose main work has been in collaboration with Brian C. DALEY (whom see for details) under the joint pseudonym Jack McKinney, but who has also written solo sf adventures: A Fearful Symmetry (1989), a NEAR-FUTURE thriller about the coming of the Millennium and the arrival of ALIENS; Illegal Alien (1990), an interplanetary SEX spoof and The Big Empty (1993), about a CYBORG caught in a war between biological and mechanical forces. The Shadow* (1994) is a film TIE. [JC]

LUCIAN

(c120-180) Syrian-Greek writer, known also as Lucian of Samosata; born in Samosata, capital of Commagene, in Syria. He early became an advocate and practised at Antioch, but soon set out on the travels which were to help provide the verisimilitude underlying the fantastic surface of some of his works. He visited Greece, Italy and Gaul, studied philosophy in Athens, and eventually became procurator of part of Egypt, where he died. The number of works attributed to him varies with criteria of authenticity, but at least 80 titles have been suggested, some certainly spurious. His works can be subdivided into various categories, some of little interest to the student of PROTO SCIENCE FICTION: works of formal rhetoric, numerous essays, biographies and the prose fictions - which include The True History and the possibly spurious Lucius, or The Ass - and the series of Dialogues which comprise L's most important work, and to the form of which he gave his name. The Lucianic Dialogue mixes PLATO's Dialogues, Old and New Comedy, and Menippean Satire into a racy, witty, pungent form ideally suited to the debunking activities with which L is most associated, and which are his most important bequest; his influence on these lines extends from Sir Thomas MORE and Erasmus (?1466-1536) to the dialogue-based SATIRES of Thomas Love Peacock (1785-1866) and others. The Lucianic Dialogue of greatest sf interest is the Icaro-Menippus, in which Menippus, disgusted with the fruitless animadversions of Earthly philosophers, acquires a pair of wings and flies first to the MOON, whence he is able to get a literal (i.e., visual) perspective on the nature of mankind's follies, and second to Olympus, where he meets Jupiter and watches that god deal with men's prayers (which arrive fartlike through huge vents). Jupiter proves moderately venal, but does in the end threaten to destroy the acrimonious philosophers who drove Menippus to flight. Other Dialogues of interest include the Charon, Timon, the 26 Dialogues of the Gods and the Dialogues of the Dead. Though less important, the prose fictions are vital proto sf. The True History - taking off from the numerous unlikely travellers' tales that proliferated at the time - is an extremely enjoyable and frequently scatological debunking exercise. L travels with 50 companions to the Moon, where they become embroiled in a space war; they then fly past the Sun and back to Earth, where they land

in the sea and are soon swallowed by an enormous whale, from which they escape and visit various ISLANDS, where L's fertile imagination piles marvel upon lunatic marvel. With regard to fantasy and the spirit of romance, The True History is detumescent. Its influence extends to Francois RABELAIS and Jonathan SWIFT. Lucius, or The Ass is important as a cognate of or original for Apuleius's The Golden Ass (cAD200; vt Metamorphoses), about a magician's helper who is turned into an ass, suffers much, and is finally retransformed by a goddess. Lucius's picaresque adventures, and the earthy manner of their telling, provided models for picaresque counterattacks on idealistic fiction from Miguel de Cervantes (1547-1616) onwards. L is vital to that somewhat problematic line of descent of prose fictions which leads eventually to what we might legitimately think of as sf proper. Though he has often been misunderstood as being himself a romancer, he was in fact a consistent (and often savage) debunker of the idiom and ideals of romance. His attitude to the FANTASTIC VOYAGES of his supposed descendants would not have been that of the typical proud father. There are various translations, the earliest in English being A Dialog of the Poet Lucyan (trans 1530 UK); The Complete Works of Lucian (trans in 4 vols 1905 UK) is useful. [JC] About the author: "Lucian's True History as SF" by S.C. Fredericks in SCIENCE-FICTION STUDIES, vol 3, part 1, Mar 1976.

LUCIAN

Pseudonym of a UK writer whose 1920: Dips into the Near Future (1917 The Nation; coll of linked stories 1918 chap) sharply examines a UK inherently deformed by years of unending war. [JC]

LUCIE-SMITH, EDWARD

[r] POETRY.

LUDWIG, EDWARD W(ILLIAM)

(1920-) US writer and publisher whose The Mask of John Culon (1970) awakens its protagonist from SUSPENDED ANIMATION into a DYSTOPIA dominated by a repressive RELIGION. The 7 Shapes of Solomon Bean and 14 Other Marvelous Stories of Science Fiction and Fantasy (coll 1983) contains some similar material. [JC]

LUFTPIRAT UND SEIN LENKBARES LUFTSCHIFF, DER

["The Pirate of the Air and his Navigable Airship"] German DIME-NOVEL series, popularly known as Kapitan Mors der Luftpirat; it has no connection with a 1948 series of the same name. One of the most popular series of its day, its author or authors are unknown, but well known writers like Oskar Hoffmann (1866-?) may have been involved; and, since its adventures take place alternately on Earth and in space, it may have been written by two people. 165 32pp issues were published 1908-11, at first by the Druck- und Verlagsgesellschaft m.b.h. in Berlin and, retitled simply Der Luftpirat, from #94 by Verlag Moderner Lektüre, also in Berlin. In 1914 #65-#86 were republished as #1-#22 of the series Der Fliegerteufel, published by Verlag P. Lehmann G.m.b.h. in Berlin. During WWI the series was proscribed by the military as "trash". DLUSLL anticipates many SPACE OPERAS, having an interplanetary background - there are numerous adventures with Venusians, Martians, crystal ROBOTS and

MONSTERS of all kinds on the planets of the Solar System. Many issues have blueprints of Mors's spaceship on the back cover. Captain Mors, the Man with the Mask, is a Nemo-like fugitive from mankind who, with his crew of Indians, fights against evil. There is a case for calling this the first sf magazine. [FR]

LUKENS, ADAM
Diane DETZER.

LUKODIANOV, ISAI (BORISOVICH)
[r] Evgeny VOISKUNSKY.

LULL, SUSAN
[s] Robert L. FORWARD.

LUNA, KRIS
A house name used twice for CURTIS WARREN publications: Stella Radium Exchange (1952) by David O'BRIEN and Operation Orbit (1953) by William Henry Fleming BIRD. [JC]

LUNA MONTHLY
US FANZINE (1969-77), published by Frank and Ann F. Dietz from New Jersey, ed Ann F. Dietz, 67 issues, schedule varying from monthly to quarterly, stapled DIGEST-size, litho. LM was notable for its professionalism and its exceptionally thorough review coverage, for which it is a useful research tool. Reviews - some by Greg BEAR - were often good; Mark Purcell's column The International Scene was consistently well informed. Paul WALKER conducted interesting interviews with sf writers. [PN]

LUNAN, DUNCAN (ALASDAIR)
(1945-) Scottish writer, generally of nonfiction books and articles in popular science, with a concentration on space exploration and related topics; titles include Man and the Stars (1974), New Worlds for Old (1979) and Man and the Planets (1983). The first of these presented and supported the hypothesis that historical radio anomalies might best be accounted for in terms of a ROBOT probe from an ALIEN culture parked at one of the Earth-Moon system's LAGRANGE POINTS; the anomalies have now been otherwise explained, but DL's exposition of his case, based on sound science rather than PSEUDO-SCIENCE, does not lack integrity. As an sf writer, DL began publishing stories with "Renaissance" for the Glasgow University Magazine in 1964, although his first fully professional sale, "The Moon of Thin Reality", did not appear until 1970 (in Gal). In Starfield: Science Fiction by Scottish Writers (anth 1989) DL demonstrated some of the range of sf currently being written in his home country. [JC/JGr]

LUNDBERG, KNUD
(1920-) Danish writer whose Det olympiske hab (1955; trans Eiler Hansen and William Luscombe as The Olympic Hope 1958 UK) suggests that the 1996 Olympics might be plagued by the use of DRUGS to improve the performance of athletes. [JC]

LUNDIN, CLAES
[r] SCANDINAVIA.

LUNDWALL, SAM J(ERRIE)

(1941-) Swedish author, editor, critic, translator (of about 400 books, many sf), professional photographer, tv producer, film director, composer, singer (several records) and publisher. His first published work was an sf play for Swedish radio, broadcast in 1952 when he was 11 years old. Enormously active in sf FANDOM since 1956, SJL began selling stories in 1963. His first book was a collection, *Visor i var tid* (coll 1965). His next book was sold in SJL's own translation to ACE BOOKS: *Science Fiction: fran begynnelsen till vara dagar* (1969; exp trans SJL as *Science Fiction: What It's All About* 1971); it was one of the earlier studies of sf in English. Beginning 1970, SJL has written a number of novels, 4 of which have been translated into English. In *Alice's World* (1970 dos US; trans SJL as *Alice, Alice!* 1974 Sweden) a spaceship returning to an abandoned Earth finds it occupied by mythic and literary beings. SJL's SATIRE can be vicious, as in *King Kong Blues* (1974; trans SJL as *AD 2018*, or *The King Kong Blues* 1975 US), about advertising; at other times it is despondent - as in *Bernhards magiska sommar* ["Bernhard's Magical Summer"] (1974), the third in a trilogy beginning with *No Time for Heroes* (1970 dos US; trans SJL as *Inga Hjaltar har Sweden* 1972) and *Bernhard the Conqueror* (1973; trans SJL as *Uppdrag i universum Sweden* 1973) - or hilarious, as in *Morkrets furste* ["The Prince of Darkness"] (1975), probably his best novel, a burlesque of turn-of-the-century DIME NOVEL SF. From 1970 he edited the *Askild* ?

interest in sf. In 1973 he left to form his own house, Delta, which lasted until 1991, specializing in new and reprinted sf, averaging some 20 sf books a year. Under the Delta imprint SJL also edited the revived *Jules Verne-Magasinet*, Sweden's only professional sf magazine (SCANDINAVIA), which in its first incarnation had run 1940-48; it is still published, now under his personal imprint, *Sam J. Lundwall Fakta* ?

BIBLIOGRAPHY of sf published in Sweden, both original and translated, is *Bibliografi over science fiction* ?

revision of a work which originally appeared in 1962; the sequel is *Bibliografi over science fiction* ?

series *Den fantastiska romanen*, 4 vols (1973-4), collects documents of sf history with critical comment. A later 18-vol anthology series ed SJL was *Det hande i morgon* ["It Happened Tomorrow"]. Another work in English is *Science Fiction: An Illustrated History* (1979 US), which argues the primacy and greater sophistication of European over US sf. SJL's most recent book in English is *The Penguin World Omnibus of Science Fiction* (anth 1986) ed with Brian W. ALDISS, which in its eclectic, mostly non-US content could be seen as a footnote to his earlier argument. Among the dozen or so novels SJL has written since 1975, *CRASH* (1980) is about the adventures of a Swedish sf author in the US publishing world. His most ambitious project is a series (novels, stories, poems) set in a probabilistic *ALTERNATE WORLD*, a flat Earth facing dissolution into other probability formats; the scientific underpinning is rooted in quantum physics. Only 3 short stories from the series have been translated into English, "Nobody Here But Us Shadows" (1975 Gal), "Take Me Down the River" (1979) and "Time Everlasting" (1986). The central novels of the series are *Fangelsestaden* ["Prison City"] (1978), *Flicka i fonster vid varldens kant*

["Girl in the Window at the Edge of the World"] (1980), Tiden och Amelie ["Time and Amelie"] (1986), Gestalter i sten ["Figures in Stone"] (1988), Frukost bland ruinerna ["Breakfast in the Ruins"] (1988) and Vasja Ambartsurian ["Vasja Ambartsurian"] (1990).SJL has been a pivotal figure in Swedish sf as author, editor, publisher, entrepreneur and translator. He updated the SCANDINAVIA entry in this encyclopedia. [J-HH/PN]See also: CRITICAL AND HISTORICAL WORKS ABOUT SF; MYTHOLOGY.

LUPOFF, RICHARD A(LLEN)

(1935-) US writer who worked in computers until he became a full-time writer in 1970. He was first active in sf fandom; the fanzine XERO, which he co-edited with his wife Pat, won a HUGO in 1963. A series of articles therein about COMICS later formed the core of All in Color for a Dime (1970), which RAL co-edited with Don Thompson. He contributed a long-running book-review column to the fanzine ALGOL. RAL is also an expert on Edgar Rice BURROUGHS, and as fiction editor of Canaveral Press in the early 1960s he supervised the republication of many of Burroughs's works. His Edgar Rice Burroughs: Master of Adventure (1965; rev 1968; rev 1975) is probably the best short introduction; Barsoom: Edgar Rice Burroughs and the Martian Vision (1976) is also useful. After The Case of the Doctor who Had No Business, or The Adventure of the Second Anonymous Narrator (1966 chap), a RECURSIVE tale involving Burroughs and Arthur Conan DOYLE's Dr Watson, RAL's first published fiction was the novel One Million Centuries (1967; rev 1981), a colourful adventure of the FAR FUTURE in a pastiche style (the object being in this case Burroughs) which would mark most of his career. Pastiche and recursiveness feed naturally into one another, and it is at times difficult, despite his clear and abundant intelligence, to identify a unique RAL voice. His short stories include a series of parodies of other sf writers published in FANTASTIC under the pseudonym Ova Hamlet and assembled as The Ova Hamlet Papers (coll 1979 chap); several were earlier incorporated into Sacred Locomotive Flies (fixup 1971). He has also used the pseudonym Addison Steele. One of RAL's most notable stories is the satirical "With the Bentfin Boomer Boys on Little Old New Alabama" (in Again, Dangerous Visions 1972 ed Harlan ELLISON), which eventually became the fine Space War Blues (fixup 1978), a nearly surrealist tale of race wars fought in space between human colonies; it and Sword of the Demon (1977), a novel based and styled on Japanese mythology, came very close to giving him a recognizable profile in the field, but his chameleon facility won out, and each new story bore a new facet usually borrowed with a grin. His other 1970s novels are various but insufficiently memorable. The Triune Man (1976) deals with the split personality of a comic-strip artist. OVERPOPULATION, ecocatastrophe and sf in-jokes are coped with in The Crack in the Sky (1976; vt Fool's Hill 1978 UK), shipwreck on a dehydrated planet in Sandworld (1976), and a female werewolf in Lisa Kane (1976). Two series dominated the 1980s. The Twin Planet books - Circumpolar! (1984) and Countersolar! (1986)-carry pastiche to the point of MAGIC REALISM. The first, in its depiction of an ALTERNATE-WORLD Earth - with a Symmesian hole ingeniously implanted in the centre of its doughnut shape (HOLLOW EARTH) - has evoked comparisons with the work of James P. BLAYLOCK; historical figures star in a race across the gap. The second less interestingly moves into the 20th century and

features a large cast of undifferentiated real people. The Sun's End sequence - Sun's End (1984) and Galaxy's End (1988) with a 3rd vol projected - is of greater interest, exploiting the fascination with Japanese culture that RAL first showed in Sword of the Demon in a complex SPACE-OPERA venue - although this does not prevent a certain amount of nostalgic pastiche of early-20th-century cultural modes and icons. But there still remains in RAL's work a sense of focus frustrated, of ambition deferred. [MJE/JC]Other works: Into the Aether (1974; rev as graph vt The Adventures of Professor Thintwhistle and His Incredible Aether Flyer 1991 with Steve Stiles); The Return of Skull-Face (1977), "collaboration" with Robert E. HOWARD; Nebogipfel at the End of Time (1979 chap); Stroka Prospekt (1982 chap); The Digital Wristwatch of Philip K. Dick (dated 1985 but 1986 chap); Lovecraft's Book (1985); The Forever City (1988); The Comic Book Killer (1988), associational; Philip Jose Farmer's The Dungeon #1: The Black Tower * (1988) and #6: The Final Battle * (1990); Daniel M Pinkwater's Melvinge of the Metaverse Book 3: Night of the Living 'Gator (1992); The Digital Wristwatch of Philip K. Dick/Hyperprism (1994 dos).As Addison E. Steele: Two Buck Rogers tv ties, Buck Rogers in the 25th Century * (1978) and That Man on Beta * (1979).As Editor: The Reader's Guide to Barsoom and Amtor (anth 1963 chap); The Comic-Book Book (anth 1973) with Don Thompson; What If? #1: Stories that Should Have Won the Hugo (anth 1980) and its sequel, What If? #2 (anth 1981).See also: CITIES; CYBORGS; SUSPENDED ANIMATION.

LURGAN, LESTER

Pseudonym of UK writer Mabel Winfred Knowles (1875-1949), author of various popular novels including The League of the Triangle (1911). LL's sf novel, A Message from Mars * (1912), based on an 1899 play by Richard Ganthony, may have been used as well as the play in creating the film version, A MESSAGE FROM MARS (1913). The story deals with the effects on humans of the arrival of a messenger from MARS with words of good sense about our earthly dilemmas. [JC]See also: SATIRE.

BENELUX.

LYDECKEN, ARVID

[r] FINLAND.

LYDECKER, JOHN

Stephen GALLAGHER.

LYMINGTON, JOHN

Pseudonym of UK writer John Newton Chance (1911-1983), prolific author of novels and stories, mostly detections, under his real name. His first novels of genre interest were two juvenile fantasies, The Black Ghost (1947) and The Dangerous Road (1948), both as by David C. Newton; a later sf novel, The Light Benders (1968), as by Jonathan Chance, is

unremarkable. Under his own name he published the Bunst series of children's stories - Bunst and the Brown Voice (1950), Bunst the Bold (1950), Bunst and the Secret Six (1951) and Bunst and the Flying Eye (1953) - which deploy sf elements, though casually. His first novel as JL, later made into a film (*The NIGHT OF THE BIG HEAT*), was *The Night of the Big Heat* (1959), about an alien *INVASION*, and much of his subsequent work constituted a set of variations on the theme of alien or natural menace to Earth, though not at the imaginative level of his predecessors (and likely models), John WYNDHAM and John CHRISTOPHER. JL's use of genuine science is minimal and most of his books (many of which feature *MONSTERS*) operate at the level of B-grade sf/horror films, where menace strikes unexpectedly in a lazy, rural setting. Some of the better titles of this sort are *The Giant Stumbles* (1960), *Froomb!* (1964) - probably his best single novel of societal collapse (the title is an acronym for fluid's running out of my brakes) - *The Green Drift* (1965), *Ten Million Years to Friday* (1967), and *Give Daddy the Knife, Darling* (1969). He wrote with some verve but little style, and there are many clichés of character. His short stories, collected in *The Night Spiders* (coll 1964), are routine. It might be said that JL's main deficiency as a writer of sf was a lack of interest in the forward thrust of the genre; he was, at heart, a *HORROR* writer.

[JC/PN]Other works: *The Grey Ones* (1960); *The Coming of the Strangers* (1961); *A Sword Above the Night* (1962), assembled with *The Grey Ones* as (omni 1978 US); *The Sleep Eaters* (1963); *The Screaming Face* (1963); *The Night Spiders* (1964); *The Star Witches* (1965); *The Nowhere Place* (1969); *The Year Dot* (1972); *The Hole in the World* (1974); *A Spider in the Bath* (1975); *The Laxham Haunting* (1976); *Starseed on Eye Moor* (1977); *The Waking of the Stone* (1967); *A Caller from Overspace* (1979); *Voyage of the Eighth Mind* (1980); *The Power Ball* (1981); *The Terror Version* (1982); *The Vale of Sad Banana* (1984).

LYNCH, (JOHN GILBERT) BOHUN

(1884-1928) UK writer and caricaturist in whose *Menace from the Moon* (1925) - which blends interplanetary, *LOST-WORLD* and future- *WAR* themes - descendants of a *MOON* colony established by 17th-century Europeans attack the Earth with heat-rays. It contains many references to the works of Bishop John WILKINS. [JE]Other work: *A Muster of Ghosts* (anth 1924; vt *The Best Ghost Stories 1924 US*), ed. See also: *INVASION*.

LYNCH, FRANCES

D.G. COMPTON.

LYNDS, DENNIS

(1924-) US editor and writer whose sf consists of 2 sf adventures as by Michael Collins - *Lukan War* (1969) and *The Planets of Death* (1970) - and several late contributions under the house name Maxwell Grant to the *The Shadow* book sequence, earlier titles in which had been mainly reprints of lead novels from the pulp magazine *The Shadow* (1931-49), mostly by Walter B. Gibson (also as Grant). DL's additions followed on from Gibson's last contribution to the series (*Return of the Shadow* * [1963]): *The Shadow Strikes* * (1964), *Shadow Beware* * (1965), *Cry Shadow!* * (1965), *The Shadow's Revenge* * (1965), *Mark of the Shadow* * (1966), *Shadow Go Mad* * (1966), *The Night of the Shadow* * (1966) and *Destination Moon* * (1967).

[JC]

LYNN, ELIZABETH A.

(1946-) US writer who began publishing work of genre interest with "We All Have to Go" for The Berkley Showcase (anth 1976) ed Victoria Schochet and John SILBERSACK. This was assembled with other early work in The Woman who Loved the Moon and Other Stories (coll 1981). Her early sf stories and her first novel, A Different Light (1978), share certain assumptions about the nature of the Universe, including the existence of HYPERSPACE, used here both to facilitate storytelling and as an existential cusp for her protagonists - like the cancer-stricken artist in the novel, who must decide whether or not to seize the day by travelling where he needs to go by hyperspace, even though such travel will mortally intensify his illness. In her second and best-received novel, The Sardonyx Net (1981), EAL applies a similar ironic torsion to a tale whose moral premises seem initially unproblematic - slavery is bad for a planet, drugs are bad for society, sadism is bad for the soul - but which become significantly less clearcut in the telling. Although the slavery which obtains in one mercenary planet in the Galaxy is never justified, its operations are seen as complexly interactive; and the sadism of the captain and slavetrader turns out to express so vividly his violated inner state that he almost becomes the protagonist of the book. Most of her remaining work - including the effective Chronicles of Tornor sequence, comprising Watchtower (1979), The Dancers of Arun (1979) and The Northern Girl (1980) - has been fantasy, and as the 1980s progressed she wrote less and less sf. Given the sophisticated use to which she has put conventional sf-adventure plots and venues, this slow departure seems most regrettable. [JC]Other works: The Red Hawk (1984 chap); The Silver Horse (1984), a fantasy for children; Tales from a Vanished Country (coll 1990), stories all previously published in earlier volumes.

LYNN, GREY

(? -) UK writer (possibly pseudonymous) whose The Return of Karl Marx (1941) features the rising of the philosopher from his grave by unexplained means. After exposure to the degenerate UK of 1940 he returns, sadly, to his place of rest. [JC]

LYON, JOHN

Andrew J. OFFUTT.

LYONS, DELPHINE C.

Evelyn E. SMITH.

LYTTON (EDWARD GEORGE EARLE LYTTON BULWER), FIRST BARON

(1803-1873) UK writer, known as Edward Bulwer until 1838, when he became Sir Edward Bulwer. He became Sir Edward Bulwer-Lytton in 1843 when he succeeded to the Knebworth estate on his mother's death. His name is often rendered as Sir Edward Bulwer-Lytton, or simply as Bulwer Lytton; the

standard editions of his collected works give his name as Lord Lytton. He became Colonial Secretary in 1858-9 (he signed the documents creating British Columbia and Queensland), and was raised to the peerage as First Baron Lytton in 1866. As a writer, he was most significant for such fashionable and trendsetting novels as *Pelham* (1828), though he is best remembered for *The Last Days of Pompeii* (1834). He was versatile and prolific in several genres, and his collected works fill over 110 volumes. His powerful interest in the occult, or more specifically in doctrines associated with the Rosicrucians, surfaces throughout his work, becoming explicit in *Zanoni* (1842) and *A Strange Story* (1862; rev 1863), which feature ruminations on the proper route to the attainment of the elixir of life and on other occult themes. *The Haunted and the Haunters, or The House and the Brain* (1859 *Blackwood's Magazine*; 1905 chap) is a more convincing haunted-house tale which qualifies as marginal sf through its quasiscientific explanations in terms of mesmerism (animal magnetism). His sf novel is *The Coming Race* (1871; vt *Vril: The Power of the Coming Race* 1972 US), a UTOPIA set in an underground LOST WORLD inhabited by an evolved form of *Homo sapiens*, larger and wiser than surface dwellers. This race derives its moral and physical virtue from *vril*, an electromagnetic form of energy of universal utility which fuels flying machines and automata, and even makes telepathy possible. (The UK beef-tea *Bovril* took its name from *vril*.) Females of the *Vril-ya* are superior to men, a circumstance which shapes the book's thin plot. A human visitor from the surface is condemned to death for eugenic reasons but two women fancy him, taking the initiative as is normal for *Vril-ya*; with the aid of one of them he escapes to tell his tale. He understands little of his superiors' lives, however, and masters nothing of their arts and sciences. Soon, it is clear, the world above will be visited in turn and *Homo sapiens* will be exterminated. Lytton's lack of horror at science, and the professionalism of his text, help explain the extremely wide influence of *The Coming Race*, which is one of the seminal sf texts before the age of H.G. WELLS. [JC] Other works: *Asmodeus at Large* (1833); *Godolphin* (1833); *The Pilgrims of the Rhine* (coll 1834), which contains "The Fallen Star", perhaps the first story to consider primitive Man from an ethnographic point of view; *The Student* (coll 1835). About the author: *Strange Stories, and Other Explorations in Victorian Fiction* (1971) by Robert Lee Wolff; *Gothic Immortals: The Fiction of the Brotherhood of the Rosy Cross* (1990) by Marie Roberts. See also: ANONYMOUS SF AUTHORS; DIME-NOVEL SF; GOTHIC SF; HISTORY OF SF; HOLLOW EARTH; POWER SOURCES; PROTO SCIENCE FICTION; PSEUDO-SCIENCE.

SF?

McALLISTER, ANGUS

(? -) Scottish writer whose first novel, *The Krugg Syndrome* (1988), briefly conceals the mild-mannered and amusing tale of a country boy in the big city by suggesting for a few pages that his personality has been replaced by that of a telepathic alien. AM's second novel, *The Canongate Strangler* (1990), plays more darkly with Doppelgänger themes in a tale of possession, murder and (once again) ESP. [JC]

McALLISTER, BRUCE (HUGH)

(1946-) US writer, editor and academic, director since 1974 of the creative-writing programme at the University of Redlands, California, and Professor of English from 1983. He has written at least 40 stories since starting to publish sf in 1963 with "The Faces Outside" (for If), which is also the title story of a long-projected collection of his best work. "The Boy" (1976) - a peculiarly revolting, skilful tale of the entropic life of a reconstructed Peter Pan and Wendy on a less than utopian ISLAND - is an exercise about, and to some extent in, literary sadism, which at the same time gives exemplary form to his ongoing obsessions with psychic and physical entrapment and with the alienation of human beings in worlds they have not made. His first novel, *Humanity Prime* (1971), which takes some material from "The Faces Outside" and was used as his thesis for an MFA degree in creative writing, ingeniously depicts the complex underwater environment of the planet Prime, where humans have, after 3000 years, become deeply adapted to their aquatic life; they cope with both the demented CYBORG starship which brought them there and an incursion of reptile-like aliens. His second novel, the elegant and incandescent *Dream Baby* (1989), is set in Vietnam during the darkest years of US involvement there, and recounts the long excruciation of a nurse whose paranormal power (she has precognitive dreams about the deaths of soldiers: the title is an imperative) leads her, under the control of a secret military unit, into the heart of the darkness. BM edited *SF Directions* (anth 1972), the special sf issue of the New Zealand journal *Edge* (Autumn/Winter 1973), which comprised a sizeable anthology of original stories, and the fine *Their Immortal Hearts* (anth 1980), to which he contributed the title novella. Because his first novel was published in a dying series (it was a late *Ace Special*), because his second novel speaks unrelentingly of painful matters, and because his shorter work remains scattered, BM continues to be relatively obscure long past the point at which he should have attained considerable prominence. [JC]About the author: *The Work of Bruce McAllister: An Annotated Bibliography* ? rev 1986) by David Ray Bourquin. See also: IMMORTALITY; WAR.

MAC AND ME

The PHILADELPHIA EXPERIMENT.

MacAPP, C.C.

Pseudonym used by US colour printer Carroll M. Capps (?1917-1971) in his writing career, which began - after illness forced his retirement-with "A *Pride of Islands*" in 1960 for *If*, with which magazine (and its stablemates) he was associated for the balance of his short career. Much of his fiction concerns itself with alien- INVASION themes, notably the *Gree* stories (in *If* and *Worlds of Tomorrow* 1965-6) and his first novel, *Omha Abides* (1964-6 *Worlds of Tomorrow*; fixup 1968), in which a long-lasting alien occupation is opposed by Terrans whose Native-American nature finds expression also in CCM's most ambitious novel, *Worlds of the Wall* (1964 *Fantastic*; exp 1969), an intriguing adventure of initiation and self-fulfilment set in a strange other-dimensional world. Though most of his work skimps character development in favour of action-oriented plots, CCM's last novel, *Bumsider* (1972), pays more attention to the development

of his cast's personalities. In general he wrote clearly and excitingly, and his range was still growing at the time of his death; the early truncation of his career was much regretted. [JC]Other works: Prisoners of the Sky (1966 If; exp 1969); Secret of the Sunless World (1969) as Carroll M. Capps; Recall Not Earth (1970); Subb (1968 If; fixup 1971).

McARTHUR, JOHN
Arthur WISE.

MacAULAY, DAVID (ALEXANDER)
(1946-) US writer, much of whose work, beginning with Cathedral: The Story of its Construction (1973), has concentrated on architectural subjects, a focus reflected in Unbuilding (1980 chap), which depicts in pictures and text the hypothetical demolition of the Empire State Building. Of more specific sf interest are Motel of the Mysteries (graph 1979 UK), a comic FABULATION whose surreal twists cleverly evoke displaced worlds, and Baaa (1985 chap), a fantasy SATIRE in which sheep take over the world. [JC]

MACAULAY, (EMILIE) ROSE
(1881-1958) UK author of 23 novels from 1906, the most famous being her last, The Towers of Trebizond (1956). Some of these books - like And No Man's Wit (1940), in which a mermaid appears - venture edgily into fantasy. What Not: A Prophetic Comedy (1918; libellous passages cut 1919), set several years after the conclusion of WWI, depicts the coming to power in the UK of an autocratic government designed to counter postwar crises. (Although copies exist of the 1918 version, which portrays a newspaper proprietor attempting political blackmail, it may never have been officially released.) Mystery at Geneva: An Improbable Tale of Singular Happenings (1922) is set in an undefined NEAR FUTURE where a monarchist counter-revolution has replaced the Bolsheviks in Russia and a reporter (a woman in drag) helps save the League of Nations from a conspiracy designed to restore communism. Orphan Island (1924) is a borderline UTOPIA (see also ISLANDS) set in the 19th and 20th centuries and satirizing conventional Victorian social and sexual mores. [JC]About the author: Rose Macaulay: A Writer's Life (1991) by Jane Emery. See also: POLITICS.

McAULEY, PAUL J.
(1955-) UK biologist and writer. He began publishing sf with "Wagon, Passing" for IASFM in 1984; his best shorter work is collected in The King of the Hill and Other Stories (coll 1991). With his first novel, FOUR HUNDRED BILLION STARS (1988 US), he launched conspicuously into a far-reaching series which, combining SPACE-OPERA plots and cosmological speculations, fruitfully amalgamated influences from both US and UK traditions: H.G. WELLS and Larry NIVEN consort, sometimes uncomfortably, in these tales of interstellar warfare, world-building and universe-creation. Further volumes are Of the Fall (1989 US; vt Secret Harmonies 1989 UK) and the very substantial Eternal Light (1991), which best exemplifies to date PJM's control over the instruments of 1990s HARD SF: wormholes, agathics to forestall death, GENETIC ENGINEERING and cosmogony on the hugest scale. The series itself ostensibly concerns the attempts of an almost fatally wearied corporation-run Earth - reminiscent

of Cordwainer SMITH - to fend off the panicked aggressions of an ancient starfaring species, itself hiding from enemies of its own ilk; but the pleasures of this ongoing sequence seem more and more to lie in the increasingly comprehensive physical history of the entire Universe adumbrated in *Eternal Light*. PJM's next two novels are singletons, and represent his most accomplished work to date. *Red Dust* (1993) is set, like many 1990s novels, on a MARS which has been colonized (and terraformed) by humans. His treatment of this dominant theme - in terms of a quest plot which takes its American protagonist across a complex landscape ruled by the Chinese - is vivid, swift, and spontaneous-seeming. Pasquale's *Angel* (1994) is an ALTERNATE WORLD story set in a Renaissance Italy dominated by the remote figure of Leonardo da Vinci, who in this reality has created a dystopian society through the power of his engineering genius. In the mid 1990s, PJM is beginning to look like one of the significant exploratory talents of late sf. [JC] Other work: *In Dreams* (anth 1992) with Kim NEWMAN. See also: ALIENS; AMAZING STORIES; BLACK HOLES; COLONIZATION OF OTHER WORLDS; CYBORGS; DISCOVERY AND INVENTION; ECOLOGY; EVOLUTION; GAMES WORKSHOP; INTERZONE; METAPHYSICS; OPTIMISM AND PESSIMISM; PARANOIA; PHILIP K. DICK AWARD; WOMEN AS PORTRAYED IN SCIENCE FICTION.

MacAULEY, ROBIE (MAYHEW)

(1919-) US writer, active as a non-genre story writer from 1947 but almost certainly best known for his first novel, *The Disguises of Love* (1952). His second, *A Secret History of Time to Come* (1979), sf, displays some literary finesse in traversing a post- DISASTER terrain, but is unoriginal. [JC]

MacAVOY, R(OBERTA) A(NN)

(1949-) US writer, primarily of FANTASY - which tends to be quirky, well written and scholarly about historical detail - and of one sf novel. Her first book, *Tea with the Black Dragon* (1983), is a witty contemporary fantasy about the friendship that grows between a middle-aged woman musician and an ageless Oriental who is probably the human incarnation of a dragon. The sequel was *Twisting the Rope: Casadh an t'Sugain* (1986). The *Trio for Lute* trilogy - *Damiano* (1983), *Damiano's Lute* (1984) and *Raphael* (1984), collected as *A Trio for Lute* (omni 1985) - is set in an ALTERNATE-WORLD Renaissance Italy, France and Moorish Spain where MAGIC works. *The Book of Kells* (1985) features time-travel from the present day to a god-frequented 10th-century Ireland. *The Grey Horse* (1987), also set in Ireland (Connemara in the late 19th century), is a finely told, complex romance about local resistance allied to the Land League, featuring a puca, or fairy-horse. RAM's sf novel is *The Third Eagle* (1989), an entertaining romance about a naive Native-American warrior's learning experiences on a variety of planetary and spacecraft venues; though promising, it is less focused than most of her fantasy. RAM returned to fantasy with the *Lens of the World* trilogy, comprising *Lens of the World* (1990), and *King of the Dead* (1991) and *Winter of the Wolf* (1993; vt *The Belly of the Wolf* 1994 US): more coming-of-age material, this time set in a marginally fantasticated baroque or renaissance alternate world. RAM has become an important fantasist, especially in the unfamiliarity of her

material, which has enlivened a genre specializing all too often in retreads. [PN]See also: JOHN W. CAMPBELL AWARD; PHILIP K. DICK AWARD.

McBAIN, ED
Evan HUNTER.

McBAIN, GORDON (DUNCAN III)
(1946-1992) US teacher and writer who, in his brief sf career, wrote the moderately appealing but unremarkable Exoterra young-adult sf series: *The Path of Exoterra* (1981) and *Quest of the Dawnstar* (1984). [JC]

McCAFFREY, ANNE (INEZ)
(1926-) US writer, now living in Ireland. Most of her work is sf, though tinged with the tone and instruments of FANTASY. She began publishing with "Freedom of the Race" for Hugo GERNSBACK's Science Fiction Plus in 1953, but became active only a decade or so later with her first novel, *Restoree* (1967), which rather conventionally, though with tongue in cheek, tells the story of a young woman who is flayed alive by alien flesh-eaters, is saved, and with her skin restored has some adventures. Soon AM began publishing the linked novels and stories that have made her reputation as a writer of romantic, heightened tales of adventure explicitly designed to appeal - and to make good sense to - a predominantly female adolescent audience. Her major series is set in a long-lost Earth colony, Pern, a world whose humans, symbiotically pair-bonded with tame, time-travelling, telepathic and telekinetic dragons, engage in high adventures and defend the planet from the poisonous Threads. It comprises several shorter units: DRAGONFLIGHT (fixup 1968) (containing the 1968 HUGO-winner "Weyr Search" and the 1968 NEBULA-winner "Dragon Rider"), *Dragonquest* (1971) and *The White Dragon* (1978) are assembled as *The Dragonriders of Pern* (omni 1978); *Dragonsong* (1976), *Dragonsinger* (1977) and *Dragondrums* (1979), which are juveniles, are assembled as *The Harper Hall of Pern* (omni 1979); *Moreta*, *Dragonlady of Pern* (1983 UK; exp 1983 US) and *Nerilka's Story* (1986) are closely connected. Further titles include *Dragonsdawn* (1988), a prequel to the overall sequence, which is followed by *The Renegades of Pern* (1989), *All the Weyrs of Pern* (1991), *The Chronicles of Pern: First Fall* (coll of linked stories (1993), *The Girl Who Heard Dragons* (coll 1994), *The Dolphin's Bell* (1994) and *The Dolphins of Pern* (1994). *A Time When: Being a Tale of Young Lord Jaxom, his White Dragon Ruth, and Various Fire-Lizards* (1975 chap) is connected to the series; DRAGONFLIGHT (graph 1991) is the first of a projected series of graphic-novel versions of the material. Though the tone is that of fantasy, the premises underlying Pern are orthodox sf; even the dragons turn out to have been bio-engineered eons previously by humans as a defence against a vacuum-traversing spore. *The Dragonlover's Guide to Pern* (1989) with Jody Lynn Nye (1957-) may be of assistance to readers. Other series include: the Pegasus books - *To Ride Pegasus* (fixup 1973), which deals with a corps of parapsychological investigators in the near future and is notable for its political conservatism, *Pegasus in Flight* (1990), these two being assembled as *Wings of Pegasus* (omni 1991) - the Ireta books - *Dinosaur Planet* (1978 UK) and *Dinosaur Planet Survivors* (1984), both being assembled as *The Ireta Adventure* (omni 1985) - the Killashandra tales - *The Crystal Singer* (1974-5 Continuum ed Roger ELWOOD; fixup 1982 UK), *Killashandra* (1985),

and Crystal Line (1992) and the Planet Pirates books - Sassinak (1990) with Elizabeth MOON, The Death of Sleep (1990) with Jody Lynn Nye, and Generation Warriors (1991) with Moon, all three being assembled as Planet Pirates (omni 1993); the Rowan sequence - linked with the Pegasus books (see above) to the extent that they may be considered as a single series, the Talents books - comprising The Rowan (1990), Damia (1992), Lyon's Pride (1994) and Damia's Children (1994), features a powerful female telepath who engages in adventures and much sex with an even more powerful male telepath named Jeff Raven. The Petaybee sequence, about a sentient planet (see LIVING PLANETS), comprises Powers That Be (1993) with Elizabeth Ann SCARBOROUGH and Power Lines (1994) with Scarborough, with further volumes projected. AM's early singletons include Decision at Doona (1969) - disappointingly sequenced much later by Crisis on Doona (1992) with Jody Lynn Nye (1957-) and Treaty Planet (1993; vt Treaty at Doona 1994 US), also with Nye - and The City who Sang (fixup 1969) - unexcitingly sequenced by PartnerShip (1992) with Margaret Ball (1947-), and The Ship who Searched (1992) with Mercedes Lackey (1950-), The City Who Fought (1993) with S.M. STIRLING and The Ship Who Won (1994) with Jody Lynn Nye. The two original 1969 titles were assembled with Restoree as The Worlds of Anne McCaffrey (omni 1981 UK). Though less popular than the Pern books, these (the sequels excepted) are perhaps more clearly inventive. The Ship who Sang, for instance, intriguingly presents a deformed girl who is grafted into a SPACESHIP (CYBORGS) and in effect becomes the ship; the emotional difficulties facing a musical lady spaceship are many ([Hyperlink to: MUSIC](#)). Later singletons, like The Coelura (1983 chap) - strangely assembled with Nerilka's Story from the Pern sequence as Nerilka's Story ? The Coelura (omni 1987) - tend to downgrade their sf premises in favour of romance. AM's stories, including some connected work, have been collected in Get Off the Unicorn (coll 1977). Though her work has been criticized as oversentimental, AM is among the most popular writers in her particular subgenre. [JC]Other works: The Mark of Merlin (1971), Ring of Fear (1971) and The Kiltarnan Legacy (1975), none sf or fantasy, and all assembled as Three Women (omni 1990); The Smallest Dragonboy (1982 chap Ireland); Stitch in Snow (1984 Ireland) and The Year of the Lucy (1986 Ireland), neither being sf or fantasy; The Girl who Heard Dragons (1985 chap); Habit is an Old Horse (coll 1986 chap); The Lady (1987; vt The Carradyne Touch 1988 UK), a romance; Rescue Run (1991 chap), an sf novella. As Editor: [Alchemy ? Cooking Out of This World](#) (anth 1973), a collection of recipes supplied by various sf writers. About the author: Anne McCaffrey, Dragonlady and More: A Working Bibliography (latest rev 1989 chap) by Gordon BENSON Jr and Phil STEPHENSEN-PAYNE. See also: ARTS; COLONIZATION OF OTHER WORLDS; DEL REY BOOKS; PLANETARY ROMANCE; PSI POWERS; SCIENCE FANTASY; WOMEN AS PORTRAYED IN SCIENCE FICTION; WRITERS OF THE FUTURE CONTEST.

McCANN, ARTHUR

[s] John W. CAMPBELL Jr.

McCANN, EDSON

Pseudonym used by Frederik POHL and Lester DEL REY on the novel Preferred

Risk (1955), hurriedly written for a GALAXY SCIENCE FICTION novel competition because no acceptable submission had been received. Cast in the same mould as Pohl's and C.M. KORNBLUTH's THE SPACE MERCHANTS (1953), it features a world dominated by insurance companies. [BS]See also: SATIRE.

McCARTHY, SHAWNA (LEE)

(1954-) US editor who served 1983-5 as editor of ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE and 1985-8 as sf editor of BANTAM BOOKS. For IASFM she produced 4 anthologies: Isaac Asimov's Wonders of the World (anth 1982), Isaac Asimov's Aliens ?

Her Own (anth 1984; vt Isaac Asimov's Space of Your Own 1984 UK; cut under original title 1989) and Isaac Asimov's Fantasy! (anth 1985; cut 1990).

With Lou ARONICA of Bantam she was involved in the FULL SPECTRUM original-anthology series, editing Full Spectrum (anth 1988) with Aronica and Full Spectrum 2 (anth 1989) with Aronica, Patrick LoBrutto and Amy Stout. [JC]

McCARTHY, WIL

Working name of US writer William Terence McCarthy (1966-) who began publishing sf with "What I Did with the OTV Grissom" for Aboriginal in 1990; the first of the 2 stories assembled in Dirtside Down/C-Minor (coll 1991 chap dos) with Gregory R.Hyde is by WMcC. In his first novel, Aggressor Six (1994), 34th century humanity is confronted by an implacable alien race which wages interstellar war against us, and is only defeated in the end due to discoveries made by a team of humans who have been trained to think like the enemy. The action is fast and clean, though not entirely unpredictable. [JC]

McCAY, BILL

Working name of US writer William McCay (? -), who has exclusively restricted himself to TIES. They include 2 titles in the 4th Tom Swift sequence (TOM SWIFT): The Black Dragon * (1991) and The Negative Zone * (1992), both as by Victor APPLETON; 3 Nintendo Adventure Books: Monster Mix-Up * (1991), Koopa Capers * (1991) and Doors to Doom * (1992); a Star Trek title: Star Trek: The Next Generation: Chains of Command * (1992) with Eloise Flood; and 2 volumes in Stan Lee's Riftworld series about a superhero comic publisher accompanied by giants: Stan Lee's Riftworld: Crossover * (1993) and #2: Villains * (1994). [JC]

McCAY, (ZENAS) WINSOR

(1867-1934) US COMIC-strip artist and creator of animated cartoons, of seminal importance in both fields. His earliest years were obscure (it is not known where he was born; his name is sometimes given as Winsor Zenic McCay, and his year of birth as 1869 or 1871), but by 1889 he was employed in Chicago as an engraver in a printing firm, and during the 1890s he worked as a freelance poster painter and as an in-house artist at Cincinnati's Vine Street Dime Museum before, in 1898, starting his newspaper career by doing editorial cartoons for the Cincinnati Commercial Tribune. By 1900 WM had switched papers and was drawing his first comic strip, Tales of the Jungle Imps, signed Felix Fiddle. His new interest in strips and success as a cartoonist for Life led to his moving in 1902 to

New York, where he began to work for the two New York papers owned by James Gordon Bennett (1841-1918): the New York Herald as WM and the New York Telegram as "Silas". A cascade of humorous allegories followed, including A Pilgrim's Progress by Mr Bunion, Hungry Henrietta, Poor Jake and Little Sammy Sneeze. 1904 saw the debut of WM's nightmarish Dreams of the Rarebit Fiend, which carried its characters into a variety of very frightening dyspepsia-generated dream experiences; it appeared in book form as Dreams of a Rarebit Fiend (graph coll 1905; rev 1973). The success of this strip inspired his masterpiece, Little Nemo in Slumberland, which appeared in the New York Herald (1905-11), then for William Randolph Hearst papers under the title In the Land of Wonderful Dreams (1911-14), then for the Herald-Tribune (1924-7) under the original title. The first sequence was the most innovative and inspired, and soon selections were reprinted as Little Nemo in Slumberland (graph coll 1909). Later titles included an adaptation by Edna Sarah Levine, Little Nemo in Slumberland * (1941) illus WM, and The Complete Little Nemo in Slumberland (graph coll 1989-90) ed Richard Marschall, a definitive version in 4 vols of the 1905-11 strip, reproducing the original colours; a 5th vol, The Complete Little Nemo in Slumberland: In the Land of Wonderful Dreams: 1911-1912 (graph coll 1991), also ed Marschall, was followed by a 6th vol, The Complete Little Nemo in Slumberland: In the Land of Wonderful Dreams: 1913-1914 (graph coll 1994) ed Bill Blackbeard, which together reprinted the second sequence. Many of the first-sequence episodes - all drawn in WM's florid, hallucinatory, meticulously crafted, architectonic, poster-like Art Nouveau style - were straightforward dream fantasies; but later sustained sequences - like those dealing with Shantytown, with Befuddle Hall, and with a voyage by airship into outer space during 1909 - intermittently displayed an sf-like verisimilitude; as pioneering explorations into the techniques of narrating complex visions through sequential drawings, the strip as a whole was of vital importance. While busy with Little Nemo, WM was also able to continue with other graphic work, including many individual drawings, those making up the Spectrophone series of visions of the future being of particular sf interest. After he moved to Hearst, he began concentrating on political cartoons from a conservative point of view; but continued to issue enormously detailed prophetic drawings involving vast airships, cityscapes and catastrophes. Some of these have been assembled as Daydreams ?

Visions of Winsor McCay (graph coll 1988) ed Richard Marschall. WM also took a central role in the development of the animated cartoon - indeed, some claim that he invented the art of animation. In whatever medium he worked, he drew with incredible speed; this gave rise to the vaudeville act he presented from 1906, during which he executed a series of 40 chalk drawings, one every 30 seconds, showing a man and a woman ageing while the orchestra played a suitable melody. From here it was a logical step to animation. With astonishing industry, he hand-painted each frame of his cartoons; beginning in 1909 he produced 10 short films: Little Nemo (1911), which required c4000 drawings; The Story of a Mosquito (1912; vt How a Mosquito Operates); Gertie, the Dinosaur (1914), which required c10,000 drawings; The Sinking of the Lusitania (1918), the most ambitious, requiring c25,000 drawings done in much more detail than in the earlier films; The Centaurs, a fantasy film, Flip's Circus and Gertie on Tour,

these 3 being done c1918-21 and surviving only as fragments; and 3 Dreams of the Rarebit Fiend shorts, all released in 1921: The Pet, Bug Vaudeville and The Flying House. In The Pet household animals drink an elixir and swell to huge proportions; a 10-storey cat ravages a city and, KING-KONG-style, is assailed by airships. Bug Vaudeville is a Silly Symphonies-style (but pre-Disney) fantasy. In The Flying House a couple, escaping their creditors, fit out their house with wings and a propeller and fly off into outer space where, inter alia, they meet a giant on the Moon. It is not certain why WM gave up animation after these successes, but it was possibly because he thought - wrongly, as was soon proven by Felix the Cat and Walt Disney's Alice and Oswald the Lucky Rabbit - that animation, as an artform, was a deadend street to whose end he had come. He continued to produce newspaper strips and illustrations, however, until the end of his life. [JC/JGr/SW]Further reading: "Winsor McCay" by John Canemaker in *The American Animated Cartoon: A Critical Anthology* (anth 1980) ed Danny Peary and Gerald Peary; *Winsor McCay: His Life and Art* (1987) by John Canemaker; *Comic Artists* (1989) by Richard Marschall.

McCLARY, THOMAS CALVERT

(?1909-1972) US speechwriter and ghostwriter whose sf appeared in ASF in the 1930s under his own name and under the pseudonyms Thomas Calvert, Miles Cramer and Calvin Peregoy - the latter for the Doctor Conklin series in ASF in 1934-5. For Unknown he wrote "The Tommyknocker" (1940). Basic to his two sf novels, *Rebirth: When Everyone Forgot* (1934 ASF; 1944) and *Three Thousand Years* (1938 ASF; 1954), is the theory, reminiscent of Buckminster Fuller (1895-1983), that a small scientific elite unhindered by the opportunism of businessmen and politicians could keep the world running in decency and comfort. Both are worked out in post- HOLOCAUST settings, intentionally and instantaneously precipitated in the former by means of a ray which obliterates all memory and in the latter by the transition of all lifeforms to a state of SUSPENDED ANIMATION. In both books the idealistic theory is set up only to be exploded. [JE/RB/PN]

MacCLOUD, MALCOLM

(? -) US writer of two sf juveniles for older children, *The Tera Beyond* (1981) and *A Gift of Mirrorvax* (1981), the latter attempting with only moderate success to make plausible a mirror Earth on the other side of the Sun. [JC]

MacCLURE, VICTOR (THOM MacWALTER)

(1887-1963) UK writer of popular fiction. His *Ultimatum: A Romance of the Air* (1924; vt *The Ark of the Covenant: A Romance of the Air and of Science* 1924 US) tells of world disarmament brought about by pacifists armed with dirigibles carrying a sleep gas and a ray that transmutes elements. They also possess atomic energy and other weapons invented by their dying South American "Master". After the US President is converted to their cause, peace ensues. [JC/PN]See also: AIR WONDER STORIES; WEAPONS.

McCLURE'S MAGAZINE

US "slick" magazine published by S.S. McClure, ed Ida Tarbell and others. Monthly June 1893-Jan 1926 (irregularly towards the end). Recommenced June 1926 as a romance magazine. Merged with *Smart Set* in Apr 1929. Initially

conceived as the US edition of *The IDLER*, *MM* appeared as a new magazine with original stories and features, although some sf was reprinted from *The Idler*. *MM*'s best remembered sf publication is Rudyard KIPLING's *With the Night Mail: A Story of 2000 AD* (1905; 1909 chap US). Two interesting disaster stories were "Within an Ace of the End of the World" (1900) by Robert BARR and "The End of the World" (1903) by Jules Guerin. Jack LONDON's "The Unparalleled Invasion" (1910) is a future- WAR Yellow-Peril story in which the author, famous as a believer in the Brotherhood of Man, recommends genocide of the Chinese. A serialized novel was Cleveland MOFFETT's *The Conquest of America: A Romance of Disaster and Victory: U.S. A. 1921 A.D.* (May-Aug 1915 as "The Conquest of America in 1921"; 1916). [JE/PN]

MacCOLL, HUGH

(? -?) UK author of *Mr Stranger's Sealed Packet* (1889), an interplanetary novel describing a spaceship journey to MARS and the discovery there of two races of Earth origin, one of which has attained a UTOPIAN ideal (EVOLUTION). Although lacking the depths of Percy GREG's influential *Across the Zodiac* (1880), the book proved popular and may in turn have influenced H.G. WELLS, especially in its account of the death of a Martian through exposure to bacteria in Earth's atmosphere. [JE]

McCOLLUM, MICHAEL A.

(1946-) US writer and control-systems engineer specializing in aerospace propulsion. *MAM* began publishing sf with "Duty, Honor, Planet" for ASF in 1979. His first novel, *A Greater Infinity* (fixup 1982), established the pattern he would follow through the 1980s: a complex SPACE-OPERA adventure plot involves humans (in this case Terrans) with one or more alien races as wars, quests and challenges galore generate a sense of movement. The *Makers* series - *Life PROBE* (1983) and *Procyon's Promise* (1985) - and the *Antares* series - *Antares Dawn* (1986) and *Antares Passage* (1987) - are in this mould, but *Thunderstrike!* (1989) deals more mundanely with what happens when a comet strikes Earth, and *The Clouds of Saturn* (1991) concerns human and internecine strife in the cloud-cities colonizing Saturn. *MAM*'s touch is usually light, and accusations of racism - occasioned by the sorry fate Africa suffers in the *Makers* books - seem almost certainly misdirected. [JC]Other Works: *The Sails of Tau Ceti* (1992).

McCOMAS, J(ESSE) FRANCIS

(1911-1978) US editor and writer who published a number of sf stories under his own name - including "Shock Treatment" (1954) and "Parallel" (1955) - and as Webb Marlowe. He was co-editor with Raymond J. HEALY of the 35-story ANTHOLOGY *Adventures in Time and Space* (anth 1946; cut vt *Selections from Adventures in Time and Space* 1954; recut vt *More Adventures in Time and Space* 1955; text restored vt *Famous Science-Fiction Stories* 1957), which was initially published by Random House, one of the two or three most prestigious literary publishers of the time, and whose contents - a very wide selection from the new US sf of the previous decade - were made available for the first time to a wide non-genre audience. It was in this anthology that he published his first story, "Flight into Darkness" (1946) as by Webb Marlowe. JFM was also joint editor with

Anthony BOUCHER of The MAGAZINE OF FANTASY AND SCIENCE FICTION from #1 (1949) until Aug 1954, though he has not generally received his due share of credit for establishing the direction of that magazine. He also co-edited with Boucher the first 3 vols of the Best from FSF sequence: The Best from Fantasy and Science Fiction (anth 1952), #2 (anth 1953) and #3 (anth 1954). He remained advisory editor of FSF until March 1962. JFM was a member of the Mystery Writers of America. [MJE/JC] Other works as editor: The Graveside Companion (anth 1962); Crimes and Misfortunes (anth 1970); Special Wonder: The Anthony Boucher Memorial Anthology of Fantasy and Science Fiction (anth 1970; in 2 vols vt Special Wonder #1 1971 and #2 1971). See also: ASTOUNDING SCIENCE-FICTION; GOLDEN AGE OF SF.

McCORD, GUY
[s] Mack REYNOLDS.

McCOY, ANDREW
Pseudonym of South African-born Australian writer Andre Jute (1945-), who has concentrated as AM on violent tales of conflict in the continent of his birth, most of them verging into the NEAR FUTURE. Novels as AM include Atrocity Week (1978 UK), The Insurrectionist (1979 UK), African Revenge (1980 UK), Blood Song (1983 UK), Cain's Courage (1985 UK), Survivors and Winners (1986 UK) and The Meyeresco Helix (1988 UK). Under his own name he has published tales of a similar nature though less aggressively told: Reverse Negative (1982 UK), Festival (1982 UK), Sinkhole (1982 UK) and Iditarod (1990 UK). [JC]

MacCREIGH, JAMES
Frederik POHL.

McCRUMB, SHARYN
(1948-) US writer, in most of whose titles detective plots intersect with fantasy and/or sf material, though her first novel to invoke these genres, Bimbos of the Death Sun: Murder Most Fun at the Ultimate Fantasy Con (1987), a RECURSIVE tale set at an sf convention, does not actually turn into sf, and the first of the Jay Omega sequence. What is most remarkable about the book, for the sf reader, maybe SMcC's intimate understanding of fans and writers and their typical interactions, acknowledgeability which also marks Zombies of the Gene Pool (1992), in which sf writer Jay Omega - in real life James Mega, a professor of engineering - visits another convention, and becomes embroiled in ancient sf scandals; there may be some roman a clef moments in the text. Of her other novels, The Hangman's Beautiful Daughter (1992) and She Walks These Hills (1994) both have fantasy elements. [JC]

McCULLOUGH, COLLEEN
(1937-) Working name of Australian writer Colleen McCullough-Robinson, who remains most famous for The Thorn Birds (1977). A Creed for the Third Millennium (1985 US), set in the 21st century, has a familiar plot in which a charismatic figure ambiguously revitalizes a disillusioned world. The Ladies of Missolonghi (1987 UK) is a ghost story. [JC]

McCUTCHAN, PHILIP
(1920-) UK writer, a Sandhurst attendee (though not graduate), author of

several routine sf thrillers, most of them in his Commander Shaw series, which began with Gibraltar Road (1960) and closed with Corpse (1980). Of these, Skyprobe (1966), The Screaming Dead Balloons (1968), The All-Purpose Bodies (1969) and The Bright Red Business Men (1969) make the clearest use of sf instruments, though never centrally. The Commander's function, which is to involve himself with espionage and to save the world from mad SCIENTISTS who grow extraterrestrial fungi, construct malign CYBORGS, etc., generally necessitates the destruction of any sf device before the story's end. [JC/PN]Other works: Bowering's Breakwater (1964), a UK liner faces trouble after the start of a nuclear world war; A Time for Survival (1966), a post- HOLOCAUST story of unremitting bleakness; The Day of the Coastwatch (1968), a DYSTOPIA; This Drakotny . . . (1971); Flood (1991), the northern polar icecap melts.

MCCUTCHEON, GEORGE BARR
RURITANIA.

McDANIEL, DAVID

(1939-1977) US writer who also wrote as Ted Johnstone. He published a SPACE OPERA, The Arsenal Out of Time (1967), and a number of tv spin-offs, most of them in the MAN FROM U.N.C.L.E. series. They are The Dagger Affair * (1966), The Vampire Affair * (1966), The Monster Wheel Affair * (1967), The Rainbow Affair * (1967), The Utopia Affair * (1968) and The Hollow Crown Affair * (1969). He also wrote a spin-off from the tv series The PRISONER, The Prisoner #2: Number Two * (1969; vt Who is Number Two? 1982 UK). [JC]

McDERMOT, MURTAGH

Pseudonym of a UK or Irish author whose satirical MOON-voyage novel, A Trip to the Moon (1728), describes various remarkable sights and beings after the fashion of CYRANO DE BERGERAC. The necessary propulsion is provided by gunpowder. [JC]

McDERMOTT, DENNIS

[s] P. Schuyler MILLER.

McDEVITT, JACK

Working name of US writer John Charles McDevitt (1935-), who began publishing sf with "The Emerson Effect" for Twilight Zone in 1981, coming to prominence with "Cryptic" (1984), a tale whose theme - First Contact between humans and the ALIEN races who are sending communications across space - was elaborated in his first novel, The Hercules Text (1986). Despite the occasional descent into CLICHES in his plotting and his politics (even as early as 1986 the vision of the USA coming close to war with the USSR over ownership of the information in the signals lacked extrapolative vigour), JMcD managed in this tale to concentrate very effectively on the human dimensions of the conundrum posed by the existence of a COMMUNICATION whose contents, when deciphered, might well devastate human civilization; and the Roman Catholic viewpoint of one of the SCIENTISTS involved in decoding the message is presented with an obvious sympathy which does not hamper the storytelling, which involves threats of violent skulduggery. JMcD's second novel, A Talent for War (1989), set in a galactic venue eons hence, similarly sets a religious

frame around the central quest plot, in which a young man must thread his way through the unsettled hinterlands dividing human and alien space in his search for the secret that may retroactively destroy the reputation of a human who has been a hero in the recent wars. His third novel, *The Engines of God* (1994), puts into the darkly humane terms that have become his trademark an epic space opera plot that gives some new life to old movements of story: the ancient artifact; the unfolding COSMOLOGY; and so forth. In all three novels, JMcD wrestles valiantly with the task he has set himself: that of imposing an essentially contemplative structure upon conventions designed for violent action. He comes, at times, close to success. [JC]See also: PHILIP K. DICK AWARD.

MacDONALD, ANSON
Robert A. HEINLEIN.

MacDONALD, GEORGE
(1824-1905) Scottish author and editor, noted for his fairy tales. His former occupation as a clergyman was reflected in his allegorical fantasies, *Phantastes: A Faerie Romance for Men and Women* (1858) and *Lilith* (1895; rev 1924), the latter work being his closest to sf. Based on the premise that an infinite number of three-dimensional universes can exist in a four-dimensional frame (*PARALLEL WORLDS*), *Lilith* draws heavily from the Talmud in its enigmatic description of a search, set in both this Universe and another, for the self. It compares interestingly with David LINDSAY's *A VOYAGE TO ARCTURUS* (1920). After GM's death, his son Greville wrote three fantasy novels as well as the biographical *George MacDonald and his Wife* (1924). [JE/JC]Other works: *Adela Cathcart* (coll 1864; rev 1882 to exclude fantasy stories); *The Portent: A Story of the Inner Vision of the Highlanders, Commonly Called the Second Sight* (1864; rev as coll vt *The Portent and Other Stories* 1909; original novel vt *Lady of the Mansion* 1983 US); *Dealings with the Fairies* (1867); *At the Back of the North Wind* (1870), *The Princess and the Goblin* (1871 US) and *The Princess and Curdie* (1882 US), a series for children; *Works of Fancy and Imagination* (10 vols 1871); *The Wise Woman: A Parable* (1875; vt *A Double Story* 1876 US; vt *Princess Rosamund* US; vt *The Lost Princess* 1895 UK); *The Flight of the Shadow* (1891); *The Fairy Tales of George MacDonald* (coll in 5 vols 1904); *Fairy Tales* (1920); *The Light Princess* (coll 1961) ed Roger Lancelyn GREEN; *Evenor* (coll 1972) ed Lin CARTER; *Visionary Novels: Lilith; Phantastes* (omni 1954 US; vt *Phantastes*; and *Lilith* 1962 UK); *The Gifts of the Child Christ: Fairy Tales and Stories for the Childlike* (coll in 2 vols; 1973 US) ed Glenn Edward Sadler; *The Gold Key and The Green Life* (anth 1986), the second story being by Fiona Macleod (pseudonym of William Sharp [1824-1905]); *The Day Boy and the Night Girl* (1988 chap); *Little Daylight* (1988 chap). About the author: There is a mass of critical work on GM. Of particular genre interest is *The Renaissance of Wonder in Children's Literature* (1977; vt *Renaissance of Wonder: The Fantasy Worlds of C.S. Lewis, J.R.R. Tolkien, George MacDonald, E. Nesbit and Others* 1980 US) by Marion Lochhead (1902-1985). See also: ADAM AND EVE; MUSIC.

McDONALD, IAN
(1960-) UK writer, a resident of Northern Ireland, who began publishing sf with "The Islands of the Dead" for *Extro* in 1982; this, with other

short work, was assembled as *Empire Dreams* (coll 1988 US). He very quickly demonstrated a fascination with garish sf impedimenta and a habit of rococo elaboration which made him both a highly promising writer and potentially a wilfully eccentric one. His first novel, *Desolation Road* (1988 US), has been described as *THE MARTIAN CHRONICLES* (coll 1950) crossed with *One Hundred Years of Solitude* (1967; trans 1970), a joke limited in accuracy only by its failure to add Cordwainer SMITH to Ray BRADBURY and Gabriel Garcia Marquez (1928-). IM is not so much being influenced or writing pastiche as appropriating deftly from other writers the precise gestures needed to make ideological or emotional points about the human implications of TERRAFORMING or cyborgization (CYBORGS). *Out on Blue Six* (1989 US) describes a failed UTOPIA, a standard theme in the UK during the Thatcher years, working both to rehabilitate socialist ideals and to acknowledge legitimate criticism; it combines standard Robert A. HEINLEIN motifs - the Man, or in this case Woman, who Learns Better-some A.E. VAN VOGT mystification about amnesiac Hidden Masters, and a catalogue of DYSTOPIAN and heterotopian fragments, plus chunks of Grail quest and a lot of shooting and running around. *King of Morning, Queen of Day* (1985 in *Empire Dreams*; exp 1991 US), which won the PHILIP K. DICK AWARD in 1992, is a fantasy about Irish identity across the generations which manages in its third (contemporary) section to assimilate much of the feel of CYBERPUNK. *Hearts, Hands and Voices* (1992; vt *The Broken Land* 1992 US), set in a tropical venue much resembling Asia (though the religious conflicts have an Irish ring), replicates the technique of his first novel; in this case his models are Geoff RYMAN's novels *The Unconquered Country* (1986) and *The Child Garden* (1988). *Scissors Cut Paper Wrap Stone* (1994 US), which is novella-length, concisely depicts the circular hegira through near-future Japan of an occidental man who is re-sorting his life and attempting to come to terms with the consequences of his invention (or discovery) of reality-controlling computer images. *Necroville* (1994; vt *The Terminal Cafe* 1994 US), which is perhaps IM's most concentrated and finest novel yet, constructs an intensely complicated urban NEAR FUTURE world - CYBERPUNK imagery of the world-city is utilized with bravado throughout - in which NANOTECHNOLOGY has accomplished what many - even in 1995 - feel may be its first transformative change, making it possible for cellular creatures - like us - to become immortal. The plot spins this speculation with feverish energy. [RK]Other works: *Speaking in Tongues* (coll 1992); *Kling Klang Klatch* (graph 1992) illus David Lyttleton. See also: *CITIES*; *COLONIZATION OF OTHER WORLDS*; *GAMES AND SPORTS*; *INTERZONE*; *MARS*; *NEW WORLDS*; *WOMEN AS PORTRAYED IN SCIENCE FICTION*.

MACDONALD, JAMES D(OUGLAS)
Debra DOYLE.

MacDONALD, JOHN D(ANN)
(1916-1986) US writer and ex-lieutenant colonel in the US Army, known mainly for such well written thrillers as *The Brass Cupcake* (1950) and the 21 Travis McGee novels (1964-85), which evolved from escapist tales of derring-do into impassioned laments for the human race and the planet. None of his sf, which began early in his career with "Cosmetics" for ASF in 1948, significantly anticipates JDM's late mood; the best of his 50 or

so short stories, nearly all written 1948-53, were assembled in *Other Times, Other Worlds* (coll 1978). His two early sf novels, *Wine of the Dreamers* (1951; vt *Planet of the Dreamers* 1953 UK) and *Ballroom of the Skies* (1952), were both polished and proficient adventures in PARANOID sf involving extraterrestrial manipulations of humanity, inadvertent in the first book and, in the second, as part of a winnowing process to select good leadership material. A later novel, *The Girl, the Gold Watch, ? Everything* (1962), is a complicated spoof adventure in which a man inherits a watch which, when correctly used, speeds up time for the owner, rendering him invisible to the people in real, apparently frozen, time, and thereby giving him great power. All 3 novels were assembled as *Time and Tomorrow* (omni 1980). JDM occasionally wrote sf stories under the pseudonyms John Wade Farrell and Peter Reed. [JC/PN] About the author: *Bibliography of the Published Works of John D. MacDonald* (1980) by Walter and Jean Shine. See also: LEISURE; PULP MAGAZINES.

MacDONALD, PHILIP

(1899-1980) Scottish-born author of detective novels and screenplays, in California from 1931; he was best known for thrillers like *The Rasp* (1924) and *X v. Rex* (1933 as by Martin Porlock), of which at least four, including *The List of Adrian Messenger* (1959), were filmed. His 23 screenplay credits included *Rebecca* (1940), *The Body Snatcher* (1945) and the sf film *Tobor the Great* (1954). PM published occasional sf stories in FSF and elsewhere in the 1940s and 1950s, and as W.J. Stuart wrote *Forbidden Planet ** (1956), based on *FORBIDDEN PLANET* (1956), a film novelization of higher quality than usual. [PN/JC]

McDONALD, RAYMOND

Joint pseudonym of US writers Raymond Leger (1883-?) and Edward McDonald (1873-?), whose sf novel, *The Mad Scientist: A Tale of the Future* (1908), features the increasingly dangerous - or effective - interventions of the said SCIENTIST in the dealings of US businessmen and of the US Government itself. The scientist's inclinations are socialist but, surprisingly for 1908, the authors are ambiguous about whether or not he is a menace pure and simple; and the protagonists of the tale find themselves again and again having to cope with uncomfortable revelations - from fraud to conspiracies with German strikebreakers - brought into the open by the scientist's numerous inventions. [JC]

McDONALD, STEVEN E(DWARD)

(1956-) Jamaican writer who began publishing sf with "Empty Barrels" for ASF in 1978, was most noted for "Ideologies" (1980), and whose first novel, *The Janus Syndrome* (1981 US), put into SPACE-OPERA guise a tale involving racial oppression, romantic exaggerations of material, and masquerades. Unfortunately, he then fell silent. [JC]

MacDONELL, A(RCHIBALD) G(ORDON)

(1895-1941) Scottish writer who began his career as author with a series of thrillers as Neil Gordon; one of these, *The Professor's Poison* (1928), was sf. From 1933, AGM wrote under his own name. In *Lords and Masters* (1936) an industrial struggle between traditional steel manufacturers and the developers of a new metal escalates into a full-blown war involving

the whole of Europe; by novel's end, a Patriotic Government is ruling the UK. [JC]

McDONOUGH, ALEX

(? -) US writer whose sf is restricted to the Scorpio sequence of tales packaged on a SHARECROP basis by the Byron PREISS enterprise: Scorpio (1990), Scorpio Rising (1990), Scorpio Descending (1991) and Dragon's Blood (1991). Scorpio, an ALIEN on the run with a pilfered superpowered orb, has escaped to 14th-century Earth, where he has many adventures. [JC]

McDONOUGH, THOMAS R(EDMOND)

(1945-) US writer and lecturer in engineering at Caltech. He is perhaps best known for his nonfiction and for serving as the coordinator of the SETI programme of the Planetary Society. The Search for Extraterrestrial Intelligence (1987) argues the case for seeking out First Contact with other races in the Galaxy. Much of his earlier work was also nonfiction, beginning with "They're Trying to Tell Us Something" for ASF in 1969, which likewise concerned SETI matters. He began to publish fiction only in 1979 with "Statues of the Gods" for Starlog. His first novel, The Architects of Hyperspace (1987), features a clearly argued HARD-SF vision of a Galaxy containing at least one artificial toroidal world; there is also sophisticated speculation about the growth of civilizations throughout the Universe. Yet it is narrated in an only intermittently humorous pulp style, and features at least one bibulous Irishman. The Missing Matter (1992) provides a similar mix of intriguingly couched cognition and comic turns. [JC]Other work: Space: The Next 25 Years (1987; rev 1989).

MacDOUGAL, JOHN

Collaborative pseudonym of James BLISH and Robert A.W. LOWNDES on "Chaos Co-ordinated" (ASF 1946). [PN]

MACE, DAVID

(1951-) UK writer whose first novel, Demon-4 (1984), describes with a quite chilling quasilyrical remoteness a post- HOLOCAUST suicide mission undertaken by the eponymous CYBORG probe to dismantle a doomsday device. Most of his later novels, like Nightrider (1985), Fire Lance (1986), The Highest Ground (1988), Shadow Hunters (1991) and Chasing the Sun (1992), rework his territory, which might be defined as the NEAR FUTURE seen in terms of military DISASTERS, threatened or consummated; but Frankenstein's Children (1990), set in what remains of the Amazonian rain forest, gathers this material into a metaphorically rich whole, envisioning the entire diseased enterprise of exploitation and "development" as a collective surrender to the overstepping venture of Victor Frankenstein himself. The MONSTER, in this book, is the torn and galvanized world itself. [JC]

McELROY, JOSEPH

(1930-) US writer who has gained attention for a series of intellectually formidable novels, almost all of which may be described as epistemological studies of contemporary life. Most notable among these are Lookout Cartridge (1974) and the extremely long and ambitious Women and Men (1987). All his work may be most fruitfully likened to the FABULATIONS of US writers like Thomas PYNCHON and Don DELILLO. However, Plus (1977),

which dramatizes the experience of an artificially nurtured brain aboard a research satellite, is sf. [GF]

McENROE, RICHARD S.

(? -) US writer and literary agent who began writing sf with "Wolkenheim Fairday" for IASFM in 1980. His first two novels were BUCK ROGERS IN THE 25TH CENTURY ties: Warrior's World * (1981) and Warrior's Blood * (1981), both based on outlines by Larry NIVEN and Jerry POURNELLE; they were not received with enthusiasm. The Far Stars and Future Times sequence - The Shattered Stars (1983), Flight of Honor (1984) and Skinner (1985)-provides some more competently told sf adventures. RSM has also edited an interesting anthology of original stories, Proteus: Voices for the 80's (anth 1981). [JC]

McEVOY, SETH

(? -) US writer. His Not Quite Human sequence of young-adult sf tales is about a teenage ANDROID: Not Quite Human #1: Batteries Not Included (1985), #2: All Geared Up (1985), #3: A Bug in the System (1985), #4: Reckless Robot (1986), #5: Terror at Play (1986) and #6: Killer Robot (1986). The Arcade Explorers sequence, all written with Laure Smith, comprises Arcade Explorers #1: Save the Venturians! (1985), #2: Revenge of the Raster Gang (1985), #3: The Electronic Hurricane (1985) and #4: The Magnetic Ghost of Shadow Island (1985). He also wrote two titles for the Explorer sequence: Destination: Brain * (1987) and Escape from Jupiter * (1987). SM has written one nonfiction text of interest, Samuel R. Delany (1985), a bio-critical study of the writer. [JC]

McEWAN, IAN (RUSSELL)

(1948-) UK writer who came to instant fame through the stories assembled in First Love, Last Rites (coll 1975), followed by In Between the Sheets (coll 1978), some of which are fantasy or sf - like "Reflections of a Kept Ape" from the second volume (APES AND CAVEMEN) - but most of which turn an intensely fabulistic eye (FABULATION) on young persons caught in the hyperboles of a UK depicted as psychically incontinent and in terminal decline. His first novel, The Cement Garden (1978), is a tale of horror. Of the plays assembled in The Imitation Game (coll 1981), "Solid Geometry" (1978) is sf. Or Shall We Die?: Words for an Oratorio Set to Music by Michael Berkeley (1983 chap) deals with the threat and imagined aftermath of nuclear WAR. The Child in Time (1987) is an sf novel set in the same dystopian NEAR-FUTURE UK adumbrated in "Two Fragments: March 199 - ""(in In Between the Sheets); in this desolate, privatized, factory-farmed venue, the protagonist agonizingly loses his child outside a shop, and his search for her becomes a search for meaning and grace in the desert landscape the UK has become. The Daydreamer (1994 chap) recounts the story-like perceptions of its young protagonist in a style of hallucinated clarity. [JC]"

MACEY, PETER

(? -) UK research chemist and writer whose routine sf novels are Stationary Orbit (1974), in which the alien intelligence turns out to be a local dolphin, Distant Relations (1975) and Alien Culture (1977), which features invasion by intelligent microbes. [PN]

MACFADDEN, BERNARR

(1868-1955) US publisher, writer and film producer, born Bernard Adolphus McFadden; much concerned throughout his life with physical culture, and an espouser of nudism and eccentric health routines in various magazines from early in his career. His acknowledged fiction, beginning with *The Athlete's Conquest* (1892), is neither sf nor fantasy; but he may have published some pseudonymous genre works in his own magazines. From 1904 his journals featured sf stories and novels. The first was "My Bride from the Other World", a HOLLOW-EARTH tale by the Rev. E.C. Atkins (who may have been BM himself) in *Physical Culture*; it was followed by the book-length serial "Weird and Wonderful Story of Another World" (1905) as by Tyman Currio (probably John Russell Coryell [1848-1924] with BM's assistance), and many other stories followed in BM's other journals, which included *Brain Power* (ed F. Orlin TREMAINE 1921-4), *Dance World*, *Metropolitan Fiction Lovers' Magazine*, *Midnight and Red-Blooded Adventures*. The most important early sf novel thus published was Milo HASTINGS's remarkable "Children of 'Kultur'", which appeared in *True Story* in 1919 and which, revised as *City of Endless Night* (1920), was one of the central - and most politically prescient - US DYSTOPIAS. *Ghost Stories*, which BM ran 1926-30 (it then soon folded under new management), concentrated on the supernatural, as did *True Strange Stories*, whose founding editor was Walter B. GIBSON; but *Liberty*, a later (and very substantial) BM magazine, published Fred ALLHOFF's *Lightning in the Night* (1940; 1979), which assumes the WWII triumph of Germany in Europe (HITLER WINS), though as the novel closes a nuclear stand-off maintains an uneasy peace between Germany and the USA. After WWI, BM's Macfadden Pictures released movies for several years, including *Zongar* (1918), which features Amazons. BM is most important in the HISTORY OF SF for his role - long obscure - in forcing the bankruptcy of Hugo GERNSBACK in 1929 and taking over *AMAZING STORIES*, events which occasioned a competitive proliferation of sf magazines; according to Sam MOSKOWITZ - in "Bernarr Macfadden", a 7-part study published in *FANTASY COMMENTATOR* 1986-92 - BM was, therefore, inadvertently instrumental in setting off the chain of events which a decade later would culminate in the GOLDEN AGE OF SF. [JC]

MacFARLANE, STEPHEN

John Keir CROSS.

McGARRY, MARK J.

(1958-) US writer whose two novels are *Sun Dogs* (1981) and *Blank Slate* (1984), both sf adventures. [JC]

McGIVERN, WILLIAM P.

[r] *AMAZING STORIES*; Alexander BLADE; P.F. COSTELLO; David Wright O'BRIEN; *PULP MAGAZINES*.

McGOWAN, INEZ

[s] Rog PHILLIPS.

MacGREGOR, LOREN J.

(1950-) US writer who began publishing sf with his first novel, *The Net* (1987), a Galaxy-spanning sf adventure involving some unremarkable capers and a play-feud between two spacefaring merchant families. It is redeemed

by the thought LJM gives to the implications of body-change technology (the book reminded many readers of John VARLEY) and by his inventive use of the Net itself, which creates a sensory field as well as conveying information in space. [JC]

MacGREGOR, RICHARD

Pseudonym of UK writer Macgregor Urquhardt (? -?). Under the name RM were published several routine GENRE-SF novels: *The Day a Village Died* (1963), *Taste of the Temptress* (1963), *Horror in the Night* (1963), *The Creeping Plague* (1963), *The Deadly Suns* (1964), *The Threat* (1964) and *The First of the Last* (1964). [JC/SH]

McGUFFIN

A term devised by Alfred Hitchcock (1899-1980) to designate an object whose loss - or rumours of whose existence - triggers the cast of a thriller or detective film into searching for it, or fighting for it, or running from it, but which has in fact no intrinsic meaning once the dust has settled. The use of McGuffins to generate chase-the-searcher plots is widespread in 1920s and 1930s thriller sf and in more recent adventure sf; McGuffin spoors are particularly noticeable in the second volumes of trilogies. The term has been variously spelled "McGuffin", "MacGuffin" and "Maguffin"; we have decided to stick with the spelling chosen by John BOWEN for his novel *The McGuffin* (1984). [JC]

McGUIRE, JOHN J(OSEPH)

(1917-1981) US author best known for his collaborations with H. Beam PIPER on the sf action novel *Crisis in 2140* (1953 ASF as "Null ABC"; 1957) and on *A Planet for Texans* (1957 *Fantastic Universe* as "Lone Star Planet"; 1958). These books are not readily distinguishable from Piper's solo efforts. JM wrote 2 other stories with Piper and 4 solo 1957-64. [JC] See also: COLONIZATION OF OTHER WORLDS; CRIME AND PUNISHMENT.

McGUIRE, PATRICK (LLEWELLYN)

(1949-) US researcher whose Princeton doctoral thesis was revised as a book, *Red Stars: Political Aspects of Soviet Science Fiction* (1985), one of the more useful sources on sf in RUSSIA, although carrying the story only as far as 1976. PM translated *Vozvrashchenie* (Polden'. 22-i vek) (1962; rev as *Polden', XXII vek* (*Vozvrashchenie*) 1967; the latter trans as *Noon: 22nd Century* 1978 US) by Arkady and Boris STRUGATSKI, and wrote the chapter on Russian sf in *Anatomy of Wonder: Third Edition* (1987) ed Neil BARRON. He has published pieces on both Russian and English-language sf in a variety of books and magazines. [PN]

MacHARG, WILLIAM

[r] Edwin BALMER.

MACHEN, ARTHUR

(1863-1947) Welsh writer, translator and actor, born Arthur Llewellyn Jones, his parents adding Machen apparently in an attempt to please a rich relative. AM was an isolated, lonely child, and was from a very early age deeply devoted both to romantic literature and to the Welsh landscape that visually dominated his writings all his life. He also imaginatively applied his extensive if somewhat random readings in the occult and

metaphysics to his Welsh background. He was in London for long periods from 1880. The death of his father in 1887 provided him with enough money to marry and to write, but by the end of the century he was once again poverty-stricken. He went on the stage for much of the following decade, and for the rest of his life did a great deal of hackwork. By the time he was rediscovered in the 1920s he was near retirement and no longer capable of producing high-calibre material. With influences ranging from William MORRIS to Robert Louis STEVENSON and associations from John Lane's Bodley Head (at the time it was publishing *The Yellow Book*) to the Order of the Golden Dawn (whose occultist members included Algernon BLACKWOOD, W.B. Yeats [1865-1939] and Aleister Crowley [1875-1947]), and throughout embodying a conviction that DEVOLUTION and racial degeneracy were scientific facts (his *Faerie* represents a degenerated race in Britain), AM's fiction generally shies clear of sf as practised in the late-Victorian and Edwardian UK; most of his best tales are horror or occult fantasies. They tend to be set in a medievalized England with Welsh tinges, those set in London being irradiated by deeply romantic visions of alternatives to the industrial world which he saw dominating England, and despised: in both his work and his appearance he resembled a malefic G.K. CHESTERTON. "The Great God Pan", the title story of *The Great God Pan* and *The Inmost Light* (coll 1894; exp 1926), is typical of Victorian sf/horror at about the time sf was beginning to shed its GOTHIC elements into a separate HORROR/fantasy genre. The story begins with an sf rationale (brain surgery) for a metamorphosis which remains one of the most dramatically horrible and misogynistic in fiction: the evil female offspring of the operated-on idiot girl grows into a malign being, apparently a woman, but actually a half-human horror whose father may have been the horned god of the story's title. *The Terror: A Fantasy* (1917; rev 1927) is quasi-sf in its story of animals turning against humans. Through work of this sort, AM's influence, via H.P. LOVECRAFT and others, has been strong on 20th-century GOTHIC SF. Volumes in which fantasy predominates include *The Chronicle of Clemendy* (coll 1888), *The Three Impostors, or The Transmutations* (coll 1895; vt *Black Crusade* 1966), *The House of Souls* (coll 1906), *The Hill of Dreams* (1907), *The Angels of Mons, The Bowmen and Other Legends of the War* (coll 1915), *The Great Return* (1915 chap), *The Secret Glory* (1922), *The Shining Pyramid* (coll 1923), *The Glorious Mystery* (coll 1924, partly nonfiction), *Ornaments in Jade* (coll 1924 US), *Dreads and Drolls* (coll 1927), *The Green Round* (1933), *The Cosy Room* (coll 1936), *The Children of the Pool, and Other Stories* (coll 1936), *Holy Terrors* (coll 1946), *Tales of Horror and the Supernatural* (coll 1948 US) and *The Collected Arthur Machen* (coll 1988). [JC/PN]About the author: *A Bibliography of Arthur Machen* (1965) by Adrian Goldstone and Wesley Sweetser.

MACHINES

Sf is sometimes considered, especially by its detractors, to be a genre in which machines are more important than people. DEFINITIONS OF SF often deny this, but the assumption that only HARD SF, dealing with the future of TECHNOLOGY, can be "real" sf is very common. Various kinds of machine have exerted a powerful fascination upon the sf imagination, and the social impact of technology has been a continual concern in sf. The first

major prose work to celebrate the shape of machines to come (although the earlier drawings of Leonardo da Vinci [1452-1519] are justly famous) was Francis BACON's prospectus for the Royal Society, *The New Atlantis* (1627; 1629), which features a catalogue of marvellous inventions. Bacon's contemporary John WILKINS similarly listed inventions - on which he would be prepared to work if someone would finance him - in *Mathematicall Magick* (1648). These catalogues aimed to be realistic; the metaphorical usefulness of machines was explored for purposes of SATIRE by Daniel DEFOE in *The Consolidator* (1705), which features a "cogitator" to force rational thoughts into unwilling brains, a "devilscope" to detect and expose political chicanery, and an "elevator" to facilitate communication between minds and with the spirits of the dead. While Bacon and Wilkins extrapolated from contemporary technology to test the limits of practicality, Defoe suggested miraculous purposes and then proposed machines to serve as symbols for the means to those ends; save for the most conscientious hard-sf writers, the modus operandi of modern sf writers has more in common with Defoe than with Bacon. Such staple devices as TIME MACHINES and FASTER-THAN-LIGHT starships, operating in frank defiance of rationality and known science, function as facilitating devices to give writers access to the infinite realms of possibility. As such they are indispensable, and are frequently included in stories otherwise conscientious in their attempts at realism (IMAGINARY SCIENCE). With the exception of flying machines - a common concern in speculative fiction in the 17th and 18th centuries - few of the machines anticipated by Bacon and Wilkins played a significant part in sf until the late 19th century, when the Industrial Revolution lent historical confirmation to their prospectuses for technology. Some UTOPIAN writers made much of the productive capacity of factory machinery, but the first major literary disciple of the futuristic machine, Jules VERNE, was primarily interested in vehicles for his imaginary voyages. TRANSPORTATION remained the chief function of machines in sf for some time, though the role was augmented by all manner of exotic WEAPONRY as future- WAR stories became popular. Miracle-working facilitating devices played a limited role in 19th-century sf, although some were employed as means of COMMUNICATION and others as forms of amusement. Examples of the latter include the sporting contraptions (GAMES AND SPORTS) featured in Anthony TROLLOPE's *The Fixed Period* (1882) and J.A.C.K.'s *Golf in the Year 2000* (1892). Further facilitating devices are found in Edward BELLAMY's *Dr Heidenhoff's Process* (1880), about a machine which erases unpleasant memories, and in Arthur Conan DOYLE's *The Doings of Raffles Haw* (1891), about a gold-making machine; but the most important exemplar was provided by H.G. WELLS in *THE TIME MACHINE* (1895). Another kind of fascination with mechanical contrivance is manifest in various baroque tales and allegories, including E.T.A. HOFFMANN's "Automata" (1814) and "The Sandman" (1816), Nathaniel HAWTHORNE's "The Celestial Railroad" (1843) and Herman MELVILLE's "The Bell-Tower" (1855), in which machines play a quasidiabolical role. This respectful suspicion of machinery is marvellously extrapolated in those chapters of Samuel BUTLER's *Erewhon* (1872) that present a vision of mechanical evolution. Wells's "The Lord of the Dynamos" (1894), too, reflects this sinister aspect; and L. Frank BAUM's children's fantasy *The Master Key* (1901) is a cautionary allegory. Enthusiasm for technological

achievement and suspicion regarding human relationships with the machine are combined in Morrison's *Machine* (1900) by Joseph Smith FLETCHER, a curiously intense study of technological creativity. In the last few years of the 19th century the potential of technology was drastically transformed by the discovery of the electromagnetic spectrum and the development of the new atomic theory. Vulgar mechanical contraptions were suddenly augmented by the magic of rays and radio, and there seemed to be no limits to possibility. A new era of imaginative exuberance began which took means of transportation (especially SPACESHIPS) and weapons out of the realms of extrapolation into those of boundless fantasy. One of the prophets of the new technology, and one whose understanding of its potential was more realistic than is sometimes appreciated, was Hugo GERNSBACK, the would-be inventor who instead became the publisher of *Radio News*, *Modern Electrics*, *The Electrical Experimenter* and *SCIENCE AND INVENTION*, and who founded *AMAZING STORIES* as their companion. In *Ralph 124C 41+* (1911-12; 1925) Gernsback produced a catalogue of wonders akin to that in Bacon's *The New Atlantis*; though painfully naive in literary terms, *Ralph* proved less incompetent as a technological prospectus. It was not unnatural that the early sf PULP MAGAZINES should go to extremes in their use of machines in a way that Verne never had. The pulp writers were the product of an age of extremely rapid technological advance in which science was coming to seem mysterious again. It was an age when it seemed machines might do anything, when even the satirical metaphors of Defoe's *Consolidator* could seem plausible as actual devices. The limitless scope of the machine was reverently translated into a kind of quasisupernatural awe in such stories as John W. CAMPBELL Jr's "The Last Evolution" (1932) and "The Machine" (1935 as by Don A. Stuart). What was largely missing from all the extravagant accounts of miracle-working machines, however, was a consciousness of the social implications of extravagant technological advance. Writers outside the genre were little better: Gardner HUNTING's *The Vicarion* (1926) features a machine that can look through time to record any event from the past, but in Hunting's blinkered view it is merely a new entertainment medium which might make cinema obsolete; the device in Andre MAUROIS's *La machine à lire les pensées* (1937; trans as *The Thought-Reading Machine* 1938) is represented as a mere fad. These and many other stories conclude that we might well be better off without miraculous machines. E. Charles VIVIAN's *Star Dust* (1925), Karel CAPEK's *The Absolute at Large* (1922; trans 1927) and William M. SLOANE's *The Edge of Running Water* (1939) are other notable examples of the "no good will come of it all" school of thought. Aldous HUXLEY's *BRAVE NEW WORLD* (1932) is an outstanding attempt to consider large-scale social consequences but it, too, is dominated by the conviction that technological opportunities will be abused. A similar suspicion was widespread in the early sf magazines, particularly in the work of David H. KELLER, but was balanced by Gernsbackian optimism. Campbell's prospectus for sf, promoted in *ASTOUNDING SCIENCE-FICTION*, demanded more conscientious analyses of the social impact of new machines. Robert A. HEINLEIN was one of the first to take up the challenge, in such stories as "The Roads Must Roll" (1940) and *BEYOND THIS HORIZON* (1942 as by Anson MacDonald; 1948). The 1940s became, in consequence, the era of the gadget: the small machine with considerable implications. "A Logic Named Joe"

(1946) by Will F. Jenkins (Murray LEINSTER) is an archetypal gadget story prefiguring the personal COMPUTER. WWII and the bombing of Hiroshima encouraged the notion that machines had become so powerful that humans were simply not up to the task of responsibly administering their use. Several memorable images of the revolt of the machines appeared in this period: Robert BLOCH's "It Happened Tomorrow" (1943), Clifford D. SIMAK's "Bathe Your Bearings in Blood" (1950; vt "Skirmish") and Lord DUNSANY's The Last Revolution (1951). A particularly powerful parable of the power of the machine acting independently of human control is Theodore STURGEON's "Killdozer!" (1944). T.L. SHERRED's "E for Effort" (1947) features a machine similar to Hunting's vicarion, but goes to an opposite extreme in arguing that its mere presence in the world would precipitate all-out war. Jack WILLIAMSON's "The Equalizer" (1947) is an elegant study of the political implications of free power. As the 1950s progressed, GENRE-SF writers became increasingly prone to show machines out of human control, remaking the world while humanity was swept helplessly along - or left helplessly behind. Philip K. DICK's "Second Variety" (1953), in which self-replicating, independently evolving war machines inherit the Earth, is a striking example. Later works embodying similar images include Fred SABERHAGEN's Berserker series, John T. SLADEK's satirical The Reproductive System (1968; vt MECHASM) and Stanislaw LEM's The Invincible (1964; trans 1973). Anxiety about the alienation of people from their mechanical environment seems to have reached its peak during the 1950s, and the 1960s began a new trend towards uneasy reconciliation, perhaps best exemplified by changes in the typical roles assigned to CYBORGS. In contemporary sf, as in contemporary society, suspicion of machines remains deeply entrenched, but the inevitability of our association with machinery is accepted. The distinction between life and mechanism often becomes blurred, as in Philip K. Dick's DO ANDROIDS DREAM OF ELECTRIC SHEEP? (1968). The intimacy of the man/machine relationship can only increase still further, and sf stories anticipate this increasing intimacy in all kinds of melodramatic ways; sexual relationships are of course included, as in such stories as Harlan ELLISON's "Pretty Maggie Moneyeyes" (1967) and "Catman" (1967). The trend towards ever-larger machines was decisively halted by the development of microprocessors, and much contemporary speculation about future machinery is concerned with NANOTECHNOLOGY: the development of machines which are no more than large molecules and can do extensive work inside our bodies as well as perform complex manufacturing tasks in huge vats. Sf has not yet really got to grips with the possibilities of nanomachinery, but a beginning has been made in such stories as Ian WATSON's "Nanoware Time" (1989), Greg BEAR's Queen of Angels (1990) and Michael J. FLYNN's The Nanotech Chronicles (fixup 1991). Pat CADIGAN's Mindplayers (1987) brings up to date the older tradition of stories which feature psychologically intrusive machinery. The growth of the awareness that mankind and machine are inextricably bound together in contemporary society has deflected attention away from the miraculous potential of the machine. The naive assumption that all human problems might be solved by appropriate technological innovations, not uncommon in the 1930s, has been replaced by the assumption that human nature is bound to be remade by new machinery in problematic ways. Machines have largely lost their force as symbols of individual freedom and power, and with this loss the potential of

high-tech sf to provide simple escapist fantasies and power fantasies has been eroded. Given this, it is not entirely surprising to find so much contemporary sf being set in imaginary pasts (ALTERNATE WORLDS), in futures returned to primitivism (HOLOCAUST AND AFTER) or on technologically primitive lost colonies (COLONIZATION OF OTHER WORLDS). Formerly, speculative fiction's main concern in dealing with machines was the adaptation of machines to pre-existent human purposes (and this is equally true of Baconian extrapolation and Defoesque fantasy); now the main concern is with the challenges facing our descendants as they are forced to adapt, physically and mentally, to their mechanical achievements and environments. McHUGH, MAUREEN F.

(1959-) US writer (her middle initial stands for nothing) who began publishing sf with "All in a Day's Work" for Twilight Zone Magazine in 1988, writing as by Michael Galloglach. Her first novel, CHINA MOUNTAIN ZHANG (1992), which has been criticized for loose plotting, works in fact as a complex and multi-faceted portrayal of a 22nd century world dominated by China, through the eyes of the eponymous gay half-Chinese protagonist, who drifts through the world with a kind heart, an accurate eye, and a constant apprehension of death, for homosexuality is a capital offense. The text includes excursions to Mars, and various episodes which only seem to be longueurs if China Mountain himself were about to change the world: which he is not. MFMcH's second novel, Half the Day is Night (1994), makes similarly acute observations of the ways human beings may cope with a straitened, desperately crowded future, fitting them on this occasion into a more tightly organized plot: a French-Vietnamese recently in Africa comes to a Caribbean undersea city to work as a bodyguard for a woman banker threatened by assassination. It is a world more complicated than he can understand-in both her novels, MFMcH serenely violates any presumption that the protagonists of a genre fiction must eventually understand and control what's happening to them-and for that reason it is a world readers may find alarmingly familiar. [JC]

McHUGH, VINCENT

(1904-1983) US writer whose comic saga Caleb Catlum's America (1936) is about a family of immortals (IMMORTALITY) who amusingly represent the high points of US history in the flesh (the family includes Abe Lincoln and Davy Crockett). I Am Thinking of My Darling (1943), in which an inhibition-releasing epidemic hits New York, cuts surprisingly deep in its superficially comic examination of the consequences. [JC]See also: PSYCHOLOGY.

McILRAITH, FRANK

[r] Roy CONNOLLY.

McINNES, GRAHAM (CAMPBELL)

(1912-1970) UK-born, Australian-educated Canadian diplomat and novelist, son of the novelist Angela Thirkell (1890-1961) - another son of hers was Colin MacInnes (1914-1976). Most of GM's work is not sf, but Lost Island (1954) is a lost-race story (LOST WORLDS). [PN]

McINTOSH, J.T.

Pseudonym (in some earlier work spelled M'Intosh) of Scottish writer and journalist James Murdoch MacGregor (1925-), used for all his sf writing, though he has written non-sf under his own name. He began publishing sf with "The Curfew Tolls" in ASF in 1950, producing many stories (though no collections) through 1980. With his first novel, *World out of Mind* (1953 US), he fully entered a career that was, in its early years, notably successful. *World out of Mind* implausibly but enjoyably sets a disguised ALIEN on an Earth dominated by aptitude tests, where he wins his way to the top and thence prepares the way for *INVASION*. *Born Leader* (1954 US; vt *Worlds Apart* 1958) puts two sets of colonists from a destroyed Earth on nearby planets, where the authoritarian set conflicts with the libertarian set. In *One in Three Hundred* (1954 US), with Earth doomed again, pilots of the only rocketships available are given the task of selecting those they will save of the planet's billions of inhabitants. *The Fittest* (1955 US; vt *The Rule of the Pagbeasts* 1956 US) depicts the harrowing effects of a misfired experiment to increase animal INTELLIGENCE. *200 Years to Christmas* (1961 dos US) is a routine but competent variation on the GENERATION-STARSHIP theme. Although some of JTM's novels in the 1960s and 1970s continued to show his professional skill with a plot and his competence at creating identifiable characters, his work began to show some slackening of interest: *The Million Cities* (1958 Satellite; rev 1963 US) is a bland urban DYSTOPIA; *The Noman Way* (1952 as "The E.S.P. Worlds"; 1964) uninterestingly repeats the test situation of his first novel, which seems to have been something of a preoccupation of his, for it turns up also in the serial "The Lady and the Bull" (1955 Authentic). *Out of Chaos* (1965) is a routine post- HOLOCAUST novel; *Time for a Change* (1967; vt *Snow White and the Giants* 1968 US) treats a local intrusion of time-travelling aliens as a domestic issue; *Flight from Rebirth* (1960 as "Immortality - For Some"; much exp 1971 US), a chase tale in an urban setting, again features testing. JTM never lost the vivid narrative skills that made him an interesting figure of 1950s sf, but his failure to challenge himself in his later career led to results that verged on mediocrity. After 1980 he fell silent. [JC] Other works: *Six Gates from Limbo* (1968); *Transmigration* (1970 US); *The Cosmic Spies* (1972); *The Space Sorcerers* (1972; vt *The Suiciders* 1973 US); *Galactic Takeover Bid* (1973); *Ruler of the World* (cut 1976 Canada; rev vt *This is the Way the World Begins* 1977 UK); *Norman Conquest 2066* (1977); *A Planet Called Utopia* (1979 US). About the author: J.T. McIntosh: *Memoir* ? by Ian Covell. See also: ANDROIDS; DISASTER; END OF THE WORLD; GAMES AND SPORTS; IMMORTALITY; SUN.

MacINTYRE, F(EARGUS) GWYNPLAINE

(?1948-) UK-born writer, who was raised in Australia, and began his career in the UK with rewrite work-though no complete novels-for paperback publishers of routine sf in the late 1960s; he is now resident in the US. After contributing some material to the Welsh magazine *Raven* in the 1970s, he began publishing work of sf interest with "For Cheddar or Worse" for IASFM in 1980. As a ghost-writer, he wrote parts of Jerzy KOSINSKI's *Pinball* (1984), giving a character in the book his own unusual middle name. His first novel was an unremarkable contribution to the fourth Tom

Swift series (TOM SWIFT), The DNA Disaster * (1991) as by Victor APPLETON; but his first novel in his own name was the altogether more interesting The Woman Between the Worlds (1994), a RECURSIVE tale-involving, among others, Aleister Crowley (1875-1947) and Arthur Conan DOYLE-set in late 19th century England. The ambience is less STEAMPUNK than Gaslight Romance, given an ornate plot involving a PARALLEL WORLD run on lines derived from the work of H.P. LOVECRAFT, and an invisible woman (INVISIBILITY) escaping from that other world, who fascinates the protagonist by asking him to give her a full-body tattoo, thus making her visible. [JC]

McINTYRE, VONDA N(EEL)

(1948-) US writer and geneticist, one of the earliest successful graduates of the CLARION SCIENCE FICTION WRITERS' WORKSHOP, which she attended in 1970. So far as the editors can establish, she began to publish sf with "Only at Night" in Clarion (anth 1971) ed Robin Scott WILSON, and gained prominence with "Of Mist, and Grass, and Sand" (1973), which won a NEBULA for Best Novelette and served as the initial section of DREAMSNAKE (fixup 1978), her best known novel to date, which won her another Nebula as well as a HUGO. The female protagonist of both story and book is a healer in a desolated primitive venue, the violent and destructive superstitions of whose inhabitants lead to her losing her healer snake, with which she was linked through complex imprinting. The book version goes on to recount her quest for a replacement snake, a search through a strongly depicted post- HOLOCAUST environment which includes gruelling experiences in the city that had served as the central venue for VNM's first novel, The Exile Waiting (1975; rev 1976 UK). That book likewise features a female protagonist with singular empathic powers: she is a sneak thief - the plot is complicated - who manages to escape Earth's last city with a Japanese poet from the stars and a virtuous "pseudosib" (the bad "twin" having been killed in the city) and in due course Earth entirely, with the prognosis that she will become a successful starfarer. After Fireflood and Other Stories (coll 1979), which assembled her best short work, VNM became associated with the STAR TREK enterprise, producing the RECURSIVE Star Trek: The Entropy Effect * (1981) and 3 film ties - Star Trek: The Wrath of Khan * (1982), Star Trek III: The Search for Spock * (1984) and Star Trek IV: The Voyage Home * (1986) - as well as Star Trek: Enterprise: The First Adventure * (1986). Her next independent novel, Superluminal (1977 as "Aztecs" in 2076: The American Tricentennial ed Edward BRYANT; exp 1983), places its female protagonist in a rite-of-passage situation - she must replace her organic heart with an artificial device in order to become a starship pilot, but manages nonetheless to retain her humanity - and is significantly open to a FEMINIST reading. Barbary (1986) is directed to a younger audience. The Starfarers series - comprising Starfarers (1989), Transition (1991), Metaphase (1992) and Nautilus (1994) - is likewise written with deliberate clarity and ease. VNM's recent work is considerably less demanding than the novels and stories of her first professional decade but it continues to demonstrate her argued, numerate and humane approach - via the instruments of sf - to feminist concerns. Aurora: Beyond Equality (anth 1976) ed with Susan Janice Anderson is a collection of feminist sf

stories, not all by women. [JC]Other works: The Bride * (1985), a film tie; Screwtop (1976 in The Crystal Ship ed Robert SILVERBERG; 1989 chap dos); Star Wars: The Crystal Star * (1994). See also: CYBORGS; FASTER THAN LIGHT; SPACE FLIGHT.

MacISAAC, FRED(ERICK JOHN)

(1886-1940) US writer who appeared frequently in Argosy after WWI with stories in which his sober prophetic intelligence wrestles with his PULP-MAGAZINE instincts, and usually loses. His work remains of interest, however. The Vanishing Professor (1926 Argosy; 1927) complicatedly engages a venal scientist, inventor of an INVISIBILITY machine, with crime czars and detectives. "The Great Commander" (1926 Argosy All-Story) adumbrates Richard CONDON's Emperor of America (1990). "World Brigands" (1928 Argosy All-Story) suggests that the USA will develop an atomic bomb around 1940 in response to threats of war. The Mental Marvel (1930) deals with a boxer whose skills represent an evolutionary leap. The Hothouse World (1931 Argosy; 1965) awakes its protagonist from SUSPENDED ANIMATION into the insanely restrictive post-catastrophe world of AD2051 - its inhabitants pent in a single tower - which he liberates once it is demonstrated that the air outside can again be breathed. [JC]See also: CITIES; ECONOMICS; POLITICS.

McIVER, G(EORGE M.)

(? -?) Australian writer, still alive in 1943. His Neuroomia: A New Continent: A Manuscript Delivered from the Deep (1894 UK) routinely uncovers a clement LOST WORLD in the Antarctic inhabited by a long-lived high-tech folk who inform us that Mars is inhabited and spins off her excess population by dumping them on a visiting planet. [JC]

MacKAY, (JAMES ALEXANDER) KENNETH

(1859-1935) Australian writer and politician whose sf novel, The Yellow Wave: A Romance of the Asiatic Invasion of Australia (1895 UK), describes a Chinese invasion in 1954 under the guidance of Russia, the romance which causes the death of the secret leader of the invaders, and the continuing war which, as the book ends, the Australians seem likely to lose. [JC]See also: AUSTRALIA.

MACKAYE, HAROLD STEELE

(1866-1928) US writer whose sf novel is The Panchronicon (1904). This TIME-TRAVEL story is whimsically condescending about its provincial characters, who travel in a TIME MACHINE (left by a traveller from the future who died) that operates by repeatedly and very rapidly circumnavigating the north pole (to which it is attached by a chain) in the same direction as the Sun. The romance in Tudor England that follows shows some awareness of TIME PARADOX, but little is done with the idea. [PN]

McKEAG, ERNEST L(IONEL)

(1896-1974) UK author who began writing boys' fiction in 1921, some of it featuring the occasional sf MCGUFFIN and several LOST WORLDS. In his later career he published many non-sf novels under the house name "GRIFF" Invaded by Mars (1934) and Terror from the Stratosphere (1937), both as by Jack Maxwell, are juvenile sf. The Shuna sequence - Shuna, White Queen of the

Jungle (1951) and Shuna and the Lost Tribe (1951), both as by John King - rounds up the usual suspects: lost worlds, PSI POWERS and so forth. The first of these tales has an sf flavour: asteroid-dwelling space beetles invade, kidnap an Inca city and take off with it for the Moon. [JC]

McKEAN, DAVE

Working name of UK COMIC-strip and GRAPHIC-NOVEL artist David Jeff McKean (1963-), whose subtle, sophisticated techniques - which include collage, the reworking of photographic negatives, the use of found objects, and a transformative take on most categories of 20th century art - challengingly extend the potential range of the form. He attended Berkshire College of Art and Design 1982-6. His first publication was Violent Cases (graph 1987 in monochrome; 1991 coloured) written by Neil GAIMAN, a short graphic novel about childhood memories of an encounter with Al Capone's osteopath. He provided some haunting covers for DC COMICS's Hellblazer and Sandman comic books, and painted artwork for the 3-part graphic novel Black Orchid (graph 1988 US; omni 1991 US), written by Gaiman, and the bestselling graphic novel Arkham Asylum (graph 1989 US), written by Grant Morrison. His other work has included Signal to Noise (1989 The Face; graph rev 1992), written by Gaiman, about a dying film-maker plotting out his last movie in the knowledge that he will never make it; Cages (1991-2 US), which DM both wrote and drew, a long episodic piece about creativity and cats; and The Tragical Comedy or Comical Tragedy of Mr Punch (graph 1994), also with Gaiman, also - like Violent Cases - mixing autobiography (Gaiman's) and fantasy, and perhaps the two collaborators' finest work to date. He won the World Fantasy Award for Best Artist in 1991. DM formed the theatre group The Unauthorised Sex Company with Colin GREENLAND, Simon Ings (1965-) and Geoff RYMAN; debut performances were in 1991 at Mexican and on the Edinburgh Festival Fringe. He is increasingly active as a cover artist for GOLLANCZ and other publishers. [RT]See also: ARKHAM HOUSE; ILLUSTRATION.

MACKELWORTH, R(ONALD) W(ALTER)

(1930-) UK writer and insurance salesman who began publishing sf with "The Statue" for NW in 1963 and produced some above-average sf adventure novels, usually involving complex, sometimes jumbled plotting, and an Earth somehow in danger. They include Firemantle (1968; vt The Diabols 1969 US), Tiltangle (1970 US), Starflight 3000 (1972 US) - which involves some interesting TERRAFORMING of both the Moon and other planets - The Year of the Painted World (1975) and Shakehole (1981), a DYSTOPIAN vision of a NEAR-FUTURE UK. [JC]

McKENNA, RICHARD M(ILTON)

(1913-1964) US writer who spent most of his adult life, not very happily, in the US Navy, which he joined in 1931. After returning to civilian life in 1953, he took a BA in literature at the University of North Carolina. His first published story was "Casey Agonistes" for FSF in 1958, although the first he wrote was "The Fishdollar Affair" (1958), which appeared in If. His efforts to revise the former story according to the editor's demands are described in his essay "Journey with a Little Man", which was reprinted in Damon KNIGHT's anthology of sf criticism, Turning Points (anth 1977). RMM was to publish only 5 more sf stories during his lifetime; another 6 appeared posthumously. 5 of the strongest were

assembled in *Casey Agonistes* and other *Fantasy and Science Fiction Stories* (coll 1973). The central theme of these stories is the power of mind over environment - either to adapt the existing one or, ultimately, to create something new. "The Secret Place" (1966), which won a posthumous NEBULA, is about PARALLEL WORLDS which can be reached through the power of the mind, while "Fiddler's Green" (1967), perhaps RMM's most ambitious story, tells of a group of men adrift in a small boat, without food and water, who mentally create an ALTERNATE WORLD into which they may escape. RMM's major work was a successful non-sf novel drawing on his naval experiences, *The Sand Pebbles* (1962), filmed in 1966. He died soon after writing the book; even had he lived it is unlikely that he would have written more sf. Nonetheless, his existing body of sf was sufficient to secure him a small, sure position in the sf pantheon. [MJE]About the author: "Casey Agonistes" by Peter NICHOLLS in *Survey of Science Fiction Literature, Volume One* (1979) ed Frank N. Magill. See also: ANTHROPOLOGY; ECOLOGY; PARANOIA; PASTORAL; PERCEPTION.

MACKENZIE, [Sir] (EDWARD MONTAGUE) COMPTON (1883-1972) Scottish writer, knighted in 1952, best known for his influential Bildungsroman, *Sinister Street* (2 vols 1913-14). His sf novel, *The Lunatic Republic* (1959), one of his many comic entertainments, depicts, with considerable slapstick in an easy-going, winning style, the UTOPIAN society that exists at the end of the century on the MOON. Two fantasies, *Hunting the Fairies* (1949) and *The Rival Monster* (1952), display the pawkish whimsy which made novels like *Whisky Galore* (1947) so popular. [JC]

McKENZIE, MELINDA
Melinda M. SNODGRASS.

McKEONE, (DIXIE) LEE (? -) US author of the *Ghoster* sequence of sf adventures - *Ghoster* (1988), *Backblast* (1989) and *Starfire Down* (1991). The tales are set in undemanding interstellar venues in which human enterprises flourish. [JC]

McKIE, ANGUS (1951-) UK illustrator. AM studied at Newcastle-upon-Tyne College of Art. From the mid-1970s his sf work appeared often on book covers, in picture books like *Alien Landscapes* (1979) by Robert HOLDSTOCK and Malcolm EDWARDS, and also in his own *The Flights of Icarus* (1977). At first AM worked mostly in the Chris FOSS style which dominated UK paperback book covers of the 1970s, whether relevant to the content or not: usually air-brushed ILLUSTRATIONS featuring high-tech artefacts, often space hardware, rendered with great detail. As that particular stereotype began to fade, AM's work, among the most proficient of its kind, showed greater variety. AM has an exceptional feel for scale: when he paints an object supposed to be huge it really looks huge. [PN/JG]

McKILLIP, PATRICIA A(NNE) (1948-) US writer whose early books were all fantasy, mostly for children. These showed an increasing assurance (and appeared to be for increasingly older children) from *The House on Parchment Street* (1973) through *The Throne of the Erril of Sherill* (1973; exp with "The Harrowing

of the Dragon of Hoarsbreath" [1982] as coll 1984) and The Forgotten Beasts of Eld (1974), an assurance which culminated in the Riddle-Master trilogy: The Riddle-Master of Hed (1976), Heir of Sea and Fire (1978) and Harpist in the Wind (1979), assembled as Riddle of Stars (omni 1979; vt The Chronicles of Morgon, Prince of Hed 1981 UK). It has been argued, by Peter NICHOLLS in Survey of Modern Fantastic Literature (1983) ed Frank N. Magill, that the trilogy is a work of classic stature: the intricate narrative of its quest story echoes a moral complexity almost unheard-of in fantasy trilogies; PAM's protagonist has a special skill at unravelling riddles and, through a series of strategies (including subliminal hints as little obvious as leaves in a forest) not unlike those adopted by Gene WOLFE in his Book of the New Sun series (1980-83), she forces the reader also to become a decipherer of codes. Thus the book's meaning is enacted by the way it must be read. While in no way resembling sf, the trilogy contains one of the most sophisticated uses of the shapeshifter theme to be found anywhere in sf or fantasy. Her sf proper began with the poignant Kyreol sequence for young adults: Moon-Flash (1984) and The Moon and the Face (1985). Much as in her fantasy books, the central theme is CONCEPTUAL BREAKTHROUGH, in this case from an Edenic but primitive POCKET UNIVERSE, Riverworld, which turns out to be an isolated corner of a planet containing the way station of an interstellar civilization, and the protected object of anthropological study. FOOL'S RUN (1987), which is adult sf, retells the Orpheus myth in a story of a woman visionary who has been found guilty of mass murder and is incarcerated in a prison satellite, the Underworld; it is memorable for its evocative sequences about future MUSIC. PAM's sf is unusual and well written, but perhaps she is more at home with fantasy, to which she returned with the haunting The Sorceress and the Cygnet (1991) - and its sequel, The Cygnet and the Firebird (1994) - set in a land where star constellations manifest themselves as gods or people and transform the mutable human world into ageless story. [PN] Other works: The Night Gift (1976), marginal fantasy; Stepping from the Shadows (1982), a possibly autobiographical novel about the growing-up of a fantasy writer; The Changeling Sea (1988), young-adult fantasy; Brian Froud's Faerielands: Something Rich and Strange (1994). See also: ARTS; CHILDREN'S SF; MAGIC; MYTHOLOGY; SPACE HABITATS.

McKINNEY, JACK

Collaborative pseudonym of Brian C. DALEY and James LUCENO. [JC]

MacLAREN, BERNARD

(? -) UK writer whose sf novel Day of Misjudgment (1956) unusually represents the domination of society by COMPUTERS as more of a blessing than a curse. [JC]

McLAUGHLIN, DEAN (BENJAMIN Jr)

(1931-) US writer who began publishing sf with "For Those who Follow After" for ASF in 1951. Of his three sf novels - Dome World (1958 ASF; exp 1962), The Fury from Earth (1963) and The Man who Wanted Stars (fixup 1965) - the last is probably the best, though all of these straightforward adventures are densely written. The first is set UNDER THE SEA, the second describes a war between Earth and a liberated VENUS, and the third depicts one man's long, driven quest to force and trick Earth governments into

attaining interstellar SPACE FLIGHT. Hawk Among the Sparrows (coll 1976) assembles stories of the 1960s. DM's subject matter and style were fairly typical of those encouraged by John W. CAMPBELL Jr during his editorial domination of ASF. [JC]See also: POLLUTION; STARS.

MacLEAN, ALISTAIR (STUART)

(1922-1987) Scottish writer whose novels are mostly - like *The Guns of Navarone* (1957) - well crafted action adventures, usually set at least in part at sea. *The Dark Crusader* (1961) and *The Satan Bug* (1962), both as by Ian Stuart, are Cold War thrillers which make use of sf MCGUFFINS. *The Golden Gate* (1976) features the abduction of a US President. *Farewell California* (1977) deals with the threat of a major earthquake along the San Andreas Fault, an event that would sink much of the eponymous state beneath the Pacific. [JC]

MacLEAN, KATHERINE (ANNE)

(1925-) US writer who took a BA from Barnard College, New York, did postgraduate study in psychology, became a quality-control lab technician in a food factory, and subsequently served as a college lecturer in creative writing and literature. Much of KM's work has been short stories, most of which, including her first, "Defense Mechanism" in 1949, appeared in ASF. She has generally written under her own name, although some stories were as by Charles Dye (Charles DYE was her husband 1951-3; see his entry for details) and one as by A.G. Morris; she was also married 1956-62 to David MASON. KM was in the vanguard of those sf writers trying to apply to the SOFT SCIENCES the machinery of the hard sciences in a generally optimistic reading of the potentials of that application; her range and competence in dealing with technological matters may in part reflect the wide range of occupations in her extra-literary life. Despite this subject matter her tone was generally that of HARD SF, and her work was unconnected with the later NEW-WAVE uses of the same basic material. KM was one of the earlier WOMEN SF WRITERS, but it would be neither desirable nor possible to read her stories as "women's" sf: in a field which was, in 1950, notoriously male-chauvinist she competed on equal terms, not restricting herself to "feminine" themes or protagonists, and not generally using a male pseudonym. A number of her stories were assembled in *The Diploids* (coll 1962) and *The Trouble with You Earth People* (coll 1980). Many of KM's early stories have been anthologized. Perhaps the best-known are "Pictures Don't Lie" (1951), which tells of the arrival of an alien SPACESHIP which seems normal according to advance radio signals but turns out to be little more than microscopic, "The Snowball Effect" (1952), an amusing SATIRE on social engineering in which a ladies' knitting circle expands to become the strongest political pressure group in the USA, and "Unhuman Sacrifice" (1958), an important piece of anthropological sf (ANTHROPOLOGY) in which a visiting exploration/contact team on another planet misreads a painful initiation ceremony as needless when its purpose is to prevent a damaging biological change. Also notable is the *Hills of Space* series, dealing with the settling of the ASTEROIDS by refugees, fugitives and the poor; it includes "Incommunicado" (1950), "The Man who Staked the Stars" (1952 as by Charles Dye), "Collision Orbit" (1954), "The Gambling Hell and the Sinful Girl"

(1975) and a long-projected novel, provisionally titled *The Hills of Space*. KM's first novel, *Cosmic Checkmate* (1958 ASF as "Second Game"; exp 1962 dos; exp vt *Second Game* 1981), with Charles DE VET, combines SPACE OPERA with interesting speculations on a society whose hierarchy is built around skill at games (GAMES AND SPORTS). *Missing Man* (fixup 1975), which contains the 1971 NEBULA-winning story "The Missing Man" (1971), deals with the exploits of an ESPER whose telepathy is a kind of sonar device enabling him to trace people emitting emotional distress signals; he cooperates with New York's Rescue Squad to go to their aid. Unusually for sf, the novel depicts New York with affection. *Dark Wing* (1979), with Carl West, less convincingly presents a world in which MEDICINE is forbidden: a teenager learns to become an outlaw surgeon by studying a medical kit. [JC/PN] Other work: *Trouble with Treaties* (1959 Star Science Fiction #5 ed Frederick POHL; 1975 chap). See also: ALIENS; PHYSICS; RELIGION; SOCIOLOGY.

MacLENNAN, (JOHN) HUGH

(1907-1990) Canadian novelist who early published two DYSTOPIAN tales, "The Finding of the Way" (1955 *The Montrealer*) and "Remembrance Day, 2010 A.D." (1957 *The Montrealer*), but almost all of whose works, like his second novel, *Two Solitudes* (1945), lay outside the field and were shaped by the search for a Canadian national myth. His only sf novel, *Voices in Time* (1980), whose frame story is set in Montreal in AD2039 after a nuclear HOLOCAUST, reflects the failure of that search in a dour meditation on the cycles of Canadian history. [JC] See also: CANADA.

MacLEOD, ANGUS

(1906-) Scottish writer of fiction and plays for RADIO. His sf novels are *The Body's Guest* (1958), in which a yoga machine built by an Indian physicist switches identities between nine Scots and a bull, with mildly amusing results, and *The Eighth Seal* (1962). [JC/PN]

MacLEOD, SHEILA

(1939-) Scottish writer, married for several years to actor and pop singer Paul Jones (PRIVILEGE), an experience reflected in her first novel, *The Moving Accident* (1968). Her second, *The Snow-White Soliloquies* (1970), is a FABULATION with surprisingly firm sf underpinning, describing in technological terms the SUSPENDED ANIMATION of its eponymous heroine as the search for a Prince continues in a grey world. *Xanthe and the Robots* (1977), set in an Institute for Advanced Robotic Research, explores the creation of "Philophrenics" (ROBOTS of near-human capability) and the problems their all-too-human designers face in deciding how far to attempt to exploit their development; it is an intelligent and sophisticated novel. *Circuit-Breaker* (1978) entertainingly mixes INNER SPACE and outer, describing an astronaut's attempts to use his PSI POWERS to save his ship - assuming the hero is indeed an astronaut and not a mental case or an sf writer: the ending is ambiguous. [MJE/PN/JC]

McLOUGHLIN, JOHN C.

(1949-) US writer whose first novel, *The Helix and the Sword* (1983), is an sf adventure of some competence, and whose second, *Toolmaster Koan* (1987), more interestingly sets up a Soviet-US tussle - to be the first to meet an ALIEN seemingly arriving from outer space in a GENERATION STARSHIP

- as a dramatic representation of the ongoing thematic argument that gives shape to the tale. This argument, extrapolated from evolutionary BIOLOGY, suggests that any species, once it acquires tools, enters an almost certainly fatal period of disequilibrium between that manipulative capacity and its powers of self-control. In the end, the "aliens" turn out to be dinosaurs, relics of Earth's last self-destructive evolutionary surge, and augurs of the failure to come. [JC]

McMAHON, PAT

[s] Edward D. HOCH.

McMULLEN, SEAN (CHRISTOPHER)

(1948-) Australian writer whose first professional sf sale was "The Pharaoh's Airship" for Omega Science Digest in 1986. The best of his craftsmanlike stories appear in Call to the Edge (coll 1992), a notable example being "The Colours of the Masters" (1988), in which a 19th-century device, the clockwork "pianospectrum", is discovered to have recorded the playing of Beethoven, Chopin and Liszt. Voices in the Light (fixup 1994), which begins the Greatwinter sequence, is an exceedingly complex post-HOLOCAUST tale set in a densely imagined Australia broken into many individual states which are linked by heliograph. The main story involves the gradual perfection of a kind of COMPUTER whose components are human calculators, along with an equally gradual movement towards the comprehension of the "Call" - the title story of SM's collection is worked into this novel - which periodically entraps humans and large animals into a fatal trek southwards to the ravaging sea. The holocaust had been man-made, and had generated the first Greatwinter; a new freezing-down is threatened. The series is projected to continue with Mirrorsun Rising (1995) and The Miocene Arrow. [PN/JC] See also: MUSIC.

McNEILLY, WILFRED GLASSFORD

(1921-1983) Scottish author of numerous novels and stories under a variety of names; he achieved some minor notoriety when he claimed in print to have written all the work published under the byline W. Howard BAKER - actually WGM's editor on stories written for the Sexton Blake library and for Press Editorial Syndicate - and various other Baker pseudonyms, a claim since disproved. WGM did write (as Errol Lecale) the Specialist series: Tigerman of Terrahpur (1973), Castledoom (1974), The Severed Hand (1974), The Death Box (1974), Zombie (1975) and Blood of My Blood (1975). As Peter SAXON, another house name, he cowrote with Baker 2 tales in the Guardians sequence: Dark Ways to Death * (1968) and The Haunting of Alan Mais * (1969). Non-series collaborations with Baker include The Darkest Night (1966) and The Torturer (1966). Solo titles as Saxon include Satan's Child (1967) and Corruption (dated 1968 but 1969). WGM is also credited with Drums of the Dark Gods (1966) as by W.A. Ballinger; The Case of the Muckrakers (1966), a Sexton Blake title; and Alpha-Omega (1977) as by Wilfred Glassford. [SH/JC]

McNELLY, [Dr] WILLIS E (VERETT)

(1920-) US academic, sf critic and editor long based at California State University at Fullerton, where he gave what were among the earlier sf classes in the USA. His anthologies include Mars, We Love You (anth 1971;

vt The Book of Mars 1976 UK) ed with Jane Hipolito, Above the Human Landscape: A Social Science Fiction Anthology (anth 1972) ed with Leon E. STOVER and Science Fiction Novellas (anth 1975) ed with Harry HARRISON; the last title had a companion work, Science Fiction Novellas: Teacher's Guide (1975) by WEM alone. He edited a collection of brief essays about the increasing interest of the academic world in sf (SF IN THE CLASSROOM), Science Fiction: The Academic Awakening (anth 1974 chap). WEM's strangest work is certainly The Dune Encyclopedia (anth 1984); it purports to have been published about 5000 years after the birth of Paul Atreides, protagonist of Frank HERBERT's DUNE (fixup 1965), and presents data about the history and ecology of the planet Dune. [PN]

MacPATTERSON, F.
Clark DARLTON.

McPHEE, JAMES
Laurence JAMES.

MacPHERSON, DONALD
(? -) Canadian author, perhaps a pseudonym of George MacTavish. Go Home, Unicorn (1935 UK) is a SCIENTIFIC ROMANCE set in Montreal, in which the life of a research scientist - loved by two women, one jealous - is much confused by projections, into the world of matter, of their (and other people's) mental fantasies, brought into being by the X-ray field he is using to create mutations in guinea-pigs; there is much scientific speculation, rather far-fetched, about the nature of the mind/matter division. The sequel, Men are Like Animals (1937 UK), likewise features research scientist Reggie Brooks, and involves a device that controls thoughts. [PN]

McQUAY, MIKE
Working name of US writer Michael Dennis McQuay (1949-), who began to publish sf with his first novel, Life-Keeper (1980), which very competently presents the kind of scenario MM has unrelentingly promulgated in book after book: a world governed by corrupt forces; a tough, anarchic, street-wise male protagonist whose powers - and virtue - are very exceptional indeed; and a plot which gives plenty of opportunities for arena-like conflicts between that protagonist and the corrupt forces he will ultimately defeat. The Mathew Swain sequence - Hot Time in Old Town (1981), When Trouble Beckons (1981), The Deadliest Show in Town (1982) and The Odds are Murder (1983) - makes explicit the generic origins of this hero, who derives from the works of Raymond Chandler (1888-1959) and Chandler's direct successors. As the series develops, Swain fights corruption first on Earth, then on the Moon and then on Earth again, always finding fit targets in the organizations which dominate society. Escape from New York * (1981), a film tie (ESCAPE FROM NEW YORK), if anything intensifies the seamy clangour of the movie version. Jitterbug (1984) interestingly posits an Arab hegemony over a corruptly DYSTOPIAN 22nd-century world. The Ramon and Morgan series - Pure Blood (1985) and Mother Earth (1985) - exploits similar venues without much innovation. MM's best novel to date is perhaps Memories (1987), in which the Weltschmerz inherent in the Chandler tradition is cleverly re-articulated

in the story of a woman who arrives by a form of subjective TIME TRAVEL from a devastated future, and who embroils the psychiatrist hero in further travels backwards into a somewhat sentimentalized understanding on both their parts of the depth of their deracination from the real world. The Nexus (1989) likewise handles material of considerable complexity, in this case a NEAR-FUTURE tale of innocence exploited. It is difficult to be sure that MM's copious energy will eventually control his equally apparent sentimentality; but he remains, without doubt, one of the more interesting professionals in the field. [JC] Other works: My Science Project * (1985), a tie to MY SCIENCE PROJECT (1985); The M.I.A. Ransom (1986); Isaac Asimov's Robot City #2: Suspicion * (1987); Puppetmaster (1991 UK; rev 1991 US), associational thriller; State of Siege (1994), a near-future thriller. As Victor Appleton (house name): Tom Swift: Crater of Mystery * (1983); Tom Swift: Planet of Nightmares * (1984). As Jack Arnett: The Book of Justice sequence of associational thrillers, those of some sf interest being #1: Genocide Express (1989), #2: Zatech Sting (1990) and #4: Panama Dead (1990). As Laura Lee Hope (house name): Bobbsey Twins: Haunted House * (1985). As Carolyn Keene (house name): Nancy Drew: Ghost Stories * (coll 1985). See also: ALTERNATE WORLDS; PHILIP K. DICK AWARD.

McQUEEN, RONALD A.
[r] ROBERT HALE LIMITED.

McQUINN, DONALD E.
(1930-) US writer whose first sf novel (his fifth overall), Warrior (1990), packs into its setting - a USA 500 years after the nation's nuclear destruction - almost every CLICHE available to writers of barbarian-warrior novels: a variety of agon-based tribal societies; a woman-run church; a batch of 21st-century warriors freshly resurrected from CRYONIC slumber and ready for a fight; an evil monarch bent on establishing an Empire; and a protagonist who must wander from one enclave to another, gradually accumulating a passel of friends and adherents as he goes. But the book itself, despite its (well handled) military moments, is in effect a PLANETARY ROMANCE, and in its 500 pages slowly and lovingly establishes an extremely complex portrait of a huge, densely populated, intensely variegated land. Several women characters have featured roles (though most of them are oppressed); the sequels, Wanderer (1993) and Witch (1994), do not, perhaps, quite maintain that sense of the multifarious, but it does continue to seem that DEM might be one of the novelists to watch in the 1990s. [JC]

MACROCOSM
GREAT AND SMALL.

MacTYRE, PAUL
Pseudonym of Scottish writer R.J. Adam (1924-). His best-known novel is his first, Midge (1962; vt Doomsday, 1999 1963 US), a literate post-HOLOCAUST story in which a new form of life threatens to take over from the remnants of outmoded, destructive Man. Further novels are the John Buchanesque Fish on a Hook (1963) and Bar Sinister (1964), the bar of the title representing a borderline-sf COMMUNICATIONS technology. [JC]

MacVICAR, ANGUS

[r] The LOST PLANET ; RADIO.

MADACH, IMRE

(1823-1864) Hungarian playwright and parliamentarian, chiefly known for his verse play *Az ember tragediaja* (1862; trans J.C.W. Horne as *The Tragedy of Man: A Dramatic Poem in Fifteen Scenes* 1963 Hungary; preferred trans by George Szirtes 1988 Hungary). This philosophical, rather pessimistic fantasy about the destiny of mankind focuses on Adam (an optimist), Eve and Lucifer (a materialist), who reappear in each scene in different guises (Adam once as Johannes KEPLER), all this being a dream shown to Adam by Lucifer. The somewhat high-flown narrative begins in biblical times and ends in the future; one of the last scenes is set in space, and another on a Dying Earth in the FAR FUTURE when the Sun is dim and red. [PN]

MADARIAGA (Y ROJO), SALVADOR de

(1886-1978) Spanish man of letters and diplomat who spent much of his life after 1916 in the UK and Switzerland, where he eventually retired. In his sf novel, *The Sacred Giraffe: Being the Second Volume of the Posthumous Works of Julio Arceval* (1925 UK), set in AD6922, the Blacks who have survived much history, including the submergence of Europe, argue about the possibility that Whites ever actually existed. Their hierarchical and monogamous state of Ebony - which is in Africa - is ruled by women. The book's various satirical points are generally directed at UK culture. *Sir Bob* (1930 US) is a fantasy for children, though its mildly satirical implications are clearly intended for the delectation of adults. SdM either wrote both works initially in English or translated them himself. [JC]

MADDOCK, LARRY

The solo writing name of Jack Owen Jardine (1931-), a creative director in radio, for his *Agent of T.E.R.R.A.* series, speedy *SPACE OPERAS* starring Hannibal Fortune and an alien sidekick on various assignments to save Earth from her enemies. The series comprises *The Flying Saucer Gambit* (1966), *The Golden Goddess Gambit* (1967), *The Emerald Elephant Gambit* (1967) and *The Time Trap Gambit* (1969). With his then wife, Julie Ann Jardine, he also wrote under the pseudonym Howard L. CORY. [JC] See also: UFOS.

MADDOX, CARL

E.C. TUBB.

MADDOX, TOM

Working name of US writer Daniel Thomas Maddox (1945-) who began publishing polished short stories with "The Mind like a Strange Balloon" for *Omni* in 1985. His first novel, *HALO* (1991), moves from a *CYBERPUNK* Earth to a *SPACE HABITAT*, engaging en route in an intense contemplation of the nature of artificial intelligence (AI; *CYBERNETICS*; *ROBOTS*) in a *VIRTUAL-REALITY* environment. The tale is intermittently hectic, but charged with energy. [JC]

MADER, FRIEDRICH W(ILHELM)

(1866-1947) German writer, mainly of juvenile novels, many set in German

East Africa and written somewhat in the style of H. Rider HAGGARD. Wunderwelten (1911; trans Max Shachtman as Distant Worlds: The Story of a Voyage to the Planets 1932 US) is a juvenile which takes its SPACESHIP crew to Mars and finally, at several times the speed of light, to Alpha Centauri, where they explore an Eden-like planet. Its content is quite advanced for 1911, but it is ill written. Other untranslated works include El Dorado ((1919; vt Auf den Spuren der Inkas), Die letzte Atlantide ["The Last Atlantis"] (1923) and Die Messingstadt ["City of Brass"] (1924). [PN/JE]See also: GERMANY.

MADLEE, DOROTHY
[r] Andre NORTON.

MAD LOVE
ORLACS HANDE.

MAD MAX
Film (1979). Mad Max Pty. Dir George MILLER, starring Mel Gibson, Joanne Samuel, Hugh Keays-Byrne, Tim Burns. Screenplay James McCausland, Miller, based on a story by Miller. 100 mins, cut to 91 mins. Colour. This low-budget exploitation movie builds up to the vigilante-style revenge of spaced-out policeman Max Rockatansky (Gibson) - who is almost as disturbed as his antagonists - on the motorcycle gang that killed his wife and child. It proved to be the successful harbinger of a boom in post-HOLOCAUST sf films where a dying civilization is pitted against a growing barbarism. Miller, whose debut feature this was, is extremely economical with data about just what (other than fuel shortages) has happened to create this crumbling of the social structure in Australia. Nonetheless, his vision of anarchy's spread - the atmosphere is reminiscent of John CARPENTER's Assault on Precinct 13 (1976) - is credible and well achieved. The film's instant success was due to the panache (and great skill) with which the chase sequences and spectacular vehicle demolitions were mounted. Prints shown in the USA were dubbed so that audiences there should not be subjected to the brutalities of the Australian accent. [PN]See also: ACE BOOKS; CINEMA; MUSIC.

MAD MAX BEYOND THUNDERDOME
Film (1985). Kennedy Miller Productions. Dir George MILLER with George Ogilvie, starring Mel Gibson, Tina Turner, Bruce Spence, Frank Thring, Paul Larsson, Helen Buday. Screenplay Terry Hayes, Miller. 107 mins. Colour. This Australian film, the second sequel to the post-HOLOCAUST movie MAD MAX (1979), has lots of well directed action but is more rambling and less focused than its predecessors. Max finds a community in the desert, Bartertown, with a female warlord (Tina Turner), gladiatorial games, and a great many extras being noisy, dirty and primitive. This lively stuff is really no more than a rehash of a great many filmic cliches, notably those of Italian sword-and-sandal epics. Far more interesting is a subplot set in a different part of the desert and involving a tribe of children who are now living in an oasis, having many years ago survived a plane crash in which all adults were killed. In perhaps the first attempt in cinema to achieve, albeit less complexly, something of what Russell HOBAN achieved in RIDDLEY WALKER (1980), they

speak a devolved language (LINGUISTICS); they also have a mythology involving a MESSIAH-figure, whom they take Mad Max to be. Their final return to the derelict ghost-city of Sydney is well done, and this whole inventive section about the children - pure sf, and ambitious sf at that - makes an otherwise routinely vivid film well worth watching. The novelization is Mad Max III: Beyond Thunderdome * (1985) by Joan D. VINGE. [PN]

MAD MAX 2

(vt The Road Warrior) Film (1981). Kennedy Miller Entertainment. Dir George MILLER, starring Mel Gibson, Bruce Spence, Emil Minty, Mike Preston, Kjell Nilsson. Screenplay Terry Hayes, Miller, Brian Hannant. 96 mins. Colour. The success of the first film in this series, MAD MAX (1979), generated a bigger budget for this, the second. It was well used, and this is a more sophisticated film, more purely sf than its predecessor. The oil wars have left a devastated world; petrol is a medium of exchange, and its conspicuous use - by burning it up on the roads - confers status. Ex-policeman Max Rockatansky (Gibson) gives reluctant assistance to a semicivilized group in a desert fortress. Possessing a valuable petrol supply, they are beleaguered by a tribe of marauders (who, in this Westerns replay, are effectively the Indians), designer-barbarians in fetishistic gear on motorbikes and vehicles of war. Made with poker-faced humour, and this time with the US prints allowed to retain Mel Gibson's Australian drawl, the film is enlivened by small details - e.g., the Feral Kid (Minty) with his razor-sharp metal boomerang - and has much to recommend it beyond the tautly directed scenes of vehicular warfare. Poignant use is made of memories when times were better. The name of the sleazy real-world coastal resort Surfer's Paradise is now only half-remembered, as "Paradise", and ironically the place becomes the Promised Land to which the civilized remnant (minus the loner, Max) finally treks. With all its comic-strip energy and vividness, this is exploitation cinema at its most inventive. [PN]

MADSEN, SVEND AGE

[r] DENMARK.

MAEPEN, K.H.

[s] Henry KUTTNER.

MAGAZINE OF FANTASY, THE

The MAGAZINE OF FANTASY AND SCIENCE FICTION .

MAGAZINE OF FANTASY AND SCIENCE FICTION, THE

US DIGEST-size magazine; published Fall 1949-Feb 1958 by Fantasy House, Inc., a subsidiary of Mercury Press, then by Mercury Press; Lawrence Spivak was credited as Publisher Fall 1949-July 1954, Joseph W. FERMAN Aug 1954-Oct 1970, Edward L. FERMAN from Nov 1970; ed Anthony BOUCHER and J. Francis MCCOMAS Fall 1949-Aug 1954, then by Boucher alone until Aug 1958, by Robert P. MILLS Sep 1958-Mar 1962, by Avram DAVIDSON Apr 1962-Nov 1964, by publisher Joseph W. Ferman Dec 1964-Dec 1965, by Edward L. Ferman Jan 1966-June 1991, and by Kristine Kathryn RUSCH from July 1991. To May 1995FSF had published 528 issues. #1 (Fall 1949) was titled The Magazine of Fantasy. The magazine began as a quarterly, became a bimonthly in Feb

1951, and has maintained a monthly schedule since Aug 1952. A rather short-lived companion magazine was VENTURE SCIENCE FICTION.FSF - the abbreviation, taken from the words "Fantasy and Science Fiction" on the spine, being in almost universal use by its readers - won HUGOS for Best Magazine in 1958, 1959, 1960, 1963, 1969, 1970, 1971 and 1972; after that category was dropped, Edward L. Ferman won the Hugo for Best Editor in 1981, 1982 and 1983. There was then a long gap until Kristine Kathryn Rusch won the same award in 1994. FSF's editorial policy has always placed the main emphasis on short stories. Its editors abandoned the standards of PULP-MAGAZINE fiction and asked for stylish sf/fantasy that was up to the literary standards of the "slick" magazines that had shaped US short-story writing between the wars; they also abandoned interior illustrations. FSF published a great deal of light and humorous material, and used occasional reprints of stories by prestigious writers, including Robert GRAVES, Eric LINKLATER, Robert NATHAN, Robert Louis STEVENSON, James Thurber (1894-1961), Oscar Wilde (1854-1900) and P.G. WODEHOUSE. It also attracted such writers as Kingsley AMIS, Gerald HEARD and C.S. LEWIS to write for its pages. Despite the various changes of editorship the personality of the magazine has been consistent, although since the 1970s it has been a more orthodox sf magazine than in earlier days. It used serials only occasionally, and most of the novels appearing in it are substantially cut; they have included BRING THE JUBILEE by Ward MOORE (Nov 1952; 1953), ROGUE MOON by Algis BUDRYS (Dec 1960; 1960) and STARSHIP TROOPERS (Oct-Nov 1959 as "Starship Soldier"; exp 1959) by Robert A. HEINLEIN. Several notable series have been associated with the magazine, including Zenna HENDERSON's People, Manly Wade WELLMAN's John the Ballad Singer, Poul ANDERSON's Time Patrol and Reginald BRETNOR's Papa Schimmelhorn. Walter M. MILLER's classic A Canticle for Leibowitz (fixup 1960) was developed from 3 novelettes published in FSF 1955-7. Starship Troopers and A Canticle for Leibowitz were two of FSF's many award-winning stories. Others were Robert BLOCH's "That Hellbound Train" (Sep 1958; Hugo), Daniel KEYES's "Flowers for Algernon" (Apr 1959; Hugo; the novel version, Flowers for Algernon [1966], won a NEBULA), Brian W. ALDISS's Hothouse series (1961; Hugo; fixup as Hothouse 1962; vt The Long Afternoon of Earth) and "The Saliva Tree" (Sep 1965; Nebula), Poul Anderson's "No Truce with Kings" (June 1963; Hugo), "The Queen of Air and Darkness" (Apr 1971; Hugo and Nebula) and "Goat Song" (Feb 1972; Hugo and Nebula), Fritz LEIBER's "Ship of Shadows" (July 1969; Hugo), "Ill Met in Lankhmar" (Apr 1970; Hugo) and "Catch that Zeppelin" (Mar 1975; Hugo and Nebula), Roger ZELAZNY's "The Doors of His Face, the Lamps of His Mouth" (Mar 1965; Nebula) and "And Call Me Conrad" (Oct-Nov 1965; Hugo; exp vt This Immortal 1966), Frederik POHL's and C.M. KORNBLUTH's "The Meeting" (Nov 1972; Hugo), Harlan ELLISON's "The Deathbird" (Mar 1973; Hugo), "Adrift Just Off the Islets of Langerhans" (Oct 1974; Hugo) and "Jeffy is Five" (Jul 1977; Hugo and Nebula), "Pages from a Young Girl's Journal" (Feb 1973; World Fantasy Award) by Robert Aickman (d1981), Robert SILVERBERG's "Born with the Dead" (Apr 1974; Nebula), Tom REAMY's "San Diego Lightfoot Sue" (Aug 1975; Nebula), Frederik Pohl's MAN PLUS (Apr-June 1976; Nebula), Charles L. Grant's "A Crowd of Shadows" (June 1976; Nebula), Edward BRYANT's "Stone" (Feb 1978; Nebula), John VARLEY's "The Persistence of Vision" (Mar 1978; Hugo and Nebula) and "The Pusher" (Oct 1981; Hugo), C.J. CHERRYH's

"Cassandra" (Oct 1978; Hugo), Lisa TUTTLE's "The Bone Flute" (May 1981; Nebula), Joanna RUSS's "Souls" (Jan 1982; Hugo), John KESSEL's "Another Orphan" (Sep 82; Nebula), Kim Stanley ROBINSON's "Black Air" (March 1983; World Fantasy Award), Nancy KRESS's "Out of All Them Bright Stars" (Mar 1985; Nebula), Ursula K. LE GUIN's "Buffalo Gals Won't You Come Out Tonight" (Nov 1987; Hugo), Michael D. RESNICK's "Kirinyaga" (Nov 1988; Hugo), Alan BRENNERT's "Ma Qui" (Feb 1991; Nebula), Mike CONNER's "Guide Dog" (May 1991; Nebula), Joe HALDEMAN's "Graves" (Nov 1992; Nebula) and Jack CADY's "The Night We Buried Road Dog" (Jan 1993; Nebula). Other excellent stories have been contributed by Alfred BESTER, Boucher himself, Samuel R. DELANY, Philip Jose FARMER, Richard MATHESON, James TIPTREE Jr and many others. Under Rusch's editorship many readers claimed to detect a change in the "feel" of the magazine, which is hardly surprising, since she is very much younger than her predecessor had become. Publication settled to 11 issues a year, one of them a double issue. As with most sf magazines, paid circulation dropped between 1986 and 1994, in this case from c56,500 to c51,800, comparatively stable for the period. From Nov 1958 to Feb 1992, 399 issues, every issue of FSF featured a science article by Isaac ASIMOV; he collected these essays, which ceased not long before his death, into many books. His replacements have been Gregory BENFORD and Bruce STERLING. Early book-review editors were Boucher, Damon Knight, Alfred Bester and Avram Davidson; the lead reviewer 1975-92 was Algis Budrys. John Kessel followed, and leaving in 1995 will be followed in turn by Robert Killheffer. Baird Searles has reviewed films. Another feature was the long series (1958-64) of punning shaggy-dog stories known as Feghoots, written by Reginald BRETNOR as Grendel Briarton. In 1968 the magazine sponsored a novel-writing contest won by Piers ANTHONY with *Sos the Rope* (July-Sep 1968; 1968). FSF has published a "special all-star anniversary issue" every October since the mid-1960s, and a series of special issues celebrating particular authors, each featuring a new story, a checklist of the author's work and articles about the author. The first of these was devoted to Theodore STURGEON (Sep 1962), and subsequent special issues featured Ray BRADBURY (May 1963), Isaac Asimov (Oct 1966), Fritz Leiber (July 1969), Poul Anderson (Apr 1971), James BLISH (Apr 1972), Frederik Pohl (Sep 1973), Robert Silverberg (Apr 1974), Harlan Ellison (July 1977) and Stephen KING (Dec 1990), the Anderson, Leiber and Silverberg stories being among the award winners listed above. The first 6 of these stories, with abridged checklists and biographical articles, were published as *The Best from Fantasy and Science Fiction: A Special 25th Anniversary Anthology* (anth 1974), ed Edward L. Ferman, which, though not so titled, is assumed to be #21 of the Best series, as its successor was #22. The Best series, beginning with *The Best from Fantasy and Science Fiction* (anth 1952) ed Boucher and McComas, ran 1952-82, amounting to 24 anthologies (counting the 25th-anniversary volume). These at first appeared annually, but none appeared in 1970, 1972, 1974-6, 1978-9 and 1981 (for details Anthony BOUCHER, Robert P. MILLS, Avram DAVIDSON and Edward L. FERMAN). Other book spin-offs from FSF have been *A Decade of Fantasy and Science Fiction* (anth 1960) ed Robert P. Mills, *Once and Future Tales from the Magazine of Fantasy and Science Fiction* (anth 1968) ed Edward L. Ferman, *Twenty Years of the Magazine of Fantasy and Science Fiction* (anth 1970) ed Edward L. Ferman and Robert P. Mills, *The Magazine*

of Fantasy and Science Fiction: A Thirty Year Retrospective (anth 1980) ed Edward L. Ferman, reprinting the stories from the Oct 1979 retrospective issue, The Magazine of Fantasy and Science Fiction, April 1965 (anth 1981) ed Edward L. Ferman and Martin H. GREENBERG, The Best Fantasy Stories from the Magazine of Fantasy and Science Fiction (anth 1986) ed Edward L. Ferman, The Best Horror Stories from the Magazine of Fantasy and Science Fiction (anth 1988; in 2 vols US 1989; vt The Best of Modern Horror: Twenty-Four Tales from the Magazine of Fantasy and Science Fiction 1989 UK) ed Edward L. Ferman and Anne Jordan, and The Best from Fantasy ? Science Fiction: A 40th Anniversary Anthology (anth 1989) ed Edward L. Ferman. UK editions of the magazine ran Oct 1953-Sep 1954 (12 issues) from Mellifont Press, and Dec 1959-June 1964 (55 issues) from Atlas Publishing ?

recombined stories from the US edition. The UK reprint magazine VENTURE SCIENCE FICTION (1963-5), also from Atlas, carried material from FSF as well as from the US Venture. There was a selective reprint edition of FSF in Australia 1954-8 (14 issues, undated) from Consolidated Press. [BS/PN] See also: GOLDEN AGE OF SF.

MAGAZINE OF HORROR, THE

US DIGEST-size magazine, 36 issues Aug 1963 (Vol 1 #1)-Apr 1971 (Vol 6 #6). The longest-running and most successful of the reprint magazines ed R.A.W. LOWNDES for Health Knowledge Inc., this chiefly published classic horror tales, some from the early PULP MAGAZINES. Most issues also contained 2-4 original stories, a number being of sf interest by writers including John BRUNNER, R.A. LAFFERTY, Emil PETAJA, Joanna RUSS, Robert SILVERBERG and Roger ZELAZNY. The majority of covers were by Virgil FINLAY. Lowndes's editorials were notably balanced and lively. [PN]

MAGAZINES

For a statement about which magazines receive entries in this volume, and why, see Magazines in the Introduction; for a general discussion of sf magazines (and some fantasy magazines that occasionally published sf stories) SF MAGAZINES, and also the individual entries for the approximately 240 professional sf magazines and SEMIPROZINES we discuss in detail; for amateur sf periodical publications FANZINES; for a discussion of pulp magazines generally, and a listing of all the pulp entries not listed under the SF MAGAZINES rubric, including the hero/villain pulps, PULP MAGAZINES, which also discusses the relationship between the pulps and their competitors, the "slicks" and tabloids. Many general-fiction magazines other than the pulps have regularly published sf stories, and a selection of the most important have received entries in this encyclopedia: COLLIER'S WEEKLY, The IDLER, MCCLURE'S MAGAZINE, MUNSEY'S MAGAZINE, The OVERLAND MONTHLY, The PASSING SHOW, PEARSON'S MAGAZINE, PEARSON'S WEEKLY, ST NICHOLAS MAGAZINE and The STRAND MAGAZINE. Other forms of periodical publishing are discussed under BOYS' PAPERS, COMICS, DIME-NOVEL SF and JUVENILE SERIES. The entries for HISTORY OF SF and PUBLISHING include discussion of the importance of the magazines. [PN]

MAGIC

In the first edition of the Oxford English Dictionary (1884-1928) "magic" is defined as "the pretended art of influencing the course of events . . .

by processes supposed to owe their efficacy to their power of compelling the intervention of spiritual beings, or of bringing into operation some occult controlling principle of nature". The lexicographer assumed that there is no difficulty in telling a "pretended" art from a real one, nor in distinguishing the "occult" from the scientific. Many sf authors have felt dissatisfied with such confident categorizations, and have written stories exemplifying alternative relationships between magic and science. One typical attitude is summed up by Arthur C. CLARKE's "Third Law", in Profiles of the Future (coll 1962): "Any sufficiently advanced technology is indistinguishable from magic." This echoes the observation by Roger Bacon (c1214-1292) 700 years before that "many secrets of art and nature are thought by the unlearned to be magical"; the irony whereby Bacon, a pioneer of experimental science, gained a posthumous reputation for sorcery goes far to confirm Clarke's "Law", and is at the heart of James BLISH's novel of the history of science, Doctor Mirabilis (1964 UK; rev 1971 US). Stories in which superior technology is treated as magic are common, the most thoroughgoing being Larry NIVEN's and David GERROLD's The Flying Sorcerers (1971). However, the unexpressed converse of Clarke's "Law" has proved even more attractive: if technology looks like magic, could magic not have been misunderstood technology? The possibilities for fiction of this nature were well exemplified by several stories published in UNKNOWN in the 1940s: Fritz LEIBER's Conjure Wife (1943; 1953), Robert A. HEINLEIN's "The Devil Makes the Law" (1940; vt as "Magic, Inc." in Waldo and Magic, Inc. coll 1950), and the Harold Shea stories by L. Sprague DE CAMP and Fletcher PRATT, later collected as The Incomplete Enchanter (1940; 1941) and The Castle of Iron (1941; 1950); the Leiber tale is set in the contemporary USA, the Heinlein in an ALTERNATE WORLD very similar to it, and the Harold Shea stories in PARALLEL WORLDS to which contemporary US citizens are sent. All rely heavily on the juxtaposition of familiar and unfamiliar, realistic and fantastic; their concern, above all, is to discipline and rationalize notions of magic. Thus in Conjure Wife the hero, a professor of social anthropology, discovers that his wife is a witch and forces her to give up this "superstition". Accumulating catastrophes persuade him that he is wrong. In the end he has to use his academic training to systematize his wife's knowledge and restore stability. The "incomplete enchanter" are likewise academic psychologists, though Heinlein's hero, characteristically, is a small-town businessman. In presenting rationalized forms of magic the Unknown authors were following arguments presented in The Golden Bough (1890 in 2 vols; 3rd edn rev in 12 vols 1911-15) by Sir James Frazer (1854-1941). This extremely influential work had suggested (a) that magic is like science but unlike RELIGION in its assumption that the Universe works according to "immutable laws", and (b) that some of these laws can be codified as Laws of Sympathy, Similarity and Contact. Frazer was probably no more than half serious in this, but the notion of quasi-Newtonian laws proved irresistible. Leiber, de Camp and Pratt include overt references to The Golden Bough, while the hero of "Magic, Inc." is actually called Fraser. At one point this Fraser explains how, for instance, he exploits the laws of "homeopathy" and "contiguity" to erect temporary grandstands: he has a section of seating carefully built, then chops it to pieces, and, "Under the law of contiguity, each piece

remained part of the structure it had once been in. Under the law of homeopathy, each piece was potentially the entire structure." So Fraser can send out splinters which, when activated by the proper spells, will temporarily become entire structures. We realize that the world he lives in is controlled entirely by "occult" principles, but that these are not haphazard. Much of the amusement of worlds-where-magic-works stories lies in developing the possibilities of a small number of magical rules. Many authors have followed the lead of the Unknown stories: Poul ANDERSON in *Three Hearts and Three Lions* (1953 FSF; exp 1961) and *Operation Chaos* (1956-9 FSF; fixup 1971), John BRUNNER in *The Traveler in Black* (coll of linked stories 1971; with 1 story added vt *The Compleat Traveler in Black* 1986 US), James Blish in *Black Easter* (1968) and James E. GUNN in *The Magicians* (1954 Beyond as "Sine of the Magus"; exp 1976). The principles of magic as a kind of alternate TECHNOLOGY are also examined in Jack VANCE's *THE DYING EARTH* (coll of linked stories 1950) and *The Eyes of the Overworld* (1966), in Mark GESTON's *The Siege of Wonder* (1976), in Fred SABERHAGEN's *Empire of the East* trilogy beginning with *The Broken Lands* (1968), and in Christopher STASHEFF's *Warlock* series beginning with *The Warlock in Spite of Himself* (1969). Rachel POLLACK's *Unquenchable Fire* (1988) envisages an alternate-world USA run by a bureaucracy of shamans whose shamanism actually works. But the purest example of "Frazerian" sf is Randall GARRETT's *Lord Darcy* series (1964-76 ASF), set in an alternate world where King Richard I founded a stable Plantagenet dynasty, Europe remained feudal and Catholic, and magic was developed in harmony with science. The heroes are a detective pair, Lord Darcy and Master Sean O'Lochlainn, resembling Arthur Conan DOYLE's Sherlock Holmes and Dr Watson. Master Sean is not a doctor, however, but a sorcerer, and he plays a much more significant role than Dr Watson ever did, compensating for the absence of forensic science by a series of carefully described magical tests for murder weapons, times of death, chemical analysis and so on. It is not too much to say that the stories are vehicles for the explanations of Master Sean rather than for the adventures of Lord Darcy. Garrett's distinctive contributions lie in the range of new "laws" added to the old Frazerian ones (Relevance, Synecdoche, Congruency, etc.) and in the rigour with which these are stated and used. In the stories so far mentioned magic is seen not as like science but as a form of science. The theme of magic as a kind of alternate science remains intensely popular. Among the writers who would convince us that magic is as much science as art are Patricia MCKILLIP in her *Riddle-Master* trilogy, beginning with *The Riddle-Master of Hed* (1976), who does so with gravitas, Phyllis EISENSTEIN with *Sorcerer's Son* (1979) and its sequel *The Crystal Palace* (1988), who does so with some frivolity, and Barbara HAMBLBY in a variety of works, notably the *Sun-Cross* sequence beginning with *The Rainbow Abyss* (1991 UK), which presents magic as culturally disreputable. Though, for really disreputable magic, it would be hard to go past Tim POWERS's splendid *The Drawing of the Dark* (1979), whose title puns on approaching evil and long-brewed beer, "the dark", which is the fountainhead, literally, of magic in the book's alternate 16th-century Vienna. But, if magic is a form of science, why has it never been systematized in our world? Many different answers have been given to this. Garrett's, for example, is that it is a result of prejudiced inquiry on the part of SCIENTISTS (exactly

the charge levelled at scientists in the real world by adherents of the PSEUDO-SCIENCES and researchers into the paranormal), complicated by the fact that the exercise of magic demands a mysterious "talent" which many investigators do not possess: experiments are therefore likely to be unrepeatable. Magic here is being assimilated to PSI POWERS, which sf authors are capable of taking seriously. No matter how serious the treatment, however, the end result can be argued as frivolous, for magic is, if not precisely disproven, regarded by science as actually workable only when both magician and subject are believers (as with faith healing or Australian aborigines "pointing the bone"), when it is susceptible to a psychological or psychosomatic rather than a supernatural explanation. The subgenre of tales about alternate worlds in which magic is subsumed into psi powers is often associated with the names of Andre NORTON and Marion Zimmer BRADLEY. Above-average work in this vein has more recently been produced by Katherine KURTZ with the continuing Chronicles of the Deryni series, beginning with *Deryni Rising* (1970), by Sheri S. TEPPER with the True Game series - which can be regarded as sf - beginning with *King's Blood Four* (1983), and most famously by Orson Scott CARD in the Tales of Alvin Maker, to date comprising *Seventh Son* (1987), *Red Prophet* (1988) and *Prentice Alvin* (1989), assembled as *Hatrack River* (omni 1989). A not uncommon elegiac variant is the idea of a world in which the supply of magic, or its sources, is drying up. Peter DICKINSON's *The Blue Hawk* (1976) is of this kind, and there never seem to be enough Sipstrassi stones (superscientific sources of magical potency from ATLANTIS) to go around in David GEMMELL's Sipstrassi sequence, which begins with *Wolf in Shadow* (1987; vt *The Jerusalem Man* 1988 US). The best known book of this kind may be Larry Niven's *The Magic Goes Away* (1977), which was followed by his two SHARED-WORLD anthologies, *The Magic May Return* * (anth 1981) and *More Magic* * (anth 1984). It is striking that one "Frazerian" area has daunted all but the boldest users of magic in sf, this being RELIGION. The position of magic in a Christian universe is especially difficult to define, since its compulsive quality appears to contradict dogmas of divine omnipotence. Most authors accordingly relegate the problem to the background of their stories, C.S. LEWIS going so far, in *That Hideous Strength* (1945), as to explain how magic has come to be unlawful for Christians in normal circumstances. One author who does not shirk the challenge is James Blish, but his *Black Easter* ends with the words: "God is dead." The actions of godlike creatures in sf (GODS AND DEMONS) are seldom distinguishable from magic, much as in Clarke's "Law" quoted above, and John VARLEY's hyperactive Gaeian sequence about an artificial world controlled by an intelligence devoted to metamorphic theatricals of a magical kind - *Titan* (1979), *Wizard* (1980) and *Demon* (1984) - though published as sf, has less cognitive consistency than a number of works - including McKillip's Riddle-Master series - which would normally be classified as fantasy. That classification is frequently given also to the only wholly successful resolution of magic, science and religion in sf so far: Ursula K. LE GUIN's *Earthsea* trilogy (1968-72). This is in a sense a "Frazerian" work, for the magic in it is based on the notion that everything has a true name and can be controlled by knowledge of it: Frazer was familiar with name-taboos. However, the relationship is virtually one of parody, for while the first "golden bough" was Aeneas's

talisman of return from the underworld (Virgil's Aeneid Book 6), the Archmage-hero of Earthsea finds himself continually struggling against death without any supporting token. He learns in the first book that the defeat of death is an improper aim for a magician, whose art must depend on respect for the individual qualities (or names) of others, rather than on manipulation of them for one's own self-perpetuation. In the second book he faces an organized religion of sacrifice and propitiation, to demonstrate that this offers no better hope for humanity. In the third he duels with a rival "mage" who appears to have won power over death, though with disastrous consequences for others. Magic is presented continually as an alternative ideology to those with which we are familiar - i.e., those of science and religion - and as a more attractive one. Earthsea is informed, atypically for sf, by an awareness of the discoveries of post-Victorian ANTHROPOLOGY; it exemplifies the serious and powerful argumentative quality which can underline what appear to be only entertaining fantasies. More recently two authors have, perhaps, done something new in the subgenre. The first is Terry PRATCHETT, whose Discworld sequence (from 1983) must have produced a greater (and funnier) variety of riffs on the world-where-magic-works theme, many of them borderline sf, than any other author; it is the sheer variety that constitutes the novelty. The second is John CROWLEY, who has presented one of the most scholarly (and historically accurate) varieties of the magical art yet to appear in genre fiction, borrowed from the neo-platonic scientist/magicians of the Renaissance. Magic of this sort permeates (though seldom obviously) the novel Little, Big (1981), and actually becomes the structural principle of AEGYPT (1987). This latter - first of a projected quartet - may be the only novel by a genre writer whose story, whose structure and whose imagery are wholly isomorphic with an actual historical magical system, gnostic magic. Renaissance magic does, however, also play a prominent role - and is portrayed as rigorous and systematic - in Mary GENTLE's vivid alternate-world novel Rats and Gargoyles (1990).

MAGIC REALISM

A term originally used to describe a form of literature most commonly associated with 20th-century Latin America, most notably in the works of Isabel Allende (1942-), Miguel Angel Asturias (1899-1974), Jorge Luis BORGES, Gabriel Garcia Marquez (1928-) and Juan Rulfo (1918-1986). US and UK practitioners include Donald BARTHELME, Angela CARTER and John Hawkes (1925-). Contrary to the antirealistic assumptions of high Modernism (Henry James [1843-1916], Ezra Pound [1885-1972] and T.S. Eliot [1888-1965]) or the fable-producing, self-referential texts of metafiction (John BARTH and Italo CALVINO), Magic Realism does not necessarily doubt either the actuality of a real world or the ability of literary language to describe that world. Instead it assumes that the mundane world and its familiar objects are often filled with fabulous secrets. Magic realism explores the real world's unrealities, and does not simply - like FANTASY, Surrealism or fairy tales - invent the dreamlike unrealities of ALTERNATE WORLDS. Magic Realism suggests that the real world can be represented, even when it cannot be believed. For further discussion of the broad tendencies of 20th-century literature from which Magic Realism partially

dissents, FABULATION. [SB]See also: POSTMODERNISM AND SF.

MAGIDOFF, ROBERT

(1905-1970) Russian-born US academic, Professor of Russian Literature at New York University 1961-70. His 3 anthologies are Russian Science Fiction (anth 1964 UK), Russian Science Fiction, 1968 (anth 1968) and Russian Science Fiction, 1969 (anth 1969). [PN]

MAGILL, FRANK N.

[r] Keith NEILSON.

MAGNETIC MONSTER, THE

Film (1953). A-Men Productions/United Artists. Dir Curt SIODMAK, starring Richard Carlson, King Donovan, Jean Byron. Screenplay Siodmak, Ivan Tors. 76 mins. B/w.A new isotope, created in a laboratory, sucks in nearby energy and doubles its size every few hours; eventually it may destroy the Earth. The first part of the film shows it being tracked down by scientific investigators, puzzled at the strange magnetic fields it produces. It emits deadly radiation and is finally destroyed in a giant power plant in the ocean by feeding it with more energy than it can absorb. The film includes much footage at the finale from the German sf classic GOLD (1934). This is a well made, documentary-style, fast-moving thriller, one of Siodmak's better scripts, and the best of the (generally poor) films that he directed. [PN/JB]

MAGUIRE, JOHN FRANCIS

(1815-1872) Irish nationalist politician and journalist, founder of the Cork Examiner. In his sf novel The Next Generation (1871), set in 1891, the UK has been much improved by steam-powered BALLOONS and the granting of women's suffrage; romance and the explication of other meliorist reforms just this side of UTOPIA take up the remainder of a very long book. "Jack Tubbs, or The Happy Isle", in Young Prince Marigold, and Other Fairy Stories (coll 1873), features an Edenic ISLAND populated by animals with whom the hero has learned to converse. [JC]

MAHMUD, MUSTAFA

(1927-) Egyptian writer, known also as Moustaffa Mahmoud, author of short stories, novels and plays dealing with Egypt's social and political development; in the mid-1960s he wrote a number of sf novels. These include Al-khuru' min at-tabut (1965; trans as Raising from the Coffin undated Cairo), Rajul tahta as-sifr ["The Man with a Temperature Below Zero"] (1965) and Al-anqabut (1965; trans as "The Spider", serialized 1965-6 in the magazine Arab Observer). He is well known also for his short-story collections, which contain an sf component, as in Yawmiyat nuss al-layl ["Diaries of Midnight"] (coll 1982). MM is also a propagator of ideas about UFOS. [JO]See also: ARABIC SF.

MAIKOWSKI, MIKE

[r] ROBERT HALE LIMITED.

MAINE, CHARLES ERIC

Pseudonym used by UK writer David McIlwain (1921-1981) for his sf; two other pseudonyms, Richard Rayner and Robert Wade, were not used for sf. CEM was one of the relatively few but extremely active UK fans before

WWII, in 1938 publishing his first story, "The Mirror", in his FANZINE The Satellite, which he edited with Jonathan BURKE. His first novel was Spaceways: A Story of the Very Near Future * (1953; vt Spaceways Satellite 1958 US), based on his own 1952 radio play; it was filmed as SPACEWAYS (1953). Also developed from a script, in this case his own screenplay for TIMESLIP (1955; vt The Atomic Man), is CEM's The Isotope Man * (1957), which begins his only series, the Mike Delaney books, the other volumes in which are Subterfuge (1959) and Never Let Up (1964). Like most of his sf, these have a leaning towards thriller-like plots and a disinclination to argue too closely scientific pinnings that are often shaky; the latter tendency is particularly visible in stories featuring HARD-SF themes like space travel, as in High Vacuum (1957). Sometimes lightly, sometimes with gravity, CEM's numerous books touch on a variety of sf themes from ROCKETS to SOCIOLOGY, but generally without more than fitfully illuminating them; he was determinedly an author of middle-of-the-road GENRE SF, and as such was successful. His finest novel is generally thought to be The Mind of Mr Soames (1961), a story of a man who does not reach consciousness until the age of 30, and of the arguments about how best to educate him. The moral issues are dealt with quite sensitively. The book was filmed as The MIND OF MR SOAMES (1969). [JC/PN]Other works: Timeliner: A Story of Time and Space (1955); Crisis 2000 (1955); Escapement (1956; vt The Man who Couldn't Sleep 1958 US), filmed as The Electronic Monster (1957; vt The Dream Machine); World without Men (1958 US; rev vt Alph 1972); The Tide Went Out (1958; rev vt Thirst! 1977); Count-Down (1958 AMZ as "The Big Count-Down"; 1959; vt Fire Past the Future 1959 US); Calculated Risk (1960); He Owned the World (1960 US; vt The Man who Owned the World 1961 UK); The Darkest of Nights (1962; vt Survival Margin 1968 US; rev vt The Big Death 1978 UK); B.E.A.S.T.: Biological Evolutionary Animal Simulation Test (1966); The Random Factor (1971). See also: ANTIGRAVITY; CLONES; DISASTER; MEDICINE; MONEY; MOON.

ORLACS HANDE.

MAINSTREAM WRITERS OF SF

This discussion should be read in conjunction with several others as part of a pattern of reasoning that is most clearly presented in DEFINITIONS OF SF, FABULATION, GENRE SF, HISTORY OF SF, MAGIC REALISM, POSTMODERNISM AND

SF, PROTO SF and SLIPSTREAM SF. When used of literature, the term "mainstream" refers in its narrowest application to the tradition of the realistic novel of human character; in a wider application commonly employed by the sf community, it denotes all serious prose fiction outside the market genres; in its widest and perhaps most regrettable sense it refers to practically any fiction, serious or otherwise (including Jackie-Collins-style lowbrow bestsellers), outside sf, fantasy, the thriller and the Western. As a piece of jargon, not yet fully accepted into the language, "mainstream" lacks precision; nonetheless, there is a useful distinction to be drawn between writers of GENRE SF, who think of

themselves as writing sf and whose books and stories are marketed as sf, and those writers of sf works who think of themselves (or are marketed) as simply writing fiction, without adopting either the protection or the stigma of a genre label. If, however, we are to employ "mainstream sf" primarily in opposition to "genre sf" - which we think is the most useful and desirable use of the former term - there is not much point in using the word "mainstream" retroactively to refer to writers like Aldous HUXLEY in the 1930s, since the term "science fiction" barely existed when he was writing books like BRAVE NEW WORLD (1932). It is, of course, possible to argue that genre sf has existed ever since Hugo GERNSBACK founded AMAZING STORIES in 1926, but at that time it was a tiny genre, not well publicized. It would make better sense to regard mainstream (that is, non-genre) sf as, say, a post-1937 phenomenon (that being the year in which John W. CAMPBELL Jr took over the editorship of ASTOUNDING STORIES, after which genre sf undeniably became established as a known form), though to name any actual year must be arbitrary. Certainly, until the sf label was adopted (in the form of the word SCIENTIFCTION in Gernsback's 1926 usage) it is realistic to argue that all sf was mainstream. Sf did exist, notably in the scientific romances of H.G. WELLS, the Voyages extraordinaires of Jules VERNE, and in much fiction of these and other kinds (HISTORY OF SF) in the general fiction magazines, pulp or otherwise, but it had not yet hardened into a selfconscious separateness. Indeed Wells's term SCIENTIFIC ROMANCE was a good one, and many tales were so described, whether informally or formally, and did belong to an sf-like tradition. But if we regard the scientific romance as prototypical genre sf, then we run counter to a common usage of "mainstream sf" - to mean sf published in books that are not labelled sf, as opposed to magazines that are - for it was precisely in such books, especially in the UK, that the scientific romance largely appeared. In other words, in many people's usage of the term, the scientific romance is almost by definition mainstream. Any usage which leads to something very like a contradiction in terms is clearly not useful. Especially in the UK, books written in the tradition of the scientific romance and published as straight novels continued well into the 1950s, some of the most popular being by John WYNDHAM. It would clearly be a nonsense to argue that Wyndham was a mainstream writer, especially since, under other pseudonyms, he was also well known in the genre-sf magazines. This example is given only to show that the idea of the presence or absence of genre labels on books as somehow defining their content is unhelpful. Nonetheless, just such judgments as to who is mainstream and who is not have often been made, frequently with the implication that the mainstream writer is thus marginalized. That is why it is more useful to decide who is mainstream and who is not by the presence or absence in the tale of adherence to the protocols of genre sf, rather than the label on the cover. During the period in which sf was beginning to take shape as an identifiably separate genre, in the 1920s and 1930s, the favourite sf themes with non-genre sf writers who published in book format were: DYSTOPIAS; stories imagining life after some sort of HOLOCAUST; stories creating imaginary societies that satirize our own (SATIRE); and stories of future POLITICS and WAR. (The LOST-WORLDS theme was already in decline by the 1920s.) Some such writers from this period, in addition to Huxley, are Karel CAPEK, John

COLLIER, Murray Constantine (Katharine BURDEKIN), Guy DENT, John GLOAG, E. C. LARGE, Sinclair LEWIS, Wyndham LEWIS, Andre MAUROIS, Joseph O'NEILL, J. B. PRIESTLEY, Herbert READ, Upton SINCLAIR, Olaf STAPLEDON, Alexei TOLSTOY and Rex WARNER. Many of these were working in the tradition of the scientific romance. One marginal sf theme whose main development - before, after and during this period - has been more outside the genre than within it is PSYCHOLOGY, under which heading the relation between mainstream and genre sf is further discussed. The distinction between genre sf and mainstream sf becomes more interesting, because more real, in the 1940s and 1950s. As genre sf became better known outside its immediate small circle of devotees, it also began to feed more from mainstream writing. Huxley and Stapledon probably had a stronger influence on genre sf than any non-genre writers since Wells. However, the traffic was by no means one-way. The number of mainstream writers of sf remained very substantial indeed, but a new distinction became apparent: between those writers whose work demonstrates some knowledge of sf motifs as they developed in genre sf or in the scientific romance, and those who rather clumsily re-invent the wheel; one could (quite randomly) take Paul THEROUX as a recent example of the latter. But many mainstream sf writers published their work in book format rather than the pulp magazines because it would not have crossed their minds to do otherwise; books were where respectable persons published their fictions. Because sf became a book-marketing category only in the 1950s in the USA (somewhat later in the UK) it would not have occurred to writers like C.S. LEWIS to request that the magic letters "SF" be placed on the covers of their books; if the thought had occurred, it would probably have been dismissed as an irrelevance. The dominant mainstream sf themes of the 1940s continued to be dystopias (George ORWELL) and tales of the HOLOCAUST AND AFTER (Pat FRANK, George R. STEWART). But, again, the recitation of names is not very helpful because the phenomenon we speak of was on such a grand scale. Around half the writers discussed in this encyclopedia did not publish their work as genre sf, and often, too, their work does not feel like genre sf. To quote from the GENRE SF entry: ". . . works of fiction which use sf themes in seeming ignorance or contempt of the protocols - these are often works from so-called mainstream writers of sf - frequently go unread by those immersed in genre sf; and, if they are read, tend to be treated as invasive and alien . . . and incompetent." This is one of the sadder results of sf's ghetto mentality, though that mentality is not now nearly so aggressively inflexible as it was during the 1940s-60s, when the use of sf themes by writers outside the genre was considered almost a form of theft in the eyes of an sf community whose love for its genre was often expressed in very proprietorial terms. Even now, similar reservations are occasionally expressed by the sf community about the work of writers like Doris LESSING. Under the heading FABULATION we discuss a further confusion, common in criticism from within the sf community. This is the belief that sf, by escaping from the here-and-now of realist fiction, was to be greatly admired as spearheading a new, less constrictive, more imaginative nonrealist mode. Sf, on the contrary, lies at the heart of the realist mode; its whole creative effort is bent on making its imaginary worlds, its imaginary futures, as real as possible. The experiments in breaking down realist or "mimetic" fiction were taking place elsewhere; fabulations

are fictions distrustful both of the very tools with which the world can be made known, words - which, as T.S. Eliot said, "slip, slide, perish, / Decay with imprecision" - and as to whether the world can in fact be known. A quite extraordinary number of fabulators use sf motifs, but in the construction of works whose foregrounding of their own artifice is opposed in style and feeling to the traditional mimesis of genre sf; it is unsurprising that sf's conservatives deeply dislike the suggestion that they in any sense share their genre with such writers as John BARTH, Jorge Luis BORGES, Italo CALVINO, Angela CARTER and Don DELILLO (to penetrate only a short way into the alphabet). But, confusingly, genre sf has produced quite a few fabulators of its own - J.G. BALLARD, John CROWLEY, Thomas M. DISCH, Karen Joy FOWLER, M. John HARRISON, Michael MOORCOCK, Lucius SHEPARD, John T. SLADEK and Gene WOLFE among them - so here, too, the distinctions between genre sf and the mainstream prove elusive. It was probably not, however, the fabulators that Ursula K. LE GUIN had in mind when she said: "If the mainstream definably exists, then I think it is itself a genre; one among many ways of writing fiction - one of the many modes I myself work in." This, too, is an arguable case, though Le Guin was probably thinking of the traditional novel of character - which is certainly a genre - when she said it. We bring this up primarily to make the obvious, but perhaps needful, point that the mainstream (like sf) is undefinable and not homogeneous, and indeed contains many genres within it, of which the fabulation and the novel of character are but two, both at times impinging upon sf. By the 1980s any attempt at protecting the racial purity of genre sf from contamination by the mainstream or by any other genre was more obviously doomed to failure than ever before, for sf was marrying out. The 1980s saw a flood of works (FANTASY for some examples) where sf was interbred with fantasy, with horror, with MAGIC REALISM, with the thriller, with practically anything available. Postmodernists clasped CYBERPUNKS in their showy, affectless embrace. Sf's furtive affaires (such as the one it consistently conducted with the historical romance, especially in TIME-TRAVEL stories) were now out in the open and legitimate, and so were their progeny. Sf is and has been a great enterprise, many of whose most remarkable achievements have taken place entirely within genre sf; all those who are part of this phenomenon should feel justifiably proud, and perhaps justifiably angry at the literary world's failure to give them their due. It is sad that equally spectacular sf achievements, outside the genre walls and within mainstream fiction, have not always been recognized by those in the "ghetto" (snobberies cut both ways), but by the 1980s the quarrel was of historical interest only, for the walls were tumbling down. Some still shelter behind those shards left standing, but, if they look, they will see that the traffic is moving freely in both directions. A theme anthology collecting sf stories by mainstream writers is *The Light Fantastic* (anth 1971) ed Harry HARRISON and Theodore J. Gordon. [PN]

MAISON d'AILLEURS, LA

"The house of elsewhere", subtitled (in French) "the museum of Utopia, of extraordinary voyages and of science fiction". This establishment in Yverdon, Switzerland, contains about 50,000 items relating to sf, maybe half of them books and magazines, the remainder all sorts of ephemera:

toys, games, stamps, posters, calendars, etc. Founded in 1975 by Pierre VERSINS, who donated his celebrated private COLLECTION to it, it was given much-needed financial assistance by the town of Yverdon in 1989, shortage of money having for some years previously restricted it to opening only twice a month. It is the most important research centre for sf in the French language. [PN]

MAITLAND, DEREK

(1943-) UK writer whose sf novels - T Minus Tower (1971), about a proposed transfer of the eponymous tower into space as a hotel, and The Alpha Experience (1974) - exhibit a certain apocalyptic flippancy but failed to target coming UK trends with any real accuracy. [JC]

MAITLAND, EDWARD

(1824-1897) UK author and Theosophist whose speculative UTOPIA By and By: An Historical Romance of the Future (3 vols 1873), set several hundred years in the future, takes an unusually optimistic view of the likely effects of technology (irrigating the Sahara), is much interested in social theory, imagines several varieties of marriage and foresees a somewhat limited emancipation of women. This didactic book is the third of a trilogy; the first 2 vols, The Pilgrim and the Shrine (1868) and The Higher Law, were originally published as by Herbert Ainslee and are not sf. [PN]

MAITZ, DON

(1953-) US illustrator. DM began his career in sf art in 1974 while still at art school (Paier School of Art), and since then has painted mainly book rather than magazine covers; among his best known ILLUSTRATIONS are the covers for the original editions of Gene WOLFE's Book of the New Sun series (1980-83). He also does advertising work, notably the very popular "Captain Morgan" for a Seagram's rum label. Unlike many of his colleagues, DM departs a little from slickness by allowing the brushstrokes in his work to be seen. He was among the sf artists most popular with fans right through the 1980s, and had many HUGO nominations before, in 1990, winning the Hugo for Best Professional Artist, and in so doing becoming only the second artist, after Jim BURNS, to break the extraordinary run of 11 Hugos (to 1992) in that category by Michael WHELAN - indeed, these three between them were probably the dominant sf book-cover illustrators of the 1980s. DM also won first place in the new non-Hugo category at the Hugo ceremony in 1990 for Best Original Artwork with his cover for the Warner/Questar edition of C.J. CHERRYH's Rimrunners (1989). A collection of his interestingly ornate artwork is First Maitz: Selected Works by Don Maitz (1988). [JG/PN]

MAJOR, H.M.

Sharon JARVIS.

MAJORS, SIMON

Gardner F. FOX.

MAKAY, ISTVAN

[r] HUNGARY.

MAKING MR RIGHT

Film (1987). Orion. Dir Susan Seidelman, starring Ann Magnuson, John Malkovich. Screenplay Floyd Byars, Laurie Frank. 98 mins. Colour. The cold, rational, shy SCIENTIST played by Malkovich has designed, in his own image, Ulysses the ANDROID (actually in part a ROBOT), also played by Malkovich, for use as a space pilot. Public-relations expert Frankie (Magnuson), whose love affair with an "unreconstructed" politician is coming to an end, has the task of "humanizing" Ulysses's image. The fluffy, screwball SEX comedy that follows makes well observed satirical points, from a FEMINIST perspective, about the men women want and to some extent create. Ulysses, who rapidly evolves into a kind of parodic, sensitive "new man", and Frankie fall in love. His tendency to short-circuit whenever sexually aroused suggests a pessimistic view of women's chance of happiness, even if they've helped design Mr Right themselves. The film was nothing like as popular as Seidelman's previous Desperately Seeking Susan (1985), being too offbeat (and lacking Madonna), but is just as good. [PN]

MAKIN, WILLIAM J.

(? -?) UK writer whose confused but inventive sf novel, Murder at Full Moon (1937), features a mad scientist, who believes there is superior life on the Moon, and who has invented a MACHINE capable of harnessing moonlight, with which he causes tidal waves, earthquakes, and other disasters. "The Monster of the Loch," a short novel included in The Exploits of Jonathan Jow (coll circa 1937), features a plesiosaur. [JC]

MALABAILA, DAMIANO

Primo LEVI.

MALAMUD, BERNARD

(1914-1986) US writer whose fiction, beginning with The Natural (1952), a mythopoeic tale of US baseball, makes use of techniques and motifs from Russian-Jewish folklore and story-telling traditions, with the result that many of his short stories are technically fantasies. His only novel of strong genre interest, God's Grace (1982), mixes sf and fable - at times uneasily - in the tale of a lone human survivor of a nuclear HOLOCAUST attempting vainly to restart civilization by breeding with a group of intelligent apes (APES AND CAVEMEN) that have also, rather miraculously, survived the worldwide tsunami responsible for the extirpation of all else. [JC]See also: END OF THE WORLD; RELIGION.

MALCOLM, DAN

Robert SILVERBERG.

MALCOLM, DONALD

(1930-) Scottish writer of fiction and considerable popular science who began publishing sf with "Lone Voyager" for Nebula in 1958. Two series of stories, the Preliminary Exploration Team tales in NW 1957-64 and the Dream Background tales in NW in 1959 and subsequently in the continuing anthology series NEW WRITINGS IN SF 1965-75 have not reached book form. His sf novels, both routine, are The Unknown Shore (1976 Canada) and The Iron Rain (1976 Canada). [JC]See also: STARS.

MALCOLM, GRANT

Dennis HUGHES.

MALEC, ALEXANDER

(1929-) US writer, variously employed, who began publishing sf with "Project Inhumane" for The Colorado Quarterly in 1966. Extrapolasis (coll 1967) assembles much of his sometimes awkward but frequently sharply pointed work, which was restricted to short stories. [JC]

MALEVIL

Film (1981). NEF-Diffusion/Stella/Antenne 2/Gibe/Telecip. Dir Christian de Chalonge, starring Michel Serrault, Jacques Dutronc, Robert Dhery, Jacques Villeret, Jean-Louis Trintignant. Screenplay de Chalonge, Pierre Dumayet, based on Malevil (1972; trans 1974) by Robert MERLE. 119 mins. Colour. This moderately lavish Franco-German post- HOLOCAUST movie reinforces the sentimental aspects of its good source novel. The Bomb goes off while the vintage is being tasted deep in the wine cellar of an aristocrat's chateau. The first half is gripping, as the survivors wonder when, if ever, they will be able to leave the well stocked cellar again, and the first glimpses of the devastated landscape outside are powerful. But then a simplistic clash between the aristocrat's lovably feudal paternalism and the totalitarianism of a local boss (he too has a gang of survivors) reduces the film to something more routine, all done with little verve and rather too much symbolism about life reasserting itself. At the end the new society, whose medieval nature is approved by the film, is threatened, ironically, by the somewhat late arrival of a relief helicopter. [PN]

MALLETT, DARYL F(URUMI)

(1969-) US bibliographer whose work, beginning in the late 1980s and generally in collaboration with Robert REGINALD, has been of growing significance for sf scholarship. Publications include the much expanded 2nd edn of Reginald's Science Fiction and Fantasy Awards: A Comprehensive Guide to the Awards and their Winners (1981; exp 1991) with Reginald, for which DFM performed the essential updating task; and Science Fiction and Fantasy Literature: A Bibliography, 1975-1991 (1992) with Mary Wickizer Burgess and Reginald, which is the continuation of Reginald's Science Fiction and Fantasy Literature: A Checklist, 1700-1974 (1979). Several further publications are projected. [JC]See also: BIBLIOGRAPHIES.

MALLINSON, SUE

[r] ROBERT HALE LIMITED.

MALLORY, MARK

[s] Mack REYNOLDS.

MALONEY, MACK

US author, possibly pseudonymous, of the Wingman series of post- HOLOCAUST military-sf novels: Wingman (1987), #2: The Circle War (1987), #3: The Lucifer Crusade (1987), #4: Thunder in the East (1988), #5: The Twisted Cross (1989), #6: The Final Storm (1989), #7: Freedom Express (1990), #8: Skyfire (1990) and #9: Return from the Inferno (1991). War Heaven (1991) is a singleton. [JC]

MALZBERG, BARRY N(ATHANIEL)

(1939-) US writer. For about seven years he was extremely prolific in the sf field, producing some 20 sf novels and over 100 short stories; his output slowed dramatically towards the end of the 1970s, when he became disenchanted with the genre for reasons explained in his collection of essays *The Engines of the Night: Science Fiction in the Eighties* (coll 1982). He has also written numerous non-sf works, including several notable erotic novels, and four excellent thrillers in collaboration with Bill PRONZINI, including *Night Screams* (1979), which makes use of ESP. His early sf appeared under the name K.M. O'Donnell, apparently derived from the initial letters of the surnames of Henry KUTTNER and C.L. MOORE plus the surname of one of their joint pseudonyms. Other pseudonyms, used on non-sf works, include Mike Barry, Mel Johnson and Gerrold Watkins. His first sf story was "We're Coming through the Window" (1967 Gal), which was quickly followed by the bitter novelette "Final War" (1968 FSF), about an unwilling soldier trapped in a neverending wargame. Books under the O'Donnell name were the short-story collections *Final War and Other Fantasies* (coll 1969 dos) and *In the Pocket and Other Science Fiction Stories* (coll 1971 dos), the novels *The Empty People* (1969) and *Universe Day* (fixup 1971), and two RECURSIVE farcical SATIRES featuring sf fans and writers in confrontation with *ALIENS: Dwellers of the Deep* (1970 dos) and *Gather in the Hall of the Planets* (1971 dos). The first sf novels to appear under BNM's own name were sceptical commentaries on the Apollo programme: *The Falling Astronauts* (1971), *Revelations* (1972) and *Beyond Apollo* (1972). The third caused some controversy when it won the JOHN W. CAMPBELL MEMORIAL AWARD despite its sarcastic and negative attitude to SPACE FLIGHT. The three novels feature astronauts as archetypes of alienated contemporary humanity, struggling to make sense of an incomprehensible world and unable to account for their failure. All BNM's central characters are caught in such existential traps, and the measure of his versatility is the large number of such situations which he has been able to construct using the vocabularies of ideas typical of sf and erotic fantasy. In *Screen* (1968) the protagonist can obtain sexual satisfaction only by projecting himself into fantasies evoked by the cinema, while in *Confessions of Westchester County* (1971) a prolific seducer obtains satisfaction not from the sexual act but from the confessions of loneliness and desperation which follow it. The situation of the racetrack punter, unable to win against the odds by any conceivable strategy, becomes the model of alienation in *Overlay* (1972), in which aliens take an actual part in the process of frustration, and in the non-sf novel *Underlay* (1974). Aliens threaten the Earth, and set absurd tasks to decide its fate, in *The Day of the Burning* (1974) and *Tactics of Conquest* (1974). In *GALAXIES* (1975) the central character is in command of a corpse-laden ship which falls into a BLACK HOLE. The protagonist of *Scop* (1976) is a time-traveller trying desperately to change the history that has created his intolerable world. Even the situation of the sf writer, struggling to cope with real life and the pressures of the market, becomes in *Herovit's World* (1973) a metaphor for general alienation. In this novel, *GALAXIES* and the introductions to some of his collections, BNM offers a scathing critique of the market forces shaping contemporary sf. BNM's writing is unparalleled in its intensity and in its apocalyptic sensibility. His detractors consider him bleakly monotonous and despairing, but he is a

master of black HUMOUR, and is one of the few writers to have used sf's vocabulary of ideas extensively as apparatus in psychological landscapes, dramatizing relationships between the human mind and its social environment in an sf theatre of the absurd. The few sf books which he has published since 1976 include three fine novels featuring real historical characters. The hero of the black comedy *Chorale* (1978) becomes Beethoven, while that of the remarkably intense *The Cross of Fire* (1982) becomes Jesus; both are in search of a better psychological balance but find their quests frustrating. *THE REMAKING OF SIGMUND FREUD* (fixup 1985) has the father of psychoanalysis failing miserably to master his own difficulties while trying to assist Emily Dickinson, and subsequently - following his technological *REINCARNATION* - coming apart while failing to solve the problems involved in *COMMUNICATION* with aliens. [BS]Other works: *In the Enclosure* (1973); *The Men Inside* (1973); *Phase IV* * (1973 UK), a film tie (*PHASE IV*); *The Destruction of the Temple* (1974); *On a Planet Alien* (1974); *The Sodom and Gomorrah Business* (1974); *Conversations* (1974); *Out from Ganymede* (coll 1974); *Guernica Night* (1975); *The Gamesman* (1975); *The Many Worlds of Barry Malzberg* (coll 1975); *Down Here in the Dream Quarter* (coll 1976); *The Best of Barry Malzberg* (coll 1976); *The Last Transaction* (1977); *Malzberg at Large* (coll 1979); *The Man who Loved the Midnight Lady* (coll 1980).As Editor: *Final Stage* (anth 1974; rev 1975), *Arena: Sports SF* (anth 1976) and *Graven Images: Three Original Novellas of Science Fiction* (anth 1977), all with Edward L. FERMAN; *Dark Sins, Dark Dreams: Crime in Science Fiction* (anth 1977), *The End of Summer: Science Fiction in the Fifties* (anth 1979; vt *The Fifties: The End of Summer 1979*) and *Shared Tomorrows: Science Fiction in Collaboration* (anth 1979), all with Bill PRONZINI; *Neglected Visions* (anth 1980) with Martin H. GREENBERG and Joseph D. OLANDER; *The Science Fiction of Mark Clifton* (coll 1980) with Greenberg (*Mark CLIFTON*); *Bug-Eyed Monsters* (anth 1980) with Pronzini; *The Arbor House Treasury of Horror and the Supernatural* (anth 2 vols 1981; cut vt *Great Tales of Horror* ? text restored, vt *Classic Tales of Horror and the Supernatural 1991*) with Pronzini and Greenberg; *The Science Fiction of Kris Neville* (coll 1984) with Greenberg (*Kris NEVILLE*).See also: *AMAZING STORIES*; *ARTS*; *CRITICAL AND HISTORICAL WORKS ABOUT SF*; *ENTROPY*; *FANTASTIC VOYAGES*; *FANTASY*; *GAMES AND SPORTS*; *GREAT AND SMALL*; *MEDIA LANDSCAPE*; *MESSIAHS*; *MUSIC*; *PARANOIA*; *PERCEPTION*; *PSYCHOLOGY*; *RELIGION*; *SEX*; *TIME PARADOXES*; *WAR*.

MAN, EVOLUTION OF
ADAM AND EVE; ANTHROPOLOGY; EVOLUTION; ORIGIN OF MAN.

MAN AND HIS MATE
ONE MILLION B.C.

MANCHURIAN CANDIDATE, THE
Film (1962). MC/Essex/United Artists. Dir John FRANKENHEIMER, starring Frank Sinatra, Laurence Harvey, Janet Leigh, Angela Lansbury, Henry Silva, James Gregory. Screenplay George Axelrod, based on *The Manchurian Candidate* (1959) by Richard CONDON. 126 mins. B/w.A group of US soldiers captured in Korea are subjected to elaborate brainwashing by the Chinese

as part of a plot to have a Chinese agent elected President of the USA. One officer is programmed-this is the strongest sf element - to become a killing machine whenever any of the people working for the Chinese gives the right command. The resulting confusions back in the USA, both funny and sinister - especially the climax at the Party convention - are choreographed with great panache by Frankenheimer, whose best film this probably is, though it owes much to the wit and intelligence of Axelrod's screenplay, which is faithful to the novel. Its ominous reverberations became darker when President Kennedy was assassinated a year later. [JB/PN]See also: CINEMA; PARANOIA.

MANCUSO, TED

(? -) US writer whose *The Granville Hypothesis* (1979), set in AD2017, features an unremarkable world- COMPUTER being suborned by an unremarkable madman. [JC]

MANDEN DER TAENKTE TING

(vt *The Man who Thought Life*) Film (1969). Asa Film/Palladium. Dir Jens Ravn, starring Preben Neergaard, John Price, Lotte Tarp. Screenplay Henrik Stangerup, based on *Manden der Taenkte Ting* (1938) by Valdemar Holst. 97 mins. B/w. This Danish fantasy tells of a man who can create objects - even people - by force of will. Anything he brings into existence has only a short life, so he goes to a doctor and asks for a brain operation to perfect his power. The doctor refuses, so the man creates a duplicate doctor who takes over his original's career and wife and ultimately performs the necessary operation, in so doing killing his creator. Interestingly photographed, this comedy, Ravn's first film, presents philosophical points about reality of the kind made familiar by Philip K. DICK. [JB/PN]

MANDERS, HARRY

Philip Jose FARMER.

MAN FROM ATLANTIS, THE

US tv series (1977). Solow Productions for NBC TV. Created Lee Katzin (who also dir the 1st episode), starring Patrick Duffy, Belinda J. Montgomery, Victor Buono. Special effects Tom Fisher. The first 4 episodes, 90min telefilms, were followed by 13 50min episodes. Colour. A green-eyed stranger with gills and webbed hands is found nearly dead on a beach. He is revived by an attractive female scientist who, realizing that he is not human, places him in a tank of water. Believed to come from ATLANTIS, he is persuaded to work for the Foundation for Oceanic Research, and is soon off on his first mission, to tackle an overweight villain in his underwater headquarters. Though the settings and special effects were sometimes eye-catching, the general intellectual level of this and subsequent episodes, which featured aliens, monsters, time-warps, etc., was no higher than that of *VOYAGE TO THE BOTTOM OF THE SEA*. The series was cancelled after 1 season. Novelized versions of the first 2 episodes were *Man from Atlantis: Sea Kill* * (1977) and *Man from Atlantis: Death Scouts* * (1977), both by Richard Woodley. [JB]

MAN FROM U.N.C.L.E., THE

US tv series (1964-8). Arena Productions/MGM for NBC TV. Executive prod

Norman Felton. Writers included Harlan ELLISON, Howard Rodman, Sam Rolfe, Henry SLESAR, David Victor. Dirs included Don Medford, Boris Sagal, Joseph Sargent, Barry Shear. 105 50min episodes. 1st season b/w, subsequent 3 seasons colour. This was one of tv's first reactions to the success of the James Bond films. Robert Vaughn starred as Napoleon Solo, a member of U.N.C.L.E. (United Network Command for Law and Enforcement). With the assistance of his Russian colleague Ilya Kuryakin (David McCallum) he fought to prevent the sinister organization T.H.R.U.S.H. (Technological Hierarchy for the Removal of Undesirables and the Subjugation of Humanity - an acronym chosen, it has been suggested, because of its assonance with "the Russians") from taking over the world. Most of the plots featured futuristic technology (vaporizers, etc.); the style was tongue-in-cheek. TMFU's success led to the creation of a sister series, The Girl From U.N.C.L.E., which began in 1966, starring Stefanie Powers; it lasted only 1 season of 29 episodes. 8 feature films had theatrical release outside the USA. Each consisted of 2 episodes edited together, sometimes with added footage, to make 90min films: The Spy with My Face (1965), To Trap a Spy (1966), One of Our Spies is Missing (1966), One Spy Too Many (1966), The Spy in the Green Hat (1966), The Helicopter Spies (1967), The Karate Killers (1967) and How to Steal the World (1968). A subsequent telemovie was Return of the Man from U.N.C.L.E. (1983). The Man from U.N.C.L.E. series of ties was complex, 23 titles appearing from ACE BOOKS in the USA and 16 from Souvenir Press in the UK. 10 of the 23 Ace books were reprints from books originated by Souvenir, and 6 of the Souvenir books were reprints of books originated by Ace; in the case of #3 in the Ace sequence, the reprint confusingly appeared before its original. None of the books was based directly on the tv scripts; all were original stories. As all the Souvenir editions appeared, either before or after their UK release, in Ace editions, we list only the Ace sequence: #1: The Thousand Coffins Affair * (1965) by Michael AVALLONE, #2: The Doomsday Affair * (1965) by Harry Whittington, #3: The Copenhagen Affair * (1965) by John Oram, #4: The Dagger Affair * (1966) by David MCDANIEL, #5: The Mad Scientist Affair * (1966) by John T. PHILLIFENT, #6: The Vampire Affair * (1966) by McDaniel, #7: The Radioactive Camel Affair * (1966 UK) by Peter LESLIE, #8: The Monster Wheel Affair * (1967) by McDaniel, #9: The Diving Dames Affair * (1967 UK) by Leslie, #10: The Assassination Affair * (1967) by Joan Hunter HOLLY, #11: The Invisibility Affair * (1967) by Thomas Stratton (Robert COULSON and Gene DEWEESE), #12: The Mind Twisters Affair * (1967) by Stratton, #13: The Rainbow Affair * (1967) by McDaniel, #14: The Cross of Gold Affair * (1968) by Fredric Davies (Ron ELLIK and Steve Tolliver), #15: The Utopia Affair * (1968) by McDaniel, #16: The Splintered Sunglasses Affair * (1968 UK) by Leslie, #17: The Hollow Crown Affair * (1969) by McDaniel, #18: The Unfair Fare Affair * (1968 UK) by Leslie, #19: The Power Cube Affair * (1968 UK) by Phillifent, #20: The Corfu Affair * (1967 UK) by Phillifent, #21: The Thinking Machine Affair * (1967 UK) by Joel Bernard, #22: The Stone-Cold Dead in the Market Affair * (1966 UK) by Oram, and #23: The Finger in the Sky Affair * (1966 UK) by Leslie. McDaniel felt A.A. Wyn, publisher at Ace, was not paying him enough; the initial letters of the chapters in #8 spell out AAWYNISATIGHTWAD. Girl from U.N.C.L.E. spin-offs of a similar kind were The Birds of a Feather Affair * (1966) by Michael Avallone; The Blazing Affair

* (1966) by Avallone; The Global Globules Affair * (1967 UK) by Simon Latter; The Golden Boats of Taradata Affair * (1967 UK) by Latter; The Cornish Pixie Affair * (1967 UK) by Peter Leslie. [JB/PN]

MANHATTAN FICTION PUBLICATIONS
STIRRING SCIENCE STORIES.

MANIMAL
Glen A. LARSON.

MAN IN THE STEEL MASK, THE
WHO?.

MAN IN THE WHITE SUIT, THE
Film (1951). Ealing Studios. Dir Alexander Mackendrick, starring Alec Guinness, Joan Greenwood, Cecil Parker, Ernest Thesiger. Screenplay Roger MacDougall, John Dighton, Mackendrick, based on the play The Man in the White Suit by MacDougall. 85 mins, cut to 81 mins. B/w. A SCIENTIST creates an artificial fibre that neither wears out nor gets dirty. To prove it, he makes himself a shining white suit that retains its pristine condition throughout the film. Attempts are made by clothing manufacturers and their workers to suppress the new material. Finally its inventor is cornered in a street where, suddenly and symbolically, his suit begins to disintegrate and is torn to shreds by the angry mob. The film ends with the scientist planning a second attempt. This fine film is a witty and pertinent SATIRE whose success owes more to the traditions of the Ealing comedy than to sf. [JB]

MANKIND PUBLISHING
VERTEX.

MANLOVE, C(OLIN) N(ICHOLAS)
(1942-) UK critic. Most of his work of interest has focused on FANTASY, beginning with Modern Fantasy: Five Studies (coll 1975). The Impulse of Fantasy Literature (1983) concentrates on UK fantasy, and tends not to deal with the more recent popularity of the genre in the USA. C.S. Lewis: His Literary Achievement (1987) competently argues the case for an author who divides critics into acolytes and disbelievers (C.S. LEWIS); further studies of fantasy interest include Christian Fantasy: from 1200 to the Present (1992) and Scottish Fantasy (1994), a survey. Of direct sf interest is Science Fiction: Ten Explorations (coll 1986), which smoothly (though at times gingerly) engages with the fiction of 10 writers, including some, like Philip Jose FARMER and Gene WOLFE, who have received relatively little academic attention. [JC]

MANN, JACK
E. Charles VIVIAN.

MANN, (ANTHONY) PHILLIP
(1942-) UK-born writer resident in NEW ZEALAND from 1969. His career as a theatre director, translation copy-polisher, drama teacher and university Reader in Drama brings to his writing a strong visual and structural sense. His first sf publication, The Eye of the Queen (1982 UK), is an accomplished novel of First Contact between humans and the

enigmatic Pe-Ellians. The Gardener diptych - Master of Paxwax (1986 UK) and The Fall of the Families (1987 UK) - describes a warring human society and the downfall of its hegemony over various planets. In Pioneers (1988 UK), his best novel to date, genetically engineered explorers come to terms with being human. Wulfsyarn: A Mosaic (1990 UK) is a character study of a failed starship captain, Wilberfoss, narrated by an autscribe; and the Land Fit for Heroes sequence - comprising to date Escape to the Wild Wood (1993 UK) and Stand Alone Stan (1994 UK) - is set in an ALTERNATE WORLD version of a 20th century Britain still ruled by the Romans. PM has written 3 fantasy plays for children as well as short stories and a humorous sf RADIO play, "The Gospel According to Mickey Mouse" (broadcast 1990). He consciously uses his skill at portraying ALIEN species and environments to display human vanity and hubris without being didactic and with an underlying respect for life. [MMacL]See also: SOCIOLOGY.

MANNES, MARYA

(1904-1990) US author, features editor and journalist, often on FEMINIST themes. Her first novel, Message from a Stranger (1948), is an afterlife fantasy. In her sf SATIRE They (1968), the USA is taken over by the under-30s. [JC/PN]

MANNHEIM, KARL

Pseudonym of unidentified UK author of 2 sf adventures: When the Earth Died (1950) and Vampires of Venus (1950). They are modestly competent but hasty. [JC]

MANNING, LAURENCE (EDWARD)

(1899-1972) Canadian-born writer, in the USA from 1920, a founder of the American Interplanetary Society and editor of its journal, Astronautics. He is remembered for his numerous contributions to WONDER STORIES and WONDER STORIES QUARTERLY in the 1930s; he also collaborated on some stories with Fletcher PRATT. His best-known series, which appeared in Wonder Stories, was the Man who Awoke sequence, 5 stories later published as The Man who Awoke (1933; fixup 1975), in which a man periodically awakes from SUSPENDED ANIMATION into a pulp- STAPLEDON succession of 5 societies, the last of which is in a world of immortals. Another series was the Stranger Club sequence, again in Wonder Stories: "The Call of the Mech-Men" (1933), "Caverns of Horror" (1934), "Voice of Atlantis" (1934), "The Moth Message" (1934) and "Seeds from Space" (1935). A short series of above-average space stories comprised "The Voyage of the Asteroid" (1932) and "The Wreck of the Asteroid" (1932). LM's style was very much of his time, but he had a more wide-ranging imagination than many of his colleagues. [JC/PN]See also: AUTOMATION; CANADA; DYSTOPIAS; EVOLUTION; FANTASTIC VOYAGES; GENERATION STARSHIPS; HISTORY IN SF; IMMORTALITY; LEISURE; LIVING WORLDS; MARS; SPACESHIPS; UTOPIAS.

MANO, D. KEITH

(1943-) US writer whose second novel, Horn (1969), is a transcendental fable, and whose third, War is Heaven! (1970), describes with some surreal vividness a WAR in an imaginary - but easily imagined - South American country. The Bridge (1973) is a full-fledged sf DYSTOPIA set in AD2035, with regimentation leading to universal disaster. [JC]

MANOLESCU, FLORIN

[r] ROMANIA.

MANTEGAZZA, PAOLO

[r] ITALY.

MAN THEY COULD NOT HANG, THE

Film (1939). Columbia. Dir Nick Grinde, starring Boris Karloff, Lorna Gray, Robert Wilcox, Roger Pryor. Screenplay Karl Brown, based on a story by Leslie T. White and George W. Sayre. 72 mins. B/w. A kindly SCIENTIST (Karloff) invents a mechanical heart, and one of his students volunteers to undergo clinical death to test it; a police raid at the critical moment prevents this and the student dies. Karloff is executed for murder, but arranges to be revived with the artificial heart. Now vindictive, he lures judge, jury and witnesses to a booby-trapped house where he proceeds to dispose of them in turn. His daughter intervenes and is accidentally killed by one of the lethal devices. He revives her at the cost of his own life. Like most sf films of the period, TMTCNH has little real science; it is, rather, a Gothic melodrama of retribution. [JB/PN]

MAN'S BEST FRIEND

Film (1993). New Line Cinema/Roven-Cavello Entertainment. Written and directed John Lafia; starring Ally Sheedy, Lance Henriksen, Robert Costanzo, John Cassini, Fredric Lehne. 87 mins. Colour. Routine sf/horror movie, with moments of black humour: Dr Jarret (Henriksen) has been performing animal experiments at the EMAX research lab, and has created a super killer guard dog through DNA splicing, some of the imported genes coming from other species. The mastiff-type dog, temporarily stable until a controlling drug wears off, is accidentally released by tv journalist Lori Tanner (Sheedy, a good performance), who adopts it, thinking it (correctly, in a way) an innocent victim. The high-IQ dog goes on to rape (another dog), multiple murder including killing Tanner's boyfriend by pissing acid onto his face and, implausibly, even camouflaging itself as a toolbox. Events escalate in the traditional manner of an exploitation movie, and the animal rights issue is raised but never really examined. Director/writer Lafia was previously best known for the extremely violent horror flick Child's Play 2 (1990). This is not as good in the horror-dog line as Cujo (1983) which was based on the Stephen KING novel, but MBF did well commercially. [PN]

MANTLEY, JOHN (TRUMAN)

(1920-) Canadian-born US screenwriter and producer whose sf novel, The Twenty-Seventh Day (1956 UK; rev 1956 US), features Galactic Federation aliens who give each of five humans from opposing countries an invincible weapon to see what they do with them. The novel was filmed - from the US version, which has a revised ending - as The 27TH DAY (1957). Mantley wrote teleplays for The OUTER LIMITS and The WILD, WILD WEST, and for years worked as a producer on Gunsmoke; he also produced the 2nd season of the 1979-81 tv series BUCK ROGERS IN THE 25TH CENTURY. [PN/JC]

MANVELL, (ARNOLD) ROGER

(1909-1987) UK writer, mostly on the cinema and on aspects of WWII; he had a doctorate in English literature. His sf novel, The Dreamers (1958),

is a tale of revenge via a dream transmitted to the intended victim by African tribesmen. A borderline-sf explanation is allowed as an alternative to the supernatural one. [JC]

MAN WHO FELL TO EARTH, THE

Film (1976). British Lion/A Cinema V Release. Dir Nicolas Roeg, starring David Bowie, Rip Torn, Candy Clark, Buck Henry. Screenplay Paul Mayersberg, based on *The Man who Fell to Earth* (1963) by Walter TEVIS. 140 mins; first US showing cut to 118 mins. Colour. In this UK film set in the USA, the clear-cut narrative of Tevis's evocative novel - about an ALIEN who comes to Earth to build a spacecraft large enough to transport his native race away from his own dying world - is replaced by a nonlinear structure that, in the familiar Roeg manner, shifts backwards and forwards in time, reflecting the psychic TIME TRAVEL of which the alien is capable. David Bowie as the frail, humanoid alien whose contact with the harsh human world corrupts him is excellent, as is Candy Clarke as the sad, funny woman who befriends him. The film is visually strong (Roeg was earlier a fine cameraman) but has been regarded by some as wilfully obscure, in part because of the rather literary complexity of its allusions (many to the painting of the fall of Icarus by Pieter Brueghel the Elder [c1525-1569], some to the Fall of Man) and the symbolism (occasionally heavy-handed) of its visual juxtapositions and imagery. All becomes much clearer on second viewing. Some sequences, including that showing serried ranks of tv sets with which the lonely alien attempts to barricade himself from direct human experience, are very powerful indeed. The theme of an alien having his identity effectively stolen from him by us - the reverse of the usual - is remorselessly followed through. TMWFTE has worn very well and is regarded as an sf classic. The film should not be confused with a 1988 made-for-tv movie (MGM) of the same book, starring Lewis Smith as the alien, Wil Wheaton as a troubled teenager, David Gerber exec. prod, teleplay by Richard Kletter, dir Robert J. Roth. This soft-centred version alters the plot considerably to give a banal moral, drops all reference to the alien's corruption, and imports much sentimentality. [PN]

MAN WHO THOUGHT LIFE, THE MANDEN DER TAENKTE TING.

"MAN WHO WAS WARNED, THE"

Harold BEGBIE.

MAN WITH THE X-RAY EYES, THE X - THE MAN WITH THE X-RAY EYES.

MAN WITH TWO BRAINS, THE

Film (1983). Aspen Film Society. Dir Carl Reiner, starring Steve Martin, Kathleen Turner, David Warner. Screenplay Reiner, Steve Martin, George GIPE. 93 mins, cut to 86 mins. Colour. Pastiche is the essence of most Steve Martin comedies; his self-indulgent acting style becomes rapidly tiresome when his performances are not focused by a good director, but Reiner is good, and this is a genuinely funny film spoofing the disembodied-brain GOTHIC tradition of *DONOVAN'S BRAIN* (1953). Kathleen Turner plays the man-destroying bitch whom brain surgeon Hfuhruhurr

(Martin) falls in love with and marries, though she refuses sex. He transfers his affections to a bodiless brain, provided by a mad SCIENTIST (Warner), with which he forms a telepathic relationship. The wife is killed by a serial murderer, Hfuhruhurr grafts the beloved brain into her head, and all ends happily. [PN]

MARAS, KARL

House name used twice by Kenneth BULMER and once by Peter Hawkins (1923-) for his novel *The Plant from Infinity* (1954). [JC]

MARCH OF THE MONSTERS, THE
GOJIRA; RADON.

MAREK, JIRI

[r] CZECH AND SLOVAK SF.

MARGROFF, ROBERT E(RVIEN)

(1930-) US writer who published his first story, "Monster Tracks", in *If* in 1964, but who has long been best known for his collaborations with Piers ANTHONY, beginning with *The Ring* (1968) and *The E.S.P. Worm* (1970), and continuing with the Dragon series of fantasies: *Dragon's Gold* (1987), *Serpent's Silver* (1988), *Chimaera's Copper* (1990) and *Orc's Opal* (1990). [JC]See also: CRIME AND PUNISHMENT; PSYCHOLOGY.

MARGULIES, LEO

(1900-1975) US publisher and editor, born in Brooklyn and educated at Columbia University. He joined the Frank A. MUNSEY chain of PULP MAGAZINES in 1932, later moving to Beacon Magazines and becoming editorial director of THRILLING WONDER STORIES when Beacon began publishing that title in 1936. LM had overall responsibility for the entire output of the chain; this later included the magazines CAPTAIN FUTURE, STARTLING STORIES and STRANGE STORIES. One of the editors who worked with him on these magazines was Oscar J. FRIEND, and the two later collaborated on 3 anthologies: *From Off This World* (anth 1949), a thematic collection about ALIENS, *My Best Science Fiction Story* (anth 1949) and *The Giant Anthology of Science Fiction* (anth 1954). After WWII, LM formed a publishing company, and returned to sf as publisher of FANTASTIC UNIVERSE, of which he was also editorial director for a time. He left that company and formed another, which published SATELLITE SCIENCE FICTION. Of the remaining anthologies bearing his name, four - *Three Times Infinity* (anth 1958), *Three in One* (anth 1963), *Weird Tales* (anth 1964) and *Worlds of Weird* (anth 1965) - were in fact ghost-edited by Sam MOSKOWITZ; but *Three from Out There* (anth 1959), *Get Out of My Sky* (anth 1960), *The Ghoul Keepers* (anth 1961) and *The Unexpected* (anth 1961) were LM's work. [MJE]

MARINER, DAVID

[r] ROBERT HALE LIMITED.

MARINER, SCOTT

Pseudonym used by C.M. KORNBLUTH and Frederik POHL in collaboration on the story "An Old Neptunian Custom" (1942). [PN]

MARKHAM, ROBERT

Kingsley AMIS.

MARKOV, GEORGI

[r] BULGARIA; David ST GEORGE.

MARK V. ZIESING

US SMALL PRESS. MVZ is the direct successor to Ziesing Brothers, which booksellers Michael Ziesing (1946-) and his brother Mark V. Ziesing (1953-) had founded in Willimantic, Connecticut, initially to produce poetry, but which then produced two books by Gene WOLFE: *The Castle of the Otter* (coll 1982) and *The Wolfe Archipelago* (coll 1983). After this Michael became inactive, and the firm became Mark V. Ziesing. Further books by Wolfe followed, plus titles by A.A. ATTANASIO, Iain M. BANKS, Neal BARRETT Jr, James P. BLAYLOCK, Pat CADIGAN, Thomas M. DISCH, Michael MOORCOCK, Lucius SHEPARD, Bruce STERLING, Howard WALDROP and others. Since 1989 the firm has operated from California. Because of its inventive publishing programme, and because most editions are well designed, MVZ has as good a chance of surviving the difficult 1990s as any small press. [JC]

MARKWICK, EDWARD

Working name of UK lawyer and writer Edward Markwick Johnson (? -?), active in the last quarter of the 19th century, whose sf novel, *The City of Gold: A Tale of Sport, Travel, and Adventure in the Heart of the Dark Continent* (1896), direly invades H. Rider HAGGARD territory, taking its protagonists into a scientifically advanced Semitic LOST WORLD run by a Great White Witch whose love for the hero causes her death. [JC]

MARLOW, LOUIS

Pseudonym of UK writer and lecturer in English studies Louis Umfreville Wilkinson (1881-1966), who also wrote novels under his real name. Of sf interest is *The Devil in Crystal* (1944) which, in LM's typically pert, dandiacal, somewhat overeager manner, describes the effects of a sort of self-possession. The protagonist finds himself cast 20 years into his own past, where he relives his life while being all the while conscious of his observer status and of his almost total inability to alter reality. [JC]See also: TIME TRAVEL.

MARLOWE, STEPHEN

Milton LESSER.

MARLOWE, WEBB

[s] J. Francis MCCOMAS.

MARNER, ROBERT

[s] Algis BUDRYS.

MAROONED

Film (1969). Columbia. Dir John Sturges, starring Gregory Peck, Gene Hackman, David Janssen, Richard Crenna, James Franciscus. Screenplay Mayo Simon, based on *Marooned* (1964) by Martin CAIDIN. 134 mins. Colour. John Sturges is best known for Westerns (e.g., *The Magnificent Seven* [1960]), though he also directed the borderline sf film *The Satan Bug* (1965); outer space may be a less suitable setting for his work. The film is a quasidocumentary about the rescue, by a Soviet/US team, of three astronauts trapped in orbit around the Earth. Opinions are divided on

whether the slowly built suspense is potent or monotonous; the dialogue is even more banal than real NASA chat. The special effects are low-key and accurate, but not visually memorable; the most impressive sequence in the film is the one containing shots of a genuine Saturn rocket-launch. The film suffered through being released at much the same time as 2001: A SPACE ODYSSEY. However, the friendly treatment given to Russian cosmonauts in M played a part in bringing about the Apollo-Soyuz space rendezvous of 1975. [JB/PN]

MARRIOTT-WATSON, H(ENRY) B(RERETON)

(1863-1921) Australian-born writer, in UK all his working life; son of Henry Crocker MARRIOTT-WATSON. His first novel, *Marahuna* (1888), is sf: the eponymous female, extracted from a fiery ring in Antarctica, may well come from the interior of the Earth. Some of the tales assembled in *Diogenes of London and Other Fantasies* (coll 1893) are indeed fantastic, as are some of the contents of *The Heart of Miranda and Other Stories*, *Being Mostly Winter Tales* (coll 1899) and *Aftermath: A Garner of Tales* (coll 1919). [JC] Other works: *The Princess Xenia* (1899) and *Alise of Astra* (1910), both RURITANIAN tales.

MARRIOTT-WATSON, HENRY CROCKER

(1835-?) New Zealand writer who spent some years in Australia, and whose surname at birth was almost certainly Watson; father of H.B.

MARRIOTT-WATSON. *Erchomenon*, or *The Republic of Materialism* (1879 UK), published anon, is a UTOPIA set some years in the future. *The Decline and Fall of the British Empire*, or *The Witch's Cavern* (1890 UK), published as by H.C.M.W., is a surprisingly adventurous and invention-filled speculation set in the FAR FUTURE. [JC]

MARS

For a long time Mars seemed to be the most likely abode for life outside the Earth, and for that reason it has always been of cardinal importance in sf. Its surface, unlike that of VENUS, exhibits markings visible (albeit unclearly) with the aid of optical telescopes, and has a distinct red colour. Blue-green tracts interrupting the red were thought to be oceans or vegetation. The polar caps, seen to wax and wane with the seasons, were generally held to be of snow and ice. In 1877 Giovanni Schiaparelli (1835-1910) reported an intricate network of canali (channels), a word widely interpreted as "canals". The US astronomer Percival Lowell (1855-1916), in *Mars* (1896), built up an image of a cool, arid world with great red deserts and a few areas of arable land, but perfectly capable of sustaining life. The landing of the Viking probes in 1976, however, revealed that Mars is extremely cold and has virtually no atmosphere; although there really are gigantic channels, possibly caused by water in the distant past, the intricate network reported by Schiaparelli does not exist, and nor do the tracts of vegetation. Mars was visited by the usual interplanetary tourists - Athanasius KIRCHER, Emanuel SWEDENBORG, W.S. LACH-SZYRMA, George GRIFFITH et al. - but it became important in the late 19th century as a major target for specific cosmic voyages because the MOON, known to be lifeless, seemed a relatively uninteresting destination. It is the home of an advanced civilization in Percy GREG's *Across the Zodiac* (1880) and a setting for lost-race-type

adventures in *Mr Stranger's Sealed Packet* (1889) by Hugh MACCOLL. Robert CROMIE's *A Plunge into Space* (1890) is an interplanetary love story and sociological tract, as is Gustavus W. POPE's *A Journey to Mars* (1894). Kurd LASSWITZ's *Auf Zwei Planeten* (1897; cut trans as *Two Planets* 1971) provides another elaborate description of an advanced civilization and discusses the politics of interplanetary relations. H.G. WELLS published a brief vision of Mars in "*The Crystal Egg*" (1897) and followed up with the archetypal alien- INVASION story, *THE WAR OF THE WORLDS* (1898), which cast a long shadow over the sf of the 20th century. Wells's Martians, having exhausted the resources of their dying world, come as predatory Darwinian competitors to stake their claim to Earth. This novel firmly implanted in the popular imagination the image of Martians as MONSTERS, and brought a new sensationalism into interplanetary fiction; when Orson Welles's Mercury Theatre dramatized the novel for US RADIO in 1938 it precipitated a panic, whose seeds had been sown 40 years before and fed ever since by a lurid stream of pulp fiction (*WAR OF THE WORLDS*). Garrett P. SERVISS's "sequel", *Edison's Conquest of Mars* (1898; 1947), which reassuringly describes the obliteration of the decadent Martian civilization, made no impact. Nor was there much imaginative power in romances of Martian REINCARNATION like Camille FLAMMARION's *Urania* (1889; trans 1891) or Louis Pope GRATACAP's *The Certainty of a Future Life on Mars* (1903). The only other image which did take hold was something much closer to Lowell's enthusiastic prospectus for exotic Martian life and landscape: an uninhibitedly romantic Mars pioneered by Edwin Lester ARNOLD's *Lt Gullivar Jones - His Vacation* (1905; vt *Gulliver of Mars*) and permanently enshrined in modern mythology by the much imitated novels of Edgar Rice BURROUGHS, whose *Barsoom* series, begun with *A PRINCESS OF MARS* (1912; 1917), was extended to 11 volumes over the next 30 years. Burroughs's John Carter and his kin battle for beautiful, egg-laying princesses against assorted villains and monsters, armed with swords but borne aloft by flying gondolas. Burroughs was co-opted into GENRE SF when *The Mastermind of Mars* (1928) appeared as the lead story in the 1927 *AMAZING STORIES ANNUAL*, and his influence within the genre has been as powerful as that of Wells. His principal imitator, Otis Adelbert KLINE, began by setting his works on Venus, but eventually began a Martian series with *The Swordsman of Mars* (1933; 1960). The early sf pulps were resonant with echoes of *THE WAR OF THE WORLDS*. The first issue of *AMAZING STORIES* reprinted Austin HALL's "*The Man who Saved the Earth*" (1923); another early example was Edmond HAMILTON's "*Monsters of Mars*" (1931). It was not long, however, before a reaction against the CLICHE became manifest. P. Schuyler MILLER's "*The Forgotten Man of Space*" (1933) features meek, mistreated Martians, and Raymond Z. GALLUN's "*Old Faithful*" (1934) is an ideological reply to Wells's Darwinian assumptions. Other notable depictions of life on Mars include Laurence MANNING's "*The Wreck of the Asteroid*" (1932-3), Stanley G. WEINBAUM's "*A Martian Odyssey*" (1934), Clark Ashton SMITH's "*The Vaults of Yoh-Vombis*" (1932), C.L. MOORE's "*Shambleau*" (1933), P. Schuyler Miller's "*The Titan*" (1st part 1936; 1952) and Clifford D. SIMAK's "*The Hermit of Mars*" (1939). Outside the pulps one work stands out from all others as a key contribution to the mythology of Mars: C.S. LEWIS's fantasy *OUT OF THE SILENT PLANET* (1938), in which Mars is a world whose life-system is organized according to Christian ethical principles rather

than the logic of Darwinian natural selection. John W. CAMPBELL Jr's editorial insistence on more careful speculative logic suppressed the "traditional" image of Mars in the pulps' primary sf market, ASTOUNDING SCIENCE-FICTION. Its exotic qualities were played down and replaced by the kind of "realism" encapsulated by P. Schuyler Miller's "The Cave" (1944), an ironic story in which Martian lifeforms kill an Earthman who violates the truce which they all must observe in order to survive the long Martian night. Martian exotica flourished nevertheless, particularly in the work of Leigh BRACKETT, whose "Martian Quest" (1940) was in ASF but who went on to do the bulk of her work for PLANET STORIES. Her gaudy version of the red planet, where decadent alien cultures face the threat of plundering Earthmen, is featured in Shadow over Mars (1944; 1951; vt The Nemesis from Terra 1961 dos), The Sword of Rhiannon (1949 as "Sea-Kings of Mars"; 1953), The Secret of Sinharat (1949 as "Queen of the Martian Catacombs"; exp 1964), The People of the Talisman (1950 as "Black Amazon of Mars"; exp 1964) and "The Last Days of Shandakor" (1952). Ray BRADBURY subsequently brought the romantic image of Mars to a kind of impressionistic perfection in THE MARTIAN CHRONICLES (1946-50; coll 1950; vt The Silver Locusts 1951 UK; the latter and many subsequent edns have variant contents). In these stories Mars is dead but still haunted by the ghosts of an extinct civilization, visited by Earthmen who become doubly haunted by virtue of the echoes of their own Earthly past which follow them. The stories are heavy with nostalgia and extraordinarily seductive. A few other writers have had some success in capturing a similar atmosphere, notably Simak in "Seven Came Back" (1950) and J.G. BALLARD in "The Time-Tombs" (1963). In the 1950s the romance of exotic Mars was mostly left behind as the dominant theme became the problems of COLONIZATION of a planet with barely enough water and barely enough oxygen. Notable stories in this newly realistic vein were The Sands of Mars (1951) by Arthur C. CLARKE, Outpost Mars (1952; rev vt Sin in Space 1961) by Cyril Judd (C.M. KORNBLUTH and Judith MERRIL), "Crucifixus Etiam" (1953) by Walter M. MILLER, Alien Dust (fixup 1955) by E.C. TUBB and Police Your Planet (1956 as by Erik van Lhin) by Lester DEL REY. Among the many juvenile novels of the same species were Red Planet (1949) by Robert A. HEINLEIN and a series by Patrick MOORE begun with Mission to Mars (1955). Martian ROBINSONADES of the same ilk include del Rey's Marooned on Mars (1952), Rex GORDON's No Man Friday (1956; vt First on Mars 1957) and James BLISH's Welcome to Mars (1967). Indigenous lifeforms are frequently featured in these novels, but few are hostile; an exception is in Kenneth F. GANTZ's Not in Solitude (1959). An uninhabited Mars becomes a grim prison colony in Farewell, Earth's Bliss (1966; rev 1971) by D.G. COMPTON. Other memorable stories of the period include Theodore STURGEON's poignant vignette about a dying astronaut, "The Man who Lost the Sea" (1959), and Philip Jose FARMER's pioneering exploration of the possibilities of alien sexuality, "Open to Me, My Sister" (1960; vt "My Sister's Brother"). The mythology of Mars moved into a new phase in the early 1960s as the scenarios of the 1950s began to reappear in a somewhat surrealized form. Heinlein's STRANGER IN A STRANGE LAND (1961) features a human raised by Martians who returns to Earth to build a religious philosophy out of the elements of their cultural heritage. Roger ZELAZNY's "A Rose for Ecclesiastes" (1963) reverses the idea, introducing to a Brackettesque Mars a poet who becomes

a preacher and leads the decadent Martians to a cultural revival. Philip K. DICK's *Martian Time-Slip* (1964) and *THE THREE STIGMATA OF PALMER ELDRITCH* (1964) use colony scenarios as backgrounds for reality-shifting plots - the arid, depleted environment was ideal for Dick's psychological landscaping. A more elaborate but equally enigmatic fantasy is Algis BUDRYS's *The Amsirs and the Iron Thorn* (1967; vt *The Iron Thorn* 1968). The real possibility that Mars might harbour life was by now on the brink of extinction, and *The Earth is Near* (1970; trans 1974) by Ludek PESEK provides a vivid requiem in which the myth-driven members of the first Martian expedition undertake an obsessive search for life in an environment which cannot sustain it. In more recent times Lin CARTER has written pastiches of Brackett - *The Man who Loved Mars* (1973) and *The Valley where Time Stood Still* (1974) - but they are blatant fakes; Brackett herself had moved on to new worlds beyond the Solar System. Christopher PRIEST went back to a more remote image in his Wellsian romp, *The Space Machine* (1975), but other writers remained determined to do what they had to in order to sustain the planet's future viability as a potential home for life. Frederik POHL's *MAN PLUS* (1976) is a grimly realistic account of the making of a CYBORG colonist, while Ian WATSON's *The Martian Inca* (1976) and John VARLEY's "In the Hall of the Martian Kings" (1977) stubbornly credit the seemingly unpromising Martian soil with miraculous adaptive qualities. Some sf writers cling to the conviction that, no matter how arid Mars might be, near-future colonization remains a viable project, as in Lewis SHINER's stubbornly realistic *Frontera* (1984); frontier Mars is featured also in Sterling LANIER's *Menace under Marswood* (1983). Other writers have taken new heart from the idea that it might be a promising world for TERRAFORMING. The possibility that terraforming might help resuscitate, at least for a brief while, a neo-romantic Mars is eloquently expressed in Ian MCDONALD's fabulous *Desolation Road* (1988). In *Green Mars* (1985 IASFM; 1988 chap dos) Kim Stanley ROBINSON looks forward ironically to the days when conservationists are champions of the old red world against the nascent fertile version; a version of their case provides one of several strands of argument about terraforming in the ambitious *Red Mars* (1992 UK), which begins a projected trilogy on the planet, with *Green Mars* (no connection to the novella) and *Blue Mars* to follow. This project promises to be a key work in the realistic school. (Robert L. FORWARD) Robert L. FORWARD's *Martian Rainbow* (1991) and Jack WILLIAMSON's *Beachhead* (1992) are other recent additions to this school. Invasions from Mars now seem completely obsolete, but the idea still has a certain satirical mileage, as revealed in Frederik Pohl's *The Day the Martians Came* (fixup 1988); the epic journey to Mars receives similar satirical treatment in Terry BISSON's *Voyage to the Red Planet* (1990). Magical echoes of romantic Mars still insinuate themselves into all these works, as they will undoubtedly do when and if the first manned mission to Mars takes place. A theme anthology is *Mars, We Love You* (anth 1971; vt *The Book of Mars* 1976 UK) ed Willis E. MCNELLY with Jane Hipolito. [BS] See also: SCIENTIFIC ERRORS.

MARSH, GEOFFREY
Charles L. GRANT.

MARSHAK, SONDRA

(? -) US writer who has been associated with STAR TREK from the early 1970s, moving from fan activities into Star Trek ties and commentaries. SM began with Star Trek Lives! (1975) with Jacqueline LICHTENBERG and Joan Winston, moving on to Star Trek: The New Voyages * (coll 1976) with Myrna CULBREATH and its direct sequel, Star Trek: The New Voyages 2 * (anth 1978), also with Culbreath, two enthusiastic but patchy compilations of short fiction. Subsequent ties written with Culbreath include The Price of the Phoenix * (1977) and its direct sequel The Fate of the Phoenix * (1979), The Prometheus Design * (1982) and Triangle * (1983). With William SHATNER, SM and Culbreath wrote Shatner: "Where No Man . . .": The Authorized Biography of William Shatner (1979). [JC/CAJ]Other work: The Star Trek Puzzle Manual (1976) with James Razzi.

MARSHALL, ARCHIBALD

Working name of UK novelist Arthur Hammond Marshall (1866-1934), who was prolific and popular in the early decades of this century. His Erewhonian sf SATIRE Upsidonia (1915) amusingly places a young man in a PARALLEL WORLD, somehow linked with ours, where all values, in particular ECONOMIC ones, suffer a reversal; many comic points are lightly made. [JC]Other work: Simple People (1928).

MARSHALL, BRUCE

(1899-1987) Scottish writer whose sequence about a NEAR FUTURE world in which the USSR controls the Vatican begins with The Bishop (1970), set in what is recognizeably our own world, and continues with Urban the Ninth (1973), Operation Iscariot (1974), Marx the First (1975) and Peter the Second (1976). By the last volume the Pope is English, and allows priests to marry. [JC]

MARSHALL, EDISON (TESLA)

(1894-1967) US writer and big-game hunter, best known for his work outside the sf field, especially his many historical novels. He began publishing sf with "Who is Charles Avison?" (1916). The narrator of Ogden's Strange Story (1928 Popular Magazine; 1934), which is also sf, suffers a head-injury and timeslips into the deep past, becoming a proto-man named Og Dian of the Lost Land (1935; vt The Lost Land 1972) is a romantically told tale of a lost race (LOST WORLDS) of Cro-Magnons in Antarctica. Earth Giant (1960) is about Hercules. [JC/PN]Other works: The Death Bell (1924), Sam Campbell, Gentleman (1934), The Stolen God (1936), Darzee, Girl of India (1937), The White Brigand (1937) and The Jewel of Mahabar (1938), all primarily adventure but with some fantastic elements.

MARSTEN, RICHARD

Evan HUNTER.

MARTENS, PAUL

Neil BELL.

MARTIAN CHRONICLES, THE

US tv miniseries (1980). NBC TV. Dir Michael Anderson, starring Rock Hudson, Gayle Hunnicutt, Darren McGavin, Roddy McDowall, Joyce van Patten, Fritz Weaver, Nyree Dawn Porter, Bernadette Peters. Teleplay Richard

MATHESON, based on THE MARTIAN CHRONICLES (coll of linked stories 1950; rev vt The Silver Locusts 1951 UK) by Ray BRADBURY. 3 110min episodes. Colour. The problems with this disappointing, expensive (\$8 million) adaptation cannot be blamed entirely on Anderson's sluggish direction (see also LOGAN'S RUN) or Matheson's script (which establishes somewhat artificial continuities between the 11 stories he adapts), or even the inflexible performance of Rock Hudson as Colonel Wilder, the main linking character. Bradbury's own words, which for many readers work poetically on the page, tend to sound stilted when spoken, and clash with the realism that tv seems to demand. The answer might have been to make the words more austere and find a visual poetry to substitute, but in this the production mostly fails, though some aspects (the Martians and their strange masks) are authentically otherworldly. The insistent moralizing (not untrue to the book) comes over as hackneyed and sentimental. Another director might have done better than Anderson, but the book is intractably literary and probably inappropriate for film or tv. Bradbury was reported to be unhappy with the production. [PN]

MARTIN, CARL
[r] John DALMAS.

MARTIN, GEORGE R(AYMOND) R(ICHARD)
(1948-) US writer and editor whose first published sf story was "The Hero" for Gal in 1971. His success was thereafter rapid. "A Song for Lya" (1974), a novella about a human convert to an alien RELIGION whose ESCHATOLOGY is based in BIOLOGY, won the first of his 3 HUGOS to date; 2 others followed for "Sandkings" (1979), which also won a NEBULA, and "The Way of Cross and Dragon" (1979); he won a second Nebula in 1986 for "Portraits of his Children" (1985), and a Bram Stoker Award for The Pear-Shaped Man (1987 Omni; 1991 chap). Other notable early stories include a short series about an unusual form of interstellar TRANSPORTATION begun with "The Second Kind of Loneliness" (1972) and another begun with "Override" (1973), about the commercial exploitation of zombies. A novella which he wrote in collaboration with Lisa TUTTLE, "The Storms of Windhaven" (1975), was eventually extended into Windhaven (fixup 1981) as by GRRM and Lisa Tuttle. His first solo (and only sf) novel, Dying of the Light (1977), is a vivid romance set on a drifting planet which, while passing close by a sun, has been the site of a huge festival; some short stories are set in the same universe. Fevre Dream (1982) is a tale of vampires and Mississippi steamboats whose realistic treatment owes as much to sf as to supernatural fiction. The Armageddon Rag (1983) is a thriller in which the kind of apocalypse imagined in Norman SPINRAD's "The Big Flash" (1969) is aborted in the nick of time. His most substantial sf project is the series collected in Tuf Voyaging (coll of linked stories 1986) about the problem-solving exploits of an ecological engineer in a declining GALACTIC EMPIRE. Perhaps because of his training as a journalist and his employment in the mid-1970s as a teacher of journalism, GRRM seems most comfortable with stories which are fast-paced and economical. "Nightflyers" (1980), a horror story set aboard a spaceship and involving a COMPUTER impressed with human PSI POWERS, is another outstanding novella, very unevenly filmed as Nightflyers (1987). In the late 1980s GRRM

moved into tv, first writing for the new The TWILIGHT ZONE series (1985-7) and then becoming heavily involved with the development of BEAUTY AND THE BEAST. In parallel with these enterprises he launched Wild Cards, a set of BRAIDED tales placed in an ALTERNATE WORLD - whose premise is rather more sophisticated than most such in COMICS - starring SUPERHEROES; the possibility of trademark infringement forced the substitution of the term "Ace" for "Superhero". This SHARED-WORLD anthology series (GRRM prefers the label "mosaic novels", on the grounds that individual volumes are more coherently organized than in most such anthologies) currently (early 1992) extends to 9 vols (WILD CARDS for listing). GRRM earlier edited the notable NEW VOICES series of ANTHOLOGIES of novellas by the nominees for the JOHN W. CAMPBELL AWARD for Best New Writer (of which he was himself one): New Voices in Science Fiction (anth 1977; vt New Voices I: The Campbell Award Nominees 1978), New Voices II (anth 1979), New Voices III (anth 1980), New Voices 4 (anth 1981) and The John W. Campbell Awards Volume 5 (anth 1984).GRRM is a vigorous storyteller with a flair for vivid imagery. All of his collections - A SONG FOR LYA AND OTHER STORIES (coll 1976), Songs of Stars and Shadows (coll 1977), Sandkings (coll 1981), Songs the Dead Men Sing (coll 1983; cut 1985 UK), Nightflyers (coll 1985) and Portraits of his Children (coll 1987) - contain striking work. His own output has declined as he has become increasingly active as an editor. [BS]Other works as editor: The Science Fiction Weight-Loss Book (anth 1983) with Isaac ASIMOV and Martin H. GREENBERG; Night Visions 3 (anth 1986; vt Night Visions 1987 UK).About the author: George R.R. Martin, the Ace from New Jersey: A Working Bibliography (last rev 1989 chap) by Phil STEPHENSEN-PAYNE. See also: ALIENS; ASTOUNDING SCIENCE-FICTION; BLACK HOLES; CRIME AND PUNISHMENT; FANTASY; GOTHIC SF; HEROES; HYPERSPACE; ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE; MUSIC; OMNI; SUPERMAN; TELEVISION.

MARTIN, GRAHAM DUNSTAN

(1932-) Scottish writer who began publishing work of genre interest with the Giftwish children's fantasy sequence: Giftwish (1978) and Catchfire (1981), both as Graham Martin. With The Soul Master (1984), as GDM, he moved sf-wards, though the godling-dominated land of Tethesta is described in terms of fantasy. Time-Slip (1986), a bleak post- HOLOCAUST tale set in nether Scotland, is fully sf, as is The Dream Wall (1987), a dreadful-warning story of the UK under the Soviets in the early 21st century. GDM's strengths - a dogged insistence on what he clearly feels to be home truths - are fully on view in this narrative, as are certain weaknesses, mainly a grim humourlessness which greys out any attempts at SATIRE or novelistic ambiguity. Half a Glass of Moonshine (1988), a study in PERCEPTION, suggests that the human sensorium blocks off certain features of our environment for good Darwinian reasons. [JC]See also: PARALLEL WORLDS.

MARTIN, PETER

Working name of UK writer Peter Martin Leckie (1890-?) for his sf novel, Summer in 3,000: Not a Prophecy - A Parable (1946), in which a progressive World Island state is contrasted with a war-torn conservative one. [JC]

MARTIN, ROD

[r] John DALMAS.

MARTIN, THOMAS

[r] Martin THOMAS.

MARTIN, WEBBER

Robert SILVERBERG.

MARTINSEN, MARTIN

Ken FOLLETT.

MARTINSON, HARRY (EDMUND)

(1904-1978) Swedish author and poet, member of the Swedish Academy, recipient of the 1974 Nobel Literature Prize. A prolific writer, HM's one contribution to sf is *Aniara* (1953 *Cikada*; exp 1956; trans Hugh MacDiarmid and E. Harley Schubert as *Aniara: A Review of Man in Time and Space* 1963 UK), a 103-canto epic poem (POETRY) eloquently defending humane values against the inhumanity of TECHNOLOGY within the story of the irreversible voyage of a GENERATION STARSHIP, *Aniara*, towards outer space. Despite or possibly because of the participation of Hugh MacDiarmid (1892-1978), arguably Scotland's most important 20th-century poet, the English translation ill serves the resonant, melodic and quotable original. Karl-Birger Blomdahl's opera (MUSIC) based on the poem, *Aniara* (1959), features some pioneering electronic effects and has achieved international success. Some of the poems in the untranslated *Doriderna* (coll 1980) belong to the *Aniara* cycle. [J-HH/JC]

MARTYN, WYNDHAM

(1875-?) UK thriller writer who occasionally tacked on sf devices. His *Stones of Enchantment* (1948) details the discovery of a lost race (LOST WORLDS) possessing the secret of longevity. [JE]Other work: *Nightmare Castle* (1935).

MARVEL COMICS

Eventually named for its first COMIC - much as DC COMICS was named after *Detective Comics* - MC was founded by Martin Goodman (1910-1992) as *Timely Comics* before, in the 1950s, being renamed *Atlas Comics* after its distribution company; it became MC in 1963. *Marvel Comics #1* (Nov 1939) featured two of the company's three early mainstays. The *Human Torch* was an ANDROID who could become a figure of living flame; he was created and drawn by Carl Burgos. *Prince Namor*, the *Sub Mariner* - a warlike undersea monarch who had an ambivalent relationship with the surface world - was chronicled by William Blake (Bill) Everett. Throughout the 1940s both *The Human Torch* and *Prince Namor* had their own comics (*The Human Torch* from Fall 1940, *Sub Mariner Comics* from Spring 1941). Running alongside them were *Marvel Mystery Comics* (*Marvel Comics* retitled) and the third of those mainstays: *Captain America* (Mar 1941-Jan 1950). The original masked superpatriot was created by artist Jack KIRBY and writer Joe Simon. In the 1950s *Marvel Mystery Comics* became *Marvel Tales*, and was indistinguishable from dozens of other horror, war, sf, Western, gag and romance anthology titles; Stan LEE was credited with writing most of the contents. Not quite lost among the chaff were strips by many fine illustrators, including Bill Benulis, Gene Colan, Richard Doxsee, Bernie Krigstein, Joe Maneely, Gray

MORROW and Al Williamson. The mid-1950s slump in comics sales saw the disappearance of Atlas but not of all of its titles. Stan Lee retrenched in 1958, giving more of an sf/horror/ MONSTER-MOVIE flavour to his titles. With the help of a returned Jack Kirby (who had worked elsewhere through most of the 1950s) plus regular artists Dick Ayers, Steve Ditko and Don Heck, editor Lee and his "Bullpen" were soon eager to re-enter the SUPERHERO genre, starting with Nov 1961's Fantastic Four. Lee allowed his heroes to be fallible: they could be bad-tempered, immature, repressed . . . The motif would establish MC at the vanguard of comics publishing. At the dawn of the "Marvel Age" MC experimented with an sf-anthology title. Produced by Lee and Ditko and complete with contents and letters pages, Amazing Adult Fantasy ran for 8 issues Dec 1961-July 1962 before being retitled Amazing Fantasy for 1 final issue, which featured the debut of MC's most popular character ever: Spider-Man. Most of Marvel's superheroes had various kinds of run-ins with PSEUDO-SCIENCE, especially The Fantastic Four, a group of superpowered troubleshooters. Kirby and Lee elegantly plundered Norse mythology for their Thor series (Journey into Mystery #83 [Aug 1962] to present; renamed Thor in 1966) while Lee and Ditko produced the definitive interdimensional magic strip in Doctor Strange (Strange Tales #114-#134 [Nov 1963-1965]; then his own title #169-#183 [June 1968-Nov 1969]; then in a relaunched Strange Tales #1-#19 [Apr 1987-Oct 1988]). Marvel Super-Heroes #12 (Dec 1967) saw the arrival of MC's space-born superhero Captain Marvel; it was not long before he had the red-yellow-blue costume and a teenage alter ego full of wisecracks and buzzwords like his 1940s namesake. (For the full tortuous story of CAPTAIN MARVEL, see his entry.) During 1968-71 MC's finest sf character, The Silver Surfer, was given his own title, drawn by John Buscema and with the writing credit going, inevitably, to Lee. In 1970 MC began publishing its own version of Robert E. HOWARD's Conan, adapted by Roy Thomas with artists John Buscema, Gil Kane and Barry Smith. MC currently (1992) dominates the US comics marketplace, most notably with the bestselling X-MEN titles. Since 1987 MC has been reprinting many of its sought-after 1960s comics in the Masterworks series: Spider-Man (4 vols to date), The Fantastic Four (3 vols), X-Men (4 vols), The Avengers (2 vols) - no relation to the tv series - The Silver Surfer (2 vols) and, each with 1 vol to date, The Incredible Hulk, Thor, Daredevil and Captain America. An authorized and therefore somewhat uncritical account of the company's history is Marvel: Five Fabulous Decades of the World's Greatest Comics (1991) by Les Daniels. [SW] See also: ILLUSTRATION.

MARVELL, ANDREW

Pseudonym of UK editor and writer Howell Davies (1896-1985); between the Wars he worked as a theatre critic for the Manchester Evening News and as literary editor of the Star and News Chronicle, later serving as editor of the South American Handbook (1938-69). During the brief time he wrote as AM he published 3 novels. Minimum Man, or Time to be Gone (1938) combines sf and thriller ingredients in its depiction of a 1950 fascist coup in the UK, and of its overthrow by a new race of tiny but very powerful telepaths whose parthenogenetic births were caused by poison gas. Three Men Make a World (1939) is a kind of DISASTER story, though the turning of the UK into a rural land by petroleum-destroying bacteria may strike modern

readers as a catastrophe with a silver lining. Congratulate the Devil (1939), in which a happiness drug is found to be intolerable to society at large, describes the process by which its disseminators are hounded to death. AM's novels were professional and engrossing. [JC/BS]See also: POLITICS; PSI POWERS; SUPERMAN.

MARVELMAN

CAPTAIN MARVEL; Alan MOORE.

MARVEL SCIENCE FICTION

MARVEL SCIENCE STORIES.

MARVEL SCIENCE STORIES

US PULP MAGAZINE. 9 issues 1938-41; 6 further issues 1950-52; published by Postal Publications (#1 and #2), then by Western Fiction Publishing Co. for the remainder of the 1st series, finally by Stadium Publishing Co.; ed Robert O. Erisman (uncredited in 1st series). An sf pulp magazine from a chain which included such fringe-sf titles as UNCANNY TALES, MSS was the first of the many new sf magazines of the late 1930s and early 1940s. It was notorious for the mildly erotic approach of its early issues, to which Henry KUTTNER contributed several stories, including "The Time Trap" (Nov 1938). The Feb 1939 issue featured Jack WILLIAMSON's After World's End (1961). After 5 issues the title changed in Dec 1939 to Marvel Tales, and for 2 issues the magazine leaned more heavily towards titillating sex and sadism, like "Lust Rides the Roller Coaster" (Dec 1939) by Ray King and "World without Sex" (May 1940) by Robert Wentworth (Edmond HAMILTON). The title then changed again in Nov 1940 to Marvel Stories, and the magazine returned to straightforward sf. Although initially successful enough to generate a companion, DYNAMIC SCIENCE STORIES, MSS, which began as a quarterly, became less and less frequent through 1939-40, ceasing with the Mar 1941 issue. It was revived in Nov 1950 under its original title, switched to DIGEST size after 2 issues, appeared 3 times in that format, and reverted to pulp size for its final issue; it was Marvel Science Fiction for the last 3 issues. Daniel KEYES was an assistant editor for some of these later numbers, which were generally unmemorable. The Feb 1951 issue was published in a UK reprint May 1951. [MJE]

MARVEL STORIES

MARVEL SCIENCE STORIES.

MARVEL TALES 1.

US SEMIPROZINE (the first 3 issues small- DIGEST-size, #4 digest-size and #5 BEDSHEET-size), 5 issues May 1934-Summer 1935. Published by Fantasy Publishers; ed William L. CRAWFORD, who was not only the publisher but also set the type himself. Some issues were distributed with several different covers. Distribution was very limited; MT was never generally available. Its fiction included works by Robert E. HOWARD, H.P. LOVECRAFT, Robert BLOCH's first story, "Lilies" (Winter 1934), and Clifford D. SIMAK's The Creator (Mar 1935; 1946 chap). The Winter 1934 issue commenced serialization of P. Schuyler MILLER's short novel "The Titan"; the magazine died before the serialization was completed, and the work was finally published as the title novella of Miller's The Titan (coll 1952). An even shorter-lived companion title was UNUSUAL STORIES.2. Variant title

MARY SHELLEY'S FRANKENSTEIN

Film (1994). American Zoetrope/TriStar Pictures/Japan Satellite Broadcasting, Inc./The IndieProd Company. Dir Kenneth Branagh; prods include Francis Ford Coppola; co-prods Branagh and David Parfitt; screenplay Seph Lady, Frank Darabont, based on *Frankenstein, or The Modern Prometheus* (1818; rev 1831) by Mary SHELLEY; starring Branagh, Robert De Niro, Tom Hulce, Helena Bonham Carter, Aidan Quinn, Ian Holm, Richard Briers, John Cleese, Robert Hardy, Cherie Lunghi, Celia Imrie. 123 mins. Colour. Branagh directs this as full-blooded (and extremely bloody) GOTHIC melodrama, truer to the original plot than almost all previous adaptations, but with thoughtful twists of his own. Much is made of birthing imagery, both literal and in the case of the monster's creation, metaphorical, perhaps showing an awareness of those readings of the original that emphasize the relevance of Mary Shelley's miscarriage shortly before writing the book, and her mother's death from blood poisoning shortly after giving birth to her. Indeed, when the obsessive Victor Frankenstein (Branagh) creates a bride for the monster, he does so out of body parts of Justine, an innocent accused of a murder committed by the monster, and Elizabeth (Bonham Carter), his fiancée murdered by the monster in revenge for his isolation. The Creature, played by De Niro in make-up a long way removed from the familiar nuts-and-bolts square-headed Karloff version, is good at grief, rage and despair. The odd post-modern touch decorates what is generally a rollicking historical costume drama. The film is, in its eccentric and uneven way, quite distinguished, and certainly sensitive to the issues raised by the book and the circumstances of its writing. It is more a film about death (and reversing it) than creating life, and much is made of a grim cholera epidemic. [PN]

MASK OF FU MANCHU, THE

Film (1932). Cosmopolitan/MGM. Dir Charles Brabin, Charles Vidor, starring Boris Karloff, Lewis Stone, Karen Morley, Jean Hersholt, Myrna Loy. Screenplay Irene Kuhn, Edgar Allen Woolf, John Willard, based on *The Mask of Fu Manchu* (1932) by Sax ROHMER. 72 mins, cut to 67 mins. B/w. Rohmer's Oriental supervillain has since been brought to the screen many times (FU MANCHU) but this first, visually lavish version, produced by Irving Thalberg, is the most memorable. It is based on the 6th book in Sax Rohmer's intensely popular, racy and racist Fu Manchu series. Malign scientific genius, torturer and murderer Fu Manchu (Karloff), pitted against his old nemesis Nayland Smith (Stone), lisps his way poisonously through the film with the assistance of his sadistic daughter (Loy), who has a wonderfully fetishistic scene (assisted by Nubians) where she whips and then caresses one of their heroic enemies. Fu Manchu seeks Genghis Khan's death-mask and sword, which he intends to use as symbols to arouse the Oriental races in a war against the White nations; tarantulas and a zombie serum play roles in an eclectic plot which mixes sf and occult devices. In a spectacular climax Fu's electrical DEATH-RAY machine is turned against Fu's generals by Nayland Smith. The bizarrely stylized sets were by Cedric Gibbons and the electrical effects were by Ken Strickfaden. This is the sort of pulp adventure classic later imitated enjoyably by

Steven SPIELBERG's Raiders of the Lost Ark (1981). [PN/JB]

MASON, ANITA

(1942-) UK writer. Her second novel, *The Illusionist* (1983), is a literary fantasy centred on Simon Magus. AM's sf novel, *The War against Chaos* (1988), also intensely literary in demeanour, posits a NEAR-FUTURE UK of surreal bleakness dominated by thought-control and savage divisions between precarious Haves and Goyaesque Have-Nots, who live in something very much like Hell. [JC]

MASON, DAVID

(1924-1974) US writer who began publishing with "Placebo" for *Infinity* in 1955; he was married 1956-62 to Katherine MACLEAN. Most of his novels - such as his first, *Kavin's World* (1969), and its sequel, *The Return of Kavin* (1972) - were routine SWORD AND SORCERY. However, his final book, *The Deep Gods* (1973), more impressively implants a 20th-century mentality into the brain of a prehistoric man who must deal with the insanity of a whale (one of the "deep gods" of the title) that threatens to destroy Eden. [JC] Other works: *Devil's Food* (1969); *The Sorcerer's Skull* (1970); *The Shores of Tomorrow* (1971); three erotic novels - *Degrees of Pleasure* (1969), *Jellyroll* (1969) and *Devil's Food* (1969).

MASON, DOUGLAS R(ANKINE)

(1918-) UK junior-school headmaster and prolific writer after 1964, both under his own name and as John Rankine; he has been silent since about 1980. His first story was "Two's Company", as by Rankine, in John CARNELL's *New Writings in SF 1* (1964), and he was soon publishing 2-3 books a year, generally routine SPACE OPERAS and other adventures as Rankine. Occasionally, under his own name - as with *From Carthage then I Came* (1966 US; vt *Eight Against Utopia* 1967) and *Matrix* (1970 US) - he would attempt more ambitious novels containing some social comment. Generally speaking, however, he was content to produce rather low-pressure work. The Dag Fletcher series of space operas, as by Rankine, was initiated in his first book, *The Blockage of Sinitron: Four Adventures of Dag Fletcher* (coll of linked stories 1966), and continued with *Interstellar Two-Five* (1966), *One is One* (1968), *The Plantos Affair* (1971), *The Ring of Garamas* (1972) and *The Bromius Phenomenon* (1973 US). The series is set in a galactic environment shared by other Rankine titles including *The Fingalnan Conspiracy* (1973) and *The Thorburn Enterprise* (1977). [JC] Other works: As John Rankine: *The Space Corporation* series, comprising *Never the Same Door* (1968) and *Moons of Triopus* (1968); *Binary Z* (1969); *The Weisman Experiment* (1969); *Operation Umanaq* (1973 US); 4 novelizations of episodes from the tv series *SPACE 1999*, being #2: *Moon Odyssey* * (1975), #6: *Astral Quest* * (1975), #8: *Android Planet* * (1976) and #10: *Phoenix of Megaron* * (1976 US); *The Vort Programme* (1978); *The Star of Hesioc* (1980); *Last Shuttle to Planet Earth* (1980). As DRM: *Landfall is a State of Mind* (1968); *Ring of Violence* (1968); *The Tower of Rizwan* (1968); *The Janus Syndrome* (1969); *Dilation Effect* (1971 US); *Horizon Alpha* (1971 US); *Satellite 54-Zero* (1971 US); *The Resurrection of Roger Diment* (1972 US); *The End Bringers* (1973 US); *The Phaeton Condition* (1973 US); *Pitman's Progress* (1976); *The Omega Worm* (1976); *Euphor Unfree* (1977); *Mission to Pactolus R* (1978); *The Typhon Intervention* (1981). See also: CITIES; MATHEMATICS; NEW

WRITINGS IN SF.

MASON, ERNST

[r] Frederik POHL.

MASON, GREGORY

(1889-1968) US writer whose sf **DYSTOPIA**, *The Golden Archer: A Satirical Novel* of 1975 (1956), depicts a USA suffering under regimented, McCarthy-like bigotry. [JC]

MASON, LISA

(1953-) US writer who began publishing sf with "Arachne" for Omni in 1987, a tale she expanded into her first novel, *Arachne* (1990), a tightly composed kitchen-sink narrative set in a post-earthquake San Francisco, in **CYBERSPACE**, and in the heart of a complex corporate world, with a tough female lawyer as protagonist, a maimed AI personality as trickster and dubious colleague, and cyberspace-haunting human personas everywhere at risk from AIs longing to acquire unprogrammed human virtues. As yet LM is still writing in a rather crowded Californian grotto, and does not shift very far in her second novel, *Summer of Love* (1994), which is fantasy; she gives, therefore, the impression of being an author it is far too early to attempt to define. [JC]

MASON, MARY

[r] Stephen GOLDIN.

MASON, ROBERT C(AVERLY)

(1942-) US writer who became known for *Chickenhawk* (1983), a memoir of his stint as a helicopter pilot in Vietnam. *Weapon* (1989), ostensibly a **TECHNOTHRILLER**, avoids the more restrictive implications of that term by concentrating on an AI; Solo, the **ROBOT** referred to in the title, learns more about being human than about being a superior killing machine. The sequel, *Solo* (1992), sees the sensitive robot forced to fight off an even more dangerous successor robot. The generic closeness of these novels to the films *The TERMINATOR* (1984) and *TERMINATOR 2* (1991) was noted in reviews, but there is certainly little resemblance between either film and *Weapon*. [JC]

MASON, TALLY

[s] August W. DERLETH.

MASSON, DAVID I(RVINE)

(1915-) Scottish writer, long resident in England, with an MA in English language and literature. He began publishing sf with "Traveller's Rest" for **NEW WORLDS** in 1965; his fiction, including this extraordinarily intense study in the distortion of **PERCEPTION**, was assembled in *The Caltraps of Time* (coll 1968), which single volume established his strong reputation as a writer of vigorously experimental, vivid, often scientifically sound stories. Notable among them, and reflecting his close and informed interest in **LINGUISTICS**, were "Not so Certain" (1967) and the brilliant **TIME-TRAVEL** story "A Two-Timer" (1966), told entirely in language appropriate to 1683, the year from which the inadvertent time traveller is whisked into the future. Each of DIM's stories seems to be a solution to some cognitive or creative problem or challenge, and he

appeared little inclined to repeat any of his effects. He has published almost no fiction since 1968, though "Doctor Fausta" in George HAY's Stopwatch (anth 1974) is an interesting SATIRE. DIM also reviewed sf fairly frequently during the 1970s in FOUNDATION. [JC]See also: DIMENSIONS; MATHEMATICS.

MASTER OF TERROR 4D MAN.

MASTER OF THE WORLD

Film (1961). AIP. Dir William Witney, starring Vincent Price, Charles Bronson, Henry Hull, Mary Webster. Screenplay Richard MATHESON, based (not very closely) on Robur le conquerant (1886; trans as The Clipper of the Clouds 1887; vt Robur the Conqueror 1887) and Maitre du monde (1904; trans as Master of the World 1914) by Jules VERNE. 104 mins. Colour.MOTW owes more to the Disney version of 20,000 LEAGUES UNDER THE SEA (1954) - which it clearly imitates - than to the two Verne novels, with the Albatross, a very light clipper ship with propellers on the masts, substituting for a submarine. Robur (Price), a warped idealist, uses his invention to enforce peace by making war on war, bombarding opposing armies from the air; he kidnaps as witnesses a US special agent (Bronson), an arms manufacturer (Hull) and a young couple. The film was more lavish than most AIP productions (usually very-low-budget exploitation movies), but most of the money went on the elaborate flying ship. The travelogue aspect of the film is achieved largely through library footage, some of it wildly anachronistic: a supposed aerial shot of 1860s London is from the 1944 film of Shakespeare's Henry V. A melodramatic, one-note script by Matheson (usually better than this) and flat direction weaken the film, but it remains watchable if silly. [JB/PN]

MASTERS, DEXTER

(1908-1989) US writer whose only sf work was The Cloud Chamber (1971). [JC]

MASTERS OF THE UNIVERSE

Film (1987). Cannon. Dir Gary Goddard, starring Dolph Lundgren, Frank Langella, Meg Foster, Billy Barty. Screenplay David Odell. 106 mins. Colour.Goddard's unfortunate film debut announced itself as the first live-action film to be based on toys (GAMES AND TOYS) - the He-Man toys made by Mattel; its obvious predecessor was an animated tv series, He-Man and the Masters of the Universe, begun 1983. The SWORD-AND-SORCERY story pits the muscle-bound He-Man (Lundgren) of Planet Eternia against Skeletor (Langella), a demon figure from another DIMENSION and leader of the malign Masters of the Universe. A MATTER-TRANSMITTER key takes He-Man to contemporary California, where he finds the help necessary for defeating Skeletor in a final showdown. The film lacks the vigour it requires. The marketing phenomenon it exemplifies has concerned many parents, and some countries ban films and tv series which, in the guise of entertainment, are designed to sell commercial products by brainwashing very young children. A further example is the much better (animated) film The TRANSFORMERS - THE MOVIE (1986). [PN]

MASTIN, JOHN

(1865-1932) UK writer, clergyman and science popularizer, author of 3 sf novels. *The Stolen Planet* (1906) features the picaresque adventures of two Earthmen through the Solar System and beyond, as narrated by Jervis Meredith, codeveloper of a space-conquering "aerostat"; centuries later, in *Through the Sun in an Airship* (1909), Meredith's last descendant again tours a number of planets. Through his various FANTASTIC VOYAGES, JM tried to exploit the romance of science in stories which have an attractive (though thin) patina of verisimilitude and are told in the uplifting manner typical of too many UK boys' books; they are permeated with religiosity, at times attempting a reconciliation of science and RELIGION. *The Immortal Light* (1907) is a LOST-WORLDS novel set in the Antarctic among an underground, Latin-speaking race. *The Autobiography of a Picture* (1910) is fantasy. [JC/EFB] See also: HISTORY OF SF; SPACESHIPS; SUN.

MATHEMATICS

The imaginations of pure mathematicians have provided sf writers with important motifs. For example, the notions taken from geometry and topology of a fourth and other DIMENSIONS (which see for a listing of relevant sf stories) have the essential qualities of strangeness and mystery, making them an enjoyable struggle for the untrained intuition to accept. A surprising number of sf writers have been mathematicians, or at least have trained in mathematics; among them have been Lewis CARROLL, Arthur C. CLARKE, Paul DAVIES, Ralph Milne FARLEY, Martin GARDNER, Norman KAGAN, Johannes KEPLER, Donald KINGSBURY, Homer NEARING, Larry NIVEN, Esther ROCHON, Rudy RUCKER, Bertrand RUSSELL, Boris STRUGATSKI, John TAINE, Vernor VINCE and David ZINDELL. In discussing the use of mathematical ideas in sf, the boundary between sf and fantasy must be drawn according to somewhat different principles from those used in the case of the natural sciences. Since many mathematical ideas derive their piquancy from the fact that they are definitely incompatible with the world we live in, a story illustrating such an idea cannot claim any credence as a record of possible events, and should perhaps be classed as a fantasy. Yet an important consideration in judging a story of this type is its fidelity to mathematical truth, in which respect it belongs not just to sf but to sf at the furthest remove from fantasy, to that subgenre comprising stories which turn on a point of established science. In the field of geometry these points are illustrated by the prototype of all stories which use the idea of space having other than three dimensions, E. A. ABBOTT's *Flatland* (1884 as by A Square). Written in a period when there was great interest among mathematicians in n-dimensional geometry, this fantasy offers an indirect approach to the problems we, as three-dimensional creatures, have in understanding four-dimensional space by examining the difficulties two-dimensional beings would have in understanding three-dimensional space - an explanatory device which was to become a standard feature of sf invoking a fourth dimension. With sentient lines, triangles and polygons as its inhabitants, the book's only three-dimensional character being a visiting sphere, *Flatland* makes no pretence of being related to the real world. The book has been made into a short animated film, *Flatland* (1965), dir Eric Martin, with narration by Peter Cook. C.H. HINTON developed Abbott's speculations, adding some of his own, in several pieces in *Scientific Romances* (coll 1886) and

Scientific Romances: Second Series (coll 1902), and in his sequel *An Episode of Flatland* (1907). In *Bolland* (1957; trans as *Sphereland* 1965 US) Dionys BÜRGER wrote another sequel designed to explain in the same way Einstein's theories about curved space. Greg BEAR's stylish story "Tangents" (1986) imagines the intrusion of higher-dimensional beings into our three-dimensional space, in a sophisticated reworking of the theme of Miles J. BREUER's "The Captured Cross-Section" (1929). Among the many stories using fourth and other dimensions, two deserve mention here for their emphasis on particular mathematical points. H.G. WELLS's "The Plattner Story" (1896) turns on the fact that a three-dimensional object, if rotated through half a turn in a fourth dimension, becomes its mirror image (in the story this happens to Gottfried Plattner, who afterwards finds his heart is on the right). The reception of this point by literary readers amusingly illustrates how, if science can lend credibility to sf, sf removes credibility from science: one critic (Allan Rodway, in *Science and Modern Writing* [1964]) told his readers that this was "neither scientific nor mathematical". In fact it is excellent mathematics. In "And He Built a Crooked House" (1940) Robert A. HEINLEIN describes a house of eight cubical rooms which fit together like the eight three-dimensional "faces" of a four-dimensional cube (a tesseract). The story ostensibly takes place in the real world, but Heinlein's main concern is not to persuade the reader that his house is physically possible but to show us something which is mathematically feasible though seemingly paradoxical. He is therefore careful to be mathematically correct in describing the structure of his house, while emphasizing its startling features. His one slip, as it happens, offends against both requirements; the mathematical truth is even stranger than he realizes. Other writers have set stories in frankly imaginary worlds for the sake of unusual topological structures of space, but few have been so careful to define the structures as Heinlein was. It is common for the topological oddity to be revealed only at the last, as a shock ending, as in David I. MASSON's "Traveller's Rest" (1965) - though this is only one element of a subtle and complex story in which the structures of time and language undergo variations related to that of the structure of space - and Arthur C. CLARKE's "Wall of Darkness" (1949), which uses a similar idea. Christopher PRIEST's *INVERTED WORLD* (1974) features (or appears to, for the whole thing could be a trick of perception) a hyperboloid world where variations of subjective experience take place according to one's position in the world. (Several mathematical stories, including Priest's, are discussed under *PERCEPTION*.) Topology is also likely to be abused as a catch-all explanation for any weird happening: in "A Subway Named Mobius" (1950) by A.J. Deutsch, for example, it is supposed that a subway network has become so complex that trains mysteriously disappear and reappear, although no proper topological explanation is presented. This careless attitude to topology is comparable with the numerology (*PSEUDO-SCIENCE*) of such stories as "Six Cubed Plus One" (1966) by John Rankine (Douglas R. MASON), in which magical properties are attributed to special numbers. (A sardonic comment on cavalier attitudes to mathematics was made by L. Sprague DE CAMP and Fletcher PRATT in *The Incomplete Enchanter* [1942], in which a series of propositions in mathematical logic is used as a magic talisman.) Transfinite arithmetic shares with topology the appeal of the

unfamiliar and the smack of paradox, and infinity has its own sensational connotations. For these reasons transfinite numbers are often called upon to establish an atmosphere of mathematical mysticism, but few authors have found it possible to do more with them. They appealed to the quirkiness of James BLISH, who in "FYI" (1953) seized on the fact that they do not and cannot count material objects and contemplated the Universe being reconstructed to accommodate them. The two other areas of mathematics which have provided material for sf stories are statistics and logic. The concepts of statistics and probability theory are easy to misunderstand, as has been demonstrated in many sf stories; also, being abstractions which can masquerade as concrete instances, they are easy to ridicule, and this can be seen in Russell Maloney's "Inflexible Logic" (1940), which shows us monkeys typing famous works of literature, William TENN's "Null-P" (1951), in which an exactly average man is discovered, and Jack C. HALDEMAN's "A Very Good Year" (1984) in which the absence of death for a whole year is statistically compensated for in the next. A rather more serious point about statistics was made by Robert M. COATES in "The Law" (1974), which describes the "Law of Averages" breaking down and so prompts consideration of why human beings in large numbers normally do behave in predictable ways. The perennial fascination of logical paradoxes was exploited by Gordon R. DICKSON in "The Monkey Wrench" (1951). This story uses the paradox of Epimenides the Cretan ("this statement is false") to deflate a computer engineer's pride in the perfection of his machine, thus giving a reassuring reminder of the insufficiency of logic. An opposite effect was achieved by Frederik POHL in a number of stories, notably "The Schematic Man" (1968), which describes a man coding himself as a computer programme, and so raises the question of what makes the real world more than a mathematical model. Logical paradoxes in fictional form were a speciality of Lewis Carroll, whose *A Tangled Tale* (1886) and *The Game of Logic* (1887) are devoted to them as, in part, are the Alice books. Closer to our own time, Martin GARDNER, whose mathematical-puzzle column appeared in *Scientific American* 1957-81 and in *ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE* from 1977, has written many fictionalized mathematical diversions, such as those collected in *Science Fiction Puzzle Tales* (coll 1981) and *Puzzles from Other Worlds* (coll 1984). Mathematics whose point is not primarily mathematical can also appear in sf; the use of an occasional mathematical formula is seen by some sf writers, as by some scientists, as conferring intellectual respectability. A rare example of a genuine mathematical argument occurs in a footnote to Fred HOYLE's *The Black Cloud* (1957): it is a nice calculation, and has probably added to a number of readers' enjoyment of the book. Hoyle also gave a mathematical explanation of an sf speculation in the preface to *Fifth Planet* (1963). Examples of popular exposition of mathematical ideas in sf are the explanation of the calculus of variations in David DUNCAN's *Occam's Razor* (1957) and that of coordinate systems and relativity in Miles J. Breuer's "The Gostak and the Doshes" (1930). Both authors proceed to tell stories which have only tenuous connections with the mathematical ideas they have expounded. Though the mathematical genius Libby in Robert Heinlein's "Misfit" (1939) proves resourceful, mathematicians as characters in GENRE SF have often been stereotyped as absent-minded, ineffectual and unworldly; they are clearly descended from the inhabitants of Jonathan SWIFT's Laputa in Gulliver's

Travels (1726; rev 1735). Sf is popular among mathematicians, however, and it is not surprising that there should have been some attempts to adjust this image. This can be seen particularly in the stories of Norman KAGAN, whose portrayals of zany, hyperactive maths students, although they sometimes appear self-congratulatory, may be rather closer to reality. Kagan's stories make witty use of many parts of mathematics; while ostensibly concerned with sf speculations - in "Four Brands of Impossible" (1964) the use of a different logic to describe the world, in "The Mathenauts" (1964) a journey into various mathematical spaces - they are really about the experience of doing mathematics. An important mathematical sf protagonist is Shevek, in Ursula K. LE GUIN's *The Dispossessed* (1974), whose new mathematics is the basis for building the ANSIBLE, a FASTER-THAN-LIGHT communications device. A particularly interesting mathematician is the elderly protagonist of "Euclid Alone" (1975) by William F. Orr, himself a mathematician. A student successfully proves one of Euclid's axioms to be wrong. His teacher is left with the moral quandary of whether or not to suppress the discovery, which may, ultimately, destroy the serenity of everyone in the world. Orr's story can be found in *Mathenauts* (anth 1987) ed Rudy RUCKER, the only anthology of sf mathematical stories since *Fantasia Mathematica* (anth 1958) and *The Mathematical Magpie* (anth 1962), both ed Clifton Fadiman. Mathematics has entered fiction in strange ways. Some of the oddest are discussed in the terminology entry OULIPO. Certainly stories of COMMUNICATIONS can feature mathematics, through the idea of mathematics as a universal language. Some notable mathematical incursions into sf during the 1980s are the mathematical harmonies in Kim Stanley ROBINSON's *The Memory of Whiteness* (1985), the cosmic message concealed in the endless series of numbers following pi's decimal point in *Contact* (1985) by Carl SAGAN, and the disquisition on the Mandelbrot set in Arthur C. Clarke's *The Ghost from the Grand Banks* (1990), one of the few sf stories to use the mathematics of fractals. But the most important mathematical sf writers of the past decade have been Rudy Rucker and David Zindell, both mathematicians. Rucker's stories do not merely turn on mathematical points; they are often set in worlds generated by mathematical ideas, whose exploration is itself an act of mathematical intellection, in which the author delights, as he does in raunchy humour. Such tales include much of his work, notably *White Light*, or *What is Cantor's Continuum Problem?* (1980) - a crazed fantasia moving in physical (though afterlife) analogues of Hilbertian space, transfinite numbers and a lot else - *The Sex Sphere* (1983) and *The Secret of Life* (1985). Zindell's *Neverness* (1988) is one of the few successful books whose assumption is that mathematics is romantic. In this novel, to win an ice-race is to solve a theorem. The sequence where the protagonist can map the space windows only through mathematics - fountains and arpeggios of mathematics - is sustained and moving, and conveys with great conviction even to the nonmathematical reader what the high delight of mathematical thought must feel like. [TSu/PN]

MATHESON, RICHARD (BURTON)

(1926-) US author of stories, novels and filmscripts, initially thought of as primarily an sf writer but from the 1960s increasingly recognized as one of the most significant modern creators of terror and fantasy in both

fiction and film. He began publishing sf with "Born of Man and Woman" for The MAGAZINE OF FANTASY AND SCIENCE FICTION in 1950. He had regarded this as a simple terror story but, on finding it praised as sf, decided to cash in on the then-current sf boom. He included most of his best early work in Born of Man and Woman (coll 1954; with 4 stories cut vt Third from the Sun 1955). The famous title story tells in affecting pidgin English of a terrifying MUTANT child and of his break towards a kind of freedom (CHILDREN IN SF). The element of terror in the tale nearly overrides a perfunctory sf base, as in his first sf novel, I Am Legend (1954; vt The Omega Man: I Am Legend 1971), a post- HOLOCAUST story in which only one man remains unaffected by a bacterium that induces vampirism (SUPERNATURAL CREATURES). RM scripted the first film version of this, L' ULTIMO UOMO DELLA TERRA (1964; vt The Last Man on Earth) but, angered by the rewrite of his script, used the pseudonym Logan Swanson for his screenplay credit; he was not responsible for the script of the second film version, The OMEGA MAN (1971). He did, however, adapt The Shrinking Man (1956), his second sf novel, as The INCREDIBLE SHRINKING MAN (1957), which won a 1958 HUGO; indeed, he sold it to Universal only on condition that he could write the screenplay, thus gaining an entry into the film business. This novel uses an sf component to shape the story of a man who, after exposure to radiation and insecticide, begins to shrink inexorably to microscopic size (GREAT AND SMALL). RM's next major commission was for the tv series The TWILIGHT ZONE in 1959; all told, 14 of his scripts appeared in the series. In 1960 he wrote the screenplay for the first of Roger CORMAN's adaptations of horror stories by Edgar Allan POE, The House of Usher (1960; vt The Fall of the House of Usher UK), and subsequently he scripted a number of fantasy/horror films, once in collaboration with Charles BEAUMONT, for Corman and other directors: The Pit and the Pendulum (1961), Tales of Terror (1962), Night of the Eagle (1962; vt Burn Witch Burn) - based on Conjure Wife (1953; vt Burn Witch Burn 1962) by Fritz LEIBER, screenplay written with Beaumont - The Raven (1963), The Comedy of Terrors (1963), Fanatic (1965), The Devil Rides Out (1968) and De Sade (1969). His tv work has included several scripts for STAR TREK and later for ROD SERLING'S NIGHT GALLERY. He also scripted a number of made-for-tv feature films, by far the best being Duel (1971), from his own story; the film was Stephen SPIELBERG's first significant work as a director, and was given theatrical release in the UK. Others included The Night Stalker (1972) and The Night Strangler (1973) (KOLCHAK: THE NIGHT STALKER), Dying Room Only (1973), Dracula (1973), Scream of the Wolf (1974), The STRANGER WITHIN (1974) and The MARTIAN CHRONICLES (1979). His script with William F. NOLAN for the tv movie Trilogy of Terror (1975) was based on three of his own stories. Of his feature-film scripts, that for MASTER OF THE WORLD (1961) is the most obviously sciencefictional. His psychological-cum-supernatural melodrama Hell House (1971) was filmed as The Legend of Hell House (1973), again with his own screenplay. Here, too, there are borderline sf elements; indeed, RM's entire career has cross-fertilized sf with HORROR. Further volumes of stories with some sf interest are The Shores of Space (coll 1957) and Shock! (coll 1961; vt Shock I: Thirteen Tales to Thrill and Terrify 1979), though the latter volume's successors, Shock II (coll 1964), Shock III (coll 1966), Shock Waves (coll 1970) and Shock 4 (coll 1980 UK), are primarily assemblages of

fantasy stories. The 86 stories assembled in Richard Matheson: Collected Stories (coll 1989) cover his career 1950-71. A fantasy, Bid Time Return (1975; vt Somewhere in Time 1980), once again powerfully utilizes devices from sf (in this case TIME TRAVEL) in a story whose emotional satisfactions are not dependent on a successful sf resolution of the problems that arise; it was filmed as Somewhere in Time (1980) from his own script, and was later assembled with What Dreams May Come (1978) as Somewhere in Time/What Dreams May Come: Two Novels of Love and Fantasy (both texts rev, omni 1991). The latter novel, an afterlife fantasy, shares with its predecessor a carefully controlled pathos occasionally reminiscent of Robert NATHAN. Earthbound (1982 as by Logan Swanson; text restored as by RM 1989 UK) is a ghost story. RM has also written some short fiction - including "Where There's a Will" (1980) - in collaboration with his son Richard Christian MATHESON. Though RM cannot be considered as in any primary sense an sf writer, his influence as one of the "liberators" of magazine sf in the early 1950s keeps his name vividly in mind. The dominant theme in RM's work has always been PARANOIA, whether imagined in GOTHIC or in sf terms. In Duel a truck inexplicably attacks a car; in Dying Room Only a woman's husband disappears in a motel toilet but no one will believe her; though the pregnancy in The Stranger Within did not result from infidelity, that is the way it seems to the woman's sterile husband. I Am Legend (one man against a world of vampires) is, in its obsessive images of persecution, perhaps the very peak of all paranoid sf. [JC/JB/PN] Other works: A Stir of Echoes (1958); Through Channels (1989 chap); Journal of the Gun Years (1992), The Gunfight (1993), By the Gun (coll 1994) and Shadow in the Sun (1994), all Westerns; 7 Steps to Midnight (1993), a thriller. As Editor: The Twilight Zone: The Original Stories * (anth 1985), with Martin H. GREENBERG and Charles G. WAUGH. About the author: Richard Matheson: He is Legend: An Illustrated Bio-Bibliography (1984 chap) by Mark Rathbun and Graeme Flanagan. See also: BIOLOGY; DISASTER; EC COMICS; END OF THE WORLD; MONSTERS; RELIGION; ROBOTS.

MATHESON, RICHARD CHRISTIAN

(1953-) US author and (primarily) writer for film and tv, and tv producer. RCM's work has been at most only fringe sf; he is not to be confused with his father, Richard MATHESON, nor with his younger brother Chris Matheson, cowriter of the witty screenplay for BILL AND TED'S EXCELLENT ADVENTURE (1989) and its sequel Bill and Ted's Bogus Journey (1991). RCM's tv work includes scripts for The INCREDIBLE HULK and AMAZING STORIES. His first published story was "Graduation" (1977 Whispers). A collection of his short fiction, predominantly fantasy and horror, is Scars, and Other Distinguishing Marks (coll 1987; rev with teleplay "Magic Saturday" added 1988). [PN] Other works: Holiday (1988 chap); Created By (1993).

MATINEE

Film (1993). Universal. Dir Joe DANTE, screenplay Charlie Haas from a story by Jerico and Charlie Haas, starring John Goodman, Cathy Moriarty, Simon Fenton, Omri Katz and Lisa Jakub. 99 mins. Colour. Not so much an sf movie as a movie giving a cultural critique of sf movies. The setting is

Key West, Florida, during the 1962 Cuban missile crisis, when nuclear war for a time seemed imminent. Teenager Gene Loomis (Fenton) is new in town, and the son of a naval officer who has been posted to a Cuban blockade ship. A MONSTER MOVIE buff, Gene is excited by the arrival in town of exploitation movie director Lawrence Woolsey, played with tacky, genial charisma by John Goodman; Woolsey appears largely modelled on real-life film producer William Castle, and perhaps to a degree on Roger CORMAN also. Woolsey's new movie, premiering here, is Mant ("Half man! Half ant! All terror!"). The film deftly explores the paranoias and sociopolitical fears of real-life 1962, and their relationship to the paranoias of the monster movies of that time, with a lot of sharpness though no great profundity, and is intelligent and amusing throughout. We see almost twenty minutes of Mant, the film within a film, an extraordinarily accurate parody of early 1970s monster movies made by JD with great affection. The film's subject is partly the cultural cusp that was 1962, with the greater openness to experience and liberality we associate with the 1960s slowly coming into view. But the film is slightly weakened by the conservatism on display being so exaggerated as to seem more mid-1950s than 1962. [PN]

MATSON, NORMAN (HAGHEJM)

(1893-1965) US writer now best known for his completion, after the death of Thorne Smith (1893-1934), of the latter's *The Passionate Witch* (1941), capturing Smith's melancholy, mildly madcap, sentimentally erotic style very neatly. NM also wrote a sequel, *Bats in the Belfry* (1943). A film, *I Married a Witch* (1942), and the tv series *Bewitched* (1964-72) were based on the books. Earlier NM wrote a fantasy, *Flecker's Magic* (1926; vt *Enchanted Beggar* 1959), also concerning a witch, and an sf novel, *Doctor Fogg* (1929). Fogg, having constructed a radio receiver capable of listening in on other worlds and attracted the interest of a young woman who has (perhaps coincidentally) been sent via MATTER TRANSMISSION to Earth from a distant planet, falls in love with the girl while extracting messages and information from space. But, when the US Government decides it must control all these scientific findings for security reasons, he destroys his device. [JC]

MATTER TRANSMISSION

The matter transmitter is one of sf's many facilitating devices: a hypothetical machine which is not rationally plausible in terms of known science but which is very convenient for certain narrative purposes (IMAGINARY SCIENCE). By virtue of an obvious play on words, matter transmitters were sometimes called "transmats" - as in Lan WRIGHT's "Transmat" (1960) - but the contraction never really caught on. Essentially, a matter transmitter is a teleportation machine (PSI POWERS) whose plausibility is usually secured by analogies with radio. The best illustration of its narrative utility is in the tv series *STAR TREK*, in which the "transporter" not only transfers people from the Enterprise to this week's stage-set with a minimum of fuss but serves as an ever-ready deus ex machina to come to the rescue when our heroes are in a tight situation. As with other facilitating devices like the TIME MACHINE and the FASTER-THAN-LIGHT starship, however, there is a flourishing subgenre

of "what if . . . ?" stories exploring the logical corollaries of the supposition that such devices might one day exist, ranging from elementary questions like "what happens to the matter occupying the space into which you are transmitting?" to questions about the way in which routine transportation of this kind would transform society. Three Trips in Time and Space (anth 1973) ed Robert SILVERBERG presents three original novellas on this theme by Larry NIVEN, John BRUNNER and Jack VANCE; the commission for the volume intrigued Brunner sufficiently that he went on to publish two novels further exploring the possibilities - Web of Everywhere (1974) and The Infinitive of Go (1980) - while in 1973-4 Niven wrote four other stories elaborating the background of his "Flash Crowd", carrying forward ideas first broached in RINGWORLD (1970). Early stories of matter transmission include "The Man without a Body" (1877) by Edward Page MITCHELL and "Professor Vehr's Electrical Experiment" (1885) by Robert Duncan MILNE, in both of which the process is interrupted with dire consequences; a later variant of the same theme, with an additional horrific twist, is George LANGELAAN's twice-filmed "The Fly" (1957) (The FLY). Matter transmitters feature as a method of interplanetary travel in Fred T. JANE's tongue-in-cheek To Venus in Five Seconds (1897) and as a method of ore-shipping in Garrett P. SERVISS's The Moon Metal (1900), but few other authors could bring themselves to deploy the notion until the advent of the sf PULP MAGAZINES, when it was quickly added to the standard vocabulary of symbols, featuring in such stories as "The Secret of Electrical Transmission" (1922) by Clement FEZANDIE, The Radio Man (1924; 1948) by Ralph Milne FARLEY, "The Moon Menace" (1927) by Edmond HAMILTON and "The Cosmic Express" (1930) by Jack WILLIAMSON. Matter transmitters are rarely featured in work done outside the genre, although Norman MATSON's Doctor Fogg (1929) is an interesting comedy about an unexpected arrival by such means. More sophisticated versions of the Star Trek transporter can be found in various HARD-SF stories, including Poul ANDERSON's THE ENEMY STARS (1959), Harry HARRISON's One Step from Earth (fixup 1970) and Joe HALDEMAN's Mindbridge (1976). Melodramas cunningly deploying them as plot-elements include Lloyd BIGGLE's All the Colours of Darkness (1963), Philip K. DICK's The Unteleported Man (1964; 1966; exp 1982; vt Lies, Inc) and David LANGFORD's The Space Eater (1982); Langford and John Grant (Paul BARNETT) cruelly parody several aspects of matter transmission in Earthdoom! (1987). Matter transmitters function as devices facilitating the COLONIZATION OF OTHER WORLDS in Eric Frank RUSSELL's "U-Turn" (1950) and Joseph L. GREEN's The Loafers of Refuge (fixup 1965). "Buildings" whose doorways are matter transmitters and whose "rooms" are on different worlds are featured in Bob SHAW's "Aspect" (1954), Roger ZELAZNY's Today we Choose Faces (1973) and Dan SIMMONS's HYPERION (1989). The idea of a galactic culture linked by matter transmitters is soberly and memorably displayed in Clifford D. SIMAK's WAY STATION (1963). Matter transmitters which malfunction occasionally result in embarrassing duplications, as in Clifford Simak's Goblin Reservation (1968), and stories about matter duplication - classic examples include the later stories in George O. SMITH's Venus Equilateral (coll of linked stories 1947) and Damon Knight's "A for Anything" (1957; exp as The People Maker 1959; vt A for Anything UK) - may be regarded as an extension of the theme; indeed, scrupulous attempts to rationalize matter transmission

(like Niven's and Brunner's) assume that what is actually transmitted is information regarding the exact duplication of the object to be reconstituted, not actual matter, so that much so-called matter transmission is really matter duplication. In Algis BUDRYS's *ROGUE MOON* (1960) the duplication is calculated, the transmitted "clones" being continually sacrificed to the task of exploring a hazardous alien artifact. In Thomas M. DISCH's *Echo Round his Bones* (1967) ghostly duplicates, perceptible only to one another, are an unintended consequence of the use of matter transmitters. Both of these last-named stories sensitively exploit the bearing which the imaginary device has on the philosophical problem of identity. [BS/MJE]

MATTHEWS, RODNEY

(1945-) UK illustrator. RM's artwork first became popular in the mid-1970s - a period of great vigour in UK sf/fantasy illustration - when it began appearing on book covers and on the first 3 covers of the short-lived magazine *VORTEX* (1977). Bizarre, whimsical, often spiky, weirdly coloured, his art "feels" more like fantasy than sf, though it has often been used on sf books - including some from Avon in the USA - and is closely associated with the work of Michael MOORCOCK, notably in his many illustrations to Moorcock's *Elric at the End of Time* (1987). RM's fantastic animals and monsters are especially good, and his thorny cities are another trademark. He works in various media, mostly watercolour, gouache and ink; much of his work has been in the form of posters, record sleeves (several winning awards) and calendars. In the 1980s a series of RM fantasy calendars, some in very large format, featured mostly new rather than recycled paintings. Books of his work include a very complete and beautifully produced retrospective collection, *In Search of Forever* (1985) with text by Nigel Suckling, *Last Ship Home* (1989) and *The Rodney Matthews Portfolio* (1991). [PN]

MATTOTTI, LORENZO

(1954-) Italian COMIC-strip artist whose work combines Futurist and Vorticist forms with Expressionist colour. Born in Brescia, he studied architecture before turning to comics in the late 1970s, with Jose Munoz (1942-) as his mentor. With other like-minded young artists, he formed the Valvoline group to "explore the frontiers of progressive fumetti [comic strips]". His first success came with *Il signore Spartaco* ["Mr Spartaco"] (graph 1982), about a man whose dreams of his childhood fears and anxieties affect his hold on reality. LM's masterpiece is *Fuochi* ["Fires"] (1985 Alter; trans as *Feux* 1986 France; trans as *Fires* 1988 US), about a battleship visiting a magical island. The story climaxes in a furious Expressionist inferno. Other works include: *Labyrinthi* ["Labyrinths"] (graph 1989); *L'uomo alla finestra* ["The Man at the Window"] (1992), a long GRAPHIC NOVEL done in black-and-white line, written with Lilia Ambrosini; and *Murmur* (graph 1992 UK), written by Jerry Kransky. [RT]

MATURIN, CHARLES R(OBERT)

(1782-1824) Irish novelist, playwright and clergyman, the son of French Protestants in exile, who wrote several GOTHIC romances and sensational plays with intermittent success - most notably *The Fatal Revenge, or The*

Family of Montorio (1807) as by Dennis Jasper Murphy-before the publication of his definitive terror-romance, *Melmoth the Wanderer* (1820). The eponymous hero, who is reminiscent of figures from the *Wandering Jew* to Faust, has sold his soul to the Devil in return for IMMORTALITY. The novel is made up of a series of complexly linked stories concerning people in various extremities to whom Melmoth appears as tempter in his desperate attempts to find someone to accept his curse; but all refuse him, regardless of the perils under which they labour, and after a century or so Melmoth returns to Ireland, where he disappears over the edge of a cliff. Honore de BALZAC wrote a sequel, "Melmoth Reconcile" (1835; trans in coll *The Unknown Masterpiece* 1896 UK). The Penguin edition of CRM's novel (1977), ed and introduced by Alethea Hayter, is convenient and scholarly. [JC]Other work: *The Albigenses* (1824).About the author: Charles Robert Maturin: *His Life and Works* (1923) by Niilo Idman.

MAURICE, MICHAEL

Pseudonym of UK writer and clergyman Conrad Arthur Skinner (1889-?), whose sf novel *Not in Our Stars* (1923) can be forgiven its confused science - giant meteorites are supposed to cause perturbations in spacetime sufficient to reverse time's arrow for the protagonist - because of the odd intensity of the tale. Awakening in a death cell after a meteor strike, the protagonist is executed and then begins to relive his life (each day passing normally, but with him awakening each morning a day earlier) with foreknowledge of the murder he has committed/will commit in error. The end of the story is ambiguous, with some hint that, on re-entering the normal flow of time, he will be able to avoid the deed. A later novel, *Marooned* (1932), is an afterlife fantasy. [JC]

MAUROIS, ANDRE

Pseudonym of prolific French novelist and man of letters Emile Salomon Wilhelm Herzog (1885-1967), in the USA during WWII. He was best known for his romantic biographies and other nonfiction, though his first work, "La dernière histoire du monde" ["The Final History of the World"] (1903) as by Emile Herzog, was sf; later included in *Premiers contes* ["First Stories"] (coll 1935) as by AM, it was the first of his several future histories. The most interesting of these is *Le chapitre suivant* (1927 chap; trans anon as *The Next Chapter: The War Against the Moon* 1928 chap UK), which describes a war against the ostensibly uninhabited Moon concocted by a cabal of newspaper barons to provide bored mankind with an external enemy; unfortunately the Moon is indeed occupied, and retaliates. This fragment was collected in *Deux fragments d'une histoire universelle* 1992 (coll 1928) with its sequel, "Chapitre CXVIII: La vie des hommes", which appeared in English as the second of the two title stories of *The Weigher of Souls and The Earth Dwellers* (coll 1963 US); it deals with inhabitants of Uranus who fail to understand the supposedly inferior inhabitants of Earth; this appeared in the collection *Relativisme* (coll 1930; trans Hamish Miles as *A Private Universe* 1932 UK). An interesting ALTERNATE-WORLDS essay, "If Louis XVI had had an Atom of Firmness", appeared in J.C. Squire's *If, or History Rewritten* (anth 1931).AM also wrote more conventional sf narratives. *Voyage aux pays des Articoles* (1927 chap; trans David GARNETT as *A Voyage to the Island of the Articoles* 1928

chap UK) carries a man and woman to an ISLAND in whose UTOPIAN society the dominant Articole caste is made up of artists who provide the other castes with their raisons d'etre; the tale is ironic. In *Le peseur d'ames* (1931; trans Hamish Miles as *The Weigher of Souls* 1931 UK) a doctor discovers that the elan vital is a gas which escapes the body at death; his attempts to mingle in posthumous harmony with his wife are, however, frustrated. This short novel reappeared in *The Weigher of Souls* and *The Earth Dwellers*. The sf device in *La machine a lire les pensees* (1937; trans James Whitehall as *The Thought-Reading Machine* 1938 UK) is a "camera" capable of registering thoughts on photographic film. Though amiability tends to soften the bite of his morality-like tales and his reputation has faded, AM's work is nicely representative of the idiomatic ease with which sf ideas have been used in this century by MAINSTREAM WRITERS, especially in the UK and mainland Europe, as vehicles for the conveyance of satirical material. [JC/PN] Other works: *Patapoufs et filifers* (1930 chap; trans Norman Denny as *Fattypuffs and Thinifers* 1941 chap UK; vt *Patapoufs and Filifers* 1948 chap US), a juvenile parable set in an underground land, illustrated by Jean Bruller (VERCORS); *Nouveaux discours du Docteur O'Grady* (1950; trans Gerard Hopkins as *The Return of Dr O'Grady* 1951 UK); *Illusions* (1968), a speculative essay. MAX HEADROOM

UK made-for-tv film (1985); US tv series (1987-8). *Chrysalis/Channel 4* (UK); *Chrysalis/Lakeside-Lorimar Telepictures* (US). Created by Steve Roberts (screenplay) and George Stone, Annabel Jankel, Rocky Morton (story). Prod Peter Wagg, Brian Frankish, Roberts. Writers included Roberts, Philip DeGuere, Michael CASSUTT. Dirs included Rocky Morton and Annabel Jankel (UK teleplay), Farhad Mann, Tommy Lee Wallace, Thomas J. Wright, Victor Lobl, Janet Greek. Teleplay 70 mins; series ran 2 seasons, 14 50min episodes in all. Colour. There are two distinct branches of the MH tv saga, first in the UK, then in the USA. Originally the computer-generated stuttering head - played by an image-processed Matt Frewer - was created as a state-of-the-art link man for rock videos in a tv music programme, but a fictional origin had to be devised for him. Hence the 1985 made-for-tv film (originally titled *A Rebus*), in which investigative newsman Carter (Frewer) digs into a conspiracy revolving around compressed tv ads ("blipverts") that can cause sedentary viewers to explode. After an accident Carter's brain patterns are electronically duplicated to create his computerized alter ego. While this led in the UK to the planned rock-video series - plus a talkshow, advertising contracts, spin-off books and merchandise - US production company Lorimar was more impressed by the teleplay explaining Max Headroom's origin, and remade it (with small changes) as *Blipverts*, the first episode of a series. Frewer continued to play Carter and Headroom, and Amanda Pays also transferred from the UK production as Theora, Carter's computer-genius colleague.

Roberts likewise crossed the Atlantic. Although the MEDIA-dominated future world of the pilot suggested many possibilities for a CYBERPUNK-style sf thriller series, subsequent episodes were hindered by a reliance on tired ideas (gladiatorial combat, test-tube babies) that could have easily been used on LOGAN'S RUN or any other future- DYSTOPIA series, and MH lasted only 2 short seasons. In its image-dense style and media-fuelled cynicism, however, MH did introduce the trappings of cyberpunk to tv. [KN]

MAXIMUM OVERDRIVE

Stephen KING.

MAXWELL, ANN (ELIZABETH)

(1944-) US writer, also of detective thrillers as A.E. Maxwell. She began publishing work of genre interest with *Change* (1975) and *The Singer Enigma* (1976), novels which combine a somewhat overready sensitivity with sf-adventure instincts. Her *Dancer Trilogy* - *Fire Dancer* (1982), *Dancer's Luck* (1983) and *Dancer's Illusion* (1983) - is a SPACE OPERA featuring a passel of escaped slaves and a very fast starship. In *Timeshadow Rider* (1986) two superpowered siblings must join together to save the Universe. [JC]Other works: *A Dead God Dancing* (1979); *Name of a Shadow* (1980); *The Jaws of Menx* (1981). See also: SUPERMAN.

MAXWELL, JACK

Ernest L. MCKEAG.

MAXWELL, JOHN C.

John S. GLASBY.

MAY, JULIAN

(1931-) US editor and writer; married to T.E. DIKTY from 1953 to his death in 1991, founding with him *Publication Associates* in 1957 (see his entry for this and later enterprises); he also served as editor and agent for all her mature work. She began publishing sf with "Dune Roller" for ASF in 1951 but, except for some fan interests, became inactive in the field for many years, during which time, under a number of pseudonyms, she wrote something over 290 books, most of them nonfiction juveniles: many were efficient presentations of science and nature topics, others biographies. Pseudonyms of sf interest included Ian Thorne (see listing below) and Lee N. Falconer, under which name she wrote *A Gazeteer of the Hyborian World of Conan* (1977). In the 1980s JM turned her attention once again to sf, making an immediate and very substantial impact with her *Saga of Pliocene Exile: The Many-Colored Land* (1981) and *The Golden Torc* (1982), both assembled as *The Many-Colored Land ?* 1982), plus *The Nonborn King* (1983) and *The Adversary* (1984), both assembled as *The Nonborn King ?* supplemented by *The Pliocene Companion* (1984), a guide to the sequence. A second, closely linked, sequence, the *Galactic Milieu* books, began with *Intervention* (1987; vt in 2 vols *The Surveillance* 1988 and *The Metaconcert* 1988), *Jack the Bodiless* (1992) and *Diamond Mask* (1994), with further volumes projected. Underlying the increasingly complicated storyline of the former sequence is what might be called a romance of vista: the protagonists have fled via TIME TRAVEL from a 22nd century where they have lived as internal exiles into deep prehistory, where at the bottom of time

they discover not only a land rich in potential but two apparently ALIEN species in a state of deadly conflict over the young world. Much additional material, from Celtic myths to intimations of HARD SF, is fed into this vision, with an effect of romance and high purpose, leavened intermittently by a Trickster protagonist or two. With Intervention the overall sequence moves into contemporary times, the narrative being charged by this point with dramatic irons in the fire and ironies galore, as well as a sustaining concern with the attractive theme of psychic evolution, as concentrated in a family of special folk and expressed in a manner sometimes evocative of the work of Doris LESSING. [JC]Other works: Black Trillium (1990) with Marion Zimmer BRADLEY and Andre NORTON. Juveniles as Ian Thorne: Frankenstein * (1977 chap), film tie; Godzilla (1977 chap), nonfiction; Dracula * (1977 chap), film tie; King Kong (1977 chap), nonfiction; Mad Scientists (1977 chap), nonfiction; The Wolf Man * (1977 chap), film tie; The Mummy * (1981 chap), film tie; Frankenstein Meets Wolfman * (1981 chap), film tie; Creature from the Black Lagoon * (1981 chap), film tie; The Blob * (1982 chap), film tie; The Deadly Mantis * (1982 chap), film tie; It Came from Outer Space * (1982 chap), film tie. About the author: The Work of Julian May: An Annotated Bibliography ? REGINALD.

MAYAKOVSKY, VLADIMIR (VLADIMIROVICH)
(1893-1930) Russian poet and playwright, a revolutionary from early years, a Futurist poet whose verse radically shocked post-Revolution RUSSIA. Of particular sf interest is his first fully fledged prose SATIRICAL play, Klop (1929; trans Guy Daniels as The Bedbug in The Complete Plays of Vladimir Mayakovsky [coll 1968 US]), in which, some generations hence, a Soviet bureaucrat is kept in a zoo as a curious example. Banya (1930; trans Guy Daniels in the same 1968 volume), set in the contemporary USSR, employs a similar array of satirical tools. These two plays were sufficiently sharp in their criticism of the blandness of Soviet ideas that a good deal of official criticism descended on VM's head. [JC]See also: THEATRE.

MAYHAR, ARDATH
(1930-) US writer who began publishing poetry in the 1940s and who wrote historicals and Westerns as Frank Cannon and other non-sf/fantasy books as John Killdeer and Sarah MacWilliams. She began publishing sf/fantasy with "The Cat with the Sapphire Eyes" for Weirdbook #8 in 1973; she integrated this tale into the second volume of her Kyrannon sequence, which comprises her first novel, How the Gods Wove in Kyrannon (1979), and The Seekers of Shar-Nuhn (1980). Like much of her work, this sequence makes use of the instruments of SCIENCE FANTASY - specifically, magical devices and powers which are justified by recourse to "scientific" explanations, generally rooted in the past - to heighten tales whose protagonists, often adolescent girls, exhibit a goodness which is sometimes shining. In the Kyrannon books, folk of transparent decency must resist a tyrant whose disruptive influence threatens to sour the harmony between human beings and Nature. The most sf-like of her subsequent novels are Khi to Freedom (1983), Golden Dream (1983), Exile on Vlahil (1984), which elaborately and

effectively describes life upon the eponymous planet, *The World Ends in Hickory Hollow* (1985), *Trail of the Seahawks* * (1987) with Ron Fortier, a game tie, *A Place of Silver Silence* (1988), a First-Contact tale for a younger audience, and *Monkey Station* * (1989) with Fortier (APES AND CAVEMEN). This last novel, in which monkeys are dubiously granted INTELLIGENCE and the power of speech as the by-product of a plague, is the first of a projected series of game tie-ins. AM's work has been compared to that of Andre NORTON, with which it shares transparent story-telling and a sense of moral certainty. [JC]Other works: *The Tyrnos fantasies*, being *Soul-Singer of Tyrnos* (1981) and *The Runes of the Lyre* (1982); *Golden Dream: A Fuzzy Odyssey* * (1982), continuing the H. Beam PIPER series; *Warlock's Gift* (1982); *Lords of the Triple Moons* (1983); *The Saga of Grittel Sundotha* (1985); *Makra Choria* (1987); *BattleTech: The Sword and the Dagger* * (1987), a game tie; *The Wall* (1987), horror; *People of the Mesa* (1992), prehistoric fantasy.

MAYNARD, RICHARD (JOHN)

(1926-) UK-born writer, resident in Australia, whose *The Coconut Book* (1985) is of some interest. *The Quiet Place* (1988; vt *The Return* 1988 US) rather overcomplicatedly describes the return to Earth of a group of astronauts long years after the planet has mysteriously reverted to savagery. There is some SEX between the descending males and the females who need them. [JC]

MAYNE, WILLIAM (JAMES CARTER)

(1928-) UK author of nearly 100 children's books. These are sometimes realistic, sometimes - especially his later work - fantastic; the fantasies, however, are treated in so down-to-earth a manner that more often than not they naturalize the supernatural. His style, which is sophisticated and sometimes oblique, is found difficult by some children; others love him, as do the many critics who see WM as perhaps the most distinguished living UK writer of children's fiction, regardless of genre. His first book was *Follow the Footprints* (1953), the earliest of the many treasure-hunt stories he was to write. WM has written very little pure sf, and even *Earthfasts* (1966), his book most commonly spoken of in an sf context, is as much FANTASY as sf in its fine tale of an 18th-century drummer boy emerging from a present-day mound and being befriended by a sceptical youth who feels impelled to interpret this and other fantastic intrusions in scientific terms. The actual sf story *Skiffy* (1972) and its sequel *Skiffy and the Twin Planets* (1982), for rather younger children, while interesting - especially the latter - are not the equal of his best work. WM's fiction typically (in a great variety of ways) depicts the past impinging on the present, often as a kind of mystery to be decoded; his work tends to climax in epiphanies where a chaotic present day is suddenly illuminated in this way; some of his books feature psychic TIME TRAVEL and ESP. His young-adult fiction is adult in every sense except the youthful consciousnesses of its protagonists, and deserves wider currency among the adult readership. Among WM's most highly regarded books, mostly for older children, all of them containing fantastic elements (some very obviously, some crucially but near-invisibly) are *A Grass Rope* (1957), *The Glass Ball* (1961), *Over the Hills and Far Away* (1968; vt *The Hill Road* 1969 US), A

Game of Dark (1971), The Jersey Shore (1973), A Year and a Day (1976), IT (1977), All the King's Men (coll 1982), Gideon Ahoy (1987), Antar and the Eagles (1989), The Farm That Ran Out of Names (1990 chap) and Low Tide (1992). Some books written ostensibly for younger children - like The Book of Hob Stories (omni 1991), which assembles four earlier pamphlets: The Blue Book of Hob Stories (coll 1984 chap), The Green Book of Hob Stories (coll 1984 chap), The Red Book of Hob Stories (coll 1984 chap) and The Yellow Book of Hob Stories (coll 1984 chap), followed by Hob and the Goblins (1993); and The Blemyah Stories (coll 1987) - are no more conventional children's literature than is the late work of Alan GARNER. [PN]See also: CHILDREN'S SF.

MAYUMURA, TAKU
[r] JAPAN.

MEACHAM, BETH
(1951-) US writer and editor who worked first as an sf bookseller before joining ACE BOOKS in 1981, where she developed the careers of Greg BEAR, Orson Scott CARD and Tim POWERS, among others; she also discovered James P. BLAYLOCK and oversaw the revived Ace SF Specials. She left Ace for TOR BOOKS in 1984, where as head of sf and fantasy she supervised the company's unusually large sf editorial staff and worked with authors like Card, Kim Stanley ROBINSON and Walter Jon WILLIAMS. In 1989 she resigned as editor-in-chief to become executive editor with a general acquisition brief. With her husband, Tappan King (1950-), she wrote Nightshade * (1976), a novel in the Weird Heroes sequence. She collaborated with Wayne BARLOWE and Ian Summers on Barlowe's Guide to Extraterrestrials (1979; rev 1987), and with Summers and Vincent DI FATE on Di Fate's Catalog of Science Fiction Hardware (1980). With Baird SEARLES, Martin Last and Michael Franklin she wrote A Reader's Guide to Science Fiction (1979), and with Searles and Franklin A Reader's Guide to Fantasy (1982). She is perhaps best known to the reading public for editing Terry's Universe (anth 1988), an original anthology in memory of Terry CARR. [PNH]

MEAD, HAROLD (CHARLES HUGH)
(1910-) UK writer. The first and better known of his sf novels, The Bright Phoenix (1955), is a sombrely told post- HOLOCAUST tale in which a reestablished but overregimented human culture tries unsuccessfully to reinhabit abandoned parts of the Earth; it ends a little sentimentally with a Second Coming. The other, Mary's Country (1957), tells of the quest of a group of children - most of whose social peers have been killed by plague - for a perfect society. [JC]

MEAD, SHEPHERD
Working name of US author (resident in Switzerland) Edward Mead (1914-), who has been active in various genres. SATIRE and comedy combine in most of his works, including his sf and fantasy novels: The Magnificent MacInnes (1949; vt The Sex Machine 1950), in which consumer society is satirized through the story of an electronic device that can predict personal preferences; The Big Ball of Wax (1954), in which Madison Avenue techniques are applied to corrupt a device that permits people to enter vicariously into the lives of others, a technique whose potential for good

is subverted into a kind of feelie; and *The Carefully Considered Rape of the World* (1966), in which ALIENS artificially inseminate Earth females. SM worked in advertising before turning to writing, and his experience was put to good use not only in *The Big Ball of Wax*, the most interesting of his sf novels, but also in his best-known work (not sf), *How to Succeed in Business Without Really Trying* (1952), for the staged version of which he shared a Pulitzer Prize and a Tony. [JC/PN] See also: LEISURE; MEDIA LANDSCAPE.

MEDIA LANDSCAPE

The degree to which COMMUNICATIONS technology (and foreseeable future extensions of it) was replacing the natural world with a "media landscape" was scarcely noticed until the 1950s. Coined to denote a world dominated by the images of advertising and the popular arts (among which sf images, especially the iconography of movies and magazine covers, loomed large), the phrase was initially used to describe the obsessions of Pop artists and media critics such as Eduardo Paolozzi (1924-), Andy Warhol (1930-1987), Marshall McLuhan (1911-1980) and Rayner Banham (1922-1988). The phrase, and indeed the idea underlying it, may seem quaint today; but with the benefit of hindsight we can see how the notion of the media landscape so popular in the 1960s and 1970s progressed naturally, through both developments in technology and the expansion of what human beings were prepared to conceive as feasible, to the VIRTUAL REALITY of the 1980s (in speculation) and 1990s (in fact). Of course, the media landscape was there before the 1950s, and sf had reflected it in various ways. The idea that the media can be used to manipulate people had long been extant. In George ORWELL's *NINETEEN EIGHTY-FOUR* (1949) this theme takes a directly political form: the media are represented not only by the ubiquitous posters of "Big Brother" but also by the "telescreens" which act as two-way channels for propaganda and surveillance. Similar political use of the media has featured frequently in sf; examples are in Ray BRADBURY's *FAHRENHEIT 451* (1953), Kurt VONNEGUT's "Harrison Bergeron" (1961) and Philip K. DICK's *The Penultimate Truth* (1964). More often, sf has portrayed future societies controlled by the media in more oblique ways. McLuhan's *The Mechanical Bride* (1951), a book about the psychological subtleties of advertising, contains a passing tribute to Fritz LEIBER, whose "The Girl with the Hungry Eyes" (1949) is about exploitation of the female image by ad-men. Leiber returned to the theme of advertising - a major theme in 1950s sf - in *The Green Millennium* (1953), set in a future when the walls of private apartments are lined with ads. Frederik POHL's and C.M. KORNBLUTH's *THE SPACE MERCHANTS* (1953) is a more extended satire on the all-powerful admen; Pohl's much later solo sequel, *The Merchants' War* (1984), seemed an anachronism. Other 1950s stories about advertising include Pohl's "The Tunnel Under the World" (1954), Shepherd MEAD's *The Big Ball of Wax* (1954) and (in part) Dick's *The Simulacra* (1964). Daniel F. GALOUYE's *Counterfeit World* (1964 UK; vt *Simulacron-3* 1964 US) is about a society which turns out to be a computer simulation generated for purposes of market research; many of Ron GOULART's stories satirize advertising techniques. Manipulation to the extent that one suspects that one's very reality is a fiction (PARANOIA) can give rise to a belief in the "new demonology" - the idea that the artificial landscape has alien

inhabitants with evil powers. Literal treatments of "demons" taking over the media include "Ether Breather" (1939) by Theodore STURGEON and "The Waveries" (1945) by Fredric BROWN, both stories about creatures which inhabit the airwaves, tampering with our communications. The writer who took the new demonology most seriously was William S. BURROUGHS; in *The Ticket that Exploded* (1962; rev 1967) and *Nova Express* (1964) he showed the human race at the mercy of the "Nova Mob" and other alien parasites who used the media (and drugs) as their means of control. Burroughs asserted that life was "a biologic film" and that the purpose of his writing was to help us break out of the "stale movie" into the "gray room" of silence. This is not entirely different from the wishful conservatism of Brown's "The Waveries", in which the USA abandons electricity and reverts to a rural economy. Barrington J. BAYLEY's "An Overload" (1973) is about computer-generated demons who adopt the personage of gangster-movie stars. Not all media-men are demons, however, and some stories deal with those who attempt to use their power to good effect. Norman SPINRAD's *BUG JACK BARRON* (1969) concerns the compere of a phone-in chat-show in the 1980s who finds himself in a position to challenge the political and industrial powers that be. Most of the action actually takes place "on the air", before an audience of millions, making this a novel set almost entirely within the media landscape. Spinrad returns to this area in several of the stories in *No Direction Home* (coll 1975), and, much later, in *Little Heroes* (1987), an sf novel about the music business in a dystopian urban world. Several of Dick's novels deal with media-men, such as *Dr Bloodmoney*, or *How We Got Along After the Bomb* (1965), in which a post- HOLOCAUST world is held together by a disc-jockey's broadcasts from an orbital satellite, and *Flow My Tears, the Policeman Said* (1974), in which a famous tv personality is thrust into a world where nobody recognizes him. Algis BUDRYS's *Michaelmas* (1977) concerns a roving newsman who, through a secret COMPUTER link-up, is in fact the benevolent dictator of the world. One of the ways in which the media create news is by invading the privacy of individuals in order to gratify the curiosity of others. D. G. COMPTON's *The Continuous Katherine Mortenhoe* (1974; rev vt *The Unsleeping Eye* 1974 US; vt *Death Watch* 1981 UK) is about a tv-man with "camera eyes" who follows a dying woman in order to record her last indignities for the entertainment of a mass audience; at the climax the ethically awakened reporter elects to become blind. The story is continued in *Windows* (1979 US). Many other tales deal with pornography, violence and vicarious suffering; e.g., Arthur C. CLARKE's "I Remember Babylon" (1960), Robert SILVERBERG's "The Pain Peddlers" (1963) and *Thorns* (1967), Robert SHECKLEY's "The Prize of Peril" (1958), Dan MORGAN's *The Richest Corpse in Show Business* (1966) and Brian STABLEFORD's *The Mind-Riders* (1976). A particularly gruesome example is Christopher PRIEST's "The Head and the Hand" (1972), in which a tv entertainer has his limbs amputated and climaxes his "act" with his decapitation. Anything is grist to the media mill, from violence to TIME TRAVEL: McLuhan's "global village" extending through time as well as space. This has been dramatized in sf stories in which the media literally invade the past in search of material. Isaac ASIMOV's "The Dead Past" (1956) features a woman obsessed with watching her dead child on the "chronoscope", Harry HARRISON's *The Technicolor Time Machine* (1967) is a humorous treatment of a film crew's adventures in

history, and J.G. BALLARD's "The Greatest Television Show on Earth" (1972) is a satire on the tv companies' attempts to film such events as the parting of the Red Sea "live". These sf exaggerations point up the extent to which the media have brought about *la societe du spectacle*. In such stories as Ballard's "The Subliminal Man" (1963), in which vast hoardings are erected alongside motorways to flash subliminal messages into drivers' brains, even the unconscious is annexed by the media landscape. Of course, manipulation of the desires of the unconscious has long been recognized as part of advertising, and the media use a complex language of signs in order to speak to it. Semiotics, as applied to popular culture by Roland Barthes (1915-1980) in his *Mythologies* (1957; trans 1972), testifies to this. All human creations are, in a sense, media of communication, since they are coded with latent "messages"-particularly such everyday things as architecture, furniture, clothing and vehicles. This is the conceptual territory that Ballard has made very much his own, particularly in the "condensed novels" collected in *THE ATROCITY EXHIBITION* (1970; vt Love and Napalm: Export USA 1972 US; rev 1990 US). In these nonlinear stories he juxtaposes elements of the media landscape of the 1960s, from the architecture of motorways and multistorey car parks to the bodies of Marilyn Monroe and Elizabeth Taylor, from the styling of cars and kitchen gadgets to the televised violence of Vietnam and President Kennedy's assassination. He blends these external "facts" with the private memories and fantasies of his characters, and with the neutral language of medical reports and astronomical data. *THE ATROCITY EXHIBITION* is a selfconscious book (Ballard has been much influenced by the Pop artists) but it is the most sustained attempt in sf to deal with the media landscape and its massive influence on all our lives. Later Ballard stories have also dealt with the media, such as "The Intensive Care Unit" (1977), which concerns a society in which marriage and family life are conducted entirely by tv: nobody ever meets anyone else in the flesh. Other sf works which have to some extent been influenced by McLuhan and the ideas about the media which became fashionable in the 1960s include John BRUNNER's *Stand on Zanzibar* (1968), Dean R. KOONTZ's *The Fall of the Dream Machine* (1969), Michael MOORCOCK's Jerry Cornelius novels, John T. SLADEK's *The Muller-Fokker Effect* (1970), J-M. LE CLEZIO's *Les Geants* (1973; trans as *The Giants* 1975) and Barry N. MALZBERG's *The Destruction of the Temple* (1974). "The Girl who was Plugged In" (1973) by James TIPTREE Jr is a savage story about the creation of a jet-set member of "the beautiful people" for purposes of advertising; in reality the woman is an ANDROID with no independent intelligence, controlled through the nervous system of a horribly exploited "ugly duckling". The language of the story cleverly reflects the chill of a society whose cruelties are largely unconscious and affectless. About the end of the 1970s traditional sf about the media seemed to wither away almost overnight: during the 1980s harsh satires about the world of admen, once almost commonplace, became scarce (although some of sf's satirical spleen transferred itself to the closely related field of rock MUSIC in search of new media targets). One or two films - such as *Le PRIX DU DANGER* (1983), based on Sheckley's "The Prize of Peril", and the very similar *The RUNNING MAN* (1987), based on *The Running Man* (1982) by Richard Bachman (Stephen KING) - focused on the theme of social violence institutionalized by tv game-shows, but they looked

curiously old-fashioned. The best sf media (or anti-media) films of the 1980s were John CARPENTER's *THEY LIVE* (1988) and David CRONENBERG's *VIDEODROME* (1982), especially the latter - but perhaps more typical of the new attitude towards the media was *BLADE RUNNER* (1982), where the vast, seductively moving advertising hoardings form a ubiquitous and insinuating backdrop - but nevertheless a backdrop, against which the story proper is played. In general, what happened in the 1980s was that sf about the media became more fascinated with potential real futures than with satirical ones. Stories like *The Space Merchants* were never intended to be serious predictions of a possible tomorrow: they exaggerated aspects of the present in order to comment upon, not the future, but that present itself. By the 1980s sf writers were becoming aware that the communications of the future would be qualitatively quite different from those of the present, and they threw themselves into the virgin speculative territory with abandon. The theme of the media became absorbed into the broader theme of a wired-up world, with the media being seen as only a part of a vision of vast communications networks of such complexity as to be almost autonomous, out of control - a vision of a world in which humans could (perilously) swim but which they could not repudiate. In short, the media-landscape story was supplanted by *CYBERPUNK*, with its focus on *VIRTUAL REALITY* (further relevant stories are discussed under both those headings). This was a logical development, for the entertainment industry has always been hell-bent (as many of the earlier sf writers realized) on creating virtual realities - if primitive ones - for its captive audiences to occupy, and the cyberpunk writers simply envisaged the technologies that would develop from, at least in part, this very phenomenon. Of course, many such stories contain direct comments on the media world, as in William GIBSON's *Mona Lisa Overdrive* (1988), one of whose four protagonists is a "stim" star for Sense-Net, the giant entertainment corporation which prepares virtual-reality scenarios of impossible glamour into which the proletariat can tune and which, for a time, they can inhabit. It is this kind of engulfing media future that now preoccupies sf. [DP/PN]

MEDICINE

Medical applications of *TECHNOLOGY* comprise one of the few areas where the cutting edge of scientific research impinges directly and intimately upon ordinary human life. New medicines are so rapidly brought into everyday use that it is easy to forget how rapid progress has been, and that barely 100 years separates us from the crucial *CONCEPTUAL BREAKTHROUGHS* associated with the development of organic chemistry and the germ theory enunciated by Louis Pasteur (1822-1895). Even people who can find little else to say in favour of science and technology (*ANTI-INTELLECTUALISM IN SF*) are usually grateful for the benefits of scientific medicine, although the rapid recent growth of "alternative medicine" has shown that even this gratitude has its limits. So urgent is the human need for better medicine that the field has always been home to legions of quacks and charlatans offering hopeful panaceas for all ills (*PSEUDO-SCIENCE*); the literary imagination has inevitably reflected and magnified these hopes in fantasies of resurrection, rejuvenation and *IMMORTALITY* - usually couched, of course, as cautionary tales - and the

ideative apparatus of sf has been promiscuously deployed in stories of these types. Medical researchers and their endeavours have been objects of central concern in sf ever since Mary SHELLEY's *Frankenstein, or The Modern Prometheus* (1818; rev 1831). Because of the urgency with which medical matters concern us, plots involving new cures (and, of course, new diseases) have an inbuilt dramatic quality which readily recommends them to speculative writers inside and outside the genre. Thanks to writers like Robin COOK one can today recognize a subgenre of "medical thrillers" whose products very often stray over the sf borderline. Several notable sf writers have been MDs, including Michael BLUMLEIN, Miles J. BREUER, Michael CRICHTON, Arthur Conan DOYLE, David H. KELLER and Alan E. NOURSE. M.P. SHIEL and J.G. BALLARD both studied medicine for a while; although neither graduated, the influence of their studies is indelibly marked on much of their work. Early US sf is replete with what one might call, after the example of Oliver Wendell Holmes, "medicated novels", mostly dealing with mental aberration (PSYCHOLOGY) or the increasingly problematic question of the precise relationship between body and soul. Bizarre medical experiments are described in such early works as Nathaniel HAWTHORNE's "Rappaccini's Daughter" (1844) and Edgar Allan POE's "The Facts in the Case of M. Valdemar" (1845). It was, however, UK writers who took up such themes more boldly in the latter half of the 19th century, in such novels as Robert Louis STEVENSON's *Strange Case of Dr Jekyll and Mr Hyde* (1886) and H.G. WELLS's *The Island of Dr Moreau* (1896). In keeping with the traditions of the day, these experiments almost always go wrong, usually horribly. Even techniques which have since become realized, to the evident betterment of the human condition - organ transplantation, chemical contraception and medical cyborgization (CYBORGS) - were frequently deployed by early sf writers in vivid horror stories or contes cruels. Brain surgery offered considerable melodramatic scope to the writer of medical horror stories, exploited to the full in W.C. Morrow's "The Monster-Maker" (1887) and S. Fowler WRIGHT's "Brain" (1932), as did stories of radiation-treatment gone awry (MUTANTS). Even Sir Ronald Ross (1857-1932), who received the Nobel Prize for his work on malaria, deployed his expert knowledge thus in his only sf story, "The Vivisector Vivisected" (written c1889; 1932). One can also identify a small-scale subgenre of "medical nightmare" stories involving hallucinations - usually vividly gruesome ones - suffered under anaesthetic; these run from Wells's "Under the Knife" (1897) to Neil BELL's *Death Rocks the Cradle* (1933 as by Paul Martens). Much modern sf continues this pessimistic tradition. C.M. KORNBLUTH's tale of the use and abuse of medical equipment timeslipped from the future, "The Little Black Bag" (1950), is one of the most famous sf contes cruels, and Daniel KEYES's classic *FLOWERS FOR ALGERNON* (1957; exp 1966) is a tragedy of unparalleled poignancy. Bernard WOLFE's *LIMBO* (1952) recruits medical technology to put an ironic twist on the idea of disarmament. Walter M. MILLER's "Blood Bank" (1952), William TENN's "Down Among the Dead Men" (1954), Cordwainer SMITH's "A Planet Named Shayol" (1961) and Larry NIVEN's "The Organleggers" (1969) are other stories in a vividly dark vein. *Caduceus Wild* (1959; 1978) by Ward MOORE and Robert Bradford, in which doctors run the world, is as DYSTOPIAN as other contemporary stories in which some special-interest group has become dominant; James E. GUNN's *The Immortals* (1955-60; fixup 1962) is similarly

but more thoughtfully downbeat, while such Alan E. Nourse novels as *The Mercy Men* (1968; rev from *A Man Obsessed* 1955) and *The Bladerunner* (1974) deploy dystopian imagery in a carefully ambivalent fashion. The tradition continues into recent times in such novels as *Dr Adder* (1984) by K.W. JETER, *Resurrection, Inc.* (1988) by Kevin J. ANDERSON, *The Child Garden* (1989) by Geoff RYMAN, *Body Mortgage* (1989) by Richard ENGLING and *Crygender* (1992) by Thomas T. THOMAS. Linked to the horror-story tradition of accounts of misfired medical experiments is a much less prolific comic tradition, in which things go wrong with rather less awful consequences; Wells' "The Stolen Bacillus" (1895) is an early example. The proposal by the Russian physiologist Serge Voronoff (1866-1951) that testosterone generated by transplanted monkey-testicles might "rejuvenate" ageing men inspired some sf black comedies, including Bertram GAYTON's *The Gland Stealers* (1922); a farcical film on a similar theme was *MONKEY BUSINESS* (1952). A modern black comedy of medical chicanery is Joe HALDEMAN's *Buying Time* (1989; vt *The Long Habit of Living* 1989 UK). Like Raymond Hawkey's thriller *Side-Effect* (1979), the latter assumes that medical miracles might well be reserved by their creators for the favoured few, extrapolating the old medical adage that the best specialism is diseases of the very rich. The Great Plague Story, memorably featured in Mary Shelley's *The Last Man* (1826) and Jack LONDON's *The Scarlet Plague* (1912; 1915), remains a melodramatic staple of the DISASTER story. Notable examples of stories whose main focus is on the medical effort to counter or control such plagues include *Cry Plague!* (1953 dos) by Theodore S. Drachman MD, *The Darkest of Nights* (1962; vt *Survival Margin* US) by Charles Eric MAINE, *Plague from Space* (1965; vt *The Jupiter Legacy*) by Harry HARRISON, *The Andromeda Strain* (1969) by Michael Crichton, *Time of the Fourth Horseman* (1976) by Chelsea Quinn YARBRO and *Disposable People* (1980) by Marshall Goldberg MD and Kenneth Kay. Interesting stories of plagues which bring ambiguous benefits as well as posing threats include Walter M. Miller's "Dark Benediction" (1951), Octavia E. BUTLER's *Clay's Ark* (1984) and Greg BEAR's *BLOOD MUSIC* (1985). The newest real-world plague, AIDS, has called forth a rapid response in the sf field; Dan SIMMONS's *Children of the Night* (1992) features the notion that a cure might be found in vampires' blood. Extravagant stories of medical responses to AIDS include F.M. BUSBY's *The Breeds of Man* (1988), Thomas M. DISCH's *The MD: A Horror Story* (1991) and Norman SPINRAD's "Journals of the Plague Years" (1988). A much more positive image of medical science is seen in stories in which doctors struggle to understand and solve exotic problems which arise with respect to the interaction between humans and ALIENS. There are two particularly notable sf series of this kind: Murray LEINSTER's *Med Service* series (1957-66) and James WHITE's ongoing *Sector General* series (begun 1957). L. Ron HUBBARD's earlier *Ole Doc Methuselah* series (1947-50; coll 1970) is unfortunately weakened by the eponymous hero's interest in eccentric theories. White's series is especially interesting by virtue of the warmly liberal humanism of its attitude towards aliens - gracefully making a point which is much more laboured in Piers ANTHONY's sitcom-like series about an interplanetary dentist, *Prosth Plus* (fixup 1971) - although White can also function effectively in the medical horror/thriller vein, as in *Underkill* (1979). Alan E. Nourse's *Star Surgeon* (1960) is a notable juvenile sf novel cast in the

earnest and constructive mould. These stories of fairly ordinary people tackling localized problems tend to be more interesting than tales in which the discovery of a panacea promises an instant end to all ills, although some such stories can be effective; examples include S. Fowler Wright's "The Rat" (1929), Charles L. HARNESS's *The Catalyst* (1980) and Kate WILHELM's rather ambivalent *Welcome, Chaos* (1983). A theme anthology is *Great Science Fiction about Doctors* (anth 1963) ed Groff CONKLIN and Noah D. Fabricant MD. [BS/JSc]

MEDIEVAL SOCIETIES

CONCEPTUAL BREAKTHROUGH; HOLOCAUST AND AFTER; MAGIC; POLITICS; SWORD AND SORCERY.

MEEK, [Colonel] S(TERNER St) P(AUL)

(1894-1972) US Army ordnance officer and writer, active for about a decade in the US PULP MAGAZINES after the publication of his first story, "The Murgatroyd Experiments" for *AMZ Quarterly* in 1929. Many of his stories are in a series featuring Doctor Bird and Operative Carnes, running from "The Cave of Horror" (1930) to "Vanishing Gold" (1932); they have not been collected in book form. *The Monkeys Have No Tails in Zamboanga* (coll 1935) assembles a series of sf tall tales; some are amusing. Of several novels published in magazine form, only two LOST-WORLD tales about survivors of ATLANTIS, *The Drums of Tapajos* (1930 *AMZ*; 1961) and its sequel *Troyana* (1932 *AMZ*; rev 1961), reached book form. [JC]Other work: *Arctic Bride* (coll 1944 chap UK). See also: ASTOUNDING SCIENCE-FICTION; GREAT AND SMALL.

MEET THE APPLLEGATES

Film (1990). New World/Cinamarque. Dir Michael Lehmann, starring Ed Begley Jr, Stockard Channing, Bobby Jacoby, Cami Cooper, Dabney Coleman. Screenplay Redbeard Simmons, Lehmann. 89 mins. Colour. In this sf/fantasy SATIRE, a group of shapeshifting giant insects from the South American rainforest, disturbed at humanity's destruction of their domain, disguise themselves as human and infiltrate a small US town, where they plan to get revenge by causing a nuclear meltdown at the local power plant. Their knowledge of human life being gleaned largely from Dick and Jane books, they begin as apparently stereotyped upright citizens, but are soon corrupted by US society, becoming a secretary-screwing husband, a consumer-product-obsessed shoplifting wife, a pregnant radical lesbian feminist daughter and a dope-smoking son. MTA is witty and pointed, but stops this side of hilarious because its affability dilutes the savagery to which it appears to aspire. [PN] See also: MONSTER MOVIES.

MEGAVILLE

Film (1990). White Noise/Heritage. Dir Peter Lehner, starring Billy Zane, J.C. Quinn, Grace Zabriskie, Kristen Cloke, Daniel J. Travanti, Stefan Gierasch. Screenplay Lehner, Gordon Chavis. 95 mins. Colour. An impressive but very low-budget picture, updating some of the feel of Jean-Luc Godard's *ALPHAVILLE* (1965) in its vision of a transformed future USA (played oddly but effectively by present-day Switzerland) divided into independent zones. The disguised hero (Zane) is sent from his puritanical

homeland, where the electronic MEDIA are outlawed, by a dying "Big Brother" figure (Travanti) into the wide open city of Megaville, where corrupting entertainments like tv are still available, to search for a device that enables the user to experience the recorded consciousness of another person. As in TOTAL RECALL (1990) the hero is gradually led to question his own identity, in this case coming to wonder whether he is indeed the criminal he is supposed to be impersonating. M is a bleak and cynical film, with a supporting cast of well played sinister characters.

MELIES, GEORGES
(1861-1938) French film pioneer. A natural showman, GM began his theatrical career as a conjurer, designing his own trick gadgets. In 1888 his wealthy family provided him with the finances to buy the Theatre Robert-Houdin, and his magic shows there became famous. In 1896, inspired by the Lumiere brothers, he acquired a motion-picture camera and began making his own short films. He realized the medium's potential for creating illusions, and was soon producing many films utilizing trick photography as well as the stage effects built into his theatre. His most successful period was 1897-1902. It was in 1902 that he made Le VOYAGE DANS LA LUNE , which is regarded as the first sf movie epic (21 mins long, at a time when 5min movies were the norm). His work was popular in many countries, but even by 1904, when he made Le VOYAGE A TRAVERS L'IMPOSSIBLE , audiences were requiring more than just trick films. By 1913 he was forced out of business. During WWI many of the negatives of his films were destroyed, and much of his work was lost forever. He enjoyed a comeback in the late 1920s when his surviving films were rediscovered by the French intellectuals of the period. He died with the satisfaction of being recognized as one of the CINEMA's true innovators; he had pioneered many of the techniques on which all subsequent sf cinema has been based. He has also been claimed, retrospectively, as a Surrealist pioneer, but the truth is that his emphasis on mere trickery (and also his use of what was in effect a proscenium arch, so that all action is seen as if it is stage action witnessed from the seats of a theatre) is a long way removed from art; not only does it seem crude now but, after the novelty had worn off,

it quickly came to seem crude then. [JB/PN]

MELLA, JOHN

(? -) US writer whose *Transformations* (fixup 1975) is an ALTERNATE-WORLD tale about the quest for a transvestite actor; it is set in a 19th-and 20th-century USA and Europe transfigured by time (the narrator, WS or William Shakespeare, does not die until a movable 1916) and geography (the two continents have been arbitrarily merged, and are haunted by Hollywood). A FABULATION dense with quotations - from authors extending from Shakespeare himself through Jonathan SWIFT, VILLIERS DE L'ISLE ADAM and W.B. Yeats (1865-1939) down to the Vladimir NABOKOV of *Pale Fire* (1962) and *Ada*(1969)-*Transformations* also has clear affinities to the 1970s Jerry Cornelius novels by Michael MOORCOCK, and JM's tale presages 1980s literary sf by writers like Angela CARTER, Steve ERICKSON and David THOMSON. Most significantly for sf, perhaps, is the similarity between JM's vision of the UK - a dark, labyrinth-riddled land, half antique, half transformed by extraordinary inventions - and that typically presented by the writers of STEAMPUNK. [JC]

MELTZER, DAVID

(1937-) US poet and novelist whose sf is almost entirely restricted to two sequences of erotic novels published by ESSEX HOUSE at the end of the 1960s, though he published a very few stories earlier. The first sequence, the Agency series - *The Agency* (1968), *The Agent* (1968) and *How Many Blocks in the Pile?* (1969) - is a remarkably savage SATIRE of a NEAR-FUTURE USA through a plot whose erotic nature (a young man is indoctrinated by the eponymous organization into sexual slavery, and himself becomes an agent for his masters) can readily be seen as a metaphor illustrating the nature of post-industrial society. This vision is even more sharply focused in the Brain Plant sequence - comprising *Brain Plant #1: Lovely* (1969), *#2: Healer* (1969), *#3: Out* (1969) and *#4: Glue Factory* (1969) - in which cartoonlike characters ricochet surreally through a disjointed USA in a pre-programmed search for theme-park SEX, while the secret masters - in this case the military-industrial complex - rule on. Most of DM's work, from his first book, *Poems* (coll 1957 chap), has been poetry, and he can be seen as a very late member of the Beat Generation; his roots in that tradition help make clear the intersection of erotic excess and political protest in his work. [JC]

MELUCH, R(EBECCA) M.

(1956-) US writer whose first novel, *Sovereign* (1979), shows a competent grasp of the conventions and venues of sf adventure while at the same time refracting traditional material through an unusually complex protagonist, who is the genetically precarious culmination of a breeding programme haunted by the continuing image of his first enemy: his own father. There are, perhaps, too many additional enemies for plausibility - as the protagonist defeats them all, whether on Earth, on his own planet or in space - but the relative inwardness of the tale is convincing throughout. The *Wind* series - *Wind Dancers* (1981) and *Wind Child* (1982) - comes close to sentimentality in its depiction of a shapeshifting species oppressed by an evil corporation intent on exploiting their planet. *Jerusalem Fire* (1985) more bracingly depicts a space-born Arab culture, but *War Birds*

(1989) again veers towards sentiment. *Chicago Red* (1990), which returns to RMM's somewhat high-blown but energetically conceived best, is a tale of a USA which has reverted to 18th-century models of kingship, with revolution inevitable, and the eponymous leader in rousing fettle; and *The Queen's Squadron* (1992) opposes - in the foregrounded manner which has become a stylistic feature of her work - free mortals and their immortal oppressors. [JC]

MELVILLE, HERMAN

(1819-1891) US writer best known for such radically symbolic novels as *The Whale* (1851 UK; vt *Moby-Dick* 1851 US); the great whale of this novel is an archetype of the more METAPHYSICAL variety of sf MONSTER, and the spirit of the book has permeated much sf, notably Roger ZELAZNY's "The Doors of his Face, the Lamps of his Mouth" (1965) and, rather superficially, Philip Jose FARMER's "sequel" to HM's original, *The Wind Whales of Ishmael* (1971). HM's blending, in *Moby-Dick*, of rational explanation and romantic openness with the inexplicable was later to become typical of sf. In *The Confidence-Man, His Masquerade* (1857), HM's violent conflict with the dictates (or concept) of a manipulative destiny may well have provided some sf writers with inspiration for contemporary sf tales of justified PARANOIA. Of more direct sf interest is HM's short story "The Bell-Tower" (1855), which appears in *The Piazza Tales* (coll 1856); rather reminiscent of the work of his friend Nathaniel HAWTHORNE, it is the story, set in Renaissance Italy, of the construction of a MACHINE-man whose function it will be to strike the hour on a large bell, but which in the event kills its maker. The story can be read as allegorical of mankind's hubris, and a comment on the implications of the new era of mechanical invention and science that HM was beginning to witness. [JC/PN] See also: HISTORY OF SF; ROBOTS.

MEMOIRS OF AN INVISIBLE MAN

Film (1992). Warner Bros. Dir John CARPENTER, starring Chevy Chase, Daryl Hannah, Sam Neill, Michael McKean, Stephen Tobolowsky. Screenplay Robert Coover, Dana Olson, William Goldman, based on *Memoirs of an Invisible Man* (1987) by H.F. SAINT. 99 mins. Colour. Nick Halloway (Chase), a feckless businessman, is turned invisible by an industrial accident. The Government, represented by a CIA psycho (Neill), tries to capture Halloway to use him for its own nefarious purposes, and he falls for a glamorously unbelievable anthropologist (Hannah) between escapes, disguises, stunts and tricks. After a good opening the film slips into a standard romantic comedy/thriller vein, with Carpenter reprising the facelessly efficient approach he used on *STARMAN* (1984). Several of its best images are lifted directly from James Whale's *The INVISIBLE MAN* (1932), but the film hardly uses its ambitious source novel, raising but then abandoning a central point - that Halloway was such an average loser as to be invisible even before he became literally so. The well achieved effects (Chase smoking a cigarette whose smoke outlines his lungs, and many others) keep the film interesting. [KN]

MEMOIRS OF A SURVIVOR

Film (1981). Memorial Films/National Film Finance Corporation/EMI. Dir David Gladwell, starring Julie Christie, Christopher Guard, Leonie

Mellinger, Debbie Hutchings. Screenplay Kerry Crabbe, Gladwell, based on The Memoirs of a Survivor (1974) by Doris LESSING. 115 mins. Colour. Amid NEAR-FUTURE scenes of urban squalor in Western London a middle-aged woman (Christie) observes (mostly peering round a lace curtain) increasing dereliction and social breakdown in the wake of some unexplained catastrophe. She sometimes seems to penetrate a wall at which she often stares, finding herself invisible amid the life of a late-Victorian family in comfortable circumstances. Given a teenage girl (Mellinger) to care for in the real world, she watches her mature into the efficient partner and mistress of an idealistic young man who runs a community centre for abandoned children. When urban life becomes almost intolerable, she leads these people through the wall into the ALTERNATE WORLD of her dreaming. In the source novel, the inner life of the protagonist, permeated by Sufistic meditation, is central, but here, through a savage reductionism, its visual equivalent is given by mere cameos of stable but emotionally disabling Victorian life. Christie's fine performance as the almost unspeaking observer is, through no fault of hers, deeply uncinematic. [PN]

MENASCO, NORMAN

[s] Wyman GUIN.

MENDELSON, FELIX Jr

(1906-1990) US writer of two unremarkable comic sf novels, Club Tycoon Sends Man to Moon (1965) and Superbaby (1969). The former, in its spoofing of the space race, sometimes scores an amusing point. [JC]

MENDELSON, DREW

(? -) US writer who began publishing sf with "Star Train" for IASFM in 1978. His Pilgrimage (1981) grippingly presents a vision of a bleak post-HOLOCAUST Earth, long abandoned by most humans except for those who inhabit the planet's one remaining artifact, a vast city that moves slowly across the devastated land. This city houses a genuine POCKET-UNIVERSE culture, which has lost touch with the human past and has become ignorant of the technologies which give it life. The adolescent protagonists' quest for meaning (CONCEPTUAL BREAKTHROUGH) takes them from the moribund Tailend of the City to Frontend; the novel closes in an ambiguous affirmation of renewal. DM's apparent retirement from the field after the publication of this novel is a matter for considerable regret. [JC] MENDES, HENRY PEREIRA Henry PEREIRA MENDES.

MENVILLE, DOUGLAS (ALVER)

(1935-) US author and editor. He ed FORGOTTEN FANTASY 1970-71 and, with R. REGINALD (whom see for further details), was advisory editor of the various ARNO PRESS reprint book series; he and Reginald have also collaborated on several books and anthologies. Solo, DM has written A Historical and Critical Survey of the SF Film (1975); with Reginald and Mary A. Burgess he wrote Futurevisions: The New Golden Age of the Science Fiction Film (1985). He also compiled The Work of Ross Rocklynne: An Annotated Bibliography ?

MERAK, A.J.

John S. GLASBY.

MERCHANT, PAUL

[s] Harlan ELLISON.

MERCIER, LOUIS-SEBASTIEN

(1740-1814) French writer best known for his numerous plays and for his anecdotal journalism; he was active in the French Revolution, being imprisoned during the Terror. His UTOPIA, *L'an deux mille quatre cent quarante* 52*B]1771 UK; trans William Hooper as *Memoirs of the Year Two Thousand Five Hundred 1772*; vt *Astraea's Return, or The Halcyon Days of France in the Year 2440* 1797), depicts a future FRANCE governed rationally, according to Enlightenment precepts as stirred by the neoprimitivism of Jean-Jacques Rousseau (1712-1778), and is a central 18th-century text, important particularly for any analysis of pre-Revolutionary ferment in France. It was probably the first utopia to be published in the USA, in 1795, in an edition which replicated the 1772 translation; unfortunately, LSM's expanded version of the text (1786 France) has never appeared in English. [JC]See also: ANONYMOUS SF AUTHORS; BALLOONS; CITIES; FUTUROLOGY; NEAR FUTURE; SUSPENDED ANIMATION.

MERCURY

Mercury is the planet nearest the Sun, and hence is difficult to observe. Until the late 19th century it was believed to rotate on its axis every 24 hours or so, but this opinion was displaced by that of Giovanni Schiaparelli (1835-1910) and Percival Lowell (1855-1916), who contended that it kept the same face permanently towards the Sun. 20th-century sf writers thus pictured it as having an extremely hot "dayside", a cold "nightside" and a narrow "twilight zone". This image persisted until the 1960s, when it was discovered that Mercury rotates on its axis rapidly enough to have a day somewhat shorter than its year. The earliest visit to Mercury was probably that of Athanasius KIRCHER in his *Itinerarium Exstaticum* (1656), and it was generally included in other round tours of the planets, including Emanuel SWEDENBORG's *The Earths in Our Solar System* (1758) and George GRIFFITH's *A Honeymoon in Space* (1901). John MUNRO's *A Trip to Venus* (1897) includes a detour to Mercury. The earliest novel in which Mercury came into principal focus was *Relation du Monde de Mercure* (1750 France) by Le Chevalier de Bethune; the first novel in English to be set there was William Wallace COOK's *SATIRE Adrift in the Unknown* (1904-5; 1925). E.R. EDDISON's series of fantasy novels begun with *The Worm Ouroboros* (1922) is likewise set on Mercury, but the name is used purely for convenience. GENRE SF rarely employed Mercury as a milieu for exotic adventure, preferring MARS and VENUS, but it does feature in Homer Eon FLINT's "The Lord of Death" (1919; in *The Lord of Death and the Queen of Life* [coll 1965]), Ray CUMMINGS's *Tama of the Light Country* (1930; 1965) and its sequel *Tama, Princess of Mercury* (1931; 1966), and Clark Ashton SMITH's "The Immortals of Mercury" (1932). An invasion from Mercury is thwarted in J.M. WALSH's *Vandals of the Void* (1931), and Leigh BRACKETT set one of her exotic romances there, "Shannach - the Last" (1952). Attempts to use Mercury in more thoughtful stories with some fidelity to astronomical knowledge were likewise infrequent in the pre-WWII pulps, the first significant examples being Clifford D. SIMAK's "Masquerade" (1941; vt "Operation Mercury") and Isaac ASIMOV's "Runaround" (1942). After WWII,

however, things picked up a little. Three juvenile novels featuring Mercury are Lester DEL REY's *Battle on Mercury* (1956 as by Erik van Lhin), Asimov's *Lucky Starr and the Big Sun of Mercury* (1956 as by Paul French; vt *The Big Sun of Mercury*), and *Mission to Mercury* (1965) by Hugh WALTERS. Alan E. NOURSE's memorable "Brightside Crossing" (1956) represents a journey across the dayside of the planet as an adventurous feat akin to the then-recent conquest of Everest. The nightside of Mercury features ironically in Larry NIVEN's "The Coldest Place" (1964), but recent sf usually employs Mercury as merely a convenient place to site bases for studying the SUN, like the one in David BRIN's *Sundiver* (1980). Perhaps the most enduring sf image of Mercury, though, is from Kurt VONNEGUT Jr's *THE SIRENS OF TITAN* (1959), which offers an account of the Harmonia, cave-dwelling lifeforms thriving on vibration and introduced to music by a stranded astronaut. [BS]

MERCURY PRESS

The MAGAZINE OF FANTASY AND SCIENCE FICTION ; VENTURE SCIENCE FICTION.

MEREDITH, JAMES CREED

(1875-1942) Irish writer, usually on philosophical subjects, who carried that interest into fiction in *The Rainbow in the Valley* (1939), which features scientists in communication with Martians, and discursively compares and contrasts the two civilizations. [JC]

MEREDITH, RICHARD C(ARLTON)

(1937-1979) US writer who began publishing sf with "Slugs" for *Knight* magazine in 1962. His first novel, *The Sky is Filled with Ships* (1969), is an effective SPACE OPERA in which colonies revolt against a tyrannical corporation. *We All Died at Breakaway Station* (1969) is a bleak, well-crafted space opera in a kind of Alamo setting, where a CYBORG must withstand both external enemies and the devils of introspection. *Run, Come See Jerusalem!* (1976) is a complex, thoroughly worked out TIME-PARADOX novel. Time also figures centrally in the *Timeliner* sequence - *At the Narrow Passage* (1973; rev 1979), *No Brother, No Friend* (1976; rev 1979) and *Vestiges of Time* (1978; rev 1979), all 3 being assembled as *The Timeliner Trilogy* (omni 1987 UK) - during the course of which ALIENS attempt to change Earth's past, and, more importantly, to punish humanity in various PARALLEL WORLDS. RCM's sense of history was acute and atmospheric, and his ALTERNATE-WORLDS tales are, as a consequence, hauntingly suggestive. Into these frameworks his heroes - wounded and reluctant but ultimately stoic - fit neatly. [JC/PN]Other work: *The Awakening* (1979).See also: HITLER WINS.

MERLE, ROBERT

(1908-) Algerian-born French writer, recipient of the Prix Goncourt in 1949, known primarily for his work outside the sf field. His *Un animal doué de raison* (1967; trans Helen Weaver as *The Day of the Dolphin* 1969 US) is an ingenious examination of scientific and political ethics following the main character's breakthrough in COMMUNICATION with dolphins. *Malevil* (1972; trans Derek Coltman 1974 US), joint winner of the JOHN W. CAMPBELL MEMORIAL AWARD in 1974, is a realistic and delicately told post- HOLOCAUST survival and reconstruction story. Both have been

filmed (The DAY OF THE DOLPHIN ; MALEVIL). Les hommes proteges (1974; trans Martin Sokolinsky as The Virility Factor 1977 US) uses an sf framework to satirize both sexist and feminist attitudes. An epidemic to which boys, castrated men and men over 60 are immune is killing the male population of the USA. The government is taken over by women and eunuchs, and new changes are rung on the old sf theme with what some saw as cheery ribaldry, others as cheap vulgarity. [MJ/PN]Other works: Madrapour (1976). See also: FRANCE; LINGUISTICS; UNDER THE SEA.

MERLYN, ARTHUR
[r] James BLISH.

MERRIL, JUDITH

(1923-) US-born writer and anthologist, in Canada from 1968. Born Josephine Grossman, she preferred the forename Judith; she became Judith Zissman by marriage, then changed her name to Merrill before marrying Frederik POHL in 1949; they were divorced in 1953. She occasionally used the pseudonym Rose Sharon. JM was associated with the FUTURIANS fan group during and after WWII. Her first published sf was "That Only a Mother" for ASF in 1948. Her first novel, Shadow on the Hearth (1950; rev 1966 UK), tells the story of an atomic war in effectively understated fashion from the viewpoint of a housewife; one of the very best stories of nuclear HOLOCAUST, it was televised as Atomic Attack. JM wrote two routine novels in collaboration with C.M. KORNBLUTH as Cyril JUDD: Outpost Mars (1952; rev vt Sin in Space 1961) is about the COLONIZATION of MARS, Gunner Cade (1952) about an era in which WAR is a spectator sport (GAMES AND SPORTS). Her best short stories, which usually feature protagonists passively caught up in world-changing events, and often hurt thereby, were a little ahead of their time. The neatly heart-rending "Dead Center" (1954) was reprinted in The Best American Short Stories: 1955 ed Martha Foley. Daughters of Earth (coll 1968 UK; cut vt A Judith Merrill Omnibus: Daughters of Earth and Other Stories 1985 Canada) features 3 fine novellas: the title story (1953) is a family saga set on a colony world; "Project Nursemaid" (1955)-cut from the vt-concerns the problems of the administrator of a space project which must adopt human embryos; "Homecalling" (1956) is a story of contact with an ALIEN being. The Tomorrow People (1960), an intense psychological mystery story, lacks the emotional resonance of her best early work. She published very little fiction after 1960. Her short-story collections, which overlap somewhat, are Out of Bounds (coll 1960), Survival Ship and Other Stories (coll 1974) and The Best of Judith Merrill (coll 1976). JM began editing sf ANTHOLOGIES in the early 1950s with Shot in the Dark (anth 1950), Beyond Human Ken (anth 1952; with 6 of 21 stories cut 1953 UK; cut version vt Selections from Beyond Human Ken 1954 US), Beyond the Barriers of Time and Space (anth 1954), Human? (anth 1954) and Galaxy of Ghouls (anth 1955; vt Off the Beaten Orbit 1959). She made her mark with the series of 12 "year's best" anthologies she began in 1956: S-F The Year's Greatest Science-Fiction and Fantasy (anth 1956); SF: 57 (anth 1957; vt SF The Year's Greatest Science-Fiction and Fantasy: Second Annual Volume 1957); SF 58 (anth 1958; vt SF The Year's Greatest Science-Fiction and Fantasy: Third Annual Volume 1958); SF 59 (anth 1959; vt SF The Year's Greatest

Science-Fiction and Fantasy: Fourth Annual Volume); The 5th Annual of The Year's Best S-F (anth 1960; vt The Best of Sci-Fi 5 1966 UK); The 6th Annual of The Year's Best S-F (anth 1961; vt The Best of Sci-Fi 1963 UK); The 7th Annual of The Year's Best S-F (anth 1962; vt The Best of Sci-Fi - Two 1964 UK); The 8th Annual of The Year's Best SF (anth 1963; vt The Best of Sci-Fi No. 4 1965 UK); The 9th Annual of The Year's Best SF (anth 1964; vt 9th Annual S-F 1967 UK); 10th Annual Edition The Year's Best SF (anth 1965; vt 10th Annual SF 1967 UK); 11th Annual Edition The Year's Best S-F (anth 1966); SF 12 (anth 1968; vt The Best of Sci-Fi 12 1970 UK); though announced, SF 13 never in fact appeared. The UK edns omit some editorial material and are numbered without regard to sense; The Best of Sci-Fi 3 (anth 1964 UK) ed Cordelia Titcomb Smith has no connection with the JM series. A selection from the sequence was published as SF: The Best of the Best (anth 1967). JM was an unusually eclectic anthologist, habitually using stories from outside the SF MAGAZINES, thus helping to broaden the horizons of the genre; she campaigned in her anthologies and in her book-review column in FSF (May 1965-May 1969) for the replacement of the term "science fiction" by SPECULATIVE FICTION. She was the first US champion of the NEW WAVE (primarily associated with the UK magazine NEW WORLDS), which she attempted to popularize in England Swings SF (anth 1968; cut vt The Space-Time Journal 1972 UK). She ed the first of the Tesseract series (CANADA) of representative anthologies of Canadian sf, Tesseract (anth 1985). Her book collection now forms the basis of the MERRIL COLLECTION OF SCIENCE FICTION, SPECULATION AND FANTASY, based in Toronto. [BS] See also: DEFINITIONS OF SF; END OF THE WORLD; GENERATION STARSHIPS; SCIENTIFIC ERRORS; SHARED WORLDS; SMALL PRESSES AND LIMITED EDITIONS; WOMEN SF WRITERS.

MERRIL COLLECTION OF SCIENCE FICTION, SPECULATION AND FANTASY

Founded in 1970 by Toronto Public Library in Canada, to house a major donation by sf author and anthologist Judith MERRIL and substantially added to since; known as the Spaced Out Library until 1 Jan 1991, and housed from September 1995 in a Special Collections building at 239 College Street in Toronto. With more than 29,000 books and 19,000 periodicals in the reference section, this COLLECTION is one of the world's more important sf research libraries. Among its holdings are many complete runs of PULP MAGAZINES, a good collection of sf from CANADA, a full set of ARKHAM HOUSE publications and a strong Jules VERNE collection. The quarterly newsletter of the library's Friends is Sol Rising. In 1993-94 the library board attempted to cut the Collection's budget, threatening its proposed move to a new, large building in 1995, and possibly restricting access through a combination of staff cuts and, perhaps, user fees. At an angry meeting in the Worldcon in 1994 the Friends of the Merrill Collection announced the formation of a new body, the Canadian Science Fiction Foundation, to lobby for the Collection's survival. [PN]

MERRILL, ALBERT ADAMS

(? -?) US writer of whom nothing is known beyond his renowned UTOPIA, The Great Awakening: The Story of the Twenty-Second Century (1899), in which a reincarnated 19th-century American is guided through the technological wonderland which the USA has become 200 years in the future,

with electric cars and tv; everyone is paid the same, the state owns all property, and happiness seems rife. [JC]

MERRIMAN, ALEX

[s] Robert SILVERBERG.

MERRITT, A(BRAHAM)

(1884-1943) US editor, real-estate developer and writer, primarily of FANTASY, though he was influential among sf writers and readers as well. His first years were occupied with newspaper journalism; he was a longtime assistant editor of *The American Weekly*, becoming editor-in-chief in 1937 and remaining so until his death. His fiction was written as a sideline to this busy career, which may explain why his output was relatively small. He began publishing stories with *Thru the Dragon Glass* (1917 *All-Story Weekly* as "Through the Dragon Glass"; 1932 chap); his first novel, *The Moon Pool* ("The Moon Pool" 1918 *All-Story Weekly*; "The Conquest of the Moon Pool" 1919 *All-Story Weekly*; fixup 1919), begins with the *Shining One*, a deadly though insubstantial monster within a pool in Micronesia, and moves on to a complicated lost-race melodrama (ANTHROPOLOGY; LOST WORLDS). (The posthumous *Reflections in the Moon Pool* [coll 1985], ed anon [actually Sam MOSKOWITZ], is unrelated to the novel, containing a long biography of AM by Moskowitz, a few prose items by AM, and some poetry, letters and articles.) *The Metal Monster* (1920 *Argosy*; 1946), another lost-race tale (and containing one of the characters from the previous book), describes a collective ALIEN being, comprised of millions of metal parts, who is absentmindedly kind to the explorer-protagonist. *The Face in the Abyss* ("The Face in the Abyss" 1923 *Argosy*; "The Snake Mother" 1930 *Argosy*; fixup 1931) describes an ancient, almost extinct, semireptilian race and its considerable wisdom. In *The Ship of Ishtar* (1924 *Argosy*; cut 1926; text restored 1949), his best novel, a man travels into a magical world and falls in love with the beautiful female captain of the ship of Ishtar; the highly coloured descriptive passages of this novel still have a strong effect on readers. *7 Footprints to Satan* (1927 *Argosy*; 1928), filmed in 1929, is a horror/detective mystery, "Satan" being a greedy villain. *The Dwellers in the Mirage* (1932 *Argosy* with happy ending; 1932; with original intended unhappy ending 1944) is an effective lost-race novel, one of AM's best. *Burn Witch Burn!* (1932 *Argosy*; exp 1933) and its sequel, *Creep, Shadow!* (1934 *Argosy*; 1934; vt *Creep, Shadow, Creep!* 1935 UK), the first volume filmed as *The DEVIL DOLL* (1936), comprise a short series about witchcraft and HORROR detection. *The Fox Woman and Other Stories* (coll 1949) assembles short stories and uncompleted fragments, of which the title story had already been incorporated into *The Fox Woman and The Blue Pagoda* (coll of 2 stories 1946) by AM and Hannes BOK, "The Blue Pagoda" being by Bok but linked to AM's fragment with connecting passages. Bok's second completion of AM's work was *The Black Wheel* (1947), of which less than a quarter is by AM. AM was influential upon the sf and fantasy world not primarily through his storylines, which tended to be unoriginal, or through the excesses of his style, but because of the genuine imaginative power he displayed in the creation of desirable alternative worlds and realities. He was extremely popular during his life, even having a PULP MAGAZINE, A. MERRITT'S FANTASY MAGAZINE, named after him;

and Sam MOSKOWITZ, in Chapter 12 of *Explorers of the Infinite* (1963), probably represents the view of many of AM's original readers that he was the supreme fantasy genius of his day. Even though, by any absolute literary standard, AM's prose was verbose and sentimental, and his repeated romantic image of the beautiful evil priestess was trivial - deriving as it did from a common Victorian image of womanhood (women being either virgins or devils) - the escapist yearning for otherness and mystery that he expressed has seldom been conveyed in sf with such an emotional charge. [JC/PN]Other works: *Three Lines of Old French* (1919 *All-Story Weekly*; 1937 chap); *The Drone Man* (1934 *Fantasy Magazine* as "The Drone"; 1948 chap); *Rhythm of the Spheres* (1936 *TWS*; 1948 chap); *Woman of the Wood* (1926 *Weird Tales*; 1948 chap); *The People of the Pit* (1918 *All-Story Weekly*; 1948 chap); *Seven Footprints to Satan and Burn Witch Burn!* (omni 1952); *Dwellers in the Mirage and The Face in the Abyss* (omni 1953). See also: **AMAZING STORIES**; **DIME-NOVEL SF**; **FANTASTIC VOYAGES**; **FAR FUTURE**; **HISTORY OF SF**; **PARALLEL WORLDS**; **PUBLISHING**; **SF MAGAZINES**.

MERWIN, SAM Jr

Working name of US writer W. Samuel Kimball Merwin Jr (1910-), son of the writer W.S. Merwin (1874-1936). SM's first sf story was "The Scourge Below" for **THRILLING WONDER STORIES** in 1939. He later went to work for the Beacon pulp chain, which published *TWS* and **STARTLING STORIES**, and was appointed to the editorship of both in 1944, succeeding Oscar J. FRIEND; although he had contributed to *TWS* and had done some editorial work for the magazines, he claimed never actually to have read an **SF MAGAZINE** before becoming editor of two of them. During his editorship he greatly raised the standard of both titles, abolishing the juvenile slant they had previously adopted, and making them the leading **PULP MAGAZINES** in the field behind **ASTOUNDING SCIENCE-FICTION**. He contributed stories to both, using his own name and the pseudonyms Matt Lee and Carter Sprague. He also edited **WONDER STORY ANNUAL** and **FANTASTIC STORY QUARTERLY** - additional companion magazines to *Startling* and *TWS* - before leaving in 1951 to freelance. Further editorial forays included editing the first issues of **FANTASTIC UNIVERSE**, a period as assistant editor for *Galaxy Publications*-working on **GALAXY SCIENCE FICTION**, **BEYOND FANTASY FICTION** and **GALAXY SCIENCE FICTION NOVELS** - and editing the auspicious first 2 issues of **SATELLITE SCIENCE FICTION**. He later went to work in Hollywood. Two articles by SM - reminiscences of his pulp-magazine days - appeared in *The ALIEN CRITIC* #9 and #10. Although comparatively little known, SM's record shows him to have been one of the most capable of all sf magazine editors. SM's fiction, on the other hand, was unexceptional; his detective novels, beginning with *Murder in Miniatures* (1940), are perhaps better than his sf, of which the best are probably *The House of Many Worlds* (1951) and its sequel *Three Faces of Time* (1955 dos), assembled as *The House of Many Worlds* (omni 1983). The Feb 1957 issue of *Satellite* contained "Planet for Plunder", a novel written in collaboration with Hal CLEMENT; this was actually a Clement novelette expanded by SM (who added alternate chapters from another viewpoint) in order to fit *Satellite's* novel-oriented policy. *Chauvinisto* (1976) took a **DYSTOPIAN** attitude towards female domination. [MJE]Other works: *Killer to Come* (1953); *The White Widows* (1953); vt *The Sex War* (1960); *The Time Shifters* (1971). See also: **ALTERNATE WORLDS**;

MESSAC, REGIS
[r] FRANCE.

MESSAGE FROM MARS, A

Film (1913). UK Films. Dir J. Wallett Waller, starring Charles Hawtrey, E. Holman Clark, Chrissie Bell. Scenario Waller, based on the play *A Message from Mars* (1899) by Richard Ganthony. 60 mins, cut to 54 mins. B/w. This moral fable about a messenger sent from Mars to help bring humans - especially the selfish Horace Parlan - to their senses was based on a remarkably successful and long-running play, and the film version was actually made in the theatre with the same actors. The story is very similar to that of Scrooge being redeemed by the ghosts in Charles DICKENS's *A Christmas Carol* (1843); very little is made of the alien nature of the Martian, who is more like an angel. An earlier film version of the same play was made in 1909 in New Zealand, probably much shorter; the details and the film itself have been lost. A later (1921) US version (Metro, 69 mins, cut to 63 mins), dir Maxwell Karger, gives the events of the story a dream framework. A novelized version of the play is *A Message from Mars* * (1912) by Lester LURGAN, the 2nd edn of which was illustrated by stills from the film. [PN]

MESSIAHS

In the MYTHOLOGY of the Old Testament the Messiah is the deliverer of prophecy, destined to lead the Jews to their salvation; the New Testament claims that Jesus was the Messiah. The term is applied by analogy to any saviour or champion whose arrival is anticipated, hoped for or desperately needed. Because Christian images of the future have always been associated with ideas of the Millennium and the Apocalypse, a preoccupation with messiahs in the futuristic fiction of Western culture is only to be expected. Many HEROES in sf play quasimessianic roles, but there is a more-or-less distinct category of stories which deals specifically with this aspect of Judaeo-Christian religion. Early sf featured numerous messianic political fantasies, including H.G. WELLS's *When the Sleeper Wakes* (1899) and Victor ROUSSEAU's *The Messiah of the Cylinder* (1917); the most literal of these is M.P. SHIEL's *Lord of the Sea* (1901). Earnest futuristic religious fantasies of the same period featuring messianic figures include Guy THORNE's *And it Came to Pass* (1915) and Upton SINCLAIR's *They Call me Carpenter* (1922). William Hope HODGSON's "The Baumoff Explosion" (1919; vt "Eloi, Eloi, Lama Sabachthani") strikes a more sceptical note in describing a re-enactment of the crucifixion which goes hideously wrong. There is little or no trace of messianic mythology in the sf PULP MAGAZINES until the 1940s, when it became possible for a SUPERMAN to play a quasimessianic role, as in *DARKER THAN YOU THINK* (1940; 1948) by Jack WILLIAMSON. *What Dreams May Come* (1941) by J.D. BERESFORD likewise features a superhuman messiah, although *The Gift* (1946) by

Beresford and Esme Wynne-Tyson is a more straightforward religious fantasy. L. Ron HUBBARD's *Final Blackout* (1940 ASF; 1948) has an inordinately charismatic hero who may qualify as a messiah. Ordinary men sometimes take on similarly charismatic roles when they are transplanted into PARALLEL WORLDS, as in Henry KUTTNER's *The Dark World* (1946 *Startling Stories*; 1965) and James BLISH's *The Warriors of Day* (1953). Messiah-figures increased in popularity when Millenarian fantasies became newly fashionable in the wake of the Bomb. C.S. LEWIS's trilogy of interplanetary religious romances was concluded in *That Hideous Strength* (1945), in which a messianic role is assumed by Merlin, though he is in effect an agent only of the trilogy's true messiah figure, Ransom. Christ first appeared in GENRE SF in this period - in Ray BRADBURY's "The Man" (1949) - but it was not until the 1960s that TIME TRAVEL was used to confront Christ's life (and death) directly. In Michael MOORCOCK's *BEHOLD THE MAN* (1966 NW; exp 1969) a time traveller takes Christ's place. Brian EARNSHAW's *Planet in the Eye of Time* (1968) features a time-trip to witness the crucifixion; Garry KILWORTH's "Let's Go to Golgotha" (1975) uses a similar notion to construct a heavily ironic parable, as does Gore VIDAL's *Live from Golgotha* (1992). Another protagonist who becomes Christ is featured in Barry N. MALZBERG's *The Cross of Fire* (1982). In Philip Jose FARMER's "Riverworld" (1966) the crucifixion is re-enacted in the human race's new incarnation. The most notable story featuring a re-enactment of the crucifixion on an alien world is "The Streets of Ashkelon" (1962) by Harry HARRISON. Nativity stories are more common; they include Robert F. YOUNG's "Robot Son" (1959), Edward BRYANT's "Eyes of Onyx" (1971) and John CAMERON's *The Astrologer* (1972). The theme of redemption through sacrifice is more or less explicitly linked to Christian mythology in many sf stories, including Robert F. Young's "Redemption" (1963), Cordwainer SMITH's "The Dead Lady of Clown Town" (1964), Harlan ELLISON's "'Repent, Harlequin!' said the Ticktockman" (1965) and R.A. LAFFERTY's *Past Master* (1968); Robert A. HEINLEIN's *STRANGER IN A STRANGE LAND* (1961) also belongs to this category. Clifford D. SIMAK's *Time and Again* (1951; vt *First He Died* 1953) features a resurrection of sorts as well as a sacrifice, as do Thomas M. DISCH's *CAMP CONCENTRATION* (1968) and Jack Williamson's *Firechild* (1986). Explicit (and mostly ironic) sciencefictional accounts of the actual Second Coming include Edward WELLEN's "Seven Days Wonder" (1963), J.G. BALLARD's "You and Me and the Continuum" (1966), Damon KNIGHT's *The Man in the Tree* (1984), Philip Jose Farmer's *Jesus on Mars* (1979) and Theodore STURGEON's posthumous *Godbody* (1986). More enigmatic messiahs, who offer little in the way of redemption, are featured in Vidal's *Messiah* (1954; rev 1965), Robert SILVERBERG's *The Masks of Time* (1968; vt *Vornan-19* 1970 UK), Brian M. STABLEFORD's *The Walking Shadow* (1979), Stuart GORDON's *Smile on the Void* (1982), Somtow Sucharitkul's (S.P. SOMTOW's) *Starship and Haiku* (1984) and Kim Stanley ROBINSON's *The Memory of Whiteness* (1985). A fake messiah, used as a political instrument, is featured in Robin SANBORN's *The Book of Stier* (1971). An enigmatically sinister "messiah" is featured in Philip K. DICK's *THE THREE STIGMATA OF PALMER ELDRITCH* (1964), but later Dick novels, including *A Maze of Death* (1970), play in ever more complex and constructive fashion with messianic figures - a process which culminates in *The Divine Invasion* (1981). The most elaborate messianic

fantasy in modern sf, however, is that in Frank HERBERT's DUNE (1965) and its sequels, following the career and posthumous influence of Paul Atreides, messiah to the desert world Arrakis. Herbert has also deployed messianic mythology elsewhere in his work, notably in The Jesus Incident (1979) with Bill RANSOM. Another writer constantly fascinated by messianic mythology is Roger ZELAZNY, whose many fantasies in this vein include "A Rose for Ecclesiastes" (1963), LORD OF LIGHT (1967) and Isle of the Dead (1969). Many of Zelazny's messianic fantasies take a broadly syncretic view of such figures, linking them to mythologies other than the Christian one; a similarly generalized theory of messianic revivification is featured in James KAHN's Time's Dark Laughter (1982). The most significant contemporary religious fantasy about a messiah is James MORROW's brilliantly bitter Only Begotten Daughter (1990), which cleverly deploys sf motifs alongside more traditional imagery. Jack WOMACK's Heathern (1990 UK) is another almost seamless alloy of sf and religious fantasy. [BS]See also: GODS AND DEMONS.

METAFICTION
FABULATION.

METAL HURLANT

French BEDSHEET-size, glossy colour COMIC-strip sf magazine launched Jan 1975 by Bernard Farkas, Jean-Pierre Dionnet (1947-) and illustrators Jean GIRAUD and Philippe DRUILLET; published by Les Humanoids Associees. Conceived as a high-quality showcase for the growing number of French sf artists, MH was an instant success, combining many aspects of sf narrative with particular stress on the erotic, the grotesque and the horrific in illustrated form. Although it was accused of putting emphasis on graphics rather than content, its influence was notable throughout Europe and North America, and translations of its contents appeared in similar magazines in the USA (HEAVY METAL), Italy, Spain, Holland and elsewhere. Major contributors included Druillet, Giraud, Alexis (Dominique Valler [1946-1977]), Enki BILAL, Vaughn BODE, Caza (Philippe Cazaumayou [1941-]), Nicole Claveloux (1940-), Serge Clerc (1957-), Richard CORBEN, F'Murr (Richard Peyzaret [1946-]), Jean-Claude Forest (1930-), Jean-Claude Gal (1944-), Dominique He (1949-), Jacques Lob (1932-1990), Sergio Macedo (1951-), Nikita Mandryka (1940-), Francis Masse (1948-), Jean-Claude Mezieres (1938-), Rene Petillon (1945-) and Jacques Tardi (1946-). Quarterly from its inception, MH became a monthly with #9 (Sep 1976), at which time it began to carry a warning forbidding sale to minors. In Oct 1976 it spawned a companion magazine devoted exclusively to female illustrators, Ah! Nana (9 issues, Oct 1976-Sep 1978). HM also published a series of Hors Serie (specials) on themes such as the END OF THE WORLD and H.P. LOVECRAFT. In 1985 Hachette bought the title and Dionnet was replaced as editor by C. Fromental. With #123 (Sep 1986) a new team took over, but by this time MH had declined in quality and popularity, and the new editor-in-chief C. Generot succeeded only in prolonging its life as a pale imitation of its early self. Its last issue was #133 (Aug 1987). [RT/MJ]See also: ILLUSTRATION.

METALSTORM: THE DESTRUCTION OF JARED-SYN

Film (1983). Albert Band International. Dir and coprod Charles BAND, starring Jeffrey Byron, Mike Preston, Tim Thomerson. Screenplay by coprod Alan J. Adler. 83 mins. 3-D. Colour. More SCIENCE FANTASY than sf, this 3-D exploitation movie, set in a tribalized future wasteland, is notable for the absence of metalstorms and the fact that the totalitarian wizard Jared-Syn is not destroyed. The hero saves his girl - after post- MAD MAX fights with punk nomads and CYBORGS - from the life-force-absorbing wizard who exits via another DIMENSION. Aimlessly routine, the film shows little of the comic-book energy that characterizes some later Band productions.

[PN]

METAPHYSICAL REVIEW, THE

Bruce GILLESPIE; SF COMMENTARY.

METAPHYSICS

One of the qualities of sf that sometimes baffles new readers is the relative infrequency, despite its label, with which it deals with the hard sciences; indeed, sf deals as often with metaphysics as with PHYSICS. This is not an accidental or a recent development; the exploration of metaphysical questions has been central to sf at least since the time of Mary SHELLEY's Frankenstein, or The Modern Prometheus (1818; rev 1831). This centrality was not thereafter abandoned: it recurs in the pioneering sf of Edgar Allan POE, Nathaniel HAWTHORNE, Robert Louis STEVENSON and pre-eminently H.G. WELLS. The basic metaphysical question is the notorious cliché, "What does it all mean?" It is to the credit of sf that it has consistently tackled this overwhelming (if nebulous) question, through a fantastically elaborate series of thought experiments, sometimes trivial and sometimes profound, in a way that the traditional novel of character and social interaction is ill equipped to manage. Metaphysics is an important field of philosophy; and from early on has been regularly used as a synonym for ontology, the study of being or existence. Metaphysics is defined in The Shorter Oxford English Dictionary as "that branch of speculation which deals with the first principles of things, including such concepts as being, substance, essence, time, space, cause, identity etc." Many of the thematic entries in this encyclopedia can be regarded as pertaining as much to metaphysics as to the natural sciences, notably ALTERNATE WORLDS, CONCEPTUAL BREAKTHROUGH, COSMOLOGY, DIMENSIONS, END OF THE WORLD, ENTROPY, ESCHATOLOGY, EVOLUTION, GODS AND DEMONS, INTELLIGENCE, LINGUISTICS, MYTHOLOGY, ORIGIN OF MAN, PARALLEL WORLDS, PERCEPTION (under which rubric sf dealing with questions of appearance versus reality is discussed), REINCARNATION, RELIGION, SENSE OF WONDER, TIME PARADOXES, TIME TRAVEL and VIRTUAL REALITY. Indeed, it is no longer possible, particularly at the frontiers of theoretical physics, to distinguish between speculation which belongs specifically to the natural sciences and speculation which is metaphysical. However, if metaphysics can be distinguished from science it is in this (the quotation is from Man is the Measure [1976], by Reuben Abel, a good account for the layman of central

problems in philosophy): "Metaphysics is that branch of philosophy which attempts to comprehend the Universe as a whole - not so much by examining it in detail (which is the procedure of science) as by analysing and organizing the ideas and concepts by means of which we examine and think about the world." Thus, for instance, a central example of metaphysical sf is Stanislaw LEM's SOLARIS (1961; trans 1970), which asks to what extent can scientists studying a totally alien and apparently sentient planet comprehend its essence, if to do so requires transcending categories of thought that are limited by their very humanness. This question about the limitation of our perceptions is one of the fundamental problems sf regularly tackles; many further examples are discussed under ALIENS and CONCEPTUAL BREAKTHROUGH. Confrontation with the alien, especially in sf stories of the 1960s and after, is often seen in sf as leading to a higher level of understanding, and a renewed sense of cosmic harmony. Robert SILVERBERG has written several novels of this type, a good one being Downward to the Earth (1970). Algis BUDRYS's ROGUE MOON (1960) projects its protagonist into a maze of metaphysical self-discovery by confronting him with a literal, murderous, alien maze on the Moon. Metaphysical questions of identity are particularly closely associated with the work of Philip K. DICK, who by blurring the distinctions between human and artificial, between Man, ANDROID and MACHINE, forces the reader to consider what qualities of consciousness constitute the essence of humanity. (Gene WOLFE entered the same area of speculation with his brilliant and subtle THE FIFTH HEAD OF CERBERUS [1972], in which one of the protagonists, it transpires, is a simulation.) Dick, in fact, has a finger in almost every metaphysical pie. He specializes in questions of appearance and reality, and of solipsism, asking to what extent the Universe as it appears to us is an objective fact, and to what extent it is a mental construct, either individual or consensual. The novels of Ian WATSON have characteristically met some of the most difficult questions in metaphysics head-on and doggedly. Watson's special interest is also whether our models of the Universe, especially as reflected in language (LINGUISTICS), correspond to any external reality; at times he seems to go further and suggest that the meaning and shape of the Universe is created by the consciousnesses that observe it. Questions of good and evil in sf are intimately bound up with questions of human EVOLUTION; to what extent do we carry the mark of the amoral beast within us, imprinted in the more primitive areas of our brains? Robert Louis STEVENSON's Strange Case of Dr Jekyll and Mr Hyde (1886) asks this question, and the theme is still very much alive today, in part through the work of such evolutionary behaviourist popularizers as Desmond Morris (1928-) and Robert ARDREY, and in part through sf itself. An example of this kind of metaphysics running wild in sf is Altered States (1978) by Paddy CHAYEFSEY, filmed as ALTERED STATES (1980), in which, absurdly, cause and effect are reversed (because consciousness may be coded in the DNA molecule, Chayefsky proposes that alterations in consciousness may be somehow able to alter our genetic make-up); his hero devolves first to hominid, then, briefly, to primal chaos, undifferentiated cosmic matter. Reversals of cause and effect are not new to sf. It is the very nature of the TIME-TRAVEL story to confront us with thought-provoking paradoxes of this sort, and in so doing, of course, to make us speculate about the question (not merely an

intellectual game) of whether the shape of our lives is created by free will or determinism. Stories that deal with this issue are legion: two good ones are "The Custodians" (1975) by Richard COWPER and Slaughterhouse Five (1969) by Kurt VONNEGUT Jr. The very nature of causality has been questioned by stories like Brian W. ALDISS's *An Age* (1967; vt *Cryptozoic!* US) and other stories in which the arrow of time is reversed and time runs backwards, such as Dick's *Counter-Clock World* (1967) and Martin AMIS's *Time's Arrow* (1991) (further examples are discussed under PERCEPTION); John CROWLEY's story "Great Work of Time" (1989) is perhaps of all time-travel stories the one that most sharply (and movingly) questions the relationship of cause and effect. The books of writers like Crowley, Gene Wolfe and Ian Watson are actually about metaphysical exploration; but such questions are by no means eschewed by writers of HARD SF. Arthur C. CLARKE has throughout his career been as interested in metaphysics as in physics; 2001: A SPACE ODYSSEY (1968) amply testifies to that, as do many of his novels. Within hard sf and SPACE OPERA to this day, metaphysical explorations consistently appear. Greg BEAR, in novels like *BLOOD MUSIC* (1985) and *EON* (1985), perhaps cuts even deeper than Clarke, often by way of fantastic premises: genetically engineered microorganisms that develop a gestalt consciousness and ultimately transform humanity into a new state of being in the former, and the exploration of a conceptually impossible infinitely extended SPACE HABITAT in the latter. While it might be objected that sf, though it indeed tackles metaphysical questions, has very often done so with a gosh-wow, pop crudity - producing metaphysical notions like brightly coloured flags without in the least understanding them - this is certainly not true of the writers of its upper echelons, of whom Bear is one. Another is Paul J. MCAULEY, whose *Eternal Light* (1991) is the very model of a metaphysical space opera, luring the reader in with promises of high adventure and low conspiracy, and then stirring cosmogony, GENETIC ENGINEERING and (of course) the secret history of the Universe into a potent - and really rather demanding - mix. The increased sophistication, in some quarters, of hard sf and space opera must, of course, be connected with the sudden appetite the reading public has shown for nonfiction books by authors like Fred HOYLE, Fritjof Capra, Heinz R. Pagels, Stephen Hawking, Freeman DYSON and Paul DAVIES: books about the most far-reaching speculations of contemporary theoretical physics. It was in such popularizations that, for example, most of us first learned about BLACK HOLES, a theme that rapidly became an irresistible magnet for writers of metaphysical hard sf. There is no traditional crux in metaphysics that is not amply reflected in sf, whether it be "What is the nature of mind as opposed to body?" or "Is there purpose in Nature?" Among sf writers of the pre-WWII generation, Olaf STAPLEDON is certainly pre-eminent as a propounder of questions of ultimate meaning: he confronted all the great metaphysical questions one after the other. But GENRE SF, too, has been amply supplied with amateur metaphysicians who have often made up in colour and verve what they may have lacked in rigorous thought; they may not have answered the questions but they certainly persuaded the reader to think about them (SENSE OF WONDER). A.E. VAN VOGT is one such, and Charles L. HARNESS, with his fantastic paradoxes of COSMOLOGY, is another; while even in the early PULP MAGAZINES John TAINE, in *The Time Stream* (1931 *Wonder Stories*; 1946) and elsewhere,

flung himself headlong and daringly (and quite unselfconsciously) into questions of ultimate meaning. Later, and initially only in garish pulp paperback format, Barrington J. BAYLEY did the same. Sf may derive its muscle and sinew from science and sociology, but much of the time its heartbeat derives from the drama of metaphysics, a drama that seems primarily intellectual, but has an enormous capacity to touch the feelings too. [PN]

METCALF, NORM

Working name of US fan bibliographer Norman Metcalf (1937-), whose *The Index of Science Fiction Magazines 1951-1965* (1968) is a sequel to *Index to the Science Fiction Magazines 1926-1950* (1952) by Donald B. DAY, and covers the same ground as the computerized index for the same years ed Erwin S. STRAUSS (though without the latter's issue-by-issue contents listing). One or other of these works is essential to the serious sf researcher. [PN] See also: BIBLIOGRAPHIES.

METEOR MAN, THE

Film 1993. Tinsel Townsend/MGM. Prod Loretha C. Jones, dir and screenplay Robert Townsend, starring Townsend, Marla Gibbs, Robert Guillame, Eddie Griffin, James Earl Jones, Don Cheadle and Bill Cosby. 100 mins. Colour. Townsend, the film's writer, director and leading actor, is a black comic with an extremely likeable, gentle manner; likeable enough, apparently, for him-he arranged the financing- to obtain many of the leading black actors in the US for what in this congenial low-budget comedy must have been a pittance. A timid schoolteacher (Townsend) in a black area of Washington, DC, is given superhero powers when struck by a mysterious green meteor. Being afraid of heights, however, he mostly flies only four feet above the ground. His neighbours persuade him to use his superpowers to do something about the Golden Lords, a black gang terrorising the area, but after several spectacular successes this becomes more difficult as his powers begin to wear off. In the end, his neighbours summon up the strength to resist the hoodlums on their own. The film is perhaps too simplistic in its view that endemic black-against-black violence can be countered with ordinary decency, but despite that is innocent and fresh in its portrayal of neighbourhood life, though most of the star names are wasted in being given very little to do. It is pleasant to have a borderline sf movie that questions whether superhero powers, in the end, would be of much use. [PN]

METROPOLIS

Film (1926). UFA. Dir Fritz LANG, starring Brigitte Helm, Alfred Abel, Gustav Frohlich, Rudolf Klein-Rogge, Heinrich George, Fritz Rasp. Screenplay Lang, Thea VON HARBOU. Original version about 3 hours (17 reels); 1927 UK release print 128 mins (12 reels); 1927 US Paramount release print 75 mins (7 reels); Munich Film Museum reconstruction about 2 1/2 hours; 1984 US reconstruction and adaptation by Giorgio Moroder 83 mins. B/w. Set in a vast city of the future whose society is divided into downtrodden workers and a ruling elite, M focuses on Freder (Frohlich), who falls in love with Maria (Helm), saintly protector of the workers' children and informal spiritual leader to the masses. But Freder's jealous father Fredersen (Abel), the industrialist master of the city, has a ROBOT

duplicate of Maria built for him by malign SCIENTIST Rotwang (Klein-Rogge), which he uses to incite the workers to self-destructive revolt (for reasons which are never entirely made clear). The damage to the city's machinery caused by the rioting floods the lower levels, threatening the lives of the children, but they are saved by the real Maria. The film ends with the city's ruler being persuaded to shake hands with the workers' spokesman and promising that things will be better from now on. Though often described as the first sf epic of the CINEMA, this famous German film - of which no complete version now exists - has just as much in common with the cinema of the GOTHIC. Though set in a future visually emphasized by towering buildings and vast, brooding MACHINES, the City of Metropolis has an underworld dark and medieval in atmosphere. One might almost say that the film's metaphor is to keep the very spectacular sf for the elite above, while the Gothic grub gnaws at the city's roots. The bridging figure is Rotwang, both scientist and sorcerer, one hand clean, the other deformed and gloved, accomplishing gleaming miracles of science while living in a bizarre house with a pentagram inscribed over the door. The story of M is trite and its politics ludicrously simplistic; but these flaws cannot detract from the sheer visual power of the film - a combination of the high Expressionistic sets (the work of art directors Otto Hunte, Erich Kettelhut and Karl Vollbrecht) and Lang's direction, particularly in the sequences involving the vast crowds which he uses as a kind of living clay with which to create giant fluid sculptures. Individual images, as when the apparently living Maria is burned to reveal the gleaming robot beneath, have been so well remembered as now to seem archetypes, alive still in the consciousness of filmgoers everywhere. M, which was extremely expensive and not a financial success, almost bankrupted the studio that made it (UFA). The film was cut almost as soon as it was released, and - still in the 1920s - shortened yet more radically in the UK and the USA. Even recently restored archival versions are half an hour shorter than the original. The 1984 US adaptation by Italian composer and producer Giorgio Moroder can be seen as a successful homage, the new tinted print cleverly recut to match the fierce rock MUSIC to which Moroder sets it. But the editing, for all its meticulousness, makes of M something rather different from Lang's (presumptive) version; now the love story is central, and the hesitant Freder appears much more decisive, while much of the obliqueness and some of the ambiguity is gone. Yet M is still a very strong film indeed, vividly renewed for a new generation. The novelization is *Metropolis* * (1926; trans 1927) by von Harbou. [JB/PN] See also: COMICS; GERMANY.

MEXICO

LATIN AMERICA.

MEYER, NICHOLAS

[r] The DAY AFTER ; Sir Arthur Conan DOYLE; INVASION OF THE BEE GIRLS; The NIGHT THAT PANICKED AMERICA ; STAR TREK II: THE WRATH OF KHAN; STAR TREK IV: THE VOYAGE HOME; STAR TREK VI: THE UNDISCOVERED COUNTRY; TIME AFTER TIME. [PN]

MEYERS, RIC

Richard S. MEYERS.

MEYERS, RICHARD S.

(1953-) US writer who publishes also as Wade Barker. His sf novels are of relatively little interest, though the Doomstar sequence - Doom Star (1978; rev vt Doomstar 1985) and Doom Star 2 (1979; rev vt Return to Doomstar 1985)-are moderately entertaining sf adventures. Of more interest are his nonfiction film studies, including The World of Fantasy Films (1980), For One Week Only: The World of Exploitation Films (1983) and S-F 2: A Pictorial History of Science Fiction Films from "Rollerball" to "Return of the Jedi" (1984; vt The Great Science Fiction Films from "Rollerball" to "Return of the Jedi" 1990). [JC]Other works: Cry of the Beast * (1979), an INCREDIBLE HULK tie; Dzurlord: A Crossroads Adventure in the World of Steven Brust's Jherreg * (1987), anon with 6 other writers; the Book of the Undead horror sequence, as by Ric Meyers, comprising Fear Itself (1991), Living Hell (1991) and Worst Nightmare (1992).As Wade Barker: Serpent's Eye: The Year of the Ninja Master: Autumn * (1985) and The Shibo Discipline * (1988), both contributions to the Ninja Master sequence.

MEYERS, ROY (LETHBRIDGE)

(1910-1974) UK physician and writer whose first sf novel, The Man They Couldn't Kill (1944), introduces the vastly talented Dr D'eath, who is capable of inducing hypnotic trances at a distance and of scientifically arranging for souls to take out-of-body excursions. Falsely convicted of a murder, D'eath clears his name and might have starred in a sequence of Doc Savage-like adventures had the book been successful. RM is best known for the later Dolphin series about the relationship between dolphins and humans: Dolphin Boy (1967 US; vt Dolphin Rider 1968 UK), Daughters of the Dolphin (1968 US) and Destiny and the Dolphins (1969 US). RM's style is wooden, but his interest in dolphins is obviously profound, and the novels are easy reading, though their mixture of melodrama and didacticism may not be to everyone's taste. [JC]Other work: Gift of the Manti (1977 Canada) with J.F. BONE (RM's name is here spelled Myers, almost certainly in error).See also: UNDER THE SEA.

MEYERS, WALTER E(ARL)

(1939-) US academic based at North Carolina State University in Raleigh. A grammarian and medievalist, WEM has also been teaching sf and fantasy since the 1970s (currently with John KESSEL). His first book of genre interest, Aliens and Linguists: Language Study and Science Fiction (1980), is an excellent and amusing work on LINGUISTICS in sf; the argument is updated in "The Language and Languages of Science Fiction" in Fictional Space: Essays on Contemporary Science Fiction (anth 1991) ed Tom SHIPPEY. WEM has published other essays on sf in a number of critical anthologies, and has written several books in his other specialities. [PN]

MEYN, NIELS

[r] DENMARK.

MEYRINK, GUSTAV

(1868-1932) Austrian novelist, long resident in Prague, a city whose depiction in his novels prefigures Franz KAFKA's, and active as a writer from the publication of Der heisse Soldat und andere Geschichten ["The Hot

Soldier and Other Stories"] (coll 1903). Of his broodingly Expressionist work, much of which deals with the mechanics of occultism, genre interest attaches to *Der Golem* (1914; cut trans Madge Pemberton as *The Golem* 1928 US; full version of trans 1976 US; preferred trans Mike Mitchell 1995 UK), in which a 19th-century protagonist experiences the original myth of the GOLEM; to *Das grüne Gesicht* (1916; trans Mike Mitchell as *The Green Face* 1992 UK), an apocalyptic fantasy haunted by the Wandering Jew and culminating in the destruction of Amsterdam; to some degree to *Walpurgisnacht* (1917; trans Mike Mitchell 1993 UK) and *Der weiße Dominikaner* (1921; trans Mike Mitchell as *The White Dominican* 1994 UK); and to *Der Engel vom westlichen Fenster* (1927; trans Mike Mitchell as *The Angel of the West Window* 1991 UK), in which a 20th-century figure engages with John Dee (1527-1608), whose Neoplatonic speculations and adventurous life have inspired writers like John CROWLEY. [JC]See also: AUSTRIA.

MEZO, FRANCINE (MARIE)

(? -) US writer whose *Fall of Worlds* series - *The Fall of Worlds* (1980), *Unless She Burn* (1981) and *No Earthly Shore* (1981)-features a female starship captain who works also as a warrior mercenary in adventures covering a good portion of the Galaxy. [JC]

MIALL, ROBERT

Jonathan BURKE.

MICHAELS, MELISA C.

(? -) US writer who remains best known for her *Skyrider* sequence of sf adventures - *Skirmish* (1985), *First Battle* (1985), *Last War* (1986), *Pirate Prince* (1987) and *Floater Factor* (1987) - depicting the growth into maturity of its eponymous female starship-pilot protagonist. The tales are at times congested, often parodic, occasionally damaged by cliché, but carry their underlying message about human potential with some grace. *Far Harbor* (1989) depicts with sympathy the plight of a planet whose natives are being attacked by humans. [JC]Other work: *Through the Eyes of the Dead* (1988), a mystery novel, associational.

MICHENER, JAMES A(LBERT)

(1907-) US author of numerous bestsellers. His long novel *Space* (1982), televised 1985, is based on the history of the US space program, becoming sf only in its later stages, when it describes invented missions and adventures roughly contemporaneous with the historical ones (e.g., a disaster owing to an outburst of solar radiation during an Apollo 18 lunar mission in 1973), and then peers optimistically into the NEAR FUTURE. Among several errors of fact are consistent references to Stanley G. WEINBAUM as Stanley G. Weinberg. [JGr]See also: ROCKETS.

MICKIEWICZ, ADAM

[r] POLAND.

MICROCOSM

GREAT AND SMALL.

MIELKE, THOMAS R.P.

[r] GERMANY.

MIESEL, SANDRA (LOUISE)

(1941-) US critic and writer, with degrees in chemistry and medieval history. Her involvement in sf was initially as a fan; since 1967 she has published over 75 pieces in FANZINES. As a critic she became active in the 1970s, her first book being *Myth, Symbol, and Religion in The Lord of the Rings* (1973 chap) on J.R.R. TOLKIEN. Her next book, *Against Time's Arrow: The High Crusade of Poul Anderson* (1979 chap), was her first significant assessment of either Poul ANDERSON or Gordon R. DICKSON, the two figures to whom she has devoted most attention, and of whose work and philosophies she has become a noted advocate. This advocacy, especially perhaps in the case of Dickson's Dorsai sequence, has perhaps assumed too readily that the claims for thematic import made for it by its author have been fully realized in the texts as read. Sometimes uncredited, she ed in the mid-1980s several collections assembling short work by these writers, usually selected from early in their careers: Anderson's *Dialogue with Darkness* (coll 1985) uncredited and Dickson's *Survival!* (coll 1984) uncredited, *Forward!* (coll 1985), *Invaders!* (coll 1985), *The Last Dream* (coll 1986) uncredited, and *Mindspan* (coll 1986). With David A. DRAKE she ed *A Separate Star* (anth 1989) and *Heads to the Storm* (anth 1989). As an author of fiction, SM has concentrated mainly on fantasy. *Dreamrider* (1982; rev vt Shaman 1989), however, mixes genres with some competence, carrying its female protagonist from a NEAR-FUTURE Earth to an ALTERNATE WORLD in which mental control (PSI POWERS) over subatomic processes is exercised by shamans; the protagonist soon becomes one. [JC]

MIGHTY JOE YOUNG

(vt Mr Joseph Young of Africa) Film (1949). Argosy/RKO. Dir Ernest B. Schoedsack, starring Terry Moore, Ben Johnson, Robert Armstrong. Screenplay Ruth Rose, from a story by Merian C. Cooper. 94 mins. B/w, with some tinted sequences. A virtual remake, though on a smaller scale, of KING KONG (1933), by much the same team that produced that classic. The hero organizes a cowboy expedition to Africa to capture animals for his new night-club. Once there they encounter a 12ft (3.7m) gorilla and, after failing to lasso it, discover it is a girl's pet. They persuade her to return with the ape to the USA, where it is exhibited in a nightclub. Finally it goes berserk, but redeems itself by rescuing children from a burning orphanage. Special-effects genius Willis H. O'BRIEN had few successes after King Kong but at least MJY, on which he supervised the model animation, won him some belated recognition as well as an Academy Award. Also working on the film was the young Ray HARRYHAUSEN. [JB]

MILAN, VICTOR (WOODWARD)

(1954-) US writer who has written under his own name and, it is understood, under more than just his one acknowledged pseudonym, Richard Austin. He began publishing sf with "Soldatenmangel" for *Dragons of Darkness* (anth 1981) ed Orson Scott CARD. His first books were in the War of Powers sequence of fantasies with Robert E. VARDEMAN (whom see for titles) from 1984, but the next year he started publishing in his own right with *The Cybernetic Samurai* (1985); it and its sequel, *The Cybernetic Shogun* (1990), comprise the complicatedly and intriguingly told story of the embodiment and education of an AI given the bodily form of a

samurai, and the subsequent warfare, which severely damages the entire world, between its/his two "children". Runespear (1987) with Melinda M. SNODGRASS is a fantasy set in 1936 in which the Nazi rulers of Germany attempt to gain the eponymous spear and thus become invincible. As Richard Austin, VM has been responsible for the Guardians sequence of post-HOLOCAUST military-sf adventures: The Guardians (1985), #2: Trial by Fire (1985), #3: Thunder of Hell (1985), #4: Night of the Phoenix (1985), #5: Armageddon Run (1986), #6: War Zone (1986), #7: Brute Force (1986), #8: Desolation Road (1987), #9: Vengeance Day (1987), #10: Freedom Fight (1988), #11: Valley of the Gods (1988), #12: The Plague Years (1988), #13: Devil's Deal (1989), #14: Death from Above (1989), #15: Snake Eyes (1990) and #16: Death Charge (1991). Subsequent work - which includes a Star Trek tie, From the Depths * (1993), a Wild Cards tie, Turn of the Cards* (1993), a Battletech tie, Close Quarters *(1994), and a lonely singleton, Red Sands (1992) - has not demonstrated any dauntingly explorative tendency. A fuller sense of VM's career awaits a better sense of its range and possible depths. [JC]See also: CYBERNETICS; LIBERTARIAN SF.

MILES

Neil BELL.

MILES, KEITH

Robert S. TRALINS.

MILFORD CIRCLE

When the Milford Science Fiction Conference was founded in 1956 by Damon Knight and Judith Merril, Milford, Pennsylvania was already quite the gathering place for writers. James Blish was the first to move to this small town in eastern Pennsylvania. Other settlers eventually included Thomas M. Disch and James Sallis. Why did Blish choose a town that, while charming, was noticeably lacking in urban amenities? The reason was that James Blish was convinced that nuclear war was imminent in the 1950s, and Milford was outside the lethal blast radius if an H-bomb fell on New York.

MILFORD SCIENCE FICTION WRITERS' CONFERENCE

Annual writers' workshop founded in 1956, held at Milford, Pennsylvania, where several sf writers - including one of its founders, Damon KNIGHT - have lived at various times. (A writers' workshop - see also CLARION SCIENCE FICTION WRITERS' WORKSHOP - includes sessions of mutual criticism of not yet published stories, interspersed with discussion groups on various professional problems.) The success of MSFWC, especially the camaraderie it inspired, was directly responsible for the setting up of the SCIENCE FICTION WRITERS OF AMERICA. Robert SILVERBERG, Harlan ELLISON, Kate WILHELM, Terry CARR and Samuel R. DELANY are among the many who were at some period regular Milford attenders. Ideally, the workshop (open only to published sf writers) had a balance between beginner writers and more experienced professionals. It was felt by some critics that Milford attenders constituted a powerful in-group in sf (particularly since editors of important anthology series attended) and that they received preferential treatment by publishers; hence the nickname "Milford Mafia". Founder member James BLISH and his wife, J.A. LAWRENCE, moved to the UK, where they set up a UK Milford in 1972, coincidentally the year in which

the US Milford was officially pronounced dead. This was held until 1988, out of terminological nostalgia, at Milford-on-Sea in Hampshire each autumn; thereafter it was held at Cheltenham (1989-90) and Margate (1991 onwards). Richard COWPER and Christopher PRIEST were two regular early attenders; more recent regulars have included Mary GENTLE, Colin GREENLAND and Diana Wynne JONES. [PN]

MILHAUS, MICHAEL F.X.
David F. BISCHOFF.

MILLARD, JOSEPH (JOHN)
(1908-1989) US writer in several genres who began publishing sf with "The Crystal Invaders" for TWS in 1941, and was active in the field for a few years, a period which included the magazine release of his only novel, *The Gods Hate Kansas* (1941 *Startling Stories*; rev 1964), a routine adventure involving manipulation of humans by aliens. It was filmed, dreadfully, as *They Came from Beyond Space* (1967). [JC]See also: *INVASION*.

MILLENNIUM

Film (1989). First Millennium Partnership/Gladden Entertainment. Dir Michael Anderson, starring Kris Kristofferson, Cheryl Ladd, Daniel J. Travanti. Screenplay John VARLEY, based on his "Air Raid" (1977). 105 mins. Colour. Commando teams from the future steal people from planes just before they crash, but an investigator becomes suspicious. He is seduced by a woman time-traveller, follows her to a chaotic future (represented by a single set) that is about to collapse in a timequake caused by careless TIME PARADOXES in its past. They escape to a further future. Nowhere is the reason for the kidnapping explained. Kristofferson acts like a sleepwalker. There is a manipulative ROBOT that looks like the Tin Man from *The Wizard of Oz* (1939). Michael Anderson's essays in genre directing, including *LOGAN'S RUN* and *DOC SAVAGE: THE MAN OF BRONZE*, have been uniformly wooden. Curiously, only Varley's short story is credited as the basis for his screenplay, even though he had turned it into a novel, *Millennium* (1983), which explains the points this botched film leaves obscure; one can only suppose that his screenplay was cut to ribbons. [PN]

MILLER, BENJAMIN
[s] Noel LOOMIS.

MILLER, CHUCK
Working name of US publisher and anthologist Charles Franklin Miller II (1952-). For his publishing activities UNDERWOOD-MILLER INC.; for his anthologies Tim UNDERWOOD. [JC]

MILLER, FRANK
(1957-) US COMIC-book writer and artist, with a distinctive fragmented narrative technique; also film scriptwriter. During 1979-85 FM worked on MARVEL COMICS's *Daredevil*, producing work that was later re-released in three collections: *Child's Play* (graph coll 1988), *Marked for Death* (graph coll 1990) and *Gang War* (graph coll 1992). He then produced two apocalyptic dramas for DC COMICS: *Ronin* (1983-4; graph coll 1987) and *Batman: The Dark Knight Returns* (1986; graph coll 1986). All of this work brought a new integrity to the gritty, toughly narrated drama in comics,

and paved the way among prospective publishers for other hopeful writer/artists. Further work from this period included Elektra Saga (1984; graph coll 1989) and, written by Chris CLAREMONT, Wolverine (1982; graph coll 1987). Following the phenomenal success of The Dark Knight Returns - nominated for a 1987 HUGO in, absurdly, the Best Non-Fiction Book category, coming second - FM has collaborated with other comics artists including: David Mazzuchelli on Daredevil: Born Again (1985; graph coll 1987) and Batman: Year One (1987; graph coll 1988); Bill SIENKEWICZ on Elektra Assassin (1986-7; graph coll 1987) and Daredevil: Love and War (graph 1986); Dave GIBBONS on Give Me Liberty (1990-91; graph coll 1991); and Geoff Darrow on Hard Boiled (1990-92). FM's other work includes Elektra Lives Again (graph 1990) and Sin City (1991-2) in Dark Horse Presents, as well as a collaboration with Walter Simonson on a series tied to the Terminator films (The TERMINATOR; TERMINATOR 2: JUDGMENT DAY). FM has also collaborated on the screenplays for ROBOCOP 2 (1990) and the projected RoboCop 3, the former being based on his original story. [SW]See also: GRAPHIC NOVEL; ILLUSTRATION; SUPERHEROES; SUPERMAN [character].

MILLER, GEORGE

(1948-) Australian film-maker. After a satirical short film, A History of Violence in the Cinema, Part One (1975), GM made an international impact with MAD MAX (1979), a NEAR-FUTURE cop/vigilante car-chase movie that introduced Mel Gibson to stardom as a leather-clad highway patrolman in an anarchic post- HOLOCAUST Australia. Its success was great enough to fund a more elaborate, more effective sequel, MAD MAX 2 (1981, vt The Road Warrior). Influential enough to generate an infestation of Italian and Filippino imitations, including I nuovi barbari (1983; vt The New Barbarians; vt Warriors of the Wasteland) and Stryker (1983), Mad Max 2 led to a sequel of its own, which GM codirected with George Ogilvie: MAD MAX BEYOND THUNDERDOME (1985). This was a more expensive, less gritty reread of the earlier film, with themes imported from Russell HOBAN's RIDDLEY WALKER (1980). GM's only feature film since the Mad Max trilogy has been The Witches of Eastwick (1987), a successful adaptation of John UPDIKE's 1984 novel, although he remade Richard MATHESON's TWILIGHT ZONE episode "Nightmare at 20,000 Feet" as a segment of Twilight Zone: The Movie (1983) and produced Philip Noyce's thriller Dead Calm (1988). GM should not be confused with the other Australian director of the same name, who made The Man from Snowy River (1982) and The Neverending Story: Part 2 (1990). [KN]See also: MUSIC.

MILLER, IAN

(1946-) UK illustrator. After graduating from St Martin's College of Art, IM became a commercial illustrator in 1970, with both book-cover work and interior ILLUSTRATIONS, some of the latter in David Day's The Tolkien Bestiary (1979). He did highly characteristic work on the backgrounds for Ralph Bakshi's Wizards (1977), an animated film with a FAR FUTURE setting. Books of his work are Green Dog Trumpet and Other Stories (graph coll 1978) - the stories being in the form of pictures without accompanying text - Secret Art (1980) and, more recently, Ratspike (1990) with John Blanche. The Luck in the Head (graph 1991) with M. John HARRISON is a GRAPHIC NOVEL with text adapted by Harrison from his 1983 short story of

the same name. IM appears in *The Guide to Fantasy Art Techniques* (1984) ed Martyn Dean. Though he has worked in a commercial vein, he is also known for fanciful work at the opposite pole from the airbrushed superrealism that has dominated UK sf/fantasy art for two decades: two of his gloomier modes involve, respectively, detailed fine-lined GOTHIC black-and-white work in ink, almost STEAMPUNK in style, and semi-abstracted deliquescing faces; in *Ratspike* he classed these as "tight pen" and "asylum images" respectively. IM was art editor for INTERZONE 1983-5. He is a gallery artist as well as an illustrator, his first exhibition having been in 1973. [PN/JC] See also: BRITISH SCIENCE FICTION AWARD; GAMES WORKSHOP.

MILLER, JIMMY

(? -) US writer whose *The Big Win* (1969) is a noisy but sometimes effective post-HOLOCAUST quest story which moves eventually into space, as the protagonists search for the Chinese war criminal whose plague has decimated the rest of the world. Though not essentially an sf novel, her *Some Parts in the Single Life* (1970) moves into a shattering NEAR FUTURE at its close. JM was married to Warren MILLER. [JC]

MILLER, MIRANDA

(1950-) UK writer whose early work, like *Under the Rainbow* (1978), was published as by Miranda Hyman. Her sf *DYSTOPIA, Smiles and the Millennium* (1987) as MM, depicts a fiercely uncongenial NEAR-FUTURE UK where class differences have hardened, the poor are downtrodden, and the Isle of Man has seceded. [JC]

MILLER, P(ETER) SCHUYLER

(1912-1974) US writer and critic; an MSc in chemistry, he did research for a time and for most of his career worked as a technical writer. He remains best known in the sf world for his book reviews in *ASTOUNDING SCIENCE-FICTION*, which first appeared in 1945 and became a regular monthly feature in Oct 1951, continuing until his death. He was not a particularly demanding critic, but his judgements were generally shrewd, his enthusiasm never waned, and his column's coverage was remarkably comprehensive. Largely as a by-product, he accumulated one of the largest private sf COLLECTIONS; the annotated *Catalogue of the Fantasy and Science Fiction Library of the Late P. Schuyler Miller* (1977) was a useful bibliographical aid. In 1963 he was presented with a special HUGO for his reviewing. However, he began as an author of fiction, being one of the more popular and accomplished sf pulp writers of the 1930s; his first story was "The Red Plague" for *Wonder Stories* in 1930. He collaborated with Paul McDermott and Walter Dennis on two connected stories, "Red Spot on Jupiter" (1931) and "Duel on the Asteroid" (1932), the first under the pseudonym Dennis McDermott, the second as by PSM and Dennis McDermott. *Alicia in Blunderland* (1933 *Science Fiction Digest* as by Nihil; coll of linked stories 1983) presents a sequence of spoof tales with RECURSIVE-SF elements, several figures from early FANDOM being represented. Later stories of note included a TIME-PARADOX variant, "As Never Was" (1944), and "The Titan" (1934-5), a story whose (mild) sexual content made it unacceptable to the pulp magazines; *MARVEL TALES*, which published it, ceased publication before the last instalment, and the story was not printed entire until *The Titan* (coll 1952), which assembles most of PSM's

better fiction. He also collaborated with L. Sprague DE CAMP on Genus Homo (1941 Super Science Stories; rev 1950), a novel set in the FAR FUTURE and filled with satirical evolutionary marvels, for apes have taken over.

[MJE]About the author: A Canticle for P. Schuyler Miller (1975 chap) by Sam MOSKOWITZ. See also: ALIENS; EVOLUTION; INVASION; MARS.

MILLER, RICHARD (CONNELLY)

(1925-) US writer whose Snail (1984) is a satirical TIME-TRAVEL tale in which the Wandering Jew and a Prussian soldier traverse a late-20th-century USA, viewing with dismay the New Age trash - both psychic and physical - which chokes the land, and en route meeting Kilgore Trout (Kurt VONNEGUT Jr). Squed (1989 UK) and its sequel Sowboy (1991 UK) are sf FABULATIONS. [JC]

MILLER, R(ICHARD) DEWITT

(1910-1958) US writer who was involved in promulgating ideas about Fortean phenomena (Charles FORT), and who began publishing sf with "The Shapes" for ASF in 1936. In addition to some works of Fortean nonfiction, such as You Do Take it with You (1956), he published an sf novel, The Man who Lived Forever (1938 ASF as "The Master Shall not Die" as by RDM alone; rev 1956 dos; vt Year 3097 1958 UK) with Anna Hunger, about an immortal who struggles to keep mankind's technology from running amuck. The Loose Board in the Floor (1951) is a fantasy about stuffed animals going on a trip. [JC]

MILLER, STEVE

(1950-) US writer who began publishing sf with 3 novels set in the same SPACE-OPERA galaxy, all in collaboration with Sharon Lee. Agent of Change (1988) and Carpe Diem (1989) are closely linked adventure tales featuring an interstellar agent on the loose; the heroine of Conflict of Honors (1988) is a starship crewperson who undergoes various travails in her quest to become a pilot. [JC]

MILLER, WALTER M(ICHAEL)

(1922-) US writer. WMM flew combat missions in WWII and was converted to Catholicism in 1947; he began publishing sf with "Secret of the Death Dome" in AMZ in 1951, and over the 10 years of his active writing career released about 40 more tales, many of which had a deep impact upon the field. During the 1950s, a time when US sf tended to express its new-found interest in character through stories whose rigid formulae were derived from sentimental fiction and which tended to read as simplistic moralities, WMM published in Gal, FSF, ASF and elsewhere tales whose treatment of character was effortlessly complex; moreover, through his preoccupation with RELIGION, he transfigured conventional sf themes and instruments - progress, GENETIC ENGINEERING, BIOLOGY in general - by treating them with a rich ambivalence. Perhaps the best example is "The Darfsteller" (1955), which won a HUGO as Best Novelette in 1955. The sf premise seems simple: a computer-like machine that controls a THEATRE of life-sized mannequins has displaced human actors. The darfsteller, an unemployed Method actor, has been working as a janitor in a theatre, and sabotages one of the mannequin-tapes so that he can replace it on stage. At this point the typical sf story of "character" might well give him his

comeuppance and the tale would end. But WMM is just beginning; the rigged performance becomes an essay in acting and, through its presentation of Christ's Passion, a continually deepening examination of the actor's complex, emblem-haunted nature. The story appears in *Conditionally Human* (coll 1962); WMM's other collection of shorter items was *The View from the Stars* (coll 1965). *The Science Fiction of Walter M. Miller, Jr.* (coll 1978) and *The Best of Walter M. Miller, Jr.* (coll 1980) amply convey a sense of his finest work in short form. But WMM remains best known for his single novel, *A CANTICLE FOR LEIBOWITZ* (1955-7 FSF; fixup 1960), which, along with James BLISH's *A CASE OF CONSCIENCE* (1953 If; exp 1958), stands as one of the very few attempts in US sf to deal with formal religion. The first part of this 3-part work is set in a Dark Ages 600 years after a 20th-century nuclear HOLOCAUST, when the survival of the human race remains a moot question. The Catholic Order of Leibowitz - named after a 20th-century physicist who created the Order and bestowed upon it the task of preserving knowledge during the period of violent nescience that followed the holocaust - has come into some holy relics relevant to Leibowitz's canonization, and their survival becomes emblematic of humanity's. In the second part, half a millennium later, the Order is confronted with the rise once again of the scientific mentality, with all its benefits and risks. In the third part, a further half-millennium later, the Order has lost prestige and power in a new industrial-scientific age, but prepares a spaceship to escape the inevitable second holocaust, thus hoping to shorten the period of darkness that will ensue. The novel is full of subtly presented detail about the nature of religious vocation and the way of life of an isolated community, deals ably with the questions of the nature of historical and scientific knowledge which it raises, and poses and intriguingly answers ethical questions about mankind's proper relation to God and the world; though the vagrant entry of the Wandering Jew into the text is perhaps a little contrived, that is a small flaw in a seminal work. While *A Canticle for Leibowitz* can be read as a work of Christian apologetics, WMM (like Gene WOLFE after him) clearly responds mythopoeically to the holy story - and to the institutions - of his Church, with effects both ambiguous and ironic. At the same time, however, his central commitment (like Wolfe's) is unwavering, and the cyclical pattern of the tale reads as anything but defeatist - for the moment of Christ's Coming is not a matter of dead history. The 1961 Hugo for the book was richly deserved. A sequel is projected for publication in the early 1990s. [JC]Other works: *Beyond Armageddon: Survivors of the Megawar* (anth 1985) ed with Harry Martin GREENBERG. See also: AMAZING STORIES; ANTI-INTELLECTUALISM IN SF; ARTS; AUTOMATION; COLONIZATION OF OTHER WORLDS; ESP; HISTORY IN SF; The MAGAZINE OF FANTASY AND SCIENCE FICTION ; MEDICINE; MUTANTS; ROBOTS; SOCIOLOGY; SPACE FLIGHT; SUPERNATURAL CREATURES.

MILLER, WARREN

(1921-1966) US writer, best known for his first Harlem novel, *The Cool World* (1959). *Looking for the General* (1964) is a combination of FABULATION and quest, and some of its devices belong to sf. WM's sf novel proper, *The Siege of Harlem* (1964), is a NEAR-FUTURE tale in which Harlem,

New York, declares itself a separate state. WM was married to Jimmy MILLER. [JC]See also: POLITICS.

MILLIGAN, SPIKE

Working name of Indian-born Irish writer and comic Terence Alan Milligan (1918-), who first became famous for his central role as the author and one of the stars of the long series of Goon Show programmes on BBC Radio in the 1950s. Many of his books, beginning with his first, Silly Verse for Kids (coll 1959 chap), have fantasy content, as do his two novels, Puckoon (1963) and The Looney: An Irish Fantasy (1987). He is of direct sf interest for a play, The Bedsitting Room (1970) with John Antrobus (1933-), which initially treats a nuclear HOLOCAUST in terms of surreal spoof, though by the final act the few survivors are engaging in cannibalism. The original play was filmed as The BED-SITTING ROOM in 1969. [JC]

MILLS, C(ARLA) J(OHNSON)

(1944-) US writer known only for her Winter World sequence - Winter World (1988), Winter World #2: Egil's Book (1991), #3: Kit's Book (1991), #4: Brander's Book (1992) and #5: Zjhanne's Book (1992) - featuring various adventures on a strife-beset frozen world. [JC]

MILLS, ROBERT E.

(? -) US author who began writing sf with the Star Quest Trilogy of adventure tales: Star Quest (1978), Star Fighters (1978) and Star Force (1978). Under the Eyes of Night (1980) is a novel of the occult. [JC]

MILLS, ROBERT P(ARK)

(1920-1986) US editor and literary agent, managing editor of The MAGAZINE OF FANTASY AND SCIENCE FICTION from its inception; he assumed the editorship proper with the Sep 1958 issue, following Anthony BOUCHER's resignation, remaining editor until Mar 1962 and continuing thereafter as consulting editor until Feb 1963. During his tenure FSF maintained its standing as the most sophisticated sf magazine and won HUGOS in 1959, 1960 and 1963. RPM edited several FSF anthologies, including The Best from Fantasy and Science Fiction: Ninth Series (anth 1960; cut vt Flowers for Algernon and Other Stories 1960), Tenth Series (anth 1961) and Eleventh Series (anth 1962), as well as A Decade of Fantasy and Science Fiction (anth 1960) and Twenty Years of the Magazine of Fantasy and Science Fiction (anth 1970), the latter with Edward L. FERMAN. RPM was also editor of VENTURE SCIENCE FICTION during its first incarnation (1957-8), when the magazine was renowned for its "daring" approach to sexual topics. He also edited The Worlds of Science Fiction (anth 1963). After leaving FSF RPM became a literary agent, operating as Robert P. Mills Ltd, and during the 1960s and early 1970s served a prestigious list of clients. He sold the agency to Richard A. CURTIS in 1984. [MJE]

MILLS-MALET, VINCENT

(? - ?) UK writer in whose sf novel, The Meteoric Benson: A Romance of Actuality (1912), the inventor of an aerostat (or helicopter) uses it to frighten the Germans and subsequently the entire world into peace, and gains the hand of the peer's daughter he loves. [JC]

MILNE, ROBERT DUNCAN (GORDON)

(1844-1899) Scottish-born journalist and writer, in the USA from about 1864, who published at least 60 sf stories of very considerable conceptual ingenuity, prefiguring many of the themes of the modern genre. Beginning with "A Modern Robe of Nessus" in 1879, he published most of these tales in the San Francisco journal *The Argonaut*, one of whose editors, Ambrose BIERCE, was strongly influenced by his work. Forgotten for many decades after his death, RDM was rediscovered by Sam MOSKOWITZ, who in *Science Fiction in Old San Francisco, Volume 1: History of the Movement from 1854 to 1890* (1980) forcefully argued the case for treating him as an important figure, and who assembled some of RDM's tales in a companion volume, *Into the Sun and Other Stories* (coll 1980). Typical of RDM's vigorous creative mind are "Into the Sun" (1882) and its sequel, "Plucked from the Burning" (1882), which together describe a world-cataclysm caused by a comet, detail the protagonist's escape in a BALLOON from the effects of impact, follow him first to Tibet and then back to a devastated world full of apocalyptic scenes, and end in the creation of a new and better society based on the political thought of Jean-Jacques Rousseau (1712-1778). Throughout his work - the rest of which remains uncollected - can be perceived the workings of a mind for whom science and technology granted far more to the imaginative mind when their rules were obeyed, or at least understood. RDM was one of the first genuinely extrapolative thinkers to work in the field. [JC]See also: MATTER TRANSMISSION.

MIND OF MR SOAMES, THE

Film (1969). Amicus. Dir Alan Cooke, starring Terence Stamp, Robert Vaughn, Nigel Davenport. Screenplay John Hale, Edward Simpson, from *The Mind of Mr Soames* (1961) by Charles Eric MAINE. 98 mins. Colour. Soames (Stamp) has been in a coma since birth and is now 30 years old. A neurosurgeon (Vaughn) brings him to consciousness with a brain operation. Now a sexually mature man, his brain is a blank slate for life to write on. Stamp's performance as the innocent who escapes his teachers too soon, and who turns violent when society treats him violently, is touching; through the pulp clichés a genuine thoughtfulness about the nature of education and learning is dimly apparent. In its theme this small-scale, rather solemn UK film resembles CHARLY (1968). [PN]

MINDWARP: AN INFINITY OF TERROR

Roger CORMAN.

MINES, SAMUEL

(1909-) US editor who worked from 1942 for Standard Magazines, the chain that published STARTLING STORIES and THRILLING WONDER STORIES. Although an sf enthusiast - he published 4 stories in TWS, beginning with "Find the Sculptor" in 1946 - he concentrated mainly on non-sf pulps until Sam MERWIN left the company in 1951, whereupon he took over the editorship of Startling Stories (Nov 1951-Fall 1954), TWS (Dec 1951-Summer 1954), FANTASTIC STORY QUARTERLY (Winter 1952-Fall 1954) and WONDER STORY ANNUAL (1952-3); he also edited all issues of the short-lived SPACE STORIES. Although he took control of the magazines at a time when the PULP-MAGAZINE industry was generally in decline, and the sf pulps in particular were suffering from the powerful competition of such new magazines as GALAXY SCIENCE FICTION and The MAGAZINE OF FANTASY AND SCIENCE FICTION, SM was

generally successful in maintaining the standard to which Merwin had raised them. He ed *The Best from Startling Stories* (anth 1953; vt *Startling Stories* 1954 UK; vt *Moment without Time* 1956 UK); the book contained stories from TWS as well. SM left *Standard* in 1954; the various magazines did not survive him long. He held no further editorial positions in sf, although he did review books occasionally for *LUNA MONTHLY*. [MJE]

MINKOV, SVETOSLAV

(1902-1966) Bulgarian writer and man of letters, active from 1920 (for contextual comments on his earliest work *BULGARIA*). The sf tales and *FABULATIONS* assembled in *The Lady with the X-Ray Eyes* (coll trans Krassimira Noneva 1965 Bulgaria), which brings together work originally published 1928-65, are sharp, occasionally didactic, and expose a sometimes insistent irony. This text is not a translation of a 1934 Bulgarian collection with the same title. [JC]

MINTO, WILLIAM

(1845-1893) UK writer whose sf novel, *The Crack of Doom* (1886), portentously invokes the threatened arrival of a dangerous comet to influence, intermittently, an entirely prosaic plot. [JC] See also: *END OF THE WORLD*.

MIRACLEMAN

CAPTAIN MARVEL; Neil GAIMAN; Alan MOORE.

MIRACLE SCIENCE AND FANTASY STORIES

US PULP MAGAZINE. 2 issues, Apr/May and June/July 1931, published by Good Story Magazine Co., ed Douglas M. DOLD. MSFS's publisher was Harold HERSEY, previously editor of *THRILL BOOK*, while Douglas Dold was consulting editor of *Astounding Stories* (*ASTOUNDING SCIENCE-FICTION*) 1930-31. The magazine featured undistinguished pulp fiction by both Douglas and Elliott DOLD and by Victor ROUSSEAU. Its cover design, by Elliott, was unusually stylish for its time. Douglas was blind, and a reference by Hersey in *Pulpwood Editor* (1937) implies that the editor was in fact Elliott. [MJE/PN]

MIRAGE PRESS

US SMALL PRESS publishing primarily fantasy-related material and taking its name from *Mirage*, a successful 1960s *FANZINE* published by Jack L. CHALKER. Chalker began issuing books under the *Mirage* logo in 1961, beginning with his own *The New H.P. Lovecraft Bibliography* (1961 chap) and including *A Figment of a Dream* (1962 chap) by David H. KELLER. The *Mirage Press* took on a more formal existence in 1967, with new financing; later publications include *The Conan Reader* (coll 1968), a collection of essays by L. Sprague DE CAMP drawn from the fanzine *AMRA* (the dustjacket artwork was Berni Wrightson's first professional sale). De Camp and George SCITHERS subsequently edited 2 further vols of Conan-related *SWORD-AND-SORCERY* material (Robert E. HOWARD) for *Mirage: The Conan Swordbook* (anth 1969) and *The Conan Grimoire* (anth 1972). Other *Mirage* books include *Dragons and Nightmares* (coll 1969) by Robert BLOCH, poetry by De Camp, *A Guide to Middle Earth* (1971) by Robert Foster, H.G. Wells: *Critic of Progress* (1973) by Jack WILLIAMSON, and a variety of sf/fantasy reference books. There were around 20 *Mirage* books by 1975, at which point

the business slowed to a near halt because its financial backer fell ill. Chalker's career as a novelist began at about this point, and MP has since been relatively inactive, though long-held projects - including an edition of The Harlan Ellison Hornbook (coll 1990) slipcased with Harlan Ellison's Movie (1990), both by Harlan ELLISON, and Chalker's and Mark OWING's The Science-Fantasy Publishers (vastly exp 3rd edn 1991) - eventually appeared. [MJE/JC/PN]

MISHA

Working name of US writer Misha Chocholak (? -), of Native American background, who began publishing material of genre interest with Prayers of Steel (coll 1989 chap), which assembles some fantasy poems; her second collection, Ke-Qua-Hawk-As (coll 1993), similarly incorporates poems, intermixed with stories based on Native American material. Her sf novel, Red Spider White Web (1990 UK), employs a congested CYBERPUNK venue (a USA in which sanitized enclaves called "Mickey-sans" shelter their lobotomized inhabitants from the excremental waste and POLLUTION outside) to darken the inherently romantic story of a dedicated artist whose intransigent attempts to do her work run afoul of surreally caricatured figures from the corrupted mire. The ending is grim. [JC]Other Works: Dr. Ihoka's Cure1993, non-fiction.

MISSION GALACTICA: THE CYLON ATTACK BATTLESTAR GALACTICA.

MR JOSEPH YOUNG OF AFRICA MIGHTY JOE YOUNG.

MISTER X

Created by Canadian designers Dean Motter and Paul Rivoche, this cipherlike character-bald and with sunglasses, black overcoat and suitcase - appeared in illustrations and on record-album covers in the late 1970s before plans were made to publish a comic. The Mister X comic was promoted with several gorgeously designed posters 1981-3 without in fact appearing. Eventually Rivoche was taken off the strip and the project was handed over to Jaime, Gilbert and Mario Hernandez, the creators of LOVE AND ROCKETS; using Rivoche's designs, they produced The Return of Mister X (graph coll 1986) which first ran in Mister X #1-#4 1984-5. Mr X is not really the star of his own comic. Its main subject and the cause of most of its stories is its location, Radiant City. This city was codesigned by Mr X using the dogmas of "Psychetecture", so that its enclosures, shapes and spaces would have resonances in the human psyche. Sadly, someone skimped on the materials during construction, and the result is the nightmare city Somnopolis - a place deliberately reminiscent of Fritz LANG's METROPOLIS. Since the Hernandez brothers many others have turned their hand to matters Somnopolitan. They include D'Israeli, Shane Oakley, Klaus Schoenfeld, Seth and eventually even Rivoche himself. [SW]

MISTRAL, BENGO

House name used for a novel by Norman A. LAZENBY and for two others: Pirates of Cerebus (fixup 1953) based on stories in John Spencer magazines (BADGER BOOKS) by B. Ward, and SPACE FLIGHT 139 (1954). [JC]

MISTRESS OF ATLANTIS, THE
Die HERRIN VON ATLANTIS.

MITCHELL, ADRIAN

(1932-) UK writer, best known for his poetry. His second novel, *The Bodyguard* (1970), is the deathbed narrative of a representative figure of a 1980s UK, a paramilitary bodyguard whose reminiscences of his various jobs defending a totalitarian state provide a DYSTOPIAN portrait of the Europe to come. [JC]See also: POLITICS.

MITCHELL, CLYDE

ZIFF-DAVIS house name, 1956-7, used twice by Robert SILVERBERG and Randall GARRETT in collaboration, twice by unidentified writers, and once by Harlan ELLISON on "The Wife Factory" (1957 Fantastic). [PN]

MITCHELL, EDWARD PAGE

(1852-1927) US newspaperman and writer, associated from 1875 until his death with the *New York Sun*, serving as editor-in-chief 1903-20. EPM's sf, which came from the first decade of his career and most of which first appeared in his own journal, was restricted to about 30 short stories, beginning with "The Tachypomp" (1874), about a sort of humanoid calculator. Their subject matters range widely, from TIME TRAVEL in "The Clock that Went Backward" (1881) to MATTER TRANSMISSION in "The Man without a Body" (1877) and INVISIBILITY in "The Crystal Man" (1881). EPM's work, which in its variety and imaginative power may have influenced H.G. WELLS and others, came to be noticed in the sf field through the publication of *The Crystal Man: Landmark Science Fiction* (coll 1973), edited and with a long and informative introduction by Sam MOSKOWITZ. [JC]See also: COMPUTERS.

MITCHELL, J(AMES) LESLIE

(1901-1935) Scottish novelist, known mainly for regional novels written as by Lewis Grassie Gibbon, and for *Scottish Scene* (1934) with Hugh MacDiarmid (1892-1978). Under his own name he wrote popular archaeology and fiction, much of the latter coloured by fantasy and romantic chinoiserie after the fashion of James Elroy FLECKER. Typical of these are *The Calends of Cairo* (coll of linked stories 1931; vt *Cairo Dawns* 1931 USA) with a letter in preface by H.G. WELLS, and *Persian Dawns, Egyptian Nights* (coll of 2 linked story sequences 1933) with a foreword by J.D. BERESFORD. *Three Go Back* (1932; bowdlerized 1953 USA) is sf, combining ANTHROPOLOGY, ATLANTIS and TIME TRAVEL themes in a well written though awkwardly plotted story of three 20th-century passengers on an airship cast back in time (by earthquakes!) to Atlantis, where they find unspoiled proto-Basques in an Eden doomed by the nearing Ice Age and by conflicts with savage Neanderthals, which decimate the tribe; the two surviving castaways then snap back to the present. The book is notable for its realistic and ebullient female protagonist, who adapts far more readily to her strange surroundings than either of the men. Very similarly, the eponymous female protagonist of *Gay Hunter* (1934), on being cast into a far-future Britain, adapts with commendable swiftness, stripping naked just as quickly as the heroine of the previous book, but remaining decorously virgin; eventually, espousing healthy athleticism, she helps

defeat a fascist attempt to reindustrialize the country. "Kametis and Evelpis", a third tale linked to the previous two by similarities of plot, was left incomplete at JLM's death; John GAWSWORTH revised the manuscript and published the resulting novelette in his Masterpiece of Thrills (anth 1936), along with other posthumous sf and fantasy, as by Lewis Grassie Gibbon. In the nonfiction Hanno, or The Future of Exploration (1928), JLM committed himself to some humorous thoughts about exploring both space and the centre of the Earth. [JC]Other work: The Lost Trumpet (1932).About the author: "The Science Fiction of John Leslie Mitchell" by Ian Campbell in EXTRAPOLATION, Dec 1974. See also: ORIGIN OF MAN.

MITCHELL, JOHN A(MES)

(1845-1918) US writer in various genres. His sf began with The Last American: A Fragment from the Journal of Khan-Li, Prince of Dimph-Yoo-Chur and Admiral in the Persian Navy (1889), a satirical post- HOLOCAUST novel in which a 30th-century Persian expedition visits a North America long devastated by climatic changes; it was much influenced by Edgar Allan POE's "Mellonta Tauta" (1849) and curiously prefigures Gene WOLFE's Seven American Nights (1978 Orbit #20; 1989 chap dos). The racism of the book - the USA falls because of unfettered immigration - is typical of JAM's era. His other well known sf book, Drowsy (1917), is a sentimental love story involving a telepath who discovers ANTIGRAVITY and visits the Moon and Mars. The book was notable for Angus Peter Macdonnal's fine illustrations, many of them moonscapes, some reproduced in EXTRAPOLATION, May 1971; their relationship to the text is at times exiguous. [JC]Other works: The Romance of the Moon (1886 chap), a fantasy for children; Life's Fairy Tales (coll 1892); Amos Judd (1895); Gloria Victis (1897; rev vt Dr Thorne's Idea 1910); That First Affair and Other Sketches (coll 1902); The Villa Claudia (1904); The Silent War (1906).

MITCHELL, KIRK (JOHN)

(1950-) US writer and former police officer who began writing sf with an ALTERNATE-WORLD trilogy - Procurator (1984), New Barbarians (1986) and Cry Republic (1989) - based on the premise that Rome did not fall and that the world of 2000CE reflects a mixture of Roman modes and richly conceived technologies. KM's best single novel is probably Never the Twain (1987), a TIME-TRAVEL tale in which a descendant of the US writer Bret Harte (1836-1902) goes back to Civil War Nevada with a copy of Mark TWAIN's The Adventures of Huckleberry Finn (1884 UK) and attempts to persuade Harte to put his name to the tale, and so make his eventual heir rich. The ensuing complications are superficially comic, but an intriguingly human and detailed portrayal of the main characters, and of 19th-century Nevada, slowly emerges. [JC]Other works: Anno Domini (1985); Lethal Wagon * (1987) as by Joel Norst, a film tie; Black Dragon (1988). See also: TIME PARADOXES.

MITCHELL, SILAS WEIR

(1829-1914) US physician, neurologist and writer, of considerable eminence for his original research - he published at least 172 papers from 1852 on neurophysiology and related subjects. Most of his voluminous fiction is historical and depicts US subjects with romantic solemnity. His first story, "The Case of George Dedlow" (1866), is of some sf interest,

as it is a SATIRE on Spiritualism. In *Dr North and his Friends* (1900) a female character exhibits a dual personality; it is one of the earliest appearances of this phenomenon in fiction (PSYCHOLOGY). *Little Stories* (coll 1903) assembles tales whose sf interest lies in SWM's ability to ground supernatural subject matter with speculations usually derived from his own researches. A further story, "Was He Dead?" (1870), appears in *Future Perfect* (anth 1966) ed H. Bruce FRANKLIN. [JC]

MITCHISON, NAOMI (MARGARET)

(1897-) Scottish novelist, story writer, cattle breeder and polemicist, sister of J.B.S. HALDANE. She is known mainly for her work outside the sf field - her bibliography includes over 100 books and over 1000 shorter pieces, beginning with *Saunes Bairos: A Study in Recurrence: A Play in Three Acts, a Prologue and Epilogue* (1913 chap) as by N.M.Haldane, the first performance of which featured an appearance by the young Aldous HUXLEY - and includes such historical novels as *The Conquered* (1923) and *The Corn King and the Spring Queen* (1931; vt *The Barbarian* 1961 US), the latter an ANTHROPOLOGICAL fantasy about Sparta. Some of her earlier stories, such as "The Goat", published in *Barbarian Stories* (coll 1929), the short novel *The Powers of Light* (1932 chap), which deals with prehistory, and many of the tales and fables in *The Fourth Pig* (coll 1936), use sf or fantasy elements for allegorical purposes. *We Have Been Warned* (1935) is a NEAR-FUTURE political novel involving the oppression of the Left in the UK. *Beyond this Limit* (1935 chap), whose illustrations by Wyndham LEWIS constitute a co-creation of the book, is an afterlife fantasy with some satirical impact. *The Big House* (1950) is a fairy tale for children, set within a Celtic frame. *Travel Light* (1952) is an historical fantasy. *To the Chapel Perilous* (1955) is a witty account of the Grail legend which pits rival anthropological and historical theories together as if, in a sense, they were all true. *Behold Your King* (1957) is a novel about Christ's crucifixion, told in a slangy, contemporary idiom to demystify it. *Images of Africa* (coll 1980) assembles short fantasies told in a folktale idiom. *Early in Orcadia* (1987), also fantasy, is set in prehistoric Orkney. Of her 30 or more books for children, many are fantasy. Two late collections, *Beyond this Limit: Selected Shorter Fiction* (coll 1986), which assembles pre-WWII work, and *A Girl Must Live: Stories and Poems* (coll 1990), which assembles work from the following half-century, include a considerable amount of sf. NM's first genuine sf novel was *MEMOIRS OF A SPACEWOMAN* (1962), a ruminative picaresque comprising a series of episodes recollected by the narrator, Mary, a COMMUNICATIONS expert dealing with ALIEN intelligences. Most of the episodes contain ingenious biological (or exobiological) speculations. Mary's reminiscences are warm and urgent; her job necessitates interstellar travel, which requires "time blackouts", so that she constantly returns to a changed world. She loves her work, however, and intends to continue; it is a radiant book. *Solution Three* (1975) is a less sustained examination of a CLONE solution to the problems of a post-catastrophe Earth. Heterosexuality is out; but a new generation is beginning to question the rigidity of the homosexual *Solution Three*. Not by *Bread Alone* (1983) suggests that the sudden distribution of free food worldwide will create serious problems; the Australian Aborigines wisely

refuse the offer. Though NM's fiction is both copious and fluent, her writing is primarily motivated by extrinsic concerns. Where these concerns are successfully embedded in her stories, she is a writer of glowing power. [JC] See also: GENETIC ENGINEERING; INTELLIGENCE; MYTHOLOGY; WOMEN AS PORTRAYED IN SCIENCE FICTION.

MITSUSE, RYU

[r] JAPAN.

MIXON, LAURA J.

(1957-) US writer who began publishing sf with the first in the *Omni Odysseys* sequence for younger readers, *Omni: Astropilots* (1987; vt *Astro Pilots* 1987 UK); other titles were from other hands. Her first adult novel, *Glass Houses* (1992), is a CYBERPUNK-influenced tale set in New York City, and told in a style one might describe as East Coast noir. The female protagonist, grittily characterized, is tough, believable, humanly vulnerable. The plot, which involves at least one MCGUFFIN, brings in the usual cyberpunk suspects: corporations; henchmen; crazed entrepreneurs; VIRTUAL REALITY surfers. It is a remarkable debut, and points to much more.

[JC]

MOAV, RAM

[r] ISRAEL.

MODERN ELECTRICS

SCIENCE AND INVENTION.

MODESITT, L(ELAND) E(XTON Jr)

(1943-) US writer who began publishing sf with "The Great American Economy" for ASF in 1973, the first of two Council of Economic Advisors tales. His first novel *The Fires of Paratime* (1982), is an eccentric but ambitious TIME-TRAVEL tale, in which emissaries/guardians from the planet Query engage in complex and metaphysical manipulations of reality. *The Hammer of Darkness* (1985), also sf, was followed by two series. The *Forever Hero* novels - *Dawn for a Distant Earth* (1987), *Silent Warrior* (1987) and *In Endless Twilight* (1988) - treat the profound ecological desecration of Earth through a sequence of SPACE OPERAS whose protagonist, an immortal warrior called MacGregor Gerswin, saves the planet as part of a scheme of sweeping galactic exploits. The *Ecolitan Trilogy* - *The Ecologic Envoy* (1986), *The Ecolitan Operation* (1989) and *The Ecologic Secession* (1990) - deals with similar themes, though ultimate success is here achieved as part of a pattern of political intrigues and battles. The *Recluce* fantasy sequence comprises *The Magic of Recluce* (1991), *The Towers of the Sunset* (1992) and *The Magic Engineer* (1994). *The Green Progression* (1992) with Bruce Scott Levinson is a nongenre novel on ecological issues. *Of Tangible Ghosts* (1994) is an ALTERNATE WORLD sf tale. [JC] Other Works: *Time Diver's Dawn* (1992) and *The Timegod* (1993).

MOEBIUS

Jean GIRAUD.

MOFFAT, W. GRAHAM

(1866-?) UK writer whose *What's the World Coming To?* (1893) with John White takes the form of a series of discussions, set in AD2003, of the

various marvels which the 20th century has seen. The tone is satirical; the targets include Edward BELLAMY, fictional cliches such as crime detection by psychic means, and concerns such as FEMINISM. [JC]

MOFFATT, JAMES

(1922-1993) Canadian-born UK writer who wrote at least 290 novels in several genres under at least 45 pseudonyms, including the Hank JANSON house name (though not in that case for sf) and Richard Allen, a personal pseudonym for the non-sf Skin books. In the 1960s he wrote the first chapter of a novel which, when taken over by Michael MOORCOCK according to a practice very common in UK pulp publishing, became *Somewhere in the Night* (1966) as by Moorcock. JM's sf novels under his own name - others may exist - are *The Sleeping Bomb* (1970; vt *The Cambri Plot* 1973 US), which was the first volume in an otherwise non-sf series starring Silas Manners, and *Queen Kong* (1977), spoofing KING KONG from a feminist point of view. [JC]

MOFFETT, CLEVELAND LANGSTON

(1863-1926) US playwright and popular novelist, author of one of the most explicit EDISONADES to appear in early-20th-century US sf. In *The Conquest of America: A Romance of Disaster and Victory* (1916), Thomas Alva Edison (1847-1931) himself saves the USA from decadent socialists while fending off a threat of WAR from Germany. *The Mysterious Card* (fixup 1912) and *Possessed* (fixup 1920) are occult fantasies. [JC]

MOFFETT, JUDITH

(1942-) US writer and academic, a professor with the University of Pennsylvania since 1979. She was first active as a poet, publishing 2 collections - *Keeping Time* (coll 1976) and *Whinny Moor Crossing* (coll 1984) - before turning to sf with an ape-as-human tale (*APES AND CAVEMEN*), "Surviving", for FSF in 1986, later assembled with "Not without Honor" (1989) as *Two that Came True* (coll 1991). With her first novel, *Pennterra* (1987), she came into immediate prominence, partly because of the rousing sexual explicitness of some scenes between humans and the pheromone-emitting Hrossa, a mysterious group-mind species named - oddly, given C.S. LEWIS's prurient distaste for sexual material - after the Martians who feature in *OUT OF THE SILENT PLANET* (1938). Having escaped a terminally polluted Earth, a party of Quakers has landed on the planet Pennterra and been permitted restricted residence on condition that they do not breed indiscriminately, claim further territory or use invasive technologies. All goes well until a second human expedition arrives with no intention of changing any of the behaviour which has ruined humanity's first home. The Hrossa warn them that Pennterra herself will punish them for any disobedience, and the novel - taking on the hues of a grave and didactic PLANETARY ROMANCE-moves inexorably to the comeuppance. JM's second novel, *THE RAGGED WORLD: A NOVEL OF THE HEFN ON EARTH* (fixup 1991), adroitly transforms a series of stories-including "Tiny Tango" (1989), about AIDS - into a remarkably effective fable of DISASTER and redemption, the latter at the hands of a deus ex machina cabal of aliens; the sequel was *Time, Like an Ever-Rolling Stream* (1992). These novels come close to aesthetic overkill, but do not succumb: the first generally avoids the chill of piety, and the sequence overall eschews the coy. By choosing

controversial subjects and then treating them to generic solutions, JM shows a mature sense of balance and an active engagement with the sf genre; she is a risk-taker of very considerable interest. [JC]See also: EDISONADE; JOHN W. CAMPBELL AWARD; PASTORAL; SEX; SUPERNATURAL CREATURES; THEODORE STURGEON MEMORIAL AWARD.

MOFFITT, DONALD (ANTHONY)

(1936-) US writer who started publishing sf with *The Jupiter Theft* (1977), a tale which established him as an author of numerate, physics-oriented, fast-moving HARD-SF adventures. After some years of silence came the Genesis series - *The Genesis Quest* (1986) and *Second Genesis* (1986) - which demonstrates a competence with the mythopoeically large scales and calculations typical of DM's category of SPACE OPERA as Earth sends terminal messages through space which reach their alien targets millions of years hence, generating an eon-leaping response. Slightly closer to home, the Mechanical Sky sequence - *Crescent in the Sky* (1990) and *A Gathering of Stars* (1990) - posits Arab-dominated venues in space. Though some local-colour weaknesses (the first volume features a court eunuch) might irritate Muslims, the focus of the tales - especially the wide-ranging second instalment - is firmly on the wide-scale action and the physics. [JC]

MOLESWORTH, VOL(TAIRE)

(1924-1964) Australian journalist and writer, active in FANDOM around the period of WWII. His sf included 4 short novels: *Ape of God* (1943 chap) and its sequel *Monster at Large* (1943 chap), *Blinded They Fly* (1951 chap), based in part on the works of Charles FORT, and *Let There Be Monsters!* (1952 chap), a tale about MUTANTS. VM also wrote *Outline History of Australian Fandom* (1953). [JC]See also: SMALL PRESSES AND LIMITED EDITIONS.

MONEY

Love of money, being the root of all evil, has always played a leading part in literature, and sf is no exception: few plots could move without it. Precisely because it is so basic, however, speculative thought has rarely focused on it; it is one of those things that is habitually taken for granted. Money may change its form, and the dollar may be replaced by the CREDIT, but its centrality in human affairs is inviolable. The commonest of all wish-fulfilment fantasies is the sudden acquisition of wealth, and sf has often given form to the wish. As with other such fantasies, however, sf writers have characteristically taken a cynical and slightly disapproving view of the issue, implying that no good can come of it. T.L. SHERRED's "Eye for Iniquity" (1953) is a neat cautionary tale about the problems involved in having a talent for making money out of nothing. The frenzy which can be aroused by the prospect of easy money is exemplified in history by the affair of the South Sea Bubble (1720), and this prompted one of the earliest speculative fictions about speculation, Samuel Brunt's *A Voyage to Cacklogallinia* (1727). However, many UTOPIANS had already expressed their distaste for the profit motive and its effects on human affairs. Various romances commenting on the folly of the alchemical quest - of which the most notable is Honore de BALZAC's *La*

recherche de l'absolu (1834; trans under various titles) - took a similar line. The prospect of science making at least the physical part of the alchemist's quest a reality did little to alter this disparaging attitude. Edgar Allan POE's "Von Kempelen and His Discovery" (1849) suggests that the discovery of a way of making gold would simply rob a practically valueless metal of its ridiculous price, and that the world would press on regardless. Arthur Conan DOYLE's successful gold-maker in *The Doings of Raffles Haw* (1891) is quickly disillusioned with philanthropy and reverts his hoard to the dust whence it came. Henry Richardson CHAMBERLAIN's eponymous *6000 Tons of Gold* (1894) nearly precipitates worldwide catastrophe. Only John TAINE's hero in *Quayle's Invention* (1927) gets much joy out of his instant wealth, and he finds it far from easy. Much more beneficial to humanity, in the eyes of its author, is the wealth-destroying machine in George Allan ENGLAND's *The Golden Blight* (1916), which frees mankind from the present generation of capitalists. The folly of retaining the gold standard in an era of technological ingenuity is exposed in Frank O'Rourke's *SATIRE Instant Gold* (1964); it is hardly surprising that the main change in the money system consistently made by sf writers was the replacement of the gold standard by a purely theoretical credit system. Garrett P. SERVISS's *The Moon Metal* (1900) offers a variant on the gold-making theme, while George O. SMITH's "Pandora's Millions" (1945) concerns the desperate race to find a new symbolic medium of exchange following the invention of the matter-duplicator, and the title of "The Iron Standard" (1943) by Henry KUTTNER largely speaks for itself. Exotic media of exchange are occasionally featured in sf, notably the virtue-based credit system of Patrick Wilkins's "Money is the Root of All Good" and the alien exchange-system whereby depression leads to extinction in John BRUNNER's *Total Eclipse* (1975). Jack VANCE has been particularly ingenious in the invention of various monetary systems appropriately or ironically adapted to different cultures. One subtheme of note is developed in stories celebrating the wonders of compound interest. Simple mathematics shows that money invested for 1000 years grows quite magnificently even at relatively low interest rates - an observation first made in Eugene Sue's *The Wandering Jew* (1845). SLEEPERS AWAKE from periods of SUSPENDED ANIMATION to find themselves rich in Edmond ABOUT's *The Man with the Broken Ear* (1861; trans 1867), H.G. WELLS's *When the Sleeper Wakes* (1899; rev as *The Sleeper Awakes* 1910) and Charles Eric MAINE's *The Man who Owned the World* (1961). Harry Stephen Keeler took the notion to extremes in "John Jones' Dollar" (1915 *Black Cat*), in which a dollar invested in trust for John Jones's distant descendants ultimately grows to represent all the wealth in the Universe. More recently, however, we have become all too well aware of what inflation can do to long-term investments, and the hero of Frederik POHL's *The Age of the Pussyfoot* (1968) awakes from suspended animation to find his "fortune" valueless in terms of real purchasing power. It all goes to prove the old adage that money doesn't grow on trees - except, of course, in Clifford D. SIMAK's "The Money Tree" (1958). [BS]See also: ECONOMICS.

MONITORS, THE
Film (1969). Bell ?

Dir Jack Shea, starring Guy Stockwell, Susan Oliver, Avery Schreiber, Sherry Jackson, with cameos by Keenan Wynn, Ed Begley and others. Screenplay Myron J. Gold, based on *The Monitors* (1966) by Keith LAUMER. 92 mins. Colour. Filled with bizarre jokes and moments of stunning banality, this film - or string of revue sketches - made in Chicago by the Second City cabaret troupe, concerns an invasion of Earth by superior ALIENS who enforce on the population a system of brotherly love and nonviolence. Dressed in black overcoats, black hats and dark glasses, the monitors control people by spraying them with a pacifying gas; a resistance movement is formed and the aliens are overthrown. An oddity, which flopped badly, the film is a product of a time when the hippy flower power counterculture was attempting to usher in an era of peace and happiness, but followed close on the heels of police brutality against hippy protesters outside the 1968 Chicago Democratic Convention. [JB/PN]

MONKEY BUSINESS

Film (1952). 20th Century-Fox. Dir Howard Hawks, starring Cary Grant, Ginger Rogers, Charles Coburn, Hugh Marlowe, Marilyn Monroe. Screenplay Ben HECHT, I.A.L. Diamond, Charles Lederer. 97 mins. B/w. Made only a year after *The Thing* (though his direction of the latter was uncredited), Hawks's second sf film is one of the classic screwball comedies. Grant plays a staid scientist working on slowing the ageing process. One of his laboratory apes accidentally mixes the ingredients that bring a kind of rejuvenation and dumps them in the water cooler. First the scientist, then his equally grave wife (Rogers) and then his employers mistakenly take the elixir, and all, sequentially, revert to manic adolescent behaviour. In a splendid bit part Marilyn Monroe plays the now predatory scientist's first quarry. Amid the well orchestrated farce, a serious enough point is made about hormonal experiments, as anarchy strikes deep into the heart of adulthood. [PN]

MONKEY SHINES

(vt *Monkey Shines: An Experiment in Terror*) Film (1988). Orion/Charles Evans. Dir George ROMERO, starring Jason Beghe, John Pankow, Kate McNeil, Joyce Van Patten. Screenplay Romero, based on *Monkey Shines* (1983) by Michael STEWART. 113 mins. Colour. The sf element in this horror thriller is Ella, a monkey, the subject of an experiment to increase simian intelligence by injecting human genetic material into her brain. Ella is given as a therapeutic companion to quadriplegic Allan, with whom she develops a quasitelepathic link. His exasperation at his helplessness is translated by Ella into instructions to kill anyone (including his suffocating mother) who angers him. She also becomes jealous, attacking the two people closest to Allan: his best friend and his new lover. Allan must stop her, using (literally) only his head. Put baldly this sounds trite, but MS is close to perfect in its own apparently unpromising terms. It is made with great patience and subtlety, with an astonishing performance from the monkey - whose growing intelligence (and malice) is rendered utterly believable - and with Beghe brilliant in the difficult quadriplegic role. The subtext (a Jekyll-and-Hyde theme with Ella being Allan's vicariously controlled Hyde, representing the animal instincts still functioning within the human mind) is maintained even in the one

gratuitous shock added to the finale after previews in order to make the film less sedate: a metaphoric twist on the old phrase "a monkey on my back". [PN]

MONOLITH MONSTERS, THE

Film (1957). Universal. Dir John Sherwood, starring Grant Williams, Lola Albright, Les Tremayne. Screenplay Norman Jolley, Robert M. Fresco, based on a story by Jack ARNOLD, Fresco. 77 mins. B/w. In this rather good little film, crystals from a meteorite that has fallen near a small desert town grow and multiply rapidly when wet. They also cause death by absorbing all the silicon from any living thing that touches them, paradoxically turning the victims to stone. There is a rainstorm: the outstandingly surreal sequences of the crystals rearing up and crashing down, in their inexorable march towards the seemingly doomed town, are memorable. Then it is discovered that ordinary salt will stop them. Sherwood's debt to Jack Arnold is obvious, especially in the moody desert landscapes. The idea of the marching crystals may well have been borrowed from "White Lily" (1930) by John TAINE. [JB/PN]

MONROE, LYLE

Robert A. HEINLEIN.

MONSARRAT, NICHOLAS

Pseudonym of Nicholas John Turney (1910-1979), UK-born writer long in Canada, best known for such adventure novels as *The Cruel Sea* (1951). The first of the 4 vols of his Signs of the Times series, *The Time Before This* (1962 UK), which is sf, tells of the discovery of ancient artefacts and frozen beings in Canada, evidence of a highly evolved earlier race on Earth, and of an atomic HOLOCAUST which ended their civilization. The second, *Smith and Jones* (1963 UK), is a seemingly conventional spy story but is transformed devastatingly into either an ALTERNATE-WORLD or a NEAR-FUTURE novel by its last line. With *The Master Mariner, Book 1: Running Proud* (1978 UK), NM began a projected 2-part novel about a Flying Dutchman figure, whose story was planned to extend over four centuries of UK life at sea; the second volume, which NM died before completing, was published as *The Master Mariner, Book 2: Darken Ship: The Unfinished Novel* (1980 UK). [JC]

MONSTER

Roger CORMAN.

MONSTER FROM THE OCEAN FLOOR

Roger CORMAN.

MONSTER MAKER

Roger CORMAN.

MONSTER MOVIES

A term colloquially used for a very specific genre of film, usually borderline sf. A monster movie - sometimes called a Creature Feature - must contain the unexpected appearance, normally in a serene setting, of a creature (or many creatures) hostile to humanity. The nature of the creature is usually revealed gradually, and its attacks normally increase in severity. It may be a mutated animal or human, an alien, a kind of

animal normally not hostile (as in Hitchcock's *The BIRDS* [1963]), or any unnatural (but not supernatural) creature. The monster is usually rationalized (often half-heartedly) as, for example, a dormant prehistoric species newly awakened (e.g., *GOJIRA* [1954]), an unintended result of scientific experiment (e.g., *TARANTULA* [1955]), a *MUTANT* created by radioactivity (e.g., *THEM!* [1954]), or a secret government experimental warfare device gone wrong (e.g., the remake of *The BLOB* [1988]). In the majority of cases the monster represents a punishment for humankind-for tampering with Nature, corrupting the environment or creating vile weapons. The featuring of a monstrous creature - e.g., the vampire protagonist of *Dracula* (1931) and its successors - is not in itself a sufficient condition for a film to be classed as a MM. The monster must occupy our world - a world where cause and effect are operative, and phenomena normally have explanations - and not a fantasy world; for this reason MMs can properly be defined as *sf*. The monster is, however, not a natural occupant of our world, and to this degree MMs approach the condition of fantasy. If the MM has an ultimate moral, it is about the fragility of the Age of Reason in which we supposedly live. Unreason lurks in the surrounding dark, just beyond the light cast by our campfires, and may break in. The case can be put psychologically, too: in Freudian terms as the revenge of the id over the conscious ego (*FORBIDDEN PLANET*), or in Jungian terms as the irruption of archetypes into a world which does not consciously recognize them. The oldest part of our brains, the hindbrain or limbic system, wellspring of our fight-or-flight reflex, is sometimes claimed as the source of our monsters, not so much Unreason reclaiming ground from Reason as the Primitive asserting its continuing strength over the Sophisticated. It is one of the interesting qualities of MMs that any attempt to unravel their subtexts nearly always reveals a critique of the smugness of "civilization" - indeed, a questioning of the very nature of civilization. Thus one of our most apparently childish genres asks some of the most unanswerable questions of our world. Various elements that make up the generic MM had previously existed in isolation: prehistoric survivals in *The LOST WORLD* (1925); a gigantic threat to humanity in *KING KONG* (1933); deformed creatures revenging themselves against normality in *FRANKENSTEIN* (1931), *ISLAND OF LOST SOULS* (1932) and *Freaks* (1932). It was only with the *sf* movie boom of the 1950s that the generic structure of the MM took the shape it retains today, quite rapidly developing inflexible conventions. The most plausible candidate for the first such film is *The THING* (1951), with subsequent milestones including *The BEAST FROM 20,000 FATHOMS* (1953), *GOJIRA* (1954), *THEM!* (1954) and *TARANTULA* (1955). The boom climaxed with a veritable eruption of MMs in 1957, including one of Roger CORMAN's first, *ATTACK OF THE CRAB MONSTERS*, and, unusually, a UK offering, the marvellously insane *FIEND WITHOUT A FACE*. The cascade continued in 1958, with variations on the theme becoming more knowing - a sign that generic conventions had sufficiently hardened for audience expectations to be consciously manipulated - in *I MARRIED A MONSTER FROM OUTER SPACE*, *The BLOB* and *The FLY*. But generic rigidity soon degenerated into decline and fall. More MMs were made 1959-62 than in the whole of 1951-8, but almost without exception they were low-budget, cynical exploitationers of no real quality aimed at the teenage drive-in market; an exception might be made of the surreal Japanese *MOSURA* (1961). The

structure of MMs normally follows, in sequence, the following narrative conventions: the peaceful beginning; the first intimations that something is wrong; half-seen glimpses of the monster; disbelief of the first reports; attacks of increasing ferocity in which the monster is fully revealed; the fight back against the monster and its destruction. Often there is also the revelation in the final frames that more monsters are hatching. An important variation, signalled by King Kong, is the sympathetic monster, doomed to destruction, sometimes magnificent in its monstrosity, more often merely pathetic as in *The Creature from the Black Lagoon* (1954), *The Quatermass Experiment* (1955; vt *The Creeping Unknown*), *The Amazing Colossal Man* (1957), *Not of This Earth* (1957) and *The Fly* (1958). Here the subtext might be that the monster, basically, is us. Another classic variation is the monstrous creature that can take over, or assume the shape of, human beings, as in *It Came from Outer Space* (1953), *Invaders from Mars* (1953), *Invasion of the Body Snatchers* (1956), *Quatermass II* (1957; vt *Enemy from Space*), *I Married a Monster from Outer Space* (1958), *Terrone nello Spazio* (1965; vt *Planet of the Vampires*) and the tv series *The Invaders* (1967-8). Such films still turn up occasionally, as in *The Hidden* (1988) and *They Live* (1988). Their subtext, however, is entirely different from that of MMs proper (*Paranoia*) and many would not regard them as the real thing. After *The Birds* (1963), few MMs of any quality were made for some time. Then came the extraordinary *Night of the Living Dead* (1968), in which the director, George Romero, rejuvenated the genre by adding to it one of its great icons, the army of (scientifically created) zombies, literally eating society away. In the 1970s the revenge-of-Nature theme of *The Birds* was taken up again by a number of other films in which the "monster" was natural, aside from its exceptional ferocity towards humanity. Some of these were *Frogs* (1972), *Night of the Lepus* (1972), *Squirm* (1976), *The Giant Spider Invasion* (1975), *Kingdom of the Spiders* (1977) and, most famous of all, *Jaws* (1975). *Phase IV* (1974) and *Bug* (1975), both featuring intelligent insects, also have points of interest. Most of these films are marginal sf at best, being closer in their paranoia to supernatural fantasy. In the mid-1970s MMs - not just in the revenge-of-Nature subgenre - began bit by bit to make their comeback, often through the work of quirky, independent directors. *Death Line* (1973; vt *Raw Meat*) and *It's Alive* (1974) are both notable for sympathetic monsters. The latter is the work of the deeply eccentric Larry Cohen, whose subsequent MMs include *It Lives Again* (1978) and *Q* (1983; vt *The Winged Serpent*; vt *Q: The Winged Serpent*). David Cronenberg also began making borderline MMs in the 1970s, with *The Parasite Murders* (1974; vt *They Came from Within*; vt *Shivers*), *Rabid* (1976) and *The Brood* (1979), all notable for being both intelligent and disgusting. Joe Dante's *Piranha* (1978) is another witty and subversive independent production. Indeed, it was now becoming clear that the second generation of MMs, far from being primitive exploitation movies, were attracting some of the most radical and sophisticated directors. Any of these films offers sufficiently complex readings, often political, to give grist for a doctoral thesis. This is only possible when genres enter their mature phase, where, although self-referential decadence (*Recursive SF*) can become tiresome, virtuoso variations on a theme are also likely to occur. The year 1979 was a turning point for MMs. Although it featured one

of the most disappointing ever made, PROPHECY, an expensive flop for John FRANKENHEIMER, it also saw the release of ALIEN, directed by Ridley SCOTT, which was an enormous success, both commercially and, in the view of some critics, artistically. Thus, although the 1980s saw the continuing release of interesting low-budget MMs from independents - e.g., ALLIGATOR (1980), DAY OF THE DEAD (1985), CRITTERS (1986), SOCIETY (1989) and TREMORS (1989) - it saw also more expensive productions from companies encouraged by the success of Alien. A surprising number were remakes (mostly middle-budget), including two that were very interesting indeed and may come to have classic status: John CARPENTER's The THING (1982) and David Cronenberg's The FLY (1986). Also better than most people expected were The BLOB (1988) and The FLY II (1989). Other middling-to-large budget MMs of the period were PREDATOR (1987) and its efficient sequel PREDATOR 2 (1990), LEVIATHAN (1989), The ABYSS (1989) - where the monsters turn out to be good ALIENS-and perhaps the best of them, the spider movie to end all spider movies, ARACHNOPHOBIA (1990), which has a strong element of social comedy. Indeed, outright comedy - either at the expense of or through the medium of MMs - is quite common, with one of the first examples being Woody Allen's EVERYTHING YOU ALWAYS WANTED TO KNOW ABOUT SEX (BUT WERE AFRAID TO ASK) (1972), which in one episode features a giant breast on the rampage. Most MM spoofs (there are quite a few) are bad, with Attack of the Killer Tomatoes (1978) being typical in its ineptness. SCHLOCK (1971), on the other hand, featuring a Neanderthal survival rather than a monster proper, is rather funny, as is Larry Cohen's The STUFF (1985), about a passive monster disguised as food. Two more recent MM satires targeting Middle America are TERRORVISION (1986) and MEET THE APPELGATES (1990): the latter ingeniously shows life from the monsters' point of view. [PN]

MONSTER ON THE CAMPUS

Film (1958). Universal. Dir Jack ARNOLD, starring Arthur Franz, Joanna Moore, Judson Pratt, Troy Donahue. Screenplay David DUNCAN. 77 mins. B/w. This is one of Jack Arnold's last and poorest sf films, a variation on the Jekyll and Hyde theme: blood from a specimen coelacanth causes living creatures to devolve (DEVOLUTION); a SCIENTIST (Franz) temporarily but repeatedly becomes an apeman. The film is, foolishly, structured as a mystery which everybody is too unobservant to solve, and the science is absurd. As critic Bill WARREN has pointed out, the main interest is noting the variety of ways in which the unfortunate scientist (whose noble quasi-suicide is the film's climax), along with a dog and a dragonfly, contrive to contaminate themselves. [JB/PN]

MONSTERS

Monsters have always stalked the hinterlands of the imagination, emblems of fear and symbols of guilt. They commonly take their aspects and roles from the supernatural imagination (SUPERNATURAL CREATURES); but the scientific imagination has produced many monsters of its own. The recruitment to the HORROR story of monsters spawned by Nature was pioneered by H.G. WELLS's classic alien- INVASION story THE WAR OF THE WORLDS (1897) and by William Hope HODGSON's sea stories. Sf monsters are often familiar but repulsive creatures made monstrous by increasing their

size (GREAT AND SMALL), and alien monsters are often created by chimerical redeployment of the repulsive features of earthly creatures. The fossil record has increased this vocabulary of ideas considerably. Other monsters arise as MUTANTS or as the accidental products of human scientific endeavour: the archetypal monster of this kind stars in Mary SHELLEY's GOTHIC-SF classic Frankenstein, or The Modern Prometheus (1818; rev 1831). The actual scientific discipline of teratology (the study of monsters) has made little impact on sf, although its elaboration in the gruesome murder mystery The Cadaver of Gideon Wyck (1934) by Alexander LAING brings that novel close to the sf borderline, and the same might be said of Whitley STRIEBER's horror-detective novel The Wolfen (1978). Russell M. GRIFFIN's The Blind Men and the Elephant (1982) borrows heavily from the well known "Elephant Man" case. Many of the standard figures of fear have made their way from MYTHOLOGY or elsewhere into sf via more-or-less ingenious processes of rationalization. The invisible monster proved easy to adapt (INVISIBILITY): one was featured in the first issue of AMZ in George Allan ENGLAND's "The Thing from-Outside" (1926). The Gorgon became C.L. MOORE's "Shambleau" (1933). Werewolves are rationalized in DARKER THAN YOU THINK (1940; 1948) by Jack WILLIAMSON and "There Shall Be No Darkness" (1950) by James BLISH. "Who Goes There?" (1938) by John W. CAMPBELL Jr takes the idea of the menacing shapeshifter to its limit. Sf vampires are featured in numerous stories, including "Asylum" (1942) by A. E. VAN VOGT - whose The Voyage of the Space Beagle (fixup 1950) features a whole repertoire of monsters - I Am Legend (1954) by Richard MATHESON, The Space Vampires (1976) by Colin WILSON, The Vampire Tapestry (fixup 1980) by Suzy McKee CHARNAS and The Empire of Fear (1988) by Brian M. STABLEFORD. The entire retinue of mythological monsters is recreated by COMPUTER in Nightworld (1979) and The Vampires of Nightworld (1981) by David F. BISCHOFF. Other kinds of quasivampiric PARASITISM are featured in Eric Frank RUSSELL's Sinister Barrier (1939; 1943; rev 1948), van Vogt's "Discord in Scarlet" (1939) and Robert A. HEINLEIN's The Puppet Masters (1951; text restored 1989). Monsters have always been very popular in the movies, and until the 1960s sf CINEMA was dominated by MONSTER MOVIES of every possible kind. The first of many versions of FRANKENSTEIN was made in 1910, but the legend was created anew in 1931 when Boris Karloff took the role of the monster. Shortly afterwards a new legend was born in the story of KING KONG (1933), in which fear was modified by sympathy: the pragmatically necessary destruction of monster by mankind was thereafter able to take on a dimension of tragedy, and the monsters could be pitied in their monstrousness. Japanese monster movies, pioneered by GOJIRA (1954), have frequently converted charismatic monsters into heroes. Another significant cinematic innovation was the monster liberated from the scientist's id in FORBIDDEN PLANET (1956). Recent advances in special-effects technology have permitted a resurgence of scary MONSTER MOVIES, the most notable sf examples being ALIEN (1979) and its sequels, and various films dir David CRONENBERG, while TERMINATOR 2: JUDGMENT DAY (1991) grafts a traditional monstrous propensity - shapeshifting-onto a technological construct. GENRE SF, of course, made abundant melodramatic use of monsters. ILLUSTRATION played a considerable part in building sf's monster mythology - ALIEN horrors were a particularly rich source of lurid cover pictures, and the BUG-EYED MONSTER, or BEM (whose archetype appeared

on the cover of ASF May 1931, illustrating Charles Willard Diffin's "Dark Moon"), quickly became a CLICHE

MONSTERS FROM THE UNKNOWN PLANET

GOJIRA; RADON.

MONTANA, RON (A.)
(?1945-) US writer whose published work in FANZINES included "We the People" in 1974 for Craig STRETE's Red Planet Earth. His first sf novel, The Sign of the Thunderbird (1977), conveys its post- HOLOCAUST protagonists to the New Mexico of 1860, where their actions in espousing a free Indian Nation generate an ALTERNATE-WORLD vision of the USA. His second, The Cathedral Option (1978), is of less interest. RM's engagement with Native American material ironically prefigured a controversy of the 1980s, in which he accused Strete of plagiarizing his draft of the manuscript published as Death in the Spirit House (1988) under Strete's name alone; RM's version of the book was eventually republished, as part of an agreed settlement, as Face in the Snow (1992), under his name as sole author. The book itself remains difficult to evaluate, for the transformation of the protagonist from spoiled "evolue" Native American into the transcendent manifestation of the spirit of a symbolic mountain seems, perhaps, rather forced. [JC]

MONTEIRO, JERONIMO
[r] LATIN AMERICA.

MONTELEONE, THOMAS F(RANCIS)
(1946-) US writer active in sf since 1972, first with book reviews in AMZ, then with short stories, beginning with "Wendigo's Child" for Monster Tales (anth 1973) ed Roger ELWOOD. Two of his stories have received NEBULA nominations; nine of them (plus a play) are collected in Dark Stars, and Other Illuminations (coll 1981). These were more ambitious than most of his work at novel length, which is undemanding adventure fiction, starting with Seeds of Change (1975 Canada); this is of interest in that, as the first of the LASER BOOKS, it was issued free to libraries and booksellers as a promotional item in order to generate sales of later titles. TFM's subsequent sf novels include The Time-Swept City (fixup 1977), featuring a city-controlling COMPUTER developing sentience; The Secret Sea (1979), with Jules VERNE's Captain Nemo and the Nautilus turning up in one of a set of PARALLEL WORLDS; and the entertaining post- HOLOCAUST Guardian sequence: Guardian (1980) and Ozymandias (1981); in the first volume a pre-holocaust supercomputer is found, and in the second it is incarnated in a human body. The rather derivative Dragonstar sequence with David F. BISCHOFF - Day of the Dragonstar (1983), Night of the Dragonstar (1985) and Dragonstar Destiny (1989) - is about First Contact with a saurian race aboard a vast, alien spacecraft. In 1980 TFM moved to horror/dark fantasy with Night Things (1980), returning to it with Night-Train (1984) and

later with others. TFM is a thoughtful editor. His 2 sf theme anthologies are *The Arts, and Beyond: Visions of Man's Aesthetic Future* (anth 1977) and *R-A-M: Random Access Messages of the Computer Age* (anth 1984; vt *Microworlds: SF Stories of the Computer Age* 1985 UK). His 2 horror anthologies are *Borderlands* (anth 1990), *Borderlands II* (anth 1991) and *Borderlands III* (anth 1994). [PN] Other works: *The Time Connection* (1976), sf; *Lyrical* (1987), *The Magnificent Gallery* (1987), *Crooked House* (1987) with John DECHANCIE and *Fantasma* (1989), *The Blood of the Lamb* (1992), all horror. See also: ARTS.

MONTGOMERY, FRANCES TREGO

(1858-1925) US writer, mostly of books for children, whose Electric Elephant sequence - *The Wonderful Electric Elephant* (1903) and *On a Lark to the Planets* (1904) - describes in a DIME-NOVEL manner the adventures of a young man who inherits a hollow mechanical elephant after the apparent death of the old man who owned it. With a girlfriend (they later marry), he frolics across the USA and, in the second volume, around the Solar System, which is described in terms appropriate to astrology. The old man then reappears and takes them on a guided tour of the Milky Way. [JC]

The BLUE BOOK MAGAZINE.

MOON

The lunar voyage has a long literary history, having developed from a standard framework for social SATIRE to become one of the archetypal projects of speculative fiction. Major works in the former tradition include two 2nd-century tales by LUCIAN of Samosata, Francis GODWIN's *The Man in the Moone* (1638), the first part of CYRANO DE BERGERAC's *L'autre monde* (1657), Daniel DEFOE's *The Consolidator* (1705), Samuel Brunt's *A Voyage to Cacklogallinia* (1727), Murtagh MCDERMOT's *A Trip to the Moon* (1728) and Joseph ATTERLEY's *A Voyage to the Moon* (1827). This phase of the history of the lunar voyage is the subject of Marjorie Hope NICOLSON's excellent *Voyages to the Moon* (1948), which has an extensive annotated bibliography. Several pre-1841 lunar voyages can be found in *The Man in the Moone* (anth 1971) ed Faith K. Pizor and T. Allan Comp. The use of the Moon as a stage for the erection of mock societies became less fashionable in the 19th century, but echoes of the tradition recur even in the present century, as in Compton MACKENZIE's *The Lunatic Republic* (1959). The first trip to the Moon seemingly motivated solely by the spirit of adventure was in a brief episode in Ralph MORRIS's *ROBINSONADE The Life and Wonderful Adventures of John Daniel* (1751). The idea that travelling to the Moon might be a notion worth taking seriously first crops up in the appendix to John WILKINS's *The Discovery of a New World* (3rd edn 1640), where the author suggests that a man might be carried to the Moon by a large bird or that a flying machine capable of the trip might one day become practicable. Another writer to take seriously the modes of TRANSPORTATION used as conveniences by satirists was David RUSSEN, author of *Iter Lunare* (1703): he suggested that a man might be propelled to the Moon by the

force of a gargantuan spring. The first writer to make any pretence at verisimilitude was Edgar Allan POE, whose "The Unparalleled Adventure of One Hans Pfaall" (1835) is a curious admixture of comic satire and speculative fiction, although Pfaall's BALLOON seems hardly more credible than Russen's spring. A superficially more convincing method was the space-gun envisaged by Jules VERNE in *De la terre a la lune* (1865; trans J.K. Hoyte as *From the Earth to the Moon* 1869 US) and its sequel, *Autour de la lune* (1870; both trans Lewis Mercier and Eleanor King as *From the Earth to the Moon . . .*, and *a Trip Around It* 1873 UK). Serious interest in the Moon as a world in its own right, possibly harbouring ALIEN life of its own, began with Johannes KEPLER's *Somnium* (1634), but this work stands almost alone. Richard Adams LOCKE published his "Moon Hoax" in the *New York Sun* in 1835, purporting to describe the inhabitants of the Moon as observed by Sir John Herschel (1792-1871) with the aid of a new telescope, but this vision of lunar life was a gaudy burlesque. By the time the cosmic voyage began to be taken seriously in the 19th century the possibility of there being life on the Moon was already past credibility. H.G. WELLS imagined a Selenite society within the Moon in *THE FIRST MEN IN THE MOON* (1901), but the setting here was no more than a convenient literary device, like the antigravitic Cavorite by means of which the trip was accomplished. Other contemporary works - including W.S. LACH-SZYRMA's "Letters from the Planets" (1887-93), Edgar FAWCETT's *The Ghost of Guy Thyrle* (1895) and George GRIFFITH's *A Honeymoon in Space* (1901)-portray the Moon as a place of ultimate desolation where life is extinct, although the scenes in which interplanetary voyagers find the ruins of long-dead civilizations on the Moon exhibit a curiously nostalgic sense of tragedy. A dead Moon is featured also in Andre LAURIE's *Les exiles de la Terre* (1887; trans as *The Conquest of the Moon* 1889 UK), a story made memorable by the magnificent notion that traversing the vacuum of space might be avoided if the Moon could be temporarily attracted into the Earth's atmosphere by giant magnets. Lunar life reappeared, however-sometimes in extravagant fashion - in the works of PULP-MAGAZINE writers, notably in Edgar Rice BURROUGHS's *The Moon Maid* (1923-5; fixup 1926), Edmond HAMILTON's "The Other Side of the Moon" (1929), Otis Adelbert KLINE's *Maza of the Moon* (1930) and, most impressively, Jack WILLIAMSON's "The Moon Era" (1932). Lip-service is paid to the deadness of the Moon's visible surface by locating the aliens inside the Moon, as Wells did, or only on its far side, or in the distant past. A nostalgic elegy for lunar life is offered by Lester DEL REY's "The Wings of Night" (1942). Dead or not, though, the Moon was there - a mere quarter of a million miles away - to be reached and to be claimed. To the early pulp writers this was an article of faith, so easily taken for granted that the Moon routinely became a mere stepping-stone en route to MARS or the STARS. The lunar voyage remained a constant theme of sf of the 1930s and 1940s, but it was more peripheral than the hype surrounding the first actual Moon landing (1969) suggested. The imminent possibility of SPACE FLIGHT in a real NEAR FUTURE had been taken seriously by relatively few writers. Arthur C. CLARKE's essay, "We Can Rocket to the Moon - Now!" (1939), ushered in a new era of realism, but it was the advent towards the end of WWII of the V-2 rocket-bomb that hammered home the message that ROCKET-powered SPACESHIPS were just around the corner. The post-WWII years saw

publication of a number of visionary novels which elevated the first trip to the Moon to quasimythical status. Robert A. HEINLEIN, who had earlier written the poignant "Requiem" (1940) about the burning ambition of a man who longed to go to the Moon even though the trip would kill him, wrote a short novel about the same hero's earlier fight to finance the first Moon-shot and sell the myth of space conquest to the world: "The Man who Sold the Moon" (1950). Heinlein also scripted the George PAL film DESTINATION MOON (1950), drawing material from his first juvenile novel, Rocket Ship Galileo (1947). Heinlein wrote realistic sf stories set on the Moon for non-genre magazines, as did Arthur C. Clarke, the chief UK prophet and propagandist of space travel, and author of Prelude to Space (1951) and Earthlight (1951). Realistic juvenile novels concerning the establishment of Moon bases were written by Lester DEL REY and Patrick MOORE, and the UK RADIO serial Journey into Space (novelized by Charles CHILTON as Journey into Space * [1954]) further popularized the idea. Pierre BOULLE moved the myth decisively into MAINSTREAM fiction in Garden on the Moon (1964; trans 1965), but by then most sf writers had abandoned the theme as too commonplace. William F. TEMPLE's Shoot at the Moon (1966) was one of the last major celebrations of the lunar-voyage myth in sf before Neil Armstrong took his "one small step". In the mythology of sf, the first lunar landing was usually a prelude to rapid COLONIZATION. A lunar colony had waged its carbon-copy war of independence as long ago as The Birth of a New Republic (1931 AMZ Quarterly; 1981) by Jack Williamson and Miles J. BREUER. The hostility of the lunar environment was admitted, but faith in human ingenuity ran high—John W. CAMPBELL Jr wrote the ultimate lunar robinsonade in The Moon is Hell (1950), easily outdoing Charles Eric MAINE's more modest High Vacuum (1956). Thrillers and mysteries set on the inhabited Moon became commonplace in the 1950s; examples are Murray LEINSTER's City on the Moon (1957), Clarke's A Fall of Moondust (1961) and Clifford D. SIMAK's Trouble with Tycho (1961). Heinlein produced a definitive new version of the birth of the new republic in THE MOON IS A HARSH MISTRESS (1966), a vision which John VARLEY modified and expanded upon in Steel Beach (1992). Despite its deadness, the Moon retained its status as an alien world, and human visitors sometimes found echoes of others long passed on - artefacts left behind to confront the Earthlings, as they broke out of their atmospheric shell, with a glimpse of the infinite possibilities of an inhabited Universe. Clarke's "Sentinel of Eternity" (1951; vt "The Sentinel") captured the essence of this notion and became its archetypal expression, ultimately forming the seed of the film 2001: A SPACE ODYSSEY (1967). An equally challenging but far less hospitable artefact is featured in ROGUE MOON (1960) by Algis BUDRYS, and the discovery of an apparently human corpse on the Moon in James P. HOGAN's Inherit the Stars (1977) is a prelude to far more spectacular discoveries. Post-1969 sf tends to look farther out than the Moon, although lunar colonies are still a frequent feature of HARD-SF stories. Despite a deflection of attention towards orbiting SPACE HABITATS, Moon-based thrillers and mysteries are still produced. Notable examples are Larry NIVEN's The Patchwork Girl (1980), Roger MacBride ALLEN's Farside Cannon (1988), Michael SWANWICK's Griffin's Egg (1991) and Charles L. HARNESS's Lunar Justice (1991). Moon colonies occasionally survive the devastation of Earth, as in When the Sky Burned

(1973; exp vt Test of Fire 1982) by Ben BOVA. More spectacular use of the Moon is made by Bob SHAW in The Ceres Solution (1981), where it is broken up, and by John GRIBBIN and Marcus CHOWN in Double Planet (1988) and its sequel Reunion (1991), where it is supplied with a brand new atmosphere. A theme anthology is Men on the Moon (anth 1958) ed Donald A. WOLLHEIM. [BS]

MOON, ELIZABETH (N.)

(1945-) US writer whose strongest work has been fantasy, primarily the Deed of Paksennarion sequence: The Deed of Paksennarion #1: Sheepfarmer's Daughter (1988), #2: Divided Allegiance (1988) and #3: Oath of Gold (1989), all assembled as The Deed of Paksennarion (all texts rev, omni 1992); a prequel, Surrender None: The Legacy of Gird (1990), vigorously sets the scene, and is followed by Liar's Oath (1992), which is similarly vigorous. EM began publishing sf with "ABCs in Zero-G" for ASF in 1986, a polished high-tech tale which was assembled, with other sf and FANTASY, in Lunar Activity (coll 1990) - the title is a play on EM's name rather than an accurate description of the book's contents. She collaborated with Anne MCCAFFREY on Sassinak (1990) and Generation Warriors (1992), being #1 and #3 of the Planet Pirates sequence of sf adventures featuring a young girl who, after her home planet has been destroyed by "planet pirates", becomes a Federation pirate hunter. Hunting Party (1993) is an sf tale starring a female soldier who must recoup her reputation after having been forced to resign in disgrace. [JC]Other Works: Sporting Chance (1994).

MOONBASE 3

UK tv serial (1973). BBC TV. Prod Barry Letts. Script ed Terrance Dicks. Scriptwriters Dicks and Letts (1st episode), and John Brason, John Lucarotti, Arden Winch. Dirs Ken Hannam, Christopher Barry. Scientific advisor James Burke, a well known presenter of tv popular-science programmes. Starring Donald Houston, Barry Lowe, Ralph Bates, Fiona Gaunt. 6 30min episodes. Colour. Set on an enclosed European Moon base in AD2003 (other nations had set up similar bases), M3 concerned a group of scientists. The usual sensational elements (aliens, monsters) were studiously eschewed in favour of psychological problems in the small, claustrophobic community, but the attempt at responsible realism was somewhat dull. [JB/PN]

MOONCHILD

Gardner F. FOX.

MOONEY, TED

Working name of US writer Edward Mooney (1951-), whose remarkable first novel, published in the MAINSTREAM, is sf: Easy Travel to Other Planets (1981). Set on a NEAR-FUTURE Earth against a backdrop of global information sickness, war in the Antarctic and a new emotion nobody has ever felt before, it tells a love story - with visionary ramifications - concerning a woman marine biologist and the dolphin on whom she conducts experiments in LINGUISTICS. It has been seen as a proto- CYBERPUNK work, but its cool, pellucid, dissecting style - perhaps influenced by J.G. BALLARD - is far removed from the hectic insistence that has characterized much of that school. TM's second sf book was the ALTERNATE-WORLD novel Traffic and Laughter (1990), set in the near future of an Earth where WWII

was inconclusive and nuclear power never developed. [PN]

MOONRAKER

Film (1979). Eon/Les Productions Artistes Associes. Dir Lewis Gilbert, starring Roger Moore, Lois Chiles, Michael Lonsdale, Richard Kiel. Screenplay Christopher Wood, based on Moonraker (1955) by Ian FLEMING. 126 mins. Colour. British agent James Bond (Moore) uncovers a plot by megalomaniac Hugo Drax (Lonsdale) to destroy the present human race using space-launched nerve-gas capsules and replace it by a master race, to be specially bred in a large, radar-invisible SPACE HABITAT. This belongs towards the decadent, later end of the James Bond film sequence, with Moore pouting fleshily as Bond and a sequence of spectacularly destructive set pieces replacing any of the escalation of suspense we expect of the true thriller. As with most James Bond films, the science is contemptible and logical flaws highly visible. The film is remembered mainly for the finding by giant, steel-toothed assassin Jaws (Kiel) of a pigtailed girlfriend. The novelization is James Bond and Moonraker * (1979) by Christopher Wood (1935-). The other two (much earlier) films in the sequence that most resemble sf are DR NO (1962) and YOU ONLY LIVE TWICE (1967). [PN]

MOON ZERO TWO

Film (1969). Hammer/Warner Bros. Dir Roy Ward Baker, starring James Olson, Catherine von Schell, Warren Mitchell, Adrienne Corri. Screenplay Michael Carreras. 100 mins. Colour. At the same time as the first actual Moon landing, Hammer Films were making this quasi-Western set on the Moon, envisaged as a rip-roaring Frontier area; the results are absurd. One of the hoariest of pulp Western plots is dressed up with a lot of colourful space hardware: a poor but honest space pilot/cowboy/gunslinger (Olson) is forced by a group of villains to capture an asteroid of pure sapphire, but his principles triumph and he foils their plans. The special effects by Kit West, Nick Allder and Les Bowie are unexpectedly convincing, considering the relatively small budget, but the film has no other strength. The novelization is Moon Zero Two * (1969) by John BURKE. [JB/PN]

MOORCOCK, MICHAEL (JOHN)

(1939-) UK writer and editor, London-based and London-obsessed from his first vivid memories of WWII bombing of its southern suburbs, experiences constantly reflected in his fiction - wartime London providing many of its characteristic landscapes and its images of ENTROPY - and central to what may be his finest single novel, Mother London (1988), a work of singular complexity whose comprehensive grasp makes generic pigeonholing impossible, despite touches of telepathy and other psi phenomena in the text (ESP; PSI POWERS). During MM's desultory schooling he began to write, starting with Outlaw's Own (about 1950), a hand-done magazine, and continuing with several other similar FANZINE titles until 1962. After leaving school he began to contribute professionally to Tarzan Adventures, which he ed 1957-8, producing for it his first HEROIC-FANTASY series, later assembled as Sojan (coll of linked stories with independent material 1977). The Golden Barge (written 1958; except 1965 NW as by William Barclay; 1979) also demonstrated the precocity common to many generic

writers, plus an already characteristic questioning of the violence and morality of commercial heroic fantasy, a genre he was all the same to exploit extensively for the next 15 years. After working on the Sexton Blake Library (a long series of thrillers)-publishing one non-sf novella for it, Caribbean Crisis (1962 chap) with James CAWTHORN, together writing as Desmond Reid - and after doing some night-club work as a blues singer, MM, inspired by John CARNELL, began to contribute sf and fantasy stories to SF ADVENTURES and SCIENCE FANTASY. His first sf novel was The Sundered Worlds (1962-3 SF Adventures; fixup 1965; vt The Blood Red Game 1970), a metaphysical SPACE OPERA which introduced the concept of the "multiverse", a term probably derived from the works of John Cowper POWYS. The word describes a Universe in which multiple PARALLEL WORLDS co-exist, constantly (but never permanently) intersecting with one another; in this infinite nesting of intersecting arenas, similar cosmic dramas are played and replayed by numerous characters who inhabit the various worlds, but who reduce to a relatively small cast of core identities, each playing himself or herself under various names throughout the nest of worlds. Of these recurring characters, the most central to the heroic-fantasy novels is the figure of the Eternal Champion, the protagonist of various series including the Eternal Champion or Ereko sequence, Elric of Melnibone, the Warrior of Mars, Hawkmoon, Corum and Von Bek. In the fantasies, the Champion's fundamental task is to combat Chaos on behalf of Order. In the sf novels, the FABULATIONS and the non-genre works, the motives and tasks of those figures closest in nature to the Champion are much more ambiguous. Throughout, MM has consistently used the multiverse and the Eternal Champion as devices by which it becomes possible to construe all his very sizable oeuvre as comprising one enormous series. The Elric stories, published intermittently for over 30 years, constitute MM's first consequential work. At their heart is the albino melancholic Elric of Melnibone, a treacherous figure who is in a sense the minion of his own supernatural Chaos-inducing sword. They comprise a sustained critique and parody of the SWORD-AND-SORCERY brand of heroic fantasy. A sense that the target of this parody was trivial clearly motivated MM's next significant move, the creation of a figure parodic of the pretentious Weltschmerz of the antiheroic Elric: Jerry Cornelius, a portmanteau antihero painted initially in the Pop colours of 1960s "Swinging London", was Elric turned inside out, an anarchic streetwise urban ragamuffin with James Bond gear, and amorally deft at manipulating everything from women to the multiverse itself. In his early adventures - during which the planet suffers various catastrophes - Jerry ranges from the present through the FAR FUTURE, ever melancholy, randy and evanescent. This early version of Jerry dominates the first two novels of the Jerry Cornelius sequence: The Final Programme (excerpts 1965-6 NW; 1968 US; rev 1969 UK; rev 1977 US; rev 1979 UK), later filmed as The FINAL PROGRAMME (1973; cut vt The Last Days of Man on Earth 1975 US), and A Cure for Cancer (1969 NW; 1971; rev 1977 US; rev 1979 UK). In the third and fourth volumes of the sequence - The English Assassin (1972; rev 1977 US; rev 1979 UK) and The Condition of Muzak (1977; rev 1977 US; further rev 1978 UK), which won the 1977 Guardian Fiction Prize - the portrait of Pierrot-like Jerry and his enduring family and associates deepens, as the various Londons they inhabit become less and less open to their sf/fantasy manipulations. Caught between the forces

of Law and Chaos, they gradually come to represent the dubious success of any late-20th-century strategy for survival "in the deep cities of this world, in the years of their dying", as claimed by John CLUTE in an introduction to the omnibus which first assembled all 4 vols: THE CORNELIUS CHRONICLES (omni 1977 US; using 1979 revs of individual titles, rev vt in 2 vols as The Cornelius Chronicles: Book One 1988 UK and Book Two 1988 UK). In The Cornelius Chronicles, Volume II (omni 1986 US) were assembled The Lives and Times of Jerry Cornelius (coll 1976; exp 1987) and The Entropy Tango: A Comic Romance (fixup 1981). In The Cornelius Chronicles, Volume III (omni 1987 US) were assembled The Adventures of Una Persson and Catherine Cornelius in the Twentieth Century (1976; cut vt The Adventures of Una Persson and Catherine Cornelius in omni 1980 US with The Black Corridor [see below]) and "The Alchemist's Question" (1984) from The Opium General and Other Stories (coll 1984). The titles assembled in the second and third omnibuses served as modulations upon the thematic material of the central quartet, but lacked its cumulative intensity or Commedia dell'Arte pathos. Further associated material appeared in The Nature of the Catastrophe (anth 1971) ed MM and Langdon JONES, which contained stories and material by MM and other NW writers who were allowed to use the Cornelius world as an OPEN UNIVERSE, and as The Great Rock'n'Roll Swindle (1980 chap in the format of a tabloid newspaper; rev vt "Gold Diggers of 1977" in Casablanca 1979). The Distant Suns (1969 The Illustrated Weekly of India; 1975 chap) with Philip James (Cawthorn) has as its protagonist a Jerry Cornelius who bears no relation to the Jerry Cornelius of the other books. In the 1960s MM also became editor of NEW WORLDS, a position he held, with a few voluntary breaks, from #142 (May/June 1964) to its effective demise (but see below) as a magazine with #201 (Mar 1971). For some time he had been arguing that GENRE SF and FANTASY sadly lacked human values and literacy of texture, and he now began to accept for the journal stories from authors like Brian W. ALDISS, J.G. BALLARD, Samuel R. DELANY, Thomas M. DISCH, M. John HARRISON, John T. SLADEK and Norman SPINRAD which - he argued in its pages - proved that literate and humane sf and fantasy could be written. Works from these authors, and by MM himself, were soon identified as comprising a NEW WAVE (a term first used in 1961 in a book review by P. Schuyler MILLER, and later transformed by Christopher PRIEST into a tag for NW's new-style fiction). For several years after 1965, NW and the New Wave were virtually synonymous in the UK. MM published-and himself wrote - stories experimental in form and content, influenced by French Surrealism and by the early work of William S. BURROUGHS. After ceasing as a magazine, NW continued as a series of anthologies until 1976, under the editorship (variously and in combination) of MM, Hilary BAILEY (MM's wife 1962-78) and Platt; another brief NW series in magazine format ran for several issues in 1978-9; a further anthology series, with MM's authorization, began in the 1990s with New Worlds 1 (anth 1991) ed David S. GARNETT. Though MM was never prolific as an author of pure sf, the 1960s saw several works of interest, notably: The Black Corridor (1969 US) with Hilary Bailey (uncredited); The Ice Schooner (1966-7 SF Impulse; 1969; rev 1977 US; rev 1985 UK), a homage to and recasting of Joseph CONRAD's The Rescue (1920) which convincingly portrays the cultures of a new Ice Age at the moment when the temperature begins to rise again; and the Karl

Glogauer sequence, comprising BEHOLD THE MAN (1966 NW; exp 1969), the magazine version of which won a 1967 NEBULA for Best Novella, and the full version of which later appeared in Behold the Man and Other Stories (coll 1994), and Breakfast in the Ruins (1972). In the earlier book Glogauer is cast back by a TIME MACHINE; he becomes Christ and is crucified. In the second, structured as a series of vignettes, he is exposed to a series of moral crises exemplary of our modern world, and to which he is forced to respond. Collections included The Deep Fix (coll 1966) as by James COLVIN (an NW house name) and The Time Dweller (coll 1969). MM's pseudonymous output was, despite 1960s rumour, not large. Beyond Desmond Reid and Colvin, he used only Bill Barclay (1 story; 2 non-sf novels), the collaborative pseudonym Michael BARRINGTON (with Barrington J. BAYLEY; 1 story) and Edward P. Bradbury (3 fantasies). This intermittent production of sf did not increase in the 1970s, though two sequences appeared. The Oswald Bastable books - The Warlord of the Air (1971 US), subsequent texts being edited by other hands, The Land Leviathan (1974) and The Steel Tsar (1981) - expressed a nostalgia, evident also in The Condition of Muzak, for the kind of future an Edwardian might have hoped for (STEAMPUNK); all 3 were assembled as The Nomad of Time (omni 1982 US). More important was the far-future Dancers at the End of Time sequence, comprising a central trilogy - An Alien Heat (1972), The Hollow Lands (1974 US) and The End of All Songs (1976 US), assembled as The Dancers at the End of Time (omni 1981) - plus a collection, Legends from the End of Time (coll 1976 US), and a further novel, The Transformation of Miss Mavis Ming (1976 NW as "Constant Fire"; 1977; vt A Messiah at the End of Time 1978 US), both assembled as Tales from the End of Time (omni 1989 US). The protagonist of the sequence, Jherik Carnelian, although his name echoes that of Jerry Cornelius, nevertheless remains an independent character, inhabiting a far-future Earth in which infinitely available power makes everything and everyone constantly malleable; Carnelian himself, however, transported into the 19th century, becomes obsessed with humanity's moral and physical trammels, even to the point of falling in love. Gloriana, or The Unfulfill'd Queen: Being a Romance (1978), a rare singleton, presents an ambiguous sexual fable in a world which could be defined as an alternate Elizabethan England. In the 1980s MM increasingly concentrated either on fantasies which continued (and at times alarmingly amplified) earlier work, or on tales in which little or no generic content could be found. He also published: a political pamphlet, The Retreat from Liberty: The Erosion of Democracy in Today's Britain (1983 chap); an autobiographical sequence, Letters from Hollywood (1986); a patchy study, Wizardry and Wild Romance: A Study of Epic Fantasy (1987), a chapter of which was based on Epic Pooh (1978 chap); and Fantasy: The 100 Best Books (1988) with (but in fact written almost entirely by) James Cawthorn. After the singletons Mother London and The Brothel in Rosenstrasse (1982), a fantasy of sexual torment, the most interesting later novels are the Colonel Pyat sequence, comprising Byzantium Endures (1981; cut 1981 US), The Laughter of Carthage (1984), and Jerusalem Commands (1992), with one further novel projected, The Vengeance of Rome (the 4 titles read together, appropriately punctuated, as one sentence). These novels, which feature many characters from the Jerry Cornelius books, are non-generic, being an ambitious attempt to convey some sense of the 20th century through the unreliable

memoirs of one man. They represent MM's slow but inexorable evolution from PULP to POSTMODERNISM, a transition made all the more interesting because of the large number of books through which it can be traced, and because he has so frequently returned to early sequences (Elric in particular), transforming them in the process. MM has therefore become less and less easy to pigeonhole as a writer, and has come to be recognized as a major figure at the edge of - but materially helping to define - all his chosen worlds. [JC]Other works:Sf: The Fireclown (1965; vt The Winds of Limbo 1969 US); The Twilight Man (1964 NW; rev 1966; vt The Shores of Death 1970); The LSD Dossier (1966) as by Roger Harris (i.e., as heavily ed MM) and its sequels Somewhere in the Night (1966 as by Bill Barclay; rev vt The Chinese Agent 1970 US as by MM) and Printer's Devil (1966 as by Bill Barclay; rev vt The Russian Intelligence 1980 as by MM), the revisions of the latter books taking them out of the original sequence and recreating them as tales of Jerry Cornell; The Wrecks of Time (1965-6 NW as by James Colvin; edited 1967 dos US; text restored vt The Rituals of Infinity 1971 UK); Moorcock's Book of Martyrs (coll 1976; vt Dying for Tomorrow 1978 US); The Time of the Hawklords (1976) and Queens of Deliria (1977), the first as by MM and Michael BUTTERWORTH, the second by Butterworth alone, only the general idea (for the first title alone) being supplied by MM; The Real Life Mr Newman (1966 in The Deep Fix; 1979 chap); My Experiences in the Third World War (coll 1980); Casablanca (coll 1989).Eternal Champion titles:The bibliographic description of the 2 1990s omnibus sequences, each given the overall title of The Tale of the Eternal Champion, is immensely complex, and as most of the 14 UK (or 15+ US) volumes contain mostly fantasy, the sequence is not here described in any detail. The UK sequence comprises Von Bek (omni 1992), The Eternal Champion (omni 1992), Hawkmoon (omni 1992), Corum (omni 1992), Sailing to Utopia (omni 1993), A Nomad of the Time Streams (omni 1993), The Dancers at the End of Time (omni 1981; rev 1991; not rev for this sequence), Elric of Melnibone (omni 1993), The New Nature of the Catastrophe (coll 1993), which contains much of sf interest, The Prince with the Silver Hand (omni 1993), Legends from the End of Time (omni 1993), Stormbringer (omni 1993), Earl Aubec (coll 1993), containing some new material, and Count Brass (omni 1993). The US sequence begins with The Eternal Champion (omni 1994), which differs - as will almost all subsequent US titles - from the UK release bearing the same title. The various Eternal Champion series are listed below according to their original titles and dates:Erekose: The Eternal Champion (1962 Science Fantasy; exp 1970US; rev 1978 US); Phoenix in Obsidian (1970; vt The Silver Warriors 1973 US); The Swords of Heaven, the Flowers of Hell (graph 1979 US) with Howard V. CHAYKIN; The Dragon in the Sword (1986 US; exp 1987 UK), all but the 3rd being assembled in The Eternal Champion (rev omni 1992).Elric of Melnibone: (by internal chronology) Elric of Melnibone (1972; cut vt The Dreaming City 1972 US); The Fortress of the Pearl (1989); The Sailor on the Seas of Fate (fixup 1976), incorporating rev of The Jade Man's Eyes (1973 chap); The Weird of the White Wolf (coll 1977 US), incorporating stories from The Stealer of Souls (1961-62 Science Fantasy; coll 1963) and from The Singing Citadel (coll 1970); The Sleeping Sorceress (1971; vt The Vanishing Tower 1977 US); The Revenge of the Rose: A Tale of the Albino Prince in the Years of his Wandering (1991); The Bane of the Black Sword (1962 Science Fantasy;

coll 1977 US), incorporating the remaining stories (see above) from *The Stealer of Souls* and *The Singing Citadel*; *Stormbringer* (1963-4 Science Fantasy; cut 1965; text restored and rev 1977 US). Omnibuses of this material are *The Elric Saga Part I* (omni 1984 US) containing *Elric of Melnibone*, *The Sailor on the Seas of Fate* and *The Weird of the White Wolf*; and *The Elric Saga Part II* (omni 1984 US) containing *The Vanishing Tower*, *The Bane of the Black Sword* and *Stormbringer*. *Elric at the End of Time* (coll 1984) assembles mostly earlier stories, including some from *Sojan*. *Warrior of Mars: Warriors of Mars* (1965; vt *The City of the Beast* 1970 US), *Blades of Mars* 1965; vt *The Lord of the Spiders* 1971 US) and *Barbarians of Mars* (1965; vt *Masters of the Pit* 1971), all assembled as *Warrior of Mars* (omni 1981 UK). The original versions of all 3 were published as by Edward P. Bradbury. *Hawkmoon: 2 series*. The *Runestaff* books are *The Jewel in the Skull* (1967 US; rev 1977 US), *Sorcerer's Amulet* (1968 US; vt *The Mad God's Amulet* 1969 UK), *Sword of the Dawn* (1968 US; rev 1977 US) and *The Secret of the Runestaff* (1969 US; vt *The Runestaff* 1969 UK; rev 1977 US), all assembled as *The History of the Runestaff* (omni 1979 UK; rev vt *Hawkmoon* 1992). The *Count Brass* books are *Count Brass* (1973), *The Champion of Garathorm* (1973) and *The Quest for Tanelorn* (1975), all assembled as *The Chronicles of Castle Brass* (omni 1985 UK). *Corum: 2 series*. The *Swords* books are *The Knight of the Swords* (1971), *The Queen of the Swords* (1971 US) and *The King of the Swords* (1971 US), all assembled as *The Swords Trilogy* (omni 1977 US; vt *The Swords of Corum* 1986 UK; rev vt *Corum* 1992 UK). A second trilogy comprises *The Bull and the Spear* (1973), *The Oak and the Ram* (1973) and *The Sword and the Stallion* (1974), all assembled as *The Chronicles of Corum* (omni 1978 US). *Von Bek: The War Hound and the World's Pain* (1981 US) and *The City in the Autumn Stars* (1986), assembled with an added story as *Von Bek* (rev omni 1992). As Editor: *The Best of New Worlds* (anth 1965); *Best S.F. Stories from New Worlds* (anth 1967); *Best Stories from New Worlds 2* (anth 1968; vt *Best S.F. Stories from New Worlds 2* 1969 US); *Best S.F. Stories from New Worlds 3* (anth 1968); *The Traps of Time* (anth 1968); *Best S.F. Stories from New Worlds 4* (anth 1969); *The Inner Landscape* (anth 1969), ed anon; *Best S.F. Stories from New Worlds 5* (anth 1969); *Best S.F. Stories from New Worlds 6* (anth 1970); *Best S.F. Stories from New Worlds 7* (anth 1971); *New Worlds 1* (anth 1971; vt *New Worlds Quarterly 1* 1971 US); *New Worlds 2* (anth 1971; vt *New Worlds Quarterly 2* 1971 US); *New Worlds 3* (anth 1972; vt *New Worlds Quarterly 3* 1972 US); *New Worlds 4* (anth 1972; vt *New Worlds Quarterly 4* 1972 US); *New Worlds 5* (anth 1973); *New Worlds 6* (anth 1973; vt *New Worlds Quarterly 5* 1974 US) with Charles PLATT; *Best S.F. Stories from New Worlds 8* (anth 1974); *Before Armageddon* (anth 1975); *England Invaded* (anth 1977); *New Worlds: An Anthology* (anth 1983). Film: *The LAND THAT TIME FORGOT* (1975), script by MM and James Cawthorn. About the author: *The Tanelorn Archives: A Primary and Secondary Bibliography of the Works of Michael Moorcock, 1949-1979* (1981) by Richard Bilyeu; *The Entropy Exhibition: Michael Moorcock and the British "New Wave" in Science Fiction* (1983) by Colin GREENLAND; *Michael Moorcock: A Reader's Guide* (1991 chap; rev 1992 chap) by John Davey (1962-); *Death is No Obstacle* (1992), a book-length interview conducted by Greenland with MM about his work. MOORE, ALAN

(1953-) UK COMICS illustrator and writer, mainly active in the latter capacity for the GRAPHIC NOVELS that made him famous; all of these, including WATCHMEN, were illustrated by others. On rare occasions, beginning with "Sawdust Memories" for Knave in 1984, he has also written prose fiction. AM's first professional work was as an artist and illustrator, beginning with a 1969 ad for the London sf bookshop Dark They Were and Golden Eyed. As Curt Vile, he began creating comics with 2 series - Roscoe Moscow (Mar 1979-July 1980) and The Stars my Degradation (July 1980-Feb 1982; continued with a different scriptwriter but drawn by AM until the Mar 1983 issue) - for the weekly music paper Sounds; another Curt Vile strip, Three Eyes McGurk ? in Dark Star) appeared in the USA in Rip Off Comics #8 (1981). As Jill de Ray, AM wrote and drew the weekly Maxwell the Magic Cat (Aug 1979-Oct 1986) for the Northants Post. Perhaps fortunately - his drawing style was an anaemic rehash of underground-comix cliches - this was his last work as an illustrator. The appearance in the UK in 1977 of the weekly sf comic 2,000 AD - the birthplace of JUDGE DREDD - had provided a forum for a new generation of writers and artists, of which AM soon became a prominent member. With scripts for MARVEL COMICS UK's Dr. Who Weekly/Monthly (June 1980-Oct 1981), he began to work for the commercial-comics industry, and was intensely active for the next half decade. For the Future Shocks section of 2,000 AD itself he wrote 26 sf shorts (July 1980-Aug 1983); most of these were later assembled as Alan Moore's Shocking Futures (graph coll 1986) and Alan Moore's Twisted Times (graph coll 1986), both with various illustrators. During the same period, he wrote 5 stories for Marvel UK's STAR WARS comic (Nov 1981-Aug 1982), and 20 episodes of the PARALLEL-WORLDS Captain Britain sequence for various other Marvel UK comics. Aside from Captain Britain, most of this early work was comparatively journeyman. In March 1982, with #1 of the anthology-comic Warrior, this all changed. In that issue, AM began 2 series of considerable significance. Marvelman was a radical POSTMODERNIST reinterpretation of a SUPERHERO (CAPTAIN MARVEL) from the 1940s. After Aug 1984, the strip was removed from Warrior, and in retitled form reprinted and completed in the US anthology-comic Eclipse; the full strip was then assembled as Miracleman (graph coll 1988 US), The Red King Syndrome (graph coll 1990 US) and Olympus (graph coll 1990 US), with various illustrators, including Alan Davis and Garry Leach. (Just as the original Captain Marvel was plagued by litigation, so was the new: the US MARVEL COMICS, which had begun its own Captain Marvel comic in 1967, insisted on the AM strip being retitled Miracleman in the USA; in retaliation, AM refused Marvel UK permission to reprint any of his early work, which remains uncollected.) The second series begun in that first issue of Warrior was V for Vendetta, which pits an anarchist hero against the fascist regime of a NEAR-FUTURE, post-Thatcherite UK. V for Vendetta also moved to the USA (after Feb 1985), being published there by DC COMICS, and was assembled as V for Vendetta (graph coll 1990 US) illus

David Lloyd. Other UK work during this period included *The Ballad of Halo Jones* (July 1984-Apr 1986 2,000 AD), set in a variety of sf locales and later collected in 3 vols as *The Ballad of Halo Jones, Book 1* (graph 1986), #2 (graph 1986) and #3 (graph 1986), all 3 being later assembled as *The Complete Ballad of Halo Jones* (graph omni 1990), and all illus Ian Gibson. *Skizz* (Mar 1983-Aug 1983 2,000 AD), an sf tale reminiscent of E.T. : *THE EXTRATERRESTRIAL*, was collected as *Skizz* (graph 1989) illus Jim Baikie; and *D.R. and Quinch* (Apr 1983-Summer 1985 2,000 AD), a comedy about ALIEN juvenile delinquents, was collected as *D.R. and Quinch's Totally Awesome Guide to Life* (graph 1986) illus Alan Davis and *D.R. and Quinch* (graph 1991). In 1984 AM began to work directly for US firms, becoming the writer for DC's *Saga of the Swamp Thing* (in Nov 1984 the title changed to *SWAMP THING*), the eponymous monster being a 1970s antihero now revived in the wake of the poor 1982 film. AM's 44 *Swamp Thing* stories (Jan 1984-Sep 1987), which were collected in 11 vols with various illustrators, perhaps take the "orthodox" sf/ GOTHIC only-partly-human-superhero theme as far as it could be taken within the framework of the conventional comic, which is distributed through newsstands and must operate in constant fear of censorship. The Grand Guignol violence of AM's imagery, and the disturbing psychosexual impact of his storylines, established *Swamp Thing* as probably the seminal comic of the 1980s. The success of *Swamp Thing* led directly to *WATCHMEN*, a graphic novel whose 12 chapters were first published as individual comics (Sep 1986-Oct 1987 *Watchmen*), but which are best read in their intended book form as *Watchmen* (graph 1987 US; with additional material 1988 US) illus Dave GIBBONS. Set in an ALTERNATE WORLD distinguished by the fact that the existence of costumed superheroes has subtly modified the history of the 20th century, *Watchmen* is both a satirical analysis of the human cost of being (or needing) a superhero, and an extremely distressing tale of a nearly-terminal holocaust fomented by one of these iconic figures. The impact of the tale - and that of its sophisticated visual language, through which subtexts and subplots interweave with (in hindsight) the utmost clarity - was enormous. After finishing the last parts of *V* for *Vendetta* and a *Batman* book, *The Killing Joke* (graph 1988 US) illus Brian Bolland, AM left mainstream comics, forming *Mad Love (Publishing) Ltd* in 1988 with his wife Phyllis and Debbie Delano, through which he edited and self-published *ARRGH! (Artists Against Rampant Government Homophobia)* (graph anth 1988). Subsequent work has tended to move away from genre concerns, though *A Small Killing* (graph 1990) illus Oscar Zarate is fantasy, and *From Hell* (graph 1991) begins a long fictional investigation of Jack the Ripper; two instalments of his major project, the non-genre *Big Numbers*, appeared in 1990. *Lost Girls*, a psychosexual study of Wendy, Dorothy and Alice, who meet around the time of WWI, began in *Taboo #5* (1992). For sf, AM remains of central importance for *Watchmen*, where the long history of sf visual material in comics form was finally connected to an sf plot of great interest. [RH/JC]

MOORE, BRIAN

(1921-) Irish-born Canadian novelist, in the USA from 1959, best known for non-genre works like *The Luck of Ginger Coffey* (1960); he has published detective thrillers under the names Michael Bryan and Bernard

Mara. Several of his novels contain strong elements of fantasy, like *Fergus* (1970) and *Cold Heaven* (1983), two tales linked by their preoccupation with the dead - dead parents visiting their child; dead husband haunting a widow and challenging the terms of her faith. *The Great Victorian Collection* (1975) somewhat resembles sf in its allegorical treatment of a professor who dreams into reality a collection of Victorian antiques, which survive his death. *The Mangan Inheritance* (1979) involves a borderline use of Doppelgänger themes. BM's only sf novel proper, *Catholics* (1972 Canada), set at the end of the century, describes the conflict between fashionable ecumenism and disillusioned conservatism in the Roman Catholic Church. [JC]See also: CANADA.

MOORE, C(ATHERINE) L(UCILLE)

(1911-1987) US writer who achieved instant fame with her first story, "Shambleau" for *Weird Tales* in 1933, a femme fatale story set on MARS. She continued to chronicle the exploits of its hero Northwest Smith, most of the series ultimately being assembled in *Scarlet Dream* (coll of linked stories 1981; vt *Northwest Smith* 1982); the exceptions are "Nymph of Darkness" (1935) with Forrest J. ACKERMAN, "Quest of the Starstone" (1937) with Henry KUTTNER and "Werewoman" (1938). 4 of the 10 stories in *Scarlet Dream* had earlier appeared in *Shambleau and Others* (coll 1953; with 3 of 7 stories cut, vt *Shambleau* 1958; with 1 story cut, also vt *Shambleau UK* 1961) and 5 in *Northwest of Earth* (coll 1954); the remaining stories in these collections, comprising the first SWORD-AND-SORCERY series to feature a female HERO, Jirel, were recombined in *Jirel of Joiry* (coll of linked stories 1969; vt *Black God's Shadow* 1977). Jirel also appears in the Northwest Smith story "Quest of the Starstone" (1937), CLM's first collaboration with Henry Kuttner, whom she married in 1940. Most of CLM's and Kuttner's works after this were to some extent collaborations; each writer could reportedly pick up any story where the other had left off. They used a wide diversity of pseudonyms (KUTTNER for a listing). Kuttner's wit, deftly audacious deployment of ideas and neat exposition well complemented CLM's perhaps greater talents of fluency and assiduity. When they became part of the stable of writers working for John W. CAMPBELL Jr's ASTOUNDING SCIENCE-FICTION during WWII they devised their most famous pseudonyms, Lewis Padgett and Laurence O'Donnell, under which they did much of their best work. Kuttner was the primary user of the Padgett name (for details of which see his entry) but the O'Donnell stories were more often CLM's. These include the remarkable "Clash By Night" (1943), whose sequel *Fury* (1947 as by O'Donnell; 1950; vt *Destination Infinity* 1958) was a collaboration (although often reprinted as by Kuttner alone); the stories are set in CITIES located UNDER THE SEAS of VENUS after nuclear war has destroyed life on Earth. "Clash by Night" has been reprinted with an alternative sequel by David A. DRAKE in *The Jungle* (1991). 4 O'Donnell stories were combined with the title short novel (originally signed CLM) in *Judgment Night* (coll 1952; title novel only 1965), but these did not include the excellent "The Children's Hour" (1944) and the classic *Vintage Season* (1946; 1990 chap dos with a sequel, *In Another Country* by Robert SILVERBERG), about time-travelling tourists (TIME TRAVEL); *Vintage Season* was intelligently filmed for cable tv in the USA as *DISASTER IN TIME* (1991, vt *Grand Tour: Disaster in Time*, vt

TIMESCAPE), director David N. Twohy, later released on videotape. CLM's other classic story of the 1940s was "No Woman Born" (1944 as by CLM), about a badly burned dancer who is given a ROBOT body and becomes a CYBORG. In these stories CLM's sometimes extravagant style is carefully controlled and combined with an earnest sentimentality which was underappreciated at the time. CLM and Kuttner wrote a series of novels for STARTLING STORIES in the late 1940s which continued the colourful tradition of the Northwest Smith stories to become archetypes of the hybrid genre of SCIENCE FANTASY, neatly fusing the strengths of CLM's romanticism and Kuttner's vigorous plotting. The Dark World (1946 as by Kuttner; 1965 as by Kuttner) is a pastiche of A. MERRITT's Dwellers in the Mirage (1932) and was itself pastiched in Marion Zimmer BRADLEY's Falcons of Narabedla (1957; 1964); other novels in the same vein are Valley of the Flame (1946 as by Keith Hammond; 1964 as by Kuttner), "Lands of the Earthquake" (1947 as by Kuttner), The Mask of Circe (1948 as by Kuttner; 1971), The Time Axis (1949 as by Kuttner; 1965 as by Kuttner), Beyond Earth's Gates (1949 as "The Portal in the Picture" by Kuttner; 1954 dos as by Padgett) and Well of the Worlds (1952 as by Kuttner; 1953 as by Padgett; vt The Well of the Worlds 1965 as by Kuttner). The first, second and fifth of these were combined in The Startling Worlds of Henry Kuttner (omni 1987). Earth's Last Citadel (1943 Argosy; 1964), with Kuttner, also belongs to this sequence, although one other Startling Stories novel, "Lord of the Storm" (1947 as by Hammond) does not. The attribution of these science-fantasy novels has rarely given CLM the credit which she deserves for her contribution to them. In 1950 Kuttner and CLM went to study at the University of Southern California; although they wrote a number of mystery novels, there were few more sf stories. CLM did one solo sf novel in this period, Doomsday Morning (1957), a futuristic thriller which did not exploit her greatest strengths as a writer. Having graduated in 1956, CLM moved after Kuttner's death into writing for tv, doing scripts for such series as Maverick and 77 Sunset Strip until she remarried in 1963 and abandoned writing for good. CLM was the more prestigious writer by far when she married Kuttner, and remained the better half of their partnership, although unthinkingly sexist reportage has always lavished the greater praise on her husband. Her true status can be accurately judged from the collection The Best of C.L. Moore (coll 1975) ed Lester DEL REY. Other collections in which her work appears include: A Gnome There Was (coll 1950) as by Padgett; Robots Have No Tails (coll 1952 as by Padgett; 1973 as by Kuttner; vt The Proud Robot: The Complete Gallagher Stories 1983 UK); Line to Tomorrow (coll 1954) as by Padgett; No Boundaries (coll 1955) with Kuttner; Clash by Night and Other Stories (coll 1980 UK) with Kuttner, not to be confused with Clash by Night (1952 chap Australia) as by Lawrence O'Donnell; and Tomorrow and Tomorrow, and The Fairy Chessmen (coll 1951), as by Padgett, containing 2 full-length tales, the second of which was also published as Chessboard Planet (1956; vt The Far Reality 1963 UK), also as by Padgett. Another collaborative text was MUTANT (fixup 1953 as by Padgett; 1954 UK as by Kuttner). Many collections signed Kuttner or Padgett (for which see KUTTNER) include work on which CLM collaborated with Kuttner. [BS/MJE] Other works: There Shall be Darkness (1954 chap Australia) with Kuttner; most remaining titles as by Kuttner alone (see his entry) have

anon contributions by CLM.About the author: Catherine Lucille Moore ?

MOORE, HARRIS

Joint pseudonym of Alf Harris (1928-), a Canadian, and Arthur Moore (? -

), whose nationality is not known. Together they wrote two sf novels:

Slater's Planet (1971 US), in which a spaceship looks for and finds alien

life, and The Marrow Eaters (1972 US), a garish adventure. [JC]

MOORE, PATRICK (ALFRED)

(1923-) UK astronomer, scientific journalist, popular tv personality

(presenter of The Sky at Night BBC tv series from 1957) and writer, a

composer, a Squadron Leader in the R

MOORE, RAYLYN

(1928-) US writer who began publishing with "Death is a Woman" for

Esquire in 1954. Her one novel of genre interest is What Happened to Emily

Goode after the Great Exhibition? (1978). [JC]

MOORE, ROBERT

Robert Moore WILLIAMS.

MOORE, WALLACE

Gerard F. CONWAY.

MOORE, (JOSEPH) WARD

(1903-1978) US writer, initially as well known for his works outside the

sf field - like the picaresque Breathe the Air Again (1942) - as for those

within. Although he contributed only infrequently to the field, each of

his books became something of a classic. His first sf publication was

Greener Than You Think (1947; cut 1961), a successful comic SATIRE about a

mutated form of grass which absorbs the entire world while governments

dither. His second and most famous sf tale, BRING THE JUBILEE (1953),

became the definitive ALTERNATE-WORLDS novel (also a TIME-TRAVEL story) in

which the South wins the American Civil War. After describing his

depressed world, an eminent historian from the disinherited Northern

States is given the chance to travel back in time to the vital moment of

the Civil War, the Battle of Gettysburg, victory in which had won the

entire conflict for the South. At this crucial point, the narrator's own

actions change history, the South loses the battle, and he is caught in

the "past" (because his time machine will not be invented in the new

future that has been created); in our own 1877 he writes out his narrative

of the history he has changed, and the manuscript is discovered and

published in 1953. Concise and elegiac, BRING THE JUBILEE has generated

dozens of successor tales in which the Civil War is manipulated for

reasons of controversy or nostalgia. WM's third novel, Caduceus Wild (1959

Science Fiction Stories as with Robert Bradford; rev 1978) is a medical

DYSTOPIA whose book publication was long delayed. His final book, Joyleg (1962) with Avram DAVIDSON, returns to a nostalgic view of the USA, this time to comic effect, through the story of the eponymous immortal, who is found in this century living deep in the Appalachians because he claims to remain entitled to his Revolutionary War pension. His discoverers learn that a special brew keeps him young, from which point in the novel bureaucratic complications become tedious. WM was not a professional genre writer, and as a possible consequence much of his work seemed to have been written (and certainly it read) as though carefully and leisurely composed for his own pleasure. WM also wrote two of the most notable stories describing nuclear HOLOCAUST and its consequences, "Lot" (1953) and "Lot's Daughter" (1954), featuring a great motorized exodus from a doomed Los Angeles, seen through biblical parallelism as the city of Sodom. The hero jettisons his irredeemably suburban wife and his sons and goes on to make a new and incestuous life with his daughter in the mountains. The ironies attached to his monstrous SURVIVALISM are savage. The stories were used as an uncredited basis for the film PANIC IN YEAR ZERO (1962), losing much of their power in the cleaning-up process. MOORE-BENTLEY, MARY ANN
[r] AUSTRALIA.

MORAN, DANIEL
Robert E. VARDEMAN.

MORAN, DANIEL KEYS
(1962-) US writer who began publishing sf with, for IASFM in 1982, "All the Time in the World", a tale which on expansion became his first novel and the first volume of his projected Tales of the Great Wheel of Existence series, The Armageddon Blues (fixup 1988). The story begins in an unremarkable post- HOLOCAUST USA and features a not unusual mutant barbarian female who hunts for a living; but, on her discovery of a time machine left by aliens, the plot soon begins to move in complicated leaps through time and space, engaging both the protagonist and an entropy-reversing long-lived SUPERMAN (whom she discovers in 1968) in a long arduous campaign to prevent the end of civilization. A second series, Tales of the Continuing Time, is projected to extend to 33 vols, although only 3 have appeared to date, Emerald Eyes (1988), The Long Run (1989) and The Last Dancer (1993). They feature the campaign - which again might be described as long and arduous - of a group of genetically engineered telepaths (ESP) to maintain their existence in a world of hostile normals. The sequence as a whole is planned to deal with the descendants of the last telepath still to be alive at the close of The Last Dancer. A singleton, The Ring * (1988), tied to a projected film version of Wagner's Ring cycle, places its GODS (rationalized as genetically engineered superbeings) in a SPACE-OPERA venue. DKM displays very considerable energy and some humour, shows a fine VAN VOGT-style recklessness with superman plots, and has demonstrated a copious ambition. [JC]

MORE, [Sir] THOMAS

(1478-1535) UK writer, lawyer, diplomat and politician. The son of a barrister, he was first educated for the Church, but soon decided upon a secular career; he sat in Parliament and gained steadily in political influence, being knighted in 1521 and occupying several posts under Henry VIII until that king's proposed divorce from Catherine of Aragon; TM's subsequent refusal to swear to the Act of Supremacy led to his execution. He was canonized in 1935. Throughout his career he was intellectually involved with the kind of humanism best exemplified by his friend Erasmus (1466-1536), who spent some time in England, and the work by which TM is popularly remembered, *Utopia* (Part 2 1516 in Latin; trans Ralphe Robynson including Part 1, written after Part 2, 1551), can be seen as the first substantial humanistic work written by an Englishman. In Part 1, TM, as a character, comes across Raphael Hythloday, a Portuguese seaman who went with Amerigo Vespucci to the New World. Hythloday, having discovered the ISLAND of Utopia on his travels, compares the corrupt state of European society with the ideal world of Utopia. In Part 2, Utopia is described in detail. It is a humanistic reversal of English society: all goods are held in common; the island's 54 shires are constructed and run rationally by citizens who participate fully in the government, though there are also slaves; arms are borne in self-defence only; there is religious tolerance, though not for atheists. Most of the rational ingredients of the hundreds of UTOPIAS (a word which, in TM's usage, is a pun on ou-topos, nowhere, and eu-topos, good place) that followed TM's initiative can be found in Utopia; what many of its successors lacked, however, was TM's insistence that his humanistic, rationally governed world was amenable to change, and that his picture of Utopia had caught only a moment in its evolution towards a more perfect constitution for the life of men on Earth. While the majority of readers of *Utopia* seem to have assumed that TM was recommending the kind of society he would have liked to live in himself, a number of critics have pointed out that some of his suggestions may have been SATIRE; since irony is largely a matter of tone, and since it is difficult for most modern readers to evaluate the tone of a Latin text, it is almost impossible to prove the case one way or the other. Certainly some aspects of TM's *Utopia* seem, to the modern reader, rigid and even cruel, but to impute similar emotions to TM himself may be anachronistic sentimentality. However, at least in translation, the book has a kind of dry, ambiguous wit which suggests that to read it as a straightforward prospectus of the good life may be simplistic. The degree to which *Utopia* and utopias in general can be thought of as relevant to sf, particularly GENRE SF of the 20th century, is controversial; it can be argued that the utopian tradition has contributed only minimally to the fundamentally Romance nature of modern sf (but see PROTO SCIENCE FICTION). The amount of available reading on TM and on utopias is huge; some relevant works are listed under UTOPIAS. [JC/PN] See also: ECONOMICS; FUTUROLOGY.

MORE WILD, WILD WEST

The WILD, WILD WEST .

MOREY, LEO

(? -1965) US illustrator, born into a well-to-do family in Peru, educated

in the USA, where he studied engineering at Louisiana State University; he worked as an artist in New Orleans before entering sf ILLUSTRATION. He took over from Frank R. PAUL as cover illustrator for AMAZING STORIES after it changed hands in 1929 (his first cover was Feb 1930), and painted 77 covers and many interior black-and-white illustrations for that magazine, and another 12 for Amazing Stories Quarterly. When these magazines were sold again he freelanced, doing covers for small magazines like Super Science Stories and quite a few interiors for Thrilling Wonder Stories, then worked mostly in COMICS. His archetypal PULP-MAGAZINE-style covers used a wider range of colours than Paul's; and, though naive and crudely executed, they were vigorous and dramatic. His imaginary technology was not as interesting as Paul's but his rendering of people was superior. Though perhaps a better artist than Paul - some of his black-and-white work was very imaginative - he was never as popular.
[JG/PN]

MORGAN, CHRIS

(1946-) UK editor, critic and writer who began publishing sf with "Clown Fish and Anemone" for Science Fiction Monthly in 1975. His fiction is generally unexceptional, though some stories - such as "Losing Control" (1989), about the crew of a crashed starship surviving by means of incestuous marriage and a strange form of symbiosis with an ALIEN species - involve interesting and innovative ideas. CM's main contribution has been as a critic, notably in The Shape of Futures Past: The Story of Prediction (1980), a comprehensive and valuable survey of pre-1945 PREDICTIONS about the future. Future Man (1980) is a history of sf speculations on possible biological and behavioural changes in humanity.
[NT]Other works: Fritz Leiber: A Bibliography 1934-1979 (1979 chap); Facts and Fallacies: A Book of Definitive Mistakes and Misguided Predictions (1981) with David LANGFORD; Dark Fantasies (anth 1989), collecting original stories. See also: PSEUDO-SCIENCE.

MORGAN, DAN

(1925-) UK writer and professional guitarist, about which instrument he wrote 2 successful manuals, Guitar (1965) and Spanish Guitar (1982). He began publishing sf with "Alien Analysis" for NW in 1952. His first sf novels, Cee-Tee Man (1955) and The Uninhibited (1957 NW; 1961), were routine adventures, but The Richest Corpse in Show Business (1966) stood out for its slapstick guying of sf conventions. He published the Venturer Twelve SPACE-OPERA series - A Thunder of Stars (1968), Seed of Stars (1972 US) and The Neutral Stars (1973 US) all with John KIPPAX - and the much more interesting Sixth Perception series: The New Minds (1967), The Several Minds (1969), The Mind Trap (1970 US) and The Country of the Mind (1975). In this latter series, which contains his most effective work, a band of people linked by their PSI POWERS solve problems, often in opposition to the world at large. Though not a powerful writer by any means, and though he has never transcended the US action-tale conventions to which he is so clearly indebted, it is all the same surprising that DM is so ignored. [JC]Other works: Inside (1971); The High Destiny (1973 US); The Concrete Horizon (1976). See also: ESP; MEDIA LANDSCAPE; MUSIC.

MORGAN, DAVE

[r] ROBERT HALE LIMITED.

MORGAN, J.M.

(? -) US writer known only for her/his Eden sequence of post- HOLOCAUST tales set in a world devastated by a biological-warfare experiment ([Hyperlink to: BIOLOGY](#)) gone awry. Volumes to date are Desert Eden (1991), Beyond Eden (1992) and Future Eden (1992). Between the Devil and the Deep (1992) is horror featuring the Loch Ness monster. [JC]

MORGAN, SCOTT

[s] Henry KUTTNER.

MORK AND MINDY

US tv series (1978-82). Miller-Milkis Productions and Henderson Production Co. in association with Paramount Television/ABC. Created Garry K. Marshall, Dale McRaven, Joe Gauberg. Prod Marshall. Writers included McRaven, April Kelly, Tom Tenowich, Ed Scharlach, Bruce Johnson. Dirs included Howard Storm, Bob Claver. 1 50min pilot episode followed by 92 25min episodes. Colour. Filling the gap in sitcoms about aliens viewing Earth between MY FAVORITE MARTIAN (1963-6) and ALF (1986-current), although its premise is more in line with Gore VIDAL's Visit to a Small Planet (1956; 1960), MAM was a spin-off from Happy Days (1974-83); Mork from Ork (Robin Williams) first appeared in the 1950s-set sitcom in an episode entitled "My Favorite Orkan". Response to the character - an innocent in very 1970s multicoloured braces, bewildered and amazed by the entire Universe, and given to cries of "nanu nanu"-was so positive that Garry K. Marshall developed a series around him, in which he arrived on Earth in a giant-egg spaceship and went to Boulder, Colorado, where he moved in with the family of Mindy McConnell (Pam Dawber) and got a job in their music store. Although early episodes present Mork as a childlike, presexual character, the writers eventually had the couple marry and Mork give birth, in the backwards Orkan fashion, to the middle-aged Mearth (Jonathan Winters), who grew younger. Regular players included Conrad Janis and Elizabeth Kerr (as Mindy's father and grandmother), Robert Donner, Tom Poston, and the voice of Ralph James as Orson, Mork's Orkan leader. Often trite in its moralizing, the show was sometimes inspired in its skewed vision of life on Earth; and Williams, not yet the major screen personality he has become, was allowed to demonstrate his versatility as a clown. [KN]See also: SATIRE.

MORLAND, DICK

Pseudonym used by UK writer and academic Reginald Hill (1936-) for his sf. Both of his sf novels as DM, Heart Clock (1973) and Albion! Albion! (1974), use DYSTOPIAN techniques to describe visions of repellent future UKs. In the first, citizens are fitted with termination devices for the government to use according to actuarial needs; in the second, England has been literally taken over by soccer rowdies and is divided into competing clubs with the citizenry as violent supporters. Both books are heavy-handed but enjoyably sharp-tongued. Hill, who also writes detections under his own name and as Patrick Ruell and Charles Underhill, has published one sf novel under his own name, One Small Step: A Dalziel and Pascoe Novella (1990), a detection set on the Moon in AD2010. [JC]

MORLEY, CHRISTOPHER (DARLINGTON)

(1890-1957) US man of letters and novelist who remains best known for mildly fantasticated (but not fantasy) tales like *Parnassus on Wheels* (1917) and *The Haunted Bookshop* (1919), and for *Kitty Foyle* (1939), a sentimental romance. *Where the Blue Begins* (1922), a beast-fable, mildly satirizes human life in New York City by substituting dogs for people, deadpan. *Thunder on the Left* (1925), though also essentially a fantasy, uses its TIME-TRAVEL theme to transport its child protagonist into a taxing future. *The Trojan Horse* (1937) employs the Homeric tale to satirize modern life. The narrator of *The Swiss Family Manhattan* (1932), victim of a Zeppelin crash which deposits his family atop a New York skyscraper under construction, at first thinks Americans are "anthropoids" (APES AND CAVEMEN), but the text soon becomes a mundane SATIRE. [JC] Other work: *The Arrow* (1927 chap; exp vt as coll *The Arrow, and Two Other Stories* 1927 UK).

MORLEY, FELIX

(1894-1982) US writer whose *Gumption Island* (1956) features a Russian superweapon which knocks some Americans on an island back millions of years in time. [JC]

MORLEY, WILFRED OWEN

[s] Robert A.W. LOWNDES.

MORONS FROM OUTER SPACE

Film (1985). Dir Mike Hodges, starring Mel Smith, Griff Rhys Jones, Joanne Pearce, Jimmy Nail, Paul Bown, Dinsdale Landen. Screenplay Jones, Smith, developed Bob Mercer. 97 mins, cut to 91 mins. Colour. Very stupid ALIENS (identical in appearance and behaviour to humans) have rented a spaceship to go on holiday. They crashland on a UK motorway and later become media stars. This remarkably unfunny film, written by and starring two tv comedians - it looks like a tv sketch blown up out of all proportion - is partly set in the USA in an attempt to broaden its appeal, but what humour it has is impenetrably English; the satirical possibilities are barely explored (in contrast to *EARTH GIRLS ARE EASY* [1988]). MFOS was a comedown for director Hodges, whose previous sf movies were *The TERMINAL MAN* (1974) and *FLASH GORDON* (1980). [PN]

MORRESSY, JOHN

(1930-) US writer and professor of English at Franklin Pierce College in New Hampshire. He began his sf career in 1971 - after 2 non-genre novels - with "Accuracy" for FSF, where most of his short fiction has since appeared. JM's early books were generally SPACE OPERA, through which medium he constructed a series of interesting ALIEN societies, and most of them shared a common galactic background: a somewhat disordered polity still dominated by humans, though with no imperial government. Within this scenario, his stories tended to the dark and extravagant end of the sf-epic spectrum, as in the Del Whitby trilogy - *Starbrat* (1972), *Nail Down the Stars* (1973; vt *Stardrift* 1975) and *Under a Calculating Star* (1975) - which intriguingly tells the same tale of interstellar intrigue and revolution from three partial points of view; none of the protagonists (orphans or impostors all) knows the whole story. Also set explicitly in

the same galactic scene were *A Law for the Stars* (1976 Canada) and *Frostworld and Dreamfire* (1977). The latter is a strongly constructed and occasionally rousing epic of a metamorphic humanoid's search for a breeding-partner; the last of his race on his native planet, he must find her elsewhere or the race dies. Later sf works, like *The Mansions of Space* (1983), continue to inhabit the same loosely defined, dark-textured milieu, but JM's 1970s juveniles were not identifiably set there: *The Windows of Forever* (1975) is an effective TIME-TRAVEL tale, and *The Humans of Ziax II* (1974 chap) and *The Drought on Ziax II* (1978 chap) apply the concerns of ECOLOGY to a planet colonized by humans, though the natives of Ziax survive in the jungles. In the 1980s JM concentrated mainly on two fantasy sequences: the Iron Angel series - *Ironbrand* (1980), *Graymantle* (1981), *Kingsbane* (1982) and *The Time of the Annihilator* (1985) - and the Kedrigern series, about a wizard - *A Voice for Princess* (1986), *The Questing of Kedrigern* (1987), *Kedrigern in Wanderland* (1988), *Kedrigern and the Charming Couple* (1990) and *A Remembrance for Kedrigern* (1990). This latter series, in strong contrast to JM's early work, is determinedly light-hearted. His first novels are perhaps more likely to last. [JC]Other work: *The Extraterritorial* (1977 Canada).

MORRILL, ROWENA
ROWENA.

MORRIS, A.G.
[s] Katherine MACLEAN.

MORRIS, ALFRED
(? -?) UK writer whose *Looking Ahead!: A Tale of Adventure* (Not by the Author of "Looking Backward") (1892) conveys its anti-Edward BELLAMY and anti-socialist argument through a ROBINSONADE plot which involves its young protagonist, shipwrecked with his crew on a desert island, in a series of political experiments. Socialism does not work; monarchy serves well. After half a century, he returns to England, which has gone to ruin after a socialist coup of 1905. [JC]

MORRIS, CHRIS
Working name of US rock musician and writer Christopher Crosby Morris (1946-); he is married to Janet E. MORRIS, who played bass in his band and with whom he has written several sf novels (see her entry). [JC]

MORRIS, GOUVERNEUR
(1876-1953) US banker and writer, great-grandson of the Founding Father Gouverneur Morris (1752-1816) and extremely prolific in his day as an author of short fiction. Some of his work is sf and fantasy, beginning with a prehistoric tale, *The Pagan's Progress* (1904), in which the hero begins to acquire spiritual values. *The Voice in the Rice* (1910) is a lost-race novel whose contemporary narrator discovers an Antebellum society in a swamp. Other titles include *The Footprint and Other Stories* (coll 1908), *It and Other Stories* (coll 1912) - which includes "Back There in the Grass" (1911 *Colliers*), an enduring demonstration of the terrors of BIOLOGY in early sf-*If You Touch Them They Vanish* (1913) and, with Charles W. Goddard, *The Goddess* (1915). [JC]See also: ORIGIN OF MAN.

MORRIS, JANET E(LLEN)

(1946-) US writer who gained some note as bass player 1972-5 in the band named after her husband, Chris MORRIS; he subsequently collaborated with JEM on several sf novels, always as Chris Morris. She herself began writing with the ambitious Silistra sequence, comprising High Couch of Silistra (1977; rev vt Returning Creation 1984), The Golden Sword (1977), Wind from the Abyss (1978) and The Carnelian Throne (1979). Toughly told and intellectually extremist, the sequence (prematurely) proclaimed an ambition on her part to write at the highest possible level; it cannot be said that she has quite fulfilled this ambition. Silistra intriguingly presents a society complexly conceived in terms of patterns (some literal) of cultural and biological bondage. Already, a sense of historical analogies pervades the texts, and in the Dream Dancer trilogy - Dream Dancer (1980 UK), Cruiser Dreams (1981) and Earth Dreams (1982) - this becomes explicit; wafted away from Earth, the young protagonist of the series climbs into the upper echelons of a culture whose assumptions about behaviour reflect the world of Hellenistic Greece. The main sf instrument deployed in these books - starships run by AIs which establish symbiotic relationships with humans - prefigures JEM's growing interest in the combat side of history, and the sequence itself becomes nightmarishly complicated in its traversal of implied analogies from the past. In the Tempus fantasies, based on the Thieves' World SHARED-WORLD enterprise - Beyond Sanctuary * (1985), Beyond the Veil * (1985), Beyond Wizardwall * (1986), Tempus * (coll of linked stories 1987), City at the Edge of Time * (1988) with Chris Morris, Tempus Unbound * (1989) with Chris Morris, and Storm Seed * (1990) with Chris Morris - the traversals of historical material become even more hectic. In the Heroes in Hell shared-world enterprise, which JEM co-created with C.J. CHERRYH - Heroes in Hell * (anth 1986) with Cherryh, Rebels in Hell * (anth 1986) with Cherryh, The Gates of Hell * (fixup 1986) with Cherryh, Masters in Hell * (anth 1987), Kings in Hell * (1987) with Cherryh, Angels in Hell * (anth 1987), War in Hell * (anth 1988), The Little Helliad * (1988) with Chris Morris, Explorers in Hell * (1989) with David A. DRAKE and Prophets in Hell * (anth 1989) - the result is something like chaos. In these works, which occupy much of JEM's bibliography, the sharp cognitive focus has softened, and the use of female protagonists whose sexual natures are controversially foregrounded has also become somewhat routinized. More interesting are some of the singletons, almost always written in collaboration; they are deeply engaged in military matters, violent, often extremely bloody, and profoundly cynical about all governments and their agencies. The 40-Minute War (1984) with Chris Morris presents an utterly disastrous nuclear HOLOCAUST brought about by stupidity; only by changing history through a commandeered TIME-TRAVEL device is the world saved. Active Measures (1985) with David A. Drake involves spying activities in the NEAR FUTURE. M*E*D*U*S*A (1986) with Chris Morris describes Sky War activities in a similar venue. Outpassage (1988) with Chris Morris is a bleak military adventure, and the Threshold Terminal sequence - Threshold (1990), Trust Territory (1992) and The Stalk (1994), all with Chris Morris - generates a similarly bleak vision of a Solar System engaging in agonistic conflicts and interstellar diplomacy within the confines of the eponymous space artifact. Throughout her career, JEM has consistently

worked to strip her language and plots of ornateness and idiosyncrasy, and her collaborative works are, at times, vividly efficient. At other times, however, little sense of JEM's individual gifts as a writer with strong convictions survives the impersonality. [JC]Other works: *I, the Sun* (1983), historical novel; *Afterwar* (anth 1985); *Warlord!* (1987); *Kill Ratio* (1987) with David A. Drake; *Target* (1989) with Drake; the two Hawkeye novels: *Hawkeye* (1991) and *Cobra* (1991), both as by Daniel Stryker. See also: **ESCHATOLOGY**; **REINCARNATION**.

MORRIS, JIM

(1940-) US writer whose *The Sheriff of Purgatory* (1979; rev vt Spurlock: *Sheriff of Purgatory* 1987) describes, with moments of sharpness, a conflict between the sheriff and the Mafia, after the **HOLOCAUST**, in the eponymous Arkansas county. The action soon moves to a devastated New York City. [JC]Other works: *Breeder* (1988).

MORRIS, RALPH

Probably pseudonymous author of the **ROBINSONADE** *A Narrative of the Life and Astonishing Adventures of John Daniel . . . Taken from his own Mouth, by Mr Ralph Morris* (1751), which involves a voyage to the **MOON** and the discovery of unearthly creatures there. The protagonists are unaware of where they are marooned, although the reader is allowed to know. [JC]

MORRIS, WILLIAM

(1834-1896) UK artist and writer whose greatest fame rests on his work as a designer of furniture and fabrics. His efforts to reform the prevalent vulgarity of mid-Victorian taste and to preserve standards of craftsmanship placed him in radical and irresolvable conflict with the basic tendencies of the industrial era, then in the first vigour of its youth. This conflict was variously expressed in his writing. In his early poems, collected in *The Defence of Guenevere* (coll 1858) and *The Earthly Paradise* (coll in 3 vols 1868-70), WM created the literary equivalent of Pre-Raphaelite paintings: romances of febrile charm and phthisic delicacy. The relation of these poems to their own time is one of studied and disdainful avoidance. In life such avoidance was to be denied him. He was - at least emotionally-cuckolded on an Arthurian scale by his friend and mentor, Dante Gabriel Rossetti (1828-1882). He became involved in **POLITICS** through his efforts, beginning in 1878, to save historical buildings from demolition and unwise "restoration". This involvement led him, remarkably quickly, to an active and enduring commitment to socialism. It was from this unusual (for its day) perspective of orthodox Marxism that WM wrote his **UTOPIA**, *News from Nowhere, or An Epoch of Rest* (1890 US; rev 1891 UK). Written in immediate response to Edward **BELLAMY**'s *Looking Backward, 2000-1887* (1888), the novel propels its dreaming narrator from the England of WM's day into a perfected England from which all traces of poverty, squalor and industrial unsightliness have been effaced, an England that bears notable similarities to the bucolic dream-landscapes of his early poetry. As a work of fiction, this most translucent of utopias exhibits all the clarity, grace - and narrative force - of WM's best wallpaper designs. Where the book is most visibly Marxist in inspiration, as in the capsule history of a proletarian revolution in Chapter XVII, it is also most densely and compellingly imagined. Its influence on later utopian

writing has been negligible, and on GENRE SF still less, since WM's vision is so relentlessly PASTORAL, looking back to an idealized Middle Ages - which he also represented in the earlier and structurally related socialist romance, "A Dream of John Ball" (in A Dream of John Ball, and A King's Lesson [coll 1888], later issued in its own right as A Dream of John Ball [1915 US]) - rather than to the urban, technologically advanced "future" of common consensus. During the composition of News from Nowhere the Socialist League, which WM had founded in 1884 and funded thereafter, dissolved as a result of an excess of democracy. This event encouraged, by reaction, WM's tendency to make his later writing into a species of highly ornamented wish-fulfilment from which the less savoury odours of daily life were artfully exorcized. The prose romances of his last years - such as The Wood Beyond the World (1894) and The Well at the World's End (1896) - have the same reluctantly valedictory air as his most defiantly escapist poetry but little of the poetry's hypnotic harmony. He had become, once more, "the idle singer of an empty day". It is these late romances, however, through their acknowledged influence on C.S. LEWIS, J.R.R. TOLKIEN and lesser writers of the SWORD-AND-SORCERY subgenre, that have most impinged on sf. WM also translated Icelandic sagas and several Greek and Roman classics. [TMD] Other works: The Life and Death of Jason (1867), a poem; A Tale of the House of the Wolfings, and All the Kindreds of the Mark (1889), an historical romance with fantasy elements; The Roots of the Mountains (1889); The Story of the Glittering Plain (1891); Child Christopher and Goldilind the Fair (1895); The Water of the Wondrous Isles (1897); The Sundering Flood (1898). Alfred NOYES assembled WM's early work in poetry and prose as The Early Romances of William Morris (coll 1907), ; with poetry cut, vt Golden Wings, and Other Stories 1976 US including the eight stories which originally appeared in Oxford and Cambridge Magazine throughout 1856, some being separately published after his death: The Hollow Land (1856; 1897 chap US), Golden Wings (1856; 1904 chap US) and Gertha's Lovers (1856; 1905 chap US). Later collections include: Prose and Poetry (1856-1879) (coll 1913); Early Romances (coll 1924); Selections from the Prose Works (coll 1931), Three Works by William Morris: A Dream of John Ball, The Pilgrims of Hope, News from Nowhere (omni 1968 US); Svend and his Brethren (coll 1909 chap US); The Juvenilia of William Morris, with a Checklist and Unpublished Early Poems (coll 1983 US). About the author: Much has been written about WM. Studies of interest include: William Morris: Romantic to Revolutionary (1955) by E.P. THOMPSON; William Morris, the Marxist Dreamer (trans 1978) by Paul Meier; William Morris: A Reference Guide (1985) by G.L. Aho. See also: ARTS; HISTORY OF SF; SLEEPER AWAKES.

MORRISON, RICHARD and ROBERT
Robert A.W. LOWNDES.

MORRISSEY, J(OSEPH) L(AWRENCE)
(1907-1981) UK-born writer, almost certainly a US resident in his later years, who began publishing thrillers in the 1930s and 1940s. His sf was restricted to the 1960s. City of the Hidden Eyes * (1960 UK) with Philip Levene was adapted from the latter's BBC radio serial about underground monsters threatening the surface world. As Richard Saxon JLM wrote several

volumes of inconspicuous but not entirely negligible sf, including *The Stars Came Down* (1964 UK), which is a UTOPIA, *The Hour of the Phoenix* (1964 UK; 1965 US as by Henry Richards), *Cosmic Crusade* (1964 UK) and *Future for Sale* (1964 UK). [JC]

MORROW, GRAY

Working name of US illustrator Dwight Graydon Morrow (1934-). Like a number of sf artists, GM began in COMICS, working with Atlas, Warren and other companies, although he did some sf covers for *If* and *Gal* in 1959 and through the 1960s produced covers and black-and-white interiors for these two - carrying over much of his lively (if sometimes crude) comics style and often using a distinctive "pen and wash" - as well as for AMZ, FSF and *Fantastic*. During the mid-1960s he began painting book covers also, especially for Avon Books, BALLANTINE BOOKS and ACE BOOKS, doing over 100 PERRY RHODAN covers for the latter. His comics work has never completely stopped: he contributed to *HEAVY METAL* and in the 1980s took over illustration of the *FLASH GORDON* comic strip. The Illustrated Roger Zelazny (1978) by ZELAZNY and GM gives a good idea of his style. He has 3 times been nominated for a HUGO. [PN]See also: MARVEL COMICS.

MORROW, JAMES (KENNETH)

(1947-) US writer who lectured and taught in the 1970s, served as a contributing editor to *Media and Methods* magazine 1978-80, and produced material for Boston tv 1979-84. His first book was *Moviemaking Illustrated: The Comicbook Filmbook* (1973). Through the 1980s he produced several textbooks for children, along with at least 5 children's novels beginning with *The Quasar Kids* (1987). Unsurprisingly, his first sf novel, *The Wine of Violence* (1981), shows in its smooth competence clear signs of JM's wide experience, though even here can be sensed a tendency, which has increased over the years, for his control over the suspension of disbelief to falter - quite deliberately, perhaps - at rhetorical high-points. That these slippages almost invariably occur at moments when JM wishes to convey an intense ethical concern for the human race does not alter the fact that, for some readers, they weaken the fictional context from which they derive their specific meaning. *The Wine of Violence* is set on a planet long colonized by humans, who have divided into two societies, the nomad Brain-Eaters, who do precisely that, and the Quetzalians, who discharge their human aggressiveness into a symbolic conduit which encircles their city walls. Chances to engage in humanist sarcasms - witness the very name Brain-Eaters - are rarely missed as the plot develops, and the Quetzalians are forced by a group of human visitors to the planet to come to grips, pyrrhically, with the vile nomads. JM's second novel, *The Continent of Lies* (1984), also set on a planet settled by humans, is less shaken by rhetorical overlays. With wit and concision it traces the attempts of its protagonist to track down an evil category of "dreambean" - good dreambeans being fruits which generate innocuous entertainment-hallucinations when eaten - before it can madden its victims into thinking of it as a god. Some moments of existential doubt intervene, but all comes right in the end. With *THIS IS THE WAY THE WORLD ENDS* (1986) JM abandoned the galactic stage, for which he clearly felt only muted sympathy, and came to Earth; as the book begins, a nuclear HOLOCAUST kills

all but a few, who are then transported via submarine to Antarctica, where they are put on trial by the "unadmitted" - those souls who will now never be born. As an idea it is perhaps more effective in paraphrase than within the constraints of a fictional narrative, though the decency of the book clearly transcends the inevitable disembodiedness of its message. Only *Begotten Daughter* (1990) tells the story of Christ's sister, Julie Katz, whose virgin birth derives from the fact that her father has contributed to a sperm bank and whose life in other ways mirrors and affectionately spoofs the Christian version. Counterpointed to that life, which is told with sympathy and verve, are the stories of Satan and a fundamentalist minister, the former being perhaps the more plausible creation; Julie's preordained destiny plays out against these figures. Short stories - JM has not been a prolific writer of them - are assembled in *Swatting at the Cosmos* (coll 1990), which includes the NEBULA-winning "Bible Stories for Adults, No.17: The Deluge" (1988). *City of Truth* (1991 UK), a novella, conveys in parable form some sharp lessons about the nature of art and the subtle virtues of untruth, with considerable wit; it won the 1992 Nebula for Best Novella. *Towing Jehovah* (1994), in which the body of God is discovered in the Atlantic Ocean and its towing arranged by the Catholic Church, carries on JM's long satirical examination of the visions of destiny which have governed, and distorted, Western civilization. JM's work has been likened to that of Kurt VONNEGUT Jr, and similarities are indeed very evident. JM could easily be seen as a more attractive author than his mentor, and certainly he couches his vision of the world's plight more happily than Vonnegut has ever done. But, while Vonnegut never disbelieves in the medium of his art, JM has great difficulty giving credence to the artifices of fiction. This may be the price paid for passion and clarity of mind; and it may be a price worth paying. [JC]Other work: *The Adventures of Smoke Bailey* * (1983 chap), a computer-game tie; 3 NEBULA anthologies: *Nebula Awards 26* (anth 1992), *Nebula Awards 27* (anth 1993) and *Nebula Awards 28* (anth 1994). See also: ARTS; DISASTER; END OF THE WORLD; LEISURE; MESSIAHS; PERCEPTION; PSYCHOLOGY; RELIGION.

MORSELLI, GUIDO
[r] ITALY.

MORT EN DIRECT, LA
(vt *Death Watch*) Film (1979). Selta Film/Little Bear/Sara
Film/Gaumont/Antenne 2/TV 15. Coprod and dir Bernard Tavernier, starring
Romy Schneider, Harvey Keitel, Harry Dean Stanton, Max Von Sydow.
Screenplay David Rayfiel, Tavernier, based on *The Continuous Katherine
Mortenhoe* (1974; vt *The Unsleping Eye*) by D.G. COMPTON. 130 mins. Colour.
This French/West German coproduction chose, perhaps eccentrically, to
locate its DYSTOPIAN city of the future in Glasgow, and the film was shot
in English. In a bored NEAR FUTURE where illness has been almost
eradicated, death has an obscene fascination. A tv station, keen to
broadcast a real-life soap opera, sends cameraman Roddy (Keitel) to film,
without her knowledge, the last days of Katherine (Schneider), who helps
computers write romantic novels and who is dying of a rare disease; this
is achieved by surgically implanting in his skull a camera that operates
through his eyes. The evocation of the future is perfunctory: just a dash

of urban blight. Attention is tremulously on the morbid relationship of invalid and cameraman. He blinds himself; she (who, we and she discover, is not really dying at all) commits suicide. As an attack on MEDIA invasion of privacy - a popular subject in sociological sf - this suffers from morbid overkill, itself reminiscent of soap opera. [PN]

MORTON, J(OHN CAMERON AUDRIEU) B(INGHAM MICHAEL)
(1893-1979) UK writer primarily known as Beachcomber, a house name of which he had sole use for half a century, and under which he wrote a comic column for the London Daily Express 1924-75. He specialized in long, serialized fantastical spoof narratives whose protagonists were themselves hyperbolic comic types, this material being re-sorted in several collections from Mr Thake (coll 1929) to Beachcomber: The Works of J.B. Morton (coll 1974; vt The Bumper Beachcomber) ed Richard Ingrams. Of his actual novels, Drink Up, Gentlemen (1930), a near-future SATIRE on English mores after the fashion of his mentor Hilaire BELLOC, is sf. The borderline Skylighters (1934) mocks a new religion. 1933 and Still Going Wrong (coll 1932) assembles verse satires, and The Death of the Dragon: New Fairy Tales (coll 1934) assembles fantasies. [JC]

MOSKOWITZ, SAM

(1920-) US sf historian and anthologist; he also worked, as Sam Martin, as an editor of trade magazines for the frozen-foods industry, retiring in 1985. For a long time SM, a prominent member of sf FANDOM since 1936, has been among the best known of all historians and commentators from within GENRE SF; his work in this field antedates that of nearly all non-genre historians of the field, with the notable exception of J.O. BAILEY. His first book was The Immortal Storm (1951 mimeographed; 1954), a history of early sf fandom which recounted the feuds of the late 1930s among the then-tiny group of sf fans with a passion and detail quite unabraded by the passing years, and which won a 1955 HUGO. More important were SM's profiles of sf authors and discussions of sf themes, which appeared in various sf magazines, primarily AMZ, from 1959. Many of these were collected (and revised) in 3 vols: Explorers of the Infinite (coll 1963), which concentrates on the period up to 1940; Seekers of Tomorrow (coll 1966), which concentrates on writers 1940-65; and Strange Horizons (coll 1976), about such sf themes as RELIGION, women (WOMEN AS PORTRAYED IN SCIENCE FICTION), Blacks and antisemitism in sf. SM's scholarship and criticism were not to everybody's taste, and these works have at times been criticized within the genre and by academics for inaccuracies and a not always fluent style. But the fact remains that, though some of his data and conclusions have been argued, SM did more original research in this field than any other scholar of his period and few since; no later history of sf has not made use of SM's painstaking work, especially his research into the early HISTORY OF SF in periodical publications. Much of this work appeared in 3 further vols which gave long historical introductions to collections of stories: Science Fiction by Gaslight: A History and Anthology of Science Fiction in the Popular Magazines, 1891-1911 (anth 1968), Under the Moons of Mars: A History and Anthology of the Scientific Romance in the Munsey Magazines, 1912-1920 (anth 1970) and The Crystal Man (coll 1973) by Edgar Page MITCHELL, ed SM. 3 later books

in the same vein are *Far Future Calling: Uncollected Science Fiction and Fantasies* (coll 1980) by Olaf STAPLEDON, ed with a long biographical study by SM, *Science Fiction in Old San Francisco: Vol. 1, History of the Movement from 1854 to 1890* (anth 1980) ed SM, and *Into the Sun and Other Stories: Science Fiction in Old San Francisco, Vol 2* (coll 1980) by Robert Duncan MILNE, ed SM. Although SM is not an academic, and does not always lay out his findings as carefully as academics might like - being sometimes rather cavalier in withholding his sources of information - the above books are a major contribution to sf scholarship. This contribution won him a PILGRIM AWARD in 1981. SM's professional connection with sf includes a brief stint as a writer, with 3 stories in 1941, the first being a SPACE-OPERA novella of distant galaxies, "The Way Back" for *Comet Stories*, and a couple more in the mid-1950s. He was an sf literary agent 1940-41, and managing editor for the last GERNSEBACK magazine, *SCIENCE FICTION PLUS*, 1952-4. He also edited a brief, 4-issue revival of *WEIRD TALES* 1973-4. He ghost-edited a number of *ANTHOLOGIES*, including 4 which appeared as ed Leo MARGULIES, 2 as ed Roger ELWOOD and 3 as ed Alden H. Norton. He was special consultant on and largely responsible for *Contact* (anth 1963) ed Noel Keyes and *The Pulps* (anth 1970) ed Tony Goodstone. SM also ed the following: *Life Everlasting* (coll 1947) by David H. KELLER with intro by SM; *Editor's Choice in Science Fiction* (anth 1954); *The Coming of the Robots* (anth 1963); *Exploring Other Worlds* (anth 1963); *A Martian Odyssey and Other Classics of Science Fiction* (coll 1966) by Stanley G. WEINBAUM with intro by SM; *Modern Masterpieces of Science Fiction* (anth 1966; vt in 3 vols *Doorway into Time* 1966, *Microcosmic God* 1968 and *The Vortex Blasters* 1968; vt in 2 vols as *Doorway into Time* 1973 and *The Microcosmic God* 1975); *Strange Signposts* (anth 1966) with Roger Elwood; *Three Stories* (anth 1967; vt *A Sense of Wonder* 1967 UK with intro severely cut; vt *The Moon Era* 1969 US); *The Human Zero* (anth 1967) with Elwood; *Masterpieces of Science Fiction* (anth 1967); *The Time Curve* (anth 1968) with Elwood; *The Man who Called Himself Poe* (anth 1969; vt *A Man Called Poe* 1972 UK), a collection of essays, poems and stories about Edgar Allan POE, plus 2 stories arguably by Poe; *Other Worlds, Other Times* (anth 1969) with Elwood; *Alien Earth* (anth 1969) with Elwood; *Great Untold Stories of Fantasy and Horror* (anth 1969) with Alden H. Norton; *Futures to Infinity* (anth 1970); *The Citadel of Fear* (1970) by Francis STEVENS, intro by SM; *Ghostly by Gaslight* (anth 1971) with Norton; *The Space Magicians* (anth 1971) with Norton; *Ultimate World* (1971) by Hugo GERNSEBACK, intro by SM, a late and dreadful novel by Gernseback ed to half manuscript length by SM; *Horrors Unknown* (anth 1971); *When Women Rule* (anth 1972); *Horrors in Hiding* (anth 1973) with Norton; *Horrors Unseen* (anth 1974); *The Raid of "Le Vengeur"* (coll 1974), hitherto uncollected stories by George GRIFFITH, intro by SM; *Out of the Storm* (coll 1975) by William Hope HODGSON with a 25,000-word critical biography by SM; "A Dream of X" (1977) by Hodgson, illus Stephen E. FABIAN, a short version of *The Night Land* (1912), intro by SM; *A. Merritt: Reflections in the Moon Pool* (coll 1985), Merritt marginalia, with long biographical intro by SM; *Howard Phillips Lovecraft and Nils Helmer Frome: A Recollection of One of Canada's Oldest Science Fiction Fans* (anth 1989), letters, articles, etc., by and about Frome, many about his relationship with Lovecraft. SM's other work includes his editorship of the 2 useful HYPERION PRESS series of reprints of sf

classics in 1974 and 1976; the Hyperion series includes also reprints of 6 of SM's most important historical works. [PN]Other works: Peace and Olaf Stapledon (1949), Hugo Gernsback: Father of Science Fiction (1959), A Canticle for P. Schuyler Miller (1975) and Charles Fort: A Radical Corpuscule (1976), four privately printed pamphlets. See also: COLLECTIONS; CRITICAL AND HISTORICAL WORKS ABOUT SF; DEFINITIONS OF SF; GENERATION STARSHIPS; NEW WAVE; OPTIMISM AND PESSIMISM; SF IN THE CLASSROOM; SOCIOLOGY.

MOST DANGEROUS MAN ALIVE, THE

Film (1958). Trans-Global/Columbia. Dir Allan Dwan, starring Ron Randell, Debra Paget, Elaine Stewart, Anthony Caruso. Screenplay James Leicester, Phillip Rock, based on a story by Rock, Michael Pate. 82 mins, cut to 76 mins. B/w. In this unusual blend of sf and crime movie, a framed gangster (Randell) escapes from prison and hides out in the desert, where he is caught up in a nuclear test. He survives but discovers that he is slowly turning to steel. This enables him to exact revenge on those who framed him - he can absorb bullets - but the process gradually robs him of humanity, which worries the woman who loves him (Stewart) and renders his seduction by his two-timing ex-mistress (Paget) rather difficult. He is eventually destroyed by soldiers wielding flame-throwers. The film is cheaply made and its script banal, but veteran director Dwan imbues it with a certain harsh power. [JB/PN]

MOST DANGEROUS MAN IN THE WORLD, THE

(vt The Chairman) Film (1969). Apjac/20th Century-Fox. Dir J. Lee Thompson, starring Gregory Peck, Anne Heywood, Arthur Hill, Conrad Yama. Screenplay Ben Maddow, based on The Most Dangerous Man in the World by Jay Richard Kennedy. 104 mins. Colour. A distinguished SCIENTIST (Peck) has a transmitter implanted in his head and is sent to China with the object of convincing Chairman Mao that he is a political defector. It is hoped he will learn the formula of a new enzyme, developed by the Chinese, that will enable crops to grow anywhere in the world; everything he says or hears goes via satellite to the intelligence team in London - who, unknown to him, have also implanted a small bomb in his head as insurance. This thriller is no more than mildly effective, its main oddity being the role, at the end, of the Russian army as valiant rescuers. [JB/PN]

MOST THRILLING SCIENCE FICTION EVER TOLD, THE

One of the many reprint DIGEST-size magazines published by Sol Cohen's Ultimate Publishing Co., using reprint rights acquired when he bought AMAZING STORIES and FANTASTIC. 42 issues early 1966-July 1975. Issues #1-#13 and #18 appeared as The Most Thrilling SF Ever Told, other issues as Thrilling Science Fiction Adventures (#14-#17) and Thrilling Science Fiction (#19 to the end). The publishing schedule was rather irregularly quarterly. The first 6 issues were undated; the first 25 issues were numbered consecutively, but thereafter only month/year was used. Most issues used stories of medium to good quality by well known names from the period when Cele GOLDSMITH edited AMZ and Fantastic, but in #14-#25 older (and dreadful) stories by obscure authors were published, probably because of a dispute between Cohen and the SCIENCE FICTION WRITERS OF AMERICA regarding payment for the reprints. Another Ultimate magazine, SCIENCE

FICTION (ADVENTURE) CLASSICS, merged with Thrilling Science Fiction for its last 2 issues in 1975. [BS]

MOSURA

(vt Mothra) Film (1961). Toho. Dir Inoshiro Honda, starring Frankie Sakai, Hiroshi Koizumi, Kyoko Kagawa and the twins Emi and Yumi Ito. Screenplay Shinichi Sekizawa, based on a story by Shinichiro Nakamura, Takehido Fukunaga, Yoshi Hotta. 100 mins. Colour. Aficionados of Japanese MONSTER MOVIES find their delight not only in the monsters themselves: the attraction depends also on the sheer bizarreness, to Western eyes and ears, of the stories and dialogue. M is perhaps the most notably grotesque of all in this respect, its relatively mundane giant moth being amply compensated for by the eccentricities of the story. Two 6in (15cm) women (the Ito twins), kidnapped from an island whose inhabitants have been mutated by radiation, are used as nightclub singers by an evil "Rosilican" (i.e., US) showman (Kagawa). Back on the island a huge, venerated egg hatches in response to prayers from the local natives, and the giant caterpillar that emerges swims off to Japan to save the dwarf-girls, whose piping singing voices act as a homing signal. It makes a mess of Tokyo and spins a cocoon; the giant moth that emerges goes off to Rosilica (where the showman has retreated) and saves the girls. This is Toho's most sophisticated MONSTER MOVIE; its imagery, though lunatic, is surprisingly poignant. Mosura never developed the following of GOJIRA (Godzilla) and GAMERA, but did reappear 4 times, in Mosura Tai Gojira (1964; vt Gojira Tai Mothra; released in English as Godzilla Vs. The Thing; vt Godzilla Vs. Mothra), where, called by the tiny twins, she saves Tokyo from Gojira; Ghidorah Sandai Kaiju Chikyu Saidai No Kessan (1964; vt Chikyu Saidai No Kessan; released in English as Ghidrah, The Three-Headed Monster), in which she defends Earth from an alien monster, helped out by Gojira and RADON (Rodan) when she can't do the job on her own; Nankai No Daiketto (1966; released in English as Ebirah, Horror of the Deep; vt Godzilla Vs. the Sea-Monster) dir Jun Fukuda, the first of the series not to be dir Honda, in which Mosura takes part in an aerial evacuation of people from an island about to explode; and Kaiju Soshingeki (1968; released in English as Destroy All Monsters; vt Operation Monsterland; vt The March of the Monsters) dir Honda, a poor film in which all 11 Toho monsters get together. [PN]

MOSURA TAI GOJIRA GOJIRA; MOSURA.

MOSZKOWSKI, ALEXANDR

(1851-1934) German writer. In his excellent and encyclopedic SATIRE of UTOPIAS *Die Inseln der Weisheit* (1922 Germany; trans H.J. Stenning as *The Isles of Wisdom* 1924 UK) the protagonists are guided by Nostradamus through an archipelago which features a Platonic (PLATO) ISLAND, a Buddhist utopia, an Island of Fine ARTS, pacifist islands, reactionary islands, and so on. Of particular interest is Sarragalla, the "Mechanized Island", where the technological utopianism of Walther Rathenau (1867-1922) is mercilessly satirized. The characters conclude that "every principle is bound to break down, somewhere, or, if its application is enforced, it is transformed into a caricature of itself". [BS] Other work:

Der Venuspark ["The Venus Park"] (1923). See also: AUTOMATION.

MOTHRA

MOSURA.

MOTTRAM, R(ALPH) H(ALE)

(1883-1971) UK writer and banker who began his long and prolific writing career as a chronicler of his WWI experiences in the famous Spanish Farm trilogy, beginning with *The Spanish Farm* (1924). In his sf novel, *The Visit of the Princess: A Romance of the Nineteen-Sixties* (1946), a joyless UK is galvanized by the visit of a European princess. Fantasy titles are *The Old Man of the Stones: A Christmas Allegory* (1930 chap), *The Ghost and the Maiden* (1940), *The Gentleman of Leisure* (1948), in which the Gentleman travels to Heaven, and *To Hell, with Crabb Robinson* (1962), which takes its protagonist elsewhere. [JC/PN]

MOUDY, WALTER (FRANK)

(1929-1973) US writer, author of a few sf stories after his sole novel, *No Man on Earth* (1964), a rather compellingly told story in which a man born of a human mother and an alien father must seek out his destiny. [JC]

MOUNDS, MONICA

Robert E. VARDEMAN.

MOXLEY, F(RANK) WRIGHT

(1889-1937) US writer whose interesting *Red Snow* (1930) tells of a snowlike precipitation which causes worldwide sterility, and of the subsequent social breakdown, lovingly elaborated. One survivor is rescued by what may be an enigmatic alien but - as the vessel from the heavens is drawn by horses - is more likely to be Helios. But this fantasy-like ending does little to dispel the sf materiality of the preceding events. [JC/PN]

MOYLAN, TOM

[r] POSTMODERNISM AND SF.

MR

To avoid confusion over variant spellings, entries whose first word is "Mr" are listed as if that title were spelt out in full as "Mister".

MROZEK, SLAWOMIR

(1930-) Polish writer, mainly of absurdist plays (*FABULATION*), several of which are assembled in *Six Plays* (trans N. Bethell 1967 UK); a further play, *Vatzlav* (1970; trans Ralph Manheim 1970 chap US), is set in a mythical metamorphosis-engendering territory. The short stories in *Slon* (coll 1957; trans Konrad Syrop as *The Elephant* 1962 UK) and *The Ugupu Bird* (coll trans Konrad Syrop 1968 UK) - the latter derived from *Wesele w Atomicach* (coll 1959), *Deszcz* (coll 1962) and *Ucieczka na Poludnie* (coll 1965) - satirically mix fantasy and absurdist elements in a manner similar to that of Italo CALVINO. [JC]

MUDD, STEVE

(? -) US writer whose sf novels, *Tangled Webs* (1989) and its sequel *The Planet Beyond* (1990), are adventures set in a totalitarian interstellar

venue. [JC]

MUDDOCK, J(OYCE) E(MMERSON) PRESTON

(1843-1934) UK writer, much travelled in early life, who published prolifically under his own name and as Dick Donovan, generally restricting his pseudonym to juveniles and thrillers, including Tales of Terror (coll 1889) and The Scarlet Seal (1902), the latter a witchcraft fantasy. As JEPM he published considerable nonfiction as well as Stories Weird and Wonderful (coll 1889) and The Sunless City (1905), in which a submarine explores a seemingly bottomless lake in the Rockies and comes upon a lost race (LOST WORLDS). [JC]

MUDGETT, HERMAN W.

[s] Anthony BOUCHER.

MUIR, WARD

(1878-1927) UK writer whose "Further East than Asia" (1919) is set in a LOST WORLD whose inhabitants gain longevity through bathing in a radioactive pool, which also disfigures them. [JC]

MULISCH, HARRY

[r] BENELUX.

MULLALLY, FREDERIC

(1920-) UK writer whose only sf novel - after the borderline Oh! Wicked Wanda (1970) - is Hitler Has Won (1975), a competent presentation of what has become a very common ALTERNATE-WORLD vision of history (HITLER WINS). FM's particular explanation for Hitler's victory involves an early assault on Russia. He was also the author of Oh! Wicked Wanda (1970). [JC]

MULLEN, R(ICHARD) D(ALE)

(1915-) US sf critic and scholar, now emeritus professor of English at Indiana State University. RDM was a founding member of the SCIENCE FICTION RESEARCH ASSOCIATION. In 1973 he established SCIENCE-FICTION STUDIES and was its publisher and, with Darko SUVIN, its co-editor through 1978; he returned to the journal as an editor in 1991 and managing editor from the Nov 1991 issue. He and Suvin also ed Science-Fiction Studies: Selected Articles on Science Fiction 1973-75 (anth 1976) and Science-Fiction Studies: Selected Articles on Science Fiction 1976-77 (anth 1978). RDM's editorial personality is relaxed, sensible, meticulous, and always eager to get the facts straight, qualities which also permeate his interesting criticism, mostly published in EXTRAPOLATION and Science-Fiction Studies. [PN]

MULLEN, STANLEY

(1911-1973) US artist, museum curator and pulp writer. He wrote over 30 sf and fantasy stories, many SPACE OPERA, in a variety of magazines, including PLANET STORIES, 1949-59. His 3 books, from SMALL PRESSES, are Kinsmen of the Dragon (1951), which pits the hero against a secret society whose magical science has roots in a PARALLEL WORLD, Sphinx Child (1948 chap), a fantasy short story, and Moonfoam and Sorceries (coll 1948). [PN]See also: ASTEROIDS.

MULLER, JOHN E.

House name used on many sf and supernatural novels published by BADGER BOOKS. The great majority of these were the work of R.L. FANTHORPE (31 titles), with 3 by John S. GLASBY and 1 by A.A. GLYNN (for titles see those authors). Works of unknown authorship are: Space Void (1960; 1965 US as by Marston Johns), Edge of Eternity (1962), Night of the Big Fire (1962) and In the Beginning (1962). [JC]

MULLER, PAUL
Paul CONRAD.

MULLER, PAUL ALFRED
[r] GERMANY.

MULLIN, CHRIS
Working name of UK politician and writer Christopher John Mullin (1947-), whose A Very British Coup (1982), adapted for tv in 1990, depicts with fixated clarity successful NEAR-FUTURE US efforts to subvert a potential change for the better in the UK Government. [JC]

MULTIVERSE
PARALLEL WORLDS.

MUNDY, TALBOT
Pseudonym of UK-born writer William Lancaster Gribbon (1879-1940), who emigrated to the USA in 1909 after his early life as a confidence man, ivory poacher and all-round rogue in British Africa had culminated in a prison sentence. He soon became a professional author, with most of his work first appearing in Adventure magazine, where he became the star writer; after 1935 he left PULP-MAGAZINE fiction and wrote scripts for the radio series Jack Armstrong, the All-American Boy. TM's fiction is sometimes difficult to classify. In his early stories he tried to combine MAINSTREAM standards with exotic adventure in Africa and the Near East; his later work often carried a didactic message and might be called philosophic adventure fiction. From the first his sf stood apart from US GENRE SF in its narrative structure, characterization and situation, having grown out of the adult adventure-fiction models to be found in Adventure, with tight, complex plotting, well handled ethnic types and exotic locales, and a strong influence from Rudyard KIPLING. He commonly used quest themes, stressing loyalty, honour and spiritual self-development. The fantastic element derived in large part from occultism, with ideas drawn from a schismatic branch of the Theosophical Society to which he belonged. Such motifs - which included various PSI POWERS, fantastic archaeology, incredible WEAPONS, strange drugs, ANTIGRAVITY, atomic energy, Atlantean science, SUPERMEN (mahatmas), transmutation of elements and vibratory phenomena - were conceived rationally and "scientifically" as part of the ancient wisdom, a body of knowledge once possessed by mankind but since lost. Most of TM's sf can be found in the large group of associated novels known as the Jimgrim/Ramsden sequence, though the interconnections are sometimes slender. Chief characters include Jimgrim (James Schuyler Grim), a US soldier of fortune, Athelstan King, an Anglo-Indian career officer, Jeff Ramsden, a US engineer, Narayan Singh, a Sikh soldier, and Chullunder Ghose, an unscrupulously brilliant Bengali babu. TM's more important works in this

series are: The Mystery of Khufu's Tomb (1922 Adventure as "Khufu's Real Tomb"; 1933), fantastic archaeology based on Ancient Egyptian superscience; Caves of Terror (1922 Adventure as "The Gray Mahatma"; 1924), in which a vibratory superscience possessed by Jain adepts is in danger of falling into the hands of an adventuress; Om: The Secret of Ahbor Valley (1924), which is ultimately concerned with a jade sphere from a great past civilization, but is noteworthy for its description of a travelling Indian dramatic group; The Nine Unknown (1924), in which an investigation into the disappearance of gold in India uncovers both a benevolent secret organization that disintegrates the gold for atomic power and an evil Shaktist order that uses secrets from the Ancient Wisdom as "magic"; Jimgrim (1930-31 Adventure as "King of the World"; 1931; vt Jimgrim Sahib 1953), featuring an attempt at world conquest using scientific secrets from ATLANTIS deciphered from golden plates found in buried cities in the Gobi; and There Was a Door (1933 UK; vt Full Moon 1935 US), with Fortean elements (Charles FORT), disappearances into another DIMENSION, fantastic archaeology and superscience of the past. Some of TM's novels - like The Devil's Guard (1926; vt Ramsden 1926 UK), Black Light (1930) and Old Ugly-Face (1939 UK) - gradually moved toward religious occultism. TM remains best known for the Tros of Samothrace books, a sequence of minimally fantastic, essentially mainstream historical stories set in Britain, Gaul and the Mediterranean world just before the beginning of the Christian Era, with debunking portraits of Julius Caesar, Cleopatra and others. First appearing irregularly 1925-35 in Adventure, these stories were published in book form as Queen Cleopatra (1929), Tros of Samothrace (1934; vt in 4 vols as Tros 1967, Helma 1967, Liafall 1967 and Helene 1967; vt in 3 vols as Lud of Lunden 1976, Avenging Liafall 1976 and The Praetor's Dungeon 1976) and The Purple Pirate (1935). For sf readers, however, the Jimgrim/Ramsden books are of greater interest. At his best, TM was a highly competent writer who produced the finest stories of Oriental adventure to appear in the pulps. [EFB]Other works: King - of the Khyber Rifles (1916); The Thunder Dragon Gate (1937). About the author: Talbot Mundy: Messenger of Destiny (1983) by Donald M. Grant (1927-) et al.; Last Adventurer: The Life of Talbot Mundy (1984) by Peter Berresford Ellis (1943-); An Index to Adventure Magazine (2 vols 1990) by Richard BLEILER.

MUNKACSY, JANOS
[r] HUNGARY.

MUNRO, DUNCAN H.
[s] Eric Frank RUSSELL.

MUNRO, H.H.
[r] SAKI.

MUNRO, JOHN
(1849-1930) UK engineer, professor of mechanical engineering at Bristol, and author of 2 short stories, "Sun-Rise in the Moon" (1894) and "A Message from Mars" (1895), in Cassell's Magazine. The latter was revised to form the first chapter of A Trip to Venus (1897), an unexceptional account of a journey by ROCKET to an idyllic UTOPIA on VENUS, with a brief

excursion to MERCURY. [JE]

MUNSEY, FRANK A(NDREW)

(1854-1925) US newspaper and magazine publisher and writer. He began publishing in 1882 with The Golden Argosy, a weekly BOYS' PAPER, later transformed into The ARGOSY . FAM expanded his titles to include MUNSEY'S MAGAZINE, The SCRAP BOOK , The ALL-STORY , CAVALIER and later, after a complex series of mergers and title changes, All-Story Weekly and Argosy All-Story Weekly. A self-made millionaire, FAM was reviled for his heavy-handed treatment of the newspapers under his control. Under the editorship of Robert Hobart Davis, his magazines became the most important pre-sf PULP MAGAZINES, publishing many works by prominent sf and fantasy authors, including Edgar Rice BURROUGHS, Ray CUMMINGS, George Allan ENGLAND, Ralph Milne FARLEY, Homer Eon FLINT, Austin HALL, Otis Adelbert KLINE, A. MERRITT and Sax ROHMER. [JE]See also: HISTORY OF SF.

MUNSEY'S MAGAZINE

US magazine published by the Frank A. MUNSEY Corp.; ed Richard H. Thitherton (with Robert Hobart Davis as fiction editor) and others. Appeared from 2 Feb 1889 as Munsey's Weekly, then as MM Oct 1891-Oct 1929, when it merged with Argosy All-Story Weekly (The ARGOSY) to form 2 magazines, Argosy Weekly and All-Story Love Tales. Although MM was contemporary with The ALL-STORY it published little sf, and that little was not of any lasting quality. Most notable was its publication of stories by E.F. BENSON, Ray CUMMINGS, George Allan ENGLAND and Sax ROHMER. It also published the borderline-sf The Green Ray (1922-3; 1924) by Vance THOMPSON. [JE]

MUNSEY'S WEEKLY

MUNSEY'S MAGAZINE.

MURAKAMI, HARUKI

(1949-) Japanese writer of very considerable popularity whose Hitsuji o meguru boken (1982; trans Alfred Birnbaum as A Wild Sheep Chase 1989 US) tumbles a bevy of eccentric protagonists into a chase for a fabricated sheep in a style that mixes FABULATION and nightmare; the sequel is Dansu Dansu Dansu (1988; trans Alfred Birnbaum as Dance Dance Dance 1994 US). Sekai no owari to hard-boiled wonderland (1985; trans Alfred Birnbaum as Hard-Boiled Wonderland and the End of the World 1991 US), which is marginally more conventional, depicts a WAR for data in a NEAR-FUTURE Japan that has become definable as a nest of information. The Elephant Vanishes (coll trans Alfred Birnbaum and Jay Rubin 1993 US) assembles shorter works. [JC]

MURDOCK, M(ELINDA) S(EABROOKE)

(1947-) US writer who began writing sf with a STAR TREK tie, Web of the Romulans * (1983), and who later continued in much the same vein with her BUCK ROGERS sequence: Rebellion 2456 * (1989), Hammer of Mars * (1989), Armageddon Off Vesta * (1989) and Prime Squared * (1990). In between, MSM composed a SPACE-OPERA series of her own - Vendetta (1987) and DYNTERYX (1988) - but this did little to modify a sense that her use of the conventions of 1980s adventure sf, though professional, lacked a personal touch. [JC]

MURNANE, GERALD

(1939-) Australian writer, highly regarded in his native land for his experimental short stories and novels, such as *Tamarisk Row* (1974). GM's meditative style bears comparison with that of Jorge Luis BORGES. He disclaims any connection with sf, but has written several fictions about ALTERNATE WORLDS. In *The Plains* (1982) the narrator enters an alternate Australia: an inland feudal society, whose landowners, devoted patrons of the arts, take part in elaborate games and rituals. The narrator is hired to make a film about this society, but in the end accepts its solipsistic ideals and abandons his project. "The Battle of Acosta Nu" (1985), which can be found in *Landscape with Landscape* (coll of linked novellas 1985), tells of a man living in Melbourne, Australia, who all his life believes himself to be living in New Australia, the (actual) Australian colony founded in Paraguay in the early 1900s. Or perhaps it is the other way around. [BG]

MURPHY, DENNIS JASPER

Charles MATURIN.

MURPHY, PAT

(1955-) Working name of US writer Patrice Ann Murphy (1955-), who began publishing sf in the 1970s, her first acknowledged story being "Nightbird at the Window" in *Chrysalis 5* (anth 1979) ed Roy TORGESON. Her first novel was the obscurely published *The Shadow Hunter* (1982), in which a Stone-Age man is displaced by a TIME-TRAVEL device into a cruelly alienating future. The theme of displacement, whether through time or across the gulf of species, significantly shapes PM's two most famous works. *Rachel in Love* (1987 IASFM; 1992 chap), which won a NEBULA and a THEODORE STURGEON MEMORIAL AWARD, tells from her point of view the story of a chimpanzee with enhanced INTELLIGENCE (see also APES AND CAVEMEN) who escapes an impersonally horrific research institute. Nothing in the tale, with the exception of Rachel's cognitively enhanced responses, is in any sense sf, or even unlikely. *The Falling Woman* (1986), which won PM another Nebula in the same year, concentrates upon a contemporary woman archaeologist who is capable of perceiving, through palimpsests of midden and artifact, figures from the period being investigated at a dig in Mexico, and can observe their ghostlike maintenance of their ancient daily endeavours. A triangle of implications develops intriguingly between one of the Mayans, who speaks to the protagonist, and her estranged daughter, and climaxes in a kind of healing transtemporal embrace. After editing and producing environmental reports and graphics for various Pacific Coast organizations, PM began in 1982 to edit the *Exploratorium Quarterly*, the journal of the Exploratorium, a San Francisco museum designed to promote a hands-on relationship between human perception and the arts and sciences. Elements of her next novel, *The City, Not Long After* (1984 Universe 14, anth ed Terry CARR as "Art in the War Zone"; much exp 1988), clearly extrapolate some of the Exploratorium agenda. Set after a plague HOLOCAUST in a physically intact San Francisco, the tale presents its protagonists' capacity to make ART analogous to the shaping of a new reality. If there is a slight air of local patriotism in the book's apotheosis of San Francisco, it is at the same time perhaps something of a relief to

participate in a vision of the future not bound by CYBERPUNK shibboleths. PM, like Kim Stanley ROBINSON, had been described in the course of the 1980s as a Humanist writer, in a formulation which opposed Cyberpunk to Humanism, generally to the discredit of the latter; also like Robinson, she resisted the labelling, which she clearly found procrustean. Her stories have been assembled as *Points of Departure* (coll 1990), which won a PHILIP K. DICK AWARD, and in *Letters from Home* (coll 1991 UK) with Pat CADIGAN and Karen Joy FOWLER, each author contributing solo tales to the volume. Though PM's career seems to be edging away from sf, it can be predicted that, from her coign of vantage, she will continue to fertilize the genre. [JC]See also: FANTASY; INTERZONE.

MURPHY, WARREN (B.)

(1933-) US writer known largely for the Destroyer sequence, a long series of spoof thrillers, many with Richard Ben SAPIR, featuring the Doc Savage-like adventures of Remo Williams, a White man (and avatar of Shiva the Destroyer) trained in the paranormal combat arts of Sinanju, which allow him (for instance) to interpenetrate his body with other matter. The first titles were written mostly by WBM and Sapir, who died in 1987, but later titles - sometimes listed as by these two, sometimes by one alone - are by various hands including WBM. The most prolific recent author of Destroyer titles is Will MURRAY, who also wrote *The Assassin's Handbook* (coll 1982; rev vt *Inside Sinanju* 1985) as by WBM and Sapir, an amused (and amusing) companion to the sequence; other authors include WBM's wife Molly Cochran, Ed Hunsburger, William Joy, Ric MEYERS and Robert Randisi. A detailed presentation of titles, listing ascribed and actual authors, can be found in R. REGINALD's *Science Fiction and Fantasy Literature: a Checklist, 1975-1991* (1992). Here we pay no attention to ascribed author (always, in any case, WBM and/or Sapir); up to #74, unless otherwise indicated, the actual author is WBM, alone or with Sapir; from #74 on the author is Murray. The sequence began, rather inauspiciously, with *Created, the Destroyer* (1971) with Sapir (who collaborated on all but one through #24) and *Destroyer #2: Death Check* (1972), ponderous imitations of James Bond; but with #3: *Chinese Puzzle* (1972) it took off with remarkable panache, some instalments coming close to SPACE OPERA, others engaging with SUPERMAN themes, and most indulging in raucous SATIRE of US politics and mores. The sequence then runs: #4: *Mafia Fix* (1972), #5: *Dr Quake* (1972), #6: *Death Therapy* (1972), #7: *Union Bust* (1973), #8: *Summit Chase* (1973) by Murphy alone, #9: *Murder's Shield* (1973), #10: *Terror Squad* (1973), #11: *Kill or Cure* (1973), #12: *Slave Safari* (1973), #13: *Acid Rock* (1973), #14: *Judgment Day* (1974), #15: *Murder Ward* (1974), #16: *Oil Slick* (1974), #17: *Last War Dance* (1974), #18: *Funny Money* (1975), #19: *Holy Terror* (1975), #20: *Assassin's Play-Off* (1975), #21: *Deadly Seeds* (1975), #22: *Brain Drain* (1976), #23: *Child's Play* (1976), #24: *King's Curse* (1976), #25: *Sweet Dreams* (1976) with Meyers, #26: *In Enemy Hands* (1977), #27: *The Last Temple* (1977) with Meyers, #28: *Ship of Death* (1977), #29: *The Final Death* (1977) with Sapir and Meyers, #30: *Mugger Blood* (1977), #31: *The Head Men* (1977), #32: *Killer Chromosomes* (1978), #33: *Voodoo Die* (1978), #34: *Chained Reaction* (1978), #35: *Last Call* (1978), #36: *Power Play* (1979), #37: *Bottom Line* (1979), #38: *Bay City Blast* (1979), #39: *Missing Link* (1980), #40: *Dangerous Games* (1980) with Randisi, #41: *Firing*

Line (1980), #42: Timber Line (1980) with Joy, #43: Midnight Man (1981) with Randisi, #44: Balance of Power (1981) with Cochran, #45: Spoils of War (1981) by Cochran, #46: Next of Kin (1981) by Cochran, #47: Dying Space (1982) by Cochran, #48: Profit Motive (1982), #49: Skin Deep (1982) by Cochran, #50: Killing Time (1982) by Cochran, #51: Shock Value (1983) by Cochran, #52: Fool's Gold (1983), #53: Time Trial (1983) by Cochran, #54: Last Drop (1983) by Cochran, #55: Master's Challenge (1984) with Sapir and Cochran, #56: Encounter Group (1984) with Murray, #57: Date with Death (1984) with Cochran and Hunsburger, #58: Total Recall (1984) with Randisi, #59: The Arms of Kali (1984), #60: The End of the Game (1985), #61: Lords of the Earth (1985), #62: The Seventh Stone (1985) with Sapir and Hunsburger, #63: The Sky is Falling (1986) by Sapir and Murray, #64: The Last Alchemist (1986) with Murray, #65: Lost Yesterday (1986) by Sapir and Murray, #66: Sue Me (1986) by Sapir, #67: Look into my Eyes (1987) by Sapir, #68: An Old-Fashioned War (1987) by Sapir, #69: Blood Ties (1987) with Murray, #70: The Eleventh Hour (1987) with Cochran and Murray, #71: Return Engagement (1988) with Murray, #72: Sole Survivor (1988) with Murray, #73: Line of Succession (1988) with Murray, #74: Walking Wounded (1988) by Murray (who is responsible for the remaining titles listed), #75: Rain of Terror (1989), #76: The Final Crusade (1989), #77: Coin of the Realm (1989), #78: Blue Smoke and Mirrors (1989), #79: Shooting Schedule (1990), #80: Death Sentence (1990), #81: Hostile Takeover (1990), #82: Survival Course (1990), #83: Skull Duggery (1991), #84: Ground Zero (1991), #85: Blood Lust (1991), #86: Arabian Nightmare (1991), #87: Mob Psychology (1992) and #88: The Ultimate Death (1992) (we cannot trace #87, nor have we been able to monitor further publications, though we are aware of the release of #96: Infernal Revenue [1994]. An out-of-series Destroyer title, Remo: The Adventure Begins * (1985) by Sapir, is a film tie to Remo Williams: The Adventure Begins (1985; vt Remo-Unarmed and Dangerous). Other genre adventures by WM include Grandmaster (1984) with his wife Molly Cochran, High Priest (1987) with Cochran, The Hand of Lazarus (1988) with Cochran, Scorpion's Dance (1990), and The Forever King (1992), again with Cochran. [JC]

MURRAY, (GEORGE) GILBERT (AIME)

(1866-1957) UK classical scholar, best known for his many translations from the Greek classic drama, for his UTOPIAN sense that contemporary society could be changed by persuasion (justified in the case of women's suffrage) and for seminal studies such as *The Rise of the Greek Epic* (1907) and *Four Stages of Greek Religion* (1912). His sf novel, *Gobi or Shamo: A Story of Three Songs* (1889), as by G.G.A. Murray, is a lost-race tale (LOST WORLDS) featuring a race of Hellenes whose ethical precepts are unsparingly ancient but who have also mastered weapons of mass destruction. [JC]

MURRAY, WILL

Working name of US writer William Patrick Murray (1953-), who has shown an interest throughout his career in pulp SUPERHEROES like DOC SAVAGE, about which figure he wrote the nonfiction *Secrets of Doc Savage* (1981 chap); as Kenneth ROBESON he began a new sequence of Doc Savage adventures comprising *Python Isle* * (1991), *White Eyes** (1992), *The Frightened Fish**

(1992), *The Jade Ogre** (1992), *Flight into Fear** (1993), *The Whistling Wraith** (1993) and *The Forgotten Realm** (1993). Under his own name he ed *The Duende History of the Shadow Magazine* (anth 1980). Writing as Warren MURPHY (whom see for titles) and/or Richard SAPIR, he has written many volumes of the *Destroyer* sequence, including all those from #74 to date (although forthcoming titles will, it seems, be by yet other hands). [JC]

MURRY, COLIN MIDDLETON
Richard COWPER.

MUSIC

This article is in 3 parts: 1, Science Fiction in Classical Music; 2, Science Fiction in Popular and Rock Music; 3, Music in Science Fiction. Because of the almost endless proliferation of popular and rock music, and because there are so many ways in which the latter (in particular) interpenetrates with sf and fantasy, section 2 is itself divided into 2 parts, from different hands: Maxim JAKUBOWSKI's comments focus on the pre-1980s period, while Charles Shaar Murray's concentrate on more recent work.

1. Science fiction in classical music By historical necessity, sf being in the broad sense a 20th-century phenomenon, earlier classical music was generally unaffected by it, but there are exceptions: Baldassare Galuppi (1706-1785) in 1750 and Franz Joseph Haydn (1732-1809) in 1777 each wrote a comic opera with the title *Il Mondo della Luna* ["The World of the Moon"] to a libretto by Carlo Goldoni (1707-1793). More directly attributable to sf is the musical adaptation by Jacques Offenbach (1819-1880), as "*Le Voyage dans la lune*" (1875), of the Jules VERNE book known in English as *From the Earth to the Moon* (2 parts, 1865, 1870; trans 1873). The Moon is again the scene of the action in the first part of the opera *The Excursions of Mr Broucek* (1917) by Leos Janacek (1854-1928), based on the novel by Svatopluk Cech (CZECH AND SLOVAK SF): the leading character dreams he has been transported there while in a drunken stupor. In *The Makropoulos Secret* (1925) Janacek adapted Karel CAPEK's play about IMMORTALITY. In the anthology *Les soirees de l'orchestre* (1853) Hector Berlioz (1803-1869) provides an interesting footnote in "*Euphonia*", a short sf tale of a musical city. Other musical works of the late 19th and early 20th century have taken on sf connotations because of their subsequent use, such as *Also Sprach Zarathustra* (1896) by Richard Strauss (1864-1949), which was featured in Stanley KUBRICK's film *2001: A SPACE ODYSSEY* (1968). The *Planets suite* (1918) by Gustav Holst (1874-1934) has often been used in sf contexts. Many compositions since 1950 have followed Holst's astronomical (in his case, astrological) lead, especially those for which avant-garde instrumental techniques or electronic music might make more traditional titles seem incongruous; thus numerous titles such as "*Cosmos*", "*Galaxy*", "*Nebula*" and "*Orbit*" can be found. Works are named after star charts (*Atlas Eclipticalis* [1961] by John Cage [1912-1992]), inspired by types of celestial objects (*NEUTRON STAR* [1968] by Jan W. Morthenson [1940-] and *Quasars* [1980] by Christian Clozier [1945-] or by individual heavenly bodies (*Sirius* [1968] by Karlheinz Stockhausen [1928-]), and dedicated to or illustrative of the journeys of early astronauts and cosmonauts: in the USSR many songs and ballads were composed in honour of Yuri Gagarin (1935-1968). Electronic music for

illustrating "the music of the spheres" - a phrase that has been used of the work of Terry Riley (1935-), Francois Bayle (1932-) and others - and stories of outer space can be found not only in film soundtracks, especially Louis (1923-) and Bebe (1928-) Barron's pioneering score for **FORBIDDEN PLANET** (1956) and the understated contributions by Eduard Artem'ev (1937-) to Andrei **TARKOVSKY's SOLARIS** (1971) and **STALKER** (1979), but also in short pieces commissioned or adapted by music-hire libraries, like Desmond **LESLIE's** *Inside the Space Ship* and *Music of the Voids of Outer Space* (both c1957). Works with similar titles also appeared early on in concert programmes, with pieces such as *Visions of Flying Saucers* (1966 with Leo Nilsson) and *Robot Amoroso* (1978) by Ralph Lundsten (1936-). The use of electric instruments permeates the avant-garde reaches of jazz and jazz-rock as with the Mahavishnu Orchestra, Weather Report and Sun Ra's Arkestra (whose varied names, including Blue Universe Arkestra, Solar Myth Arkestra and Cosmo Love Arkestra, testify to a kind of sf allegiance). Another relationship is the direct linkage of a piece of music to an existing sf story. In rare cases this consists of a vocal work with an sf text, as with the song-cycle *The Tentacles of the Dark Nebula* (1969) by David Bedford (1937-), from Arthur C. **CLARKE's** story "Transcience" (1949), and *The Music and Poetry of the Kesh* (1985) by Todd Barton, musical settings of the poems in Ursula **LE GUIN's** **ALWAYS COMING HOME** (1985). More often a purely electronic or instrumental composition was inspired by or evokes the atmosphere of the original story, as in *Quatermass* (1964; Nigel **KNEALE**) by Tod Dockstader (1932-), *Alpha Ralpa Boulevard* (1979; based on a 1961 story by Cordwainer **SMITH**) by Ralph Lundsten, the cycle *Kristallwelt* (1983-6; in homage to J.G. **BALLARD's** **THE CRYSTAL WORLD** [1966]) by Michael Obst (1955-), and several further works by Bedford, including *Jack of Shadows* (1973; based on Roger **ZELAZNY's** 1971 novel), *Star's End* (1974; refers to Isaac **ASIMOV's** Foundation trilogy) and *The Ones who Walk Away from Omelas* (1976; based on the 1973 story by Le Guin). *The Birthplace of Matter* (1975) by Sten Hanson (1936-) refers to sf concepts, while his *The John Carter Song Book* (1979-85) is more unusual: it is based, we are told, on the minimal information about Martian music in Edgar Rice **BURROUGHS's** novels supplemented by Hanson's direct contact with Carter; for lack of available recordings these examples of Martian music were perforce recreated by means of computerized vocal synthesis. Dramatic cantatas and music dramas concerned with sf subjects but without the involvement of an sf author include the **RADIO** drama *Comet Ikeya* (1966) by Joji Yuasa (1929-) and *Cometose* (1987) by Kristi Allik (1952). In the latter, Samuel Clemens (Mark **TWAIN**), who was born and died during consecutive appearances of Halley's Comet, is transported with his house to the comet's core, returning to Earth's vicinity in 1985 only to have the Giotto satellite destroy the house. Halley's Comet is celebrated also in *The Return* (1985) by Morton Subotnick (1935-). Deep concern over humanity's future can be found in the work of the composer and poet Lars-Gunnar Bodin (1935-), such as his *Cybo* (as in **CYBORG**) trilogy (1967-8) and the cantata *For Jon* (Fragments of a Time to Come) (1977), the final section of which is called "Instruction Manual for Interdimensional Travel". Staging and costumes have emphasized sf elements in certain musico-dramatic works, including *Licht* ["Light"], Stockhausen's cycle of 7 full-length operas to his own scenarios (in progress since

1977), and the Surrealist *Le grand macabre* (1977) by Gyorgy Ligeti (1923-), loosely based on the play by Michel de Ghelderode (1898-1962). Among the operas for children by Gian Carlo Menotti (1911-) are the tongue-in-cheek *Help, Help, The Globolinks!* (1968), which tackles alien INVASIONS, and *A Bride from Pluto* (1982), a modernized fairy tale. An ALIEN being provides a suitable updating of the role of *deus ex machina* in Michael Tippett's opera *The Ice Break* (1976), and three alien visitors play significant parts in his *New Year* (1988). The most substantial connection between sf and classical music can be found in recent operas based on sf stories. One of the most successful has been *Aniara* (1959) by Karl-Birger Blomdahl (1916-1968), a musical version of Harry MARTINSON's epic starship poem featuring the Mima computer. Other operas that fall into this category include Vaclav Kaslik's *Krakatit* (1961; based on Karel Capek's 1924 novel), *VALIS* (1987; based on the 1981 novel by Philip K. DICK) by Tod Machover (1953-), and two operas by Paul Barker, *Phantastes* (1986; based on George MACDONALD's 1858 fantasy) and *The Marriages Between Zones Three, Four and Five* (1987; based on Doris LESSING's 1980 novel). The composer who has had the greatest success in radicalizing and popularizing opera in the late 20th century, Philip Glass (1937-), likewise selected Lessing's *The Marriage Between Zones Three, Four and Five* for an opera he has been working on since his 1988 setting of the same author's *The Making of the Representative for Planet 8* (1982). Another work by Glass, more music drama than opera, is *1000 Airplanes on the Roof* (1988), involving TIME TRAVEL; the climax of his plotless first opera, *Einstein on the Beach* (1976), takes place on board a spaceship, as does a significant part of the action of his much later opera *Christopher Columbus* (1992).

[HD/MJ]2. Science fiction in popular and rock music It was in the mid-1960s, with the widespread assimilation of sf into general Pop culture, that sf came into its own as a factor in popular music. Nowhere was this relationship more visible than with the San Francisco groups, where sf themes and imagery often became the subject matter of songs. The Steve Miller Band's early albums are titled *Children of the Future* (1968), *Sailor* (1968) and *BRAVE NEW WORLD* (1969), and feature songs like "Overdrive", "Song for our Ancestors" and "Beauty of Time"; a similar fealty was paid by The Grateful Dead - with *Aoxomoxoa* (1969), *From the Mars Hotel* (1974) and improvisatory pieces like "Dark Star" - and by Spirit - whose *Future Games* (1977) flirts with STAR TREK - Quicksilver Messenger Service, the Byrds, Moby Grape, Kaleidoscope and, in a satirical guise, The Mothers of Invention. But the Californian group most influenced was certainly Jefferson Airplane, spearheaded by Paul Kantner (1942-), Grace Slick (1939-) and Marty Balin (1942-). Their early albums *Surrealistic Pillow* (1967), *After Bathing at Baxter's* (1968), *Crown of Creation* (1968) and *Volunteers* (1969) are consummate examples of dynamic melodies and furiously articulate lyrics often referring to sf (including Robert A. HEINLEIN and John WYNDHAM). Shortly after Balin's departure from the group, guitarist and songwriter Kantner recorded *Blows Against the Empire* (1970) with Jefferson Starship, an amalgam of the previous band with other outstanding San Francisco musicians. This concept album (nominated for a HUGO in 1971) is sometimes thought to have been the finest fusion of the genres, though the opposite opinion has also been published: it is a symphonic poem in the rock mode about the hijacking of

a spaceship by a group of rebels in a fascist future USA, and their hopeful journey to the stars. Later albums by Jefferson Starship saw Kantner adopting a persistent revolutionary stance interlaced with stark depictions of a totalitarian planet; the return of Balin to the group in 1975 brought an end to the predominance of Kantner's sf situations. While the West Coast groups heartily embraced sf in the USA, the situation in the UK was more fragmented. Despite the early, arguably sf imagery of The Shadows' ethereal guitar style or The Tornados' "Telstar" (1962), Pink Floyd were the premier sf group to gain popularity. Piper at the Gates of Dawn (1967), A Saucerful of Secrets (1968), Ummagumma (1969) and Atom Heart Mother (1970) are among their many albums having sf subject matter contained in and illuminated by highly evocative music, using the quicksilver guitar and organ runs which have since become closely associated with the sf-music concept. Their style was widely imitated in Europe by Tangerine Dream, Klaus Schulze, Nektar and a score of supposed wizards of the synthesizer. Another important UK group was Peter Hammill's Van Der Graaf Generator, who were particularly adept at mapping the powerful, bleak vistas of post-nuclear desolation: The Aerosol Grey Machine (1969), The Least We Can Do is Wave to Each Other (1970), "After the Flood" (1970), "Pioneers over C", "Lemmings" and Hammill's solo album Chameleon in the Shadow of the Night (1973). One band to attempt a wholeheartedly sciencefictional concept album was the UK-based Nirvana (no relation to the much later US band), with The Story of Simon Simopath (1968), but it was fairly execrable on release and has not improved with age - although it caused some stir at the time. The composer/singer David Bowie (1947-) enjoyed worldwide fame and showed a comprehensive understanding of sf in his work, ranging from the early "Space Oddity" and "Cygnet Committee" (both 1969) to the songs about Ziggy Stardust, the ultimate superstar of the apocalypse, on the album The Rise and Fall of Ziggy Stardust and the Spiders from Mars (1972), or Diamond Dogs (1974), an impressive jaunt through a DELANY-like city of fear. Other notable UK groups conversant with the use of sf concepts included: Yes (showing the influence of lyricist/singer Jon Anderson, who also used sf material in his solo albums); King Crimson; Emerson, Lake & Jimi Hendrix (1942-1970); The Incredible String Band; The Rolling Stones (notably on Their Satanic Majesties Request [1967]); Genesis; Man (whose guitarist Deke Leonard peppered his songs with sf references); and the Anglo-French group Gong, who evolved a complete mythology full of pixies and flying teapots. Hawkwind, with whom Michael MOORCOCK was associated, built songs around stories by Roger ZELAZNY, Ray BRADBURY and others, introducing many sf archetypes, while Moorcock's own group, Deep Fix, recorded the uneven New World's Fair (1975). A better use of aggressively high-energy music with sf connotations can be found in the US group Blue Oyster Cult. There have also been popular settings of sf classics. Though the style might not be called popular, Anthony BURGESS set his own A Clockwork Orange (1962) to music for a stage production. Notable (and controversial) was Giorgio Moroder's new 1984 score for the 1926 film METROPOLIS, and the songs are a basic feature of EARTH GIRLS ARE EASY. Other sf films were musicals in the first place, including BIG MEAT EATER, It's a Bird! It's a Plane! It's Superman (SUPERMAN), JUST IMAGINE, ROCKY HORROR PICTURE SHOW and TOOMORROW. [MJ/PN]2A. To the more adventurous pop fans of the late 1960s,

sf was a literary and cinematic extension of fashionable interest in Eastern mysticism and psychedelic drugs, all three providing ways of taking the mind "where minds don't usually go", as Pete Townshend (1945-) put it in The Who's Tommy (1969). Most rockers' 1960s favourites were 2001: A SPACE ODYSSEY (the movie - complete with "trip" sequence - rather than the 1968 Arthur C. CLARKE book) and J.R.R. TOLKIEN's fantasy trilogy The Lord of the Rings (1954-5; rev 1966; omni 1968). The former provided the most spectacular vision extant of the wondrously enigmatic nature of the Universe, and the latter offered a grand struggle between Good and Evil, with the heroes representing the purest of hippie virtues: bucolic gentleness and a fondness for pipeweed and munchies. It was tailor-made for Yes fans and admirers of Crosby, Stills ? contribution to the apocalyptic end of rock's sf strain being "Wooden Ships" (1969), a collaboration with Jefferson Airplane (who also recorded their own version of the song) in which the hippies escape from a polluted, war-torn world in the wooden ships of the title; the song was highlighted as an anthem in the cinematic rock testament of hippiedom, Woodstock (1970). But the primary rock science-fictioners of the hippie era were Pink Floyd and Jimi Hendrix; 1967-8 classics like the former's "Set the Controls for the Heart of the Sun", "Astronomy Domine" and "A Saucerful of Secrets" and the latter's "Third Stone from the Sun", "The Stars that Play with Laughing Sam's Dice" and "1983/Moon, Turn the Tides" graphically equated the explorations of INNER SPACE and outer space: a direct musical expression of the same concerns as the NEW-WAVE sf of the era. Yet pop's first real signpost to the future came not from the UK or the USA, but from the German quartet Kraftwerk, who during the first half of the 1970s not only pioneered the use of the then-exotic synthesizer but extended the process of computerized, digital music-making into a madly seductive vision of the romance of technology with records like Autobahn (1974) and, most significantly, We Are the Robots. The ever-alert David Bowie began a new age of sf-influenced rock when "Space Oddity" (1969), his comic-angsty tale of Major Tom, the astronaut who decides not to come back, was used as the theme for tv coverage of the first Moon landing. His later excursions into post-apocalyptic speculation included the albums The Rise and Fall of Ziggy Stardust and the Spiders from Mars (1972), about a leper- MESSIAH rocker, and Diamond Dogs (1974), jointly derived from George ORWELL's NINETEEN EIGHTY-FOUR (1949) and Harlan ELLISON's "A Boy and his Dog" (1969). Bowie also helped to kick in yet another phase when he became an early devotee of Kraftwerk and, with the aid of Brian Eno (1948-), himself a pioneer synthophile from his stint as a member of Roxy Music, helped to transform synthesizer technology from method to metaphor with Low (1977). This enabled the likes of Gary Numan (1958-) to trivialize the new style into the superficial kitsch futurism which has all too often been rock's perception of sf. More to the point was the work of George Clinton (1940-), the funk prankster and mastermind of such acts as Parliament, Funkadelic and Bootsy's Rubber Band. Parliament's Mothership Connection (1976), the stage version of which generally began with Clinton descending from the flies in a massive flying saucer, and The Clones of Dr Funkenstein (1976) used sf devices as an enhancement of meaning rather than a substitute for it. Grandiose concept albums like 2112 (1976) by the Canadian power-trio Rush rubbed shoulders with

heavy-metal imagery drawn from horror (Black Sabbath and Alice Cooper [1948-] being the "onlie begetters" of an entire school of contemporary death-metallists including Slayer, Metallica and Sabbath's own former lead singer Ozzy Osbourne [1948-]) and SWORD-AND-SORCERY heroic fantasy of the Robert E. HOWARD variety (early-to-mid-1970s Led Zeppelin favourites like "Immigrant Song" and "Stairway to Heaven", drawing on, respectively, Nordic fantasies of rape'n'pillage and the most sentimental aspects of Celtic faerie). Chris de Burgh's "A Spaceman Came Travelling" (1974) blended the Christmas story with the Erich VON DANIKEN-esque notion that the infant Christ arrived by UFO, to produce one of the more memorable 1970s sf commercial pop songs. An important piece was Jeff Wayne's musical adaptation of H.G. WELLS's THE WAR OF THE WORLDS (1898). The recording, Jeff Wayne's Musical Version of The War of the Worlds, was released in 1978. The advent of rock video in the early 1980s reemphasized the fact that much of sf's imagery enters rock music by way of the movies - like the "Flying Saucers Rock and Roll", "Martian Hop" and "Purple People Eater" of the 1950s - and the visual style of movies like BLADE RUNNER (derived from Philip K. DICK's DO ANDROIDS DREAM OF ELECTRIC SHEEP? [1968]), George MILLER's MAD MAX series and The TERMINATOR provided instant raw material for many of the rock videos of the 1980s. At worst, there was Duran Duran, mindlessly recycling the usual leather-jacket-apocalypse cliches; at the other end of the intelligence spectrum were Z.Z. Top, constructing elaborate sf mini-comedy-dramas in videos like "TV Dinners" (1983) and "Rough Boy" (1985). What was most apparent, however, was that the late 1980s and early 1990s saw an actual sf future arrive in pop's present. The 1970s experiments of Kraftwerk and Bowie bore genuine CYBERPUNK fruit in the shape of hundreds of "house" dance records produced, as often as not, in bedrooms and home studios rather than in the 24-track establishments of the previous decade. Their creators took full advantage of the proliferation of affordable sampling and sequencing technology to generate an authentic "cyberpop" which seemed to have sprung full-blown from the brows of William GIBSON and Bruce STERLING, and which rapidly achieved mass popularity. At the time of writing (late 1991) at least half the records in the UK pop charts were classifiable as "bleep" of one sort or another: records which made no attempt at all to sound human. For every synth record that attempted to mimic "real" drums, strings or keyboards, there were dozens that actively celebrated their digital origins: vocals or raps were sampled into digital keyboards and triggered on the stuttering electronic beat. "Robotic" dance moves were the norm, humans imitating machines rather than - as early sf visionaries had warned - machines imitating humans. An entire generation of pop fans embraced a futurist metaphor quite unselfconsciously, demonstrating that sf has, in this sphere at least, invaded and conquered the present. Rock bands of both the orthodox and synthesized varieties continue to name both themselves and their songs after their sf favourites, just as the fiction of sf writers like Howard WALDROP, Sterling, Jack WOMACK and Lewis SHINER reflects their preoccupation with rock and its attendant culture. William S. BURROUGHS still leads the field in this respect (groups like Soft Machine, Dead Fingers Talk and Steely Dan have borne witness to his influence); The Comsat Angels derived their name from a short story by J.G. BALLARD; the alter-ego KLF outfit

Justified Ancients of Mu-Mu demonstrate their allegiance to Robert Anton WILSON and Robert SHEA's *Illuminatus* books; Level 42 drew their name from a reference in Douglas ADAMS' *Hitch Hiker's Guide to the Galaxy* series; while jazz-rock bass virtuoso Stuart Hamm has paid an entire series of tributes to William Gibson, most recently with the album *Kings of Sleep*. As long as both sf writers and rock musicians continue to share a vested interest in the hegemony of the imagination, the relationship is likely to remain a fruitful one. [CSM]3.

Music in science fiction Of the ARTS, music is the one most commonly featured in sf - albeit not quite to the extent that FANTASY is pervaded by it. Several sf writers studied it, notably including Lloyd BIGGLE Jr (PhD in musicology), Langdon JONES and Edgar PANGBORN, or were for a time professionally or semiprofessionally involved in music: Philip K. DICK purveyed classical music on a radio programme and in a record shop; Douglas ADAMS, Biggle, Jerome BIXBY, Anthony BURGESS, the film director John CARPENTER, the sf editor Edmund CRISPIN, Samuel R. DELANY, L. Ron HUBBARD, Jones, Desmond LESLIE, Pangborn and especially Somtow Sucharitkul (S.P. SOMTOW) have composed music, while Delany, Laurence M. JANIFER, Anne MCCAFFREY, Barry N. MALZBERG, Michael MOORCOCK, Dan MORGAN, Chris MORRIS and Janet E. MORRIS, Charles PLATT, John B. SPENCER, Boris VIAN and many others have appeared as performers, often of their own compositions. Music, dependent on the instruments with which it is played, is more than most artforms associated with contemporary technology. Also central, though we now take it for granted, is the technology of sound reproduction. The "frozen words" of Francois RABELAIS's *Gargantua and Pantagruel* (1532-52; trans 1653-94) anticipate sound recording, as, more scientifically, do the hi-tech Sound Houses of Francis BACON's *New Atlantis* (1629). Edward BELLAMY, in *Looking Backward, 2000-1887* (1888), saw mechanically reproduced music as fundamental to a UTOPIA. In "The Colours of the Masters" (1988) Sean MCMULLEN imagines a 19th century in which a clockwork "pianospectrum" has been invented in time to record Chopin and Liszt. Many sf authors, like most of the general public, believe that radical musicians (often using electronic technology) are producing work that is deliberately ugly and unintelligible. Others believe that the influence of technology on music is unavoidable and will eventually give rise to new masterpieces. Arthur C. CLARKE, in *The Songs of Distant Earth* (1986), makes the realistic extrapolation that historical processes will integrate today's electronic music and instruments into the artistic mainstream. Futuristic or ALIEN music is, of course, rather difficult to describe, and stories which try - including "The Music Makers" (1965) by Langdon Jones and Sweetwater (1973) by Laurence YEP - set themselves a near-impossible task. Musicians from the past, both rock and classical, occasionally figure in sf. A flute-playing character in Piers ANTHONY's *MACROSCOPE* (1969) is obsessed by the life of the 19th-century poet and musician Sidney Lanier (1842-1881); the seeming revival of Richard Strauss - to demonstrate the future poverty of hi-tech music - in James BLISH's "A Work of Art" (1956) turns out to be a mental pattern imposed on the brain of a totally unmusical person; Jimi Hendrix (1942-1970) is mysteriously revived, with no desire to perform music, in Michael MOORCOCK's "A Dead Singer" (1974). Other stories of interest in this context include Gregory BENFORD's "Doing Lennon" (1975) and Michael SWANWICK's "The Feast of St Janis" (1980). Music has always played a

substantial role in literature, whether as a principal plot element or only incidentally, as in Captain Nemo improvising at the organ or Gully Foyle plucking primitive tunes on an egg-slicer while marooned in space. The profound effects achieved by music (and particularly singing), both beneficial and destructive, have been favourite subjects from the stories of Orpheus and HOMER's sirens through to, for example, Edgar Pangborn's "The Music Master of Babylon" (1954) and "The Golden Horn" (1962), or the operatic "Un Bel Di" (1973) and "The Fellini Beggar" (1975) by Chelsea Quinn YARBRO. (The Orpheus legend features commonly in sf versions, a recent and interesting example of its HARD-SF transmutation being Fool's Run [1987], by Patricia MCKILLIP.) Music's therapeutic powers can be seen in Delany's "Corona" (1967) and the impact of the Singers in his "Time Considered as a Helix of Semi-Precious Stones" (1969). Anne McCaffrey's training as an opera singer is evident in her *The Ship who Sang* (fixup 1969) and elaborately reflected in *The Crystal Singer* (1974-5; fixup 1982) and its sequel *Killashandra* (1985), all of which focus on the potency of music. In Orson Scott CARD's *Songmaster* (fixup 1980) both the healing and destructive powers of music are shown. Music is effectively used as a weapon in *Tintagel* (1981) by Paul H. COOK and in *Dargason* (1977) by Colin COOPER; in Charles L. HARNESS's "The Rose" (1953) the unusual time signature of Tchaikowski's 6th Symphony (Pathetique) is used as a weapon in a fight with a villain. Music may be a political tool; it instigates revolution against repression in Lloyd Biggle's *The Still, Small Voice of Trumpets* (1968), but supports the soulless, mechanical nature of the societies in Yevgeny ZAMIATIN's *My* (trans as *We* (1924) and George ORWELL's *NINETEEN EIGHTY-FOUR* (1949). (Biggle's interest in music is also apparent in many of the stories in *The Metallic Muse* [coll 1972].) In Frank HERBERT's "Operation Syndrome" (1954) music is a means of revenge, and it is a means of escape from the constraints of the physical body in *ON WINGS OF SONG* (1979) by Thomas M. DISCH. Since the late 1960s the charismatic nature of rock music - and its power to create emotions so strong that they can be read by those who feel them as transcendent - has played an important role in sf, sometimes ambiguously, as in the Satanic heavy metal of George R.R. MARTIN's *Armageddon Rag* (1983), with its power both to heal and to destroy. This novel, part horror and part sf, has an intense feeling for the music of the 1960s of a kind quite common in recent sf. It (relevantly) powers such stories as Howard WALDROP's "Flying Saucer Rock ? Roll" (1985) and "Do Ya, Do Ya, Wanna Dance" (1988), the former about Black kids picked up by aliens on account of the transcendent power of old Frankie Lymon songs, the latter about "a song that was gonna change the world" and, two decades later at a class reunion, does. 1960s rock appears by way of local colour in many novels by Stephen KING, sometimes relevantly, and wholly irrelevantly in Allen STEELE's *Orbital Decay* (1989). This last was reviled by some critics as culturally trapped in a rock'n'roll era (dead even now), even though it is set in the mid-21st century; it is a specific case of a general problem - the future story whose cultural referents, often musical, are so absurdly anachronistic that willing suspension of disbelief flies out the window. Other authors who draw powerful metaphors from the rock'n'roll era are Jack WOMACK - whose *Elvissey* (1993) plays on the Elvis Presley myth, as do Robert RANKIN's *Armageddon* books and Allen Steele's *Clarke County, Space* (1990) -

Lewis SHINER, Norman SPINRAD - notably in "The Big Flash" (1969) and Little Heroes (1987), another book about revolution and the music business - Bradley DENTON, in Wrack and Roll (1986) and BUDDY HOLLY IS ALIVE AND WELL ON GANYMEDE (1991), and John SHIRLEY, in Eclipse (1985). Two predecessors of this particular strand of sf writing were The Book of Stier (1971) by Robin SANBORN and Barefoot in the Head (1969) by Brian W. ALDISS; in both, youth movements are at least partially inspired by popular music, as a prelude to the triumph of the counterculture, and at the risk of creating enormous personal power. One of the most interesting variants is Bruce STERLING's acid, precise fable of an ALTERNATE WORLD in which rock critic Lester Bangs (1948-1982) lived on, "Dori Bangs" (1989). Some of the conventions of this strand are parodied in The Truth about The Flaming Ghoulies (1984) by John Grant (Paul BARNETT), and the elevation of the vampire Lestat to rock megastardom in Anne Rice's series of fantasies, The Vampire Chronicles (1976-92), can also be read as in part a parody (perhaps an unconscious one) of the subgenre. Colonizers of alien planets might get back to their roots with access to a piano (Frank Herbert's "Passage for Piano", 1973), but more commonly music in alien circumstances is used as a means of understanding or even as the only means of COMMUNICATION. Touring musicians thus may have an ambassadorial function, as in the string quartet that visits the advanced society of Jules VERNE's L'île à hélice (1895; trans as The Floating Island 1896). An interplanetary touring opera company features in Jack VANCE's ironically titled Space Opera (1965). Aliens may well be biologically musical, as with the trumpet-faced heralds, one form of the Selenites in H.G. WELLS's THE FIRST MEN IN THE MOON (1901), the hollow-horned unicorns in Piers Anthony's Apprentice Adept sequence (1980 onward) and the centauroid titanides in John Varley's Gaean trilogy (1979-84). Mutated singing plants feature in J.G. BALLARD's "Prima Belladonna" (1956). Musical contact is achieved over interplanetary distances in Barrington J. BAYLEY's "The Big Sound" (1962), in which an orchestra of 6000 becomes not only a sound transmitter but also a receiver. Music as a kind of alien LINGUISTICS is central to Jack Vance's "The Moon Moth" (1961); it has since become almost a CLICHE. The aliens communicate with us this way in the film CLOSE ENCOUNTERS OF THE THIRD KIND (1977), initially with the most celebrated five-note musical phrase in sf. Music is combined with dance in Spider and Jeanne ROBINSON's STARDANCE (1979), another novel which supposes that rapport with aliens might be made easier by the use of the kind of nonverbal communication which music represents; yet another is The Rapture Effect (1987) by Jeffrey CARVER. An amusing, well told ecological melodrama is Sheri S. TEPPER's After Long Silence (1987; vt The Enigma Score 1989 UK), in which giant, crystalline lifeforms can be appeased - or, it turns out, spoken to - only by specially trained musicians. Music unlocks galactic history for terrestrials in Piers Anthony's MACROSCOPE (1969). It achieves such religious significance for the Third Men in Olaf STAPLEDON's LAST AND FIRST MEN (1930) that a Holy Empire of Music is founded; one of Stapledon's Last Men describes the Music of the Spheres and, in its most rarefied application, it has become part of the very fabric of some early universes described in Stapledon's STAR MAKER (1937), where all movement is musical rather than spatial. Kim Stanley ROBINSON's The Memory of Whiteness (1985) uses a great interplanetary "Orchestra" - a

vast calliope-like instrument with a single player - as part of a complex metaphor, combining music and mathematics, in which musical structure and cosmic structure are seen as analogous. This sort of music/MATHEMATICS/structure-of-the-Universe imagery appears also in David ZINDELL's ornate *Neverness* (1988). Perhaps the most distinguished of recent sf novels with a musical theme is *The Child Garden* (1988) by Geoff RYMAN, in which a densely portrayed future world, whose people are infected into INTELLIGENCE by virally transmitted DNA, is both transcended and reflected - in all its infernal and purgatorial aspects - by the setting to music of DANTE ALIGHIERI's *Inferno* and *Purgatorio* (written c1314-21), works which also shape the novel. This is one of the most richly orchestrated portrayals of the function of music in all sf. The invention of imaginary musical instruments is surprisingly common in sf, and by no means only recently. It is touched on in several stories, notably "Automata" (1814) by the composer E.T.A. HOFFMANN. There have been many proposals for what, in recent years, have been known as sound sculpture and sound environments: early mentions include the sounds made by wind blowing through the statues in Samuel BUTLER's *Erewhon* (1872). More recent wind-powered sound sculptures can be found in the "Music Masons" entry in *Dictionary of the Khazars* (1983) by Milorad Pavic (1929-); they intricately carve rock salt in preparation for the season of the 40 winds. Future instruments mostly fall into two classes: variants on traditional instruments and those that exploit future technology. The focus of J.B. PRIESTLEY's lighthearted *Low Notes on a High Level* (1954) is the subcontrabass wind instrument, the Dobbophone, while more conventional instruments include the 9-stringed guitar-like baliset played by troubadours in Frank Herbert's *DUNE* (fixup 1965). Moderately conventional instruments tend to be found in low-technology and post- HOLOCAUST environments, like the pipe played by a 6-fingered MUTANT in Olaf Stapledon's *Odd John* (1935), the 20-hole flute (played with fingers and toes) fashioned inside a mutant's machete in Delany's *THE EINSTEIN INTERSECTION* (1967) and, in Richard COWPER's Corlay trilogy (1978-82), the double pipe articulated by its player's surgically twinned tongue-tip in the Britain of AD3000. Forms of instruments unknown at the time of writing but which could have existed a couple of decades later include: the Fourier audiosynthesizer in Charles L. Harness's "The Rose", which anticipates programmable synthesizers by some 25 years; the three-bass radiolyn played in an ensemble in Delany's *Out of the Dead City* (as *Captives of the Flame* 1963; rev 1968); and the multichord in Biggle's "The Tunesmith" (1957). The sensory-syrinx in Delany's *NOVA* (1968) is operated like a combination of theremin and guitar, and has sympathetic drone strings. The ultracembalo in "The Song the Zombie Sang" (1970) by Harlan ELLISON and Robert SILVERBERG is operated by electronic glove controllers. A direct neural input to the auditory lobes is achieved with Ballard's ultrasonic instruments in "The Sound Sweep" (1960), thereby reducing workload for the "sonovac" operators in a world overloaded with sonic pollution. Direct stimulation of the brain is featured also in Philip K. Dick's *We Can Build You* (1972) by way of the Waldteufel Euphoria and the Hammerstein Mood Organ. Not all such instruments are played by soloists. Dance music in quintuple time in Aldous HUXLEY's *BRAVE NEW WORLD* (1932) is performed by 16 sexophones (plus additional ether music, synthetic music

and a scent-and-colour organ). A typical "cosmos group" of audiovisual instruments is featured in Silverberg's *The World Inside* (1971): vibrastar, comet-harp, incantator, orbital diver, gravity-drinker, doppler-inverter and spectrum-rider, some of them generating sounds and images that are modulated by others. Similarly, in Ballard's *Vermilion Sands* (coll 1971) sonic statues with built-in microphones respond to sounds about them, replaying them in transmuted form. The most outrageous instruments, buried in concrete bunkers, are played by means of off-planet remote control by the rock group Disaster Area in Douglas ADAMS's *The Restaurant at the End of the Universe* (1980): these are the photon-ajuitar, bass detonator and Megabang drum complex, with the performance reaching its climax when a stunt ship is driven into the system's sun. A recent anthology of original stories relating to pop and rock music is *In Dreams* (anth 1992) ed Paul J. MCAULEY and Kim NEWMAN. [HD/PN/BS] See also: THEATRE.

MUTANT

1. Variant title of the film *FORBIDDEN WORLD* (1982). 2. Film (1983; vt *Night Shadows*). Film Ventures International. Dir John Bud Cardos, starring Wings Hauser, Bo Hopkins, Jennifer Warren, Jody Medford, Cary Guffey, Lee Montgomery. Screenplay Peter Z. Orton, Michael Jones, John C. Kruize. 99 mins. Colour. When their car is wrecked by fun-loving good ole boys, two city slickers are trapped in a little town whose inhabitants have been turning strange since an unscrupulous chemical company started dumping toxic waste nearby. A low-budget sensationalist film, this has more than its share of blue-faced, yellow-drooling mutant zombies, but also takes some care with its pleasantly offbeat characterization (Hauser is fine as the hero who just wants to get the hell out of town) and its nonstop action (there's an immaculate scare sequence with hero and heroine cornered in the school toilets by pre-teen monsters). The picture was begun by director Mark Rosman (*The House on Sorority Row* [1983]) but Cardos, of *KINGDOM OF THE SPIDERS* (1977) and *The Day Time Ended* (1979; vt *Vortex*), stepped in - as he did when Tobe Hooper was fired from *The Dark* (1978) - and efficiently took over. [KN]

MUTANTS

The idea of "mutation" as a concept for use in understanding biological EVOLUTION was popularized by Hugo de Vries (1848-1935) in *Die Mutationstheorie* (1901-3); he related it to gross hereditary variations - the freakish "sports" which occasionally turn up in animal populations. Such sports are usually short-lived and sterile, and Charles Darwin (1809-1882) had rejected the notion that they might play a key part; the concept of mutation as an evolutionary factor was eventually modified to refer to relatively slight modifications of individual genes. In 1927 the US geneticist H.J. Muller (1890-1967) succeeded in inducing mutations in fruit flies by irradiation, and this success captivated the imagination of many speculative writers. One of the first to take up the notion was John TAINE, who wrote several extravagant "mutational romances". In *The Greatest Adventure* (1929) the corpses of giant saurians, no two alike, begin floating up from the ocean depths and are traced to a LOST WORLD in Antarctica where experiments in mutation were once carried out. In *The*

Iron Star (1930) a mutagenic meteor transforms a region in Africa, causing local wildlife to undergo exotic metamorphoses. In *Seeds of Life* (1931; 1951) an irradiated man becomes a SUPERMAN, but does not realize the damage done to the genes which he transfers to the next generation. Stories like these, which attribute magical metamorphic qualities to radiation, owe far more to de Vries than to orthodox mutation theory, and yet they have remained commonplace throughout the history of sf. Mutational romance has been a staple of PULP MAGAZINES, COMICS and sf CINEMA, with the irradiation of various creatures frequently producing giant MONSTERS and the irradiation of people causing metamorphoses into supermen (many - possibly most - SUPERHEROES have this type of genesis) or subhumans. Examples from the early pulps include Jack WILLIAMSON's "The Metal Man" (1928) and Edmond HAMILTON's "The Man who Evolved" (1931). Hamilton went on to write many further mutational romances, notably *The Star of Life* (1947; rev 1959). He habitually featured developmental metamorphoses, and wrote an early story in which a mutant child is born to irradiated parents, "He that Hath Wings" (1938). Another author who made prolific use of mutational romance during the 1940s was Henry KUTTNER, in such stories as "I am Eden" (1946) and "Atomic!" (1947), where the magical transmutations are spread over several generations. Kuttner and C.L. MOORE, collaborating as Lewis Padgett, introduced into the sf pulps the sympathetic mutant superman, unjustly persecuted by "normal" humans, in the Baldy series - assembled as *MUTANT* (1945-53; fixup 1953) - and made comic use of the notion in the Hogben series. UK SCIENTIFIC ROMANCE of the 1930s frequently looked to mutational miracles to produce a better and saner breed of humans; even H.G. WELLS - who knew better - toyed halfheartedly with the idea in *Star-Begotten* (1937). The idea that mutation is a necessary part of the process of EVOLUTION led many serious sf writers to treat freakish human mutants sympathetically. Robert A. HEINLEIN did so, in "Universe" (1941), as did Isaac ASIMOV in *Foundation and Empire* (fixup 1952), the central character of which is "The Mule", a mutant whose advent had been unforeseeable by PSYCHOHISTORY. Frequently populations of persecuted mutants were used as a metaphor for real-life oppressed minorities. The explosion of the atom bomb in 1945 gave a great stimulus to mutational romance, and, although the wildest variants of the concept became scarcer in written sf, the logically absurd notion of clutches of similar superhuman mutants arising simultaneously as a result of nuclear accidents remains commonplace. The most notable example is perhaps Wilmar H. SHIRAS's *Children of the Atom* (1948-50; fixup 1953); a more recent one is *Aubade for Ganelon* (1984) by John Willett (1932-). Post- HOLOCAUST stories frequently feature several subspecies of mutants, and often show the "normal" survivors of the atomic war persecuting the mutants - usually unwisely, as it is from the ranks of the mutants that a new species of humanity, better than the old model, is scheduled to appear; examples include *Twilight World* (1947; fixup 1961) by Poul ANDERSON and F.N. Waldrop, John WYNDHAM's *The Chrysalids* (1955; vt *Re-Birth*), Walter M. MILLER's *A CANTICLE FOR LEIBOWITZ* (1955-7; fixup 1960), Fritz LEIBER's "Night of the Long Knives" (1960; vt "The Wolf Pair") and Edgar PANGBORN's *DAVY* (1964). It was in this period that the cinema made most of its mutational romances; notably the giant-ant story *THEM!* (1954). Variants on the post-holocaust mutant theme include Lester

DEL REY's *The Eleventh Commandment* (1962; rev 1970), in which a post-war Church encourages limitless reproduction in order to fight the lethal effects of the mutation rate; and Samuel R. DELANY's vivid romance of a social world which has undergone total mutational metamorphosis, *THE EINSTEIN INTERSECTION* (1967). Post-holocaust PARANOIA about mutants is used in Norman SPINRAD's *The Iron Dream* (1972) as an analogue for Hitler's attitude to the Jews. More recent examples of post-holocaust mutational romance include Stuart GORDON's *One-Eye* (1973) and its sequels, and Hiero's *Journey* (1973) by Sterling LANIER. A more original story of mutant-persecution is J.G. BALLARD's "Low-Flying Aircraft" (1975), and the ambitious thread of *THE EINSTEIN INTERSECTION* has been taken up by A.A. ATTANASIO in *Radix* (1981) and its sequels. Sf stories dealing sensibly with the idea of mutation remain rare but, now that the mutational miracle story has been taken to its ultimate extreme in Greg BEAR's *BLOOD MUSIC* (1985), writers may be forced to become more ingenious in mining the melodramatic potential of the notion. MUTATIONS

Film (1973). Getty Picture Corp./Columbia. Dir Jack Cardiff, starring Donald Pleasence, Tom Baker, Michael Dunn, Julie Ege. Screenplay Robert D. Weinbach, Edward Mann. 92 mins. Colour. In this scientifically ludicrous UK film a mad SCIENTIST (Pleasence) attempts to combine plant with animal life, aided by the dwarf owner of a carnival freak-show (Dunn), who obtains human guinea-pigs for his experiments and exhibits the results. Tom Baker plays the sadistic, deformed assistant. The results of these experiments (one is a Venus Flytrap Man) carry out the inevitable revenge on their creator. As in Tod Browning's *Freaks* (1932), real circus freaks (human pincushion, pretzel boy, lizard lady) were used to make the film, but, where Browning used them sympathetically, here they are only for sensationalist voyeurism. Director Cardiff was usually more reputable than this. [PN/JB]

MYERS, EDWARD

(1950-) US writer whose *LOST WORLD* sequence-the Mountain Trilogy comprising *The Mountain Made of Light* (1992), *Fire and Ice* (1992) and *The Summit* (1994)-interestingly revises a long-abandoned convention. Though it is primarily set in the 1920s, and though fantasy elements increasingly dominate in later volumes, the trilogy is of sf as a demonstration of the extent to which seemingly dead forms can, on re-thinking, serve contemporary needs. The sequence is set in the Andes, and the lost race in question is Native American. But the old *Lost World* novel-which normally articulated late 19th century Western civilization's uneasy claims to racial and political hegemony over the entire planet-would have necessarily treated the lost race-because it was not of ancient white stock-as inherently superstitious. EM's version is far more complex, and the protagonist's rocky hegira towards higher wisdom in the 3rd volume transforms the old *Lost World* progaganda vehicle into genuine dialogue. [JC]

MYERS, HOWARD L.

(1930-1971) US writer whose *Cloud Chamber* (1977) attractively combines

COSMOLOGY, ANTIMATTER invaders of our Universe, SEX and effortless rebirth of all sentient beings in a wide-ranging SPACE OPERA climaxing in its hero's arrival at Nirvana. [JC]See also: SOCIOLOGY.

MYERS, ROY
Roy MEYERS.

MY FAVORITE MARTIAN

US tv series (1963-6). A Jack Chertok Production for CBS. Prod/created Jack Chertok. Writers included John L. Greene, Ben Gershman, Bill Freedman, Albert E. Lewin, Burt Styler. Dirs included Leslie Goodwins, Oscar Rudolph, John Erman. 3 seasons, 107 25min episodes. First 2 seasons b/w, 3rd colour. This was a fairly sophisticated (compared to most tv sitcoms of the time), humorous and commercially successful series about a Martian (Ray Walston) who becomes stranded on Earth. He is befriended by a young man (Bill Bixby), who passes him off to friends as his uncle. The Martian's unfamiliarity with Earth customs, plus his special powers - which include ESP, INVISIBILITY and TELEKINESIS - provide much of the humour. A similar premise, again mostly used for light SATIRE, was adopted by 2 subsequent tv series, MORK AND MINDY (1978-82) and ALF (1986-current). [JB]

MYHRE, OYVIND
[r] SCANDINAVIA.

MYLER, LOK
[r] GERMANY.

MYLIUS, RALPH
[r] Warren C. NORWOOD.

MY LIVING DOLL

US tv series (1964-5). CBS TV. Created Jack Chertok, also executive prod. Prod Howard Leeds. 1 season, 25 mins per episode. Colour. After his success with MY FAVORITE MARTIAN, Chertok came up with another sf comedy series. Starring Bob Cummings as a psychiatrist, it concerned a female ROBOT, originally designed for use in space but put in his care while its inventor is away. Cummings decides to train it as the "perfect woman" - that is, quiet and obedient - but the robot's unpredictability places him in embarrassing situations. Statuesque Julie Newmar was memorable as the robot, carrying an erotic charge that could not be properly utilized within the context of a tv comedy. The underlying metaphor (woman equals doll) could be interpreted as either sexist, as Cummings plays it, or subversively proto-FEMINIST, which some of the ironies suggest. [JB/PN]

MY SCIENCE PROJECT

Film (1985). Touchstone/Silver Screen Partners II. Written and dir Jonathan R. Betuel, starring John Stockwell, Danielle von Zerneck, Fisher Stevens, Raphael Sbarge, Dennis Hopper. 94 mins, cut to 91 mins. Colour. One of an epidemic of teen sf movies (BACK TO THE FUTURE, EXPLORERS, REAL GENIUS, WEIRD SCIENCE, etc.), this was among the less successful, even though its director, whose debut this was, had previously written the much better teen movie, The LAST STARFIGHTER (1984). Here a young man seeking material for a science project finds in a derelict army

warehouse a strange engine (apparently taken from a hushed-up UFO), and it turns out to work as a TIME MACHINE when fed energy; the school is absorbed into a time vortex as the town's power supply is sucked up. Teenagers do well (naturally) against cavemen, Japanese soldiers, dinosaurs and mutants. The film lacks focus and straggles, but Hopper is good as the ex-hippy science teacher. [PN]

MY STEPMOTHER IS AN ALIEN

Film (1988). Weintraub/A Franklin R. Levy/Ronald Parker
Production/Catalina. Dir Richard Benjamin, starring Kim Basinger, Dan Aykroyd, Alyson Hannigan. Screenplay Jericho Weingrod, Herschel Weingrod, Timothy Harris, Jonathan Reynolds. 108 mins. Colour. This charmless and leaden-footed SEX comedy tells of an alien woman (Basinger), fully human in appearance, who comes to Earth to learn the operation of a Galaxy-penetrating beam accidentally invented by an oafish scientist (Aykroyd). The running gags are all infelicitous variations on the theme of cultural misunderstanding, often sexual, between alien and human. [PN]

MYSTERIANS, THE CHIKYU BOEIGUN.

MYSTERIOUS ISLAND

Film (1961). American Films/Columbia. Prod Charles H. Schneer. Dir Cy Endfield, starring Michael Craig, Joan Greenwood, Michael Callan, Herbert Lom. Screenplay John Prebble, Daniel Ullman, Crane Wilbur, based on L'île mystérieuse (1874-5; trans W.H.G. Kingston as The Mysterious Island 1875 UK) by Jules VERNE. 100 mins. Colour. This is a jovial showcase for Ray HARRYHAUSEN's robust special effects, with a luxuriant musical score by Bernard Herrmann. Prisoners escape by balloon from a confederate prison during the American Civil War and are washed ashore on a remote Pacific island. They encounter a giant crab, two female castaways, a giant prehistoric bird, huge bees, pirates, a deserted underwater city, Captain Nemo (Lom) himself, with his famous submarine Nautilus and, of course, an erupting volcano. Other versions include one made by MGM in 1929. Dir Lucien Hubbard, Maurice Tourneur, Benjamin Christiansen, it starred Lionel Barrymore as Count Dakkar (Nemo). The screenplay was by Hubbard; a soundtrack was added at the last moment. A Russian version, Tainstvenni Ostrov, was - surprisingly - made in wartime, in 1941. In 1951 Sam Katzman produced a 15-part serial for Columbia, dir Spencer G. Bennett and starring Richard Crane, Marshall Reed, Karen Randle. A little-seen French/Italian/Spanish coproduction, L'Isola Misteriosa e il Capitano Nemo, starring Omar Sharif, was briefly released as The Mysterious Island of Captain Nemo (1972) in the USA. [JB/PN]

MYSTERIOUS TRAVELER MAGAZINE, THE

US DIGEST-size magazine. 5 issues #1-#4 Nov 1951-June 1952, #5 undated 1952, published by Grace Publishing Co.; ed Robert Arthur. A spin-off from Mutual Broadcasting's Mysterious Traveler RADIO show, MTM was subtitled "Great Stories of Mystery, Detection and Suspense, Old and New", but included some sf (Ray BRADBURY, Murray LEINSTER) until, with its last issue (#5), it was retitled The Mysterious Traveler Mystery Reader. [FHP/MJE/PN]

MYSTERIOUS WU FANG, THE

US PULP MAGAZINE. 7 issues Sep 1935-Mar 1936, monthly, published by Popular Publications; ed Rogers Terrill. Intended to capitalize on the popularity of Sax ROHMER's Fu Manchu (featured in films and a radio series of the period), MWF showed the "Dragon Lord of Crime" seeking world domination, sometimes using sf means in the attempt. The novels were by the prolific Robert J. Hogan (1897-1963), who was simultaneously producing G-8 AND HIS BATTLE ACES; the first of them, The Case of the Six Coffins, was reprinted in PULP CLASSICS #8 (1975 chap). DR YEN SIN was a near-identical follow-up from the same publisher. [MJE/FHP]

MYTHOLOGY

The relationship of mythology to sf is close and deep, but not always obvious. Part of the confusion stems from the widely held belief that sf is itself a form of latter-day mythology, fulfilling comparable hungers in us. James BLISH took issue with this argument, pointing out that myth is usually "static and final in intent and thus entirely contrary to the spirit of sf, which assumes continuous change". We restrict ourselves below to the role of traditional mythologies in sf and to the literal, new mythologies which are sometimes created within sf, usually in the context of explaining the way alien societies think. Traditional mythology appears in sf in two ways, its archetypes being either re-enacted or rationalized (sometimes both). The re-enactment of myths is the more complex of the two cases. Behind the retelling of a myth in a modern context lies the feeling that, although particular myths grew out of a specific cultural background, the truths they express relate to our humanness and remain relevant to all our societies: the story of Prometheus, punished by the gods for stealing fire from the heavens, or its Christian variant, where Dr Faustus is doomed to eternal damnation for selling his soul in exchange for knowledge, has a direct bearing on the SCIENTIST's aspiration for ever more information about the meaning of the Universe, and more power over matter. The entry on CONCEPTUAL BREAKTHROUGH lists many such stories; even such an apparently HARD-SF technological story as Arthur C. CLARKE's RENDEZVOUS WITH RAMA (1973) is permeated quite deliberately with echoes of ancient myths, the Promethean one in particular. But to list mythic echoes in sf (as with most forms of prose fiction) would be impossible; there are too many. Even a list of full-scale sf analogues of myths as opposed to mere echoes would be fatiguingly long. Several of the most popular mythic analogues are discussed elsewhere in this volume. Retellings of the Christian legend are discussed under RELIGION and MESSIAHS, and reworkings of the story of Genesis are examined under ADAM AND EVE. Obviously the entry on GODS AND DEMONS bears on mythology, as does that on SUPERNATURAL CREATURES. Mythology in sf reflects a familiar truth, that in undergoing social and technological change we do not escape the old altogether, but carry it encysted within us. The totally new is by its nature almost impossible for sf writers or anyone else to envisage. Far more commonly, they work out ancient patterns of love and death, aspiration and reconciliation in a new context. Several sf writers have imagined a sterile future which has consciously repudiated its myths and hence its past, only to be left with a terrible emptiness. Ray BRADBURY's nostalgic "The Exiles" (1949 as "The Mad Wizards of Mars") has literary and mythic

figures exiled on Mars, perishing when the last of the books containing their stories is burned or lost; the emerald city of Oz dissolves like a mist; an Earth expedition is faced with only a desert. Robert SILVERBERG's "After the Myths Went Home" (1969) has figures of myth reincarnated, via a time machine, for the entertainment of a far future which is suffering from ennui; familiarity soon breeds boredom, and the myths are dismissed; the society, emptied of heroism and mystery, is destroyed by invaders. James WHITE's *The Dream Millennium* (1974) depicts a crew of starship colonists, who spend much of their time in *SUSPENDED ANIMATION*, as able to survive because in their dreams they have access to a kind of Jungian substratum of racial memory; the awareness they thereby derive of the mythic patterns in human history gives them the strength to survive on a new world. Re-enactments of myth in sf take several forms. The simplest strives to deepen the emotional connotations of a story by permeating it with the reverberations of some great original, as C.S. LEWIS does successfully with the myth of the temptation of Eve in *Perelandra* (1943; vt *Voyage to Venus*), and less successfully with the Arthurian legend in *That Hideous Strength* (1945; vt *The Tortured Planet US*). Lewis's friend Charles WILLIAMS re-enacted myths both Christian and pre-Christian in most of his novels, usually digesting the pagan elements so that they emerged as supportive to the Christian faith. Patricia MCKILLIP's *FOOL'S RUN* (1987) is one of several sf retellings of the Orpheus myth, perhaps the most accomplished, set in a prison satellite, the Underworld. Several writers have striven for a Homeric resonance by retelling HOMER's *Odyssey* in sf terms, whether directly or indirectly; Stanley G. WEINBAUM did this in a short series of stories in the 1930s, R.A. LAFFERTY in *Space Chantey* (1968), and Brian STABLEFORD in his *Dies Irae* trilogy (1971). (*SPACE OPERA* generally, of course, has a good deal in common with the picaresque voyages of *Odysseus*.) Lafferty has several times reverted to mythic themes, notably in *The Devil is Dead* (1971) and *FOURTH MANSIONS* (1969); the latter categorizes mythic archetypes into four groups, the eternal conflict between which leads to many of our troubles. The supposed Cretan myth of the Earth-Mothers, and the king sacrificed to ensure renewed fertility, is often evoked in sf, naturally enough by Robert GRAVES, in *Watch the North Wind Rise* (1949 US; vt *Seven Days in New Crete* 1949 UK), since he is the best known popularizer of the myth in this century, particularly in his nonfictional (though anthropologically unreliable) book *The White Goddess* (1947 US). It is also used, colourfully if confusingly, in *Sign of the Labrys* (1963) by Margaret ST CLAIR, in which members of a surviving witch/priestess cult prove best equipped to cope with an underground, post-HOLOCAUST existence. Philip Jose FARMER has also been preoccupied with the image of WOMEN as archetypal seeresses, creators and destroyers, and with men as virile but doomed horned gods, notably in *Flesh* (1960; rev 1968). Like Bradbury in "The Exiles", Farmer makes little distinction in most of his writings between literary and religious myths, seeming to regard them as feeding the same human needs. All Farmer's work is permeated by mythology, whether the mythic creature is a reincarnated god, a great white whale or Tarzan; the mythology may be a new one invented by Farmer himself, usually on very traditional models (see below). The best known sf novel drawing on *The White Goddess* is *THE SNOW QUEEN* (1980) by Joan D. VINGE, in which she designs an entire

planetary culture along Gravesian lines, and adds to it a secondary and more recent myth taken from Hans Christian Andersen (1805-1875). Another bestselling book (like Graves's) about myth was *The Hero with a Thousand Faces* (1949) by Joseph Campbell (1904-1987). Many myths that make their way into modern sf have been filtered through a sort of Campbellian sorting process before getting there. Among them are Farmer's books, mentioned above, a particularly pure example being *Tarzan Alive: A Definitive Biography of Lord Greystoke* (1972), a spoof biography in which Farmer draws on Campbellian ideas about the nature of the HERO. George LUCAS has often spoken about his use of Campbellian ideas about myth, and his films *STAR WARS* (1977) and its sequels, which are intended to have many mythic resonances, incorporate these (as, indeed, does every second work of sf mythology; see discussion of Roger ZELAZNY below). Something of Farmer's engagingly packrat attitude towards myth can also be found in Sam LUNDWALL's satirical *Alice's World* (1970 dos US), in which a spaceship returning to an abandoned Earth finds a grotesque variety of mythic and literary beings now living there. More complex than many of the above are stories whose mythic components are seen with a degree of irony, stressing not only ancient continuities but also modernist discontinuities with the past. Several of Samuel R. DELANY's novels fall into this category, notably *THE EINSTEIN INTERSECTION* (1967) and *NOVA* (1968); in the former a deserted Earth is repopulated by aliens who take on human shape and, with it, the mythic burden of the past, in a confused form they do not always understand; in the latter the story of Prometheus is replayed in a tale of literally stealing fire from the heavens, but the narrative tone has as much of the deflationary as the heroic in it. Michael MOORCOCK's *BEHOLD THE MAN* (1966 NW; exp 1969) has a time traveller who wanted to see Christ's crucifixion playing an uncomfortably central role in that event; the scene he finds is more squalid than transcendent. Lawrence DURRELL's *Tunc* (1968) and its sequel *Nunquam* (1970) feature a multinational conglomerate called Merlin, but the Arthurian echoes are primarily to show that there is little room for romance in a corrupt future. Michael SWANWICK uses similar Arthurian echoes altogether more economically and to equally squalid effect in "The Dragon Line" (1988), a tale of a coke-snorting modern Mordred trying to do the right thing for the world with a resuscitated Merlin's help. Cordwainer SMITH derives a considerable emotional charge from the mythic analogues, often Oriental, he uses in his stories; in "The Dead Lady of Clown Town" (1964) the parallels are with the legend of Joan of Arc. Smith's use of myth is touching but sometimes rather remote; often, as in this story, the mythic parallels are further distanced by the events of the tale being themselves remembered by later generations, and recounted with the formality and balance of a well rounded myth-myths within myths, as it were. In *The Infernal Desire Machines of Doctor Hoffman* (1972; vt *The War of Dreams US*) Angela CARTER, another ironist, has a mad scientist using a MACHINE charged with erotic energy to make the dreams and myths of men come alive; the very series of betrayals through which his plans go awry is itself, ironically, mythic. Charles L. HARNESS regularly uses mythic archetypes both of character and of plot in his involuted, grandiose melodramas, notably in *THE RING OF RITORNEL* (1968) and "The Rose" (1953), in both of which art and science dance a complex saraband and winged archetypes are confronted with

MATHEMATICS. Stories structured on myth can appear rather simple-mindedly determinist, as events run along their preordained grooves. Alan GARNER, for example, specializes in a kind of cyclic history in which ancient myths of violence and betrayal work themselves out again in a modern setting, but such books as *The Owl Service* (1967), based on a Welsh legend in the Mabinogion, and *Red Shift* (1973) allow free will to loosen the mythic trap, if not escape it entirely. James TIPTREE Jr evokes the legendary figure of the Rat King in "The Psychologist who Wouldn't do Awful Things to Rats" (1976), but the protagonist is not saved by its majestic appearance; indeed, he is goaded into brutal rat murder. Within both GENRE SF and FANTASY a particularly popular variant on the mythology theme is to have humans encountering mythic figures through TIME TRAVEL to the past or in an ALTERNATE WORLD, or conversely to have mythic survivals appearing in the modern world. Some of these stories are dealt with under the heading of MAGIC. They were especially associated with the magazine UNKNOWN, and often involved a puckish or whimsical humour, as in the Harold Shea stories by L. Sprague DE CAMP and Fletcher PRATT. Jack WILLIAMSON's *The Reign of Wizardry* (1940; rev 1965) is from the same magazine and the same period. Edmond HAMILTON's *The Monsters of Juntonheim* (1941 *Startling Stories* as "A Yank at Valhalla"; 1950 UK; vt *A Yank at Valhalla* 1973 US) is another story of this type. Naomi MITCHISON gives an account of the search for the Holy Grail as told by two reporters from the *Camelot Chronicle* and the *Northern Pict* in *To the Chapel Perilous* (1955), but here the basic points are serious, despite the anachronistic jokes that usually feature largely in stories of this kind, as in several by Poul ANDERSON (MAGIC). Thomas Burnett SWANN made a career out of writing sweet, sometimes oversweet, narratives about mythic survivals, his point being that something wonderful and delicate left the world as modern rationalism took a grip, and as we desecrated our landscapes. One quite popular strategy for mythology stories is to tell the myths from the viewpoint of an observer or protagonist from the time in which they happened - sometimes, of course, rationalizing them in the process. John GARDNER's *Grendel* (1971) does this with the Beowulf story, as did Henry Treece (1911-1966) in *The Green Man* (1966) and Michael CRICHTON in *Eaters of the Dead* (1976), but only Crichton's book, which accounts for Grendel and his dam as Neanderthal survivals (APES AND CAVEMEN), can be seen as sf. The majority of stories of mythic survival are more fantasy than sf, like Swann's; or like *The Last Unicorn* (1968) by Peter Beagle (1939-), which tells of the sad search of the beast of the title for its extinct fellows; or like Diana Wynne JONES's *Eight Days of Luke* (1975), in which Loki turns up in modern England, and *Fire and Hemlock* (1984), in which the tale of Tam Lin's escape from the Fairy Queen is replayed (yet again) in the here and now; or like the allegorical *The Circus of Dr Lao* (1935) by Charles FINNEY, in which mythic creatures survive in a circus, and have a deep effect on the disbelieving town folk who witness them. A yearning for the survival of mystery, and an intellectual belief in the necessity of such a survival if human culture is not to become sterile and bleak, pervade most such stories, and are central to the concerns of *Beauty* (1991) by Sheri S. TEPPER, which fascinatingly (and fascinatedly) weaves a centuries-spanning construct out of folklore and fairy-tale archetypes as a possible prophylactic against a hellish, mythless future. The same

yearning is to be found even at the simplistic end of the spectrum, as in Emil PETAJA's Kalevala series, where avatars of the Finnish gods have adventures, or Joseph E. KELLEAM's *The Little Men* (1960) and its sequel, where Jack Odin has fights in space and elsewhere. Stan LEE (and/or Jack KIRBY) resuscitated various myths, notably that of Thor, in MARVEL COMICS, and Thor turns up again in Douglas ADAMS's *The Long Dark Tea-Time of the Soul* (1988), trying to catch a plane to Oslo. Sterling LANIER's *The Peculiar Exploits of Brigadier Ffellowes* (coll 1971) wittily spins yarns about confrontations with demigods, monsters, and other mythic survivals. John BLACKBURN also worked with the theme, but here we enter a new area, and a peculiarly sciencefictional one, the rationalized myth, which becomes (not always convincingly) sf rather than fantasy. Blackburn was not the best exponent of the rationalized myth, although *Children of the Night* (1966) and *For Fear of Little Men* (1972) elicit satisfying shudders in their accounts of hidden LOST RACES in England whose existence explains legends of fairies and goblins, with a logic similar to that of the Crichton novel mentioned above, and echoing the *Faerie of Arthur* MACHEN. Manly Wade WELLMAN's Hok stories (1939-42) rationalize various myths, as H. BEDFORD-JONES had done in his *Trumpets from Oblivion* series in *The BLUE BOOK* (1938-9). Rather in the manner of the theories of Erich VON DANIKEN, a number of sf stories explain myths as distorted memories of visits to Earth by aliens, as did Arthur C. Clarke in *CHILDHOOD'S END* (1950; exp 1953) - though in this case it is through racial precognition, not memory, that the horned aliens have given rise to the legend of the Devil. In Clifford D. SIMAK's *The Goblin Reservation* (1968) a rather whimsical attempt is made to explain gnomes, trolls, fairies, banshees and so forth as specialized colonists created by biological engineering. More successful was Nigel KNEALE's tv serial *QUATERMASS AND THE PIT* (1958-9), in which the image of the Devil turns out to be a race memory of insect-like Martians, a memory that comes disturbingly to life in modern London. Larry NIVEN and Jerry POURNELLE reversed the ordinary rationalization procedure in *Inferno* (1976), in which an sf writer finds himself, possibly deservedly, in Hell, a place he consistently and unsuccessfully attempts to rationalize as an actual physical construct in the Universe of matter; ultimately it turns out to be, indeed, Hell. A quite different kind of mythic survival appears in *Mythago Wood* (1984) and its sequel *Lavondyss* (1988) by Robert HOLDSTOCK. The wood of the title (which like John CROWLEY's hidden world in *Little, Big* [1981] is infinitely bigger on the inside than its modest periphery would suggest) has the property, more fantastic than sciencefictional, of incarnating mythagos from the collective unconscious of those humans who live in and around it, mythagos being, effectively, walking figures of myth. As the wood is ever more deeply penetrated, the ultimate bare myths of the Ice Age come to life. The two books are Holdstock's most powerful work, and perhaps the central mythological fantasy of the 1980s. The sf writer who has most consistently used mythological themes in sf, as opposed to fantasy, is Roger Zelazny. His first novel, *THIS IMMORTAL* (1966), confronts its almost immortal protagonist (IMMORTALITY) with various MUTANT creatures which are somehow archetypes of Greek myth given flesh. Zelazny stayed with themes of this type for some years, often using them ironically, typically playing off the colloquial against the archaic, in

stories about quasi-gods of human origin whose powers blend advanced mental training with high technology, deliberately reconstructing and replaying mythic confrontations, in *Creatures of Light and Darkness* (1969), which reincarnates the Egyptian pantheon, and perhaps most successfully in *LORD OF LIGHT* (1967), an assured and oddly moving story of planetary colonists who deliberately take on the aspect of Hindu gods, and become involved with a variety of appropriate metaphysical paradoxes. These comprise a new kind of mythology story, in which myths are evoked not only by the author but quite consciously by the characters, often as a form of cold-blooded *CULTURAL ENGINEERING*, and sometimes self-destructively, as game becomes trap. Another example is Harry HARRISON's *Captive Universe* (1969), in which the crew of a giant starship has been deliberately programmed into a mental state of medieval monkishness, and the colonists into an Aztec tribalism complete with Aztec "gods" (who turn out to be constructs); both crew and colonists are ignorant of the true state of affairs, and regard the starship simply as the world (*POCKET UNIVERSE*). Poul Anderson's "The Queen of Air and Darkness" (1971) has the native inhabitants of a colonized planet reading the minds of the colonists, picking out their archetypal fears and hopes, and creating by hallucination a world of sinister faerie to keep the colonists away, even kidnapping human children in the manner of the old ballads. Finally, sf commonly creates its own myths. In his *A VOYAGE TO ARCTURUS* (1920) David LINDSAY invents a whole series of imaginary (but hauntingly familiar) mythologies on another planet; these ultimately annihilate one another in a kind of mutual critique, leaving its protagonist at the end annealed by fire and wholly stripped of illusion. The *SWORD AND SORCERY* subgenre regularly constructs mythologies which often, as in the case of Robert E. HOWARD's, bear a close relation to our own. *Out of the Mouth of the Dragon* (1969) by Mark GESTON is permeated with a myth of Armageddon, a final conflict doomed never to take place, since the forces who have volunteered to fight it keep cutting their own side to ribbons in squabbles on the way. At a more accessible level, *GENRE SF* has created a meta-narrative *SPACE-OPERA* myth which has resulted from the borrowing of ideas from story to story, with additional accretions on the way. A distinct sf version of *MARS*, for example, is the work of no single writer, has little to do with the real Mars, and yet exists very clearly in the imagination of readers. Leigh BRACKETT and Ray Bradbury have created some of the more poignant variations on this particular Mars myth. With the growing interest in *ANTHROPOLOGY* in sf since the 1960s, several of the better sf writers have added richness and density to their depiction of alien or imaginary societies by creating myths for them. This is the case with most of Ursula K. LE GUIN's work, as in *THE LEFT HAND OF DARKNESS* (1969) and - with a spectacular density and length - in *ALWAYS COMING HOME* (1985); her "Buffalo Gals, Won't You Come Out Tonight?" (1987), however, uses traditional Native American myth in its story of a girl who comes to live with incarnate animal spirits. Terry CARR's "The Dance of the Changer and the Three" (1968) presents a dangerous alien society whose enigmatic behaviour may be explained only if their myths are properly understood; it was brave of Carr to essay a mythology for beings composed of pure energy. Harlan ELLISON, by juxtaposing icons and images from the ancient and the modern worlds, has forged some fine modern myths, many collected in

Deathbird Stories (coll 1975), which includes "The Whimper of Whipped Dogs" (1973), in which the violence and indifference of a great city are seen to coalesce into a kind of contemporary demon. His "Croatoan" (1975) features a characteristically wild but unselfconscious metaphor in bringing together the story of the lost Virginian colony of Roanoke with (a development of a modern myth) the idea of a colony of children in the sewers, descended from aborted fetuses flushed down the drains, who live alongside huge alligators which, when smaller, suffered the same fate. THE FIFTH HEAD OF CERBERUS (1972) is one of the many works by Gene WOLFE in which, as with the Le Guin stories, the bearing of myth on reality is both constant and unpredictable; along perhaps with John Crowley - whose brilliant ENGINE SUMMER (1979), for example, plays cruelly with the idea of cyclic myth in a post- HOLOCAUST venue - Wolfe makes the most sophisticated use of myth of any modern sf writer. Clashes between free will and predestination, the first signifying an outward thrust and the second an inward pressure from the inexorable past, occur, as they must, in all mythological sf written by people who are conscious of the consequences of their themes. Certainly it is Wolfe's pre-eminent subject - especially in the Book of the New Sun series - as it is, with the emphasis rather more on myth as elegiac trap, Crowley's also. A theme anthology is New Constellations: An Anthology of Tomorrow's Mythologies (anth 1976) ed Thomas M. DISCH and Charles Naylor. [PN]See also: ATLANTIS.

SF?

NABOKOV, VLADIMIR

(1899-1977) Russian-born US novelist, poet, translator and entomologist. Raised in Russia until the Revolution, and then educated at Cambridge, he lived between the wars in Germany and France, emigrated to the USA in 1940 - at which point he began to write in English rather than Russian - and from 1959 lived in Switzerland. His first books of poetry date from the teens of the century, his first novel from 1926, though he came to world fame only after the publication, many books later, of Lolita (1955 France). Several of his novels can be read precariously in terms of their fantasy or sf elements - including Korol', Dama, Valet (1928 Germany; trans Dmitri Nabokov and VN as King, Queen, Knave 1968 US), which features automata; the afterlife fantasy Soglyadatay (1930 France; trans Dmitri Nabokov and VN as The Eye 1965 US); Priglasenie na kasn' (1938 France; trans Dmitri Nabokov and VN as Invitation to a Beheading 1959 US), a fable which ends in a state beyond death; the DYSTOPIA Bend Sinister (1947); and Pale Fire (1962 US), which transforms RURITANIAN manias into deeply intricate parable. But VN's FABULATIONS tend to an austere self-referentiality, and are not easily pigeonholed. (It has also been suggested that all VN's novels from Pnin [1957] to Transparent Things [1972] contain attempts at communication from dead characters to the living.) Nevertheless Izobretenie Val'sa (1938 France; rev text trans Dmitri Nabokov as The Waltz Invention 1966 US) is a genuine sf play; its eponymous protagonist, having invented a kind of atomic device, demands to rule his country or he will cause apocalypse. Some of the stories assembled in Nabokov's Dozen (coll 1958) as well as "Poseshchenie muzeya

(1939; trans as "The Visit to the Museum" 1963) and "The Vane Sisters" (1959), both found in Nabokov's *Quartet* (coll 1966 US), and "Lance" (1952), found in Nabokov's *Congeries* (coll 1968 US), are of sf or fantasy interest. *Ada, or Ardor: A Family Chronicle* (1969 US) has likewise been treated as sf, though perhaps not fruitfully. Certainly *Ada* depicts an ALTERNATE WORLD, whether or not this Anti-Terra has been created by protagonist Van Veen as a counterpoint to and justification of incest; the book can therefore be read with some interest for its rendering of sf elements, though the novel itself comprises much, much more. However individual texts might be defined, VN was concerned in all his work to shape versions of the creative act. The materials he used were subjunctive to the shaping, not vice versa, as in sf. [JC]"See also: HISTORY OF SF; OULIPO.

NAHA, ED

(1950-) US writer and journalist, at one time the Los Angeles-based movie correspondent for the *New York Post*; since July 1986 he has run the regular movie and tv Nahollywood column in *SF CHRONICLE*. His nonfiction books, aimed at a popular market, include: *Horrors - From Screen to Scream* (1975); *The Science Fictionary: An A-Z Guide to the World of SF Authors, Films and TV Shows* (1980), a small, selective encyclopedia that is reliable if brief on film and tv, but devotes far too little space to authors; *The Films of Roger Corman: Brilliance on a Budget* (1982); and *The Making of Dune* (1984).EN's first sf novel was *The Paradise Plot* (1980), a humorous mystery novel set on a SPACE HABITAT at Lagrange 5 (LAGRANGE POINT); the sequel was *The Suicide Plague* (1982). In 1984, as D.B. DRUMM (which may be a house name), he began writing the Traveler sequence of *SURVIVALIST FICTION* set in a depleted post- HOLOCAUST USA: #1: *First, You Fight* (1984), #2: *Kingdom Come* (1984), #3: *The Stalkers* (1984), #4: *To Kill A Shadow* (1984), #5: *Road War* (1985), #6: *Border War* (1985), #7: *The Road Ghost* (1985), #8: *Terminal Road* (1986), #9: *The Stalking Time* (1986), #10: *Hell on Earth* (1986), #11: *The Children's Crusade* (1987), #12: *The Prey* (1987) and #13: *Ghost Dancers* (1987). The first of these is definitely by Naha, but most subsequent numbers are thought to be the work of John SHIRLEY.EN has also written 3 film novelizations - *Robocop* * (1987), *Ghostbusters II* * (1989) and *Robocop 2* * (1990) - and 2 horror novels, *Breakdown* (1988) and *Orphans* (1989). [PN]

NANKAI NO DAIKETTO GOJIRA.

NANOTECHNOLOGY

Item of terminology borrowed by sf writers from theoreticians of future TECHNOLOGY, and quite popular in sf from the late 1980s. It seems to have been first used by K. Eric Drexler in 1976, and popularized by him in his book on the subject, *Engines of Creation* (1987).Nanotechnology - the term loosely combines "nano", the SI (metric system) prefix denoting 10(-9), with "technology" - means the technology of the very small indeed. The term microtechnology encompasses MACHINES of the order of a micrometre across; nanotechnology envisages machines very much smaller than that, perhaps of molecular size. Indeed, its working components would be atoms; the nanomachine might be like "motorized DNA". Drexler called these

theoretical tiny machines "assemblers". As to the uses of these molecule-size ROBOTS, there is little that cannot be imagined: scraping fatty deposits from the insides of hardened arteries, brain surgery on individual neurons, food-making, ore-mining . . . The suggestions have been endless. Assemblers would be of a size small enough to conduct the most delicate operations within human cells - although Kim Stanley ROBINSON has suggested it might be better to image, rather than tiny medics, 10 million molecule-sized steamrollers charging up one's capillaries to perform brain surgery. Assemblers would also necessarily be capable of self-replication, which raises two questions: could they be considered a lifeform?; and could they get out of control, self-replicating until all available building materials were used up? Their number would increase exponentially: if a single assembler took 15 minutes to double, then at the end of 10 hours of doubling there would be 68 billion of them, and in just over 2 days the assemblage would outmass the Sun. Whether or not their construction is a realistic prospect is another question. Certainly it has been much discussed, and a number of laboratories have worked on some of the preliminary problems. The scanning tunnelling microscope, developed at the IBM laboratories in Zurich, has been used (April 1990) to manipulate individual atoms - even, in an episode of startling chutzpah, spelling out (using 35 xenon atoms) the IBM logo. Now that we have reached the stage of manipulating individual atoms, perhaps the construction of molecule-machines is not so impossible after all, though it is still a long way from achievement. Nevertheless, preliminary designs are already under way in the real world. A lively account of the development of theories about nanotechnology can be found in *Great Mambo Chicken and the Transhuman Condition* (1990) by Ed Regis. The concept of nanotechnology, not always named as such, appears regularly in 1990s sf. One of the most distinguished works to which it is fundamental is *Queen of Angels* (1990) by Greg BEAR. The intelligent briefcase around whose actions and fate Michael SWANWICK's eccentric tale *STATIONS OF THE TIDE* (1991) pivots is, according to his acknowledgements, a work of "nanotechnics". Perhaps more significant is the number of HARD-SF works in which the existence of nanotechnology is merely taken for granted, forming part of the overall background of futuristic technology. [PN]

NANOVIC, JOHN L(EONARD)

(1906-). US editor and writer, associated with STREET ?

he edited *The Shadow* from 1932 to 1943. He was also involved in developing the figure of Doc Savage for the firm, writing the initial treatment which was published, long afterwards, as *Doc Savage, The Supreme Adventurer* (1980 chap), and editing the actual journal, *DOC SAVAGE*, from 1933 to 1943. He was responsible for the successful choice of Lester DENT as principal author of the series; Dent wrote most of the Doc Savage stories published under the Kenneth ROBESON housename (see this entry and the entry for the magazine itself for fuller details on the series). [JC]

NATHAN, ROBERT (GRUNTAL)

(1894-1985) US writer, author of over 40 novels from *Peter Kindred* (1919) to *Heaven and Hell* and *the Megas Factor* (1975), in which latter (as so often in his work) good and evil - in this case God and Satan - confer and

put aside their differences, smilingly. Much of his fiction reflects a wistful, melancholy, sometimes satirical sense of fantasy; and it is perhaps ironic that he is best remembered for perhaps the harshest of his tales, *Portrait of Jennie* (1940), in which he uses J.W. DUNNE's time theories to frame the sentimental tale of a young girl not of this Earth whose love for a human artist reaches fruition only at the moment of her death. *The Barly Fields* (omni 1938) - which contains *The Fiddler in Barly* (1926), *The Woodcutter's House* (1927), *The Bishop's Wife* (1928) and its sequel *There is Another Heaven* (1929), and *The Orchid* (1931) - fairly represents the soft-edged work of his early years. Later came some Arthurian fantasies, including *The Fair* (1964), which sustains a sublimated elegiac tone in its depiction of a maiden's adventures there, and *The Elixir* (1971). *The Mallott Diaries* (1965) deals with Neanderthal survivals in Arizona, and *The Summer Meadows* (1973) movingly explores the nature of love in a fantasy quest for significant and telling moments in its protagonists' lives. Of direct sf interest is *The Weans* (1956 Harper's Magazine as "Digging the Weans"; 1960 chap), a satirical archaeological report on the long-dead US civilization. RN's reputation is submerged at present, but on reevaluation he may be seen as a significant creator of humanistic fantasy. [JC]Other works: *Jonah* (1925; vt *Son of Ammitai* 1925 UK; vt *Jonah, or The Withering Vine* 1934 US); *Road of Ages* (1935), an unusual political fantasy in which the Jews are sent into a new Exile; *The Enchanted Voyage* (1936); *Journey of Tapiola* (1938) and *Tapiola's Brave Regiment* (1941), assembled as *The Adventures of Tapiola* (omni 1950); *They Went on Together* (1941); *The Sea-Gull Cry* (1942); *But Gently Day* (1943); *Mr Whittle and the Morning Star* (1947); *The River Journey* (1949); *The Married Look* (1950; vt *His Wife's Young Face* 1951 UK); *The Innocent Eve* (1951), which is assembled in *Nathan 3* (omni 1952) along with *The River Journey* and the associational *The Sea-Gull Cry* (1952); *The Train in the Meadow* (1953), an afterlife fantasy; *Sir Henry* (1955); *The Rancho of the Little Loves* (1956); *So Love Returns* (1958); *The Wilderness Stone* (1961); *The Devil with Love* (1963); *Stonecliff* (1967); *Mia* (1970). About the author: *Robert Nathan: A Bibliography* (1960 chap) by Dan H. Laurence. See also: *THE MAGAZINE OF FANTASY AND SCIENCE FICTION* ; *TIME TRAVEL*.

NATION, TERRY

(1930-) UK screenwriter involved in the inception of the long-running BBC TELEVISION series DR WHO; he created in 1963 its most famous villains, the DALEKS, the story of which he subsequently told in *The Official Doctor Who and the Daleks Book* (1988) with John Peel, the relevant episodes appearing as *Doctor Who: The Scripts: The Daleks* * (coll 1989) with John McElroy. In 1975 TN created a post- HOLOCAUST series, *SURVIVORS*, also for BBC TV, which rather unsuccessfully attempted to capture on tv the flavour of the English DISASTER novel; his novelization is *The Survivors* * (1976). *Rebecca's World* (1975), illustrated with bravura by Larry Learmonth, is a fable for young children about ECOLOGY. In 1978 TN created a further series for tv, *BLAKE'S SEVEN*; he wrote all 13 episodes of this SPACE OPERA's 1st season as well as 6 later episodes, but by the time of its weak 4th (and last) season in 1981 his association with it had ceased.

NAYLOR, GRANT

Joint pseudonym of UK scriptwriters and authors Rob Grant and Doug Naylor, who worked for 3 years as head writers for Spitting Image, a satirical tv series using a combination of puppets and live action, and who wrote the RED DWARF tv series, which weds black humour and SPACE OPERA; some of the scripts have been published as Primordial Soup: Red Dwarf Scripts (coll 1993). As GN they have published 2 novelizations: Red Dwarf: Infinity Welcomes Careful Drivers * (1989) and Better than Life * (1990), both assembled, with additional material, as Red Dwarf Omnibus (omni 1992). [JC]

NAZI NOVEL

Little did Norman Spinrad know that he was such an inspiring writer. His novel, The Iron Dream, was published in 1972, and the plot was not exactly realistic. It was set in an alternate universe where Hitler had emigrated to the United States as a young man, eventually becoming a pulp fiction writer. In Spinrad's book, Hitler ended up writing an SF novel called "Lord of the Swastika." Obviously the German authorities didn't get the satire. Spinrad's book was banned in Germany in the early 1980s, under provisions of postwar anti-Nazi laws.

NEAL, HARRY

[s] Jerome BIXBY.

NEANDERTHALS

ANTHROPOLOGY and especially ORIGIN OF MAN for prehistoric romances; APES AND CAVEMEN for Neanderthal survivals.

NEAR FUTURE

Images of the near future in sf differ markedly from those of the FAR FUTURE in both content and attitude. The far future tends to be associated with notions of ultimate destiny, and is dominated by metaphors of senescence; its images display a world irrevocably transfigured. It is viewed from a detached viewpoint; the dominant mood is - paradoxically - one of nostalgia, because the far future, like the dead past, can be entered only imaginatively, and has meaning only in terms of its emotional resonances. The near future, by contrast, is a world which is imminently real - one of which we can have no definite knowledge, which exists only imaginatively and hypothetically, but which is nevertheless a world in which (or something like it) we may one day have to live, and towards which our present plans and ambitions must be directed. The fears and hopes reflected in our images of the near future are real, however overpessimistic or overoptimistic they may seem (OPTIMISM AND PESSIMISM). In order to plan our lives we must all possess such images, and the fact that they are fictions does not mean that they are unimportant. Literary representations of the near future both reflect and nourish those images. Just as fictions of the far future could not emerge until there was

an appreciation of the true timescale of the Earth and the forces involved in long-term change, so fictions dealing with the near future could not emerge until it was generally realized that an individual's lifetime might see changes of considerable import. An awareness that habits and strategies designed to deal with the past and the present might not be adequate to deal with one's personal future emerged rather more slowly than an awareness of the geological timescale, and was handicapped by a dogged ideative resistance. It is doubtful whether many people, even today, have really cultivated a genuine appreciation of the scope of the change that might overtake the world in the space of their own lifetimes. The difficulty of making such an adjustment was the subject of Alvin TOFFLER's bestselling work of popular FUTUROLOGY, *Future Shock* (1970). The near future is implicitly threatening; whatever innovations it produces must invalidate - however temporarily - the past experience on which our present consciousness is based. At a time when no one believed in the possibility of fundamental change, this threat was ineffective, not because innovations never occurred but because they were unanticipated and the processes producing them were unperceived. In today's world change is so rapid we cannot fail to perceive it, despite our most fervent efforts to ignore it. In such a historical situation it is easy to understand the popularity of dogmas of conservatism and conservationism, and the acuity of sensations of personal and social insecurity. It is also easy to understand the rapid growth of a literature which both reflects these anxieties and offers palliative reassurances. In much early futuristic fiction there is no trace of either near or far future in the senses outlined above; events take place in a disconnected, generalized imaginative space which is comprehensively distanced by its dating. Examples include the anonymous *The Reign of King George VI 1900-1925* (1763), L.S. MERCIER's *Memoirs of the Year Two Thousand Five Hundred* (1771; trans 1772) and Jane LOUDON's *The Mummy! A Tale of the 22nd Century* (1827). The earliest near-future speculations are warnings about the consequences of specific political practices; I.F. CLARKE's bibliography, *The Tale of the Future* (3rd edn 1978), lists inter alia a 1644 pamphlet on the dangers of restoring the monarchy and an 1831 pamphlet warning of the effects of the Reform Bill. The idea of historical change independent of strategic action on the part of governing bodies did not come until the late 19th century. The first class of near-future fantasies to emerge was the WAR-anticipation genre in the UK, which began with a political debate concerning the need for rearmament. George T. CHESNEY's classic drama-documentary *The Battle of Dorking* (1871) headed a tradition of speculative stories exploring the probable effects of new TECHNOLOGY on the business of warfare which eventually led writers like George GRIFFITH and H.G. WELLS to produce literary nightmares of war remade by submarines, tanks, aeroplanes and atomic bombs. Griffith died before the outbreak of WWI, but most of his readers did not; Wells lived just long enough to witness the advent of the real atom bomb. The anxieties reflected in this early class of near-future fantasies were entirely justified, and the notion of "a war that will end war", in Wells's phrase - an idea already popularized in such jingoistic extravaganzas as Louis TRACY's *The Final War* (1896)-was enthusiastically borrowed by the promoters of WWI as a means of selling it to the populations which became involved. A somewhat

different set of images was presented by another subgenre which emerged in the same period, celebrating the modern wonders of a newly emergent era of technological DISCOVERY AND INVENTION. Significantly, there are few genuine UTOPIAS in this class, most ideal societies being cast forward by at least a century, as in Edward BELLAMY's *Looking Backward, 2000-1887* (1888); and even the fervently optimistic Hugo GERNSBACK subtitled his *Ralph 124C 41+* (1911-12; 1925) "A Romance of the Year 2660". Technological wonder stories located within the personal future of their readers were mostly concerned with the future of TRANSPORTATION, connected to the war-anticipation genre by virtue of rejoicing in the conquest of the air. Jules VERNE is the archetypal early writer of near-future sf, although his imitators often took a more cavalier view of imminent possibility than he did; where Verne went *Around the World in 80 Days* (1873; trans 1874), Andre LAURIE went from New York to Brest in Seven Hours (1888; trans 1890). Sf writers were slower to take account of the AUTOMATION of industry than they were to foresee new opportunities in LEISURE. When Gernsback attempted to capture the scattered aspects of technological enthusiasm and bind them all together into a medium of communication which would hopefully "blaze a trail, not only in literature, but in progress as well" he was still a man ahead of his time, despite the precedents set by Verne and Wells. He saw SCIENTIFCTION as a means not only of anticipating the transformation which the world was undergoing through the acceleration of technological progress, but also of making a crucial contribution to it. He was an inventor himself, passionately involved with contemporary technology and particularly with the development of radio. In the editorials which he wrote for his early sf PULP MAGAZINES he talked about atomic energy, radar, tv and space travel. His near-future anticipations were by no means unjustified; most of his readers were in their teens in the 1920s, and so lived to see Gernsback's hypothetical technologies made actual. GENRE SF undertook to deal with all aspects of the future, but it was in its generalization of images of the near future that it was really new. The impact of sf upon young readers in the 1920s and 1930s may have been partly due to a consciousness of the immediacy of change as well as to the vastness of sf's imaginative horizons. That said, most early pulp sf was located in numinous eras beyond the personal horizon, and its grasp of the extent to which technological change would alter the quality of life was decidedly weak. Outside the genre, the wide-eyed optimism and ludicrously uninhibited melodrama of most pulp sf seemed childish; in the less prolific but far more earnest tradition of the UK SCIENTIFIC ROMANCE, the anxieties attendant on the awareness of change were much more prominently represented. The balance began to be redressed when John W. CAMPBELL Jr took over ASTOUNDING SCIENCE-FICTION in the late 1930s and began to ask for more carefully considered appraisals of future possibility. Many authors understandably preferred the freedom of more distant future realms, where they could set melodramatic SPACE OPERAS against the gaudy background of a GALACTIC EMPIRE, but a new generation of sf writers were prepared to tackle the problems of the near future, and in a more realistic fashion. The late 1930s and early 1940s produced several notable stories dealing with the advent of NUCLEAR POWER, and Robert A. HEINLEIN attempted to construct a detailed future HISTORY mapping the interplay of technological innovation and political response. The

destruction of Hiroshima and Nagasaki by the first atom bombs brought into the world a sensation of existential insecurity unparalleled in modern history (it is perhaps more easily comparable with such events as the slaughter of the population of Europe by the Black Death in the 14th century). To those professionally involved in the sf field, like Campbell and Donald A. WOLLHEIM, it seemed that sf had been "justified" by the unveiling of the atom bomb, and that from 1945 on everyone would have to acknowledge the power of technological change to transform the world. But such advances in sf's popularity and esteem were limited, and there also emerged within the genre a powerful sense of nostalgia for that GOLDEN AGE when sf had been aware of change only as a succession of miracles and make-believe adventures. The response of sf authors to the new intellectual climate was varied. Straightforward PREDICTIONS of imminent atomic doom were abundant (END OF THE WORLD; HOLOCAUST AND AFTER; WAR), but a more eccentric response was the widespread creation of distorted future societies in which some contemporary power-group had "taken over" and formed an oppressive regime; the archetype of this species is THE SPACE MERCHANTS (1953) by Frederik POHL and C.M. KORNBLUTH. These stories of distorted societies are often labelled SATIRES, and do indeed have a satirical edge, but there is also an element of actual anticipation in them, and they reflect a genuine fear of the swamping of individual ambitions by large-scale bureaucratic institutions. The baroque and slightly surreal mode of this kind of imaginative exercise gradually gave way to a more acute awareness of real processes of change in the contemporary world, and of their dangers. In the 1960s OVERPOPULATION, POLLUTION and resource crises (POWER SOURCES) became standard features of sf's images of the near future. Stories on these subjects often have a hint of panic about them, and there was a distinct apocalyptic note about the sf of the 1960s and 1970s. Images of the near future produced outside the genre became virtually indistinguishable in attitude from those produced within it (although the near-future novels produced by MAINSTREAM WRITERS tended to work with an impoverished vocabulary of ideas). Insofar as it deals with the near future, genre sf is primarily a literature of anxiety; optimism and colourful adventurism remain the prerogatives of fiction set in a more distant future, in which the particular problems of Spaceship Earth are often reduced to irrelevance. Our awareness of impending ecocatastrophe (ECOLOGY) has been complicated in the 1970s and 1980s by the advent of two new species of technology which promise dramatic transformations of the way we live. The COMPUTER revolution has pressed forward much faster than most sf writers of the 1950s and 1960s anticipated; CYBERPUNK fiction represents a somewhat belated but suitably intense response to this developing situation, and its rhetoric is feeding back into the real situation much as the rhetoric of the future-war story fed back into the actual build-up to WWI. Second, while the cracking of the genetic code and the subsequent advent of GENETIC ENGINEERING have not yet begun to transform the everyday environments of the home and workplace, the inherent possibilities hold the promise of a new technological revolution which might overturn many of our assumptions about the nature of MACHINES (see also NANOTECHNOLOGY). Within the last few years the assumptions which sf writers have made about the POLITICS of the future have been devastated by the collapse of communism in Eastern

Europe, and this too has ensured that virtually all extant sf images of the near future, however recent, are now almost redundant. Those which seem most pertinent are those which anticipate the greatest confusion. Bruce STERLING's *ISLANDS IN THE NET* (1988) is perhaps the most compelling recent image of the near future, overtaking Frederik Pohl's *The Years of the City* (1985), which has already begun to seem tentative. David BRIN's far more optimistic *Earth* (1990) is a worthy attempt to celebrate heroic attempts to cope with ecocatastrophe but ultimately founders on the rock of its outrageous *deus ex machina*, while Greg BEAR's *Queen of Angels* (1990) obtains its conviction by focusing tightly on the particular predicaments of a handful of characters. The vast majority of sf writers are either narrower still in the focus of their concerns or content to farm the much greener pastures of hypothetical futures which lie safely beyond the personal event-horizon. This is probably inevitable. The near future is an uncomfortable imaginative space for writers and readers to inhabit, and it is entirely understandable that those who venture into it should go equipped with blinkers, armoured by some protective obsession which obviates the necessity of dealing with the near future-world as a whole. The faster the pace of technological change becomes, the more horrifying a prospect the near future seems. It could not be otherwise. Our personal ambitions are tied to our expectations, which - if they are not mere castles in the air - are based in our experience of the past. The innovations which the future will surely bring are much more likely to threaten these ambitions than to aid them (even though they may compensate by making possible new ambitions) and are therefore bound to be sources of acute anxiety. The rate of technological change will certainly not slow down - unless DISASTER overtakes the entire cultural/industrial complex and renders all ambitions beyond mere survival redundant - and there now seem no grounds for hoping, as some apologists for sf once did, that assiduous study of images of future possibility will help us adapt ourselves to the acceleration of that change. Despite the increasing number of sf titles published each year, realistic speculative fiction about the near future is scarce and will undoubtedly remain so. Such fiction is too frightening to be popular; even those readers who like to be frightened prefer to gain their excitement from the obsolete workings of the supernatural imagination, which are utterly without consequence for the way they must live their lives. [BS]

NEARING, HOMER Jr

(1915-) US writer and professor of English at Pennsylvania Military College. His series of stories about Professor Cleanth Penn Ransom and Professor Archibald MacTate, mathematician and philosopher respectively, appeared in FSF from "The Poetry Machine" in 1950 up to 1963. 7 of these stories were assembled with 4 unconnected tales (and very thinly "novelized") as *The Sinister Researches of C.P. Ransom* (coll 1954); they concern the two professors' attempts to formalize a union between science and the arts. Their efforts, though doomed, are told without malice. Uncollected stories are "The Embarrassing Dimension" (1951), "The Maladjusted Classroom" (1953), "The Cerebrative Psittacoid" (1953), "The Gastronomical Error" (1953) and "The Hermeneutical Doughnut" (1956 *Fantastic Universe*). The professors' names disconnectedly represent

several US poets and critics associated with the New Criticism: Cleanth Brooks, Archibald MacLeish, John Crowe Ransom, Allen Tate and Robert Penn Warren. [JC/PN]See also: DIMENSIONS; HUMOUR.

NEBULA

Sf award given by the SCIENCE FICTION WRITERS OF AMERICA (now the Science Fiction and Fantasy Writers of America) since 1966. The idea of funding such an award from the royalties of an annual anthology of award-winning short fiction was proposed in 1965 by the SFWA's then secretary-treasurer, Lloyd BIGGLE Jr. The awards are made in the spring and, unlike the HUGOS, are dated by the year of publication of the award-winning stories; thus the 1965 awards, the first, were made in 1966. The award takes the form of a metallic-gitter spiral nebula suspended over a rock crystal, both embedded in clear lucite; the original design by J.A. LAWRENCE was based on a drawing by Kate WILHELM and has been followed ever since. The original 4 classes of award, all for professional writing, have remained unchanged; a 5th class, for Best Dramatic Presentation, was added in 1974, changed to Best Dramatic Writing in 1976, and then immediately dropped. Several special awards, taking the form of plaques or citations, have also been made; the only special category listed here is the Grand Master Award made from time to time by the Nebula committee for lifetime achievement in sf writing; it goes always to writers who are senior in both status and years. The 4 writing categories are Novel (over 40,000 words), Novella (17,500-40,000 words), Novelette (7500-17,500 words) and Short Story (under 7500 words). Voting is by SFWA members, using a final ballot paper made up from members' nominations. From 1970 a preliminary ballot of all nominated works was circulated early in the year, the entries receiving the most votes being entered on the final ballot. In 1980 procedures were changed (not for the first or last time): the year of a work's eligibility became the previous calendar year (not December 1 to November 30 as had earlier been the case); more importantly, perhaps, a Nebula jury system was set up, with each year's panel of judges allowed to add one item to the final ballot in each category. For some time authors have been allowed the option of choosing a one-year-later, usually mass-market, edition of their books to be eligible, rather than the original edition: many authors prefer to be judged on the basis of a widely read paperback rather than on the original hardcover. The procedures for Nebula awards have been more consistent than those for Hugos, but lobbying among the SFWA membership has received much criticism over the years, with some critics maintaining that the awards sometimes reflect political as much as literary ability. It may be partly as a result of this that the proportion of SFWA members voting is often not very high. Although the Nebulas have occasionally gone to rather more experimental writing than ever wins a Hugo, there has not been a great deal of difference between the choices. It might have been expected that the Nebula, inasmuch as it is given by a consensus of professional writers, would place a stronger emphasis on literary skills, but there is no evidence that this has been so. Neither Hugo nor Nebula has been given to non-genre sf or fantasy, and both have mostly gone, quite disproportionately, to US recipients. While the Nebula has certainly been awarded to some fine works, many critics have argued that the whole AWARDS system, in sf at least, is more a publicity exercise than a

consistently well judged measure of value. Anthologies of Nebula-winning short fiction, along with a selection of the runners-up, are published annually in the Nebula Award Stories series, each volume ed by an SFWA member. These books sometimes contain critical essays and accounts of the year in sf, as well as winners of the Rhysling Award for sf POETRY. Volumes to date are Nebula Award Stories 1965 (anth 1966; vt Nebula Award Stories 1 UK) ed Damon KNIGHT, Nebula Award Stories Two (anth 1967; vt Nebula Award Stories 2 UK) ed Brian W. ALDISS and Harry HARRISON, Three (anth 1968) ed Roger ZELAZNY, Four (anth 1969) ed Poul ANDERSON, Five (anth 1970) ed James Blish, Six (anth 1971) ed Clifford D. SIMAK, Seven (anth 1972) ed Lloyd Biggle Jr, Eight (1973) ed Isaac ASIMOV, Nine (anth 1974) ed Kate Wilhelm, Ten (anth 1975) ed James E. GUNN, Eleven (1976 UK) ed Ursula K. LE GUIN (Eleven appeared in 1977 in the USA; from then until 1983 the year of publication was 2 years behind the year for which the awards were given), Twelve (anth 1978) ed Gordon R. DICKSON, Thirteen (anth 1979) ed Samuel R. DELANY, Fourteen (anth 1980) ed Frederik POHL, Fifteen (anth 1981) ed Frank HERBERT, Sixteen (anth 1982) ed Jerry E. POURNELLE, Seventeen (anth 1983) ed Joe W. HALDEMAN, 18 (anth 1983) ed Robert SILVERBERG (with these latter, both published in the same year, the books went back to trailing the award year by only 1 year), 19 (anth 1984) ed Marta RANDALL, 20 (anth 1985) ed George ZEBROWSKI, 21 (anth 1986) ed Zebrowski (again the gap increased to 2 years), 22 (anth 1988) ed Zebrowski, 23 (anth 1989) ed Michael BISHOP, 24 (anth 1990) ed Bishop and 25 (anth 1991) ed Bishop. In 1969 the concept of SFWA members voting on stories was extended retroactively to cover those stories (but not novels) considered the all-time best prior to 1965. The chosen short stories were published as SCIENCE FICTION HALL OF FAME (anth 1970) ed Robert SILVERBERG and the novellas in The Science Fiction Hall of Fame Volume Two A (anth 1973; vt The Science Fiction Hall of Fame Volume Two UK) and The Science Fiction Hall of Fame Volume Two B (anth 1973; vt The Science Fiction Hall of Fame Volume Three UK) ed Ben BOVA. [PN]Novels: 1965: Frank HERBERT, DUNE 1966: Daniel KEYES, FLOWERS FOR ALGERNON, and Samuel R. DELANY, BABEL-17 (tie) 1967: Samuel R. NEBULA SCIENCE FICTION

UK large- DIGEST-size magazine. 41 issues Autumn 1952-Aug 1959, published by Crownpoint Publications, Glasgow, Autumn 1952-Apr 1955, and by Peter Hamilton Sep 1955-Aug 1959; ed Peter Hamilton. Issues were numbered consecutively after Vols 1 and 2 of 4 nos each; what should have been Vol 3 #1 was actually marked #9. Publication was quite irregular except for July 1957-Feb 1959, which was monthly apart from the omission of Nov and Dec 1957. N was the first and so far only Scottish sf magazine, and was part of the 1950s UK sf magazine revival, one of the most important titles along with NEW WORLDS and SCIENCE FANTASY. N was subsidized by its editor, an enthusiastic fan, still a teenager when the magazine began. It always ran a news section, including a column by the celebrated Irish fan Walt Willis (1919-), editor of HYPHEN and SLANT. But although N was fannish it was by no means juvenile; Hamilton was serious-minded and prepared to experiment with difficult stories and to encourage young writers. Brian W. ALDISS, Bob SHAW and Robert SILVERBERG all had their first published stories in N. Other contributors included Harlan ELLISON, Eric Frank RUSSELL, Kenneth BULMER and E.C. TUBB, the latter being the most prolific. Early issues each contained a novel with a small number of short stories, but the novel-an-issue policy was later dropped. The handsome and distinctive front covers were the work of various artists, including Gerard QUINN and Eddie JONES. N was popular with writers; Hamilton was able to keep it going as very much a one-man show, never very profitably, for 7 years. Some later issues went on sale in the USA. [PN/FHP]

NEEF, ELTON T.

[s] R.L. FANTHORPE.

NEEPER, CARY

Working name of US microbiologist and author Carolyn A. Neeper (1937-) for her fiction, which consists primarily of the ambitious A Place Beyond Man (1975), which somewhat uneasily combines a HARD-SF rendering of the physics and biology of her interplanetary venues with a contemplative sweep characteristic of the SCIENTIFIC ROMANCE. Confronted with the looming ecological self-destruction of Earth, the two other sentient species of our Solar System must decide what course to follow; the consequent lessons are earnestly put. [JC]

NEFF, ONDREJ

[r] CZECH AND SLOVAK SF.

NEILL, A(LEXANDER) S(UTHERLAND)

(1883-1973) UK educationist who gained fame for revolutionary theories about the teaching of children and who cofounded the International School - first on the Continent, then (from 1921) at Summerhill in the UK - to put them into practice. Fictionalized accounts like A Dominie's Log (1915)

popularized his arguments, and his sf novel, *The Last Man Alive* (1938), was read aloud to his pupils. The DISASTER it recounts is readable but unoriginal. [JC]

NEILSON, KEITH (TOWNSEND OLAF)

(1935-) US academic of importance in the field of sf and fantasy scholarship for editing (anon: both books were created under the umbrella editorship of Frank N. Magill [1907-]) the 5-vol *Survey of Science Fiction Literature* (anth 1979) and the 5-vol *Survey of Modern Fantasy Literature* (anth 1983); each contains about 500 essays, averaging about 2000 words, on individual books and series. Although (inevitably) some essays are weak or wrong-headed, many are strong and original, and the two surveys present them an indispensable series of critical responses to the literature. [JC]

NELSON, RAY

Working name of Radell Faraday Nelson (1931-), who also writes as R.F. Nelson, R. Faraday Nelson and Ray Faraday Nelson, and once under the house name Jeffrey Lord (Lyle Kenyon ENGEL). He has been active in both sf and detective genres, publishing his first sf story, "Turn off the Sky", in FSF in 1963. He worked as a gagwriter for cartoonist Grant Canfield, and for a time collaborated with Michael MOORCOCK in smuggling Henry Miller books from France into the UK; Moorcock was caught, RN forced to cease. RN holds a secure place in the hearts of sf FANDOM (he used to be a fan artist) for having invented the propeller beanie which in fan cartooning is always emblematic of the sf fan. RN's first sf novel was *The Ganymede Takeover* (1967) with Philip K. DICK, a tale in which Dickian preoccupations are somewhat dampened by implausibly foregrounded action sequences. His second, *Blake's Progress* (1975 Canada; rev vt Timequest 1985 US), accords the poet/painter William Blake (1757-1827) the capacity to travel through time, along with his wife Kate; she is by far the better painter of the two, though her husband signs her works. History is altered, the novel being in part an ALTERNATE-WORLDS story. In its full revised form it is a highly energetic vision of the poet, and RN's best work. Then *Beggars Could Ride* (1976 Canada) and its sequel, *The Revolt of the Unemployables* (1978), depict an ecological UTOPIA of small, self-contained but interacting units, in which a protagonist tries to sort himself out. RN's most recently published novel is #1 in the projected Timebinder sequence, *The Prometheus Man* (1982), in which a rigid and therefore DYSTOPIAN meritocracy has transformed the USA into a land of employables (not numerous) and the Uns, or unemployables (the great majority). The plot revolves around a marriage broken by the system as well as an assortment of gurus, tycoons and revolutionaries; it does not fully resolve. At least one sequel is reportedly awaiting publication. Though sometimes over-easily applied, RN's iconoclasm is all the more welcome for its surprising rarity in the sf field. [JC] Other works: *The Ecolog* (1977 Canada); *Dimension of Horror* * (1979) as Jeffrey Lord, #30 in the Richard Blade series. See also: INVASION; PHILIP K. DICK AWARD; TRANSPORTATION.

NEMERE, ISTVAN

[r] HUNGARY.

NEMESIS

Film (1993). Shah/Jensen and Imperial Entertainment. Prod Ash R. Shah, Eric Karson and Tom Karnowski; dir Albert Pyun; screenplay Rebecca Charles; starring Olivier Gruner, Tim Thomerson, Cary-Hiroyuki Tagawa and Merle Kennedy. 96 mins. Colour. This very violent, low-budget, straight-to-video, exploitation action-adventure movie, directed by straight-to-video specialist Pyun, has one element of sf interest. At a time when, despite all the publicity given to them, CYBERPUNK themes are barely impinging on the "respectable" end of the film business, parts of poverty row are embracing them. In N, bio-enhanced gangsters, anti-CYBORG terrorist groups, machine cops, a lovely dead woman encoded on a data chip, and third world police forces take part in an almost unfathomable series of shoot-outs in the information-saturated world of 2027, where the largest information cartel consists of US/Japan. Hawaii is passed off as Java, and ethnic Chinese unconvincingly represent Indonesians. Though the acting is below par, the dialogue is largely four-letter words and nothing in the plot goes beyond cyberpunk stereotypes, at least the attempt was made. [PN]

NENONEN, KARI

[r] FINLAND.

NEPTUNE

OUTER PLANETS.

NESFA

BIBLIOGRAPHIES; Erwin S. STRAUSS.

NESVADBA, JOSEF

(1926-) Czech psychiatrist, doctor and writer, born in Prague. He started by writing dramatic sketches but soon turned to detective stories and satirical sf, continuing the tradition of Karel CAPEK. One of the best Czech sf writers (CZECH AND SLOVAK SF) - though he has written less since the late 1960s - and aside from Capek the best known in the West, JN writes subtly ironic variations on common sf themes, poking fun at human weaknesses, and is not afraid to satirize his own social system (as in "Inventor of His Own Undoing", in all the English-language collections noted below). His 3 early collections of short stories are Tarzanova smrt ["Tarzan's Death"] (coll 1958), Einsteinuv mozek ["Einstein's Brain"] (coll 1960) and Vyprava opacnym smerem ["Expedition in the Opposite Direction"] (coll 1962), not to be confused with the later Vypravy opacnym smerem ["Expeditions in the Opposite Direction"] (coll 1976), which assembles early work, some previously collected, as does Einsteinuv mozek a jine povidky ["The Einstein Brain and Other Stories"] (coll 1987). A mystery novel of fantasy interest is Bludy Erika N. ["The Ravings of Erika N."] (1974), which draws on some of Erich VON DANIKEN's ideas. A later stage of psychiatry-related sf novelettes and novels begins, in book form, with Ridicky prukaz rodicu ["Parents' Driving Licence"] (coll of 3 linked novelettes 1979). Others are Minehava podruhe ["Minehava for the Second Time"] (coll of 3 linked novelettes 1981) and the novel Hledam za manzela muze ["I am Looking for a Man to be a Husband"] (1986). These are less well known in the West, but the title story of the second collection has

been translated in cut form as "The Return of Minnehawa or Marian Kolda's Psychoscope" in Panorama of Czech Literature, No 8 (anth 1986 Czechoslovakia) ed Nesvadba, an anthology of modern Czech fantasy and sf with biographical pieces on the authors. JN's stories have been a fertile source of inspiration for the Czech film industry. Films based on his work include Tarzanova smrt (1962; vt The Death of an Apeman) dir Jaroslav Balik, screenplay by JN and Balik, a tragicomic new adventure of Tarzan; Blbec z Xeenemunde (1962; vt The Idiot of Xeenemunde) dir Balik, screenplay by JN and Balik, another tragicomedy, this time about a halfwit scientist who kills Nazis; Ztracena tvar (1965; vt The Lost Face) dir Pavel Hobl, screenplay by Hobl and JN, a slapstick story set in the 1930s about a doctor who can perform miracles of disguise with plastic surgery and organ transplants; Zabil jsem Einsteina, panove! (1969; vt I killed Einstein, Gentlemen) dir Oldrich Lipsky, screenplay by Lipsky, Milos Macourek and JN, an overfarical TIME-TRAVEL comedy involving a society in 1999 where women are sterile and bearded because of radiation from nuclear war; Slecna Golem (1972; vt Miss Golem) dir Balik, screenplay by Balik and JN, about the creation of an artificial woman by cloning; Upir z Feratu (1981; vt The Vampire from Ferat) dir Juraj Herz, based on JN's story known in English as "Vampires Ltd.", about a racing car that uses the blood of drivers rather than petrol as fuel. Another film based on a JN story is ZITRA VSTANU A OPARIM SE CAJEM (1977; vt Tomorrow I'll Wake up and Scald Myself with Tea). JN's intricately plotted, absurdly logical stories have been translated into many languages and widely anthologized. English-language editions of JN's stories are Vampires Ltd. (coll 1964 trans Iris Urwin, Prague) and In the Footsteps of the Abominable Snowman (coll 1970; vt The Lost Face US). All but the first and third stories of the latter collection are also in the former, which also contains 5 stories not in the latter. [JO/SC/FR/PN]Other works: Dialog s doktorem Dongem ["Dialogue with Dr Dong"] (1964), a contemporary novel about Vietnam; Tajna zprava z Prahy ["Secret Report from Prague"] (censored text 1978; text restored 1992).

NEUTRON STARS

Item of TERMINOLOGY in ASTRONOMY, and much used in sf. In an ordinary star, such as the Sun, the gravitational pressure tending to make it collapse is balanced by the outward pressure created by the continuous nuclear fusion within it. As a star's fuel burns out, GRAVITY takes over. A star of mass less than the Chandrasekhar limit - a value calculated by Indian physicist Subrahmanyam Chandrasekhar (1910-) to be about 1.4 times the mass of our Sun - would usually contract under the force of gravity into a very dense White Dwarf, with a radius of maybe only a few thousand kilometres; but a further, more extreme compression is possible, as under pressure the empty space within the atoms of the star's matter is annihilated, the electrons being crushed down to the atomic nucleus, there to fuse with the protons of the nucleus to form neutrons. The resulting degenerate matter - neutronium - is incredibly dense because of the loss of the intra-atomic emptiness: a neutron star having the same mass as our

Sun would have a radius of about 10km (6 miles). Its surface gravity would be so strong that no "mountain" (i.e., surface irregularity) could exist on it higher than about 5mm (0.2in); and, initially at least, it would rotate very rapidly owing to the conservation of angular momentum (i.e., for the same reason as ice skaters can increase their rate of spin by pulling in their limbs). Beginning in 1968, radio telescopes discovered many celestial sources which emitted regular bursts of microwave radiation with very short periods (from only a couple of seconds down to tiny fractions of a second) between pulses. These objects were named pulsars, and were soon shown almost certainly to be neutron stars. Their powerful electromagnetic fields channel the radiation associated with the pulsar into two continuous beams which, because of the object's rapid rotation, we see (assuming we are in a suitable line-of-sight) in the form of pulses, much as we might see the light from the rotating lamp of a lighthouse. The period of a pulsar's pulses (i.e., its rate of rotation) can be used as a measure of the pulsar's age - the rotation slows with time - and there is excellent correlation between such measures and the ages of pulsars whose dates of formation are known (notably the pulsar at the core of the Crab Nebula, the remnant of the supernova observed in AD1054). The tidal forces created in proximity to such a star would be lethal, as imagined in Larry NIVEN's story "Neutron Star" (1966), in which a spaceship pilot who has ventured too close is almost ripped apart because, in such an intense gravitational field, the length of his body represents a significant distance, and so the force exerted by GRAVITY on his feet is considerably stronger than that exerted on his head; it is this difference in pull that so nearly proves fatal to him. In Gregory BENFORD's *The Stars in Shroud* (1978) a neutron star's gravity is exploited by spacecraft whipping round it to accelerate into new courses - a more extreme version of the manoeuvre whereby space-probes in the Solar System exploit the gravitational fields of the larger planets. The most extreme neutron-star stories may be Robert L. FORWARD's *DRAGON'S EGG* (1980) and its sequel *Starquake!* (1985), which have an ALIEN race - who live on a hugely accelerated timescale - evolving on the unfriendly surface of such a star, and ultimately making contact with human observers. Stellar collapse for stars with a mass greater than the Chandrasekhar limit can, it is theorized, lead to a different and even more bizarre form, the BLACK HOLE. [PN]

NEUWIRTH, BARBARA
[r] AUSTRIA.

NEVILLE, KRIS (OTTMAN)
(1925-1980) US writer of fiction who worked for many years as a technical writer specializing in plastics technology, and through his connection with the Epoxylite Corporation co-authored several texts on epoxy resins. He began publishing sf with "The Hand from the Stars" for *Super Science Stories* in 1949, and for several years was a prolific contributor to *FSF* and other magazines; he wrote some fantasy as by Henderson Starke. His short fiction was assembled in *Mission: Manstop* (coll with some stories

updated 1971) and in the posthumous *The Science Fiction of Kris Neville* (coll 1984) ed Barry N. MALZBERG and Martin H. GREENBERG, much of it demonstrating his notable strengths as a writer: concision, clarity of style and a capacity to develop the sometimes routine initial material of a story so that its implications expanded constantly, rather in the manner mastered, with more recognition than KN ever received, by James TIPTREE Jr. "Hunt the Hunter" (1951), for instance, begins as a simple hunt on an alien planet but expands subtly but quickly into a study in power politics whose trick ending very neatly turns the meaning of the whole tale in upon itself. Another early story, "The Toy" (1952), powerfully structures a very sharp lesson in ANTHROPOLOGY within an apparently routine tale about humans oppressing "inferior" aliens. One of his very few late stories, "Ballenger's People" (1967), counts as sf only through its moderately futuristic form of urban transport; the tale itself describes, with superb concision, the complex internal politics of a deranged mind. KN's best known story is probably "Bettyann" (1951) which, with a sequel, "Overture" (1954), eventually became *Bettyann* (fixup 1970). It tells the story of a young girl whose adolescent sense that she really belongs somewhere else is, in classic sf fashion, confirmed by her discovery first that she is adopted, and second that she is a child of creatures from the stars. She is then forced to decide between heredity and environment, a choice whose implications are developed in a recent sequel, "Bettyann's Children" (1973) with Lil Neville, KN's wife and frequent late collaborator. Among the fiction KN wrote with her is a 1975 novel published only in Japanese whose title translates as "Run, the Spearmaker". KN's comparative silence for two decades before his death, a silence obscured by the book publication of old material (some of it revamped), was much to be regretted, for his intelligence was acute and his artistic control over his material was always evident. He was one of the potentially major writers in the genre who never came to speak in his full voice. [JC] Other works: *The Unearth People* (1964); *The Mutants* (1953 Imagination as "Earth Alert"; exp 1966); *Special Delivery* (1952 Imagination; 1967 chap dos); *Peril of the Starmen* (1954 Imagination; 1967 chap dos); *Invaders on the Moon* (1970) with Mel Sturgis (left uncredited through a publishing decision against which KN protested). NEWCOMB, SIMON
(1835-1909) Canadian-born writer, in the USA from 1853, of texts on and studies of astronomical and mathematical subjects. In his sf novel *His Wisdom, the Defender* (1900) future historians tell how a professor discovers a source of limitless energy, invents ANTIGRAVITY and, after creating a private army - equipping it with futuristic armour-takes over the world from the air and prohibits war. In "The End of the World" (1903

McClure's Magazine) a black body from space hits the Sun, devastating the world. The few who survive realize that eons must pass before civilization may rise again. [JC]See also: WEAPONS.

NEW DESTINIES DESTINIES.

NEW DIMENSIONS

ORIGINAL-ANTHOLOGY series (1971-1981) ed Robert SILVERBERG. New Dimensions I (anth 1971) appeared when original anthology series were proliferating in the USA, with such titles as INFINITY, QUARK and UNIVERSE. ND was one of the longest-lasting titles from this period, although it had to change publishers several times (#1-#3 DOUBLEDAY, #4 Signet, #5-#10 Harper ?

New Dimensions I (anth 1971), #2 (anth 1972), #3 (anth 1973), #4 (anth 1974), #5 (anth 1975), #6 (anth 1976), #7 (anth 1977), #8 (anth 1978), #9 (anth 1979), #10 (anth 1980), #11 (anth 1980) with Marta RANDALL and #12 (anth 1981) with Randall. An associated anthology was The Best of New Dimensions (anth 1979).ND was one of the more experimental anthology series, and introduced a number of new writers. Its regular contributors included Gardner DOZOIS, George Alec EFFINGER, Felix GOTSCHALK and James TIPTREE Jr. #2 contained "Eurema's Dam" by R.A. LAFFERTY, which shared a HUGO as Best Short Story; #3 contained 2 Hugo-winning stories: "The Girl who was Plugged In" by Tiptree and "The Ones who Walk Away from Omelas" by Ursula K. LE GUIN; #11 had "Unicorn Tapestry" by Suzy McKee CHARNAS, which won a NEBULA as Best Novella. Many other stories were award nominees; ND was one of the best original anthology series. [MJE/PN]

NEW FUTURIAN, THE The FUTURIAN .

NEWMAN, BERNARD

(1897-1968) UK writer, mostly of espionage thrillers (some as by Don Betteridge) and detective mysteries, the two genres being perhaps most successfully combined in Maginot Line Murder (1939). The entertainment value of his sf is somewhat minimal, as he used the form primarily to provide platforms for his arguments about WAR, WEAPONS and the political nature of peace. In Armoured Doves (1931) SCIENTISTS combine to end war, as does the hero of Secret Weapon (1941), whose invention of an atomic bomb ends WWII; later, in The Flying Saucer (1948), the same scientist continues his peace campaign by creating an imaginary Martian threat against the world. BN, who appears as himself in this book, acknowledged that its source was Andre MAUROIS's Le Chapitre Suivant (1927 chap; trans as The Next Chapter 1928 chap UK). Further novels combining politics and future-war themes include Shoot! (1949), The Blue Ants: The First Authentic Account of the Russian-Chinese War of 1970 (1962) and Draw the Dragon's Teeth (1967). The Wishful Think (1954) is a borderline-sf story about politicized ESP. [JC]Other works: The Cavalry Went Through (1930); Hosanna (1933); The Boy who Could Fly (1967).

NEWMAN, JOHN

(? -) UK research chemist and writer who collaborated with Kenneth BULMER on a long series of science articles for NW and Nebula 1955-61

NEWMAN, KIM (JAMES)

(1959-) UK writer and broadcaster who remains as well known for his film criticism as for his fiction, though the latter has become increasingly dominant in his output. His film books - *Nightmare Movies: Wide Screen Horror Since 1968* (1984 US; rev vt *Nightmare Movies: A Critical History of the Horror Film, 1968-1988* 1988 UK) and *Wild West Movies* (1990) - express a generically savvy, sophisticatedly wry vision of their subject matters, a vision also articulated in the weekly reviews he has conducted on tv since 1989. KN began publishing sf with "Dreamers" for *Interzone* in 1984, rapidly establishing a name for liquidly dense tales of the NEAR FUTURE - or ALTERNATE-WORLD versions of the earlier 20th century - which combine a more or less standard CYBERPUNK idiom with an acute sensitivity to the dream world of the movies, in particular the film noir tradition already mined by authors like William GIBSON; many of these tales appear in *The Original Dr. Shade and Other Stories* (coll 1994). KN's almost excessive sensitivity to the icons of Hollywood helps distinguish him from his sf models. His first novel, *The Night Mayor* (1989), potently intensifies the VIRTUAL REALITY claustrophobias of cyberpunk through a plot whose villain, the criminal Daine, has escaped into a MAGIC-REALIST, glowing, alternate-world mental construct peopled by personae from detective films of the 1940s, from which haven he must be flushed by the protagonists. The book clearly and deliberately harks back to Philip K. DICK's darker investigations of the nature of reality and to Roger ZELAZNY's *THE DREAM MASTER* (1966), though KN's rather impersonal polish may have kept his tale from fully expressing the epistemological vertigo of some of its greater models; and certainly his use of tropes out of the dream-life of US film is, at times, soothingly nostalgic. His second novel, *Bad Dreams* (1990), replicates much of this material in terms of HORROR, again diminished in its visceral effect by a sense that the author has good-humouredly distanced himself from the products of his imagination. *Jago* (1991), a full-blown horror tale, once again features an antagonist capable of exercising coercive control over his opponents' inner worlds, in this case by transfiguring their dream self-images into reality, so that - for instance - a farmer anguished by drought and debt becomes a Green Man. *Anno Dracula* (1992) is set in a RECURSIVE alternate-world 19th-century England which has been transformed by the marriage of Vlad Tepes, Count Dracula, to Queen Victoria. *The Quorum* (1994) is again horror: four ambitious young men (there are roman a clef elements in their depiction) sell their souls to the devil, who manifests himself as a newspaper magnate. At the same time as writing novels that eat at the consensual world while suggesting that reality could still be addressed in something like comfort, KN also produced, as Jack Yeovil, a series of ties for GAMES WORKSHOP which leapt unashamedly into the explicitly easier environment of the GAME-WORLD. *Drachenfels* * (1989), *Beasts in Velvet* * (1991) and *Genevieve Undead* * (coll of linked stories 1993) are fantasies constructed for the Warhammer enterprise; but the *Demon Download* sequence - written in the *Dark Future* series, and comprising "Route 666" * (in *Route 666* [1990] ed David PRINGLE), *Demon Download* * (1990), *Krokodil Tears* * (1991), *Comeback Tour (The Sky Belongs to the Stars)* * (1991) and *Route 666* *

(1994) - contains elements of genuine sf, ruthlessly blended into a NEAR-FUTURE/alternate-world/fantasy/horror/punk mix. Both game-worlds and horror as a genre tend to view CONCEPTUAL BREAKTHROUGHS as breakers of the dream, and it is not yet certain that KN is much inclined to engage himself - or Jack Yeovil, under which name has also appeared Orgy of the Blood Parasites (1994) - in the displacements necessary to compose full and unadulterated sf. KN wrote many of the CINEMA and tv entries for the 2nd edition of this encyclopedia. [JC] Other works: Ghastly Beyond Belief: The Science Fiction and Fantasy Book of Quotations (anth 1986) edited with Neil GAIMAN; Horror: 100 Best Books (anth 1988) ed with Stephen Jones, critical essays. NEW ORIGINAL WONDER WOMAN, THE
WONDER WOMAN.

NEW PATHWAYS

US SEMIPROZINE, full title New Pathways into Science Fiction and Fantasy (Mar 1986-Jan 1991); BEDSHEET-format, bimonthly to #6, later quarterly, then irregular, ed and published Michael G. Adkisson from Texas, 19 issues to Jan 1991. Lively, but struggling for readership, NP mixed fiction, features and COMIC strips, all at the radical end of the sf spectrum, including commentary by MISHA and fiction by Carter SCHOLZ, Lewis SHINER, John SHIRLEY and others, and sometimes experimental, as in a number of reprints from Brian W. ALDISS's Enigmas series of short stories. We can trace no issues later than 1991. [PN]

NEWTE, HORACE (WYKEHAM CAN)

(1870-1949) UK novelist and controversialist on political matters whose The Master Beast: Being a True Account of the Ruthless Tyranny Inflicted on the British People by Socialism, A.D. 1888-2020 (1907; vt The Red Fury: Britain Under Bolshevism 1919) lives fully up to its subtitle, telling of a young socialist at the turn of the 20th century who first experiences a German INVASION of an unprepared UK, then, after awakening (SLEEPER AWAKES) from suspended animation, experiences the enormity of a century of socialist rule, with women freed for immorality, George Bernard Shaw (1856-1950) canonized, and thought-control universal. The Ealing Miracle: A Realistic Story (1911) is a fantasy in which two women exchange personalities at the behest of a Christlike stranger and learn about love and deprivation. [JC]

TOMORROW PEOPLE, THE.

NEWTON, DAVID C.
John LYMINGTON.

NEWTON, JULIUS P.

(? -) UK writer whose The Forgotten Race (1963) depicts with awkward sincerity the attempts of Venusians and Martians-both survivors of the atomic HOLOCAUST which destroyed the fifth planet - to persuade the humans of Earth not to repeat the tragedy. [JC]

NEWTON, W(ILFRID) DOUGLAS

(1884-1951) Irish writer who began writing sf with 2 future- WAR novels, War (1914) - prefaced by Robert Hugh BENSON and introduced by Rudyard KIPLING - and The North Afire (1914). Later works include The Golden Cat (1930), The Beggar and Other Stories (coll 1933), which contains a story about guided missiles, "The Joke that Ended War", and Dr Odin (1933), about an attempt to perfect a Nordic "master race". His Savaran series includes two LOST-WORLD stories, "The Great Quest" in I, Savaran (coll 1937) and Savaran and the Great Sands (1939 The Passing Show as "The Devil Comes Aboard"; 1939). He contributed sf to various early magazines, including PEARSON'S MAGAZINE, and to the US PULP MAGAZINES, but only a small proportion has been reprinted in book form. [JE]

NEW VOICES

ORIGINAL-ANTHOLOGY series, subtitled "The Campbell Award Nominees", #1-#2 from Harcourt Brace ?

from BLUEJAY BOOKS; ed George R.R. MARTIN. Each vol contained original novellas written (a few years later in most cases) by the 4-6 finalists from a particular year of the JOHN W. CAMPBELL AWARD for the best new sf or fantasy writer. The books, which contained stories from the award winners for 1973 to 1977 respectively, were New Voices in Science Fiction (anth 1977; vt New Voices I: The Campbell Award Nominees 1978 US), New Voices II (anth 1979), New Voices III (anth 1980), New Voices 4 (anth 1981) and The John W. Campbell Awards Volume 5 (anth 1984). Eventually the publication year fell too far behind the year of the award, and this interesting series lost its point and came to a close. The best-known story published in the series is John VARLEY's "Blue Champagne" (1981) in #4. [PN]

NEW WAVE

This term, as applied to sf, is borrowed from film criticism, where it was much used in the early 1960s as a translation of the French *nouvelle vague* to refer to the experimental cinema associated with Jean-Luc Godard (1930-), Francois Truffaut (1932-1984) and others. (It was also applied to music around 1977 as a synonym for Punk.) The term was first applied to UK sf writers in a 1961 book-review column by P. Schuyler MILLER, and then used - probably first by Christopher PRIEST - to describe the sort of fiction being published in NEW WORLDS. It came to be used more by sf proselytizers than by the writers concerned - especially by Judith MERRIL, in her anthology England Swings SF (anth 1968; cut vt The Space-Time Journal 1972 UK) and elsewhere. The kind of story to which the term refers is in fact rather older than the (late-1960s) term, which anyway has never been defined with any precision. The first writers whose work was later subsumed under the New Wave label were UK, notably Brian W. ALDISS and J.G. BALLARD. These two were publishing stories in NW while it was still under the editorship of John CARNELL, but it was not until Michael MOORCOCK took over with the May/June 1964 issue that the kind of imagistic, highly metaphoric story, inclined more towards psychology and the SOFT SCIENCES than to HARD SF, that both men wrote (in quite different styles) was given a setting where it seemed at home. Traditional GENRE SF had reached a crisis point in both the UK and the USA by the middle 1960s; too many writers were working with the same few traditional sf themes, and

both the style and content of sf were becoming generally overpredictable. Many young writers entering the field came to feel, either instantly, like Thomas M. DISCH, or after some years' slogging away at conventional commercial sf, like Harlan ELLISON and Robert SILVERBERG, that genre sf had become a straitjacket; though widely supposed to emphasize change and newness, sf had somehow become conservative. Young Turks, of course, conventionally exaggerate the sins of their seniors, but this time they had a real case. It was not as if the market were shrinking; on the contrary, hardcover publishers were more willing than ever to add sf to their lists. There was no reason to suppose that publishers would not be grateful for sf becoming rather more flexible in style and content. By 1965, then, sf was ripe for change. In fact, many of the so-called sf experiments of the period were not experiments at all, but merely an adoption of narrative strategies, and sometimes ironies, that had long been familiar in the MAINSTREAM novel. In the event, some of the sf writers who felt they now had the freedom to experiment, especially Ballard and perhaps (rather later) Moorcock, were to add something new to the protocols of prose fiction generally; the New Wave may have taken from the Mainstream, but it gave something back in return (this is now a truism of POSTMODERNIST criticism, but it was by no means clear at the time), and certainly New-Wave sf did more than any other kind of sf to break down the barriers between sf and mainstream fiction. Because it was never a formal literary movement—perhaps more a state of mind than anything else—New-Wave writing is difficult to define. Perhaps the fundamental element was the belief that sf could and should be taken seriously as literature. Much of it shared the qualities of the late-1960s counterculture, including an interest in mind-altering DRUGS and oriental RELIGIONS, a satisfaction in violating TABOOS, a marked interest in SEX, a strong involvement in Pop Art and in the MEDIA LANDSCAPE generally, and a pessimism about the future that ran strongly counter to genre sf's traditional OPTIMISM, often focused on the likelihood of DISASTER caused by OVERPOPULATION and interference with the ECOLOGY, as well as by WAR, and a general cynicism about the POLITICS of the US and UK governments (notably the US involvement in Southeast Asia and elsewhere). The element of DYSTOPIA in New-Wave writing was particularly dramatic in the case of John BRUNNER, much of whose earlier work had been relatively cheerful SPACE OPERA. New-Wave sf often concerned itself with the NEAR FUTURE; but it often turned inward, too, and one of the buzzwords of the period was INNER SPACE. Moorcock's NW published most of the notable figures of the New Wave at one time or another, including the work of several US writers who lived for a time in the UK, such as Samuel R. DELANY, Disch, James SALLIS, John T. SLADEK and Pamela ZOLINE. Other US NW contributors often subsumed under the New-Wave label were Ellison, Norman SPINRAD and Roger ZELAZNY; other UK contributors were Barrington J. BAYLEY, M. John HARRISON, Langdon JONES and Charles PLATT, and one would add Christopher PRIEST, although he was less closely associated with NW. Despite the various excesses of NW, whose stories sometimes embraced ENTROPY with a fervour reminiscent of Edgar Allan POE's "The Masque of the Red Death" (1842), there is no doubt that it was influential on sf PUBLISHING generally, and it was not long at all before various US markets were adopting a far less exclusive attitude to what they would or would not publish, a symptom being the appearance of

ORIGINAL-ANTHOLOGY series like DANGEROUS VISIONS, NEW DIMENSIONS, ORBIT and QUARK, which included a good quota of experimental work - indeed, they demonstrated clearly (though the point hardly needed to be made) that as much US sf as UK had come to be New Wave in style and content. All this naturally horrified some of sf's more conservative spokesmen, as a glance at sf histories written by David KYLE, Sam MOSKOWITZ and Donald A. WOLLHEIM will demonstrate. Wollheim commented, in *The Universe Makers* (1971), that "the readers and writers that used to dream of galactic futures now got their kicks out of experimental styles of writing, the free discussion of sex, the overthrow of all standards and morals (since, if the world is going to end, what merit had these things?)". It is easy to feel some sympathy with the conservative viewpoint in one respect; with few exceptions the New-Wave writers avoided HARD SF, and it must have seemed to some observers of the scene as if the very thing that most centrally defined sf by its presence-the science (to simplify) - was disappearing. But in fact the battle was quickly over (though hard sf never quite regained its former position of prominence). The better New-Wave sf writers were soon accepted by sf readers generally, and often found an audience outside sf as well; the bad writers (some were terrible) mostly fell by the wayside. By the 1970s there no longer seemed very much point to the term, although newly prominent figures like Gardner DOZOIS, Barry N. MALZBERG, Joanna RUSS, James TIPTREE Jr and Gene WOLFE clearly wrote in a style that would have been called New Wave only a year or so earlier. Later in the decade all sorts of quite different new writers emerged who had clearly absorbed the positive lessons of the New Wave, along with some of its attitudes, ranging from Michael BISHOP and John VARLEY in the USA to Ian WATSON in the UK. There can be no doubt that during the late 1960s genre sf found new freedoms, while the market showed a greater readiness to accept sophisticated writing. As with all ideological arguments, one uses whatever ammunition comes conveniently to hand, and it suited many friends (and foes) to see the New Wave as a kind of homogeneous, monolithic politico-literary movement. It was never that in the minds of most of its writers, many of whom resented being categorized. Disch commented, in an open letter published in 1978: "I have no opinion of the 'New Wave' in sf, since I don't believe that that was ever a meaningful classification. If you mean to ask - do I feel solidarity with all writers who have ever been lumped together under that heading - certainly I do not." It was common during the 1970s and 1980s, especially for those (like Disch) who resisted stereotyping, to dismiss the importance of the New Wave, or even to deny that it ever existed. From the perspective of the 1990s, however, it seems fair to say that the New Wave was real and liberating; New-Wave excesses-including its sometimes miasmic gloom - have largely dropped away in subsequent sf, while the New Wave's grasp of the complexities of the world has remained. The 1960s were indeed a maturing period for genre sf; if we see the 1960s as sf's puberty, then we also have an explanation of why some of it, at the time, was so irritating (especially in its tone of voice): most adolescents are. One reason why the perspective of the 1990s is useful is that we have, meanwhile, been able to observe yet another New Wave in action: CYBERPUNK. Two of the many anthologies of New Wave sf are *The New SF* (anth 1969) ed Langdon Jones and *The New Tomorrows* (anth 1971) ed Norman Spinrad. A book on the subject is

The Entropy Exhibition: Michael Moorcock and the UK "New Wave" (1983) by Colin GREENLAND. [PN]See also: ARTS.

NEW WORLDS

The leading UK sf magazine (an ORIGINAL-ANTHOLOGY series for two sections of its chequered career), publishing 218 issues over an intermittent career of nearly 50 years ([July] 1946-current), but including a 12-year hiatus; 12 of these issues have been in book form. NW, though it had volume numbers up to #177, has always been numbered consecutively (in its magazine incarnations), the numeration not beginning again with each volume number. #1-#5 were undated. 3 PULP-size issues were published irregularly by Pendulum in 1946-7 under the editorship of an sf fan, John CARNELL (NW was a development from a pre-WWII FANZINE [1936-9] called first NOVAE TERRAE and then New Worlds, the last 4 issues of which were ed Carnell). #1 was issued twice with different covers; #1 with the original cover had not sold well, but it did better the second time round (the second version used the same cover as #2). Nova Publications, a publishing group formed by UK sf fans who used to meet at the White Horse pub in London, revived this somewhat tentative 1946-7 magazine in 1949 as a DIGEST. Carnell remained in charge until #141 (Apr 1964), after which the title was taken over by Roberts ?

issued it in a pocketbook (paperback-size) edition, ed Michael MOORCOCK. After #172 (Mar 1967) it was published by Moorcock under the auspices of the Arts Council in a stapled 8in x 11in (approx A4) format, rising to BEDSHEET-size with #179. In this incarnation NW suffered financial difficulties, compounded when the leading UK retail-newsagent chain, W.H. Smith ?

particular the use of "obscene" language in Norman SPINRAD's BUG JACK BARRON (Dec 1967-July 1968; 1969). The last issue to be properly released was #200 (Apr 1970), though in 1971 #201, a special final, "Good-Taste" issue with retrospective index went out to subscribers. During this period Moorcock relaxed his control over the editorship, various members of his coterie taking a hand in the issues released in 1969; Charles PLATT was editor #197-#200. For the greater part of the period from #22 to #200 the magazine maintained a monthly schedule with only occasional lapses. In 1971 the title was revived again, this time as a series of original anthologies (numbered from #1 again, although the original numeration was tacitly maintained) published in paperback by Sphere Books (#1-#8) and Corgi Books (#9 and #10). These were New Worlds #1 (anth 1971; vt New Worlds Quarterly 1 1971 US) ed Moorcock; #2 (anth 1971; vt New Worlds Quarterly 2 1971 US) ed Moorcock; #3 (anth 1972; vt New Worlds Quarterly 3 1972 US) ed Moorcock; #4 (anth 1972; vt New Worlds Quarterly 4 1972 US) ed Moorcock; #5 (anth 1973) ed Moorcock; #6 (anth 1973; vt New Worlds Quarterly 5 1974 US) ed Moorcock with Charles Platt; #7 (anth 1974) ed Hilary BAILEY with Platt; #8 (anth 1975) ed Bailey; #9 (anth 1975) ed Bailey; and #10 (anth 1976) ed Bailey. When the book series was cancelled, NW was defunct, but the fervour of its supporters brought about yet another resuscitation in 1978, with #212 ed Moorcock in a FANZINE-style format, and #213-#216 ed by various supporters professionally published, the last 2 being in 1979. This final incarnation, published by Charles Partington in Manchester, was more a generalized underground magazine than an sf magazine; it contained

many satirical graphics. #214 was titled in Russian. #215 ed David BRITTON was marked "limited edition of one thousand copies". In 1991 David S. GARNETT, with Moorcock's approval and with Moorcock as Consulting Editor, initiated yet another incarnation of NW, this time in anthology book form, as *New Worlds* (anth 1991), *New Worlds 2* (anth 1992), *New Worlds 3* (anth 1993) and *New Worlds 4* (anth 1994) all ed Garnett, published by GOLLANCZ. These volumes were numbered #217, #218, #219 and #220 according to the original sequence, which was again explicitly acknowledged. The financial results were disappointing, and Gollancz cancelled after the fourth, leaving Garnett currently looking for a new publisher. Under Carnell NW was the primary force in shaping a tradition in UK magazine sf, and under Moorcock its name became the banner of what was dubbed the NEW WAVE. Carnell provided a stable domestic market for the leading UK writers and played a considerable role in the careers of Brian W. ALDISS, J.G. BALLARD, John BRUNNER, Kenneth BULMER, Colin KAPP, E.C. TUBB and James WHITE. He encouraged a species of sf more sober in tone than much US material, with the emphasis on problem-solving; an excellent example of the species is James White's *Sector General* series. In publishing ambitious work by Aldiss and most of Ballard's early work Carnell began a shift in emphasis toward psychological and existential sf (FABULATION; PSYCHOLOGY), which also showed in his choice of reprints from US authors: Philip K. DICK's *Time Out of Joint* (Dec 1959-Feb 1960; 1959) and Theodore STURGEON's *Venus Plus X* (Jan-Apr 1961; 1960). Most of the US magazines were also shifting their emphasis away from the "hardware" of sf, but retained a kind of brashness not evident in NW save in the work of those authors most heavily influenced by pulp sf. Moorcock's editorship was a good deal more flamboyant than Carnell's, and he was as polemical in the material which provided the environment for the fiction as John W. CAMPBELL Jr had been in *ASTOUNDING SCIENCE-FICTION* during the early 1940s, though to very different ends, juxtaposing fiction with factual social comment, visual collage, even concrete poetry, in a deliberate attempt to lose the GENRE-SF image and to place speculative fiction in a context of rapid social change, and radical art generally. Apart from his own avant-garde material (often written as James Colvin), he promoted inventive UK writers like Barrington J. BAYLEY, Langdon JONES, David I. MASSON and, later, Ian WATSON, and recruited some US writers - notably Thomas M. DISCH and John T. SLADEK. Moorcock's early Jerry Cornelius pieces appeared in NW, as did his NEBULA-winning "Behold, the Man" (Sep 1966; exp as *BEHOLD THE MAN* 1969). The large-size version serialized, in addition to Spinrad's *BUG JACK BARRON* (noted above), *CAMP CONCENTRATION* by Disch (July-Sep 1967; 1968), and featured 2 more Nebula-winning short pieces: Samuel R. DELANY's "Time Considered as a Helix of Semi-Precious Stones" (Dec 1968), which also won a HUGO, and Harlan ELLISON's "A Boy and His Dog" (Apr 1969). Under Moorcock NW established in its review columns a particularly trenchant style of criticism which continued in the paperback anthologies, much of it written by John CLUTE and M. John HARRISON. It cannot be said that Moorcock's programme met with wide-ranging approval, especially among those readers attuned to the more modest and traditional aspects of Carnell's policy, and it certainly lacked Carnell's sense of balance, but its contribution to sf in the 1960s was considerable-the paths beaten by the NW writers are now much more generally in

use. Garnett's annual NW anthology of the 1990s could not find a secure market niche, though the contents were impressive, featuring good stories by, among others, Storm CONSTANTINE, Paul Di Filippo, Ian MCDONALD, Kim NEWMAN and Moorcock himself, and also an annual round-up of the year's sf by John CLUTE. Although Garnett sensibly avoided nostalgia for the 1960s/1970s, the enterprise seems to have been doomed anyway. A US edition of NW, with Hans Stefan SANTESSON credited as editor, ran for 5 issues Mar-July 1960, selected mainly from the 1959 NW with some stories from other sources. Some unsold issues of the Roberts ? in twos and threes and sold under the title SF REPRIZE, these being SF Reprise 1 (anth 1966) containing #144/#145; SF Reprise 2 (anth 1966) containing #149/#150; and SF Reprise 5 (anth 1967) containing #149-#151. There were many derived anthologies. Carnell ed The Best From New Worlds Science Fiction (anth 1955), and his Lambda 1 and Other Stories (anth 1964; UK and US contents vary) was also selected from NW. Moorcock ed The Best of New Worlds (anth 1965), Best S.F. Stories from New Worlds (anth 1967), Best Stories from New Worlds 2 (anth 1968; vt Best S.F. Stories from New Worlds 2 US), Best S.F. Stories from New Worlds 3 (anth 1968), Best S.F. Stories from New Worlds 4 (anth 1969), Best S.F. Stories from New Worlds 5 (anth 1969), Best S.F. Stories from New Worlds 6 (anth 1970), Best S.F. Stories from New Worlds 7 (anth 1971) and Best S.F. Stories from New Worlds 8 (anth 1974), as well as the retrospective New Worlds: An Anthology (anth 1983). These series anthologies also sometimes used stories from SCIENCE FANTASY Impulse. The first 6 of the 8 Best S.F. Stories from New Worlds vols were also published in the USA. [BS/PN] See also: ENTROPY; TABOOS.

NEW WORLDS QUARTERLY NEW WORLDS.

NEW WRITINGS IN SF

ORIGINAL-ANTHOLOGY series begun 1964 by John CARNELL after he relinquished the editorship of NEW WORLDS and SCIENCE FANTASY; it was published by Dennis Dobson to #20, then by Sidgwick ? paperback editions (all published by Corgi) sometimes preceded hardcover publication, and in the case of #30, the last in the series, there was no hardcover. NWISF carried on the tradition of Carnell's New Worlds: predominantly middle-of-the-road sf, leavened with occasional more adventurous pieces and saved from staleness by his willingness to publish new writers. Regular contributors included not only Colin KAPP (chiefly with his Unorthodox Engineers series), Douglas R. MASON (under his own name and as John Rankine), John Rackham (J.T. PHILLIFENT) and James WHITE (including stories in his Sector General series), but also Keith ROBERTS, while M. John HARRISON and Christopher PRIEST both published early short stories in its pages. NWISF was intended to be a quarterly, but later its appearances became erratic. New Writings in SF 1 (anth 1964) was followed by #2 (anth 1964), #3 (anth 1965), #4 (anth 1965), #5 (anth 1965), #6 (anth 1965), #7 (anth 1966), #8 (anth 1966), #9 (anth 1966), #10 (anth 1967), #11 (anth 1967), #12 (anth 1968), #13 (anth 1968), #14 (anth 1969), #15 (anth 1969), #16 (anth 1970), #17 (anth 1970), #18 (anth 1971), #19 (anth 1971), #20 (anth 1972) and #21 (anth 1972), this last being

published after Carnell's death. 9 vols of this series were published in the USA by BANTAM BOOKS 1966-72, with some difference in contents after the first 6: the US #7 drew from the UK #7, #8 and #9; US #8 drew from UK #10, #11 and #12; US #9 drew from UK #12, #13, #14 and #15. The series remained alive after Carnell's death, its editorship being taken over by Kenneth BULMER from #22 (anth 1973). This brought about no substantial change in policy, although one feature of Bulmer's NWISF was Brian W. ALDISS's Enigmas series. New authors to debut in the later issues included David LANGFORD, Charles Partington (NEW WORLDS; SOMETHING ELSE) and Cherry WILDER, and early stories by Robert P. HOLDSTOCK and Ian WATSON also appeared around this time. Bulmer edited #23 (anth 1973), #24 (anth 1974), #25 (anth 1975), #26 (anth 1975), #27 (anth 1976), #28 (anth 1976), #29 (anth 1976) and #30 (anth 1978). At this point the market for ANTHOLOGIES was looking even gloomier than usual in the UK, and the series ended. Seldom groundbreaking but always reliable, NWISF did not have any impact comparable to the major original-anthology series in the US (e.g., ORBIT, UNIVERSE), which mostly began somewhat later. Associated anthologies are The Best from New Writings in SF: First Selection (anth 1971) ed Carnell and 3 omnibus volumes: New Writings in SF: Special 1 (anth 1975), containing #21 and #23; #2 (anth 1978), containing #26 and #29; and #3 (anth 1978), containing #27 and #28. [MJE/PN]

NEW YORK REVIEW OF SCIENCE FICTION

US critical magazine, published Dragon Press, Pleasantville, New York; ed (in 1995) by Kathryn CRAMER, L.W. CURREY, Samuel R. DELANY, David G. HARTWELL, Robert J. Killheffer, Gordon Van Gelder and Donald G. Keller; current; monthly, beginning with the trial issue (#0) Aug 1988 and #1 Sep 1988. It had reached #79 by Mar 1995. Too highbrow and professional - many of its staff being sf/fantasy writers and publishers - to be called a FANZINE, too informal to be called an academic journal, NYROSF is a somewhat unusual critical SEMIPROZINE. It publishes general articles of remarkably varying quality on sf, as well as some of the best long reviews in the field. Its tone is far from homogeneous; it moves disconcertingly (and fast) from chatty to pompous, and there is something to irritate everyone. But, as one might expect from the very well informed staff producing its 24 large-format pages a month with astonishing regularity, it is also irreplaceable. Certainly its coverage of GENRE SF and FANTASY is both wider and deeper than anything in the academic journals with the possible exception of FOUNDATION: THE REVIEW OF SCIENCE FICTION. [PN]

NEW ZEALAND

One of the last lands discovered by Europeans, New Zealand was a convenient setting for moral and UTOPIAN tales. The anonymous Travels of Hildebrand Bowman, by Himself (1778 UK) anticipates Samuel BUTLER's satirical Erewhon (1872) and Erewhon Revisited (1901). Utopian fiction by New Zealanders includes Anno Domini 2000, or Woman's Destiny (1889 UK) by the NZ Premier Sir Julius VOGEL, a dreary novel of a UK/US empire formed through dynastic marriage, and Godfrey SWEVEN's difficult novel sequence Riallaro: The Archipelago of Exiles (1901 US) and Limanora: The Island of Progress (1903 US), the latter described by E.F. BLEILER as "probably the greatest of all early utopian novels". Some 19th-century works, mostly

published in England, are extrapolated from a remark of Lord Macaulay (1800-1859) in *Critical and Historical Essays* (coll 1843): ". . . when some traveller from New Zealand shall, in the midst of a vast solitude, take his stand on a broken arch of London Bridge to sketch the ruins of St Paul's." The UK writer Francis Carr's *Archimago* (1864), partly set in a ruined London of 1964, is an example. A more popular taste is seen in the end-of-the-century boom in romance. The *Great Romance* (1881) by "The Inhabitant" is NZ's first space story. The heroes in Ajar's *The Secret of Mt Cook* (1894) revive frozen people; in *Hedged with Divinities* (1895) by Edward Tregear (1846-1931) all men die; the subject of *The Elixir of Life* (1907 UK) by William Satchell (1860-1942) is self-evident. A puritan realist mode dominates NZ MAINSTREAM fiction and criticism, yet writers within the tradition often use sf and fantasy tropes. Robyn Hyde's *Wednesday's Children* (1937 UK) is fantasy; Maurice GEE has written fantasies for children; M.K. JOSEPH wrote the speculative *The Hole in the Zero* (1967 UK) and *The Time of Achamoth* (1977); Janet FRAME's metafiction *Scented Garden for the Blind* (1963) and *Living in the Maniototo* (1979 US) are fantastic; and the dystopian *Smith's Dream* (1971) - filmed as *Sleeping Dogs* (see below) - by C.K. STEAD tells of a future military dictatorship. Current writers such as Russell Haley, Marilyn Duckworth (1935-) and Rachel McAlpine (1940-) are adept at using sf devices for mainstream audiences. Works marketed as sf include Adrian Geddes's *The Rim of Eternity* (1964), in which aliens invade, Colin GIBSON's tale of nuclear winter, *The Pepper Leaf* (1971 UK), and the novels of Hugh COOK, which are fantasy. Peter Hooper's fantasies and Craig HARRISON's thrillers have escaped the genre label. Phillip MANN and Cherry WILDER (who now lives in Germany) are the best-known contemporary NZ sf writers, along with Sandi HALL. NZ sf in the CINEMA started with the now lost *A Message from Mars* (1909), based on Richard Ganthony's popular 1899 UK stage play, which he and Lester LURGAN novelized (1912), the play itself being published much later (1924). There was no further NZ sf film until the successful *Sleeping Dogs* (1977) dir Roger Donaldson, a NEAR-FUTURE political thriller envisaging a totalitarian government. The industry flourished from this time until the mid-1980s with government subsidies, its sf titles including the routine, post-HOLOCAUST *Battletruck* (1982), the violent, lunatic brain-surgeon-and-his-experimental-subjects story *Death Warmed Up* (1984), the sf thriller *DEAD KIDS* (1981; vt *Strange Behavior*) and *The QUIET EARTH* (1985); then subsidies were withdrawn. Subsequent films, such as the deliberately disgusting *BAD TASTE* (1987) and the TIME-TRAVEL fantasy *The Navigator: A Medieval Odyssey* (1988), plus tv shows such as *Space Knights* (1988), seem to show that, in the visual media, NZ sf and fantasy must cross genre boundaries if they are to be viable. [MM]

NEXUS

US COMIC-book series (1981-91), 80 issues, published first by Capital Comics and later by First Comics, created by writer Mike Baron and artist Steve Rude. Set in the 25th century, when Earth is the political hub of the interstellar society known as the Cohesive Web and humanity just one of many intelligent races, the comic had as title character a superpowered agent of vengeance, driven to kill tyrants and criminals by targeting them with dreams. N explored the moral ambiguity of execution and the often

logical motivations behind the atrocities of those killed by the hero; but it also had a lighter side, much humour deriving from Nexus's problems in dealing with his homeworld, Ylum. N began with 3 black-and-white issues, changed to colour with #4, was cancelled by Capital with #6 and picked up by First Comics from #7 a year later, in 1985. Declining sales - partly due to long absences by Rude and the poor reception given to the fill-in artists - led to N's demise in 1991. First Comics have published reprints of #1-#26; spin-offs have been Nexus Legends (1989-91; 4 issues) and the one-shot Nexus Files. [RH]

NEY, FERENC
[r] HUNGARY.

NICHOLLS, PETER (DOUGLAS)
(1939-) Australian writer and editor, critic and historian of sf, resident in the UK 1970-88, co-editor of this volume. He became first Administrator of the SCIENCE FICTION FOUNDATION 1971-7, and edited its journal FOUNDATION: THE REVIEW OF SCIENCE FICTION 1974-8, part of this work being republished as Foundation Numbers 1-8: March 1972-March 1975 (anth 1978). PN ed Science Fiction at Large (anth 1976; vt Explorations of the Marvellous 1978), collecting essays written for a 1975 sf symposium by Philip K. DICK, Thomas M. DISCH, Alan GARNER, Ursula K. LE GUIN, himself and others. His major work, of which he was General Editor and John CLUTE Associate Editor, has been The Encyclopedia of Science Fiction (1979); vt The Science Fiction Encyclopedia US; rev 1993 with Clute and PN co-editors), for which he won the first Non-Fiction HUGO (1980), also winning a PILGRIM AWARD in that year for services to sf scholarship. The Science in Science Fiction (1983), ed PN and written with David LANGFORD and Brian M. STABLEFORD, is a study of sf's scientific content. Fantastic Cinema (1984; vt The World of Fantastic Films 1984 US), PN's first solo book, is a critical history of sf, horror and fantasy films; it was shortlisted for the British Film Institute Award for Best Film Book. PN has also worked as an academic in English literature (1962-8, 1971-7), scripted tv documentaries, been Harkness Fellow in Film-making (1968-70) in the USA, worked as a publisher's editor (1982-3), often broadcast film and book reviews on BBC Radio from 1974 and published much sf criticism - generally waspish but unsnobbish - in newspapers and magazines. [PN]See also: BIBLIOGRAPHIES; CINEMA; COLLECTIONS; CRITICAL AND HISTORICAL WORKS ABOUT SF; DEFINITIONS OF SF; PROTO SCIENCE FICTION; SF IN THE CLASSROOM; SENSE OF WONDER.

NICHOLS, LEIGH
Dean R. KOONTZ.

NICHOLS, ROBERT (MALISE BOWYER)
(1893-1944) UK poet and playwright whose lyrical talent did not survive the end of WWI; he wrote plays and verse epics thereafter. The Smile of the Sphinx (1920 chap), a fantasy, was later revised and assembled in Romances of Idea, Volume One: Fantastica: Being the Smile of the Sphinx and Other Tales of Imagination (coll 1923). The largest item in that volume is the book-length "Golgotha ? world war and assaulting capitalist dreams of the Earthly paradise; the

Wandering Jew (who is also a defiant Antichrist) appears and the Messiah is recrucified (off-stage). No second volume of the "Romances" appeared. Wings Over Europe: A Dramatic Extravaganza on a Pressing Theme (1929 US) with Maurice Browne (1881-1955), a play, features the son of a UK prime minister who gains the secret of atomic energy but is killed in an accident before he can do the harm he intends. [JC]Other work: Under the Yew (1928 chap), a marginal fantasy.

NICHOLSON, J.S.

[r] ANONYMOUS SF AUTHORS.

NICK CARTER

Nick CARTER.

NICOLSON, [Sir] HAROLD (GEORGE)

(1886-1968) UK diplomat, MP and writer, married to V. SACKVILLE-WEST, knighted in 1953. His sf novel Public Faces (1932), set in 1939, describes the international conflicts aroused through the UK knowing how to make atomic bombs, developing a ballistic missile, destroying part of Florida in error, and insisting on world nuclear disarmament. [JC]See also: END OF THE WORLD; NUCLEAR POWER; POLITICS; WEAPONS.

NICOLSON, MARJORIE HOPE

(1894-1981) US scholar and university professor, with a PhD from Yale. Her useful pioneering study in PROTO SCIENCE FICTION was Voyages to the Moon (1949) - subtitled "Discourse on Voyages to the Moon, the Sun, the Planets and Other Worlds generally, written by divers authors from the earliest times to the time of the First Balloon Ascensions made during the years 1783-84 with remarks on their sources and an epilogue about a few selected later works of this kind; to which is appended a Bibliography of 133 works up to the year 1784 with an added listing of 58 books and articles dealing with the theme itself and with related sciences". The works dealt with are primarily English. MHN was the second winner of the PILGRIM AWARD, in 1971. [PN]See also: CRITICAL AND HISTORICAL WORKS ABOUT SF; MOON.

NIEBO ZOWIET

Roger CORMAN; PLANETA BUR.

NIEKAS

US FANZINE (1962-current) ed from New Hampshire by Ed Meskys alone for the first 5 issues, when it was a small, personal fanzine, then with Felice Rolfe and Anne Chatland from #6, Chatland dropping out after #8. Under Meskys and Rolfe, N established itself as a large and variegated magazine containing a mixture of articles, but with particular emphasis on FANTASY. Al Halevy's "Glossary of Middle Earth" was first published in N. N ceased publication with #20 in 1968, then was revived with #21 in 1977. Currently Meskys, now blind, is listed as editor-in-chief and Mike Bastraw as editor and designer. Contributors to N have included Piers ANTHONY, Isaac ASIMOV, Anthony BOUCHER, Algis BUDRYS, Avram DAVIDSON, Philip K. DICK, Raymond Z. GALLUN, Jack GAUGHAN, Harry HARRISON, Sam MOSKOWITZ, Andre NORTON, Alexei PANSHIN, Jerry POURNELLE, Donald A. WOLLHEIM and Roger ZELAZNY. N won the HUGO for Best Fanzine in 1967. [PR/RH]

NIELSEN, NIELS E.

[r] DENMARK.

NIGHTBERT, DAVID F(RANKLIN)

(1948-) US writer who began publishing sf with his Stryker sequence-Timelapse (1988) and Clouds of Magellan (1991)-which engages its thrillerish protagonist first in a complicated TIME-PARADOX tale whose villain tricks him into falling in love with his own mother, and second in a traditional search for the long-gone ALIEN "Builders" responsible for an enormous artifact (BIG DUMB OBJECTS) called The Wheel. Strikezone (1989), an associational thriller, again shows DFN's competence but also a disturbing tendency to rifle his genres for material without showing much concern for establishing a bailiwick of his own. [JC]

NIGHT CALLER, THE

(vt Blood Beast from Outer Space) Film (1965). Armitage Films. Dir John Gilling, starring John Saxon, Maurice Denham, Patricia Haines, Alfred Burke. Screenplay Jim O'Connolly, from The Night Callers (1960) by Frank R. CRISP. 84 mins. B/w.Very-low-budget UK film, made with some genuine style by Gilling, who had previously made good horror films for Hammer. However, the story - an ALIEN aims to provide women (whom he finds by advertising for models) for genetic experiments back home on Ganymede - is pure pulp. The alien is tracked down by two SCIENTISTS (he strangles the female one, well played by Haines) who have come across his energy transmitter. The film should not be confused, under its US title, with the US NIGHT OF THE BLOOD BEAST (1958) or the British The Blood Beast Terror (1967). [PN]

NIGHT GALLERY

ROD SERLING'S NIGHT GALLERY.

NIGHT OF THE BIG HEAT

(vt Island of the Burning Damned) Film (1967). Planet. Dir Terence Fisher, starring Christopher Lee, Peter Cushing, Patrick Allen, Sarah Lawson, Jane Marrow. Screenplay Ronald Liles, Pip Baker, Jane Baker, based on The Night of the Big Heat (1959) by John LYMINGTON. 97 mins, cut to 94 mins. Colour.An island off the UK coast experiences a freak heatwave, during which there are a number of mysterious killings involving fire. The culprits turn out to be ALIENS who resemble giant fried eggs and are attracted to any source of heat. At the climax the few survivors are saved when a thunderstorm destroys the aliens: water, it seems, dissolves them. Lymington's pulp novel was certainly not rational sf, but it built up an atmosphere of claustrophobic tension which the film lacks. [JB]

NIGHT OF THE BLOOD BEAST

Film (1958). Balboa/AIP. Dir Bernard Kowalski, starring Michael Emmet, Angela Greene, John Baer. Screenplay Martin Varno, based on a story by Gene Corman. 65 mins. B/w.In this typically cheap 1950s Corman production (the executive producer was Roger CORMAN; his brother Gene produced it from his own story), a rocket pilot has cells implanted in his body by a deeply unconvincing-looking ALIEN who returns to Earth with him. Embryos grow inside him, making him the first (but not the last) effectively pregnant movie astronaut. Several plot twists suggest an attempt to cash

in on the popularity of The QUATERMASS XPERIMENT (1955). [JB/PN]

NIGHT OF THE COMET

Film (1984). Atlantic 9000/Film Development Fund. Dir Thom Eberhardt, starring Catherine Mary Stewart, Kelli Maroney, Robert Beltran, Mary Woronov. Screenplay Eberhardt. 100 mins cut to 95 mins for UK release. Colour. This likable exploitation movie, witty throughout, opens with the light from a comet (an idea stolen from John WYNDHAM's Day of the Triffids [1951]) destroying almost everybody by turning them into red dust or, in less severe cases, cannibal zombies. Two spunky teenage girls survive, team up with a truck driver, raid department stores for fashionable clothes, destroy the evil government agency that wants to kill them for serum, do disco dances and shoot submachine guns. As one might expect from the producers of Valley Girl (1984), the women are shown as self-reliant, intelligent, unmotivated and vain. [PN]

NIGHT OF THE LEPUS

Film (1972). Lyles/MGM. Dir William F. Claxton, starring Stuart Whitman, Janet Leigh, Rory Calhoun, DeForest Kelley. Screenplay Don Holliday, Gene R. Kearney, based on The Year of the Angry Rabbit (1964) by Russell BRADDON. 88 mins. Colour. Braddon's satirical novel was set in Australia, but the film dropped the SATIRE and switched the setting to Arizona. A test rabbit full of experimental hormones breaks loose and breeds with local rabbits. Suddenly hordes of gigantic carnivorous rabbits are attacking people, eating horses and demolishing houses. The film is endearing for its unintentional humour, enhanced by the commendably serious if wooden performances of all concerned, rabbits included. [JB/PN] See also: MONSTER MOVIES.

NIGHT OF THE LIVING DEAD

1. Film (1968). Image 10 Productions/Walter Reade-Continental. Dir George A. ROMERO, starring Duane Jones, Judith O'Dea, Karl Hardman, Keith Wayne. Screenplay John A. Russo. 96 mins, cut to 90 mins. B/w. This unrelenting and downbeat HORROR film, Romero's astonishing debut, tells of a horde of walking, cannibalistic corpses who lay siege to an isolated house. Their revival is explained by "space radiation" brought to Earth on an aborted rocket launch, but the absurdity of this barely detracts from the concentrated Gothic PARANOIA of the action, whose intensity won the film a cult following, especially from those who saw the savagery - and helplessness - of both ordinary people and zombies (whose bite infects the victim with zombism) as symbolic of the horrors of the Vietnam War. NOTLD was independently financed and made during weekends by a small group based in Pittsburgh. The sequels, making up a Living Dead trilogy, are DAWN OF THE DEAD (1978) and DAY OF THE DEAD (1985). 2. Film (1990). 21st Century/George Romero/Menahem Golan/Columbia. Dir Tom Savini, starring Tony Todd, Patricia Tallman, Tom Towles, McKee Anderson, William Butler, Katie Finneran. Screenplay George ROMERO, based on the 1968 screenplay by Romero and Russo. 89 mins. Colour. It was a risky and possibly cynical undertaking to remake, in colour, the 1968 b/w classic. However, while the original remains the stronger, this was an accomplished feature-film debut for Savini, best known for his ghoulish special make-up on Romero's zombie movies. Generally the story-line of the original is followed closely, but

there is a greater emphasis on the female character, Barbara (Tallman), who does not succumb so quickly to frozen fear as did her original. The 1968 film made a virtue of its ramshackle production values, with a cinema verite style resulting from a shoestring budget; the greater smoothness of the remake makes it strangely less compelling - more obviously a movie. NIGHT OF THE SILICATES
ISLAND OF TERROR.

NIGHT SHADOWS
MUTANT.

NIGHT STALKER, THE
KOLCHAK: THE NIGHT STALKER.

NIGHT STRANGLER, THE
KOLCHAK: THE NIGHT STALKER.

NIGHT THAT PANICKED AMERICA, THE
Made-for-tv film (1975). ABC TV. Dir Joseph Sargent, starring Vic Morrow, Cliff De Young, Michael Constantine, Paul Shenar. Screenplay Nicholas Meyer, Anthony Wilson, based partly on the text of the original 1938 radio play WAR OF THE WORLDS by Howard Koch. 100 mins, cut to 78 mins. Colour. The film recreates the 1938 Orson Welles broadcast of an updated version of H.G. WELLS's THE WAR OF THE WORLDS (1898) which, due to its news-bulletin format, caused many US citizens to believe that a Martian invasion was actually taking place. When the film concentrates on events inside the broadcast studio it is fascinating, conjuring up a realistic picture of work in 1930s US RADIO; but when it shows the resulting panic it degenerates into a routine DISASTER movie with hackneyed characters reacting in predictable ways. 1984
Film (1955). Holiday Film Productions. Dir Michael Anderson, starring Edmond O'Brien, Michael Redgrave, Jan Sterling, Donald Pleasence. Screenplay William P. Templeton, Ralph Bettinson, based on NINETEEN EIGHTY-FOUR (1949) by George ORWELL. 91 mins. B/w. After the success of a 1954 BBC TV production of NINETEEN EIGHTY-FOUR, scripted by Nigel KNEALE and starring Peter Cushing (the second - live - performance won the biggest UK tv audience since the Queen's coronation) it was inevitable that a film would follow. But, for all its technical limitations, the BBC adaptation was superior to the lifeless film, which starred a badly miscast O'Brien as Winston Smith; Anderson has a lame track record with sf (LOGAN'S RUN). This version of the celebrated totalitarian nightmare

focuses on the love affair between Smith and Julia, and leaves Orwell's grim SATIRE foggy and simplified. Two endings were shot, one for the USA and one for the UK. The former followed the book, with Winston and his lover successfully brainwashed and now devoted supporters of Big Brother; the UK version had them overcoming their conditioning, defiantly dying in a hail of bullets, and incidentally vitiating Orwell's theme. For the 1984 remake NINETEEN EIGHTY-FOUR. [JB/PN]

NINETEEN EIGHTY-FOUR

Film (1984). Umbrella-Rosenblum/Virgin Cinema Films. Dir Michael Radford, starring John Hurt, Richard Burton, Suzanna Hamilton, Cyril Cusack. Screenplay Radford, Jonathan Gems, based on NINETEEN EIGHTY-FOUR (1949) by George ORWELL. 110 mins. Colour. This second film version (1984 for the first) is better acted and more intelligent than its predecessor, but still stresses the romantic interest, substituting an orthodoxly liberal lovers-against-the-system sadness for Orwell's sheer savagery and irony. It was eight weeks into shooting before Burton was cast as the treacherous O'Brien, Smith's torturer, and he seems a little cut off from the rest of the film. [PN]

1990

UK tv serial (1977-8). BBC TV. Prod Prudence Fitzgerald. Regular cast included Edward Woodward, Barbara Kellerman, Robert Lang, Tony Doyle, Lisa Harrow. Most episodes written Wilfred Greatorex (1921-), who devised the series, or Edmund Ward. 16 55min episodes. Colour. Reflecting the fears of the middle classes in the 1970s, this serial, set in a socialist UK of 1990, warns of what could happen if the welfare state continued in its present direction. The country is run by the PCD, an all-powerful bureaucracy that incorporates the trade-union movement within its machinery; the only people free of its control are a select elite possessing Privilege Cards. The story concerns the efforts of a lone journalist (Woodward) to outwit the system in such ways as helping people to escape to the USA, still a bastion of freedom. 1990's political statement, which Orwell made much more powerfully in NINETEEN EIGHTY-FOUR (1949), plays second fiddle to the thriller elements. The novelization by Maureen Gregson (with Greatorex also credited) is 1990 * (1977). [JB]

1990: BRONX WARRIORS

1990: I GUERRIERI DEL BRONX.

1990: I GUERRIERI DEL BRONX

(vt Bronx Warriors; vt 1990: Bronx Warriors) Film (1982). Deaf Film International. Dir Enzo G. Castellari, starring Mark Gregory, Vic Morrow, Chris Connelly, Stefania Girolami, Fred Williamson. Screenplay Castellari, Dardano Sacchetti, Elisa Livia Briganti. 84 mins. Colour. Inspired by Walter Hill's *The Warriors* (1979) and John CARPENTER's *ESCAPE FROM NEW YORK* (1981), this Italian film is set in a future-Hell New York overrun by street gangs, with a psychotic law-enforcer (Morrow) trying to rescue a corporate princess (Girolami) from a biker hero named Trash (Gregory). Essentially silly, it has three exploitation veterans (Morrow, Connelly, Williamson) to make up for its pouting hero, and throws in an array of intriguing minor characters - a sadomasochist Morticia-Addams figure, a

tap-dancing gang of killer Broadway chorines, subway troglodytes - and some pleasantly melodramatic excesses. Its sequel is *Fuga dal Bronx* (1983; vt *Bronx Warriors 2*), and Castellari also made a similar post- HOLOCAUST actioner, inspired by *MAD MAX 2* (1981), *I nuovi barbari* (1983; vt *The New Barbarians*; vt *Warriors of the Wasteland*). The slew of similar Italian cheapies included *L'ultimo guerriero* (1983; vt *The Final Executioner*), *Bronx lotta finale* (1984; vt *Endgame*) and *Il guerriero del mondo perduto* (1984; vt *Warrior of the Lost World*). [KN]

NIPPON CHINBOTSU

(vt *The Submersion of Japan*; vt *Tidal Wave US*) Film (1973). Dir Shiro Moritani, starring Keiju Kobayashi, Hiroshi Fujioka, Tetsuro Tamba, Ayumi Ishida. Screenplay Shinobu Hashimoto, based on *Nippon Chinbotsu* (1973; cut trans as *Japan Sinks 1976*) by Sakyo KOMATSU. 140 mins, cut to 110 mins, then to 81 mins. Colour. This film is more sophisticated than the usual Japanese DISASTER or MONSTER MOVIE, and involves natural rather than fantastic forces. Changes within the Earth's core result in the chain of islands which make up Japan sinking beneath the ocean over a period of two years. Other countries are not eager to accept millions of homeless Japanese citizens, although Australia offers its Northern Territory as a new Japanese homeland. The film has been praised for the elegiac feeling aroused by the dying of Japan and her culture, but not especially for its special effects (by Teruyoshi Nakano), which though spectacular are less than wholly convincing. *Tidal Wave* is the title of the tawdry 1974 version released to universal execration by Roger CORMAN's New World company. It was cut to 81 mins and little more than the special effects remains; it includes specially shot US footage written and directed by Andrew Meyer and starring Lorne Greene and Rhonda Leigh Hopkins. [JB/PN]

NISBET, HUGH A.

[r] ROBERT HALE LIMITED.

NISBET, HUME

(1849-1921) Scottish writer and illustrator, in England or Australia from 1865, author of at least 45 novels, some of which are fantasy or sf, beginning with *The "Jolly Roger"* (1892), which features a supernatural wind and a hidden pirate island. In *Valdmer the Viking: A Romance of the Eleventh Century by Sea and Land* (1893) Vikings find a technologically superior LOST WORLD in the Arctic north of North America. *The Great Secret: A Tale of Tomorrow* (1895), like much of HN's work, mixes genres, here combining posthumous spirits and a this-worldly undersea excursion to ATLANTIS. *The Empire Builders* (1900) sets its lost world in Africa. [JC] Other works: *The Haunted Station, and Other Stories* (coll 1893); *Stories Weird and Wonderful* (coll 1900); *A Crafty Foe* (1901); *A Colonial King* (1905).

NIVEN, LARRY

Working name of US writer Laurence van Cott Niven (1938-). He was born in California, where he set many of his stories, and gained a BA in mathematics from Washburn University, Kansas. From his first publication, "The Coldest Place" for *If* in 1964, he set his mark on the US sf field, winning four short-fiction HUGOS, and both Hugo and NEBULA in 1971 for

RINGWORLD (1970), a capstone title in his seminal Tales of Known Space sequence, which he began with "The Coldest Place" and has added to ever since. In the novels and stories of this sequence, and in some of his other work, he was seen for some time as HARD SF's last best hope; and there can be no doubt that hard-sf writers dominant in the 1980s, like Greg BEAR, and some of those reaching for eminence in the 1990s, like Paul J. MCAULEY and Roger MacBride ALLEN, owe much to the scope of LN's inventiveness, the sense he conveys of technological ingenuity as being ultimately beneficial, and his cognitive exuberance. The Tales of Known Space, a title LN himself selected for the sequence, is a wide-ranging, complex, unusually well integrated future HISTORY which, within an essentially optimistic and technophilic frame, provides an explanatory structure for the expansion of humanity into space, one notable from the first for the complexity of the Universe into which it introduces the burgeoning human race. ALIEN races - not normally found in the first generation of future histories, those created in ASF under the influence of the homocentric John W. CAMPBELL Jr - have dominated Known Space for eons, beginning with the Thrintun, extinct a billion years ago with the exception of one deadly Thrint held in a stasis field (one of LN's numerous terminological coups) and released with deadly effect in his first novel, World of Ptavvs (1966). Millions of years closer to the present, humanity's ancestors, the Pak, spread their seed through the local arm of the Galaxy. Protectors are the "adult" form of Homo sapiens, the yam necessary to transform humans into full-grown Paks not being available on Earth; the Pak protagonist of Protector (1967 Gal as "The Adults"; exp 1973), set in human times, has travelled from afar at terribly slow sublight speeds to take care of us and protect us against other Protectors who find our slightly evolved species loathsome. The novel spans many years; its complex, casually-alluded-to background demonstrates the value of a coherent sequence in buttressing SPACE-OPERA conventions, though at the same time, as LN himself once admitted, the Universe-changing plot of Protector made it difficult to maintain internal consistency within Known Space stories set after the Pak incursion. Less dangerously, A Gift From Earth (1968) sticks to less transformative material, being set on a planet colonized from Earth whose inhabitants, descended from the ship's lowly passengers, rebel against the ruling caste descended from its crew; the story is interfused with arguments for personal and entrepreneurial liberty whose connection, as in much US sf, is taken as axiomatic. Centuries of relative peace follow, until the start of the Man-Kzin Wars, treated by LN as a sort of sideshow; the relevant stories were delegated mainly to others in four SHARED-WORLD anthologies, The Man-Kzin Wars * (anth 1988), The Man-Kzin Wars II * (anth 1989), III * (anth 1990), IV * (anth 1991), V (anth 1992) and VI (anth 1994). Finally, the tales and novels of Known Space culminated in RINGWORLD and its immediate sequel Ringworld Engineers (1979), which feature the alien Puppeteers, who are fleeing the explosion at the Galaxy's core which will within some millennia make space uninhabitable, and who enlist human aid to explore the eponymous BIG DUMB OBJECT - a million miles wide, 600 million miles around - which circles a distant star. This ring, created by Pak ancestors, houses much life and serves as a final home for Teela Brown, whose genetically programmed good luck is the culmination of a long

and secret Puppeteer breeding programme; the inevitability of her good fortune might have significantly reduced the chance of LN's writing any successful Known Space stories set after her maturity, which is perhaps why she is killed off in the sequel. In the interstices of this joyfully complicated galactic structure, humanity enters space, solves problems in BIOLOGY and GENETIC ENGINEERING, benefits from local TELEPORTATION and the discovery of a FASTER-THAN-LIGHT hyperdrive for interstellar travel, copes with CORPSICLES and organlegging and a myriad other new challenges, and by the beginning of the fourth millennium has reached a mature plateau.

Titles in which Known Space activities are dramatized include: NEUTRON STAR (coll 1968); The Shape of Space (coll 1969), much of which is re-assembled in Convergent Series (coll 1979); All the Myriad Ways (coll 1971); Inconstant Moon (coll 1973 UK; cut 1974), which was assembled from The Shape of Space and All the Myriad Ways; Tales of Known Space: The Universe of Larry Niven (coll 1975), which includes explanatory charts; and The Long ARM of Gil Hamilton (coll of linked stories 1976) and its immediate sequel The Patchwork Girl (1980); and Crashlander (coll 1994). Most of LN's first decade as a writer was occupied with Known Space, with the exception of the tales assembled in The Flight of the Horse (coll 1973)-including the 5 stories of the Svetz series of TIME-PARADOX comedies - A Hole in Space (coll 1974) and, with David GERROLD, The Flying Sorcerers (1971), a tale of a low-tech people who think that high technology is MAGIC. His next - and commercially his most successful move - was to collaborate with Jerry POURNELLE on THE MOTE IN GOD'S EYE (1974), a giant, spectacular SPACE-OPERA epic with all the trappings-interstellar shenanigans, aliens with unhealthy proclivities they must keep hidden, galactic aristocracies, intricate solutions to hard-sf problems . . . The book is essentially a development of Pournelle's CoDominium series, and may fruitfully be read in that context. Several critics have taken the book to task for what they regard as its human chauvinism, the discrepancy between its imaginative plot and its old-fashioned characterization, and its conservative political stance; but the combination of Pournelle's ability to shape novel-length plots (an ability his partner has always lacked) and LN's brilliant conceptual knack make for an enticing book. The sequel, The Gripping Hand (1993; vt The Moat Around Murcheson's Eye 1993 UK), lacks the drive of the original, concentrating on heavy-handed spacewar shenanigans which have been fatally overtaken by events, as the problem of the Moties's breeding pattern is solved before any of the battles actually occur. Further collaborations with Pournelle ensued.

Inferno (1975) reworks DANTE ALIGHIERI's Inferno, an act notable for its apparently conscious vulgarity, interesting in its theological explanation of evil - that God's "sadism" is in fact designed to encourage self-help among the damned - and amusing in its placing of anti-NUCLEAR-POWER propagandists in Hell. Lucifer's Hammer (1977) is a long, ambitious DISASTER novel which sophisticatedly marries sf techniques with the bestseller idiom familiar from the many disaster films of the early 1970s. In Oath of Fealty (1981) a Los Angeles arcology - without the aid of an ineffective, bureaucratic government - defends its wealthy inhabitants from ECOLOGY freaks and terrorists. The internal government of this arcology being a conveniently infallible hierarchy culminating in one brilliant man in constant communication with a great COMPUTER, no

significant dissent is necessary, or heard. Footfall (1985), about an alien INVASION of Earth, became an example of RECURSIVE SF through its enlisting of a readily identifiable group of sf writers to brainstorm solutions to the threat from space. The Legacy of Heorot (1987 UK), with Pournelle and Steven BARNES, replays the Beowulf saga on a colony planet: the natives of the planet have the unenviable role of the dragon. Fallen Angels (1991), with Pournelle and Michael FLYNN - in which the US Government betrays its own astronauts - once again treats environmentalists as villains in a planetary drama of the NEAR FUTURE. LN has increasingly made use of collaborators; in fact, in later years he has written only 4 solo novels outside the Known Space canon: A World Out of Time (fixup 1976), a complexly contemplative look through one protagonist's eyes at millions of years of human history; The Magic Goes Away (1977), a fantasy in which MAGIC is treated as a non-renewable resource; and The Integral Trees (1984) and its immediate sequel The Smoke Ring (1987), both linked to A World Out of Time. The Dream Park sequence - Dream Park (1981), The Barsoom Project (1989) and Dream Park: The Voodoo Game (1991 UK; vt The California Voodoo Game 1992 US), all with Barnes - is set in a GAME-WORLD environment (see also VIRTUAL REALITY) in the 21st century, with the eponymous corporation involved in running complex role-playing games as well as enterprises in the real world and on Mars. Other collaborations include The Descent of Anansi (1982) and Achilles' Choice (1991), both with Barnes. LN's late collections - like Niven's Laws (coll 1984), Limits (coll 1985), N-Space (coll 1990), Playgrounds of the Mind (coll 1991) and Bridging the Galaxies (coll 1993) - have tended increasingly to re-sort earlier material. It cannot be denied that the fresh inventive gaiety characteristic of LN's early work has not survived the passing of the years, nor that the political agendas (POLITICS) exposed in the collaborations have become more rancorous over the same period. He will perhaps be best remembered for the Tales of Known Space, the most energetic future history ever written, for his bright and profligate technophilia, for his astonishingly well conceived aliens, and for his early joy. [JC]Other works: The Time of the Warlock (coll 1984), fantasies; The Magic May Return * (anth 1981) and More Magic * (anth 1984), shared-world successor anthologies to The Magic Goes Away. About the author: The Many Worlds of Larry Niven (last rev 1989 chap) by Chris DRUMM. NOBEL, PHIL

R.L. FANTHORPE.

NO BLADE OF GRASS

Film (1970). Symbol/MGM. Dir Cornel Wilde, starring Nigel Davenport, Jean Wallace, Anthony May, Lynne Frederick. Screenplay Sean Forestal, Jefferson Pascal, based on *The Death of Grass* (1956) by John CHRISTOPHER. 96 mins cut to 80 mins. Colour. Cereal crops all die and society breaks down. A family journeys across chaotic England, battling armed groups of marauders who are searching for food, and reach sanctuary in the Lake District. Wilde had previously dealt well with the stripping away of civilized instincts in *The Naked Prey* (1966), so this story must have attracted him, but NBOG has an amateurish quality, reinforced by poor acting, though the depiction of anarchy is zestful. The film is disjointed, partly due to drastic cutting before release. [JB/PN] See also: HOLOCAUST AND AFTER; PANIC IN YEAR ZERO.

NOBLE, MARK

[r] Bob STICKGOLD.

NOEL, ATANIELLE ANNYN

(1947-) Now the legal name of the US writer who, under her earlier legal name, Ruth S(wycaffer) Noel, published 2 studies of J.R.R. TOLKIEN: *The Mythology of Middle-Earth* (1977) and *The Languages of Tolkien's Middle-Earth* (1980). Her 3 novels as AAN rather mercilessly tumble together fantasy, sf and thriller modes into spoof plots, through which some excitements emerge willy-nilly. *The Duchess of Kneedeep* (1986) is a humorous fantasy with ROBOTS. *Speaker to Heaven* (1987), set in post-HOLOCAUST California, conflates PSI POWERS and MAGIC. *Murder on Usher's Planet* (1987), evoking Edgar Allan POE, sends its investigator protagonists to a planet containing a secret, which they uncover. [JC]

NOEL, STERLING

(1903-1984) US writer and journalist, author of 2 sf novels: *I Killed Stalin* (1951), a NEAR-FUTURE thriller in which WWII is staved off by the deed described in the title, and *We who Survived* (1959), which depicts the life of the survivors of the sudden onslaught of a new ice age. [JC]

NO ESCAPE

(vt Penal Colony; vt The Prison Colony; vt Escape From Absalom) Film (1994). Pacific Western/Allied Filmmakers/Columbia Tristar. Prod Gale Ann HURD; dir Martin Campbell; screenplay Michael Gaylin, Joel Gross, based on *The Penal Colony* (1987) by Richard Herley; starring Ray Liotta, Lance Henriksen, Stuart Wilson, Kevin Dillon, Kevin J. O'Conner, Don Henderson, Ian McNeice, Jack Shepherd, Michael Lerner and Ernie Hudson. 115 mins. Colour. Curiously, this is one of two future-privatised-prison movies released in 1993/94 and shot in Australia, the other being the fractionally better FORTRESS. Despite Hurd's impeccable credentials as an independent producer of action sf movies, this is a messy internationalised adaptation of a very British original novel. Apart from the first five minutes, there is nothing futuristic about this world of 2022 (1997 in the novel) in which private corporations run prisons, and the hardest cases are dumped on a high-security island (actually Queensland rainforest) to rot. Two tribes exist on the island, the

civilised Insiders and the barbarian and psychotic Outsiders. (Among the myriad visible sources are ESCAPE FROM NEW YORK, LORD OF THE FLIES and MAD MAX.) Captain Robbins (Liotta), imprisoned for killing his superior officer as a protest against the slaughter by US forces of 342 women and children, is the hero who battles the evil Outsiders, helps the Insiders, and eventually escapes to tell the world about governmental cover-ups, corrupt prisons and wartime slaughters. Narrative glitches abound, and little attempt is made to confront questions of future penology; there is, however, a genuine bid to characterise the two societies that have arisen on the island, and there are surprisingly contemplative moments in what is otherwise an adolescent action POW escape movie. But how could the corporation running this corrupt system possibly make money from it, since its elaborate security systems are clearly incredibly expensive? [PN]

NOLAN, WILLIAM F(RANCIS)

(1928-) US writer and editor who trained and for a time practised as a commercial artist; he also raced cars, publishing several books on the subject. He became a full-time writer in 1956. Of his 55 books since then, at least 30 have related directly to sf or fantasy. WFN first became active in sf as a fan, cofounding the San Diego Science Fantasy Society, editing a fanzine, the Rhodomagnetic Digest, publishing The Ray Bradbury Review, and serving as managing editor of #1-#3 of GAMMA (1963-4). He published his first sf story, "The Joy of Living", in If in 1954, subsequently writing some short stories and criticism as by Frank Anmar and F.E. Edwards. His first sf book, Impact 20 (coll 1963), assembles some of his early work. His second, for which he remains best known, Logan's Run (1967) with George Clayton JOHNSON, begins the Logan sequence, which continued with Logan's World (1977) and Logan's Search (1980), both by WN alone; all 3 are assembled as Logan: A Trilogy (omni 1986). The premise of the books is melodramatic: after a strange act of nuclear terrorism a youth culture takes over, instituting the rule that all those over 21 must be killed to combat OVERPOPULATION; the protagonist, first an enforcer and then posing as a fugitive, escapes Earth with a genuine female rebel, returning (now authentically rebellious) in the later volumes to confront the COMPUTER controlling Earth. The first volume was unsuccessfully filmed as LOGAN'S RUN (1976) and adapted as a short-lived tv series. Written in part as an homage to Dashiell Hammett's Sam Spade (WFN's Hammett: A Life on the Edge [1983] is an effective biography), the Sam Space sequence, about an sf detective, comprises Space for Hire (1971), Look Out for Space (1985) and 3 for Space (coll 1992). WFN's later short fiction, some of it of high quality, was assembled in Alien Horizons (coll 1974), Wonderworlds (coll 1977 UK) and Things Beyond Midnight (coll 1984). WFN has also been active as an anthologist, mostly of reprinted material, though The Future is Now (anth 1970) assembles original stories. He also compiled a detailed bibliography of Ray BRADBURY, with copious annotations: The Ray Bradbury Companion (1975). [JC/PN] Other works: The Work of Charles Beaumont (1985 chap; rev 1991 chap); How to Write Horror Fiction (1990); Helltracks (1991), a horror novel; Blood Sky (1991 chap); Helle on Wheels (1993). As Editor: The Fiend in You (anth 1962) with Charles BEAUMONT, WFN anon; Man Against Tomorrow (anth 1965); The Pseudo-People (anth 1965; vt Almost Human 1966 UK); 3 to the Highest Power (anth 1968); A Wilderness of Stars

(anth 1969); A Sea of Space (anth 1970), no connection to the Sam Space books; The Human Equation (anth 1971); Science Fiction Origins (anth 1980) with Martin H. GREENBERG; Urban Horrors (anth 1990) with Greenberg; The Bradbury Chronicles (anth 1991) with Greenberg. About the author: The Work of William F. Nolan: An Annotated Bibliography ?
Clarke (R. REGINALD) and James Hopkins (WFN himself). See also: ANDROIDS.

"NONAME"

House name for the Frank Tousey publishing firm, used in the late 19th century for boys' fiction in several genres, including mysteries and Westerns as well as sf. Of most sf interest were the Frank Reade, Jr. tales (FRANK READE LIBRARY; Luis SENARENS) and the slightly later Jack Wright tales (Luis SENARENS). Authors whose sf work appeared as by "Noname" include Harold Cohen (1854-1927), Francis Worcester DOUGHTY, Senarens and possibly Cecil Burleigh and Frederic Van Rensselaer Dey (1861-1933). [EFB]

NOON, JEFF

(1957-) UK writer whose first novel, Vurt (1993), places in NEAR-FUTURE Manchester a CYBERPUNK tale, complete with Mean-Streets idiom and a driven (though occasionally tangled) narrative line; Vurt itself is a reality-shifting drug. The novel won the 1994 ARTHUR C. CLARKE Award. A second novel, Pollen (1995), has similar virtues. [JC]

NOONE, EDWINA

Michael AVALLONE.

NORBERT, W.

Norbert WIENER.

NORDEN, ERIC

(? -) US writer who began publishing work of genre interest with "The Final Quarry" for FSF in 1970, assembling his short work in Starsongs and Unicorns (coll 1978). His novel, The Ultimate Solution (1973), depicts a Nazi-dominated New York (HITLER WINS), a state of affairs made possible by the assassination of Franklin Delano Roosevelt in 1933, as a consequence of which the USA remained too long a noncombatant in WWII. Slavery has been reinstated. [JC]

NORMAN, BARRY

(1933-) UK journalist, tv personality and writer whose sf novel is End Product (1975), a NEAR-FUTURE story in which Blacks are lobotomized at birth and provide the civilized world with ample meat. The allegorical and political messages of the novel, though highly loaded, tend to clash. [JC]

NORMAN, ERIC

(? -) US writer whose routine sf novel The Under-People (1969) is not to be confused with The Underpeople (1968) by Cordwainer SMITH. [JC]

NORMAN, JOHN

Pseudonym used for his fiction by US writer and philosophy teacher John Frederick Lange Jr (1931-). His fiction mainly comprises a series of borderline-sf PLANETARY ROMANCES set on Gor, a planet sharing Earth's orbit but - because it is on the other side of the Sun - always invisible

to us. This astrophysical impossibility is never argued in the texts, which might consequently read as either antiquarian sf or fantasy were it not that the development of the series precludes any reading of Gor as an exercise in sf nostalgia while at the same time demonstrating its great remove from category FANTASY. In Tarnsman of Gor (1966), as the series begins, Earthman Tarl Cabot abruptly finds himself on Gor, where - after the fashion of Edgar Rice BURROUGHS's Barsoom novels - he undergoes numerous adventures, alarms, fights and romances of a SWORD-AND-SORCERY nature. However, as the series progresses, the plots begin to revolve around a singularly invariant sexual fantasy in which a proud woman-often abducted for the purpose from Earth - is humiliated, stripped, bound, beaten, raped, branded and enslaved, invariably discovering in the process that she enjoys total submission to a dominant male, and can derive proper sexual satisfaction only from this regime. Later volumes feature interminable discussions which end, invariably, in an affirmation of the Gorean status quo. The sequence, now terminated, includes: Outlaw of Gor (1967) and Priest-Kings of Gor (1968), both assembled with Tarnsman of Gor as Gor Omnibus (omni 1972 UK); Nomads of Gor (1969); Assassin of Gor (1970); Raiders of Gor (1971); Captive of Gor (1972); Hunters of Gor (1974); Marauders of Gor (1975); Tribesmen of Gor (1976); Slave Girl of Gor (1977); Beasts of Gor (1978); Explorers of Gor (1979); Fighting Slave of Gor (1980); Rogue of Gor (1981); Guardsman of Gor (1981); Savages of Gor (1982); Blood Brothers of Gor (1982); Kajira of Gor (1983); Players of Gor (1984); Mercenaries of Gor (1985); Dancer of Gor (1985); Renegades of Gor (1986); Vagabonds of Gor (1987); and Magicians of Gor (1988). Imaginative Sex (1974), a nonfiction text, details some Gor-like games for Earthlings. JN's two out-of-series novels are Ghost Dance (1969) and Time Slave (1975). Unless the new Telnarian Histories sequence - beginning with The Chieftain (1991), The Captain (1993) and The King (1993) - strikes a new note, JN will be remembered - and widely detested - for Gor alone. [JC]See also: DAW BOOKS; SEX.

NORMYX

Norman DOUGLAS.

NORST, JOEL

Kirk MITCHELL.

NORTH, ANDREW

Andre NORTON.

NORTH, DAVID

(? -) US writer whose Time Warriors sequence of military-sf adventures - Time Warriors #1: Fuse Point (1991), #2: Forbidden Region (1991) and #3: The Guardian Strikes (1991) - sends its protagonist, accompanied by a barbarian named Brom, back and forth through time into various conflicts.

[JC]

NORTH, ERIC

Pseudonym used by Australian novelist Charles Bernard Cronin (1884-1968) for his sf work; he used other pseudonyms in other genres. As EN he published sf in Australian journals such as the Melbourne Herald and The Bulletin. "The Satyr" (1924 Melbourne Herald; vt "Three Against the Stars"

Argosy 1938 US) tells of invaders from another DIMENSION; it was not published in book form. The eponymous villain of Toad (1924 Melbourne Herald as "The Green Flame"; 1929 UK) has invented an ingredient which sets water aflame, and threatens to use it against first Australia and then the world. The Ant Men (1955 US) is a LOST-WORLD juvenile about giant intelligent ants. [JC]

NORTH, VALENTINE

[s] Thomas P. KELLEY.

NORTON, ANDRE

Initially the working name of Alice Mary Norton (1912-), but for some years now her legal name. A librarian for two decades before turning to full-time writing, she was one of the few sf figures of any stature to enter the field via CHILDREN'S SF, and, though much of her work is as adult in theme and difficulty as most general sf, she was for many years primarily marketed as a writer for children and adolescents. In the 1970s and 1980s, however, as her work changed in emphasis from sf to fantasy and as her popularity continued to grow, new novels and reprints alike were released primarily into the general market. AN began to publish in the 1930s with *The Prince Commands* (1934) which, like her slightly later WWII espionage trilogy - *The Sword is Drawn* (1944), *Sword in Sheath* (1949; vt *Island of the Lost* 1953 UK) and *At Swords' Point* (1954) - was not of direct genre interest. She came to sf proper only in 1947 with "The People of the Crater" for *Fantasy Book*, as by Andrew North, a pseudonym she used also for 3 novels; the story was included in *Garan the Eternal* (coll 1972) which, along with *High Sorcery* (coll 1970), *The Many Worlds of Andre Norton* (coll 1974; vt *The Book of Andre Norton* 1975), ed Roger ELWOOD, and *Perilous Dreams* (coll 1976), assembled most of her relatively small output of short fiction. AN's career can, very roughly, be divided into two equal periods: the two decades from 1950 when she concentrated on sf novels, most of them gathered into series which were in turn treated as loose units in a broadly conceived common galactic superseries; and the two decades from 1970 when, after the success of the *Witch World* SCIENCE-FANTASY sequence, she produced numerous further fantasies. Throughout both periods, her most typical protagonists have been young women or men who must undergo some form of rite de passage into a sane maturity; in so doing, they characteristically discover that the true nature of the Universe lies not in what it might become (hence the lack of CONCEPTUAL-BREAKTHROUGH novels in her oeuvre) but in its history, and in the talismans and icons associated with that history. The Universe revealed in these numerous books - from her first sf novel, *Star Man's Son, 2250 A.D.* (1952; vt *Daybreak-2250 A.D.* 1954 dos; vt *Star Man's Son* 1978), to her most recent - is a colourful, complex and rewarding environment for her typical protagonists to come to terms with; though any advanced technology there deployed- FASTER-THAN-LIGHT space travel, for instance, and at one time or another almost every other instrument of SPACE OPERA - serves mainly to add verisimilitude to AN's romantic SENSE OF WONDER, and to a style in which science and TECHNOLOGY are in fact treated perfunctorily (if at all) and more often than not as inimical to humanity and its friends. Close - sometimes telepathic - rapports might

exist among people, or between human and beast as in *Catseye* (1961), but rarely or never are human beings called to shape their lives in the service of transcendent or objective goals. AN's instincts, in other words, have never been those of the natural sf author; however, in the sense that her books never violate her audience's legitimate expectations, AN has always been an orthodox writer. The sf novels, mostly told against the shared galactic backdrop, were widely varied, featuring a multitude of space-opera themes and plots, along with several comparatively intimate studies of humans and ALIENS and beasts, and their relationships under various circumstances. Series include: the Central Control sequence, comprising *Star Rangers* (1953; vt *The Last Planet* 1955 dos) and *Star Guard* (1955); the Astra or Company of Pax sequence, comprising *The Stars are Ours!* (1954) and *Star Born* (1957); the Dane Thorson or Solar Queen sequence, comprising *Sargasso of Space* (1955 as by Andrew North; 1969 as by AN), *Plague Ship* (1956 as by North; 1969 as by AN), *Voodoo Planet* (1959 dos as by North; 1968 as by AN), *Postmarked the Stars* (1969) and *Redline the Stars* (1993) with P.M. GRIFFIN; the Blake Walker sequence, comprising *The Crossroads of Time* (1956 dos) and *Quest Crosstime* (1965; vt *Crosstime Agent* 1975 UK); the Ross Murdock sequence, comprising *The Time Traders* (1958), *Galactic Derelict* (1959), *The Defiant Agents* (1962), *Key out of Time* (1963) and *Firehand* (1994) with P.M.Griffin; the Hosteen Storm sequence, comprising *The Beast Master* (1959; cut 1961) and *Lord of Thunder* (1962); the Forerunner sequence, comprising *Storm over Warlock* (1960), *Ordeal in Otherwhere* (1964), *Forerunner Foray* (1973), *Forerunner* (1981) and *Forerunner: The Second Venture* (1985); the Janus sequence, comprising *Catseye* (1961), *Judgment on Janus* (1963) and *Victory on Janus* (1966); the Moon Singer sequence, comprising *Moon of Three Rings* (1966), *Exiles of the Stars* (1971), *Flight In Yiktor* (1986) and *Dare to Go A-Hunting* (1990); the Murdoc Jern sequence, comprising *The Zero Stone* (1968) and *Uncharted Stars* (1969); and the Star Ka'at sequence for younger readers, all written with Dorothy Madlee (1917-1980), comprising *Star Ka'at* (1976), *Star Ka'at World* (1978), *Star Ka'ats and the Plant People* (1979) and *Star Ka'ats and the Winged Warriors* (1981). Though begun in the 1960s, the Witch World sequence is essentially FANTASY - though it often uses such sf tropes as dimensional gates and force fields - and lacks any connection with the shared background; it soon became both her best known series and a model for her later work. Set centrally in the matriarchal land of Estcarp on an otherwise unnamed planet, and pleasingly sensitive to FEMINIST issues, these tales engage personable young protagonists in SWORD-AND-SORCERY adventures which tend to end well. Various connected, the series titles include *Witch World* (1963), *Web of the Witch World* (1964) and *Year of the Unicorn* (1965), all 3 assembled as *Annals of the Witch World* (omni 1994), plus *Three Against the Witch World* (1965), *Warlock of the Witch World* (1967), *Sorceress of the Witch World* (1968), *Spell of the Witch World* (coll 1972), *The Crystal Gryphon* (1972), *The Jargoan Pard* (1974), *Trey of Swords* (1977), *Zarsthor's Bane* (1978), *Lore of the Witch World* (coll 1980), *Gryphon in Glory* (1981), *Horn Crown* (1981), *'Ware Hawk* (1983), *Were-Wrath* (1984 chap), *Gryphon's Eyrie* (1984) with A.C. CRISPIN, *Serpent's Tooth* (1987 chap), *The Gate of the Cat* (1987), an internal sequence comprising *Witch World: The Turning: Storms of Victory* (1991) and *Flight of Vengeance* (1992) with P.M. Griffin and *On Wings of Magic* (coll

of linked stories 1994) with Patricia Matthews and Sasha Miller, and Songsmith (1992) with Crispin. There were also 4 SHARED-WORLD anthologies edited or authorized by AN: Tales of the Witch World * (anth 1987), Tales of the Witch World II * (anth 1988), Four from the Witch World * (anth 1989) and Tales of the Witch World III * (anth 1990). Though her style has matured over the years, and her plots have tended to darken somewhat, from first to last an AN story will show the virtues of clear construction, a high degree of narrative control, protagonists whose qualities allow easy reader-identification and a Universe fundamentally responsive to virtue, good will and spunk. Her disinclination to publish short material in the sf magazines and her labelling for decades as a juvenile writer both worked to delay proper recognition of her stature, though her actual sales have been very considerable for decades. It has only recently been borne in upon the sf world that AN's 100 or more books - most of them in print - are for very many readers central to what the genre has to offer.

[JC]Other works: Non-sf includes: Follow the Drum (1942); Rogue Reynard (1947); Scarface (1948); Huon of the Horn (1951); Murders for Sale (1954; with Grace Allen Hogarth, together as Allen Weston; vt Sneeze on Sunday 1992 as AN and Hogarth); Ten Mile Treasure (1981); Stand and Deliver (1984). Sf and fantasy: Sea Siege (1957); Star Gate (1958; exp 1963); Secret of the Lost Race (1959 dos; vt Wolfshead 1977 UK); Shadow Hawk (1960); The Sioux Spaceman (1960 dos); Star Hunter (1961 dos); Eye of the Monster (1962 dos); Night of Masks (1964); The X Factor (1965); the Magic fantasies, comprising Steel Magic (1965; vt Grey Magic 1967), Octagon Magic (1967) and Fur Magic (1968), all assembled as The Magic Books (omni 1988); Operation Time Search (1967); Dark Piper (1968); Dread Companion (1970); Ice Crown (1970); Android at Arms (1971); Breed to Come (1972); Dragon Magic (1972); Here Abide Monsters (1973); Iron Cage (1974); Outside (1974); Lavender-Green Magic (1974); Merlin's Mirror (1975); The White Jade Fox (1975); The Day of the Ness (1975) with Michael Gilbert; No Night without Stars (1975); Knave of Dreams (1975); Wraiths of Time (1976); Red Hart Magic (1976); The Opal-Eyed Fan (1977); Quag Keep (1978); Yurth Burden (1978); Seven Spells to Sunday (1979); Voorloper (1980); Moon Called (1982); Wheel of Stars (1983); Ride the Green Dragon (1985) with Phyllis Miller (1920-); Imperial Lady: A Fantasy of Han China (1989) with Susan M. SHWARTZ; Wizards' Worlds (coll 1989); Elvenbane: An Epic High Fantasy of the Halfblood Chronicles (1991) with Mercedes Lackey (1950-); The Jekyll Legacy (1990) with Robert BLOCH; Black Trillium (1990) with Marion Zimmer BRADLEY and Julian MAY, the second sequel to which, by AN alone, being Golden Trillium (1993); The Mark of the Cat (1992), based on the cat drawings of Karen Kuykendall; Empire of the Eagle (1993) with Susan Shwartz; Brother to Shadows (1993); The Hands of Llyr (1994). As Editor: Bullard of the Space Patrol (coll of linked stories 1951) by Malcolm JAMESON; Space Service (anth 1953); Space Pioneers (anth 1954); Space Police (anth 1956); Gates to Tomorrow: An Introduction to Science Fiction (anth 1973) ed with Ernestine Donaldy; Small Shadows Creep (anth 1974); Baleful Beasts and Eerie Creatures (anth 1976); the Ithkar fantasies, all with Robert ADAMS, comprising Magic in Ithkar #1 (anth 1985), #2 (anth 1985), #3 (anth 1986) and #4 (anth 1987); Cat-fantastic (anth 1989), Cat-fantastic II (anth 1991) and Cat-fantastic III (anth 1994), all with Martin H. GREENBERG. About the author: "Andre Norton: Loss

of Faith" (1971) by Rick Brooks in *The Many Worlds of Andre Norton* (coll 1974); intro by Sandra Miesel to the GREGG PRESS reissue (1977) of the *Witch World* series; Andre Norton: A Primary and Secondary Bibliography (1980) by Roger C. SCHLOBIN; Andre Norton: Grand Master of the *Witch-World: A Working Bibliography* (1991 chap) by Phil STEPHENSEN-PAYNE. See also: CRIME AND PUNISHMENT; GAMES AND TOYS; HITLER WINS; LONGEVITY (IN WRITERS AND PUBLICATIONS); MAGIC; NEBULA; ROBERT HALE LIMITED; WOMEN SF WRITERS.

NORTON, PHILIP

(? -?) UK clergyman and writer, active in the former capacity 1871-1924. As Artegall Smith he published one sf novel, *Sub Sole, or Under the Sun: Missionary Adventures in the Great Sahara* (1889), in which the Wandering Jew reveals to Artegall Smith the wonders of an underground LOST WORLD peopled by the Lost Tribes of Israel, who have created there a scientific civilization. Smith soon converts them and marries the girl of his choice. Unusually for UK fiction before 1940, Jews are treated with some respect. [JC]

NORTON, ROY (E.)

(1869-1942) US author of many Westerns and some sf, beginning with *The Vanishing Fleets* (1908), in which a group of scientists, having invented an ANTIGRAVITY device, use it to shift the world's fleets mysteriously about, terrifying the bellicose nations into disarming. In his second sf novel, *The Toll of the Sea* (1909; cut vt *The Land of the Lost* 1925 UK), the Pacific figures again, this time changing its shape and uncovering a LOST WORLD inhabited by advanced descendants of ATLANTIS. In *The Flame* (1916) another antigravity device allows its user to force Germany into early surrender. RN was notable both for his didacticism and for a strong narrative imagination. [JC] Other works: *The Caves of Treasure* (1925).

NORVIL, MANNING

Kenneth BULMER.

NORWAY

SCANDINAVIA.

NORWOOD, VICTOR (GEORGE CHARLES)

(1920-1983) UK traveller and writer who concentrated on Westerns and nonfiction works about exploration. Of some genre interest is the *Jacare* series of jungle tales, loosely derived from Edgar Rice BURROUGHS's *Tarzan* and mostly sf or fantasy: *The Untamed* (1951), *The Caves of Death* (1951), *The Temple of the Dead* (1951), *The Skull of Kanaima* (1951), *The Island of Creeping Death* (1952), *Drums along the Amazon* (1953), which was associational, and *Cry of the Beast* (1953). *Night of the Black Horror* (1962) is a singleton sf adventure. Among VN's other titles was *Island of the Voodoo Dolls* (1969) as by Paul Dangerfield. [JC/SH]

NORWOOD, WARREN C(ARL)

(1945-) US bookseller and writer who has normally published as Warren Norwood, sometimes as Warren C. Norwood; due to a publisher's error, some titles were published as by Warren G. Norwood. After a number of years in

bookselling, during which period he published some not particularly distinguished poetry, WCN began his sf career with the Windhover Tapes sequence - The Windhover Tapes: An Image of Voices (1982), #2: Flexing the Warp (1983), #3: Fize of the Gabriel Ratchets (1983) and #4: Planet of Flowers (1984) - attempting with some success to compose SPACE OPERAS whose baroque inturnings are themselves of some narrative interest; but calling the human protagonist of the series Gerard Hopkins Manley and referring to Hopkins (1844-1889) with some frequency - while implying that Manley himself is ignorant of any connection with the poet - does suggest a disconnectedness deep within the structure of the sequence. The Tapes themselves constitute a record kept by the sentient starship Windhover; they detail Manley's quite various adventures on several planets as troubleshooter and anthropologist. A second series, the Double Spiral War sequence - Midway Between (1984), Polar Fleet (1985) and Final Command (1986) - is less chaotic but also less interesting. The Seren Cenacles (1983) with Ralph Mylius (1945-) likewise suffers from inattentive bursts of energy; though Shudderchild (1987), set in a genuinely complicated multistate post- HOLOCAUST USA, is engagingly compact and full of action, and True Jaguar (1988), a fantasy, delves intriguingly into Mayan lore. In 1988 WCN publicly announced that he had been diagnosed as having terminal pancreatic cancer; in 1991 he said that he had entered remission, and also indicated his wish to acknowledge assistance in completing the Time Police sequence, a Byron PREISS package comprising Time Police: Vanished! (1988), #2: Trapped! (1989) and #3: Stranded! (1989), with Mel Odom (1950-) given co-author credit on the final volume; WCN's wife had extensively outlined the second and third volumes and Odom had done the writing work on both. The sequence itself is a fairly unremarkable reworking of the Time Patrol recipe created by Poul ANDERSON and others. Given the enforced hiatus at the end of nearly a decade of intense productivity, it is difficult to know whether or not WCN will eventually harness his knowledge and drive to stories that move beyond the slightly unfocused exuberance of his first work. [JC]

NOSILLE, NALRAH
[s] Harlan ELLISON.

NOT OF THIS EARTH

1. Film (1957). Los Altos/Allied Artists. Prod and dir Roger CORMAN, starring Paul Birch, Beverly Garland, Jonathan Haze, Dick Miller. Screenplay Charles B. Griffith, Mark Hanna. 67 mins. B/w. A sombre humanoid alien (Birch), whose dark glasses conceal blank white eyes, seeks human blood and victims to send by matter transmitter to his home planet, whose inhabitants' blood is being "turned to dust" by radiation from continuing nuclear war. Low-budget nonsense - a typical Corman film of the period - cheaply made, NOTE is nevertheless well scripted and surprisingly powerful; unusually, it shows some sympathy for the lonely, pedantic alien. 2. Film (1988). Miracle. "Roger CORMAN presents" a film dir Jim Wynorski, starring Arthur Roberts, Traci Lords, Lenny Juliano. Screenplay R.J. Robertson, Wynorski, based on that of the 1957 film. 76 mins. Colour. Though fairly true to the original script, and played moderately straight apart from a plethora of large-breasted women, this Corman-inspired remake

cannot cope with cultural and cinematic changes over the intervening three decades, and what was once mildly serious now emerges as high camp; hence it was promoted as a spoof. [PN]See also: MONSTER MOVIES.

NOTT, KATHLEEN (CECILIA)

(1910-) UK poet, novelist and academic, perhaps best known for *The Emperor's Clothes* (1953), in which she mounted articulate and scathing attacks on the religious pretensions of such writers as T.S. Eliot (1888-1965) and C.S. LEWIS. Her sf novel, *The Dry Deluge* (1947), describes the founding of an underground UTOPIA devoted to the achievement of IMMORTALITY. [JC]

NOURSE, ALAN E(DWARD)

(1928-1992) US writer and physician; much of his nonfiction has been in the field of popular MEDICINE - *Intern* (1965) as by "Doctor X" being a great success. He began publishing sf with "High Threshold" for ASF in 1951, and gained a reputation as a reliable creator of CHILDREN'S SF novels. His first, *Trouble on Titan* (1954), features rebellion and conflict within a SPACE-OPERA Solar System, as do others of his juveniles, like *Raiders from the Rings* (1962), where conflict between an oppressive Earth regime and libertarian Spacers is finally halted by the intervention of superior, peaceful ALIENS. In *Rocket to Limbo* (1957), mankind's destiny is explained to us by alien observers. *Star Surgeon* (1960) interestingly posits an Earth which, while being the main medical centre of all the inhabited worlds, is still in the position of having to apply to join the Galactic Confederation. The vision of these juveniles is appropriately optimistic, and technologies - especially medical ones - are there for humanity's benefit. AEN's adult novels are also straightforward, frequently making somewhat simple points about bureaucracies and tyrannies, as in *The Invaders are Coming!* (1959) with Joseph A. Meyer and in several stories - some genuinely funny - assembled in *Tiger by the Tail* (coll 1961; vt *Beyond Infinity* 1964 UK). Several others make use of his medical knowledge: brain surgery figures in *A Man Obsessed* (1955 dos; rev vt *The Mercy Men* 1968), part of a series also including "Nightmare Brother" (1953) and "The Expert Touch" (1955); *Rx for Tomorrow* (coll 1971) collects stories about medicine in general; *The Bladerunner* (1974)-which was adapted by William S. BURROUGHS as *Blade Runner* (A Movie) (1979 chap), neither book having anything to do with Ridley SCOTT's *BLADE RUNNER* (1982) (although Scott obtained permission from AN for use of the title) - deals with the medical implications of OVERPOPULATION in a framework of coercive sterilization; and *The Fourth Horseman* (1983) deals with a NEAR-FUTURE plague. A sense of fundamental decency permeates AEN's fiction; and, though sometimes too easily achieved, the victories of decency over bigotry cannot, for the market upon which AEN concentrated, be seriously faulted. [JC]Other works: *Junior Intern* (1955), not sf; *Scavengers in Space* (1959); *Nine Planets* (1960), science fact; *The Counterfeit Man and Others* (coll 1963); *The Universe Between* (1951; fixup 1965), which incorporates his first story; *PSI High and Others* (coll 1967).See also: MERCURY; OUTER PLANETS; PARALLEL WORLDS; SCIENCE FICTION WRITERS OF AMERICA.

NOVA

US ORIGINAL-ANTHOLOGY series (1970-74) ed Harry HARRISON, published by Delacorte (#1) and then Walker ?

#3) and then Manor Books. All had UK editions also. Its 4 vols were Nova 1 (anth 1970), #2 (anth 1972), #3 (anth 1973; vt The Outdated Man 1975) and #4 (anth 1974). This was a catholic series, the contents ranging from old-fashioned sf adventure stories by such writers as Gordon R. DICKSON through humour by John T. SLADEK to experimental pieces by younger authors. Tom REAMY made his first sale (though not his debut) here with "Beyond the Cleft" (1974). The most regular contributors were Brian W. ALDISS, Barry N. MALZBERG, Robert SHECKLEY and, unusually, Naomi MITCHISON. It was an entertaining series, but had no great impact. [MJE/PN]

NOVAE TERRAE

The earliest true FANZINE in the UK (1936-9), 33 issues, ed Maurice K. Hanson, first for the Nuneaton chapter of the SCIENCE FICTION LEAGUE, and then, from #10, for the pre-WWII Science Fiction Association, the UK's first national sf organization. NT was given over primarily to discussion of sf and FANDOM, the only fiction it carried being parodies or based on fan doings. In Sep 1937 Hanson moved to London, and from #17 John CARNELL and Hanson's flatmate Arthur C. CLARKE were listed as assistant editors. Hanson's other flatmate, William F. TEMPLE, replaced Carnell with #25, but after #29 Hanson handed NT to Carnell, who issued a further 4 issues - numbered 1 to 4 - under the anglicized title New Worlds, which had always appeared on the title page alongside the Latin version. The title was revived after WWII by Carnell as a professional magazine of fiction, NEW WORLDS. [RH]

AWARDS.

NOVELIZATIONS

Everyone knows examples of books that were made into films. In science fiction, it often happens the other way around. Novelizations are novels adapted from movie scripts and published in conjunction with the release of a film. The Quatermass Xperiment was a big success as a novelization in 1959 - it was based on the 1955 Hammer film about an ancient Martian spaceship excavated in modern London. Theodore Sturgeon wrote the book version of A Voyage to the Bottom of the Sea in 1961. By the mid-sixties, movies and television were often novelized, including borderline SF shows, such as The Man From U.N.C.L.E. and The Prisoner. Some novelizations, like the ones for Star Trek, remained popular long after the show was cancelled.

NOWLAN, PHILIP FRANCIS

(1888-1940) US writer whose first sf story, "Armageddon 2419" - published in the same 1928 issue of AMAZING STORIES that featured the inception of

E.E. "Doc" SMITH's Skylark saga - introduced Anthony "Buck" Rogers to the world, helping to inaugurate the reign of full-grown interstellar SPACE OPERA in US sf. This and a subsequent story, "The Airlords of Han" (1929), were put together long after PFN's death as Armageddon 2419 AD (1928-9 AMZ; fixup 1962). The Buck Rogers saga takes its hero, via SUSPENDED ANIMATION, to a corrupt 25th-century USA under the thumb of the tyrannous Hans, where Rogers soon becomes a central figure in the successful revolt. His exploits were retold and then extended through space in BUCK ROGERS IN THE 25TH CENTURY, the first sf COMIC strip, scripted by PFN and drawn by Dick CALKINS; it ran 1929-67. PFN worked on it until his death, which also cut short a new series he had begun in ASF. An adaptation of a tale from the comic - each page of text faced with a Calkins illustration - appeared as Buck Rogers 25th Century AD and the Planetoid Plot (1936), and the first 426 daily strips were published in book form as Buck Rogers in the 25th Century, Great Classic Newspaper Comic Strips, No. 1 (graph coll 1964), #2 (graph coll 1965), #7 (graph coll 1967) and #8 (graph coll 1968). [JC]See also: ILLUSTRATION; INVASION; RADIO; TRANSPORTATION.

NOYES, ALFRED

(1880-1958) UK poet and man of letters, best known during his life for extremely long epic poems like Drake (2 vols 1906-8) and The Torchbearers (3 vols 1922-30), the latter depicting the march of science. He wrote some fantasy and horror - in the form of narrative poems in Tales of the Mermaid Tavern (coll 1914) and in the form of prose tales in Walking Shadows: Sea Tales and Others (coll 1918) and The Hidden Player (coll 1924). Beyond the Desert: A Tale of Death Valley (1920 chap US) and The Devil Takes a Holiday (1955) are fantasies. The Secret of Pooduck Island (1943) is a juvenile. Of sf interest is a post- HOLOCAUST novel, The Last Man (1940; vt No Other Man 1940 US), in which a doomsday ray stops all human hearts, petrifying the corpses. A few survivors - man, woman and (male) evil SCIENTIST-finally reach Assisi, which has been miraculously saved. AN was a fervent Roman Catholic (converted in 1930), an ardent anti-Modernist, an early Japanophile and a defender of VOLTAIRE and Charles Parnell (1846-1891). In several novels Gordon R. DICKSON has praised his lyric poetry. [JC]See also: CLUB STORY; END OF THE WORLD; WEAPONS.

NOYES, PIERREPONT B(URT)

(1870-1959) US businessman and writer whose The Pallid Giant: A Tale of Yesterday and Tomorrow (1927; vt Gentlemen: You are Mad! 1946) places in an ominous NEAR-FUTURE context the discovery of records of a long-dead ancient race, which destroyed itself with DEATH RAYS. Before the last moments, however, its scientists had through GENETIC ENGINEERING set the ape on an upward course. But now, in the 20th century, death rays have just been invented. The narrator warns the world. [JC]

NOYES, RALPH

(? -) UK writer whose sf novel, A Secret Property (1985), depicts an alien INVASION without great originality. [JC]

N3F

The National Fantasy Fan Federation, formed in the USA 1941, the

brain-child of Damon KNIGHT. After a succession of short-lived and factional US fan associations in the 1930s, the N3F proved a stable and enduring national organization. However, despite its long existence, it has maintained only a very low level of membership and activity and has contributed little to sf or FANDOM. It continues to publish The National Fantasy Fan, a newsletter which first appeared under the title Bonfire in 1941. [PR]

NUCLEAR COUNTDOWN TWILIGHT'S LAST GLEAMING.

NUCLEAR POWER

The claim that sf is a realistic, extrapolative literature is often supported by the citing of successful PREDICTIONS, among which atomic power and the atom bomb are usually given pride of place. When the news of the bombing of Hiroshima and Nagasaki was released in 1945, John W. CAMPBELL Jr, editor of ASTOUNDING SCIENCE-FICTION, was exultant, claiming that now sf would have to be taken seriously. Campbell was entitled to congratulate himself: it was largely due to his editorial influence that sf writers of the early 1940s had concerned themselves so deeply with atomic power. It could, however, be argued that anticipating the advent of atomic power was not such a tremendous imaginative leap. The notion of "splitting the atom" goes back to antiquity as a philosophical problem raised in the consideration of atomic theories from Democritus (fl 5th century BC) and Epicurus (c341-270BC) onwards. It was not until the end of the 19th century, however, that any evidence relating to the actual structure of atoms became accessible. In 1902 Ernest Rutherford (1871-1937) and Frederick Soddy (1877-1956) demonstrated that certain heavy atoms-including those of uranium and radium - were in a state of continuous spontaneous decay, emitting various types of energetic radiation. The popularization of this and related discoveries had an influence on SCIENTIFIC ROMANCE comparable only to that of evolutionary theory; the first title to reflect this opportunity was probably Robert CROMIE's The Crack of Doom (1895). The power of radioactivity - in many applications, some of them bizarre - quickly became commonplace in sf, especially in relation to WAR. Einstein's famous equation linking mass and energy ($E = mc^2$)

NUETZEL, CHARLES (ALEXANDER)

(1934-) US self-styled hack writer; in various genres, under a variety of names, he wrote over 70 paperback novels. He became active in sf in the 1960s, publishing "A Very Cultured Taste" for Jade #1 in 1960. Lost Valley of the Damned (1961 as by Alec River; exp vt Jungle Jungle 1969 as CN) was routine. Lovers: 2075 (1964) as by Charles English, was, like Queen of Blood (1966), mildly erotic, and marketed as such. Images of Tomorrow (coll 1969) assembled satirical tales. Warriors of Noomas (1969) and its sequel Raiders of Noomas (1969) were romantic adventures heavily influenced by Edgar Rice BURROUGHS, as was Swordsmen of Vistar (1969). The last 4 titles were all published by Powell Books, whose sf line CN edited, as was The Slaves of Lomooro (1969) as by Albert Augustus Jr. [JC]Other works: If this Goes On (anth 1965); Last Call for the Stars (1970).

NUEVA DIMENSION
SPAIN.

NUNES, CLAUDE

(1924-) South African writer and statistician, most of whose work was in collaboration with his wife Rhoda (Gwylleth) Nunes (1938-). They published their first sf story, "The Problem", in Science Fantasy in 1962, and were active for the next two decades. Inherit the Earth (1963 Science Fiction Adventures as by Claude and Rhoda Nunes; exp 1966 dos US) was published as by CN alone, as his wife participated less than usual in the rewrite; in it the telepathic ANDROIDS who inhabit Earth after a nuclear HOLOCAUST has driven humanity to the stars hope one day to teach their makers how to live in peace. Recoil (1971 US) was published as by both; in a rather archaic style it tells of telepathic ALIENS and their attempts to influence humans, specifically a group of children. The Sky Trapeze (1980 UK), by CN alone, again concentrated on the powers of the mind, this time in an alien venue. [JC]

NUOVI BARBARI, I

George MILLER; 1990: I GUERRIERI DEL BRONX.

NUTTY PROFESSOR, THE

Film (1963). Jerry Lewis Productions/Paramount. Dir Jerry Lewis, starring Lewis, Stella Stevens, Dell Moore, Kathleen Freeman, Howard Morris. Screenplay Lewis, Bill Richmond. 107 mins. Colour. Even those who do not normally enjoy the heavily overstated comedy of Lewis, which depends a lot on gesticulation and face-pulling, admit this to be one of his best films; it is a remake as a campus comedy of DR JEKYLL AND MR HYDE, with Lewis playing both Professor Kelp, the nerd who takes the potion, and the revoltingly smooth, sexually charged lounge lizard and crooner, Buddy Love, whom he intermittently becomes; the film is an imaginative act of spite against Lewis's former partner and co-star Dean Martin, recognizable even in this broad parody. Not only is it funny, it hits off the subtext of Robert Louis STEVENSON's original rather well. [PN]See also: CINEMA.

NYBERG, BJORN

[r] L. Sprague DE CAMP; Robert E. HOWARD.

NYE, HAROLD G.

[s] Lee HARDING.

SF?

O'BRIEN, DAVID

(? -) UK writer of whom nothing is known except that he wrote several early-1950s sf novels for CURTIS WARREN under various house names, including the International Research Council sequence - Photomesis (1952) and Black Infinity (1952) - as Berl CAMERON, Blue Asp (1952) as Rand LE PAGE, Stella Radium Discharge (1952) as Kris LUNA, and Ships of Vero (1952) as Brian SHAW. [JC]

O'BRIEN, DAVID WRIGHT

(1918-1944) US writer. A nephew of Farnsworth WRIGHT, he published almost

entirely for the ZIFF-DAVIS magazines AMAZING STORIES and Fantastic Adventures from early 1940; there were about 40 stories and novels under his own name plus others under various pseudonyms, including John York Cabot (the Sergeant Shane series and about 20 further tales), Bruce Dennis, Duncan Farnsworth (19 stories), Richard Vardon and the house names Alexander BLADE and Clee GARSON; nothing reached book form. He also collaborated with William P. McGivern (1921-1982) on 4 stories. Almost all his work was SPACE OPERA or other routine adventure. He served in the US Army Air Force and was shot down over Berlin. [JC]

O'BRIEN, DEAN D.

[s] Eando BINDER.

O'BRIEN, E.G.

[s] Arthur C. CLARKE.

O'BRIEN, FITZ-JAMES

(1828-1862) Irish-born US writer, active from his arrival in New York in 1852 until he died of an infected wound in the Civil War. FJO contributed numerous poems and minor stories to the magazines, but his importance rests on a handful of brilliantly original sf tales, which were influential not only on subsequent sf but also on the development of the short-story genre. His finest work is "The Diamond Lens" (1858), a long, precisely detailed story about a SCIENTIST who invents a supermicroscope and is then consumed by his morbid love for a beautiful woman he perceives living in an infinitesimal world inside a drop of water (GREAT AND SMALL). What Was It? A Mystery (1859 Harper's; 1974 chap) tells of an encounter with an invisible being whose nature remains an enigma, although a plastercast made while the creature is chloroformed reveals it as a hideous diminutive humanoid (INVISIBILITY). These two stories, his best known, are both set firmly in mid-19th-century New York, and helped establish a mode of sf characterized by surface realism. In a similar vein was the earlier "The Bohemian" (1855), in which the narrator's passionate love for gold fatally induces him to have his fiancée mesmerized in order to reveal the whereabouts of a treasure. "From Hand to Mouth" (1858) is a remarkable surrealistic fantasy in which a man sits in the Hotel de Coup d'Oeil surrounded by disembodied but living eyes, ears, mouths and hands. In "The Lost Room" (1858) a strange house, whose intricate "corridors and passages, like mathematical lines, seemed capable of indefinite expansion", becomes the scene of an orgy by six male and female "enchanters" who apparently succeed in kidnapping the narrator's room into some other world or DIMENSION. "The Wondersmith" (1859) is notable in the history of sf, despite its fantastic framework, for its extended descriptions of an army of miniature automata. The posthumous "How I Overcame my Gravity" (1864), though marred by the use of dream, is otherwise a singularly modern piece of sf: its core is a detailed description of suborbital flight achieved with the aid of gyroscopic stabilization. The great strength of FJO's sf is its inventiveness, which also became its greatest weakness whenever he allowed ingenuity to dominate the fiction. "The Diamond Lens" remains a masterpiece because he subordinated his brilliant invention to a profound exploration of the diseased psychology of one of the main figures of his age, the would-be

lone genius of scientific creation. FJO's works have been collected in various posthumous editions: *Poems and Stories* (coll 1881) ed (sometimes damagingly) by poet and reviewer William Winter (1836-1917), a member with FJO of the Pfaff's Cellar literary circle in New York; *The Diamond Lens and Other Stories* (coll 1885); *What Was It? and Other Stories* (coll 1889); *Collected Stories by Fitz-James O'Brien* (coll 1925); *The Fantastic Tales of Fitz-James O'Brien* (coll 1977). These were all superseded by *The Supernatural Tales of Fitz-James O'Brien, Volume One: Macabre Tales* (coll 1988) and *The Supernatural Tales of Fitz-James O'Brien, Volume Two: Dream Stories and Fantasies* (coll 1988), both ed Jessica Amanda Salmonson (1950-), which assembles some previously uncollected work and presents well known texts in their original magazine versions. [HBF] See also: HISTORY OF SF.

O'BRIEN, FLANN

Pseudonym of Irish writer and civil servant Brian O Nolan (1911-1966), who also wrote mainly for a newspaper column - as Myles na Gopaleen, sometimes rendered Myles na gCopaleen. He is best known for work outside the sf field, such as the *FABULATION, At Swim-Two-Birds* (1939 UK), a fantasy "saga" at the heart of which mythological entities inflict themselves on a character within a book by a man about whom the protagonist of the actual novel is writing a book, and *Faustus Kelly* (1943) as by Myles na Gopaleen, a fantasy play about the Devil in Ireland; *Rhapsody in Stephen's Green* (1994 UK), which was produced in 1943, is a beast-fable, based on the Brothers CAPEK Insect Play of 1921, and dangerously satirical of both Ulster and Eire. FO's novels most closely resembling sf are *The Third Policeman* (written c1940; 1967 UK), a fantasy, featuring numerous sciencefictional devices, in which a murderer sets off (by bicycle) through a fantasmagorical posthumous *POCKET UNIVERSE* whose circularity is not spatial but temporal, and *The Dalkey Archive* (1964 UK), which utilizes material from the previous book in its entrancingly eccentric presentation of a plot featuring a mad SCIENTIST eager to destroy the world, and the fantastic results of a gas he invents. [JC/PN]

O'BRIEN, ROBERT C (ARROLL)

Pseudonym of US writer Robert Lesly Carroll Conly (1922-1973); his books were marketed as juveniles, though the last two are essentially adult. His first, *The Silver Crown* (1968), is a sometimes frightening, complex fantasy about the kidnapping of a young girl by a king who is ruled in turn by a malignant MACHINE. *Mrs Frisby and the Rats of NIMH* (1971; vt *The Secret of NIMH* 1982), which won the Newbery Medal, tells of a group of fugitive rats from a laboratory where their INTELLIGENCE has been enhanced; with the help of Mrs Frisby, a field mouse, they found an independent colony, determined not to batten on humans. The treatment is realistic and without a trace of whimsy. After his death his daughter, Jane Leslie Conly, wrote two sequels, *Rasco and the Rats of NIMH* (1986) and *R.T., Margaret, and the Rats of NIMH* (1991). RCO's *A Report from Group 17* (1972) is about biological warfare between the USA and Russia; it is competent, but less successful than his other work. In *Z for Zachariah* (1975), a post- HOLOCAUST novel of considerable sensitivity, a solitary surviving adolescent girl comes to realize that she cannot make a life

with the male survivor who has entered her quiet valley; she eludes his attempt at rape and travels across the desolated landscape in search of other survivors. It is a fine book, morally complex, and not simply a story of good versus evil; the girl's victory is ambiguous. RCO died before the novel was quite finished; it was completed by his family. [PN/JC]See also: CHILDREN'S SF.

O'BRIEN, WILLIS H(AROLD)

(1886-1962) US special-effects supervisor in the film industry. For his own amusement he early began to experiment with stop-motion photography. A 1min home movie of an animated caveman and dinosaur, involving 960 separate exposures, led to a producer advancing him \$5000 to make a more elaborate version of the same subject: *The Dinosaur and the Missing Link* (1917) ran for only 5 mins but took 2 months to make. It proved successful and later the same year he made a series of similar films for the Edison Company. In 1919 he made the more elaborate *The Ghost of Slumber Mountain*, one of the first films to combine footage of live actors with animated models. WHO's first full-length film was *The LOST WORLD* (1925), whose success led him to start work on a project of epic proportions, *Creation*, a variation on the LOST-WORLD theme. It was never completed, but he incorporated much of its material (including improved designs for his models, which by then had metal skeletons with ball-and-socket joints) into *KING KONG* (1933), which proved to be the peak of his career. A sequel, *SON OF KONG* (1933), was hurriedly made, but after that WHO found difficulty in getting backing for his increasingly expensive projects. In the late 1930s he began work on *The War Eagles* (it was to climax in an aerial battle between airships and men riding giant eagles over New York City), but the film was abandoned, as was his 1942 project, *Gwangi*, about cowboys who discover dinosaurs on a Texas mesa (it was eventually filmed as *The VALLEY OF GWANGI* [1969]). It was not until 1949 that he was able to complete another partially animated feature, *MIGHTY JOE YOUNG* (an unambitious rerun of the King Kong theme), assisted by his new young protege, Ray HARRYHAUSEN. It was the last film over which he had real control. During the 1950s he worked on *MONSTER MOVIES* for other people but was unable to obtain backing for his own films. He died in 1962 while working on *It's a Mad, Mad, Mad, Mad World* (1963 dir Stanley Kramer). Despite his comparatively small output, he is widely regarded as one of the great pioneers of special effects in fantastic cinema. [JB]

OBRUCHEV, VLADIMIR A(FANASEVICH)

(1863-1956) Russian geologist, academician and writer. Two of his novels, both early classics of Russian sf, have been translated: *Plutoniia* (1915; 1924; trans B. Pearce as *Plutonia* 1957) and *Zemlya Sannikova* (1926; trans Y. Krasny as *Sannikov Land* 1955 USSR). Both are adventures after the style of Jules VERNE, aimed at younger readers, and informatively crammed with geological and palaeontological data. The first is a *HOLLOW-EARTH* story in which a party of Russian explorers enters the Earth via an unknown landmass north of the Bering Strait and finds a *LOST WORLD* full of prehistoric reptiles. The second is similar; a volcano thrusting through the Arctic icecap to the far north of Siberia has a fertile lost world, populated by a stone-age people, inside its huge crater. Other,

untranslated, works by VO were travel novels set in Central Asia. [PN]See also: RUSSIA.

OBUKHOVA, LYDIA

(1924-) Russian writer who began publishing work of interest as early as 1945, and whose books gained some popularity in her native land. Lilit (trans Mirra Ginsburg as Daughter of Night 1974 US) tells the story of Adam's first wife, Lilith, who meets an ALIEN assessing Earth for colonization. He falls in love with her, presents her with the gift of fire, and saves the planet from his own people. [JC]

OCEANOGRAPHY

UNDER THE SEA.

OCTOBER, JOHN

[r] ROBERT HALE LIMITED.

OCTOPUS, THE

US PULP MAGAZINE. 1 issue, Feb/Mar 1939, published by Popular Publications; ed Rogers Terrill. The feature novel, "The City Condemned to Hell" by Randolph Craig (Norvell W. PAGE), was actually a rewritten SPIDER story; the evil Octopus broadcasts a ray that turns people into monsters. It was reprinted as Pulp Classics #11 (1976) (Robert E. WEINBERG). The SCORPION was a follow-up to O. The single issue was confusingly designated Vol 1 #4. [MJE/FHP]

ODELL, SAMUEL W.

(1864-1948) US writer of 2 sf books, Atlanteans (coll 1889) and The Last War, or The Triumph of the English Tongue (1898). In the latter, a future-WAR story set in the 26th century, the highly civilized all-White Allied Anglo-American Nations decide, more in sorrow, to engage in "war to the end" against a miscegenate evil empire controlled by the Russian Czar, destroying millions of the foe before their inevitable victory. [JC]

ODLE, E(DWIN) V(INCENT)

(1890-1942) UK writer and editor. As younger brother of Alan Odle, who was the husband of Dorothy M. Richardson (1873-1957), EVO came into close contact with J.D. BERESFORD, who had been instrumental in publishing the first volume of Richardson's Pilgrimage in 1915. EVO's sole sf novel, The Clockwork Man (1923), clearly shows Beresford's influence, and may also have been published with his help. In this graceful SCIENTIFIC ROMANCE, a CYBORG - in this case a man into whose body a clock has been inserted - comes accidentally back through time from AD8000 to the present, where he plays cricket and describes a world in which life regulated by MACHINES is accepted by most, though not all. God, it is hoped, has been taking note of the new, improved version of humanity. [JC]See also: DIMENSIONS; EVOLUTION; HISTORY OF SF; SUPERMAN; TIME TRAVEL.

ODOM, MEL

[r] Warren C. NORWOOD.

O'DONNELL, KEVIN Jr

(1950-) US author with a BA in Chinese Studies who has spent several years in the Far East. His first published sf was "The Hand is Quicker"

(1973 ASF), and over 50 short stories have followed. His first novel, *Bander Snatch* (1979), curiously blends pulp cliché and real inventiveness in its tale of a ghetto mobster who has telepathic powers and learns to use them responsibly. *Mayflies* (1979), which shows a real advance in narrative skill, is a GENERATION-STARSHIP story where ephemeral human lives flit past the hero, an (immortal) human brain embedded in the ship's COMPUTER and fighting for control. KO is perhaps best known for the amusing series *The Journeys of McGill Feighan*, which consists to date of *The Journeys of McGill Feighan: Book I: Caverns* (1981), *Book II: Reefs* (1981), *Book III: Lava* (1982) and *Book IV: Cliffs* (1986). Feighan is a flinger (he can teleport people and things) who, though based on Earth, solves problems on various planets; his quest is for the godlike Far Being who has interfered with his life since birth. Like most of KO's fiction, these are interesting, light-hearted books, casual in their tone of voice, like a hybrid of Ron GOULART and Jack VANCE. *ORA:CLE* (1984), complexly plotted, has an expert on Asian history, brain-linked with a computer, in a future where people live indoors because the air is bad outside and aliens hunt you there. *Fire on the Border* (1990), a SPACE OPERA with interstellar warfare and a Japanese general, is crammed with almost too much incident. It would be interesting to see what KO could do if his novels proceeded less breathlessly. [PN]Other works: *War of Omission* (1982); *The Shelter* (1987) with Mary Kittredge, horror; *The Electronic Money Machine* (1984), written with the Haven Group, nonfiction about personal computers. See also: CYBORGS; SPACESHIPS.

O'DONNELL, K.M.
Barry N. MALZBERG.

O'DONNELL, LAWRENCE
Henry KUTTNER; C.L. MOORE.

O'DONNELL, MARGARET
(? -) Irish writer whose *The Beehive* (1980) is a FEMINIST thriller set in a DYSTOPIAN world. [JC]

O'DUFFY, EIMAR
(1893-1935) Irish writer whose mock-epic-Irish Aloysius O'Kennedy sequence-*King Goshawk and the Birds* (1926), *The Spacious Adventures of the Man in the Street* (1928) and *Asses in Clover* (1933) - makes satirical points about contemporary civilization, very much in the manner of James Stephens (1882-1950) in *The Crock of Gold* (1912), by assessing modern life through the eyes of characters who are, or claim to be, figures of Irish legend. The second volume mounts its comparatively sustained SATIRE through its heroes' voyage to a UTOPIA where everything is, not unusually, inverted. The third, set like the first in Ireland after 1950, musters the forces of legend to defeat US capitalism in the form of the egregious King Goshawk. [JC]Other works: *Bricriu's Feast* (1919), a fantasy play. About the author: *Eimar O'Duffy* (1972 chap) by Robert Hogan.

ODYSSEY
US BEDSHEET-size magazine. 2 issues, Spring and Summer 1976, published by Gambi Publications, New York; ed Roger ELWOOD. O was advertised as an sf magazine, but contained a high proportion of fantasy. The fiction and

articles were unremarkable; lead novellas were by Jerry POURNELLE (#1) and Larry NIVEN (#2). Production was poor, and the covers by Frank Kelly FREAS and Jack GAUGHAN were inferior to their usual work. Bad distribution and poor sales killed O. [FHP/PN]

OFFRET

Andrei TARKOVSKY.

OFFUTT, ANDREW J(EFFERSON V)

(1937-) US writer who often signed his name andrew j offutt; his first published story was as by Andy Offutt and his first professional sale was as by A.J. Offutt. That first published story, a contest winner, was "And Gone Tomorrow" for If in 1954, but he regards his professional sf career as beginning with "Blacksword" for Gal in 1959. He soon became a prolific writer in several genres, both under his own name and under pseudonyms including John Cleve (see below for the Spaceways sequence), Jeff Douglas and the house name J.X. WILLIAMS. The pseudonymous works have been SEX novels, several with sf content. AJO's first sf novel under his own name was Evil is Live Spelled Backwards (1970), in which an underground movement opposes a 21st-century religious tyranny through sexual revolution. The Castle Keeps (1972) more ambitiously depicts - through an acid examination of SURVIVALIST shibboleths - the violent disintegration of Western culture. A juvenile, The Galactic Rejects (1973), features three young friends with PSI POWERS on a UTOPIAN world threatened by invasion. From the mid-1970s, with the appearance of tales like Messenger of Zhuvastou (1973) and My Lord Barbarian (1977), AJO turned primarily to fantasy, usually SWORD AND SORCERY, often works tied to other authors' creations, though much of the John Cleve sf erotica was published in the 1980s. His urgent, sometimes rather hasty style and his sharp intelligence are most effectively deployed in sf stories depicting a hectic urban world and, though he clearly finds all sorts of material congenial, his later career has not been of striking interest. [JC]Other works: The Great 24-Hour Thing (1971); Ardor on Aros (1973); Genetic Bomb (1975) with D(ouglas) Bruce Berry; the Cormac Mac Art sequence, based on Robert E. HOWARD's character and comprising Sword of the Gael * (1975), The Undying Wizard * (1976), Sign of the Moonbow * (1977), The Mists of Doom * (1977), When Death Birds Fly * (1980) with Keith Taylor (1946-) and The Tower of Death * (1982) with Taylor; Chieftain of Andor (1976; vt Clansman of Andor 1979 UK); a Conan parody, The Black Sorcerer of the Black Castle (1976 chap) plus 3 Conan novels, Conan and the Sorcerer * (1978), The Sword of Skelos * (1979) and Conan the Mercenary * (1980); the War of the Wizards fantasy sequence, all with Richard K. Lyon (1933-), comprising Demon in the Mirror (1978), Eyes of Sarsis (1980) and Web of the Spider (1981); the War of the Gods on Earth fantasy sequence, comprising The Iron Lords (1979), Shadows Out of Hell (1980) and The Lady of the Snowmist (1983); King Dragon (1980); Shadowspawn * (1987), whose labelling identifies it as a contribution to the Thieves' World SHARED-WORLD enterprise but which is, according to AJO, not so - a denial whose terms might also apply to The Shadow of Sorcery*(1993); Deathknight (1990).As John Cleve:Barbarana (1970); The Devoured (1970); Fruit of the Loins (1970); Jodinareh (1970); The Juice of Love (1970); Pleasure Us! (1971; vt The Pleasure Principal

1975 as by Baxter Giles); Manlib! (1974); The Sexorcist (1974; vt Unholy Revelry 1976); the Spaceways sequence (the first 6 written solo, most of the rest in collaboration, but all signed Cleve alone), comprising Spaceways #1: Of Alien Bondage (1982), #2: Corundum's Woman (1982), #3: Escape from Macho (1982), #4: Satana Enslaved (1982), #5: Master of Misfit (1982), #6: Purrfect Plunder (1982), #7: The Manhuntress (1982) with Geo. W. PROCTOR, #8: Under Twin Suns (1982), #9: The Quest of Qalara (1983), #10: The Yoke of Shen (1983) with Proctor, #11: The Iceworld Connection (1983) with Jack C. HALDEMAN II and his wife Vol Haldeman, #12: Star Slaver (1983) with G.C. EDMONDSON, both writing as Cleve, #13: Jonuta Rising! (1983) with Victor KOMAN, #14: Assignment: Hellhole (1983) with Robin Kincaid, #15: Starship Sapphire (1984) with Roland GREEN, #16: The Planet Murderer (1984) with Dwight V. SWAIN, #17: The Carnadyne Horde (1984) with Koman, #18: Race Across the Stars (1984) with Kincaid and #19: King of the Slavers (1985). There are further Cleve erotic novels. As Jeff Douglas: The Balling Machine (1971) with D. Bruce Berry. As J.X. Williams: The Sex Pill (1968). As Editor: The Swords Against Darkness series, comprising Swords Against Darkness (anth 1977; vt Swords Against Darkness I 1990); II (anth 1977); III (anth 1978); IV (anth 1979); V (anth 1979). See also: POLLUTION; SCIENCE FICTION WRITERS OF AMERICA.

O'FLINN, PETER
[s] R.L. FANTHORPE.

O'HARA, KENNETH
[s] Bryce WALTON.

OHARA, MARIKO
[r] JAPAN.

O'KEEFE, CLAUDIA
(1958-) US writer, the hero of whose first sf novel, Black Snow Days (1990), has been genetically engineered by his mother to reawaken, 10 years after his fatal car crash, into a post- HOLOCAUST environment he is intended to redeem; the novel rather confusedly puts him through a long quest sequence for a MCGUFFIN Hidden Base which contains the answers to questions he resents having to ask. CO'K has also edited Ghost Tide (anth 1993), mostly originals. [JC]

OKUN, LAWRENCE (EUGENE)
(1929-) US medical doctor and writer whose sf novel, On the 8th Day (1980), treats GENETIC ENGINEERING in terms of the PARANOIA it evokes. [JC]

OLAN, SUSAN TORIAN
(? -) US writer whose The Earth Remembers (1990) is a cagily written example of the everything-but-the-kitchen-sink variety of post- HOLOCAUST fiction. Set on the Texas-Mexico border, the tale features MUTANTS, Amerindians and nuclear devices along with the usual protagonists and antagonists. [JC]

OLANDER, JOSEPH D.
(1939-) US academic and anthologist, all of whose work has been in collaboration with Martin Harry GREENBERG (whom see for details),

sometimes plus further collaborators. "Name" authors involved in team anthologies part-edited by JDO are Isaac ASIMOV, Damon KNIGHT, Frederik POHL and Robert SILVERBERG. [JC]See also: CRITICAL AND HISTORICAL WORKS ABOUT SF; SOCIOLOGY.

OLDMEADOW, ERNEST (JAMES FRANCIS)

(1867-1949) UK writer whose 1930s radio work sometimes verged on the fantastic, as in *The Town To-Morrow: Five and Twenty Imaginary Broadcasts* (coll 1937) as by Francis Downman. His sf novel, *The North Sea Bubble: A Fantasia* (1906), set in 1910, spoofs the conventions of the future- WAR tale in a manner later amplified by P.G. WODEHOUSE in *The Swoop* (1909). [JC]

OLERICH, HENRY

(1851-?) US author of a series of UTOPIAN novels, some barely fictionalized. *A Cityless and Countryless World* (1893) fairly vividly presents a highly organized Mars of FEMINIST interest, women there being financially and sexually independent of men. His remaining books - even *The Story of the World a Thousand Years Hence* (1923) - fatally eschew narrative. [JC]Other works: *Modern Paradise* (1915); *Cause and Cure of the High Cost of Living* (1919); *The New Life and Future Mating* (1927).

OLIVER, CHAD

Working name of US writer and anthropologist Symmes Chadwick Oliver (1928-1993) for his sf. CO was born in Ohio but spent most of his life in Texas, where he took his MA at the University of Texas (his 1952 thesis, "They Buildded a Tower", being an early academic study of sf). He took a PhD in ANTHROPOLOGY from the University of California, Los Angeles, and became professor of anthropology at the University of Texas at Austin; his sf work consistently reflected both his professional training and his place of residence: much of it is set in the outdoors of the US Southwest, and most of his characters are deeply involved in outdoor activities. CO was always concerned with the depiction of Native American life and concerns: *The Wolf is My Brother* (1967), which is not sf, features a sympathetically characterized Native American protagonist. Most of CO's sf, too, could be thought of as Westerns of the sort that eulogize the land and the people who survive in it. The sf plots that drive his stories - like, in *The Winds of Time* (1957), the awakening of ALIENS held in SUSPENDED ANIMATION for hundreds of centuries - tend to be resolved in terms that reward a deeply felt longing for a non-urban life closely involved with Nature, though the effect of this is somewhat dissipated by his characteristic inability to prepare for his favourite scenes by adequate plotting, and a tendency (in his earlier works) to pad novelettes to novel length. His first published story, "The Land of Lost Content", appeared in *Super Science Stories* in 1950; his short work has been collected in *Another Kind* (coll 1955) and *The Edge of Forever* (coll 1971), the latter containing biographical material and a checklist compiled by William F. NOLAN. CO's first novel, a juvenile, was *Mists of Dawn* (1952). *Shadows in the Sun* (1954), set in Texas, describes with some vividness its protagonist's discovery that all the inhabitants of a small town are aliens, that it may be possible for Earth to gain galactic citizenship, and that he can work for that goal by living an exemplary life on his home

planet; *Unearthly Neighbors* (1960; rev 1984) depicts human attempts to communicate with alien visitors; *The Shores of Another Sea* (1971) is set in Africa, and articulates CO's concern with the natural world, specifically in terms of ECOLOGY; *Giants in the Dust* (1976) argues the thesis that mankind's fundamental nature is that of a hunting animal, and that our progress from that condition has fundamentally deracinated us. CO was a pioneer in the application of competent anthropological thought to sf themes, and, though awkward construction sometimes stifled the warmth of his earlier stories, he is a careful author whose speculative thought deserves to be more widely known and appreciated. [JC]Other works: *Broken Eagle* (1989) and *The Cannibal Owl* (1994), both Westerns. About the author: Chad Oliver: *An Annotated Bibliography ?*
W. HALL. See also: GENERATION STARSHIPS; LINGUISTICS; ORIGIN OF MAN; UFOS; VENUS.

OLIVER, FREDERICK SPENCER
[r] ATLANTIS.

OLLIER, CLAUDE
[r] FRANCE.

OLSA, JAROSLAV Jr
(1964-) Student of Arabic and Oriental studies and international relations; also sf editor, translator and bibliographer. JO was for a time assistant editor of the first Czechoslovak sf monthly magazine, *Ikarie* (published since 1990), but his major role in sf studies has been as co-editor of the Czechoslovak *Encyklopedie science fiction* ["Encyclopedia of Science Fiction"] (1992). He has contributed to *LOCUS*, *FOUNDATION* and other sf magazines, has compiled bibliographies of Czechoslovak FANZINES, and wrote the entry on CZECH AND SLOVAK SF for this encyclopedia. [PN]

OLSEN, BOB
Working name of US writer Alfred John Olsen Jr (1884-1956), who began publishing sf with "The Four Dimensional Roller Press" for *AMZ* in 1927; this was the first of several tales in the Four Dimensional sequence. Other tales featured Professor Archimedes Banning, whose exploits were patterned on the model of the *EDISONADE*. One story, *Rhythm Rides the Rocket* (1940 chap), was published in booklet form, but BO was a born PULP-MAGAZINE writer, and lost interest in the field after about 1940. [JC]See also: GREAT AND SMALL; HIVE-MINDS.

OLTION, JERRY B.
(1957-) US writer who began publishing sf in 1982 with "Much Ado About Nothing" for *ASF*, the journal which published a high proportion of the 25 or so stories he wrote in the 1980s, many of which appear in *Love Songs of a Mad Scientist: The Collected Stories of Jerry Oltion Volume One* (coll 1993). His first novel, *Frame of Reference* (1987), is a POCKET-UNIVERSE tale whose human protagonists discover, while growing up and falling in love, that the starship they live in is actually a simulacrum hidden underground and that the ALIENS on the surface of the Earth deserve a strict comeuppance, which they soon get. JBO then published two Isaac Asimov's *Robot City: Robots and Aliens* ties: #4: *Alliance ** (1990) and #6: *Humanity ** (1990). [JC]Other Works: *The Gigantic Three in One Complete*

History of the Universe (1994 chap) with A.B.Newcomer.

O'MALLEY, KATHLEEN

[r] A.C. CRISPIN.

OMEGA MAN, THE

Film (1971). Warner Bros. Dir Boris Sagal, starring Charlton Heston, Anthony Zerbe, Rosalind Cash. Screenplay John William Corrington, Joyce H. Corrington, based on I Am Legend (1954) by Richard MATHESON. 98 mins. Colour. This is the second film version of Matheson's ultra- PARANOIA novel, the first being L' ULTIMO UOMO DELLA TERRA (1964; vt The Last Man on Earth). "The first one was very poorly done," said Matheson, himself a screenwriter, "but it did follow the book. The Omega Man bore no resemblance to my book . . . I had absolutely nothing to do with the screenplay." A survivor of a biological war battles (with a machine gun rather than Matheson's sharpened stakes) against a group of mutated, albino fanatics haunting the almost dead city. The film sacrifices the claustrophobia and nightmare of the novel for fast-moving action. The true cinematic heir to Matheson's story, though not directly based on it, is the far superior NIGHT OF THE LIVING DEAD (1968). [JB/PN]

OMEGA SCIENCE DIGEST

Australian popular-science magazine, small- BEDSHEET size, publishing an average of 2 sf stories per issue; 37 bimonthly issues Jan/Feb 1981-Jan/Feb 1987, ed Philip Gore. The parent magazine was the US Science Digest, discontinued at around the same time. Though unexceptional as a science magazine, OSD was, with a circulation around 35,000, for 6 years the most important publisher of Australian short sf, printing 78 stories by Australian authors, illustrated by Australian artists such as Mark McLeod, Tony Pyrzakowski and Frantz Cantor. Authors included Russell BLACKFORD, Damien BRODERICK, Simon Brown, Sean MCMULLEN, Jack WODHAMS and, perhaps most notably, Terry DOWLING, whose popular stories in OSD attracted much local notice. [PN]

OMNI

US popular-science magazine which includes fiction; monthly, current to April 1995 but (see below) slick, small- BEDSHEET size, #1 Oct 1978, published by Omni Publications International, New York. Because it has a high circulation - at times topping 1 million - and because it pays the highest rates for fiction, Omni has a prestige in sf circles out of proportion to the actual number of stories it publishes (seldom more than 2 per issue, 1 per issue through most of the early 1990s). Founded by Bob Guccione of Penthouse magazine as a sister periodical, O has been one of the big success stories of US MAGAZINE publishing: lavishly illustrated in colour, publishing science articles ranging from the demanding through the gosh-wow to features on only marginally scientific, sometimes New-Age subjects like parapsychology and UFOS, O does not depend on fiction for its sales, and has been fortunate in having fiction editors who have kept the standard quite high; they have been Ben BOVA (Oct 1978-Dec 1979), Robert SHECKLEY (Jan 1980-Sep 1981) and Ellen DATLOW (Oct 1981-current). Bova was also executive editor Jan 1980-Aug 1981; the present executive editor is Keith Ferrell, an sf enthusiast who is soliciting more

nonfiction from sf writers, thus increasing the sf presence in the magazine. However, circulation figures kept dropping from the peak in 1988 of over one million. In Oct 1992 Omni changed from perfectbound to staplebound. In that same year most of the staff (but not Datlow) was moved to North Carolina. There were only 11 issues in 1993, but they included the enormous 15th-anniversary Oct 1993 issue, which published Harlan ELLISON's "Mefisto in Onyx". Circulation rose a little in 1994, but it was still down 25% on the 1988 figures. The difficulties came to a head in March 1995 when it was announced that Omni as a monthly would change to electronic publishing, to be available as Omni Online through America Online. The printed version would continue as a quarterly available through newsstands only, all subscriptions being cancelled. Datlow would continue as fiction editor. O's fiction has, interestingly, not put a high premium on hard science; indeed, especially in later years, it has often published SCIENCE FANTASY, pure FANTASY and MAINSTREAM fiction with a small sf twist to it. This has been attributed (1991) by Datlow to the higher quality overall of fantasy submissions relative to sf submissions, rather than to any change of policy. As fiction editor, Datlow has pulled in the big names but also done much for the careers of novice writers. For example, Ted Chiang's novelette "Tower of Babylon" (Omni 1990), his first story, won a NEBULA. Among the other award-winning Omni novelettes and short stories have been "Sandkings" (1979) by George R.R. MARTIN (HUGO and Nebula), "The Way of Cross and Dragon" (1979) also by Martin (Hugo), "Morning Child" (1984) by Gardner DOZOIS (Nebula), "Tangents" (1986) by Greg BEAR (Hugo and Nebula), "Permafrost" (1986) by Roger ZELAZNY (Hugo), "Schrodinger's Kitten" (1988) by George Alec EFFINGER (Hugo and Nebula) and "At the Rialto" (1989) by Connie WILLIS (Nebula). Omni has also published work of some literary distinction by Thomas M. DISCH and John CROWLEY, supported the eccentric talent of Howard WALDROP and the CYBERPUNK of William GIBSON and Bruce STERLING, and generally had an honourable, imaginative publishing record. Although Datlow is on record as liking very much some stories she would still not accept for Omni, she seems to have made remarkably few concessions, in O's fiction, to its mass-market audience. A UK version, *Omni: Book of the Future*, featuring new UK material and US reprints, ed Jack Schofield, was test-launched as a weekly partwork in Nov 1981 in the UK West Country by Eglemoss Publications; it lasted only 4 weeks and never received national distribution. Anthologies based on Omni are *The Best of Omni Science Fiction* (anth 1980) ed Bova and Don Myrus, #2 (anth 1981) ed Bova and Myrus, #3 (anth 1982) ed Bova and Myrus, #4 (anth 1982) ed Bova and Myrus, #5 (anth 1983) ed Myrus, #6 (anth 1983) ed Myrus—all but the first of these containing original fiction in addition to reprints - *The First Omni Book of Science Fiction* (anth 1983) ed Datlow, *The Second Omni Book of Science Fiction* (anth 1983) ed Datlow, *The Third Omni Book of Science Fiction* (anth 1985) ed Datlow, *The Fourth Omni Book of Science Fiction* (anth 1985) ed Datlow, *The Fifth Omni Book of Science Fiction* (anth 1987; includes 1 original story) ed Datlow, *The Sixth Omni Book of Science Fiction* (anth 1989; includes 1 original story) ed Datlow and *The Seventh Omni Book of Science Fiction* (anth 1989; includes 1 original story) ed Datlow. [PN]

OMPA

Known usually by its acronym, the Offtrail Magazine Publishers Association (1954-78/79) was formed in the UK by Kenneth BULMER, A. Vincent Clarke and Chuck Harris. OMPA was modelled on FAPA, and was founded to facilitate distribution of FANZINES published by and for members. Early contributors included John BRUNNER and Michael MOORCOCK. Uniquely for an APA, OMPA once organized a national convention, Ompacon, the 1973 UK Eastercon. [PR/RH]

ONE HOUR TO DOOMSDAY
CITY BENEATH THE SEA.

O'NEILL, GERARD K.
[r] LAGRANGE POINT; SPACE HABITATS.

O'NEILL, JOSEPH
(1886-1953) Irish educationist and novelist; Permanent Secretary to the Department of Education, Irish Free State, 1923-44; author of 3 sf novels. *Wind from the North* (1934) is only marginally sf, its narrator passing through a timeslip to give a vivid account of Dublin under Viking rule in AD1013. JO turned to sf proper with *Land under England* (1935), a DYSTOPIA in a LOST-WORLD setting: in a cave system beneath Cumberland, descendants of the Roman Army suffer a totalitarian state in which individualism is completely obliterated by telepathic means. The introduction by AE assumed that the book was a SATIRE on Hitlerian totalitarianism, an impression confirmed with the appearance of *Day of Wrath* (1936), a future- WAR novel which describes the destruction of civilization by advanced aircraft following a coalition between Germany, Japan and China. JO was not a GENRE-SF writer; rather, he used sf instruments to make cultural and political points. His eloquence was considerable. [JE]See also: OPTIMISM AND PESSIMISM; POLITICS.

O'NEILL, SCOTT
[r] Barton WERPER.

ONE MILLION B.C.
(vt Man and his Mate) Film (1940). Hal Roach/United Artists. Dir Hal Roach and Hal Roach Jr, starring Victor Mature, Carole Landis, Lon Chaney Jr. Screenplay Mickell Novak, George Baker, Joseph Frickert, based on a story by Eugene Roche. 85 mins, cut to 80 mins. B/w. In this not very distinguished prehistoric Romeo-and-Juliet soap opera a young caveman is exiled from the family cave and meets a girl from a rival tribe; together they face various prehistoric hazards, including an earthquake and an erupting volcano. Photographically enlarged lizards wearing rubber disguises play the anachronistic dinosaurs, and an elephant wearing a woolly coat stands in for a mammoth. D.W. Griffith (1875-1948) worked on portions of the film, but resigned in anger at the decision not to have the cavepeople speak modern English. The UK remake was ONE MILLION YEARS

BC (1966). [JB/PN]See also: CINEMA.

ONE MILLION YEARS B.C.

Film (1966). Hammer/20th Century-Fox. Dir Don Chaffey, starring Raquel Welch, John Richardson, Robert Brown, Martine Beswick. Screenplay Michael Carreras, based on the screenplay of ONE MILLION B.C. (1940). 100 mins. Colour. The first of Hammer's several stone-age movies (see also WHEN DINOSAURS RULED THE EARTH), this is a remake of One Million B.C.. Prehistoric lovers from different scantily clad tribes, the rock people and the shell people - some loony ANTHROPOLOGY here - survive warfare, anachronistic monsters, unconvincing fur brassieres and volcanic upheavals. Ray HARRYHAUSEN - this time not working with his usual colleague Charles Schneer - was in charge of the monsters which are, indeed, animated. [PN/JB]

ONN, CARRIE

Robert E. VARDEMAN.

ON SPEC

Canadian SEMIPROZINE, #1 Spring 1989, slightly irregular quarterly since 1991, current, eighteen issues to Fall 1994, pub The Copper Pig Collective from Edmonton, ed Barry Hammond, Susan MacGregor, Hazel Sangster, Jena Snyder and Diane L. Walton, DIGEST, perfect bound, around 96pp. With quite a low circulation that perhaps should qualify it only as a FANZINE, in other respects including the quality of its stories and the artwork of its covers OS is a fairly professional venture. Most writers - Robert Boyczuk and Alice Major for example - are comparatively unknown, but well-known authors like Charles DE LINT, Dave DUNCAN, Spider ROBINSON and Robert J. SAWYER also occasionally contribute fiction. Most issues contain some poetry. [PN]

ON THE BEACH

Film (1959). Lomitas Productions/United Artists. Dir Stanley Kramer, starring Gregory Peck, Ava Gardner, Fred Astaire, Anthony Perkins, Guy Doleman. Screenplay John Paxton, based on On the Beach (1957) by Nevil SHUTE. 134 mins. B/w. 1964, the NEAR FUTURE: only Australia has survived a global nuclear war. This merely prolongs the agony: a cloud of radioactive fallout is moving south and everyone will die. Suicide pills are handed out; people face death (or run to meet it) with varying degrees of dignity, though tears are shed; big-name Hollywood stars (the plot provides reasons for the number of Americans facing the end in Melbourne) look anguished; the wind blows newspapers through empty streets. OTB was the most celebrated of the 1950s anti-Bomb films, heavily publicized, much discussed, seen as Art, and certainly effective propaganda in the Cold-War nuclear-weapons debate. It has not weathered well; seen today it appears slow, mawkish, ludicrously stiff-upper-lip, and unrealistic in a sanitized middle-class way: no riots, no looting, just chaps feeling miserable and driving racing cars in a reckless manner. The Australian legend that Ava Gardner, while shooting, looked around and said of Melbourne "What a great place to make a movie about the end of the world" is untrue. Peter NICHOLLS appeared in a crowd scene. [PN]

OPEN UNIVERSE

In cosmology an open universe is a model of the Universe which implies that it will continue to expand forever; in this general sense, the term is found incidentally in many sf novels. However, sf readers also use it in a quite different meaning: to designate a work or series whose characters and venues may be made use of by fans and others in FANZINES without copyright restrictions (although the original authors do sometimes impose constraints). The best known open universes are probably STAR TREK and Marion Zimmer BRADLEY's Darkover. A cognate use of the term, to designate works or series whose authors invite other professional authors to participate, is perhaps deceptive. Open universes of this sort, from H. P. LOVECRAFT's Cthulhu to Michael MOORCOCK's Jerry Cornelius, are perhaps more appropriately thought of as a kind of SHARED WORLD. [JC]

OPERA MUSIC; THEATRE.

OPERATION GANYMED

Film (1977). Pentagrama/Zweites Deutsches Fernsehen. Written/dir Rainer Erler, starring Horst Frank, Dieter Laser, Uwe Friedrichsen, Jurgen Prochnow, Claud Theo Gaestner, Vicky Roskilly. 126 mins, cut to 120 mins. Colour. This grim German film emerges as a realist response to fantasies like PLANET OF THE APES (1968). On their return to Earth, 5 survivors of a 3-ship, 21-man mission to Ganymede crashland off the Gulf of Mexico and, lost in the desert, turn to madness, murder, cannibalism and guilt-ridden introspection as they wonder whether humanity has been wiped out by a nuclear war. During the mission, as we discover in flashbacks, the astronauts discovered ALIEN microorganisms which caused a plague among them, but it turns out that Earth is the harshest environment of all, as the final survivor straggles back to an unchanged, uncaring civilization. Concerned with the ethical issues of space travel-whether the expenditure results in an improved earthly standard of living or not - this is a talky and melodramatic film, but intermittently powerful. Erler's other sf films, mainly for the German tv company ZDF which cofinanced this one, include Das Genie ["The Genius"] (1974), Plutonium (1978) and Fleisch ["Flesh"] (1979). [KN]

OPERATION MONSTERLAND GOJIRA; RADON.

OPERATOR #5

US PULP MAGAZINE, 48 issues, Apr 1934-Nov/Dec 1939, published by Popular Publications; ed Rogers Terrill, it began as a monthly and then alternated between bimonthly and monthly. This was one of the livelier and more successful hero/villain pulps, and more sciencefictional than most. Operator #5 was secret agent Jimmy Christopher, whose assignment, in the lead novel every issue, was to save the USA from destruction by various menaces (often superscientific) and unfriendly powers (frequently Asiatic). The lead novels were published under the house name Curtis STEELE, which concealed the highly prolific pulp writer Frederick C. DAVIS (Apr 1934-Nov 1935), then Emile Tepperman (Dec 1935-Mar 1938), and lastly Wayne Rogers. Other features included a series of spy stories by Arthur Leo ZAGAT. 13 of the early lead novels, all the work of Davis, were

reprinted as paperback books (Frederick C. DAVIS for details).
[MJE/FHP/PN]

OPPENHEIM, E(DWARD) PHILLIPS

(1866-1946) UK writer, publishing from 1887 at least 160 novels, most of them espionage thrillers or society detective mysteries, the best known being *The Great Impersonation* (1920). His sf novels of interest - most of the titles listed below are romantic-fantasy potboilers - include *The Wrath to Come* (1924 US), in which the USA is threatened by a 1940s German-Russian-Japanese axis, *Gabriel Samara, Peacemaker* (1925 US; vt *Gabriel Samara* 1925 UK; vt *Exit a Dictator* 1939 US), in which the Russian government is overthrown, and *The Dumb Gods Speak* (1937), a novel set in the future and involving high intrigue and a secret weapon. EPO was a careless, clumsy, snobbish, quite enjoyable writer of escapist fiction.

[JC]Other works: *The Mysterious Mr Sabin* (1898); *A Daughter of Astrea* (1898); *The Traitors* (1902); *The Great Awakening* (1902; vt *A Sleeping Memory* 1902 US); *The Secret* (1907); *Havoc* (1911); *The Falling Star* (1911 US); *The Double Life of Mr Alfred Burton* (1913 US); *The Black Box* (1915 US); *The Great Prince Shan* (1922 US); *The Golden Beast* (1926 US); *Matorni's Vineyard* (1928 US); *The Adventures of Mr Joseph P. Cray* (1929); *Up the Ladder of Gold* (1931 US); *The Spy Paramount* (1935); *Mr Mirakel* (1943 US).

OPTIMISM AND PESSIMISM

In the most simplistic version of the HISTORY OF SF, sf was always (and rightly) an optimistic literature until the NEW WAVE came along in the 1960s and spoiled everything. This was at best a very partial truth, being only remotely applicable to GENRE SF and not at all to MAINSTREAM sf. In the mainstream, not even the work of individual authors could be categorized as simply either optimistic or pessimistic. Both Jules VERNE and H.G. WELLS took a darker view of the future as they became older; indeed, Wells's vision described almost a parabola: between *THE TIME MACHINE* (1895), a novel of evolutionary futility, and *Mind at the End of its Tether* (1945), from 1905 through the 1920s his portraits of the future were generally UTOPIAN. The favourite themes of sf outside the genre magazines have always included DYSTOPIA, INVASION, future WAR, and the HOLOCAUST AFTER, and the stories have often taken the form of dire warnings or a generalized philosophical bleakness aimed at demonstrating humanity's predilection for getting itself into trouble. Olaf STAPLEDON envisaged, in *LAST AND FIRST MEN* (1930), an ultimate harmony in the Universe, but one achieved only after a prolonged variety of evolutionary torments. By contrast, sf in the PULP MAGAZINES was mostly cheerful, especially after Hugo GERNSBACK founded *AMAZING STORIES* in 1926. Gernsback proselytized actively for technological optimism, and this, despite many exceptions - including several stories by John W. CAMPBELL Jr, writing as Don A Stuart, which evoked an atmosphere of moody desolation - remained the dominant tone of sf until the dropping of the atom bomb on Hiroshima in 1945. Campbell, as editor of ASF, normally required a constructive attitude towards science from his contributors, but, though writers like Robert A. HEINLEIN were temperamentally inclined to oblige, even before 1945 the typical ASF story was by no means mindlessly cheery, and many of

the stories showed a strong awareness of possible technological DISASTER. After the advent of the Bomb (NUCLEAR POWER) it was no longer possible to see the applications of science as an unmixed blessing. Also working against optimism were the Cold War and its domestic effect in the USA: the suspicious atmosphere (approaching PARANOIA) prevalent from the early 1950s (shown notably in the anti-communist scares) probably helped to change the focus of interest of many sf stories from TECHNOLOGY to SOCIOLOGY and POLITICS. The magazine GALAXY SCIENCE FICTION specialized in a form of social SATIRE best exemplified by THE SPACE MERCHANTS (1952 as "Gravy Planet"; 1953) by C.M. KORNBLUTH and Frederik POHL; this type of story created its future scenario with a distinct cynicism, but its narrative tone was similar to that of most pulp sf, cheerful and hardbitten, with no such strong sense of horror and disgust as could be found outside the genre in novels like George ORWELL's NINETEEN EIGHTY-FOUR (1949). But any categorization of sf stories into the optimistic and the pessimistic is so imprecise as not to be greatly useful, and indeed there would be no point in discussing the subject were it not that sf critics with backgrounds in 1930s and 1940s FANDOM have often regarded the optimism/pessimism split as of grave importance. Just such a distinction has also been made in several histories of sf, such as Donald A. WOLLHEIM's The Universe Makers (1971), and it is implicit in much of the work of Sam MOSKOWITZ. The work of Clifford D. SIMAK is relevant as an example of the difficulties in such a categorization: his stories regularly revolve around reconciliation and the achievement of some kind of harmony between Technological Man and Nature (hence optimistic), but his tone, as in CITY (fixup 1952), is often elegiac and nostalgic (hence pessimistic). A distinction with some truth is often made between US sf, as typically outward-thrusting and riding the momentum of the old myth of the Frontier, and the UK SCIENTIFIC ROMANCE, which, perhaps as a result of imperial power giving way rapidly to global impotence, was far more inclined to expect DISASTER. But this was never more than a gross generalization (though truer of UK sf than of US sf); nor did it take into account the guileless pleasure the British took in disaster. Could anything so enjoyable be called pessimism? Now that, in the 1990s, the world economic hegemony of the USA is threatened by financial weakness and domestic problems, as happened in the UK much earlier, it will be interesting to observe what sociological reflections appear in US sf of the later 1990s. It was only in the middle and late 1960s, with the advent of the so-called New Wave, that real anger and sometimes despair about the future of humanity became quite commonplace in genre sf. But the writers of the New Wave, even though their attitudes sometimes appeared anarchic, were seldom passively acceptant of a dark view; the dominant New-Wave metaphor may have been of ENTROPY, of things running down, but the fierce commitment of, say, Harlan ELLISON or Brian W. ALDISS could not be airily dismissed as "pessimism" by any but the crudest of critics. Aldiss has many times inveighed in print against what he regards as the strong moral pressure, found especially in some US publishing houses, to legislate for a kind of mandatory optimism. The casual insertion of a happy ending or a few improving messages no more constitutes true optimism than an awareness of the difficulties of life either now or in the future constitutes true pessimism. Poets have many

times argued that an awareness of death gives a sharper edge to love; just so, the darker elements which have entered sf since 1945, and especially since the mid-1960s, have been argued as redressing a balance without which sf could never have reached maturity as a genre. The good sf writer often mediates between simplistic extremes of optimism and pessimism, and his mode of mediation is often irony: one meaning of this complex word has been defined as "an outcome of events contrary to what was, or might have been, expected". The ironist is not just somebody sarcastic or even somebody who expects the worst: he or she is somebody who understands the multitude of possibilities concealed in apparently straightforward events, does not take anything at face value, and (at best) embraces the largeness and unpredictability of things (at worst being merely knowing). Notable sf ironists have included J.G. BALLARD, Alfred BESTER, Algis BUDRYS, Philip K. DICK, Thomas M. DISCH, Ursula K. LE GUIN, Michael MOORCOCK and, more recently, Iain M. BANKS, John CROWLEY, William GIBSON, James TIPTREE Jr. and Gene WOLFE. To read the more painful or rueful aspects of their work as simple pessimism is to read inaccurately. Indeed the whole question of optimism and pessimism in sf seems far less pressing today than it did when the first edition of this encyclopedia was published in 1979, with the residual echoes of the New-Wave debate still audible. While the entropic introspection (INNER SPACE) of the New Wave is no longer characteristic of any but a few writers, the old certitudes of SPACE OPERA (the Universe is ours for the taking, just so long as we're inventive and self-reliant) are likewise long gone. Writers of HARD SF from the 1980s - Greg BEAR, David BRIN, Orson Scott CARD, Paul J. MCAULEY, Michael SWANWICK and others - no longer portray the Universe as waiting voluptuously to be had. The extremes of optimism and pessimism have disappeared; perhaps, except for purposes of tub-thumping argument, they were never there in the first place. [PN]

OR, L'
GOLD.

ORAM, NEIL

(1938-) UK writer whose involvement in sf was restricted to the 3 vols of his The Warp sequence of metaphysical adventures - The Storm's Howling through Tiflis (1980), Lemmings on the Edge (1981) and The Balustrade Paradox (1982) - which novelize his 22-hour, 10-play cycle, The Warp, performed in London in 1979, dir Ken Campbell. The sequence, after the manner of the Illuminatus! books by Robert SHEA and Robert Anton WILSON, features world conspiracies, ley energies, reincarnated searchers for the key to unlock occult mysteries, and so forth. [JC]

ORBAN

Working name of US illustrator Paul Orban (?1896-?1974). He executed 7 covers and many interior ILLUSTRATIONS for a remarkable number of magazines (1933-60), including If, Future, Space Science Fiction and The Shadow, but is mostly associated in readers' minds with the 1940s ASF, where he did many of the interior illustrations 1933-54. His black-and-white work was often symbolic of a story rather than directly representational, regularly placing faces or figures over geometrical abstractions and using bold cross-hatching; it was always competent and

sometimes more. Brian W. ALDISS has called O "an incurable romantic in a field of incurable romantics". [JG/PN]

ORBIT

Seminal US ORIGINAL-ANTHOLOGY series ed Damon KNIGHT. Although Orbit was not the first such series, having been preceded by STAR SCIENCE FICTION STORIES in the USA and NEW WRITINGS IN SF in the UK, it was its extraordinary early success that precipitated the boom in such series in the early 1970s. It had a more literary orientation than the sf magazines, and perhaps for this reason was especially popular with the active members of the newly formed SCIENCE FICTION WRITERS OF AMERICA. For whatever cause, stories from Orbit dominated the NEBULA awards in their early years, although none has ever won a HUGO. Orbit 1 (anth 1966) contained "The Secret Place" by Richard MCKENNA, which won the short-story Nebula. Orbit 3 (anth 1968) featured 2 Nebula-winning stories: "Mother to the World" by Richard WILSON and "The Planners" by Kate WILHELM. Orbit 4 (anth 1968) contained another winner in "Passengers" by Robert SILVERBERG. That was the last Orbit story to win an award, although the year of pervasive dominance was 1970, when between them Orbit 6 (anth 1970) and Orbit 7 (anth 1970) provided 1 of the 5 novellas on the final Nebula ballot, 3 of the 6 novelettes, and 6 of the 7 short stories. Three writers in particular became associated with ORBIT, and remained its most regular contributors: R.A. LAFFERTY, Wilhelm and Gene WOLFE; in the run of 21 volumes, Lafferty and Wilhelm had 19 stories each, and Wolfe 18. Orbit lost its dominance once the flood of competitors appeared, and with #14 had to change publishers (becoming confined to a hardcover edition in the process) in order to survive. Notable stories in later volumes include Wolfe's "The Fifth Head of Cerberus" in Orbit 10 (anth 1972), Ursula K. LE GUIN's "The Stars Below" in Orbit 14 (anth 1974) - which also contained Joan D. VINGE's debut story - and Wilhelm's "Where Late the Sweet Birds Sang" in Orbit 15 (anth 1974). Orbit was especially notable for stories that seemed at the time odd and sui generis, quite unlike the usual run of GENRE SF and fantasy, but with hindsight were early signs of a general sophistication of genre sf in the 1970s, in which this series at first played a vital role; later numbers became rather insipid. Other volumes in the series are Orbit 2 (anth 1967), Orbit 5 (anth 1969), Orbit 8 (anth 1970), Orbit 9 (anth 1971), Orbit 11 (anth 1972), Orbit 12 (anth 1973), Orbit 13 (anth 1974), Orbit 16 (anth 1975), Orbit 17 (anth 1975), Orbit 18 (anth 1976), Orbit 19 (anth 1977), Orbit 20 (anth 1978) and Orbit 21 (anth 1980). The Best From Orbit (anth 1977) is culled from the first 10 vols. [MJE/PN]

ORBIT SCIENCE FICTION

US DIGEST-size magazine. 5 issues 1953-Nov/Dec 1954, first 2 undated, published by Hanro Corp., New York; ed Jules Saltman. OSF was a middling-quality magazine that fell victim to the inundation of the market with too many sf magazines in the early 1950s. A story in the Tex Harrigan series by August DERLETH appeared in every issue, and #5 contained "Adjustment Team" by Philip K. DICK. All stories were chosen by Donald A. WOLLHEIM, uncredited. A cut 1954 Australian edition of #1 only, in pulp format, was published by Consolidated Press, Sydney. [FHP/PN]

ORCZY, BARONESS

Working name of Hungarian-born UK author and illustrator Baroness Emmuska (variously Emma or Emulka) Magdalena Rosalia Maria Josefa Barbara Orczy (1865-1947). After magazine work as an illustrator, she came to fame with *The Scarlet Pimpernel* (1905). Her sf novel, *By the Gods Beloved* (1905; vt *The Gates of Kamt* 1907 US), is a LOST-WORLD tale set in the desert, where ancient Egyptians engage in sexual intrigues and politics. [JC]

ORDE, A.J.

Sheri S. TEPPER.

ORE, REBECCA

Pseudonym of US writer Rebecca B. Brown (1948-), who began publishing sf with "Projectile Weapons and Wild Alien Water" for AMZ in 1986 and is best known for *Becoming Alien* (1988) and its sequels, *Being Alien* (1989) and *Human to Human* (1990), a sequence which - with a deceptive air of leisureliness - takes a young rural Virginian named Tom from the provincial backwaters of xenophobic Earth to another planet where, as the solitary human among a multitude of other races, he is trained to join, on behalf of Earth, the Federation of Space Traveling Systems. A very wide range of ALIENS is introduced in a concise but seemingly disorganized cataloguing style which has reminded critics of Stanley G. WEINBAUM's "A Martian Odyssey" (1934); but, as the sequence progresses, the momentum of the tale builds, and RO's apparently scattershot concisions turn out to have been carefully meditated. The end sense, as Tom grows into knowledge of himself and of his prejudice-stricken fellow humans, is one of complexities experienced. More immediately impressive, perhaps, is a singleton, *The Illegal Rebirth of Billy the Kid* (1991), in which a CIA specialist in DNA-recombinant engineering (GENETIC ENGINEERING) creates a CLONE - or chimera - of Billy the Kid whose "memories" of the 19th century have been programmed into his blank brain, and whose perceptions are controlled by a "nineteenth-century visual matrix" that causes him to read 21st-century sights in terms of Billy's own experiences. The story of this chimera's slow and anguished climb into self-awareness, and of his escape to a rural Appalachian theme-parked reservation, is swift and urgently dense in the telling, fragilely hopeful in its implications. As of 1991, RO herself lived in Appalachia, and the ironies attendant upon inhabiting a contrived sanctuary enrich an already rich text. Her stories, which are strong and varied, appear in *Alien Bootlegger* (coll 1993); *Slow Funeral* (1994) is a contemporary fantasy which evocatively crosshatches supernatural material into the American scene. [JC]

O'REILLY, JOHN BOYLE

(1844-1890) Irish-born US writer. A Fenian transported to Australia, he escaped to the USA and became a journalist, poet and novelist. His sf novel about a republican England, *The King's Men: A Tale of Tomorrow* (1884) with Robert GRANT, F.J. Stimson and John T. Wheelwright, features an attempted monarchist coup which is roundly defeated. [JC]

ORGILL, DOUGLAS (WILLIAM)

[r] John GRIBBIN.

ORIGINAL ANTHOLOGIES

An original ANTHOLOGY is an anthology in book format of stories that have not been previously published, and such volumes played an important role in sf PUBLISHING, especially in the 1960s and 1970s. This encyclopedia gives entries to original-anthology series devoted to sf and (with one exception, *Dangerous Visions*) running to 3 or more vols; we do not give separate entries for shared-world anthology series (*SHARED WORLDS* for examples) with the exception of *Wild Cards*. There are 19 such entries: *The BERKLEY SHOWCASE* , *CHRYSALIS*, *DANGEROUS VISIONS*, *FULL SPECTRUM*, *INFINITY*, *INTERZONE: THE ANTHOLOGY* (original only in part), *L. RON HUBBARD PRESENTS WRITERS OF THE FUTURE*, *NEW DIMENSIONS*, *NEW VOICES*, *NEW WRITINGS IN SF*, *NOVA*, *ORBIT*, *OTHER EDENS*, *QUARK*, *STAR SCIENCE FICTION STORIES*, *STELLAR*, *SYNERGY*, *UNIVERSE* and *WILD CARDS*. (We classify some further original-anthology series in book format as magazines, when they so describe themselves; these include *DESTINIES* and *PULPHOUSE: THE HARDBACK MAGAZINE*.) [PN]

ORIGINAL SCIENCE FICTION STORIES, THE
US DIGEST-size magazine, 38 issues, 1953-May 1960. Published by Columbia Publications; ed Robert A.W. LOWNDES. A companion magazine to *FUTURE FICTION* and *SCIENCE FICTION QUARTERLY*, *TOSFS* began life as a one-shot simply entitled *Science Fiction Stories*, though some commentators see this as a mere continuation, after a gap, of the magazine *SCIENCE FICTION* (1939-41), also ed Lowndes. #2 followed in 1954, and the magazine commenced regular publication in Jan 1955. The Sep 1955 issue added an advertising slogan, "The Original", to the title on the cover, and the magazine subsequently became known by that name, although technically its title remained *Science Fiction Stories*. Like its companion magazines, *TOSFS* existed on a very small editorial budget but maintained a respectable, if largely mediocre, level of quality, a little better perhaps than its stable companion *Future Fiction*. Serialized novels included *The Tower of Zanid* (1958) by L. Sprague DE CAMP and *Caduceus Wild* (1959 *TOSFS*; 1978) by Ward MOORE and Robert Bradford. Robert SILVERBERG was the magazine's most prolific contributor. R.A. LAFFERTY made his debut here with "Day of the Glacier" (1960). The numeration of this cluster of magazines was very complex, and can be found explained in *Science Fiction, Fantasy and Weird Fiction Magazines* (1985) ed Marshall B. TYMN and Mike ASHLEY (in their article on *Science Fiction*, as they prefer to treat *TOSFS* as a continuation of that journal). After its demise in May 1960 the title was bought by fan James V. Taurasi (*FANTASY TIMES*), who used it on 3 *SEMIPROZINE* issues - little more than *FANZINES*, in fact - in *BEDSHEET* format in Dec 1961, Winter 1962 and Winter 1963. The UK abridged reprint edition (1957-60) had 12 numbers. [MJE/FHP/PN]

ORIGIN OF MAN

An abundant literature dealing with the remote ancestry of the human species inevitably sprang up in the wake of the theory of *EVOLUTION*, as propounded by Charles Darwin (1809-1882). T.H. Huxley (1825-1895), the principal champion of Darwinism, published a classic essay on "Man's Place in Nature" (1863), and Darwin himself wrote *The Descent of Man* (1871) soon after. The main point at issue was, as Benjamin Disraeli (1804-1881) put

it, "the question of whether Man is an ape or an angel". Disraeli was on the side of the angels, but science and serious speculative fiction were not; their main interest was in how Man had ceased to be a brute beast and become human. Huxley took a rather harsh view of the process of natural selection, and so did his one-time pupil, H.G. WELLS, whose "A Story of the Stone Age" (1897) envisages the crucial moment in human evolution as the invention of a "new club" - a better means to cut and kill. This view recurs constantly, being memorably envisaged in Stanley KUBRICK's 2001: A SPACE ODYSSEY (1968), in which the dawn of intelligence occurs as an ape realizes that the bone he uses to smash other bones can also be used as, among other things, a WEAPON. Darwin presented a rather different account, stressing the positive value of cooperation and mutual protection in the struggle for existence. This stress on cooperative emotions as well as physical inventions is found in such works as Jack LONDON's Before Adam (1906), although previous, more religiously inclined authors had represented the origins of humanity in purely spiritual terms; Gouverneur MORRIS's The Pagan's Progress (1904) is an example. The domestication of fire was also widely seen as the crucial invention, notably in Stanley WATERLOO's The Story of Ab (1897), in Charles Henry Robinson's Longhead: The Story of the First Fire (1913), and in the most famous novel by the most prolific author of prehistoric fantasies, J.H. ROSNY aine's La guerre du feu (1909; cut trans as The Quest for Fire 1967). Rosny's prehistoric stories - which include Vamireh (1892), Eyrimah (1893), Le felin geant (1918; trans 1924 as The Giant Cat 1924 US; vt Quest of the Dawn Man 1964) and Helgvor de Fleuve Bleu ["Helgvor of the Blue River"] (1930) - inspired numerous works by other French writers, including Marcel Schwob's "The Death of Odjigh" (1892; trans 1982), Claude ANET's La fin d'un monde (1925; trans as The End of a World 1927) and Max BEGOUEN's Les bisons d'argile (1925; trans as Bison of Clay 1926). The Huxleyan account of human nature was comprehensively rejected by two UK writers in SCIENTIFIC ROMANCES that glorified the innocent state of Nature and blamed civilization for all human ills: S. Fowler WRIGHT in Dream, or The Simian Maid (1929) and its intended sequel The Vengeance of Gwa (1935) (as by Anthony Wingrave) and J. Leslie MITCHELL in the polemical Three Go Back (1932) and the lyrical "The Woman of Leadenhall Street" (1936) as by Lewis Grassie Gibbon. Similar nostalgia for a prehistoric Golden Age is displayed in William GOLDING's The Inheritors (1955), though Golding follows Wright rather than Mitchell in refusing to grant innocence to Man's direct ancestors, and presents a more brutal view of prehistoric life in "Clonk Clonk" (1971). All these works are, in part, admonitory fables, and by natural exaggeration prehistoric fantasies have also been employed for SATIRE, as in Andrew LANG's "The Romance of the First Radical" (1886), Henry Curwen's Zit and Xoe (1887), W.D. Locke's "The Story of Oo-oo" (1926) and Roy LEWIS's What We Did to Father (1960: vt The Evolution Man 1963; vt Once upon an Ice Age 1979). There have been several attempts to write novels on a vast scale which link prehistory and history to provide a "whole" account of the "spirit of Man". The most impressive is Den Lange Rejse (1908-22 Denmark; trans as The Long Journey 1922-4; omni 1933) by the Danish Nobel prizewinner Johannes V. JENSEN, the first two parts of which are prehistoric fantasies. A work on an even greater scale is the Testament of Man series by Vardis FISHER, a 12-novel series

of which the first 4 vols are prehistoric fantasies. Also in this tradition is *Les enchainements* (1925; trans as *Chains* 1925) by Henri BARBUSSE, while more trivial examples include *The Invincible Adam* (1932) by George S. VIERECK and Paul ELDRIDGE and *Tomorrow* (coll of linked stories 1930) by F. Britten AUSTIN, who also wrote a volume of prehistoric short stories, *When Mankind was Young* (coll 1927). The attempt to find in the evolutionary history of Man some sequence of events for which the Genesis myth might be considered a metaphor - a key theme of Fisher's novels - is such an attractive notion that it has infected anthropological theory as well as speculative fantasy. Austin BIERBOWER's *From Monkey to Man* (1894) offers a simpler account of a metaphorical expulsion from Eden. A fierce reaction against such superstitions can be found in *The Sons of the Mammoth* (trans 1929) by the Russian anthropologist V.G. BOGORAZ. In the US PULP MAGAZINES there grew up a romantic school of prehistoric fiction glorifying the life of the savage. Its most prolific proponent was Edgar Rice BURROUGHS, author of the Pellucidar series, *The Eternal Lover* (1914; 1925; vt *The Eternal Savage*) and *The Cave Girl* (1913-17; 1925). Novels from outside the pulps, however, often show a similar if more muted romanticism. Examples include most of Jack London's stories in this vein, Sir Charles G.D. ROBERTS's *In the Morning of Time* (1919), H. Rider HAGGARD's *Allan and the Ice-Gods* (1927) and Richard TOOKER's *The Day of the Brown Horde* (1929). Prehistoric romances in the CINEMA, which are notorious for their anachronisms, are perhaps the extreme examples of the romantic school, from D.W. Griffith's *Man's Genesis* (1911) onwards. Although Hugo GERNSBACK reprinted Wells's "A Story of the Stone Age", GENRE SF did not really take prehistoric fantasy aboard, with notable exceptions including Lester DEL REY's "When Day is Done" (1939), Jack WILLIAMSON's "The Greatest Invention" (1951), Chad OLIVER's juvenile *Mists of Dawn* (1952) and Theodore L. THOMAS's "The Doctor" (1967). Progress in physical ANTHROPOLOGY has encouraged a sophistication of fictional images of prehistoric life, reflected in such works as *Cook* (1981) by Tom Case and *NO ENEMY BUT TIME* (1982) by Michael BISHOP. The most remarkable modern manifestation of prehistoric fantasy is, however, the series of bestselling novels by Jean AUDEL, collectively entitled *Earth's Children*, which begins with *The Clan of the Cave Bear* (1980). Auel ingeniously combines a realism based in modern scientific understanding with robust literary romanticism. Also worthy of special note is a series of surreal prehistoric fantasies included in Italo CALVINO's *COSMICOMICS* (coll 1965; trans 1968) and *t zero* (coll 1967; trans 1969; vt *Time and the Hunter*). Significant scientific speculations on the topic are contained in two novels by the palaeontologist Bjorn KURTEN, *Dance of the Tiger* (1978; trans 1980) and *Singletusk* (1984; trans 1986). There have, of course, been several unorthodox accounts of the origin of Man, including various hypothetical extraterrestrial origins. Some, like that propounded by Erich VON DANIKEN, have been presented as fact. Such notions recur throughout the HISTORY OF SF, usually developed as silly plot gimmicks (*ADAM AND EVE*). Among the more interesting examples are Eric Frank RUSSELL's *Dreadful Sanctuary* (1948; 1951; rev 1963), which plays with the Fortean hypothesis (Charles FORT) that Earth is an asylum for the lunatics of other worlds, and James BLISH's "The Writing of the Rat" (1956), one of many stories which makes us the descendants of a "lost colony" within a

galactic civilization. [BS]See also: MYTHOLOGY.

ORKOW, BEN (HARRISON)

(1896-1988) Russian-born US writer, mostly of plays and film scripts. In his sf novel *When Time Stood Still* (1962) a couple travel via SUSPENDED ANIMATION to AD2007, where her fatal disease may be curable. [JC]

ORLACS HANDE

(vt *The Hands of Orlac*) Film (1924). Pan Film. Dir Robert Wiene, starring Conrad Veidt, Fritz Kortner, Carmen Cartellieri, Alexandra Sorina. Screenplay Louis Nerz, based on *Les mains d'Orlac* (1920) by Maurice RENARD. 92 mins, cut to 70 mins. B/w. In this Austrian film from the director of *The Cabinet of Doctor Caligari* (1919), a pianist whose injured hands have been replaced with those of an executed murderer inherits also the murderer's homicidal tendencies, and must struggle against the domination of the dead man. The central idea is scientifically absurd, but it has an emotional logic and has attracted several film-makers. The best version is the US remake *Mad Love* (1935; vt *The Hands of Orlac*), which deviates somewhat from Renard's silly novel, shifting the emphasis from pianist to surgeon. It was dir Karl Freund (best known as a brilliant cameraman) from a script by Guy ENDORE, P.J. Wolfson and John L. Balderston, and starred Peter Lorre, Frances Drake, Colin Clive, 70 mins, b/w. Lorre - in one of his few truly great performances and one of his first after arriving in the USA - plays the demented surgeon who grafts the murderer's hands onto a pianist whose wife he loves, and then attempts to drive him insane by masquerading as the executed murderer back from the dead. This stylish, Grand Guignol melodrama still seems stunning half a century later. Two later remakes were produced - one using the original title *The Hands of Orlac* (1960; vt *Les mains d'Orlac*; vt *Hands of a Strangler*) and the other called *Hands of a Stranger* (1963). The former was a UK-French coproduction made in two versions, the UK version dir Edmond T. Greville, the French dir Jacques Lemare, both versions starring Mel Ferrer, Lucille Saint Simon, Christopher Lee, Donald Pleasence, Dany Carrel, Felix Aylmer, Basil Sydney and Donald Wolfitt, with screenplay by John Baines and Grenville, 105 mins cut to 95 mins, b/w. The latter film was US, written and dir Newton Arnold, starring Paul Lukather, Joan Harvey, 86 mins cut to 73 mins, b/w. Both versions, particularly the latter, are distinctly inferior to *Mad Love*. [JB/PN]

ORU KAIJU DAISHINGEKI GOJIRA.

ORWELL, GEORGE

Pseudonym of UK writer Eric Arthur Blair (1903-1950), much of whose best work was contained in his impassioned journalism and essays, assembled in the 4 vols of *The Collected Essays, Journalism and Letters of George Orwell* (all coll 1968). His fiction and extended social criticism, as in *Down and Out in Paris and London* (1933), also demonstrates his good sense and the intense clarity of his mind. His books of sf interest are two. *Animal Farm: A Fairy Story* (1945 chap) is a fable satirical of the form communism took once it had established itself in the Soviet Union, and consequently enraged many of those who responded sensitively to criticisms

of what they continued to perceive as a valid experiment in socialism. Despite its fable form, however, *Animal Farm* is an intensely practical book, mocking not the ideals of socialism or communism (many of which GO shared) but their corrupt embodiment in an actual state. The attack is direct, and the USSR is the target. A great revolution takes place on the Farm, but is soon subverted by the Pigs, whose leader, Napoleon, seizes power and reduces the Revolution's original 7 Commandments (the last being "All animals are equal") down to one, which is written in capitals on the communal wall: ALL ANIMALS ARE EQUAL BUT SOME ARE MORE EQUAL THAN OTHERS. The attack on Stalin is devastating. A cartoon feature film animated by John Halas and Joy Batchelor, *Animal Farm*, was released in 1955. GO's most famous book remains *NINETEEN EIGHTY-FOUR* (1949), which was published shortly before his death of tuberculosis and which again caused some of his colleagues on the Left to accuse him (mistakenly) of betrayal. It was filmed in 1955 as *1984* and in 1984 as *NINETEEN EIGHTY-FOUR*. With Aldous HUXLEY's *BRAVE NEW WORLD* (1932), it is the century's most famous English-language *DYSTOPIA*. It is a book of hectic, devilish, claustrophobic intensity, so nightmarish in the telling that some critics have faulted it (imperceptively) for subjective imbalance. In 1984, the world is divided into three vast enclaves: Britain, now known as Airstrip One, is devastatingly shabby - never having been decently rebuilt after an atomic war fought in the 1950s - and without hope. It is hard to resist a sense that GO was painting, with an unusual savagery of verisimilitude, the UK in which he lived - 1984 being simply a partial inversion of 1948 - but his presentation of the totalitarian regime ruling Airstrip One could be thought to apply to the contemporary Labour government of the UK only by those whose *POLITICS* were radically to the right of GO's own. The rulers of Airstrip One (symbolized by images of Big Brother) use their ability to inflict pain to drive the fact of their power into the masses, whose lives are mercilessly regimented by the Thought Police and who live in squalid barracks monitored by two-way tvs, their thoughts controlled by the Newspeak to which GO devoted a scathing appendix: "It was intended that when Newspeak had been adopted once and for all and Oldspeak forgotten, a heretical thought . . . should be literally unthinkable." The scarifying story of Winston Smith's attempt to liberate himself, and of his eventual surrender of all his human dignity under torture, makes up the actual plot of the book. As an indictment of the deep tendency of modern, technologically sophisticated governments to manage reality, and as a further devastating assault upon the actual situation in the USSR of 1948, *NINETEEN EIGHTY-FOUR* was unmatched. Its pessimism was both distressing and salutary. Its understanding of the nightmare of power - when wielded by representatives of a species which had evolved beyond the constraints of mercy - was definitive. "Do not forget this," his chief torturer tells Winston at the finish, after glorying in the end of all natural human affinities and goals: "Always there will be the intoxication of power, constantly increasing and constantly growing subtler . . . If you want a picture of the future, imagine a boot stamping on a human face - for ever." [JC] About the author: There is much Orwell criticism in print. Irving Howe's *Orwell's Nineteen Eighty-four* (1963) is valuable, as are George Woodcock's *The Crystal Spirit* (1967) and *George Orwell: A Reassessment* (anth 1988) ed Peter Buitenhuis and Ira B. Nadel. See also:

OTHER EDENS

UK original anthology series, consisting of Other Edens (anth 1987), #II (anth 1988) and #III (anth 1989), ed Christopher EVANS and Robert HOLDSTOCK. This was a curious series. The (ironic?) title is taken from the description of England in Shakespeare's Richard II, though the editors mistakenly say it was Richard III; in fact, however, they rather let down their own ambition of giving a boost to UK short fiction by including stories by US writers like Kim Stanley ROBINSON and Scott BRADFIELD, which led some readers to the unfortunate conclusion that not enough local material existed. Though good stories were published (many of the better ones inclining to FABULATION or fantasy rather than sf) the overall tone was bleak and introspective, sometimes to the point of self-parody; thus the series could be read as supporting the long-held US stereotype of UK sf, a stereotype that was contemporaneously being destroyed by the magazine INTERZONE. The series did include good work from the new generation of UK writers, including Gill ALDERMAN, Stephen BAXTER, Keith BROOKE and Ian MCDONALD. [PN]

OTHER DIMENSIONS PARALLEL WORLDS.

OTHER WORLDS

US DIGEST-size magazine, in PULP-MAGAZINE format from Nov 1955. 47 issues, only 45 featuring fiction (not counting those titled either SCIENCE STORIES or UNIVERSE SCIENCE FICTION), Nov 1949-July 1953 (31 issues) and May 1955-Sep 1957 (16 issues). Published by Clark Publishing Co., Nov 1949-July 1953, and Palmer Publications Inc., May 1955-Nov 1957; ed Raymond A. PALMER. Though for some periods monthly, OW was usually a slightly irregular bimonthly. OW was launched by Palmer while he was still editor of AMAZING STORIES and FANTASTIC ADVENTURES; for this reason editorship of the first issue was credited to Robert N. Webster (a Palmer pseudonym). OW was editorially very similar to the previous Palmer magazines, particularly in featuring the supposedly nonfictional stories of Richard S. SHAVER. Eric Frank RUSSELL was a regular contributor, and the magazine serialized L. Sprague DE CAMP's nonfiction Lost Continents (1952-3; 1954). OW was suspended after #31, July 1953. Palmer was notorious for his many title changes, and it is possible to regard his short-lived Science Stories (Oct 1953-Apr 1954) as a continuation of OW, the title

change allowing him to duck some inconvenient printing bills, but Science Stories's numeration began again from #1. And, to confuse the story further, also in 1953 Palmer anonymously founded a new magazine, Universe Science Fiction, whose first 2 issues, June and Sep 1953, he ed under the pseudonym George Bell; with #3, Dec 1953, Palmer became officially its editor and publisher. After 10 issues (the last was Mar 1955) the title of Universe Science Fiction was changed to Other Worlds, and at this point the magazine's numeration followed both magazines (the first new OW, for example, being #11 [32] May 1955, it being the 11th Universe and the 32nd Other Worlds). 12 more issues followed, until in June 1957 the title was changed again, to Flying Saucers from Other Worlds, reflecting Palmer's increasing preoccupation with UFOS. Only 2 of the first 4 retitled issues (3 of which were unnumbered) featured sf stories, these being #2 and #4 (July and Sep 1957). After this, though it carried on for some years, the magazine became solely UFO-oriented. [MJE/FHP/PN]

OTOMO, KATSUHIRO

(1954-) Japanese comic-book illustrator and film animator, one of the most popular in the new generation of "manga" (Japanese COMICS) artists. His debut, not sf, was in 1973 with "Jusei" ["Gun Report"], based on the novella "Mateo Falcone" (1833) by Prosper Merimee (1803-1870). Since then he has pleasantly shocked the comics world with his excellent artwork, his surreal way of telling a story and the dynamic movement of his scene-setting. His breakthrough from cult status to national fame came with the GRAPHIC NOVEL Dohmu ["A Dream of Childhood"] (1981; 1983; English trans projected 1992), which won the Nippon SF Taisho and a Sei'un Award (JAPAN). This describes a conflict between the PSI POWERS of a murderous old man and of a group of children. KO's international status largely rests on the still-continuing Akira story, a graphic epic (over 1500pp) rather than a graphic novel. This began its first serialization in 1982-6, and resumed in 1988, in which year an English-language version commenced publication from Epic Comics. It has also been published in book form - several volumes - in both Japan and the USA. During the hiatus KO wrote, designed and directed the feature film version, AKIRA (1987), a tour de force of animation which, like the comic, alarmingly blends elements of "splatter" (SPLATTER MOVIES) with images of post- HOLOCAUST evolutionary transcendence in a somewhat CYBERPUNK manner. KO's other main works include "Kibun Wa Moh Senso" ["Almost Enjoying the War"] (1979), "Highway Star" (1979) and "Rohjin Z" ["Old Man Z"] (1991). [TSh/PN]

OTTUM, BOB

Working name of US writer Robert K. Ottum Jr (?1925-1986), in whose surprisingly funny sf novel, All Right, Everybody Off the Planet (1972), inefficient ALIENS send a spy among us in human form; the humour derives from their ignorance of human relationships and from their attempts to stage-manage an impressive First Contact. A similar notion - with the sexes reversed - was much later used, leadenly, for the film MY STEPMOTHER IS AN ALIEN (1988). [JC]

OULD, CHRIS

(?1959-) UK writer whose sf novel, Road Lines (1985), was a NEAR-FUTURE thriller set in an apocalyptic landscape reminiscent, to some, of the MAD

OULIPO

A term standing for L'Ouvroir de Litterature Potentielle, which might be crudely translated as "workshop of possible fictions". Oulipo is an extremely selfconscious international literary movement founded in 1960 by the French authors Raymond Queneau (FRANCE) and Francois Le Lionnais; its official membership was originally limited to 10 but eventually expanded to the present 25. Over the years Oulipo's members and proponents have included many internationally known fabulists and magic realists such as Harry Mathews (1930-), Georges Perec (1936-1982) and Italo CALVINO. Oulipo's tenets are radically high-Modernist. Inspired by the linguistic theories of Ferdinand de Saussure (1857-1913), its members consider "literature" a game of language rather than a means of representing the world, a perspective foreign to most but not all sf writers. By designing artificial "constraints" and "structures", Oulipoans try to make prose-writing difficult in the same way that metrical schemes make sonnets and sestinas difficult. But, in order to manufacture complicated products, it is necessary first to manufacture complicated machines. It is the friction generated by the author's imagination working against such formal constraints, Oulipo contends, that produces great art. Members of the group have tended to be mathematicians as well as writers. While many of their formal structures are extremely complicated, it is often their simplest formulae that produce the most spectacular results. Perhaps consciously following the example of Ernest Vincent Wright, whose novel Gadsby (1939) has no letter "e", Georges Perec (1936-1982) wrote the novel *La Disparition* ["The Disappearance"] (1969) without once using that letter. (When a work is produced by deleting a letter or set of letters, the resulting narrative is referred to as a "lipogram"; *The Wonderful O* [1957] by James Thurber [1894-1961] is about a lipogram world.) Italo Calvino generated the plot for his *Il Castello dei Destini incrociati* (coll of linked stories 1973; trans as *The Castle of Crossed Destinies* 1977 US) by randomly turning over the cards of a Tarot deck. Similar procedures were used by various contributors to Rachel POLLACK's *Tarot Tales* (anth 1989 UK). Thomas M. DISCH's novel *334* (fixup 1972 UK) is probably the most successful Oulipo-related experiment in the sf field. The title (which should be pronounced "three three four") does not refer primarily to a place or a time but rather describes the three-dimensional narrative diagram according to which the book is constructed. John T. SLADEK is another sf author who often builds his novels and stories according to arbitrary designs or games; in *Tik-Tok* (1983), for example, each of the 26 chapters begins with a successive letter of the alphabet. Other sf or sf-related authors who exhibit a similar "gamesmanship" in their work - whether having heard of Oulipo or not - include Don DELILLO, Vladimir NABOKOV, Rudy RUCKER and Pamela ZOLINE. [SB]See also: FABULATION; MAGIC REALISM; POSTMODERNISM IN SF; PSEUDO-SCIENCE.

OUTER LIMITS, THE

US tv series (1963-5). A Daystar/Villa di Stefano Production for United Artists, ABC TV. Created Leslie Stevens, also executive prod. Prod Joseph

Stefano (season 1), Ben Brady (season 2). Writers included Stefano (many episodes), Stevens, David DUNCAN, Robert Towne, Harlan ELLISON, Meyer DOLINSKY, John MANTLEY, Jerry SOHL, Otto O. Binder ([Hyperlink to: Eando BINDER](#)), Clifford D. SIMAK and Ib Melchior. Dirs included Byron HASKIN, Leonard Horn, Gerd Oswald, Charles Haas. 2 seasons, 49 50min episodes. B/w.TOL, which featured a new sf story each week, is often regarded as the classic sf-anthology series. Though leaning towards the HORROR or MONSTER-MOVIE end of the sf spectrum, the series was often innovative in both style and subject matter, and many of its writers either were sf professionals or knew the genre well. The pilot episode, "The Galaxy Being", written and dir Stevens, concerned an ALIEN made of pure energy who is accidentally absorbed into a 3D radio transceiver on Earth. Harlan Ellison contributed 2 episodes: "Soldier" (1964), about an ultraconditioned soldier from the future who is projected back in time and finds himself in a typical 1960s US household - a precursor of The TERMINATOR (1984) - and "Demon with a Glass Hand" (1964), perhaps the finest episode, about an ANDROID, pursued by aliens, who has the entire human race coded in his internal circuitry. Actors who appeared in the series - many of them then unknown - included Leonard Nimoy, Robert Culp, William SHATNER, Bruce Dern, Donald Pleasence, Martin Landau and David McCallum. The bizarre make-up that was such a feature of the series was the work of Fred Phillips, John Chambers and, primarily, Wah Chang. The talented cinematographer Conrad Hall worked on the 1st season, and the series was visually striking. Only stupid programming (it was shifted to a time-slot opposite the hugely popular Jackie Gleason Show) led to the series' cancellation halfway through the 2nd season. TOL was, on the whole, more imaginative and intelligent than its more famous competitor on CBS, Rod SERLING's The TWILIGHT ZONE. The Outer Limits: The Official Companion (1986) by David J. Schow and Jeffrey Frentzen is about the series. [JB/PN]

OUTER PLANETS

Relatively little attention has been paid in sf to the planets beyond Jupiter. Of them only Saturn was known to the ancients - Uranus was discovered in 1781, Neptune in 1846 and Pluto in 1930 - and it is therefore the only outer planet featured in Athanasius KIRCHER's and Emanuel SWEDENBORG's interplanetary tours. Uranus, however, is included in the anonymous Journeys into the Moon, Several Planets and the Sun: History of a Female Somnambulist (1837). The only object beyond Jupiter that has made significant appeal to speculative writers as a possible abode for life is Saturn's major moon Titan, though the fascinating rings have provoked a good deal of interest from interplanetary passers-by. Pluto has come in for a certain amount of special attention as the Ultima Thule of the Solar System, although as much - if not more - interest has been shown in the possibility of there being a 10th planet even further out. Saturn was visited, en route to Earth, by VOLTAIRE's tourist from Sirius in Micromegas (1750; 1952), and a Saturnian accompanied him on his sightseeing trip. It was one of the major worlds featured in J.B. Fayette's anonymously published The Experiences of Eon and Eona (1886); and in John Jacob ASTOR's A Journey in Other Worlds (1894) it is the home of the spirits, who confirm the truth of the theological beliefs of

travellers from a future Earth. Roy ROCKWOOD's series of juvenile interplanetary novels extended thus far in *By Spaceship to Saturn* (1935), but relatively few PULP-MAGAZINE writers followed suit. Arthur K. BARNES's *Interplanetary Hunter* (1937-46; fixup 1956) ventured beyond Jupiter on two occasions, but Stanley G. WEINBAUM was the only early pulp writer of any real significance to explore the outer planets, in "Flight on Titan" (1935), "The Planet of Doubt" (1935) - one of the rare stories set on Uranus - and "The Red Peri" (1935), a SPACE OPERA set partly on Pluto. Other pulp stories set in the outer reaches include J.M. WALSH's "The Vanguard to Neptune" (1932), Wallace WEST's "En Route to Pluto" (1936), Raymond Z. GALLUN's "Raiders of Saturn's Rings" (1941) and Murray LEINSTER's "Pipeline to Pluto" (1945). One of Stanton A. COBLENTZ's SATIRES, *Into Plutonian Depths* (1931; 1950), delved there, and Clifford D. SIMAK's *Cosmic Engineers* (1939; rev 1950) begins near Pluto. By far and away the most significant role allotted to an outer planet in the speculative fiction of the pre-WWII period was, however, that given to Neptune by Olaf STAPLEDON in *LAST AND FIRST MEN* (1930) and *Last Men in London* (1932): in the very FAR FUTURE, the ultimate members of the human race are forced to make a new home there following the expansion of the Sun. In the post-WWII period the outer planets occasionally featured in more serious speculative fictions. The rings of Saturn play a key part in Isaac ASIMOV's "The Martian Way" (1952), and Asimov returned to the same locale in his juvenile *Lucky Starr and the Rings of Saturn* (1958) as by Paul French. Another notable juvenile in which Saturn is an abode of life is Philip LATHAM's *Missing Men of Saturn* (1953). Elsewhere, Titan features much more prominently than its parent world. Alan E. NOURSE's *Trouble on Titan* (1954) is a juvenile novel about COLONIZATION of the satellite, the climactic scenes of Kurt VONNEGUT Jr's *THE SIRENS OF TITAN* (1959) take place there, and Titan is the location of huge ALIEN machines in Ben BOVA's *As on a Darkling Plain* (1972). A more fully described colony is featured in Arthur C. CLARKE's *Imperial Earth* (1976), and it is the home of the strange lifeform that provides the climax of Gregory BENFORD's and Gordon EKLUND's *If the Stars are Gods* (fixup 1977). An artificial world hidden among the satellites of Saturn is the main locale of John VARLEY's *Gaeian* trilogy begun with *Titan* (1979). Pluto figures prominently in Algis BUDRYS's *Man of Earth* (1958), and is the destination of the characters in Wilson TUCKER's *To the Tombaugh Station* (1960). It is the setting of Kim Stanley ROBINSON's mysterious artefact in *Icehenge* (1984), and the starting-point of the interplanetary tour featured in the same author's *The Memory of Whiteness* (1985), which zooms past Uranus and Neptune at considerable narrative pace. Neptune's moon Triton is the setting of Margaret ST CLAIR's "The Pillows" (1950) and Samuel R. DELANY's "ambiguous heterotopia" in *Triton* (1976). The "outer satellites" conduct a war against the inner planets in Alfred BESTER's *Tiger! Tiger!* (1956 UK; rev vt *The Stars My Destination* US), but the reader never gets to visit them; a much more detailed conflict takes place in Cecelia HOLLAND's *Floating Worlds* (1976), in which the cities of the title float above Saturn and Uranus. Few of those space operas whose action is partly set in the more remote regions of the Solar System pause to take in much of the scenery, but notable recent exceptions include Colin GREENLAND's *TAKE BACK PLENTY* (1990) and Roger McBride ALLEN's *The Ring of Charon* (1990), both of which

are partly set on Pluto's large moon Charon. It has long been held in some quarters that a 10th planet is necessary to account for the orbital perturbations of Uranus, even after Neptune and Pluto are taken into account, and sf writers have occasionally dealt with the possibility. The protagonists of John W. CAMPBELL Jr's *The Planetoids* (1936-8; coll of linked stories 1966) ultimately make their way there, and it is the setting for Henry KUTTNER's "We Guard the Black Planet" (1942). In Philip K. DICK's *SOLAR LOTTERY* (1955; vt *World of Chance*) members of an esoteric cult flee Earth in the hope of finding such a world. Edmund COOPER's *The Tenth Planet* (1973) plants an advanced civilization there. Contrastingly, in *Lucifer's Hammer* (1977) by Larry NIVEN and Jerry POURNELLE it is a much more remote GAS GIANT, whose gravity perturbs the orbit of a comet, deflecting it towards Earth. Perhaps more intriguing than the notion of a 10th planet is speculation about the Solar System's diffuse cometary "halo". An extravagant sf version of this is developed in *The Reefs of Space* (1964) by Frederik POHL and Jack WILLIAMSON, which features a particularly imaginative reef life-system. Clarke's *Imperial Earth* makes much of the possibility of life existing beyond Pluto, and Williamson made further use of the locale in *Lifeburst* (1984). More recently, there has been discussion among astronomers of the possibility that the cause of the orbital perturbations among the outer planets might instead be another star a couple of light years away; i.e., that the Sun might be not a singleton star but one element of a widely spaced binary (most stars are multiple rather than solitary), the other component being a dwarf star, a NEUTRON STAR or even a BLACK HOLE. Even a dwarf star would, at such a distance, be insignificant enough in our skies to make identification difficult. Or the cause might be a yet undetected nearby star heading in our direction, as suggested in Asimov's *Nemesis* (1989). [BS]

OUTLAND

Film (1981). Ladd Co. Dir Peter Hyams, starring Sean Connery, Peter Boyle, Frances Sternhagen. Screenplay Hyams. 109 mins. Colour. A mining base on Io, third moon of Jupiter. The new marshal (Connery) discovers that the mine manager (Boyle), in a bid to increase production, is introducing powerful amphetamines which ultimately render the workers psychotic and suicidal. The manager hires assassins to kill the nosy marshal. The critical cliché that O is High Noon (1952) in space is absolutely true. This routine anti-capitalist adventure is lifted out of the ordinary by its richly textured setting (the art director was Malcolm Middleton)-dirty, crowded, and wholly convincing as an unromanticized future industrial settlement. There are also good performances from Sternhagen as a cantankerous lady doctor and Connery as the tired, middle-aged failure making good. The novelization is *Outland* * (1981) by Alan Dean FOSTER. [PN]

OUTLANDS

UK DIGEST-size magazine. 1 issue, Winter 1946. Published by Outlands Publications, Liverpool; ed Leslie J. Johnson. An abortive SEMIPROZINE of undistinguished fiction, subtitled "A Magazine for Adventurous Minds", O included stories by John Russell FEARN and Sydney J. BOUNDS (his first published story). [MJE/FHP]

OUT OF THE DARKNESS

Roger CORMAN.

OUT OF THE UNKNOWN

UK tv series (1965-71). BBC TV. Prod Irene Shubik (seasons 1 and 2), Alan Bromly (seasons 3 and 4). Script editor Irene Shubik (seasons 1 and 2), Roger Parkes (seasons 3 and 4). Writers included Terry NATION, J.B. PRIESTLEY, Troy Kennedy Martin, Clive Exton, Julian Bond, Nigel KNEALE. Dirs included Michael Ferguson, Peter Sasdy, Philip Saville, Philip Dudley, Eric Hills. 4 seasons, 49 episodes, each 50 mins in 1st season, 60 mins thereafter. Seasons 1-2 b/w, thereafter colour. This sf-anthology series, originated by Irene Shubik - previously story editor on OUT OF THIS WORLD (1962) - dramatized the work of many well known sf writers. Adapted stories and novels included Immortality, Inc. (1958) by Robert SHECKLEY, Liar! (1941; rev 1977 chap) by Isaac ASIMOV, "The Last Lonely Man" (1964) by John BRUNNER, "Beachhead" (1951) by Clifford D. SIMAK, "Random Quest" (1961) by John WYNDHAM, "The Little Black Bag" (1950) by C. M. KORNBLUTH, "Thirteen for Centaurus" (1962) by J.G. BALLARD, The Naked Sun (1957) by Asimov, "The Midas Plague" (1954) by Frederik POHL, "Andover and the Android" (1963) by Kate WILHELM, "The Yellow Pill" (1958) by Rog PHILLIPS, Level 7 (1959) by Mordecai ROSHWALD and "The Machine Stops" (1909) by E.M. FORSTER. Despite budget limitations, the standard of production was often very high, and good actors were used; one episode was designed by Ridley SCOTT. The quality of the scripts varied, some of the writers assigned being unfamiliar with sf. After 3 seasons the BBC decided that the series lacked mass popularity, and for the 4th switched it from sf to supernatural stories, all but one being original teleplays. [PN/JB]

OUT OF THIS WORLD

1. US tv series (1952). ABC TV. Prod Milton Kaye. Narrated Jackson Beck. 1 season, 25min episodes. B/w. OOTW hovered between sf and lectures on science. In episode 3, for example, we saw a young couple in 1993 going to the Moon for a vacation and then telephoning their relations on Earth. Between these dramatized segments the narrator discussed with a scientist, Robert R. Cole, the actual possibilities of space travel and conditions on the Moon. 2. UK tv series (1962). ABC TV. Prod Leonard White. Story editor Irene Shubik. 13 50min episodes. B/w. This short-lived but relatively ambitious sf-anthology series - the first such in the UK - was hosted by Boris Karloff (1887-1969). Stories adapted for the series included Little Lost Robot (1947; rev 1977 chap) by Isaac ASIMOV, "The Cold Equations" (1954) by Tom GODWIN, "Impostor" (1953) by Philip K. DICK and "Pictures Don't Lie" (1951) by Katherine MACLEAN. Of the two original teleplays used, one was "Botany Bay" by Terry NATION, later to become a driving force behind DR WHO. OOTW's success inspired Shubik to make the similar (but better) OUT OF THE UNKNOWN series 3 years later, this time for the BBC rather than commercial tv. [JB]

OUT OF THIS WORLD ADVENTURES

US PULP MAGAZINE. 2 issues, July 1950 and Dec 1950, published by Avon Periodicals; ed Donald A. WOLLHEIM. #1 included an impressive line-up of authors: A. Bertram CHANDLER, Ray CUMMINGS, Lester DEL REY, Kris NEVILLE, Mack REYNOLDS, William TENN and A.E. VAN VOGT. The stories, however, were

not the authors' best, and Chandler was the only writer of equivalent stature in #2. An unusual feature was a 32pp COMICS section in colour (#2 of the Canadian edition included a different comics section from that in the US edition). The comics feature proved not to be the expected selling point, and the magazine flopped. [MJE]OOTWA should not be confused with the UK weird-fiction DIGEST magazine Out of this World (2 issues 1954-5), published by John Spencer ?

OUTSIDER
FINLAND.

OVERLAND MONTHLY, THE

US magazine founded by Bret Harte (1836-1902), published in San Francisco by A. Roman ?

1935. Under the editorship of Millicent W. Shinn a special "Twentieth Century" issue - June 1890 - contained articles and essays all directly related to Edward BELLAMY's then much discussed work Looking Backward, 2000-1887 (1888). In addition, its 6 fiction contributions were all sf, including an early translation of Kurd LASSWITZ (Chapter 1 of "Bis zum Nullpunkt des Seins" [1871], under the title "Pictures out of the Future"). This is the earliest known case of a general magazine devoting an issue exclusively to sf. OM is known for its publication of poetry and fiction by Clark Ashton SMITH in the 1910s and 1920s, and for several "Yellow Peril" stories by little-known authors. [JE/PN]

OVERPOPULATION

In 1798 the UK economist Thomas R. Malthus (1766-1834) published his Essay on the Principle of Population as it Affects the Future Improvement of Society, arguing that a UTOPIAN situation of peace and plenty would be impossible to achieve because the tendency of populations, in the absence of the checks of war, famine and plague, to increase exponentially would result in society's continually outgrowing its resources. In the second edition (1803), replying to criticism, he introduced another hypothetical check: voluntary restriction of population by the exercise of "moral restraint". But Malthus had little faith in the effectiveness of moral restraint, and most modern sf writers agree with him. Although the amended Malthusian argument was (and is) logically unassailable, it was ignored or even attacked by most speculative writers even after it had become known that world population was indeed increasing exponentially. Richard Whiteing (1840-1928) brought the entire population of the world to the Isle of Wight to prove that anxiety about overpopulation was, as his title stated, All Moonshine (1907). It was not until the 1960s that awareness of the population problem resurfaced, probably as a consequence of an already-widespread DYSTOPIAN pessimism (OPTIMISM AND PESSIMISM), which it then helped to maintain and amplify. The major nonfiction books involved in the popularization of the issue were The Population Bomb (1968) by Paul Ehrlich and The Limits to Growth: A Report for the Club of Rome's Project on the Predicament of Mankind (1972) by D.H. Meadows et al. Although MARVEL SCIENCE STORIES published in its Nov 1951 issue a "symposium" on the subject of whether the world's population should be strategically limited, the question was at that time unexplored in sf. C.M. KORNBLUTH's "The Marching Morons" (1951), depicting a future in which the intelligentsia

have prudently exercised birth control while the lumpenproletariat have multiplied unrestrainedly, is a black comedy on the theme of eugenics rather than of overpopulation. In Kurt VONNEGUT Jr's equally black comedy, "The Big Trip up Yonder" (1954), overpopulation is the result of technologies of longevity rather than ordinary increase. Overpopulated milieux became gradually more evident in 1950s sf. Isaac ASIMOV, one of the first sf writers to become anxious about the matter, displayed one such in *The Caves of Steel* (1954). Frederik POHL produced the first of many ironic fantasies of corrective mass homicide in "The Census Takers" (1956); Robert SILVERBERG's *Master of Life and Death* (1957) takes the notion of institutionalized population control more seriously; and Kornbluth's "Shark Ship" (1958) is a melodramatic horror story of overpopulation and resultant POLLUTION. An effectively understated treatment of the theme is J.G. BALLARD's "Billenium" (1961), which presents a simple picture of the slow shrinkage of personal space. A curiously ambivalent approach is adopted in Lester DEL REY's *The Eleventh Commandment* (1962), which begins as a polemic against overfertility but concludes with a SOCIAL-DARWINIST volte-face. The most powerful attempt to confront the issue squarely and in some detail was Harry HARRISON's *MAKE ROOM! MAKE ROOM!* (1966), a novel whose thrust was entirely lost when it was filmed as *SOYLENT GREEN* (1973). A major novel from India, *The Wind Obeys Lama Toru* (1967) by LEE TUNG, quickly followed. There are three aspects to the population problem: the exhaustion of resources; the destruction of the environment by pollution; and the social problems of living in crowded conditions. The first two aspects form the basis of most extrapolations of the problem, including *A Torrent of Faces* (1968) by James BLISH and Norman L. KNIGHT and *The Sheep Look Up* (1972) by John BRUNNER, and such black comedies as "The People Trap" (1968) by Robert SHECKLEY and "The Big Space Fuck" (1972) by Vonnegut. The third aspect comes into sharper focus in *STAND ON ZANZIBAR* (1968) by Brunner, *The World Inside* (1972) by Silverberg, *334* (1972) by Thomas M. DISCH and *My Petition for More Space* (1974) by John HERSEY. Because sf writers had not considered the problem until it was imminent, the quest for hypothetical solutions was difficult, and many stories hysterically allege that it is already too late to act effectively. Such traditional sf myths as the escape into space lack plausibility in the context of a problem so immediate, as demonstrated by such stories as Blish's "We All Die Naked" (1969). Confidence in moral restraint, even aided by birth control (which Malthus forbore to propose), was so low that sf stories exploring possible solutions almost always concern themselves with the setting up of Draconian prohibitions or with various forms of overt and covert culling. Stories of grotesque mass homicide include, in addition to those cited above, D.G. COMPTON's *The Quality of Mercy* (1965), William F. NOLAN's and George Clayton JOHNSON's *Logan's Run* (1967), Leonard C. LEWIN's *Triage* (1972), Piers ANTHONY's *Triple Detente* (1974), Chelsea Quinn YARBRO's *Time of the Fourth Horseman* (1976) and Snoo WILSON's *Spaceache* (1984). Vonnegut's "Welcome to the Monkey House" (1968) mockingly envisages a future in which reproduction is discouraged by the use of bromides, but most speculations in this vein are more gruesomely inclined. Suggested solutions not involving mass murder are rare, and not usually to be taken seriously; a notable example is that featured in Philip Jose FARMER's

Dayworld (1985) and its sequels, in which every person is conscious only one day a week, spending the remaining six in suspended animation, thus effectively packing seven people into one person's space. A rare application of Malthusian thinking to an ALIEN situation is employed in THE MOTE IN GOD'S EYE (1974) by Larry NIVEN and Jerry E. POURNELLE, in which a species for whom birth control is impossible has negative checks built in at the biological level. Although the real-world situation grows worse each passing day, the fashionability of overpopulation stories in sf has waned dramatically since 1980, partly in accordance with a general tendency to skip over the most frightening problems of the NEAR FUTURE and partly because of the absorption of the population problem into a more general sense of impending ecocatastrophe (ECOLOGY). Perhaps, though, the problem does not really deserve to be considered urgent. As Malthus pointed out, the situation is self-correcting; when there are more people than the world can accommodate, the surplus will inevitably die - one way, or another. An interesting but now quaintly dated anthology accurately reflecting the mood at the height of the panic is Voyages: Scenarios for a Ship Called Earth (anth 1971) ed Bob Sauer, published by BALLANTINE BOOKS for the Zero Population Growth movement. [BS] See also: POLITICS; PREDICTION; SOCIOLOGY.

OVERTON, MAX

[s] Don WILCOX.

OWEN, DEAN

Pseudonym - and eventually perhaps the legal name - of US writer Dudley Dean McGaughy (1913-1985), whose routine novelizations of horror and sf films are The Brides of Dracula * (1960), Konga * (1960), Reptilicus * (1961) and End of the World * (1962), based on PANIC IN YEAR ZERO! (1962), a film in turn based, without acknowledgement, on two short stories by Ward MOORE. Monarch Books's habit of publishing soft-porn adaptations of chaste movies led to at least one court case (REPTILICUS). [JC/PN]

OWINGS, MARK

(1945-) US bibliographer and SMALL-PRESS publisher; with Jack L. CHALKER, he was involved for a period with MIRAGE PRESS, which published his magnum opus, The Index to the Science-Fantasy Publishers (1966 chap; rev 1966; vastly exp, vt The Science-Fantasy Publishers: A Critical and Bibliographic History 1991), all edns with Chalker (whom see for further details). Other books through Mirage included The Necronomicon: A Study (1967 chap), solo, and The Revised H.P. Lovecraft Bibliography (1973 chap) with Chalker. With Chalker and Ted Pauls, MO founded Croatan House, through which he published Robert A. Heinlein: A Bibliography (1973 chap) and James H. Schmitz: A Bibliography (1973 chap). Murray Leinster (Will F. Jenkins): A Bibliography (1970 chap), The Electric Bibliograph, Part I: Clifford D. Simak (1971 chap), Poul Anderson: Bibliography (1973 chap) and A Catalog of Lovecraftiana: The Grill/Binkin Collection (1975 chap) with Irving Binkin were all published elsewhere. [JC]

SF?

PADGETT, LEWIS

PAGE, KATHY

(1958-) UK writer whose first novels - Back in the First Person (1986) and The Unborn Dreams of Clara Riley (1987) - are associational, though tinged with elements of literary fantasy. Island Paradise (1989), set 100 years after the Unfought War, promulgates an ambiguous worldwide UTOPIA whose citizens enjoy lives uncluttered by violence, but are bullied to die soon after they reach 50. Some of the stories assembled in As in Music and Other Stories (coll 1990) are fantasy or sf. KP's style moves from a kind of numb austerity into moments of cautious lyricism. [JC]

PAGE, NORVELL W.

(1904-1961) US writer who specialized during the 1930s in hero/villain PULP MAGAZINES, much of his production being novel-length stories for The SPIDER , featuring the eponymous SUPERHERO. The Spider sequence was created in competition with the somewhat more successful Shadow tales, mostly written for The Shadow magazine by Walter B. GIBSON. Under the house name Grant STOCKBRIDGE NWP wrote more than 100 Spider tales, many of whose plots verged into the supernatural and sf; those eventually published in book form include Wings of the Black Death (1933; 1969), City of Flaming Shadows 1934; 1970), Builders of the Black Empire (1934; 1980), City Destroyer (1935; 1975), Hordes of the Red Butcher (1935; 1975), Master of the Death Madness (1935; 1980), Overlord of the Damned (1935; 1980), Death Reign of the Vampire King (1935; 1975) and Death and the Spider (1942; 1975). A final Spider title, left unpublished when the magazine folded, was reworked with new characters as Blue Steel (1979) as by Spider Page. As Randolph Craig, NWP created two spin-offs from The Spider, The OCTOPUS and The SCORPION , neither of which extended past a single story; these were subsequently published as The Octopus (1939 as "The City Condemned to Hell"; 1976 chap) and The Scorpion (1939 as "Satan's Incubator"; 1975 chap). Under his own name NWP contributed 3 long stories to UNKNOWN in its first year: "But without Horns" (1940) concerns a MUTANT who uses his PSI POWERS to induce religious worship in those who come into contact with him; Flame Winds (1939; 1969) and Sons of the Bear-God (1939; 1969) are SWORD-AND-SORCERY novels whose hero is based on Prester John. During WWII NWP took a post writing government reports; afterwards he worked for the Atomic Energy Commission. [MJE/JC] See also: GODS AND DEMONS.

PAGE, THOMAS (WALKER IV)

(1942-) US writer whose first novel was The Hephaestus Plague (1973), filmed as BUG (1975), a tale which starts strongly, with vivid descriptions of the effect of an irruption from underground of a new species of beetle capable of emitting fire, but which weakens when it begins to deal with a SCIENTIST who becomes overfascinated with these beetles, which seem to possess a kind of group intelligence. His later novels - The Spirit (1977), Sigmet Active (1978) and The Man who Would not Die (1981) - were borderline sf. [JC]

PAGERY, FRANCOIS

Gerard KLEIN.

PAGET, JOHN
John AIKEN.

PAGETTI, CARLO

(1945-) Italian critic, Professor of English Literature at the University of Turin. His study of sf *Il senso del futuro: la fantascienza nella letteratura Americana* ["The Sense of the Future: Science Fiction in American Literature"] (1970) is the first serious literary study of sf by an Italian. Subsequent books are *I Marziani alla corte della Regina Vittoria* ["Martians at the Court of Queen Victoria"] (1986), on H.G. WELLS's *SCIENTIFIC ROMANCES*, and *Cittadini di un assurdo universo* ["Citizens of an Absurd Universe"] (coll 1989), essays on Ambrose BIERCE, Katharine BURDEKIN, H.P. LOVECRAFT, Edgar Allan POE and Mark TWAIN. He ed *Nel tempo del sogno* ["In the Time of the Dream"] (anth 1988), has had articles on Wells, Philip K. DICK and Burdekin translated in *SCIENCE-FICTION STUDIES*, and is editor of a critical series in book form devoted to sf, *La città e le stelle* ["The City and the Stars"]. He has published a collection of short stories, mostly fantasy, *Favole di lontananza* ["Fables of Distance"] (coll 1989). He wrote the entry on ITALY in this volume. [PN]See also: CRITICAL AND HISTORICAL WORKS ABOUT SF.

PAIGE, RICHARD
Dean R. KOONTZ.

PAIN, BARRY (ERIC ODELL)

(1864-1928) UK writer best known for the supernatural tales assembled in volumes like *Stories in the Dark* (coll 1901), and for humorous fiction in which he uneasily condescended to the lower orders. He frequently made superficial use of sf devices and motifs - e.g., the IMMORTALITY of the protagonist of *Robinson Crusoe's Return* (1906; rev vt *The Return and Superizing Reception of Robinson Crusoe of York, Parrot-Tamer* 1921) facilitates the making of a number of satirical points about modern England - and occasionally a tale depends on these devices. *An Exchange of Souls* (1911) posits a scientific rationale for the said exchange. The title story of *The New Gulliver and Other Stories* (coll 1913) takes its hero to a futuristic UTOPIA in *Ultima Thule*. [JC]Other works: *In a Canadian Canoe* (coll 1891); *Stories and Interludes* (coll 1892); *The One Before* (1902); *Three Fantasies* (coll 1904); *The Diary of a Baby: Being a Free Record of the Unconscious Thought of Rosalys Ysolde Smith Aged One Year* (1907); *The Shadow of the Unseen* (1907) with James BLYTH; *Here and Hereafter* (coll 1911); *Stories in Grey* (coll 1911); *Going Home: Being the Fantastical Romance of the Girl with Angel Eyes and the Man who Had Wings* (1921); *Short Stories of To-day and Yesterday* (coll 1928).

PAINE, ALBERT B(IGELOW)

(1861-1937) US writer best remembered as Mark TWAIN's confidant and unscrupulous expurgator: after Twain's death he published mutilated editions of *The Mysterious Stranger* (1916) and *Mark Twain's Autobiography* (1924). ABP was primarily a writer and editor of children's fiction. *The Mystery of Evelin Delorme: A Hypnotic Story* (1894) exploits the late 19th century's prurient fascination with split personalities, the eponymous heroine committing suicide when her socially unacceptable self comes out.

In The Great White Way (1901) a warm, UTOPIAN, Antarctic LOST WORLD peopled by telepaths is discovered by a businessman and a real-estate developer, who are forced to flee when the latter's intentions are revealed. [JC]

PAINE, LAURAN (BOSWORTH)

(1916-) US rancher and author, extraordinarily prolific in several fields, with nearly 1000 books under his own name and 85 pseudonyms, almost all for ROBERT HALE LIMITED, over 600 of them Westerns and a very few of them sf. This Time Tomorrow (1963) was published under his own name; further routine SPACE OPERAS are: Focolor (1973) as by Roy Ainsworthy; A Crack in Time (1971), The Undine (1972), Another View (1972), Bannister's Z-Matter (1973) and The Underground Men (1975) as by Mark Carrel; and The Harbinger (1972), The Misplaced Psyche (1973) and Kernel of Death (1973) as by Troy Howard. [JC]

PAINTER, THOMAS

(1885-1970) US writer who collaborated with Alexander LAING (whom see for details) on The Motives of Nicholas Holtz, being the Weird Tale of the Ironville Virus (1936; vt The Glass Centipede, Retold from the Original Sources 1936 UK). [PN]

PAIRAULT, PIERRE

[r] Stefan WUL.

PAL, GEORGE

(1908-1980) Hungarian film producer, based in the USA since 1940, best known for his sf and fantasy films, for which he received a NEBULA Special Award in 1976. Trained as an illustrator in Budapest, GP decided to specialize in animation, and in 1931 moved to Germany, where he worked at the UFA studios. When Hitler came to power GP went to Paris, where he soon became very successful with a series of animated commercials and entertainment films, his Puppets. After emigrating to the USA he set up a Puppetoon unit at Paramount Studios. His first live-action film was The Great Rupert (1949) dir Irving Pichel, starring Jimmy Durante and an animated squirrel. He then started work on DESTINATION MOON (1950) dir Pichel, which was so successful - it initiated the sf film boom of the 1950s - that GP immediately chose another sf subject for his next film, WHEN WORLDS COLLIDE (1951) dir Rudolph Mate. This was followed by WAR OF THE WORLDS (1953) dir Byron HASKIN, The Naked Jungle (1954) and CONQUEST OF SPACE (1955), both dir Haskin, ATLANTIS, THE LOST CONTINENT (1959) and The TIME MACHINE (1960), both dir GP, and The POWER (1968) dir Haskin and GP. He also made a number of pure fantasy films during this period, including Tom Thumb (1958) and The Seven Faces of Dr Lao (1964). His last film was DOC SAVAGE: THE MAN OF BRONZE (1974) dir Michael Anderson. He is credited as co-author with Joe Morhaim of Time Machine II (1981), a sequel to H.G. WELLS's THE TIME MACHINE (1895), seemingly written in connection with a film which was never made. GP's dominant interest in special effects often led to other aspects of his films, including scripts and acting, being neglected. Most of his productions, however, possess a colourful bravura that distracts attention from their shortcomings, and he has on occasion produced memorable images. [JB] See also: CINEMA; MOON; ROCKETS.

PALLANDER, EDWIN

(? -?) UK author of whom nothing is known except that he published several books and collaborated with Ellsworth DOUGLASS on one story, "The Wheels of Dr Gynochio Gyves" (1899). *Across the Zodiac: A Story of Adventure* (1896) is a Vernean interplanetary romance which carries its three protagonists (VERNE's usual complement) through the Solar System in a spaceship captained by a mad scientist. *The Adventures of a Micro-Man* (1902), one of the tales of miniaturization common to the period (GREAT AND SMALL), shrinks its protagonists to mites, subjecting them to adventures before they grow again. [JC]

PALLEN, CONDE B(ENOIST)

(1858-1929) US writer and editor; in the latter capacity he was one of the editors, with C.G. Herbermann and others, of *The Catholic Encyclopedia* (15 vols 1907-18). *Crucible Island: A Romance, an Adventure and an Experiment* (1919), a DYSTOPIA, describes the disillusioning experiences of a young radical who is transported to Schlectland, where socialism has been allowed to run rampant, and who comes to his senses while falling in love with the daughter of a longtime resident. They escape to the USA. En passant, points are scored against FEMINISM and the Irish. *In Ghost House* (1928) a device is invented which reads details of a murder from the walls. [JC]

PALMER, DAVID (REAY)

(1941-) US writer whose first story, the impressive "Emergence" for ASF in 1981, was expanded as *Emergence* (fixup 1984), attracting some notice for its depiction of a USA suffering the consequences of a nuclear HOLOCAUST, and for its juvenile heroine, who represents a superior form of Homo sapiens and whose transcribed voice dominates the tale; some found her obnoxiously reminiscent of the narrator of Robert A. HEINLEIN's *THE MOON IS A HARSH MISTRESS* (1966). The novel won the Compton Crook/Stephen Tall Memorial Award (AWARDS). DP's taste for protagonists whose special gifts legitimize their behaviour also helped shape his second novel, *Threshold* (1985), in which the Galaxy is saved. [JC] See also: PSI POWERS; SUPERMAN.

PALMER, JANE

(1946-) UK writer and illustrator who began writing sf with *The Planet Dweller* (1985) which, with its sequel *Moving Moosevan* (1990), presents a mildly comic set of parodies of sf tropes in dealing with alien INVASIONS and the like. A somewhat greater force of imagination is demonstrated in *The Watcher* (1986), which features brave young girls, a mysterious survivor from Victorian times, an ANDROID which longs for human status, and the rulers of the Universe. [JC]

PALMER, RAYMOND A(RTHUR)

(1910-1977) US author and editor. His childhood was plagued by serious accidents, and in adulthood he stood only 4ft tall and was hunchbacked, but he never allowed physical stress to affect his career. He was an active sf fan in the 1930s - he is credited with publishing the first sf FANZINE, *The Comet*, in 1930 - and was the author of a fair number of stories, beginning with "The Time Ray of Jandra" for *WONDER STORIES* in

1930; some later tales were published as by Henry Gade, Frank Paton, J.W. Pelkie, A.R. STEBER and Morris J. Steele. After the death of Stanley G. WEINBAUM in 1935, RAP edited and published a memorial collection of his stories, Dawn of Flame and Other Stories (coll 1936); RAP's only other book was Strange Offering (anth c1945 chap UK) with Otis Adelbert KLINE. It was as an editor that RAP would make his name. When AMAZING STORIES was bought by the Chicago-based ZIFF-DAVIS in 1938 it was decided to replace T. O'Connor SLOANE as editor. RAP, a resident of nearby Milwaukee, was recommended for the job and was appointed. AMZ was in a moribund state by this time; RAP made it livelier, albeit with a more overtly juvenile slant, and it revived. He published work by Edgar Rice BURROUGHS and, in 1939, Isaac ASIMOV's first story, "Marooned off Vesta"; in the same year he began a companion magazine, FANTASTIC ADVENTURES. The vigour of his early editing work, though evident at the time and in retrospect, was submerged during the 1940s by the notoriety he achieved with his promotion as fact of the stories of Richard S. SHAVER. RAP claimed that the popularity of the "Shaver Mystery" gave AMZ the highest circulation ever achieved by an SF MAGAZINE. His interest in PSEUDO-SCIENCE and the occult widened; in 1948, while still employed at Ziff-Davis, he started his own occult magazine, Fate, which has proved enduringly successful. In 1949 he established his own sf magazine, OTHER WORLDS (using the editorial pseudonym Robert N. Webster on the first issue), and shortly afterwards he left Ziff-Davis. In 1950 he began a companion magazine, IMAGINATION, in this case lending his name as a cover for William L. HAMLING, who edited the journal while still officially working for Ziff-Davis. After another severe accident, RAP sold Imagination to Hamling, while Bea Mahaffey edited Other Worlds. On his recovery in 1953, RAP took over the magazine UNIVERSE SCIENCE FICTION and started a companion, SCIENCE STORIES; meanwhile Other Worlds was suspended. Science Stories was short-lived, and in 1955 RAP changed the title of Universe to Other Worlds, continuing the Universe numeration. The magazine began to feature more and more UFO material, and in 1957 was retitled Flying Saucers from Other Worlds, RAP deciding to concentrate all his energies on UFOs and the occult. He later explained that the bewildering title changes of his magazines resulted in part from financial difficulties and the need to throw up smokescreens. A last RAP publication, including UFO and Shaver material, was The HIDDEN WORLD . [MJE/JC]

PALMER PUBLICATIONS, INC.

OTHER WORLDS; SCIENCE STORIES; UNIVERSE SCIENCE FICTION.

PALMER, THOMAS

(1955-) US writer whose first novel, The Transfer (1983), verges on the technothriller, and whose second, Dream Science (1990), made some stir for its quiet (but ultimately ruthless) intelligence. The protagonist of the book is one of those cursed with a perception of lines running across the physical environment which, when crossed, take one into PARALLEL WORLDS. These worlds, unfortunately, offer no solace to the protagonist, and even his eventual return to what he thinks of as prime reality is constrained by a dread sense that there is no true centre to life; that we may simply be passing through the worlds, greyly. [JC]

PALTOCK, ROBERT

(1697-1767) UK lawyer and writer, known mainly for *The Life and Adventures of Peter Wilkins, a Cornish Man: Relating Particularly his Shipwreck Near the South Pole; his Wonderful Passage Thro' a Subterranean Cavern into a Kind of New World; His There Meeting with a Gawry or Flying Woman* (1751), which ranks in popularity as an 18th-century imaginary voyage behind only Daniel DEFOE's *Robinson Crusoe* (1719) and Jonathan SWIFT's *Gulliver's Travels* (1726). After discovering a race of winged people, Wilkins breeds with them and teaches them about civilization and the arts of war, while himself manufacturing a flying machine in which he returns, now an old man, to tell his tale. There have been many reprints of the novel, variously titled (e.g., *The Unrivalled Adventures of that Great Aeronaut and Glum, Peter Wilkins* 1802) and almost always cut. [JC]

PALUMBO, DENNIS (JAMES)

(1929-) US writer in whose sf novel, *City Wars* (1979), set decades after *The Levelling* when a nuclear HOLOCAUST flattened the USA, several seceding city-states engage in a Great War which leads, through a terminal conflict between New York and Chicago, towards ultimate extinction. The cast-members, who include MUTANTS called "lunks" and a woman called Cassandra, find no solace in the new world. [JC]

PAN

Leslie BERESFORD.

PANGBORN, EDGAR

(1909-1976) US writer whose publishing career began with *A-100: A Mystery Story* (1930) as by Bruce Harrison, and other non-genre work. He published his first sf story, the famous "Angel's Egg", for *Gal* as late as 1951. In his first sf novel, *West of the Sun* (1953), six shipwrecked humans found a UTOPIAN colony on the planet Lucifer in association with two native species. When the rescue ship eventually arrives, they decide to stick with the society they have constructed. The reflective conclusion of this novel was typical of EP's work. In *A MIRROR FOR OBSERVERS* (1954), which won the 1955 INTERNATIONAL FANTASY AWARD, Mars has been guiding humanity into the light of civilization for thousands of years, but matters approach crisis in the 20th century when two Martian observers contest for control over a human boy genius, a potential ethical innovator; the good Martian wins. In both novels-but not always in his career - EP's gracious literacy usually overcomes a tendency towards cloying sententiousness. After two fine non-genre novels - *Wilderness of Spring* (1958) and *The Trial of Callista Blake* (1961), a moving courtroom drama - EP created his most successful and sustained work, the Davy sequence, comprising, by rough internal chronology, *The Company of Glory* (coll of linked stories 1975), most of the stories assembled in *Still I Persist in Wondering* (coll 1978), the loosely related *The Judgment of Eve* (see below), and *DAVY* (fixup 1964). The sequence is set in a USA devastated by a nuclear HOLOCAUST, whose immediate consequences dominate - at times harshly - the first volumes. By the time of Davy's birth, 250 years later, the land has long been balkanized into feudal enclaves, rather romantically conceived, and Davy's picaresque adventures (which he recounts in retirement) generate what might be called a kind of nostalgia

for a livable future, though at the same time it is clear that Davy, and those he inspires, will necessarily begin to rebuild a more complex world. Set in the same universe, *The Judgment of Eve* (1966) is less convincingly constructed in mythopoeic terms, as Eve tries to choose among the lifestyles of her disparate male suitors. The trek on which she consequently sends them, in order to find out the meaning of love, probably represents the deepest of EP's frequent descents into distinctly uneasy bombast. When, however, he was able to control himself - the early novels, most of Davy, and most of the stories in *Good Neighbors and Other Strangers* (coll 1972) sidestep these pitfalls - the inherent though sometimes selfconsciously rural decency of his view of life won through.

[JC]About the author: *Edgar Pangborn: A Bibliography* (1985 chap) by Gordon BENSON Jr. See also: ALIENS; ARTS; CHILDREN IN SF; GALAXY SCIENCE FICTION; MUSIC; MUTANTS; PASTORAL.

PANIC IN YEAR ZERO!

(vt *End of the World*) Film (1962). Alta Vista/AIP. Dir Ray Milland, starring Milland, Jean Hagen, Frankie Avalon, Mary Mitchell. Screenplay Jay Simms, John Morton, story by Simms, based (without credit) on the stories "Lot" (1953) and "Lot's Daughter" (1954) by Ward MOORE. 92 mins. B/w. This cynical, violent film - one of the earliest examples of the SURVIVALIST ethos in cinema - shows how a typical US family have to act to survive the aftermath of an atomic HOLOCAUST: by trusting no one and shooting first. The father quickly, and almost gleefully, reverts to being a ruthless "natural survivor" who will let nothing stand in the way of getting his family to safety after Los Angeles has been A-bombed. The escape along roads jammed with panicking traffic is strongly done, but thereafter the film subsides into clumsy adventure in the mountains; it is inferior to, and lacks the sexual reverberations of, the stories on which it was loosely based, though it retains some biblical parallels. The novelization is *End of the World* * (1962) by Dean OWEN, and this was also the title of the film's re-release. [JB/PN]

PANICO EN EL TRANSIBERIANO

(vt *Horror Express*) Film (1972). Granada/Benmar. Dir Eugenio Martin, starring Peter Cushing, Christopher Lee, Telly Savalas. Screenplay Arnaud d'Usseau, Julian Halevey. 90 mins, cut to 88 mins. Colour. In this Spanish/UK coproduction the year is 1906. The body of an apparent "missing link", dug up in China by an anthropologist (Lee), comes to life on the Trans-Siberian Express and turns out to be an ALIEN who crash-landed on Earth eons ago. He has the power to transfer his personality from one body to another, and also to absorb people's personalities. The film is slick and amusing, and moves so fast that there is little time to dwell on its absurdities. It came into being only because the producer bought two model trains that had been used in the epic *Nicholas and Alexandra* (1971) and had a script written around them. The direction is in routine exploitation-movie style, but the lively script has some surprising turns. [JB/PN]

PANSHIN, ALEXEI (A.)

Working name of US writer Alexis Adams Panshin (1940-), initially most active as an sf fan, in this role doing considerable writing and editing,

for which he won a HUGO in 1967. He began publishing sf stories in 1963 with "Down to the Worlds of Men" for If, and soon became an active author of both fiction and criticism. The story "Dark Conception" (1964), as by Louis J.A. Adams, was written in collaboration with Joe L. HENSLEY. AP's short work has been assembled as Farewell to Yesterday's Tomorrow (coll 1975; with "Lady Sunshine and the Magoon of Beatus" added, rev 1976) and Transmutations: A Book of Personal Alchemy (coll 1982). His first novel, RITE OF PASSAGE (1963 If as "Down to the Worlds of Men"; exp 1968), which won a 1968 NEBULA, remains his only significant singleton. It is a complex and expertly told novel, making adroit use of the basic rite-of-passage structure (POCKET UNIVERSE) that underlies almost all tales set in GENERATION STARSHIPS; the fact that in this instance the asteroid-ship is capable of FASTER-THAN-LIGHT speeds may modify the consciousness of the protagonists-they have not been travelling long enough to forget their origins - but does not make the venue itself seem any less constrictive. The heroine must progress from childhood into questioning adulthood via a dangerous trial conducted on the colony planet which her ship - one of eight containing the survivors of the destruction of Earth 150 years earlier - is currently monitoring. Surviving her ordeal, she not only comes into her own as a person, but validly (as in the classic model) comes to question the stratified "adult" quasidemocracy of the ship. AP then wrote the Anthony Villiers series of SPACE OPERAS about a lordly adventurer and his alien companion Torve the Trog: Star Well (1968), The Thurb Revolution (1968) and Masque World (1969). The spoofing of sf's PULP-MAGAZINE conventions was amusing and without malice and the echoes of Leslie CHARTERIS's Saint were enjoyable, but the series lacked the energy of its predecessor. As a writer of sf, AP then fell relatively quiet. Heinlein in Dimension: A Critical Analysis (1968), a comprehensive study of the works of Robert A. HEINLEIN, was perhaps the most thorough and literate book on a US sf writer written to that date. It breaks its subject's career into the 3 phases (1940-42; 1947-58; after 1958) that every subsequent critic has utilized, arguing the superior merit of the later juveniles, and presenting a case for thinking of his later work as inferior. In the introduction to his first collection, AP credited his wife, Cory PANSHIN (married 1969), as his collaborator on some of his stories, and announced that from 1975 all future work would be jointly signed. Much of the Panshins' joint criticism first appeared in Fantastic, and some of these pieces, along with others, appeared in SF in Dimension (coll 1976; exp 1980) as by both authors, as did Mondri interiori ["Interior Worlds"] (1978 Italy) which, it is understood, contained material later developed by the Panshins into their Hugo-winning magnum opus, The World Beyond the Hill: Science Fiction and the Quest for Transcendence (1989), a massive and coherent history of sf whose sustaining argument - that sf answered the world's need for a transcendent domain through the creation of galactic venues and concerns beyond the "village" of Earth - made inevitable its narrative halt at the year 1945, just at the end of the GOLDEN AGE chaired by John W. CAMPBELL Jr. So clear a cognitive strategy may have engendered a too-ruthless clarity of view - and an all too simple acceptance of the notion of Progress - but the detailed exegeses of critically neglected writers like E.E. "Doc" SMITH and A.E. VAN VOGT are very much worth examining. In its close modelling of

GENRE SF's view of its own development, the book was exemplary; by virtue of writing it the Panshins became US sf's house historians. PANSHIN, CORY (SEIDMAN)

(1947-) US writer and critic, collaborator with her husband, Alexei PANSHIN (whom see for details), from before 1975. She shared a nonfiction HUGO with him for *The World Beyond the Hill: Science Fiction and the Quest for Transcendence* (1989). Her interest in Sufism and other philosophies of transcendence suffuses, in particular, their joint criticism. [JC]See also: SENSE OF WONDER.

PANTROPY

This useful item of sf TERMINOLOGY was coined by James BLISH in the stories later melded together as *THE SEEDLING STARS* (fixup 1957). Blish's view was that in humanity's COLONIZATION OF OTHER PLANETS (which see for further discussion), we must either change the planet to make it habitable (TERRAFORMING) or change humanity itself to fit it for survival in an alien environment (pantropy). The Greek root of the word means "turning everything". Pantropy is usually undertaken by some form of biological engineering (GENETIC ENGINEERING). An ugly pantropy fable is "Between the Dark and the Daylight" (1958 *Infinity*) by David C. Hodgkins (Algis BUDRYS), reprinted as by Budrys in *Budrys' Inferno* (coll 1963; vt *The Furious Future* 1964 UK), in which generations of humans are genetically rendered ever more inhuman to fit them for violent competition with murderous alien life. *MAN PLUS* (1976) by Frederik POHL, a novel that tackles several pantropy issues, prepares a man for living on MARS by changing him into a CYBORG. [PN]

PAPE, RICHARD (BERNARD)

(1916-) UK writer of various books including his bestselling wartime autobiography, *Boldness Be My Friend* (1953), and a number of thrillers. In *And So Ends the World ...* (1961) arrogant mankind is given a severe warning from high-up cosmic sources - the Moon disappears - and comes to its senses. The novel is more mysticism than sf. PARALLEL EVOLUTION

EVOLUTION.

PARALLEL WORLDS

A parallel world is another universe situated "alongside" our own, displaced from it along a spatial fourth DIMENSION (parallel worlds are often referred to in sf as "other dimensions"). Although whole universes may lie parallel in this sense, most stories focus on parallel Earths. The parallel-world idea forms a useful framework for the notion of historical ALTERNATE WORLDS, and is often used in this way. Most of the "secondary worlds" of modern FANTASY are explicit or implicit parallel worlds. Notable early sf extrapolations include J.H. ROSNY aine's "Un autre monde" (1895; trans as "Another World" 1962) and two stories by H.G. WELLS: "The Strange Case of Davidson's Eyes" (1895) and "The Plattner Story" (1896). The idea that other worlds lie parallel to our own and occasionally connect with it is one of the oldest speculative ideas in literature and legend; examples range from Fairyland to the "astral plane" of Spiritualists and mystics. There are two basic folkloristic themes connected with the notion; in one, an ordinary human is translocated into a fantasy land where s/he undergoes adventures and may find the love and fulfilment that remain beyond reach on Earth; in the other, a communication or visitation from the other world affects the life of an individual within this world, often injuring or destroying that person. Both patterns are very evident in modern imaginative fiction, shaping whole subgenres. Much of the overlap between sf, FANTASY and HORROR fiction—which makes clear-cut DEFINITIONS of the genres impossible—occurs by virtue of the promiscuous use of parallel worlds. The first pattern was modernized by Edgar Rice BURROUGHS, A. MERRITT and other PULP-MAGAZINE writers before the founding of AMAZING STORIES, and was easily dressed up with pseudo-scientific jargon; a notable early example is The Blind Spot (1921; 1951) by Homer Eon FLINT and Austin HALL. Henry KUTTNER and C.L. MOORE wrote several Merrittesque SCIENCE-FANTASY novels after this fashion, notably The Dark World (1946; 1965) and Beyond Earth's Gates (1949 Startling Stories as "The Portal in the Picture"; 1954 dos). Among the first writers to co-opt parallel worlds for straightforward sf melodrama were Edmond HAMILTON, in "Locked Worlds" (1929), and Murray LEINSTER, in "The Fifth-Dimensional Catapult" (1931) and its sequels. The idea was frequently used in humorous fashion by L. Sprague DE CAMP and others in UNKNOWN WORLDS. The second pattern, in which entities from a parallel world impinge on ours, was sciencefictionalized by William Hope HODGSON in The Ghost Pirates (1909); his earlier The House on the Borderland (1908) uses the landscapes of a parallel world to map and symbolically display the psyche of its protagonist. The renewal of such

traditional horror motifs by sf imagery was taken further by H.P. LOVECRAFT in a manner imitated by his many disciples, including Frank Belknap LONG and Donald WANDREI. The early GENRE-SF writers were slow to develop more extravagant speculative possibilities, although one notable attempt to describe a parallel world with different physical laws from those holding in our own continuum was made by Clark Ashton SMITH in "The Dimension of Chance" (1932); this notion was eventually developed much more carefully and elaborately by Isaac ASIMOV in THE GODS THEMSELVES (1972). Raymond F. JONES's Renaissance (1944; 1951; vt Man of Two Worlds) is straightforward, and Fritz LEIBER's use of parallel alternative worlds in Destiny Times Three (1945; 1957) is quantitatively restrained. It was in the 1950s and 1960s that exploration of the quirkier corollaries of the basic notion really got under way. Clifford D. SIMAK imagined a more extensive series of Earths - all empty of humanity and thus available for colonization and exploitation - in Ring Around the Sun (1953) and examined the hazards of trading between parallel worlds in "Dusty Zebra" (1954) and "The Big Front Yard" (1958), as did Alan E. NOURSE in "Tiger by the Tail" (1951). Gordon R. DICKSON's Delusion World (1955 Science Fiction Stories as "Perfectly Adjusted"; exp 1961) features a city simultaneously occupied by two societies, each invisible to the other. A common variant of the theme is that of a multiplicity of almost-identical worlds existing in parallel: alternate worlds in which there has been no significant change. Examples include "The Celestial Plot" (1948; trans 1964) by Adolfo BIOY CASARES and "Next Door, Next World" (1961) by Robert Donald Locke. In Robert SILVERBERG's "Trips" (1974) transuniversal tourists wander aimlessly through worlds similar and dissimilar. Parallel worlds often feature eccentric societies, sometimes for purposes of SATIRE, and sometimes equally eccentric patterns of EVOLUTION - like that in Stephen BOYETT's The Architect of Sleep (1986), where raccoons have become the dominant technological species. Bob SHAW has used the notion cleverly in two original novels: The Two-Timers (1968), in which a man who has lost his wife inadvertently creates a parallel world in which she still exists, and A Wreath of Stars (1976), in which two worlds made of different species of matter co-exist until the approach of an anti-neutrino star shifts the orbit of one of them. A different kind of parallelism is featured in a group of stories in which "timeslips" bring different eras of earthly history into geographical proximity - a motif featured in "Sidewise in Time" (1934) by Leinster and October the First is Too Late (1966) by Fred HOYLE. The idea that parallel worlds might include literal versions of fictional worlds as well as alternative histories is proposed in "The Number of the Beast" (1980) by Robert A. HEINLEIN and more sensitively developed in Frankenstein Unbound (1973) by Brian W. ALDISS. Larry NIVEN's "All the Myriad Ways" (1969) deals tentatively with the psychological implications of multiple universes. Richard COWPER's Breakthrough (1967) extrapolates the psychological attractions of the concept, as do Christopher PRIEST's stories of the Dream Archipelago, including The Affirmation (1981). Modern uses of the theme usually imagine an infinite number of parallel worlds extending in a manifold which contains all possible Earthly histories and perhaps all possible physical universes. The notion that the perceived Universe is simply one single aspect of such a "multiverse" has been lent credence by the "many-worlds

interpretation" of the enigmas of quantum mechanics propounded by, for example, John Wheeler, and popularized in nonfiction books by writers like Paul DAVIES and John GRIBBIN. Keith LAUMER's *Worlds of the Imperium* (1962) and its sequels deploy this kind of infinite series of parallel worlds in connection with alternative histories, as do Richard C. MEREDITH's *At the Narrow Passage* (1973) and its sequel and Frederik POHL's *The Coming of the Quantum Cats* (1986). Certain philosophical implications of the many-worlds interpretation are explored more-or-less seriously in a number of sf novels, including Aldiss's *Report on Probability A* (1968), Graham Dunstan MARTIN's *Time-Slip* (1986), Greg EGAN's *Quarantine* (1992) and Pohl and Jack WILLIAMSON's *The Singers of Time* (1991). Modern fantasy novels - including most of those in the intermediate science-fantasy category - sometimes draw upon the legacy of sf recomplication in order to invigorate their use of parallel worlds. Notable examples include Roger ZELAZNY's Amber series and Michael MOORCOCK's many SWORD-AND-SORCERY series, which are all bound together (with some sf novels) within a hypothetical multiverse. [BS]

PARANOIA

Paranoia is common in sf; schizophrenia (which we also cover here, although aware that it is a wholly different condition) is comparatively rare. Both are also discussed in rather a different context under PSYCHOLOGY. It is obviously necessary to distinguish between sf stories about paranoia (a fairly small group) and sf stories whose implicit attitude is paranoid (an extremely large group); most stories discussed below belong to the latter group. Paranoia has been defined as "a mental disorder characterized by systematic delusions, as of grandeur or, especially, persecution". The delusions (PERCEPTION) of persecution that appear to lie behind much sf were discussed in a forum of the SCIENCE FICTION WRITERS OF AMERICA, and 3 papers were published together as a pamphlet, *Paranoia and Science Fiction* (coll 1967 chap), the contributors being Alexei PANSHIN, James BLISH and also Joanna RUSS, who argued that, historically, the paranoid element in sf stems largely from its roots in the GOTHIC. It is fundamental to the gothic that none of us is safe; that it is the nature of the Universe to contain menaces that may at any time, arbitrarily, threaten us. Such menaces play a prominent role in, for example, the stories of Ambrose BIERCE, notably "The Damned Thing" (1893), a tale of a ravaging invisible monster. The PULP MAGAZINES, especially WEIRD TALES, but also the early SF MAGAZINES, were fond of such stories. H.P. LOVECRAFT is an almost perfect example of a writer whose work exhibits a systematic paranoid frame of reference; basic to his work was the idea that adherents of cults formed to worship malign gods are conspiring throughout the world to bring those gods physically back to rule us and feed from us. There was no lack of paranoid stories at the sf end of the spectrum, either; most stories of INVASION, whether by foreigners or ALIENS, fall into this category. Paranoia is fundamental, too, to whole classes of MAINSTREAM fiction, especially ABSURDIST fiction (often bordering on sf); Franz KAFKA wrote little else but stories of this kind. However, one should remember the old dictum that "the paranoid is not entirely wrong". Invasions, after all, do take place; people are sometimes persecuted (though seldom turned into beetles as in Kafka's famous story); the Universe, as simple observation shows, does indeed contain menaces.

Also, one should not mistake the writer for the tale; paranoid stories are not necessarily written by paranoiacs, though some GENRE-SF writers may have been consciously feeding the perceived paranoia of their readership. Early paranoid stories in the sf magazines include "Parasite" (1935) by Harl VINCENT, where invading aliens attach themselves to us and control our thoughts, and "The Earth-Owners" (1931) by Edmond HAMILTON, one of the first examples of a theme later to be enormously popular in sf: that Earth is already invaded and we are manipulated by aliens in disguise. Charles FORT formulated this paranoid insight pithily: "We are property." Many sf writers took the hint; e.g., Eric Frank RUSSELL in *Sinister Barrier* (1939; 1943; rev 1948) and *Dreadful Sanctuary* (1948; 1951; rev 1963). A common variant on the theme, which must have won sf countless adherents among genuine paranoiacs, is that many people in mental hospitals are there because they have uncovered the conspiracy, but nobody will listen; an example is "Come and Go Mad" (1949) by Fredric BROWN, where it turns out that Earth is controlled by an intelligent HIVE-MIND (of ants); the man who uncovers the truth is cold-bloodedly driven mad. AMAZING STORIES improved its circulation very considerably in the years 1945-7 by publishing a series of purportedly fact-based stories by Richard S. SHAVER showing how we are all manipulated by malign underground ROBOTS. Conspiracy theories of the Shaver variety are extremely popular among propagandists of the PSEUDO-SCIENCES, many of whom themselves have believed that there is a conspiracy (or "cover-up", to use the prevalent terminology) among the scientific community to suppress their findings - a phenomenon discussed by Martin GARDNER in his *In the Name of Science* (1952; rev vt *Fads and Fallacies in the Name of Science* 1957) and by other writers, notably John T. SLADEK in *The New Apocrypha* (1973), which has many interesting observations about the relationship of the pseudo-sciences themselves to paranoia. Among the more popular pseudo-science cults are the groups believing we are being secretly observed by UFOS and/or endorsing Erich VON DANIKEN's belief that human progress is the result of alien intervention. Cult beliefs about UFOs are very widespread, as witness the popularity of the tv series *PROJECT UFO* (1978-79) and 1980s tale like W. Allen HARBINSON's *Projekt Saucer* series (1980-91) or Whitley STRIEBER's *Communion* (1987) and *Transformation: The Breakthrough* (1988), the latter purporting to be true accounts of the author's and then his son's abduction by aliens. The Strieber books were best-sellers; *Project UFO* was the only sf drama series ever to make it into the top 20 of US tv programmes (in terms of number of viewers). An sf subgenre that fascinatingly mixes delusions of grandeur with delusions of persecution is the tyrannized- SUPERMAN story, especially associated with A.E. VAN VOGT, whose oeuvre probably contains more systematic conspiracy theories than that of any other writer in sf. Notable examples are *SLAN* (1940; 1946; rev 1951) and *The World of A* (1945; rev 1948; rev 1970; vt *The World of Null-A*). Similarly paranoid patterns occur in most of Keith LAUMER's supermen stories of the 1960s and 1970s. Van Vogt was later to be associated with L. Ron HUBBARD's DIANETICS movement, whose appeal was in part to the same mixture: the desire to be superior and the fear of being different. Hubbard himself wrote one of the most forceful paranoia stories in pulp sf: *Fear* (1940; 1957; in *Typewriter in the Sky/Fear*, coll 1951). This is a story both paranoid and about paranoia: it can be taken either

as the case history of a psychotic killer or as a demonstration of demonic manipulation; in either event, a vivid and frightening series of delusions is projected. "Dreams are Sacred" (1948) by Peter Phillips (1921-) has a telepath entering the mind of a paranoid in order to destroy his grandiose fantasies at root, but perhaps the most interesting study of a delusory framework is the one presented as fact in Robert LINDNER's *The Fifty-Minute Hour* (coll 1955; vt *The Jet-Propelled Couch UK*), a case-study of an sf fan who believes himself to be living in a SPACE OPERA, and merely dreaming reality. The other major paranoid variant is the story of the alien menace which can either change its shape or attach itself as a parasite to a human (PARASITISM AND SYMBIOSIS); either way, the fear is that the inhuman result looks just like us. This is an image from the very heart of paranoia: the idea that our friends, sweethearts or even parents could be mysteriously other, hateful, dangerous and to be destroyed. In real life such delusions have led to murder; they are disturbingly popular in sf. The most celebrated early example is John W. CAMPBELL Jr's story "Who Goes There?" (1938) - filmed twice, the remake *The THING* (1982) more closely and unnervingly duplicating Campbell's original theme as the comradeship of a research installation crumbles into terrible isolation - but the heyday of stories of this kind was the 1950s. This was the period of the Cold War, when almost daily propaganda encouraged US citizens to believe that a secret conspiracy of communists and homosexuals was preparing to subvert the American way of life; it was the time of the McCarthy hearings, and of the evangelical religious revival largely led by Billy Graham; paranoia was in the air. The frightening thing about communists and homosexuals, as everyone knew, was that from the outside they looked just like us. Hence, in part, the unprecedented popularity of stories about aliens who looked like humans, especially in the CINEMA (see also MONSTER MOVIES), including such films as *I MARRIED A MONSTER FROM OUTER SPACE* (1958), *INVADERS FROM MARS* (1953), *INVASION OF THE BODY SNATCHERS* (1956) and *IT CAME FROM OUTER SPACE* (1953). (Over a decade later the theme entered tv in the form of the series *The INVADERS* , and there was a resurgence of the genre in the 1980s, with films like *THEY LIVE* [1988] and *SOCIETY* [1989], and tv shows like *WAR OF THE WORLDS* [1988-90].) In book form the best known example is Robert A. HEINLEIN's *The Puppet Masters* (1951), where the analogy between the alien group mind and totalitarian communism was made overtly. The most notable exponents of paranoia in written sf were Richard MATHESON, Robert SHECKLEY and Philip K. DICK, Matheson in almost everything he wrote, especially his filmscripts for *The INCREDIBLE SHRINKING MAN* (1957) and, later, *Duel* (1971). (The latter film, like *DEMON SEED* [1977], falls into the category of machines-are-out-to-get-us stories, much used by the writer and film director Michael CRICHTON.) Sheckley's style is more rueful and ironic; he pokes fun at paranoia even while most of his stories - which are clear demonstrations of his belief that the universe is out to get us - invoke it. By far the most important writer in this area has been Dick, in whose novels the basic question is often: "To what extent is a paranoid (or schizophrenic) frame of reference delusory, and to what extent is reality itself a mere construct erected defensively by the mind in order to maintain sanity?" Several of Dick's stories take place, in effect, in ALTERNATE WORLDS actually projected by paranoid consciousnesses. Three

novels relevant to the paranoia theme are *Eye in the Sky* (1957), *Clans of the Alphane Moon* (1964) and, most powerfully, *THE THREE STIGMATA OF PALMER ELDRITCH* (1965). Dick's novels are amazing in the emotional intensity of their psychodramas and their cavalier attitude towards reality, but dissolution of all meaning is (mostly) held at bay by the calm and wit of their narrative voice. Delusory systems that can in fact be entered and regarded as real are quite common in sf, especially among writers like Heinlein for whom solipsism is an important theme; an outstanding example is Richard MCKENNA, whose 12 sf stories published 1958-68 project imaginary worlds as real over and over again; it is not clear whether this sort of story more closely approaches paranoia or schizophrenia. One paranoid *idée fixe* of the period turns up frequently, notably in stories by Frederik POHL, with C.M. KORNBLUTH or solo: that a small group of very selfish near-immortals is secretly manipulating society behind the scenes. Examples are *Gladiator-at-Law* (1955), by both, and *Drunkard's Walk* (1960), by Pohl. UK examples of paranoia stories from the 1950s are less common, though *Alien Life* (1954) by E.C. TUBB, in which a starship crew is taken over by alien parasites with the idea of invading Earth, would certainly qualify. This idea has been used several times since, as in the film *TERRORE NELLO SPAZIO* (1965; vt *Planet of the Vampires*) and *QUATERMASS II* (1957; vt *Enemy from Space*). (Most sf/ HORROR films fall into the paranoia category, *NIGHT OF THE LIVING DEAD* [1968], *Demon Seed* and *VIDEODROME* [1982] being good examples.) The hysterical edge of 1950s paranoid sf did not dissipate as some of the worst Cold War fears subsided in the 1960s, but it did change its nature, when a different (and actual) war took place involving the USA, whose armed forces fought in Vietnam through the second half of the decade, not finally withdrawing until 1975. The assassination of John F. Kennedy in 1963 also heightened feelings of paranoia. Elements of division in US society were reflected in a series of darkly paranoid films about POLITICS directed by John FRANKENHEIMER, with *The MANCHURIAN CANDIDATE* (1962), *Seven Days in May* (1964) and *SECONDS* (1966); the exiled left-wing director Joseph Losey (1909-1984), a victim of Hollywood politics in the 1950s, made *The DAMNED* (1961) in the UK; Stanley KUBRICK added new ingredients to the paranoid brew with *DR STRANGELOVE OR: HOW I LEARNED TO STOP WORRYING AND LOVE THE BOMB* (1964), and Theodore Flicker both spoofed and endorsed conspiracy theorizing with *The PRESIDENT'S ANALYST* (1967). Also extremely relevant is the UK tv series *The PRISONER* (1968), in which a political prisoner is subjected to ever more grotesque psychological manipulations. In written sf, monuments of paranoia from the late 1950s to the early 1970s include: Algis BUDRYS's *WHO?* (1958), in which nobody knows if an enigmatic man in a metal mask is a good US scientist or a Russian spy; several of Christopher HODDER-WILLIAMS's 1960s novels in which the protagonist's sanity is called into question as he makes curious discoveries; Philip Jose FARMER's *Riverworld* series (from 1965), in which the human race is apparently reincarnated en masse as a cold-blooded experiment; Richard COWPER's *Breakthrough* (1967), in which communication from outside seems like madness from inside; Frank HERBERT's *The Santaroga Barrier* (1968), in which an entire community is cut off and apparently has its identity submerged (here what begins as horrifying is cleverly tilted so as to seem almost acceptable by the end); John BRUNNER's *The Jagged Orbit* (1969), in which paranoia is endemic and taken

for granted in a NEAR-FUTURE situation of racial hatred; Roger ZELAZNY's Amber series (from 1970) in which a family of quasi-superbeings plot constantly against one another, and real universes keep on turning out to be mere shadows of some further but unreachable reality; John T. Sladek's The Muller-Fokker Effect (1970), which takes US paranoia as its prime target; and Norman SPINRAD's The Iron Dream (1972), which parodies sf paranoia by passing itself off as a SWORD-AND-SORCERY novel written by Adolf Hitler. Though most of this work in book form shows no special pattern, the films of the 1960s certainly did, and all this activity culminated in a second wave of paranoia books and films that emerged in the mid-1970s, and - in the cinema, at least - continues intermittently to the present day. This new paranoia boom was shaped differently from its 1950s predecessor; the earlier period produced paranoia stories about outside menaces that ultimately endangered the State; the later boom produced a more domestic version in which the menace came from within, and was very often the State itself - as in most of the films noted above - or even, in an inward claustrophobic spiral, the family itself, in the case of Richard CONDON's Winter Kills (1974), a FABULATION about a political family closely resembling the Kennedys. The 1970s boom, though it built on conspiracy theories of the 1960s, was immediately attributable to the revelations following the 1972 break-in at Watergate which climaxed with President Nixon's resignation. It is hardly surprising that paranoid sf this time around emerged mostly (and perhaps justifiably) in stories that blended sf with POLITICS, as in the borderline sf film The Parallax View (1974) and the 1979 film of Condon's Winter Kills. Among the many more obviously sciencefictional (though still political) paranoid film scenarios that followed are The CRAZIES (1973), CHOSEN SURVIVORS (1974), CAPRICORN ONE (1977), The FURY (1978), The BOYS FROM BRAZIL (1978), The CHINA SYNDROME (1979), SCANNERS (1980), ROLLOVER (1981), BLUE THUNDER (1982), ENDANGERED SPECIES (1982), FIRESTARTER (1984), KAMIKAZE (1986), The BLOB (1988) and BRAIN DEAD (1989), each of which involves a conspiracy, in most cases supported secretly by the apparatus of the State. Curiously enough, conspiracy-theory material of this sort did not much permeate written genre sf in the 1970s, though it was very obvious in the sort of fabulations written by Kurt VONNEGUT Jr and especially Thomas PYNCHON, a tradition continued in the work of many others, including William T. VOLLMANN in his You Bright and Risen Angels: A Cartoon (1987 UK). Within more obviously generic work, a kind of knowing paranoia characterized a series of novels by Barry N. MALZBERG (some listed under PSYCHOLOGY) which see Man as a puppet in some kind of enigmatic or indifferent cosmic game; but the conspiracy-theory work par excellence was Robert SHEA's and Robert Anton WILSON's Illuminatus! (3 vols 1975), in which recent political history is explained in terms of a dazzlingly complex series of interlocking conspiracies by rival secret societies, some with histories going back to ATLANTIS. Algis Budrys's Michaelmas (1977) comes out, rather worriedly, on the side of conspiracy by producing as hero the man who secretly manipulates human politics. In the 1980s, paranoia in genre sf may have been slightly in abeyance, though it appeared in recurrent motifs of various sub-genres: the "shoot first, ask questions afterward" mentality of some SURVIVALIST FICTION; the godlike manipulations of various VIRTUAL REALITIES in novels by Jack CHALKER and

others; and some of the more sophisticated SPACE OPERAS, in which galactic history (including ours) turns out to have been warped by alien superbeings, as in Paul J. MCAULEY's *Eternal Light* (1991). The most senior 1980s authors whose worlds are readable as paranoid are perhaps William GIBSON and Orson Scott CARD, but in rather different ways. Gibson's characteristically Canadian presentation is of struggling protagonists who often find themselves treated as puppets, as if free will may come to be illusory in a sufficiently complex world; Card's protagonists, who exist in a kinetic Universe pervaded by a sense of omnipotent presence, are - more typically of the USA - both manipulated and manipulative, the tool of greater forces or in the upshot godlike themselves. Card's Universe is intensely hierarchical, with his protagonists ranked high, but it is not always clear which rung of the ladder he believes the rest of us to be standing on; he may believe that we have free will if we stick to the rules. It is difficult to generalize about paranoia in sf; clearly it is important and has led to some distinguished work. It does seem as if sf of the last few decades has matured and that, where sf once simply reflected paranoia, it is now more often written to analyse the very real paranoia that the writers know to exist in society. Western society has a cumbrous, bureaucratic power system; no wonder if the average individual feels at the mercy of forces he or she cannot even identify. In all paranoid sf the question of our free will is the fundamental one. Schizophrenia is very much rarer in sf, though there is a small but persistent subgenre of tales about dual personality, its earliest classic being *Strange Case of Dr Jekyll and Mr Hyde* (1886) by Robert Louis STEVENSON. The popular belief that schizophrenia is a synonym for split personality is incorrect; in clinical psychology schizophrenia is more complex and more common than that. However, it is the split-personality theme that has most attracted sf writers (*PSYCHOLOGY* for further examples). An amusing variant can be found in Robert Sheckley's *The Alchemical Marriage of Alistair Crompton* (1978 UK; vt *Crompton Divided* 1988 US), in which split personalities can be excised by psychic surgery and implanted into new bodies. The film *FORBIDDEN PLANET* (1956) features a self-controlled scientist out of touch with his own subconscious mind, the "id"; in a surprisingly successful post-Freudian variation on Stevenson's Jekyll-and-Hyde syndrome, his secret passions become literally projected into the form of a ravaging monster. Where stories of PARASITISM regularly have a subtext of paranoia, those of symbiosis often appear schizophrenic, at least in such tales as Brian STABLEFORD's *Hooded Swan* series, where the symbiote literally inhabits the host's brain. (An earlier example is Algis Budrys's "Silent Brother" [1956].) Stableford is one of the few sf writers to use schizophrenia in the modern sense as an sf theme, in *Man in a Cage* (1975), where a schizophrenic is chosen to take part in a space project which might prove impossible for ordinary people. (Samuel R. DELANY had used a similar idea in "The Star Pit" [1967], but there the spacemen, though unbalanced, were not schizophrenic.) Theodore STURGEON wrote several strong (but perhaps glib) stories about schizophrenia, including "The Other Man" (1956), and "Who?" (1955; vt "Bulkhead"), which is about the deliberate splitting of an astronaut's personality to save him from insanity during a long space flight alone. And, of course, his gestalt creation in *MORE THAN HUMAN* (fixup 1953) consists of the joining together of individually maimed

persons, each of whom (before joining) is like an inadequate, schizophrenic personality split off from some unknowable whole. Another story about the deliberate splitting of personality is Wyman GUIN's interesting "Beyond Bedlam" (1951). The most consistently evocative use of schizophrenic themes in sf, however, is in the work of Philip K. Dick, notably in *We Can Build You* (1972) and *Martian Time-Slip* (1964). Both use the word schizophrenia in the full clinical sense, and both treat schizophrenics with considerable empathy, though not necessarily sympathy; the latter is fascinating in its theorizing that the anomie of the schizophrenic may be to do with his or her subjective experience of time being radically removed from the normal; the desolated landscapes projected by (or perceived by) the schizoid mind are memorable. PARASITE MURDERS, THE

(vt *They Came from Within*; vt *Shivers*) Film (1974). Cinepix/Canadian Film Development Corp. Written/dir David CRONENBERG, starring Paul Hampton, Joe Silver, Lynn Lowry, Alan Migicovsky, Barbara Steele. 87 mins, cut to 77 mins. Colour. In an attempt to develop a beneficial symbiote, a scientist creates a parasite that, when it invades a human body, makes its host sexually ravenous. The vaguely phallic parasites spread through an isolated apartment building, and sexual apocalypse follows, the film ending with the sterile high-rise building's surviving occupants climbing into their cars to infect first Canada and then the world. The film has SPLATTER-MOVIE sequences and other scenes, notably the parasite's vaginal penetration of Steele while she is in the bath, of a distinctly nauseating kind, but it transcends the exploitation-movie genre to which it belongs through its wit and intensity, and its readiness to follow its axioms through to their conclusions. This was Cronenberg's first commercial film, notable for its remarkably bold visual metaphors. [PN]See also: CINEMA; MONSTER MOVIES; PARASITISM AND SYMBIOSIS; SEX.

PARASITISM AND SYMBIOSIS

Parasitism and symbiosis are Nature's extreme forms of commensalism (physical association). A parasitic species promotes its own interests entirely to the detriment of the other; symbiosis refers to the much less common state in which both organisms obtain some benefit from the association. Imaginary parasites of human beings are featured in many effective sf HORROR stories, often linked to the idea of vampirism (although classical vampires might better be regarded as predators than as parasites). Stories dealing with LIFE ON OTHER WORLDS often feature parasites which are exaggerated versions of earthly creatures. Those insects which lay their eggs in living hosts are popular models; they feature in A.E. VAN VOGT's "Discord in Scarlet" (1939; incorporated in *The Voyage of the Space Beagle*, fixup 1950) and the film *ALIEN* (1979) and its sequels; the closely related notion of the mother killed by her internal young appears in Philip Jose FARMER's *THE LOVERS* (1952; exp 1961) and Gardner DOZOIS's *STRANGERS* (1978). Parasites leeching the "vital energy" of human beings are commonplace; when the parasites are internal rather than external this often involves the will of the victim being usurped, thus referring metaphorically to demonic possession as well as to

vampirism. Early examples of this kind of story include J. Maclaren COBBAN's *Master of His Fate* (1890) and Arthur Conan DOYLE's *The Parasite* (1895); the classic PULP-MAGAZINE sf extrapolations are Eric Frank RUSSELL's *Sinister Barrier* (1939; 1943; rev 1948) and Robert A. HEINLEIN's *The Puppet Masters* (1951). Other stories in the same vein are Russell's "Vampire from the Void" (1939), Farmer's "Strange Compulsion" (1953; vt "The Captain's Daughter"), Frank R. CRISP's *The Ape of London* (1959), Robert SILVERBERG's "Passengers" (1968), Colin WILSON's *The Mind Parasites* (1967) and *The Space Vampires* (1976), David CRONENBERG's film *The PARASITE MURDERS* (1974) and Damon KNIGHT's *CV* (1985). This frequent movement of the notion of parasitism from the context of the mundane to the quasisupernatural is in keeping with sf's habitual treatment of biological themes (BIOLOGY). In concert with general trends relating to ALIENS there was a dramatic change of emphasis in post-WWII stories, in which apparently parasitic relationships are often revealed to be in fact symbiotic. Some stories are conscious ideological replies to earlier works - Ted WHITE's *By Furies Possessed* (1970), which attacks the implicit xenophobia of *The Puppet Masters*, is a notable example. The concept of symbiosis had earlier been used in some ecological puzzle stories (ECOLOGY), notably Eric Frank Russell's "Symbiotica" (1943) and an ironic story of defensive biological warfare, "Symbiosis" (1947) by Will F. Jenkins (Murray LEINSTER), but the quasisupernatural connotations it eventually took on were decisively opposed to metaphors of vampirism and possession. It became a central notion of the "ecological mysticism" displayed in such works as Sydney J. VAN SCYOC's trilogy *Daughters of the Sunstone* (1982-4; omni 1985). Explicit religious imagery comes to the fore in such stories of human/alien symbiosis as Clifford D. SIMAK's *Time and Again* (1951; vt *First He Died*), Bob SHAW's *Palace of Eternity* (1969) and Nicholas Yermakov's trilogy begun with *The Last Communion* (1981). Post-WWII stories in which human and alien minds share a brain usually see such relationships as potentially symbiotic; examples include Hal CLEMENT's *Needle* (1950), Brian M. STABLEFORD's *Halcyon Drift* series (1972-5), Roger ZELAZNY's *Doorways in the Sand* (1976) and F. Paul WILSON's *Healer* (1976). Even Christopher EVANS's bleak mind-parasite story *The Insider* (1981) is sympathetic to the parasitic consciousness. The more ambivalent view of human/alien commensalism adopted in Octavia E. BUTLER's *Clay's Ark* (1984) and related works and in the first part of Dan SIMMONS's *HYPERION* (1989) cleverly exploits and undercuts this modern sensibility. This area of speculation is perhaps the most obvious example in sf of the utility of biological notions as metaphysical metaphors (METAPHYSICS), and of the way that such metaphorical usage dominates the expression of biological notions in sf. PARAZZOLI, FERRUCCIO
[r] ITALY.

PARIS QUI DORT

(vt *Le Rayon Invisible*; vt *The Crazy Ray*) Film (1923). Films Diamant. Written/dir Rene Clair, starring Henri Rollan, Albert Prejean, Madeleine Rodrigue, Marcel Vallee. 61 mins. B/w. This is one of the earliest sf films

(other than shorts). A scientist accidentally freezes Paris into a split-second of time with an invisible ray. Some Parisians escape, through being either on the Eiffel tower or in a plane. Most of them take advantage of the situation to break out of their social roles, have drunken parties, etc., but a young nightwatchman persuades a group to seek out the source of the problem and put it right, which they do (though at first the victims can move only in slow motion). Made with style and charm by Clair - whose first film it was - PQD retains its wit and good humour when seen today. [JB]See also: CINEMA.

PARK, PAUL (CLAIBORNE)

(1954-) US writer, educated in the land of his birth, peripatetic for most of the 1980s, but resident again in the USA at about the time he began publishing sf with *SOLDIERS OF PARADISE* (1987), the first volume of *The Starbridge Chronicles*, which comprises also *Sugar Rain* (1989) - assembled with the first volume as *The Sugar Festival* (omni 1991) - and is completed with *The Cult of Loving Kindness* (1991). It is the sort of sequence whose composition seems possible only in the later years of a genre, when the literary atmosphere is saturated with memories of previous work and a sense of antiquity attaches naturally to some of the sf instruments used in new stories. RELIGION dominates every page of *The Starbridge Chronicles*, which is set, eons hence, in a dying-Earth venue where history endlessly recycles, tied to the return of the generations-long seasons of a Great Year. (PP has denied being influenced by Brian W. ALDISS's *Helliconia* sequence: the idea of a Great Year may be one which comes naturally to mind in the late maturity of a genre.) As in most dying-Earth tales (*FAR FUTURE*), metal is now scarce, technologies of radically varying complexity co-exist, human and humanlike species intermingle, and nothing new can happen. The Great-Year cycle owes its existence to the influence of a visiting planet (PP's astronomy is, perhaps intentionally, vague on its exact nature) called Paradise, which the religion dominant during the terrible Winter conceives to be the habitat of those who have not yet died and been sent to Earth. The delineation of this faith in *SOLDIERS OF PARADISE* - with its bloodiness, its erotic complexities, its totalitarian control over the predestined lives of the damned, its worship of the dog-god Angkhdt, its melancholia and its strange rightness - is the major creative achievement of the sequence. In that first novel, as Winter begins to end, the Starbridge clan, which has dominated the great province whose capital is Charn, begins to panic in foreordained ways; Abu Starbridge is martyred, and will become the avatar of a Summer faith, and Thanakar Starbridge, a doctor who blasphemously heals those low in the social order, escapes a crumbling Charn with his lover. *Sugar Rain* deals in gravely slow terms with the meteorological and social phenomena which signal Spring, as well as continuing the Thanakar love story. *The Cult of Loving Kindness*, set in Summer, depicts the slow rebirth of the cult of Angkhdt. The contemplative and tocsin richness of the sequence demonstrates the continuing imaginative power of latter-day sf. *Coelestis* (1993 UK; rev vt *Celestis* 1995 US) is a singleton and reads, at first glance, like an extended vignette: a morose administrator from Earth, trapped by time dilation and a failed career on a decrepit colony planet, falls in love with a wealthy

native ALIEN, who has been cosmetically modifying herself so as to resemble human stock more closely; and she falls in love with him; and the romance ends tragically, as seemed inevitable from the start. But the quietly savage density of the prose, the inexorability of the telling, and the more profound tragedy of the continuing destruction at human hands of the complex alien culture, all add again to a demonstration of late 20th century sf at its most responsible, and least conciliatory. [JC]See also: GODS AND DEMONS; PLANETARY ROMANCE.

PARKER, RICHARD

(1915-) UK writer for children. His *The Hendon Fungus* (1968) is about fungal specimens from abroad proliferating in England, feeding on calcium, and thus crumbling buildings of stone, concrete, etc. *The Old Powder Line* (1971) is a fantasy featuring a train as a time machine. *A Time to Choose* (1973) presents two children forced to pick between double lives in ALTERNATE WORLDS, one pleasant, the other ours. [PN]Other works: *M For Mischief* and *Spell Seven* (1971), both tales of magic.

PARKES, LUCAS or WYNDHAM

John WYNDHAM.

PARKINSON, H(AROLD) F(REDERICK)

(? -) UK writer whose sf novel, *They Shall not Die* (1939), describes with muted irony the effects of a MEDICINE which prevents all disease but also sterilizes those who use it: only those who remain prone to the ills of the flesh can give birth. [JC]

PARNELL, FRANCIS

[s] Festus PRAGNELL.

PARNOV, EREMEI (IUDOVICH)

(1935-) Russian scientist and writer, almost all of whose sf of interest was published in collaboration with Mikhail EMTSEV (whom see for details). After the partnership broke up in 1970, EP published some further work, like *Prosnis' V Famaguste* ["Wake up in Famagusta"] (1985), which mixes Eastern mysticism and ALIEN encounters in a formula adventure plot. Some superficial sf criticism appears in *Fantastika V Vek NTR* ["SF in the Age of Scientific Revolution"] (1974) and *Zerkalo Uranii* ["The Mirror of Urania"] (1982). [VG]See also: HIVE-MINDS.

PARODY

SATIRE.

PARRINDER, (JOHN) PATRICK

(1944-) UK academic and critic whose work in the sf field has focused primarily upon H.G. WELLS. His *H.G. Wells* (1970) remains the best short introduction to the work and the man, though it may now, two decades later, seem unduly dismissive about Wells's later career. *H.G. Wells: The Critical Heritage* (anth 1972) reflects a similar viewpoint. PP ed with Robert M. PHILMUS *H.G. Wells's Literary Criticism* (coll 1980). *The War of the Worlds: Notes* (1981 chap) is a study guide. *H.G. Wells: A Comprehensive Bibliography*, 4th Ed (1986 chap), with J.R. Hammond, A.H. Watkins and the H.G. Wells Society, justifies its subtitle only if periodical publications are to be ignored. *H.G. Wells under Revision:*

Proceedings of the International H.G. Wells Symposium, London, July 1986 (anth 1990) with Christopher Rolfe reflects some of the advances in Wells studies since PP's first study, which in retrospect seems all the more prescient in the sophisticated seriousness of its approach. PP has also edited 2 critical editions for The H.G. Wells Society: *Select Conversations with an Uncle (Now Extinct)* ([coll 1895] 1992 chap) with David C. Smith, which includes previously uncollected material, and *The Discovery of the Future* ([1902] coll 1989 chap), which includes also some lesser essays. The useful *Science Fiction: A Critical Guide* (anth 1979) was followed by *Science Fiction: Its Criticism and Teaching* (1980), a clear-headed and subtle conspectus of the field from a scholarly point of view. [JC] See also: CRITICAL AND HISTORICAL WORKS ABOUT SF; SF IN THE CLASSROOM; SCIENTISTS.

PARRY, DAVID MacLEAN

(1852-1915) US businessman and writer whose anti-socialist *DYSTOPIA*, *The Scarlet Empire* (1906), introduces a young US citizen to a nightmarish ATLANTIS, protected from the ocean by a great dome, in which the obsession with regimented equality leads to grotesqueries prophetic of those dreamt of by Evgeny ZAMIATIN in *My* (trans Gregory Zilboorg as *We* 1924 US). The protagonist escapes with the young woman he loves, destroying the dome - and hence the entire society - as he leaves. [JC]

PARSEC

The official SI unit of astronomical distance; the name is a contraction of "parallax-second". The measure was introduced by UK astronomer Herbert Hall Towner (1861-1930). As the Earth travels from one side of the Sun to the other in half a year, parallax makes the position of any comparatively nearby star apparently shift. Using simple trigonometry, from the observed angular displacement of the star's measured position and knowledge of the distance between Earth and Sun the distance of the star can be calculated. One parsec is defined (essentially) as the distance at which a star would show a parallax displacement of 1 second of arc, a distance which proves to be approximately 3.258 light years. The term "parsec" is a common item of sf TERMINOLOGY, either correctly as a unit of distance or, depressingly often - especially in PULP-MAGAZINE, juvenile and cinematic sf - mistakenly as a unit of velocity ("We're moving at 17 parsecs!" the hero of *SPACE 1999* might cry) or of time ("I made the run in less than four parsecs," says Harrison Ford in *STAR WARS*). [PN] See also: SCIENTIFIC ERRORS.

PARTINGTON, CHARLES

[r] NEW WORLDS; SOMETHING ELSE.

PASSES, ALAN

Working name of UK writer, translator and film technician Alan Pazolski (1943-), who also signs himself Alan Passes-Pazolski. His first sf story was "Spoor" for NW in 1969, and he has written two sf plays, "Mystic of the Western World", produced 1976, and "Death Raise", produced 1977. His epic novel *Big Step* (1977) mixes sf material with MYTHOLOGY in the experimentally couched story of the adventures on Earth of an interstellar Angel of Death who seeks to punish a fugitive Nazi. [JC]

PASSING SHOW, THE

UK large-format (14" x 10" [36cm x 26cm]) weekly magazine, 26 Mar 1932-25 Feb 1939. It featured articles, short stories, serials and cartoons.

Beginning with the serializations of *Pirates of Venus* (1933; 1934) and *Lost on Venus* (1933-4; 1935) by Edgar Rice BURROUGHS (both reprinted from *The ARGOSY*), TPS became the UK's most regular periodical source of sf in the 1930s, remaining so until *TALES OF WONDER* and *FANTASY* started up. Several short fantasy stories by Lord DUNSANY and others and a series of articles by Ray CUMMINGS, *The World of Tomorrow* (1936), appeared in TPS over the next 5 years together with 11 other serials, notably Warwick DEEPING's "The Madness of Professor Pye" (1934), Edwin BALMER's and Philip WYLIE's *When Worlds Collide* (1934-5; being a reprint of *When Worlds Collide* [1933] and *After Worlds Collide* [1934]), Wynant Davis Hubbard's *The Thousandth Frog* (1935; 1935), John Beynon's (John WYNDHAM) *Planet Plane* (1936 as "Stowaway to Mars"; 1936; vt cut as "The Space Machine", 1937 *Modern Wonder*; rev vt *Stowaway to Mars* 1953) and *The Secret People* (1935; 1935), and W. Douglas NEWTON's "The Devil Comes Aboard" (1938; vt *Savaran and the Great Sand* 1939). TPS later became *The Illustrated* and focused its attention on WWII, though sf still made an occasional appearance. [JE]

PASTORAL

The term "pastoral" can be understood in various ways. It can refer to the Classical or Shakespearean tale of courtiers holidaying among nymphs and shepherds; it can refer, as Sir William Empson (1906-1984) and other modern critics have argued, to the proletarian novel or to the story which contrasts childhood innocence with adult experience. In essence, however, a pastoral is any work of fiction which depicts an apparently simple and natural way of life, and contrasts it with our complex, technological, anxiety-ridden urban world of the present. Pastorals can be full of moral earnestness or they can be utterly escapist. Of the many versions of pastoral in sf, the most obvious is the tale of country life as written by Clifford D. SIMAK, Zenna HENDERSON and others. Such stories usually involve the intrusion of ALIEN beings (frequently telepathic) into rural landscapes peopled by farmers and small-town tradesmen. Examples are Simak's "Neighbor" (1954), "A Death in the House" (1959), *WAY STATION* (1963), *All Flesh is Grass* (1965) and *A Choice of Gods* (1972), and Henderson's *PILGRIMAGE: THE BOOK OF THE PEOPLE* (fixup 1961) and *The Anything Box* (coll 1965). Fantasies in a kindred mode include Ray BRADBURY's *Dandelion Wine* (fixup 1957), Ward MOORE's and Avram DAVIDSON's *Joyleg* (1962) and Manly Wade WELLMAN's *Who Fears the Devil?* (coll of linked stories 1963). What these works have in common is an emphasis on the virtues (and sometimes the constraints) of the rural way of life. They are, explicitly or implicitly, anti-city and anti-MACHINE; they frequently extol the values of living close to Nature, of being in rhythm with the seasons. This bucolic and Luddite strain in GENRE SF has its origins in some major works of US literature such as *Walden* (1854) by Henry David Thoreau (1817-1862) and *Winesburg, Ohio* (1919) by Sherwood Anderson (1876-1941), as well as in such UK UTOPIAS and romances as Richard JEFFERIES's *After London* (1885), with its vision of the city reconquered by forest and field, W.H. HUDSON's *A Crystal Age* (1887) and

William MORRIS's *News from Nowhere* (1890 US). A variant form of this version of pastoral is that in which the contrast between city and country is made quite explicit. Stories of this type, discussed more fully in the entry on CITIES, have a long history, going back beyond After London. In this variant urban life is depicted as cruel, oppressive or sterile, while the country represents freedom; the genre-sf archetype is Arthur C. CLARKE's *The City and the Stars* (1956). It is a particularly popular theme in CHILDREN'S SF, as in John CHRISTOPHER's *Wild Jack* (1974) and Isobelle CARMODY's *Scatterlings* (1991). A second version of pastoral, again taking its cue from Jefferies and Morris, is exemplified by George R. STEWART's *Earth Abides* (1949) and Leigh BRACKETT's *The Long Tomorrow* (1955), both tales depicting the rise of agricultural and anti-technological societies after some sort of HOLOCAUST. Although this type of story is set in the future, the future becomes a clear analogue of the pre-industrial past. A particularly fine example is Fredric BROWN's "The Waveries" (1945), a tale in which the modern USA is forced back into a horse-and-buggy economy by invading aliens who prevent the use of electricity. Other examples of this kind of story are Pat FRANK's *Alas, Babylon* (1959) and Edgar PANGBORN's *DAVY* (1964). This sort of pastoral is not always simple; the pastoral post-holocaust world can itself be seen with a little irony, as in John CROWLEY's *ENGINE SUMMER* (1979), which is suffused by an elegiac melancholy. (Another ambiguous pastoral, not really sf, is Crowley's *Little, Big* [1981], where the ultimate pastoral values of Faerie are teasingly impossible to reach and, if reached, might mean death.) A third version of sf pastoral is the story set on another world, often Edenic or, at the least, satisfying. Such works usually depict benign alien ECOLOGIES which support nontechnological societies. Humanity is often seen as a destructive intruder upon these planets, although frequently the protagonist is "accepted" because he or she is capable of seeing the wisdom of the alien ways. The ideological thrust of such stories is anti-anthropomorphic and anti-xenophobic. Examples are Robert A. HEINLEIN's *Red Planet* (1949) - and, by implication, his *STRANGER IN A STRANGE LAND* (1961) - Bradbury's *The Martian Chronicles* (fixup 1950), Mark CLIFTON's *Eight Keys to Eden* (1960), H. Beam PIPER's *Little Fuzzy* (1962), Robert SILVERBERG's *Downward to the Earth* (1970) and *The Face of the Waters* (1991), Lloyd BIGGLE Jr's *Monument* (1974), Cherry WILDER's *Second Nature* (1982), Joan SLONCZEWSKI's *A Door into Ocean* (1986) and Judith MOFFETT's *Pennterra* (1987). Ursula K. LE GUIN's *The Word for World is Forest* (1976) is an outstanding treatment of this theme, the sourness of the narrative reflecting the realities of the Vietnam War. Brian M. STABLEFORD's *The Paradise Game* (1974) and *Critical Threshold* (1976) are clever variations; both are about planets which are apparently Edenic but which turn out to be rather more sinister. This is also the case in Ian WATSON's "The Moon and Michelangelo" (1987), in which a pastoral alien society has been wholly misunderstood but offers a form of ironic transcendence nevertheless. Richard MCKENNA's "Hunter, Come Home" (1963) and John VARLEY's "In the Hall of the Martian Kings" (1977) are both good treatments of the ultimate in benign ecologies: bio-systems that enfold and preserve the sympathetic human characters against all dangers. The fourth version of sf pastoral is perhaps the commonest: the escapist adventure story set in a simpler world, whether it be the future, the

past, another planet or in another continuum. If the portrayal of "Nature" is an essential element in all pastorals, then this is the version of them that prefers its Nature red in tooth and claw. Edgar Rice BURROUGHS's Tarzan of the Apes (1914) belongs here, as do his A Princess of Mars (1912; 1917), At the Earth's Core (1914; 1922) and all their various sequels. Tarzan is an archetypal 20th-century pastoral hero; his freedom of action, affinity with animals and innocent capacity for violence represent an amalgam of daydreams, Rousseau married to Darwin. One could go further and say that the whole subgenre of SWORD AND SORCERY is in a sense pastoral. As urbanization increases and free space diminishes on the Earth's surface, so the pastoral dream of simpler worlds in harmony with (or in enjoyable conflict with) Nature becomes ever more compelling. In the 1980s (there are earlier examples) pastoral themes were used by a number of WOMEN WRITERS OF SF to image the values of FEMINISM, as in Slonczewski's A Door into Ocean. The prime example here, though, is Le Guin's Always Coming Home (1985), an extraordinarily rich and dense exercise in speculative ANTHROPOLOGY, largely set in a post-holocaust pastoral culture whose values are the values of women. A cruder exercise in the same vein is Sally Miller GEARHART's The Wanderground: Stories of the Hill Women (coll of linked stories 1980), in which the women's society's embrace of Nature and the men's society's despisal of it are both so diagrammatic as to approach caricature. Sheri S. TEPPER achieves the balance in Raising the Stones (1990), with plenty of melodrama but also with plenty of real life, when she contrasts two agricultural societies on two planets, the one society patriarchal and brutal, the other deriving its strength from the realism (and, in the main, the kindness) of women, a confrontation between the bad pastoral and the good. Pastoral has always been an attractive theme, but its simpler pleasures can pall after a time. The most interesting uses of pastoral in sf, many of which are cited above, are those in which the pastoral values have their cost, or in which the urban/pastoral or civilized/primitive oppositions are seen with some sort of irony - that is, with the recognition that life is not always as neatly dualistic as we would sometimes wish. Some of the poignant qualities of Hilbert SCHENCK's At the Eye of the Ocean (1980) and A ROSE FOR ARMAGEDDON (1982), pastorals whose pastures are the field of ocean, derive from this recognition. Behind the greatest pastorals is often a sense of loss, for Nature herself often throws up images of decline and decay as well as of growth and harvest, and to invoke Nature is to invoke a world whose benisons are ephemeral (although they will always return). This may be why some of the finest pastorals are seasonal or cyclical; Brian W. ALDISS's Helliconia trilogy (1982-5) is many other things as well, but at root it is a pastoral whose burden is that Winter always comes. [DP/PN] See also: CHILDREN IN SF; ISLANDS; LIVING WORLDS.

PATAPHYSICS

IMAGINARY SCIENCE; Alfred JARRY.

PATCHETT, M(ARY OSBORNE) E(LWYN)

(1897-) Australian writer, long resident in the UK, whose competent CHILDREN'S SF novels are Kidnappers of Space (1953; vt Space Captives of

the Golden Men 1953 US), Adam Troy, Astroman (1954), which deals with the consequences for Earth of colliding with a giant asteroid, Lost on Venus (1954; vt Flight to the Misty Planet 1954 US), Send for Johnny Danger (1956), The Venus Project (1963), Ajax and the Haunted Mountain (1963) and Farm Beneath the Sea (1969). Her writing is alert, uncondescending, sensitive to animal life and information-full. [JC]

PATON, FRANK

[s] Raymond A. PALMER.

PATON, JOHN

[r] ROBERT HALE LIMITED.

PATRICK

Oscar ROSSITER.

PAUL, BARBARA (JEANNE)

(1931-) US writer who began publishing sf with "Answer 'Affirmative' or 'Negative' "for ASF in 1972, but who has become much better known in the 1980s for her detective novels, of which she has written at least 13; one of them, Liars and Tyrants and People who Turn Blue (1980), depends for its plot upon a psychic character. Earlier BP wrote several sf novels - An Exercise for Madmen (1978), Pillars of Salt (1979), Bibblings (1979) and Under the Canopy (1980) - which feature women protagonists, through whom an unprogrammatically FEMINISM is pursued as they find themselves coping with sf-adventure situations. Pillars of Salt, for instance, is a TIME-TRAVEL tale which confronts its 21st-century protagonist with the challenge of becoming Queen Elizabeth I of England. A later novel, The Three-Minute Universe * (1988), is a Star Trek tie (STAR TREK).BP should not be confused with the Barbara Paul who wrote The Curse of Halewood (1976; vt Devil's Fire, Love's Revenge 1976 US); this was the pseudonym of Barbara Kathleen Ovstedal (1925-). [JC]

PAUL, FRANK R(UDOLPH)

(1884-1963) Austrian-born US illustrator. FRP is the best candidate for "Father of Modern SF ILLUSTRATION", at least in the form it took in the PULP MAGAZINES. He received much of his education in Vienna, and studied also in Paris and New York. Trained as an architect, he was discovered by Hugo GERNSBACK in 1914 while working for a rural newspaper. Their names have been virtually inseparable ever since the days of The Electrical Experimenter (SCIENCE AND INVENTION). For #1 of AMAZING STORIES in Apr 1926 FRP not only painted the cover illustration but did all the interior black-and-white artwork as well, and continued to do both until Gernsback lost control of the magazine in 1929. When Gernsback started publishing again later that year, FRP was once more his primary illustrator, on SCIENCE WONDER STORIES, AIR WONDER STORIES and then WONDER STORIES; indeed, his association with Gernsback lasted until the short-lived Science Fiction Plus in 1953; he painted more than 150 covers for Gernsback in all. He worked elsewhere, too, with a further 28 front covers for various non-Gernsback SF MAGAZINES, including all 12 for Charles D. HORNIG's SCIENCE FICTION, and also a series of full colour back-cover paintings for the ZIFF-DAVIS Amazing Stories and Fantastic Adventures (1939-46). He also did all the illustration for Superworld Comics, a

Gernsback experiment of 1939. FRP's style shows his architectural training; his CITIES and TECHNOLOGY are lovingly detailed, his ALIENS well thought out and plausible, but his human figures stiff and simplistic. His colours were bright (almost garish, even for the period) and flat, and he liked pure reds and yellows, particularly as backgrounds (though this was partly due to Gernsback's meanness in using three- rather than four-colour printing). It seems odd to associate primitive art with sf, but FRP was in his technological way, just as much a primitive as Grandma Moses (1860-1961) and, like her, had an authentic naive poetry to his work. The brightness of colour throughout the PULP-MAGAZINE era of sf was a direct result of FRP's influence. FRP was guest of honour at the first World SF CONVENTION in 1939. [JG/PN] See also: SPACESHIPS.

PAYN, JAMES

(1830-1898) UK writer and editor whose 100+ books cover a wide variety of genres, his sf being comparatively inconspicuous. The Cruise of the Anti-Torpedo (1871 chap) is a typical future- WAR tale, one of many written in direct response to George T. CHESNEY's The Battle of Dorking (1871 chap); along with the comic "The Fatal Curiosity, or A Hundred Years Hence" (1877) it was included in High Spirits: Being Certain Stories Written in Them (coll 1879). The Eavesdropper: An Unparalleled Experiment (1888) is an INVISIBILITY tale whose protagonist, after taking the requisite potion, discovers the truth about his friends and servants and returns to the normal world sadder and wiser. [JC]

PAYNE, (PIERRE STEPHEN) ROBERT

(1911-1983) UK-born writer, much travelled, who spent his final years in the USA. Immensely prolific under a variety of names - including Richard Cargoe, John Anthony Devon, Howard Horne and Valentin Tikhonov - he wrote little fantasy or sf. The War in the Marshes (1938) as by Robert Young is an allegorical adventure rather in the mode of Rex WARNER. The Deluge (1954), which pretends to be based on notes left by Leonardo da Vinci (1452-1519), is sf. [JC]

PEABODY, JOEL R.

[r] JUPITER; SUN.

PEACE GAME, THE GLADIATORERNA.

PEAKE, MERVYN (LAURENCE)

(1911-1968) UK writer and artist, born in China, where he lived until he was 12 in a missionary compound, embedded into a land as strange as the country surrounding Gormenghast. He was initially better regarded as an artist than as a writer and, although he had written some poetry before the end of WWII, the publication of Titus Groan (1946) showed an unexpected side to his genius. Gormenghast (1950) is closely linked to that first volume, but it is clear that MP never intended to compose a trilogy per se; Titus Alone (cut 1959; reconstructed from manuscript by Langdon JONES 1970) - a text the author was unable to take beyond draft form due to the onset of the disease which killed him - ends at a point that MP did not intend as a definitive terminus. This sense of the shape of the sequence is confirmed by the 1991 critical edition of the 3 novels,

in which *Titus Alone* (as coll 1991 US) ed G. Peter Winnington includes the surviving pages of "Titus Awakes", the incomplete 4th volume of the sequence. But, although the existing trilogy-variously identified as the Gormenghast or Titus Groan sequence, and on one occasion assembled as *The Titus Books* (omni 1983; vt *The Gormenghast Trilogy* 1991 US) - was never in its author's mind a complete entity, it remains a series of texts whose power is remarkable, and the definition of which in generic terms is loaded with difficulties. Although couched in a language which might point towards FANTASY, it contains no fantasy elements; though redolent of a dying-Earth (FAR FUTURE) venue in its sense of belatedness and in the person of Titus's father - a fidgety, crotchety-ridden, ENTROPY-exuding manic-depressive aristocrat whose like has haunted the dying-Earth habitats of writers from M. John HARRISON to Richard GRANT - the first 2 volumes cannot be thought of as sf. The sequence is perhaps best thought of as being sui generis. Told in an elaborated, densely pictorial language, the story of Titus's birth and childhood in Gormenghast Castle is fundamentally the story of a coming-of-age: it is a genuine Bildungsroman, the story of the growth of a soul. At the same time, great stretches of the sequence ignore the priggish, bland young Titus entirely to concentrate upon the vividly realized cast of grotesques which surrounds him. In *Titus Groan* itself, one of the most intensely painterly books ever crafted, the infant protagonist is surrounded by a dwelling so intricate and dense (MP derived something of its scale from Sark, in the Channel Islands) that he never becomes more than an occasional raised figurine in the Gormenghast geography. Gormenghast is essentially devoted to the Realpolitik rise and inevitable fall of the modern-minded Steerpike. Only *Titus Alone* concentrates on the hero, now self-exiled from his childhood and his great demesne, as he hurtles through a futuristic, jaggedly conceived DYSTOPIAN world; at the end, about to return home, he turns his back on all his memories, and the sequence stops short, dangling. Throughout, the wealth of detail of the work makes Gormenghast one of the most richly realized ALTERNATE WORLDS in all the literature of fantasy or sf. MP contributed to *Sometime, Never* (anth 1956) a short story about Titus, *Boy in Darkness* (1956; 1976 chap). *Mr Pye* (1953) is an excellent whimsical fantasy, set largely on Sark, about a man whose goodness is so profound that he sprouts angel's wings, and about his desperate attempts to get rid of them. But the huge fragments of *Titus Groan* remain central. [JC] Other works: *Captain Slaughterboard Drops Anchor* (1939 chap), for children; *Letters from a Lost Uncle* (1948), for children; *Mervyn Peake: Writings and Drawings* (anth 1974) ed Maeve Gilmore, MP's widow, and Shelagh Johnson. About the author: *A World Away: A Memoir* (1970) by Maeve Gilmore; *Mervyn Peake* (1974) by John Batchelor; *Mervyn Peake* (1976) by John Watney; *Peake's Progress* (coll 1978; rev 1981) ed Maeve Gilmore. A journal, *Peake Studies*, ed G. Peter Winnington, was instituted in 1988 and continues.

PEARCE, BRENDA

(1935-) UK writer who began publishing sf with "Hot Spot" for ASF in 1974. *Kidnapped into Space* (1975) and *Worlds for the Grabbing* (1977) are both routine but enjoyable adventures in which her interest in technical and technological matters sometimes shows through to advantage.

PEARCE, PHILIPPA
[r] CHILDREN'S SF.

PEARSON, C.A., LTD
PEARSON'S MAGAZINE; PEARSON'S WEEKLY; SCOOPS.

PEARSON, MARTIN
Pseudonym used once by Donald A. WOLLHEIM alone, and also for "The Embassy" (1942 ASF), which he wrote with C.M. KORNBLUTH. [PN]

PEARSONS
PEARSON'S MAGAZINE; PEARSON'S WEEKLY; SCOOPS.

PEARSON'S MAGAZINE
UK magazine published by C.A. Pearson Ltd, ed Sir Arthur Pearson and others. Monthly, Jan 1896-Nov 1939. PM was a popular fact and fiction magazine which, following the trend set by its companion paper PEARSON'S WEEKLY, published sf by George GRIFFITH, H.G. WELLS, F.M. WHITE, C.J. Cutcliffe HYNE and others on a regular basis for several years, becoming the STRAND MAGAZINE's keenest competitor. It is best remembered for the serializations of Wells's THE WAR OF THE WORLDS (1897; 1898) and The Food of the Gods (1903-04; 1904) and of George Griffith's A Honeymoon in Space (1900 as "Stories of Other Worlds"; fixup 1901) and the sf illustrations of Fred T. JANE and Warwick Goble. Sf continued intermittently into the 1930s, sometimes originally, as with John Raphael's weird sf novel Up Above (1912; 1913), and sometimes with reprints, as with Douglas NEWTON's "Sunken Cities" (1923) from MUNSEY'S MAGAZINE. A US edition appeared Mar 1899-Apr 1925 with substantially different contents. In particular it serialized H.G. Wells's War in the Air (1908; 1908) a month or two after the original publication in Pall Mall Magazine. [JE] Further reading: Science Fiction by Gaslight: A History and Anthology of Science Fiction in the Popular Magazines 1891-1911 (1968) by Sam MOSKOWITZ.

PEARSON'S WEEKLY
UK 16pp tabloid magazine published by C.A. Pearson Ltd; ed Peter Keary and others. Weekly, 26 July 1890-1 Apr 1939. Retitled The New Pearson and Today from 17 Sep 1938, and The New Pearson's Weekly from 26 Nov 1938. Incorporated into Tit-Bits from 8 Apr 1939. PW popularized sf in Victorian magazines with the publication of George GRIFFITH's The Angel of the Revolution (1893; cut 1893), following it with other serials by Griffith, H. Rider HAGGARD, Louis TRACY and M.P. SHIEL, and also H.G. WELLS's The Invisible Man (1897; rev 1897). Many short sf stories appeared during this period, with further stories appearing sporadically into the 1930s. [JE]

PEASE, Lt JOHN
[s] Ralph Milne FARLEY.

PECK, RICHARD E(ARL)
(1936-) US writer and academic, professor of English at Temple University, Philadelphia, and an active critic of both literature in general and sf in particular. He began publishing sf with "In Alien Waters" for Venture in 1969. His sf novel, Final Solution (1973), is an amusing but grim tale in which a US academic is sent 50 years into the

future (through CRYONICS) to find universities and CITIES merged into a hideous conglomerate and sealed off, with Middle America living comfortably outside. REP is not to be confused with Richard (Wayne) Peck (1934-), author of the Blossom Culp series of children's fantasies.

[JC/PN]

PEDLER, KIT

Working name of UK writer and scientist Christopher Magnus Howard Pedler (1927-1981). He was a medical doctor, practising from 1953 for about three years, after which he began the research into the experimental pathology of eye disease that resulted in a second doctorate. In 1970 KP and Gerry DAVIS devised the BBC TV series DOOMWATCH, which ran to 37 episodes, many written by KP and Davis, and most dealing in sf terms with the prevention of manmade threats to this fragile planet. KP's first sf novel, *Mutant 59: The Plastic-Eater* (1971) with Davis, featured a Doomwatch-type scenario (indeed, the basic plot had been used as a Doomwatch episode) in which a laboratory-created plastic-eating virus escapes, creating havoc as plastics start dissolving. The working out of the notion is less than crisp. POLLUTION and ECOLOGY themes recurred in the next two collaborations, *Brainrack* (1974) and *The Dynostar Menace* (1975), neither being wholly satisfactory. KP's scientific ideas were stronger than the methods he used to dramatize them. He made many tv and radio appearances, usually dealing with ecological problems, and presented several tv films in this field. [JC/PN] See also: DISASTER; GENETIC ENGINEERING; PSEUDO-SCIENCE.

PEEL, JESSE

[s] Steve PERRY.

PEIRCE, HAYFORD

(1942-) US writer who began publishing sf with "Unlimited Warfare" for ASF in 1974 and who established a name for lightly written tales whose backgrounds were unusually well conceived. "Mail Supremacy" (1975) began a series - which has not reached book form - in which an Anglo-Chinese businessman brings Earth into the Galactic Postal Union. *Napoleon Disentimed* (1987; exp 1989 UK), his first novel, is an attractive example of what might be called the ALTERNATE-WORLDS hijinks tale: cast into a 1992 ruled by the French Empire, a confidence trickster attempts to upset the applecart. *The Thirteenth Majestral* (1989) - HP's titles are notably inventive - is a TIME-TRAVEL tale set in the far future and disregardful of the pretensions of established religion. *Phylum Monsters* (1989) deals amusedly with GENETIC ENGINEERING. [JC]

PEKIC, BORISLAV

[r] YUGOSLAVIA.

PELKIE, J.W.

[s] Raymond A. PALMER.

PELLUME, NOAM D.

[s] Orson Scott CARD.

PEMBERTON, [Sir] MAX

(1863-1950) UK writer, educated at Caius College, Cambridge, the first

editor of Chums 1892-3, editor of Cassell's Magazine 1896-1906, and later a director of Northcliffe Newspapers; he was knighted in 1928. Of more than 60 novels, his most famous is a Jules VERNE-style piece of CHILDREN'S SF: in the much-reprinted The Iron Pirate: A Plain Tale of Strange Happenings on the Sea (1893; vt The Shadow on the Sea 1907) and its sequel Captain Black (1911) an advanced submarine is used for piracy. Equally popular in its day was his novel of attempted future WAR, Pro Patria (1901), in which a Channel tunnel is excavated by the French for a planned INVASION of the UK. France is again the unsuccessful antagonist in The Giant's Gate (1901), this time using advanced submarines to bypass the UK's defence systems. Another theme prominent in MP's writing is of secret communities established either for scientific reasons, as in The Impregnable City (1895) and The House under the Sea (1902), or for UTOPIAN, as in White Walls (1910). [JE]Other works: Queen of the Jesters (1897); The Phantom Army (1898); Dr Xavier (1903); The Diamond Ship (1906).About the author: Sixty Years Ago and After (1936), an autobiography. See also: HISTORY OF SF; SPACESHIPS; UNDER THE SEA.

PEMBERTON, RENFREW

[s] F.M. BUSBY.

PENA, ALFREDO CARDONA

[r] LATIN AMERICA.

PENAL COLONY

NO ESCAPE.

PENALURICK, JAN

[s] Charles DE LINT.

PENDLETON, DON(ALD EUGENE)

(1927-) US writer who began with "Boomerang Peep Show" for Ace Magazine in 1958 and whose sf novels - some written as by Dan Britain, and most of them routine - began with Revolt! (1968 as by Britain; rev vt Civil War II: The Day it Finally Happened! 1971 as DP) and The Olympians (1969), both soft porn. Other singletons were Cataclysm: The Day the World Died (1969), The Guns of Terra 10 (1970), The Godmakers (1970 as by Britain; 1974 as DP) and 1989: Population Doomsday (1970; vt Population Doomsday 1974). Also of some sf interest are the Asthon Ford psychic spy tales: Ashes to Ashes (1986), Eye to Eye (1986), Mind to Mind (1987), Life to Life (1987), Heart to Heart (1987) and Time to Time (1988).DP wrote the first 27 vols of the Mack Bolan or Executioner series for Gold Eagle Books, which thereafter adopted "Don Pendleton" as a house name; among the authors who wrote under it was Peter LESLIE. Of sf interest in that series is Mack Bolan: Paradine's Gauntlet * (1983) by Michael Newton (1951-) as Pendleton. [JC]

PENDRAY, (GEORGE) EDWARD

(1901-1987) US writer and rocket scientist, a founding member of The American Interplanetary Society, and author of The Coming Age of Rocket Power (1945); he was also involved in the Time Capsule featured at the 1939 New York World's Fair. As Gawain Edwards he published some stories in sf magazines in the 1920s and 1930s and a future- WAR novel, The

Earth-Tube (1929), in which Asians take advantage of their possession of the invulnerable metal undulal to tunnel under South America, which they soon conquer. After a young hero has penetrated the secret, catastrophic explosions close the tunnel, inundating South America but sparing the USA, which has transformed itself into a socialist regime in response to the free gold which the Asians have been raining from the skies in an effort to destabilize the great capitalist democracy. [JC]

PENNINGTON, BRUCE

(1944-) UK illustrator. One of the young sf artists to gain prominence in the 1970s, BP entered the field in 1967 with a cover for Robert A. HEINLEIN's STRANGER IN A STRANGE LAND (1961), though at the time he worked primarily on covers for Westerns and historical novels. Since then he has done sf covers for New English Library, BALLANTINE BOOKS, Corgi and Sphere among others; he was also associated with SCIENCE FICTION MONTHLY. His painting is textured, with brush-strokes showing and strong colour, often featuring surreal landscapes; it is distinctive, vigorous work, but has been criticized for crudeness, maybe because of its contrast with the smooth, airbrushed superrealism that was coming into vogue in the UK at that time. Three books are Eschatus (1977), containing fantasy paintings illustrating the prophecies of Nostradamus, Ultraterranium: The Paintings of Bruce Pennington (1991) and The Bruce Pennington Portfolio (1991). [JG/PN] See also: BRITISH SCIENCE FICTION AWARD.

PENNY, DAVID G(EORGE)

[r] ROBERT HALE LIMITED. [JC]

PENRICE, ARTHUR

(? -?) Unidentified UK writer; according to Darko SUVIN almost certainly a pseudonym. AP's Skyward and Earthward (1875) features an interplanetary BALLOON aboard which the narrator visits the telepaths who live on Mars before returning to Earth to engage in further exploits. [JC]

PEOPLE THAT TIME FORGOT, THE

Film (1977). Amicus. Dir Kevin Connor, starring Patrick Wayne, Sarah Douglas, Dana Gillespie, Thorley Walters, Doug McClure. Screenplay Patrick TILLEY, Connor Carter, Maurice Carter, based on The Land that Time Forgot (fixup 1924) by Edgar Rice BURROUGHS. 90 mins. Colour. After the mild success of The LAND THAT TIME FORGOT (1975) and AT THE EARTH'S CORE (1976), made by the same company, a third Burroughs LOST-WORLD adaptation was inevitable, but Tilley's screenplay lacked the tautness and the mild ironies of that by James CAWTHORN and Michael MOORCOCK for The Land that Time Forgot. This time around the MONSTERS are perfunctory, and the added feminist subplot ends up as more notably male chauvinist than the Burroughs original. [PN]

PER ASPERA AD ASTRA

CHEREZ TERNII - K ZVYOZDAM.

PERCEPTION

The ways in which we become aware of and receive information about the outside world, mainly through the senses, are together called perception. Philosophers are deeply divided as to whether our perceptions of the

outside world correspond to an actual reality, or whether they are merely hypotheses, intellectual constructs, which may give us an unreliable or partial picture of external reality, or whether, indeed, outside reality is itself a mental construct. Perception is and always has been a principal theme of sf; it is the philosophical linchpin of many stories and has played a subsidiary role in hundreds more. (Many perception stories are discussed, from a different perspective, under PSYCHOLOGY.) For convenience, we can divide sf perception stories into 5 groups: stories about unusual modes of perception; stories about appearance and reality; stories about perception altered through drugs; stories about synaesthesia; stories about altered perception of time. The groups are not mutually exclusive, and several stories fall into more than one category. Unusual modes of perception appear early in sf. R.H. HORNE's *The Poor Artist* (1871), which is partly devoted to the way the world would appear as perceived through the senses of animals, was the first book ever to be described as "science fiction" (by his contemporary William WILSON). Edwin A. ABBOTT's *Flatland* (1884) is an exercise in how beings from a one- or two-dimensional universe would perceive reality, and about how we would perceive a fourth DIMENSION. J.H. ROSNY aine's "Un autre monde" (1895; trans as "Another World" 1962) tells of a MUTANT with a very fast metabolism who can see colours beyond violet (and new life forms) invisible to ordinary humans. David LINDSAY developed a similar idea in *A VOYAGE TO ARCTURUS* (1920), in which the protagonist, mysteriously transported to another planet, keeps forming and then losing new organs of perception whose functions run from seeing additional colours to sensing emotions to intensifying the will. Many sf writers have followed Rosny's lead in imagining modes of perception which allow the direct sensing of ALTERNATE WORLDS or other dimensions, often through ESP (see also PSI POWERS). (It is probably more accurate to suppose that the idea was popularized by an H.G. WELLS story of the same year, "The Story of Davidson's Eyes" [1895], though Rosny's story is superior as sf.) A.E. VAN VOGT's melodramatic *Siege of the Unseen* (1946 as "The Chronicler"; 1959; vt as title story in *The Three Eyes of Evil* coll 1973 UK) has a hero with a third eye which allows him to perceive and then travel into another dimension. In Richard MCKENNA's "The Secret Place" (1966) no special organ is required; a world of the distant geological past is perceived direct by the mind of the heroine. Nearly all McKenna's work involves the perception and/or construction of alternate realities. Another of his stories, "Hunter, Come Home" (1963) involves an alien lifeform that perceives by instant molecular analysis - which is not too far removed from our own sense of smell - an example of the strange modes of perception which appear in many of the stories described in the entry on ALIENS. James TIPTREE Jr often used perception themes, notably in the almost surreal "Painwise" (1971), in which a human explorer, surgically modified to feel no pain, takes up with a crew of hedonistic aliens fixated on taste sensations; pain is rediscovered. Several of Ian WATSON's novels have dealt more seriously with perception, as in *The Jonah Kit* (1975), where the perceptions of a whale are mediated through (and modified by) a human intelligence, and *The Martian Inca* (1977), where the perceptions of two South American Indians are changed by the accidental intake of a Martian organism, so that their model of the world becomes very much more complex.

Watson here, as elsewhere, touches on the relation between external reality and the way that reality is perceived and modified by mental programmes in the observer. These are questions that emerge regularly in the second category, stories of appearance and reality. Appearance and reality is one of the fundamental themes of sf. It has as much to do with METAPHYSICS and CONCEPTUAL BREAKTHROUGH as with perception per se (and so is discussed, from rather a different perspective, in those two entries also; relevant stories treated in more detail in the latter are "The Yellow Pill" [1958] by Rog PHILLIPS and Counterfeit World [1964 UK; vt Simulacron-3 US] by Daniel GALOUYE). The difficulty in perceiving the difference between the real and the illusory is a central theme in ABSURDIST SF and in FABULATION, as it is in surrealist literature generally; it comes up often in the stories of Josephine SAXTON and is the subject of Angela CARTER's *The Infernal Desire Machines of Doctor Hoffman* (1972; vt *The War of Dreams USA*) and Salman RUSHDIE's *Grimus* (1975). All three writers regularly use the quest format, life being seen as a journey through baffling illusions, the desired end being understanding. Ed BRYANT's *Cinnabar* (coll of linked stories 1976) is set around an enigmatic city where desires can be made flesh in various ways, and where reality itself is ever dissolving from one form to another; always changing and diverse, its one unchanging quality appears to be the evanescence of external reality. In James MORROW's *The Continent of Lies* (1984) "dreambeans" (which grow on genetically engineered trees) are used to dissolve, temporarily, the boundaries between appearance and reality; the hero is a dreambean reviewer. Richard COWPER has written that "one single theme which intrigues me above all others is the nature of human perception". Where van Vogt's ESP breakthroughs into other realms of perception tend to be brutally direct and melodramatic, Cowper has approached the subject more obliquely and sensitively; a kind of further reality, not explicable in everyday terms, makes itself known to several of his characters in dreams, intimations - glimpses caught, as it were, out of the corner of the eye. Cowper clearly believes that our everyday reality is only partial, and has expertly evoked a kind of quivering, tense broadening of perception, especially in *Breakthrough* (1967) and *The Twilight of Briareus* (1974). Sf stories commonly dwell on the strangeness of such experiences, and the protagonist's feeling that he might be going mad. Another example is Arthur SELTINGS's *The Uncensored Man* (1964), in which drugs are used to increase receptivity, a theme we will examine further below. Several sf stories have combined ideas from MATHEMATICS (strange topologies and geometries) with stories of perception. Arthur C. CLARKE's "The Wall of Darkness" (1949) describes how it feels to live in a world which is a three-dimensional analogue of a moebius strip; it is all inside and no outside. Ted Chiang's "Tower of Babylon" (1990), in which M. C. Escher (1902-1972) seems to be an unacknowledged collaborator, has its archaic people building a tower from Earth to Heaven, from which perceptions of Earth's nature evolve the higher one climbs until, in a perceptual loop, the top turns out to be the bottom. R.A. LAFFERTY's "Narrow Valley" (1966) is quite remarkably bigger on the inside than it is on the outside - like DR WHO's Tardis - and the perceptions of the observers are driven to the brink of insanity. John CROWLEY uses a similar but much more developed version of the theme in *Little, Big* (1981), more

fantasy than sf, in which the land of Faerie is described as having the characteristic that the further in you go the bigger it gets. Christopher PRIEST's *INVERTED WORLD* (1974) is a fascinating story of perceptual paradox in two respects; first, the progressive spatial distortion that takes place north and south of a shifting zone of stability on the hyperboloid planet; second, the revelation that the planet may in fact be our own Earth, viewed by a group whose perceptions have created a model of its shape which inverts the spheroid to a hyperboloid, and who cannot escape their own intellectual construct. Such stories approach genuine philosophical questions, though these are evoked in sf more commonly than they are actively explored; but even in such cases as Priest's novel (and most like it), where the scientific and philosophical argument is not really rigorous, there is a compulsive, teasing quality about the central image that amply compensates. Stanislaw LEM has several times written about the difficulties of transcending our perceptions. *SOLARIS* (1961; trans 1970) asks the pessimistic philosophical question: "Can we ever regard reality as knowable, given the limitations of the senses with which we apprehend it and the mental programmes which force us to relate our understanding of it always to human experience?" Barry N. MALZBERG is also intrigued with this area of speculation and pessimistic. *Beyond Apollo* (1972) has an astronaut returning from a disastrous expedition to Venus; he tells the story of what went wrong over and over again, always differently, but it seems that the real tragedy cannot be put in terms of his human perceptions, and all his analogies can give only a partial truth. This theme, of course, is as familiar outside sf as it is inside, though sf has remarkable resources of image and metaphor with which to explore it. The two sf writers who have played the most extravagant and kaleidoscopic variations on the theme of appearance and reality are J.G. BALLARD and Philip K. DICK. Almost all of Ballard's early work, and much of his later, deals with the various psychological processes to which we subject our perceptions of reality. One of his earliest stories, "Build-Up" (1957; vt "The Concentration City") is a kind of bravura replay of the Clarke story cited above. A young man living in claustrophobic circumstances catches a train to escape; after weeks of travelling in one direction he finds he is going east, not west; the space of the city is curved; there is no outside, just as with our own Universe. In "The Subliminal Man" (1963) the very quickness of our perception is exploited by advertisers. In "Manhole 69" (1957) an experiment in sleep deprivation gets out of control as the subjects' apprehension of reality shrinks their universe, smaller and smaller, effectively strangling them. The whole of Ballard's oeuvre is, in effect, an extended exploration of the inner, psychic universes made up by our selective perceptions of the external world - hence the term he popularized, used often of his subject matter, *INNER SPACE*. The paradox in Ballard is that, although our inner reality is made up of data from the outside (in such a confusing hotchpotch that the system can short out through overload), the inner pattern created by the data mediates the reception of further data in a kind of vicious circle, where no certainty is possible. Dick's emphasis is a little different; his realities often require inverted commas: they are "realities" consistently adulterated by false constructs, hallucinations, counterfeiting. Ultimately the conjuring is so baffling that the stability of any reality

comes to seem suspect; the external world suffers a kind of dissolution. In its place we are left with a view which is surprisingly far from pessimistic, as Dick implies it; it can be synopsisized (only crudely) as "the universe is what we perceive it to be". This is not necessarily an intolerable labyrinth, for Dick provides a dogged survival factor connected somehow to innate human decency, by which the construction of simple, often ethical reference points may prevent the self from spiralling inwards into subjective madness: handholds for the mind. The most important works by Dick relevant to perception are *Eye in the Sky* (1957), *Time Out of Joint* (1959), *THE MAN IN THE HIGH CASTLE* (1962), *THE THREE STIGMATA OF PALMER ELDRITCH* (1964), *Martian Time-Slip* (1964), *The Penultimate Truth* (1964), *Dr Bloodmoney, or How We Got Along After the Bomb*, (1965), *Now Wait for Last Year* (1966), *Ubik* (1969), *A Maze of Death* (1970), and *Flow My Tears, the Policeman Said* (1974). Together they constitute a kind of meta-novel, unique in literature. Ursula K. LE GUIN moved briefly into Dick's territory with *The Lathe of Heaven* (1971), in which a man has the power to alter reality through his dreams; here, although the reality-shifts are adroitly managed, the central theme bears more on the making of ethical decisions than it does on questions of appearance and reality per se. Several of the shifting realities cited in the Dick novels above were catalysed by drugs, his *A SCANNER DARKLY* (1977) being his most prolonged exploration of the theme. The late 1960s saw a general interest in the drug-culture. In the air was a romantic belief that drugs could open the gates of perception, and offer heightened and perhaps superior versions of reality. Very few sf writers subscribed to this myth, and indeed when drugs had figured in earlier sf - as in Aldous HUXLEY's *BRAVE NEW WORLD* (1932), where drugs are used to dim perception and bring about a false euphoria - they had usually been seen as detracting from rather than heightening the powers of perception, although Margaret ST CLAIR in *Sign of the Labrys* (1963) has the consciousness-heightening power of some fungi as potentially transcendental. Similarly, in Robert SILVERBERG's *Downward to the Earth* (1970) a drug is the agent for the transcendent rebirth undergone by the hero, who, like the despised natives on the planet he has revisited, is suffused by a new and joyful perception of life's harmony. Also relevant here is *The Butterfly Kid* (1967) by Chester ANDERSON, in which the drug-induced mood is more cheerful than transcendental. More common, even in the 1960s, at the height of the drug culture's years of euphoria, were sf stories about the distortions of perception brought about by drugs, especially those written by NEW-WAVE writers, who could not generally be described as conservative and who indeed lived in the main closer to the drug-culture than sf writers a little older. Drug-taking, for example, plays a role in Charles PLATT's *The City Dwellers* (1970; rev vt *Twilight of the City* 1977) and M. John HARRISON's *The Centauri Device* (1974). Perhaps the most vivid of all new-wave sf works dealing with perception shifts through drugs is Brian W. ALDISS's *Barefoot in the Head* (fixup 1969), in which hallucinogenic drugs have been used as a weapon in Europe, and the entire freaked-out population shifts into a euphoric anarchy that changes easily to violence. Norman SPINRAD has written some notable stories about drugs, including "No Direction Home" (1971), where a future USA is so used to orchestrating its mental states by drugs that perception

of naked reality without any chemical assistance is seen as the worst trip of all. Synaesthesia is an interesting perceptual state which occasionally appears in sf; it is a condition where the senses become confused and feed into one another, so that, perhaps, a vision can be smelt. Alfred BESTER exploited it in *Tiger! Tiger!* (1956 UK; rev vt *The Stars My Destination* 1957 US), where, in a compelling passage, the hero's apotheosis comes about (with many verbal fireworks) in a synaesthetic rite of passage which mixes agony and exultation. Spinrad envisaged synaesthesia as perhaps addictive in his strong story "All the Sounds of the Rainbow" (1973). Drugs can be seen as a quasi-natural or at least organic method of altering modes of perception. Sf, naturally, has many times invented technological means for doing the same thing. Bob SHAW has persistently written about alternate forms of vision: in the Slow Glass stories collected in *Other Days, Other Eyes* (fixup 1972) a glass is invented which slows the passage of light through it, so that the past can be directly perceived in the present; in *Night Walk* (1967) a blind man invents a device which allows him to see through the eyes of other humans and animals; and in *A Wreath of Stars* (1976) a device is invented to render visible a world (coexisting with our own) made entirely from antineutrinos. The Slow Glass stories bring us directly to the last category: unusual perceptions of time (see also TIME TRAVEL). Spinrad has written in this area: "The Weed of Time" (1970) is about a drug which makes its victim see all his lifetime as co-present; the effect is retroactive, so that the hero as a child knows he will be affected by the drug before he has been. Dick's *Martian Time-Slip* (1964) sees schizophrenia (PARANOIA) as bringing with it an altered time perception. In James BLISH's "Common Time" (1953) the altered time perception is brought about by pseudo-relativistic effects in a rapidly accelerating spaceship. Eric Frank RUSSELL's "The Waitabits" (1955) is an amusing story about a race of aliens who experience time much more slowly, appearing almost static to humans. Kurt VONNEGUT Jr's *Slaughterhouse-Five* (1969) has aliens who, like Spinrad's hero, see all time as existing simultaneously, which gives them a somewhat deterministic view of the Universe. In Jacques STERNBERG's "Ephemera", one of the stories in *Futurs sans avenir* (coll 1971; trans as *Future without Future* 1974), survivors of a spacewreck are doomed when they land on a planet in which, as in Russell's story, the inhabitants see time more slowly. Ballard, as might be expected, has several stories about the perception of time, the most powerful being "The Voices of Time" (1960), in which the Universe is running down and time perception on Earth is altered in various ways; one man is able to sense geological time directly, as if he smelt it. Time is a dominant theme of Aldiss's work; his stories about time perception include the strange "Man in His Time" (1965), about a man who perceives time a few minutes ahead of everyone else, and "The Night that All Time Broke Out" (1967), in which a time gas used for controlled mental time travel gushes out and affects everyone. His most notable story of this kind is *An Age* (1967; vt *Cryptozoic!* 1968 US), in which it finally turns out that time actually runs backwards, but our minds defensively perceive it as going forward. The same notion was used at around the same time, quite coincidentally, by Philip K. Dick in *Counter-Clock World* (1967), but the Aldiss book, though uneven, has the greater imaginative brio; more recent treatments of the ideas of *An Age* and "Man in his Time"

are, respectively, Martin AMIS's *Time's Arrow* (1991) and Eric BROWN's "The Time-Lapsed Man" (1988). The strangest of all such stories, however, must be David I. MASSON's "Traveller's Rest" (1965), about a war against an unknown enemy on the northern frontier of a country where the perception of time slows down as one travels south; a soldier on indefinite leave marries, raises a family, grows middle-aged, and is eventually called up again to find himself back in his bunker 22 minutes after he left. The story is told with extraordinary conviction. The time-perception stories cited above are generally of a very high standard, demonstrating clearly the way that sf thought-experiments can stimulate the mind and move the feelings in ways that are almost closed to traditional realist fiction. We take time for granted without fully understanding it, or how it works; these stories, with some intensity, stretch our perceptions of what meaning it might have for us. [PN]

PERCY, F. WALKER

(1916-1990) US doctor and writer who reflected in his novels - the best known of which remains his first, *The Moviegoer* (1961) - a searchingly liberal and Catholic reading of US life. *Love in the Ruins: The Adventures of a Bad Catholic at a Time Near the End of the World* (1971), the first vol of the Dr Thomas More series, is a long, complex NEAR-FUTURE story set in a 1980s USA suffering technological decay, and almost certainly in no real position to benefit from the invention by the narrator - distantly related to the author of *Utopia* - of an insanity-curing device. It is continued thematically in *The Thanatos Syndrome* (1987). The speculative pieces assembled in *Lost in the Cosmos: The Last Self-Help Book* (coll 1983) are mostly nonfiction, but the end of the book slips into uneasy sf. [JC]

PEREGOY, CALVIN

[s] Thomas Calvert MCCLARY.

PEREIRA, W(ILFRED) D(ENNIS)

(1921-) UK aviation engineer, advertising executive and writer whose first books, from *Time of Departure* (1956), concentrated on flying. He began writing sf with *Aftermath 15* (1973), which depicts a DYSTOPIAN post-HOLOCAUST USA whose inhabitants are rigidly stratified according to how much radiation they have absorbed. The projected sequels, *Aftermath 16* and *Aftermath 17*, have never appeared. WDP's other novels, all written for ROBERT HALE LIMITED in a professionally impersonal style, have been *The Charon Tapes* (1975), *Another Eden* (1986), *Contact* (1977), *The King of Hell* (1978) and *Celeste* (1979). [JC]

PEREIRA MENDES, H(ENRY)

(1852-1937) UK-born rabbi, academic and writer, from 1877 in the USA, where he wrote prolifically in many genres. *Looking Ahead: Twentieth Century Happenings* (1899) tells of various socialist upheavals which lead to several world wars and are defeated, in the end, only by an alliance of theocratical Christians and Jews, which also establishes in Palestine a Jewish homeland ruled by a descendant of the ancient Jewish monarchy. [JC]

PERFECT WOMAN, THE

Film (1949). *Two Cities/Eagle-Lion*. Dir Bernard Knowles, starring

Patricia Roc, Stanley Holloway, Nigel Patrick, Miles Malleon, Irene Handl, Pamela Devis, Constance Smith. Screenplay George Black, Knowles, based on the play *The Perfect Woman* (produced 1948; 1950) by Wallace Geoffrey and Basil Mitchell. 89 mins. B/w. An inventor creates a ROBOT in the image of his niece and hires a young man to take it out on a date as a final test of its believability. But the real girl takes the robot's place during testing, and a conventional but well played farce follows, notable for its underwear fetishism and a sauciness quite close to the rim of what the period regarded as decent. The ending is mildly apocalyptic when the malfunctioning robot marches stiff-legged, spouting sparks and smoke, through a crowded hotel before exploding. [JB/PN] See also: CINEMA.

PERILS FROM THE PLANET MONGO
FLASH GORDON.

PERKINS, GEOFFREY
[r] Douglas ADAMS.

PERKINS, MICHAEL
[r] ESSEX HOUSE.

PERRY, ROGER
[r] ROBERT HALE LIMITED.

PERRY, STEVE
(1947-) US writer who began publishing sf with "With Clean Hands" as by Jesse Peel for Gal in 1977, and whose first novel, *The Tularemia Gambit* (1981), combines sf with elements of the hardboiled detective genre. After two ties for the Time Machine sequence produced by the Byron PREISS packaging enterprise - *Sword of the Samurai* * (1984) with Michael REAVES and *Civil War Secret Agent* * (1984) - and an effective sf adventure, *Hellstar* (1984) with Reaves, SP finally came into his own with the Matador sequence: *The Man who Never Missed* (1985), *Matadora* (1986) and *The Machiavelli Interface* (1986), along with a prequel, *The 97th Step* (1989); plus *The Omega Cage* (1988) with Reaves, *Black Steel* (1992) and *Brother Death* (1992), all set in the Matador universe. Khadaji, the sequence's hero, rebels against a violent military dictatorship using his skill at martial arts to mock the enemy into impotence; in his raffish insouciance, he rather resembles Leslie CHARTERIS's Saint. The first volume takes its title from the fact that Khadaji has stolen a fixed number of non-lethal poison darts and proceeds to knock out precisely that number of government figures with them, never once missing, and generating a revolt through mirth; the book might be called an exercise in muscular pacifism. Subsequent volumes do not build on the success of the first, but neither do they significantly decline. Of SP's remaining singletons, *Dome* (1987) with Reaves makes efficient use of its post- HOLOCAUST submarine setting, as AIs come gradually to dominate the new world. [JC] Other Works: Several Conan SWORD-AND-SORCERY fantasies, including *Conan the Fearless* * (1986), *Conan the Defiant* * (1987), *Conan the Indomitable* * (1989), *Conan the Free Lance* * (1990) and *Conan the Formidable* * (1990); *The Albino Knife* (1991); *The Hero Curse* (1991 chap); several Aliens ties: *Earth Hive* * (1992), *Nightmare Asylum* *(1993), *The Female War* * (1993), plus one volume also tied to the Predator film sequence, *Aliens vs Predator: Prey* *(1994) with

Stephani Perry; Spindoc (1994); Stellar Ranger (1994), a space opera in Western style; The Mask * (1994), novelizing the film..

PERRY, WALTER COPLAND

(1814-1911) UK writer, lawyer and archaeologist in whose sf novel, *The Revolt of the Horses* (1898), the Houyhnhnms (from Jonathan SWIFT's *Gulliver's Travels* [1726]) arrive in the England of 1950. Finding humans as terrible as ever - a future WAR features in the tale - they decide to destroy the race. [JC]

PERRY RHODAN

German sf series, weekly, published by Verlagsunion Pabel Moewig (formerly Moewig-Verlag). Created by Walter Ernsting (who writes for the series as Clark DARLTON) and Karl-Herbert SCHEER, PR began in 1961 and is still current: to the end of 1991 about 1600 booklets describing Perry Rhodan's adventures and mankind's destiny had been published, a record quite without precedent in sf. The weekly booklet series is accompanied by a monthly paperback series, which fills some of the narrative gaps. Often thought of as aimed at the teenage market, PR is actually read, surveys show, by readers of all ages, both men and women. Though the stories have been dismissed as potboilers, the fans of this German future HISTORY (of whom thousands attend PR CONVENTIONS) argue that the density and complexity of the world built up over so many volumes has led to a sophistication unusual in SPACE OPERA. Conversely, the series's many critics, especially in Germany, have attacked it not only on literary grounds but also for being what Franz ROTTENSTEINER calls "notoriously fascist". This judgement of PR's reactionary nature has been supported and argued at length by Michael Pehlke and Norbert Lingfeld in *Roboter und Gartenlaube: Ideologie und Unterhaltung in der Science-Fiction-Literatur* ["The Robot and the Summerhouse: Ideology and Entertainment in SF"] (1970) and by Manfred Nagl in "Unser Mann im All" ["Our Man in Everywhere"] (1969 *Zeitnahe Schularbeit* #4/5). During the first years of its existence PR was indeed dominated by military conflicts, but the concept changed so that now PR concentrates on solving mysteries of galactic or even cosmic scale - with lots of action. The success of the series has been enormous, and not just in GERMANY. Translations have appeared (and sometimes still do) in many European countries, including the UK (since 1974), France (1966), Belgium (1966), Netherlands (1971), Finland (1975) and Italy (1976); also in Japan (since 1971), Brazil (since 1975) and notably in the USA, where it was published by ACE BOOKS. Ed Forrest J. ACKERMAN, the US series-monthly for much of the time - appeared for 118 numbers (1969-77) in paperback-book format, containing a letter column, articles, new stories and reprints of sf classics in addition to the leading PR novella or (in later volumes) 2 novellas; a few further PR titles were published by Ace in their Atlans series. When all the translations are included, PR has had a readership higher than anything else in sf. Perry himself is an Earthman propelled into the politics of the Galaxy (GALACTIC EMPIRES). He builds his small group, the New Power, into a Solar Empire; after renouncing all claims to leadership, the Solar Empire becomes one of the equal members of the Galacticum. It has been said that there is no sf idea which will not, sooner or later, be used in the series. The authors

include, in addition to Ernsting (Scheer died 1991): Kurt Brand, Arndt Ellmer, H.G. Ewers, Robert Feldhoff, H.G. Francis, Peter Griese, Horst Hoffmann, Hans Kneifel, Kurt Mahr, Marianne Sydow, Ernst Vlcek, William Voltz (died 1984) and Thomas Ziegler. Voltz was the long-time coordinator and chief author, having early superseded Scheer in this function. Each episode is written by one of the team from a treatment done by the "factory", currently Vlcek and Mahr, according to the further development of the series as discussed in an annual authors' meeting. PR has appeared in comic books, and there was also a PR magazine 1977-81. [HU/PN]Further reading: Analyse einer Science-Fiction-Romanheftserie (1979) by Claus Hallman; "Perry Rhodan", by Mike ASHLEY in Science Fiction, Fantasy, and Weird Fiction Magazines (1985) ed Ashley and Marshall B. TYMN; partial indexes of the Perry Rhodan novels were published by NESFA (1973 and 1975); a full list of English-language titles can be found in Science Fiction and Fantasy Series and Sequels: A Bibliography (1986) by Tim Cottrill, Martin H. GREENBERG and Charles G. WAUGH.

PERTWEE, ROLAND

(1885-1963) UK painter, actor, playwright and author whose MW.XX.3. (1929; vt Hell's Loose 1929 US; vt The Million Pound Cypher 1931 UK) is an early example of the tale of technological PARANOIA. A dead scientist is discovered along with the eponymous formula for a cheap fuel which will if released supplant petroleum. The UK Government allows limited use of the fuel, but only until a working-class strike fomented by communists is defeated; thereafter the petroleum corporations are allowed to re-establish their dominance. [JC]

PERU

LATIN AMERICA.

PERUTZ, LEO

(1882-1957) Austrian novelist and playwright who moved to Israel in 1938 after the Anschluss. Most of his novels are baroque phantasmagorias, like Zwischen Neun und Neun (1918; trans Lily Lore as From Nine to Nine 1926 US), an elaborately grotesque afterlife fantasy, Der Marques de Bolibar (1920; trans Graham Rawson as The Marquis de Bolibar 1926 UK), in which the Wandering Jew and the spirit of the eponymous marquis defeat a German regiment fighting for Napoleon, and Die Geburt des Antichrist ["The Birth of the Antichrist"] (1921). Of more direct sf interest are Der Meister des jungsten Tages (1923; trans Hedwig Singer as The Master of the Day of Judgment 1929 UK), in which it is suggested that an ancient hallucinogen, when breathed by men of ambition, will so terrifyingly expose their true nature that they will commit suicide, and Sanct Petri-Schnee (1933; trans E.B.G. Stamper and F.M. Hodson as The Virgin's Brand 1934 UK; trans Eric Mosbacher as Saint Peter's Snow 1990 UK), which similarly depends upon a sense that human civilization is a fragile contrivance. The eponymous wheat fungus at the centre of this tale has been, from time immemorial, responsible for spreading a virus which induces faith in humans. In 1932, after long dormancy, the virus has been deliberately reinjected into European wheat strains in order to revitalize Christianity, but the deity invoked turns out to be not God but Moloch. So forthright a fable for the times could not go unchallenged, and the Nazis banned the book as soon as

they came to power. [JC]See also: AUSTRIA; GODS AND DEMONS.

PESEK, LUDEK

(1919-) Czech writer and artist. LP's first novels (about social inequalities; not sf) were published in Czechoslovakia in the late 1940s, but for decades he has lived abroad, his books being first published in German translation; they have been widely translated into other languages. His astronomical paintings are well known, and have been featured in National Geographic; he has illustrated some of his own books. The first of several sf juveniles is Die Mondexpedition (1966 Germany; trans as Log of a Moon Expedition 1969). His best is Die Erde ist nah (1970 Germany; trans Anthea Bell as The Earth is Near 1973). It deals, with unusual sophistication for CHILDREN'S SF, with the psychological stresses experienced by the first expedition to MARS, and won the 1971 Jugendbuchpreis (Children's Book Prize) in Germany. Another sf book is Falle fur Perseus (1976 Germany; trans Anthea Bell as Trap for Perseus 1980), set in a 23rd-century totalitarian DYSTOPIA. [JO/PN]Other works: Preis der Beute ["Price of Plunder"] (1973 Germany); Eine Insel fur Zwei (1974 Germany; trans as An Island for Two 1975).See also: CZECH AND SLOVAK SF; SOCIOLOGY; SPACE FLIGHT.

PESSIMISM

ENTROPY; OPTIMISM AND PESSIMISM.

PETAJA, EMIL (THEODORE)

(1915-) US writer of Finnish descent, most of whose earlier fiction was fantasy rather than sf. He began publishing in 1935 with "The Two Doors" for the semiprozine UNUSUAL STORIES; his first professional sale was "Time Will Tell" for AMZ in 1942. Some of his early work can be found in Stardrift, and Other Fantastic Flotsam (coll 1971). Occasionally he wrote as E. Theodore Pine (once with Henry L. HASSE), though only in magazines. A friend of Hannes BOK, EP founded the Bokanalia Foundation in 1967, after Bok's death, publishing a commemorative volume, And Flights of Angels: The Life and Legend of Hannes Bok (1968) and editing The Hannes Bok Memorial Showcase of Fantasy Art (1974). EP's first novel was Alpha Yes, Terra No! (1965 dos); he published a further 12 books over the next half decade. The best known make up a series based on the Finnish verse epic Kalevala. In each of the novels of the Kalevala sequence - Saga of Lost Earths (1966) and The Star Mill (1966), both assembled under their joint titles (omni 1979), and The Stolen Sun (1967 dos) and Tramontane (1967 dos), both likewise assembled under their joint titles (omni 1979) - a Terran descendant of one of the four main heroes of the Kalevala is reborn into his avatar's role to order to re-enact his adventures on Otava, the planet of origin of this pantheon. A fifth book of the sequence remains unpublished. A novel unconnected with the series but still related to the Kalevala is The Time Twister (1968). The Green Planet series - Lord of the Green Planet (1967 dos) and Doom of the Green Planet (1968 dos) - recounts similar adventures befalling its Irish protagonist, who finds himself role-playing fake Celtic deities for the benefit of a madman armed with sf instruments of coercion. Most of EP's sf trades unpretentiously on the emotions aroused by mythical analogues like those in his Kalevala books; the adventure plots through which he evokes these resonances are by no

means poorly conceived, and he remains entirely readable. [JC]Other works: The Caves of Mars (1965 dos); The Prism (1965 Worlds of Tomorrow; exp 1968 dos); The Nets of Space (1969); The Path Beyond the Stars (1969); Seed of the Dreamers (1970 dos); As Dream and Shadow (coll 1972), poetry. See also: FINLAND; MYTHOLOGY.

PETERKIEWICZ, JERZY

(1916-) Polish writer-his first novel in English was published as by Jerzy Pietrkiewicz - active as a poet in his native land before WWII. He lived in the UK for many years, wrote in English, and was married to Christine BROOKE-ROSE 1968-75. The Quick and the Dead (1961) is an afterlife fantasy. Inner Circle (1966), which is sf, remarkably conflates three strands of story: one set in the mythical past, one on the Circle Line of London's underground railway, and one in a horrific FAR FUTURE where congestion (under an artificial dome) is so great there is no room to lie down. Each story reflects the others, setting up a complex commentary on the human condition. [JC]

PETERS, DAVID

Peter DAVID.

PETERS, LAWRENCE

[s] L.P. DAVIES.

PETERS, LUDOVIC

Pseudonym of UK writer Peter Brent (1931-1984), one of whose political thrillers, Riot '71 (1967), posits a NEAR-FUTURE racist crisis in an economically battered UK. [JC]

PETRESCU, CEZAR

[r] ROMANIA.

PETTY, JOHN

(1919-) UK writer, variously employed until he began publishing in 1957. The Last Refuge (1966) is a post- HOLOCAUST novel set in an oppressive, grey England that provides no refuge for the protagonist-writer. [JC]

PEYTON, AUDREY

[r] ROBERT HALE LIMITED.

PFEIL, DONALD J.

(? -) US writer whose Voyage to a Forgotten Sun (1975), Through the Reality Warp (1976) and Look Back to Earth (1977) were written in a deliberately (and enjoyably) outmoded SPACE-OPERA idiom. Under the house name William ARROW he wrote Return to the Planet of the Apes 2: Escape from Terror Lagoon * (1976). He was also editor of VERTEX. [JC]

PFEIL, FRED

Working name of US writer and academic John Frederick Pfeil (1949-), whose sf novel, Goodman 2020 (1986), portrays in a superbly suffocating present tense the corporate USA of AD2020, where all power has fallen into the hands of priest-like businessmen. The most powerful of these hires the "professional friend" Goodman to give him moments of human society, but Goodman eventually kills him, escapes into the barrios (and the narrative

dynamism of the more normal past tense) and settles down to prepare for a wholesome change. The politics of the book may seem naive, but the execution is compelling. Some of the essays assembled in *Another Tale to Tell: Politics and Narration in Postmodern Culture* (coll 1990) offer a formal context for FP's sf work. [JC]

PHANTASM

Film (1978). *New Breed*. Dir/prod/written/photographed Don Coscarelli, starring Michael Baldwin, Bill Thornbury, Reggie Bannister, Angus Scrimm. 90 mins, cut to 89 mins. Colour. At the independent, low-budget, exploitation end of the movie market, small miracles sometimes occur that could not take place inside a major studio. P is one such, a spirited blend of horror, surrealism and sf, in which the presumably alien and possibly supernatural Tall Man (Scrimm) steals bodies to be resuscitated and turned into malicious, deformed midgets with yellow blood, and then passed through a dimensional gate to be used as slave labour on a red desert planet. The teenager who opposes him, Mike (Baldwin), is troubled by a flying silver sphere that kills people by spiking their brains, by the Tall Man's severed finger that becomes a nasty insect, and most of all by the Tall Man's ability to confuse appearance and reality, to be there and not there, anticipating Wes Craven's *Freddy in Nightmare on Elm Street* (1984). P has the arbitrary, confused logic of a dream. A decade later *Phantasm II* (1988), also written/dir Coscarelli, was a mostly failed attempt to capitalize on the earlier cult success; it is less a sequel than a remake with a bigger budget. The special effects are more sophisticated and disgusting, but the randomness is more of a mess than a dream; the acting is stilted; ideas that were wholly original in 1978 had become clichés by 1988, and there were no new ideas to replace them; the sf content is negligible. [PN]

PHANTASM II

PHANTASM.

PHASE IV

Film (1973). *Alced/Paramount/PBR Productions*. Dir Saul Bass, starring Nigel Davenport, Lynne Frederick, Michael Murphy. Screenplay Mayo Simon. 91 mins, cut to 84 mins. Colour. A battle of wits takes place between, on the one hand, a fanatical SCIENTIST and two others living in a desert-based experimental dome and, on the other, an ant species which has acquired intelligence. The script substitutes mysticism for science and tries too hard to emulate *2001: A SPACE ODYSSEY* (1968) - as in its ending, where the two surviving human protagonists undergo a transcendental transformation. Originally there was also in the finale a 2001-like montage of surrealistic images showing a fantastic evolutionary upheaval, but this was cut by the studio after the initial release. Phase IV was Bass's directorial debut; he had previously been known as the designer of such striking movie title sequences as those for *Psycho* (1960) and *Walk on the Wild Side* (1962). While he is a master of his craft visually, his handling of actors is unsatisfactory and he seems to have little feeling for sf. This conceptually silly melodrama is an interesting failure, its attraction lying in the superb insect photography by Ken Middleham rather than in any sf content. The novelization is *Phase IV* * (1973) by Barry N.

MALZBERG. [JB/PN]See also: MONSTER MOVIES.

PHELPS, GILBERT (HENRY Jr)

(1915-1993) UK writer who spent much of his career in the BBC as a radio producer. His first story, "I Have Lived a Hundred Years" in *The Faber Book of West Country Stories* (anth 1951), prefigured the thematic material of his first sf novel, *The Centenarians* (1958), whose protagonists attempt - in the end unsuccessfully - to translate their eminence in the arts and sciences into lives safely prolonged. *The Winter People* (1963), a very late example of the LOST-WORLD tale, describes a tribe in the Andes which has survived for centuries through hibernation and other adaptations to extreme circumstances. [JC]See also: ANTHROPOLOGY.

PHILADELPHIA EXPERIMENT, THE

Film (1984). New World/Cinema Group/New Pictures/Douglas Curtis. Executive prod John CARPENTER. Dir Stewart Raffill, starring Michael Pare, Nancy Allen, Bobby Di Cicco, Eric Christmas. Screenplay William Gray, Michael Janover, based on a story by Wallace Bennett and Don Jakoby, based in turn on the purportedly nonfictional *The Philadelphia Experiment* (1979) by William I. Moore and Charles Berlitz. 101 mins. Colour. In 1943 a device to render warships invisible to radar is tested, but instead it throws an entire destroyer and crew temporarily forward in time, where two crew members fall through a vortex into the 1984 Nevada desert. One of them (whose electromagnetic instability has been creating havoc) is later drawn back to 1943. The second, joined by a paradigmatic 1980s woman (Allen), undergoes the culture shock obligatory in all visiting- ALIEN and TIME-TRAVEL films, refuses to believe that Reagan is president, looks up his buddy (now elderly), finds the time vortex is getting worse, and winds up - after a brief detour to 1943 during which he saves the world - back in 1984. TPE is silly as sf (having undergone many rewrites, including a script by Carpenter) but fun. While not as amusing as Raffill's earlier *The ICE PIRATES* (1984), it is better than his appallingly sentimental *Mac and Me* (1988), a film about cute aliens that appears to be an unacknowledged advertising campaign for Coca-Cola and McDonalds. [PN]See also: INVISIBILITY.

PHILIP K. DICK AWARD

Founded in 1983 by admirers of Philip K. DICK, who died in 1982. Because much of Dick's classic sf was published with no fanfare and initially without a hardcover edition, it seemed appropriate to give the award to a distinguished work of sf or fantasy of the previous year first published in paperback. The award was initially suggested by Thomas M. DISCH, who was for several years its administrator; he was succeeded by an administrative team of Algis BUDRYS and David G. HARTWELL. The winners are chosen by a jury (with variously 3, 4 and 5 members) of writers and critics, most of whom choose their own successors for the following year; usually one judge is the previous year's winner. The PKDA is announced at NorWesCon, a CONVENTION held in the state of Washington in March each year. In good years, when the committee has collected enough cash, the winner receives \$1000 and the second-place winner \$500. Plaques are provided by the Philip K. Dick estate. [PN]Winners: 1983: 1st, Rudy RUCKER, *SOFTWARE* 2nd, Ray Faraday NELSON, *The Prometheus Man* 1984: 1st, Tim POWERS,

THE ANUBIS GATES^{2nd}, R.A. MACAVOY, Tea With The Black Dragon¹⁹⁸⁵: 1st, William GIBSON, NEUROMANCER^{2nd}, Kim Stanley ROBINSON, THE WILD SHORE¹⁹⁸⁶: 1st, Tim Powers, Dinner at Deviant's Palace^{2nd}, Richard GRANT, Saraband of Lost Time¹⁹⁸⁷: 1st, James P. BLAYLOCK, HOMUNCULUS^{2nd}, Jack MCDEVITT, The Hercules Text¹⁹⁸⁸: 1st, Patricia Geary, Strange Toys^{2nd}, Mike MCQUAY, Memories¹⁹⁸⁹: 1st (equal), Paul J. MCAULEY, 400 Billion Stars^{1st} (equal), Rudy Rucker, Wetware¹⁹⁹⁰: 1st, Richard Paul RUSSO, Subterranean Gallery^{2nd}, Dave WOLVERTON, On My Way to Paradise¹⁹⁹¹: 1st, Pat MURPHY, Points of Departure (coll)^{2nd}, Raymond HARRIS, The Schizogenic Man¹⁹⁹²: 1st, Ian MCDONALD, King of Morning, Queen of Day^{2nd}, Emma BULL, Bone Dance¹⁹⁹³: 1st, Richard Grant, Through the Heart ^{2nd}, Elisabeth VONARBURG, In the Mother's Land¹⁹⁹⁴: 1st, John M. FORD, Growing Up Weightless and Jack WOMACK, Elvissey *

PHILLIFENT, JOHN T(HOMAS)

(1916-1976) UK writer of much sf and works in other genres; though he claimed to reserve his best material for publication under his own name, he was at least as well known to sf readers under his pseudonym John Rackham. He began writing sf with the Space Puppet series for Pearson's Tit-Bits SF Library as Rackham: Space Puppet (1954 chap), Jupiter Equilateral (1954 chap), The Master Weed (1954 chap) and Alien Virus (1955 chap). He produced also a fantasy series, the Chappie Jones stories, for Science Fantasy, beginning with "The Veil of Isis" (1961); these stories were assembled as The Touch of Evil (coll of linked stories 1963) as by Rackham. In the mid-1960s his career picked up some steam with a flow of Rackham SPACE OPERAS for ACE BOOKS, beginning with We, the Venusians (1965 dos US) and Danger from Vega (1966 dos US), and continuing with others of the same unambitiously readable nature. Under his own name, JTP produced in the 1970s some sf novels of real competence, including King of Argent (1973 US), an entertaining adventure set on an agreeably strange planet. Through his career, he remained a reliable producer of the second-rank fiction demanded by an entertainment genre hungry for copy. [JC]Other works: 3 MAN FROM U.N.C.L.E. ties: The Mad Scientist Affair * (1966 US), The Corfu Affair * (1967) and The Power Cube Affair * (1968); Genius Unlimited (1972 US); Hierarchies (1973 dos US); Life with Lancelot (coll of linked stories 1973).As John Rackham: Watch on Peter (1964), a juvenile; The Beasts of Kohl (1966 dos US); Time to Live (1966 dos US); The Double Invaders (1967 dos US); Alien Sea (1968 dos US); The Proxima Project (1968 dos US); Ipomoea (1969 dos US); Treasure of Tau Ceti (1969 dos US); The Anything Tree (1970 dos US); Flower of Doradil (1970 dos US); Beyond Capella (1971 dos US); Dark Planet (1971 dos US); Earthstrings (1972 dos US); Beanstalk (1973 US).

PHILLIPS, MARK

Pseudonym used on a series of novels written by Randall GARRETT and Laurence M. JANIFER for ASF: Brain Twister (1959 as "That Sweet Little Old Lady"; 1962), The Impossibles (1960 as "Out Like a Light"; 1963) and Supermind (1960-61 as "Occasion for Disaster"; 1963). [BS]

PHILLIPS, ROG

Working name of US writer Roger Phillips Graham (1909-1965), a prolific contributor to the sf magazines of the late 1940s and 1950s. His first

story was "Let Freedom Ring" in 1945 for AMAZING STORIES, which, along with its companion magazine FANTASTIC ADVENTURES, remained his most regular market. He wrote a series of stories featuring the character Lefty Baker: "Squeeze Play" (1947), "The Immortal Menace" (1949), "The Insane Robot" (1949) and "But Who Knows Huer or Huen?" (1969). His best known story is "The Yellow Pill" (1958), an ingenious exercise in paradoxes of PERCEPTION (see also CONCEPTUAL BREAKTHROUGH; PSYCHOLOGY). Some of his short work appeared as by Clinton Ames, Franklin Bahl, Craig Browning, Gregg Conrad, Inez McGowan, Melva Rogers, Chester Ruppert, William Carter Sawtelle and John Wiley; he also wrote under the house names Robert ARNETTE, Alexander BLADE, P.F. COSTELLO, A.R. STEBER, Gerald VANCE and Peter WORTH. Under the aegis of AMZ editor Raymond A. PALMER, RP conducted an influential FANZINE-review column, The Club House (Mar 1948-Mar 1953), later reviving it in other magazines ed Palmer: UNIVERSE SCIENCE FICTION and OTHER WORLDS. RP wrote 4 novels, none negligible, though less successful than some of his shorter work: Time Trap (1949), Worlds Within (1950), World of If (1951) and The Involuntary Immortals (1949 Fantastic Adventures; rev 1959), the last being an example of a kind of tale intrinsic to GENRE SF (a recent example being Nancy KRESS's Beggars in Spain [1991]): a group of young paranormals (SUPERMAN) must band together to protect themselves from the vengeance of ungifted normal humans. [MJE/JC]See also: FANTASTIC VOYAGES; POLITICS; ZIFF-DAVIS.

PHILLIPS, THOMAS
L.P. DAVIES.

PHILLPOTTS, EDEN
(1862-1960) UK writer known primarily for his work outside the sf field. He was extremely prolific, writing about 250 books and plays. His first sf novel was the lurid thriller Number 87 (1922) as by Harrington Hext. His most notable SCIENTIFIC ROMANCES belong to a later and very different phase of his work: the excellent Saurus (1938), in which a reptilian ALIEN becomes an objective observer commenting upon contemporary society and the human condition; The Fall of the House of Heron (1948), a study of an amoral atomic scientist; and Address Unknown (1949), which deliberately challenges the assumption of Saurus that an alien observer could pass meaningful judgment on human affairs. These novels carried forward philosophical themes from a remarkable series of didactic philosophical fables, most of which are based in Greek mythology: The Girl and the Faun (1916chap), Evander (1919), Pan and the Twins (1922), The Lavender Dragon (1923), The Treasures of Typhon (1924), Circe's Island (coll 1925; includes The Girl and the Faun), The Miniature (1926), Arachne (1927), The Apes (1929), Alcyone (1930) and The Owl of Athene (1936). The last-named deploys some sf motifs, notably an INVASION of the UK by giant crabs, and links the mythological fantasies to the scientific romances. EP's philosophical meditations are featured also in a curious early fantasy, My Laughing Philosopher (1896); but the determined rationalism and Epicurean humanism developed in his allegorical fantasies is better displayed in his collection of fiction and nonfiction, Thoughts in Prose and Verse (coll 1924), whose fantasy stories include a visionary encounter with an inhabitant of JUPITER. Also of marginal sf interest are one of EP's early

collaborations with Arnold Bennett (1867-1931), *The Statue* (1908), which involves innovative radio apparatus, and a treasure-island story *Tabletop* (1939), which features giant spiders. He wrote numerous mystery novels, some of which have very slight intrusions of ESP; the most interesting are *The Grey Room* (1921), which features a dramatic confrontation between scientific rationalism and religious mysticism in search of the solution to the mystery of a haunted room, and the rationalized-werewolf story *Lycanthrope* (1937). His other fantasies include *A Deal with the Devil* (1895), an ANSTEY-esque novel about a man who grows young, and several early stories collected in *Fancy Free* (coll 1901). There are occasional fantasies in his various other collections; the tales of "witchcraft" assembled in *The Hidden Hand* (coll of linked stories 1952) do not in fact invoke the supernatural. [BS]Other works: *The Transit of the Red Dragon* (coll 1903); *The Golden Fetich* (1903); *The Flint Heart* (1910); *Black, White and Brindled* (coll 1923); *Up Hill, Down Dale* (coll 1925); *The Voice from the Dark* (1925); *Peacock House and Other Mysteries* (coll 1926); *The Blue Comet: A Comedy in Three Acts* (1927); *The Torch and Other Tales* (coll 1929); *Golden Island* (1938). See also: ASTEROIDS; ASTRONOMY; LONGEVITY (IN WRITERS AND PUBLICATIONS); SATIRE; SOCIOLOGY.

PHILMUS, ROBERT M (ICHAEL)

(1943-) US sf critic, professor of English literature at Concordia University, Montreal. He became a co-editor of *SCIENCE-FICTION STUDIES* with the Nov 1978 issue and remained in that position until the last issue of 1991; he remains a contributing editor. His *Into the Unknown: The Evolution of Science Fiction from Francis Godwin to H.G. Wells* (1970; rev 1983) is scholarly and informative, and something of a pioneering study for its time. RMP also wrote the section on "Science Fiction: From its Beginning to 1870" for the 1st edn of *Anatomy of Wonder: Science Fiction* (1976; rev 1981; rev 1987) ed Neil BARRON. With David Y. Hughes he ed *H.G. Wells: Early Writings in Science and Science Fiction* (coll 1975), and with Patrick PARRINDER he ed *H.G. Wells's Literary Criticism* (coll 1980). A variorum edition of Wells's *The Island of Dr Moreau* (1896), appeared in 1993. [PN] See also: CANADA; CRITICAL AND HISTORICAL WORKS ABOUT SF.

PHILPOT, JOSEPH HENRY

[r] Philip L AFARGUE.

PHYSICS

In discussing the scientific content of sf it is customary to regard the sciences as ranging from "hard" to "soft", with physics lying at the hard end of the spectrum (HARD SF). A concern with the hard sciences is generally held to have characterized sf of the period 1940-60, or a type of sf whose locus classicus is to be found in that period, and so we may expect this type of sf, in its scientific aspect, to be dominated by physics. In fact a large part of the importance in sf of physics can be attributed to its association with TECHNOLOGY; among the pure sciences, ASTRONOMY and BIOLOGY have probably provided more motive force for hard sf than has physics. Nevertheless, physics is prominent in the ideological and cultural background to sf, and its influence can often be detected even when it makes no explicit contribution to a story. A familiarity with physical ideas and an ability to deploy the language of physics have been

used by many authors to establish a general scientific atmosphere, a good example being Isaac ASIMOV's "Three Laws of Robotics", which borrow the form of Newton's Three Laws of Motion so as to claim the same seminal impact. The two areas of physics which have been most popular with sf writers, GRAVITY (see also ANTIGRAVITY) and Relativity (FASTER THAN LIGHT), are covered in the relevant entries. Ideas from physics have been applied to technology constantly since Hugo GERNSBACK or even Jules VERNE, but in such writing the interest usually lies in the application. Some writers seem to feel that the motivation of fundamental research lies entirely in its applications. Tom GODWIN, for example, in "Mother of Invention" (1953), changes the proverb and proposes that necessity is the mother of DISCOVERY; he shows the crew of a crashed spaceship developing a new theory of gravitation which enables them to design an antigravity generator to lift their ship. The most extreme example of this attitude is embodied in Raymond F. JONES's "Noise Level" (1952), which argues that, if we only try hard enough, we can discover any laws of nature we should like to be true. Many imaginary inventions and strange events are based on points of physics, though sometimes the explanation of the modus operandi amounts to no more than a translation into technical terms of the everyday description of its effect - as in H.G. WELLS's explanation in *The Invisible Man* (1897) that the INVISIBILITY potion works by giving human flesh a refractive index of one. An effect at the opposite pole to this was envisaged by Bob SHAW in his invention of "slow glass" in "Light of Other Days" (1966), in which light travels so slowly that it takes several years to travel through the thickness of a window pane. (Realizing that it would not give quite the effect he wanted, Shaw was obliged to reject the description of slow glass as simply having a very high refractive index.) Part, if only a small part, of the effectiveness of the idea of slow glass lies in the way it provides an imaginative realization of a physical fact that in normal experience remains merely theoretical knowledge, namely the finiteness of the speed of light. This kind of imaginative exploration of physics can be seen in its purest form in James BLISH's "Nor Iron Bars" (1957), which is an attempt to provide a picture of the inside of an atom and the quantum behaviour exhibited by electrons, utilizing the device of having a spaceship shrink to subatomic size and move inside an atom as if it were a solar system. This was one of the very few sf stories before the mid-1970s to make any substantial use of quantum phenomena. Blish adopted a similar approach to a more familiar area of physics in his famous microscopic-world story "Surface Tension" (1952). Ideas from physics have been used in postulating new forms of life. The favourite basis for these is electromagnetic fields, either in isolation, as in Fredric BROWN's "The Waveries" (1945) and Bob Shaw's *The Palace of Eternity* (1969), or in conjunction with inorganic matter, as in Fred HOYLE's *The Black Cloud* (1957), the latter having something in common with the sentient suns in Olaf STAPLEDON's *STAR MAKER* (1937). Blish's *VOR* (1958) is about a creature whose energy source is one of the fusion cycles which Bethe proposed as taking place in stars (this creature communicates by modulating light waves rather than sound waves). In Fredric Brown's "Placet is a Crazy Place" (1946) there are birds, made of condensed matter, which fly through the rock of a planet as if it were air. Stanislaw LEM's *SOLARIS* (1961; trans 1970) postulates life formed from a

new type of matter composed entirely of neutrinos. Shaw's *A Wreath of Stars* (1976) postulates an antineutrino world whose form of matter can interpenetrate with that of our own. Neutrinos are particles which have no properties other than momentum and spin, and interact only very weakly with other particles, so that they are very difficult to stop. Their harmlessness is the point of Ralph S. Cooper's SATIRE "The Neutrino Bomb" (1961); their delicacy underlies the idea of "neutrino acupuncture" in "Six Matches" (1960) by Arkady and Boris STRUGATSKI. The last four examples make use of the branch of physics which, together with COSMOLOGY (including theories of BLACK HOLES), has undergone dramatic development in the last decade and therefore has the most obvious potential for sf; the physics of elementary particles. Subnuclear physics provides one of the ideas in Isaac Asimov's *THE GODS THEMSELVES* (1972), which postulates a parallel universe whose strong nuclear force is greater than in ours; pumping electrons between the two universes provides a source of energy in both. Some of the more striking ideas in the field of particle physics concern condensed matter, ANTIMATTER and neutrinos. Condensed matter is of two kinds: "electron-degenerate" matter, the material of white dwarf stars, in which the atoms are compressed as close as they can be while remaining atoms (a matchboxful would weigh several tons); and nuclear matter ("neutronium"), the material of NEUTRON STARS, which has the density of the atomic nucleus (a pinhead of it would weigh several thousand tons). Degenerate matter features in "Placet is a Crazy Place" and in Paul CAPON's juvenile novel *The Wonderbolt* (1955); and nuclear matter in Larry NIVEN's "There is a Tide" (1968). Antimatter is composed of particles which are the opposite in all respects to those which compose ordinary matter; when matter and antimatter meet, they mutually annihilate in a burst of radiation. A.E. VAN VOGT's "The Storm" (1943) is about a storm in space that takes place when an ordinary gas cloud meets a cloud of antimatter gas. Some more of the craziness of Placet in Brown's story comes from its orbiting two suns, one of matter and the other of antimatter. Larry Niven described an antimatter planet in "Flatlander" (1967). The correspondence between an electron and its antiparticle, the positron, was used by Blish in "Beep" (1954) as the basis of a method of instantaneous signalling, following ideas suggested by the original description by Paul Dirac (1902-1984) of the positron (DIRAC COMMUNICATOR). The formation of matter and antimatter universes in the first fraction of a second of creation, and some extremely hypothetical consequences for the nature of our reality, are treated in *The Jonah Kit* (1975) by Ian WATSON, who blends real and imaginary physics very adroitly throughout the book. Stories which turn on fairly elementary points of physics include: Arthur C. CLARKE's "A Slight Case of Sunstroke" (1958), in which the spectators at a football match hold their glossy programmes so as to form an enormous parabolic mirror focusing sunlight on the referee; Clarke's "Silence Please" (1954), in which the phenomenon of interference is used as the basis for a silence generator; Robert A. HEINLEIN's "Let There Be Light" (1940 as by Anson MacDonald), which suggests that the relationship between radio waves and light waves could be used to provide a cold light source; and Larry Niven's "A Kind of Murder" (1974), in which the fact that potential energy and heat are interchangeable forms of energy is exploited in an attempt at a perfect

murder. *The Dispossessed* (1974) by Ursula K. LE GUIN is unusual in sf in that much of the story is focused on an attempt to recreate the thought processes and psychology of a physicist whose theories regarding simultaneity and the nature of time would create a revolution in physics comparable to that initiated by Einstein's Relativity theories. Le Guin's physics is imaginary though plausible and presented with conviction (IMAGINARY SCIENCE); her psychology might very well be accurate. Finally, since measurement is of fundamental importance in physics, this is the place to mention those stories that make the point that all physical measurements are relative. It was put in its simplest form by Katherine MACLEAN in "Pictures Don't Lie" (1951); it was put further into the context of physics by Philip LATHAM in "The Xi Effect" (1950), observing that there would be no observable consequences if everything in the Universe were to contract at the same rate (although the contraction would become observable if the wavelength of visible light stayed constant). Referring to time rather than length, Blish described in "Common Time" (1953) an oscillating discrepancy between a man's internal (mental) time and external (physical) time. Since the appearance of black holes in sf in the mid-1970s there has been something of an upsurge of physics themes; most relate to COSMOLOGY, but a number of stories concern quantum physics, not necessarily cosmological. Often these stories take metaphors from physics rather than physics itself; one of the first such ideas drawn from physics and thereafter used as a metaphor is ENTROPY (which is from thermodynamics, not quantum physics), and many such stories are discussed under that head. An even older example is Heisenberg's Uncertainty Principle, formulated in 1927, which regularly appears both within and outside sf, usually not in its strict meaning but as a kind of "proof" from the world of physics that we can no longer be sure of anything, and that all the old certainties are gone. Schrodinger's Cat has popped up so often as almost to have become a CLICHE, as in "Schrodinger's Cat" (1974) by Ursula Le Guin, the Schrodinger's Cat trilogy (1979-81) by Robert Anton WILSON, *The Coming of the Quantum Cats* (1986) by Frederik POHL and "Schrodinger's Kitten" (1988) by George Alec EFFINGER. The attraction of this idea is that, according to the many-worlds interpretation of quantum physics formulated in the late 1960s by Hugh Everett, John Wheeler and Neill Graham—who took the fate of Schrodinger's possibly murdered cat (a half-dead, half-live wave function until somebody comes to look at it, at which point it collapses into one state or the other) as their starting point—the cat's fate gives an imaginative warrant for the existence of ALTERNATE WORLDS. Perhaps the wittiest use of ideas from quantum physics appears in Connie WILLIS's "At the Rialto" (1989), which describes the extraordinary quantum uncertainties that vex a congress of quantum physicists at a large hotel. It behoves us all to remember the remark of physicist Niels Bohr (1885-1962): "Those who are not shocked when they first come across quantum theory cannot possibly have understood it." Among those who use ideas from physics with considerable sophistication and know-how are a number of writers of SPACE OPERA and adventure on other planets, including old-stagers like Larry Niven and Arthur C. Clarke but also newer authors, in their turn expanding the genre, like Stephen BAXTER, Greg BEAR, Gregory BENFORD, David BRIN, Robert L. FORWARD, Paul J. MCAULEY, Charles SHEFFIELD and John E. STITH. More detailed accounts of

their work, and other relevant users of themes from physics, will be found by following up the various cross-references above as well as BIG DUMB OBJECTS, DYSON SPHERE, FORCE FIELD, ION DRIVE, MATHEMATICS, SPACE WARP and TACHYONS. [TSu/PN]

PIANETA DEGLI UOMINI SPENTI, IL

(vt Battle of the Worlds; vt Planet of the Lifeless Men) Film (1961).

Ultra Film/Sicilia Cinematografica/Topaz. Dir Anthony Dawson (pseudonym of Antonio Margheriti), starring Claude Rains, Bill Carter, Umberto Orsini, Maya Brent, Jacqueline Derval. Screenplay Vassily Petrov. 94 mins, cut to 84 mins. Colour. Earth is threatened by a large meteor, which launches flying saucers at Earth and proves to be sent from an alien planet (now dead) and run by a COMPUTER. Rains is the scientist who gains access to the computer. The fevered stylization of the dead-planet imagery (giant skeletons, etc.) rather than the bewildering though sometimes funny story is what everyone who has seen this somewhat rare but visually striking film remembers. Margheriti, a very uneven director, was one of the most prolific stalwarts of the Italian exploitation movie. [PN]

PIEGAI, DANIELA

[r] ITALY.

PIER, THE

La JETEE.

PIERCE, JOHN J.

(1941-) US editor and critic with a background in FANDOM, editor of a FANZINE, Renaissance, in the 1960s, and at that time author of polemical articles about the damage he saw being wrought on sf by writers of the NEW WAVE. JJP ed GALAXY SCIENCE FICTION Nov 1977-Mar/Apr 1979, years in which through no special fault of his the magazine was rapidly declining. Later he published an ambitious trilogy of critical books about sf, A Study in Imagination and Evolution, which together form a kind of HISTORY OF SF: Foundations of Science Fiction (1987), Great Themes of Science Fiction (1987), When Worlds Collide (1989) and Odd Genre: A Study in Imagination and Evolution (1994). These may deserve more discussion than they appear to have received. JJP's prose is accessible and the books are well organized, but their ideology is deeply conservative in the sense that non- GENRE SF is seen by JJP as effectively not sf at all. Within the books' strong bias toward HARD SF are some well informed discussions about the different ways in which sf has invented the future. Much of the analysis is thematic, some philosophical. [PN]

PIERCE, JOHN R(OBINSON)

(1910-) US scientist and writer. As scientist he was a director of Bell Telephone Laboratories 1952-71, working intimately at the forefront of communications research and development; after 1971 he was professor of engineering at the California Institute of Technology, from which he had received his PhD in 1936. As writer, JRP published 14 nonfiction works, both specialized and popular, from Theory and Design of Electron Beams (1949; rev 1954) to Almost All about Waves (1974). As an sf writer he has published material under his own name, as John Roberts and as J.J.

Coupling, beginning with "The Relics from the Earth" for Science Wonder Stories in 1930 under his own name. He remains best known as J.J. Coupling, contributing 1944-71 a number of nonfiction articles under that name to ASF. [JC]See also: IMMORTALITY.

PIERCY, MARGE

(1936-) US writer who has become recognized as a significant voice of US FEMINISM, initially with POETRY in volumes like Breaking Camp (coll 1968) but more importantly in novels like Going Down Fast (1969) and Vida (1980). Her first sf novel, Dance the Eagle to Sleep (1970), deals with an attempt by a group of student revolutionaries to set up a loving, communistic alternative society in the shadow of a near-totalitarian NEAR-FUTURE US state. In WOMAN ON THE EDGE OF TIME (1976) a Chicano woman, falsely accused of abusing her daughter and confined to a mental institution, makes contact with (or hallucinates the existence of) an emissary from a future society which has arisen in the aftermath of a "full feminist revolution". This vision of a USA in which women and men are truly equal and truly whole has inspired many; although, while the contemporary sequences are insightful and deeply moving, the descriptions of the future UTOPIA tend to lack credibility. It might be accurate to say that the culture so described is primarily a utopia of personal relationships rather than one of social and technological structures, and is perhaps best approached as a dream rather than as a realizable society. He, She and It (1991; vt Body of Glass 1992 UK) more sustainedly places its examination of human relationships in a CYBERPUNK-influenced vision of a USA dominated by Japanese corporations, but the analogy which structures the plot - an ANDROID powered by an AI is likened to the medieval GOLEM - seems sentimental, especially in the closing pages, where the android sacrifices itself so a Jewish commune may live. It nevertheless won the ARTHUR C. CLARKE AWARD for 1993. [NT/JC]See also: POETRY; SOCIOLOGY; WOMEN SF WRITERS.

PIKE, CHRISTOPHER

Pseudonym - apparently based on a Star Trek character - of US writer Kevin McFadden (? -), whose career has been mostly devoted to novels for older children; some of these, like The Tachyon Web (1986), are sf adventures combining orthodox plots (in this case a group of teenagers "borrows" a spaceship in which they penetrate the eponymous barrier which keeps humans from outer space) with a modicum of contemporary relevance (the children in this book are sexually involved with one another). Other juveniles - including Chain Letter (1986), Last Act (1988), Remember Me (1989), Scavenger Hunt (1989), See You Later (1990), Witch (1990) and Fall into Darkness (1990) - are horror or fantasy, the latter sometimes involving TIME TRAVEL. With Sati (1990), whose eponymous heroine may be God or may be a dippy channeller, CP moved into adult fiction. Whisper of Death (1991) is an sf tale for older children, and The Season of Passage (1992) is an adult horror novel. [JC]Other Works: Monster (1992); Road to Nowhere (1993); The Eternal Enemy (1993); The Immortal (1993); The Wicked Heart (1993); The Listeners (1994); The Midnight Club (1994); The Last Vampire (1994).

PILGRIM AWARD

Given at its annual summer conference since 1970 by the SCIENCE FICTION RESEARCH ASSOCIATION to a person who has made distinguished contributions to the study of sf, the Pilgrim is awarded normally for a body of work rather than for a specific book or essay, and has gone to both scholars and critics, academic and otherwise. Judging is by a committee of the SFRA, reconstituted each year. Recipients become Honorary SFRA Members; until 1990 they received certificates, since then commemorative plaques (also given retrospectively to previous winners). The award is named for Pilgrims through Space and Time (1947) by J.O. Bailey, who in 1970 was the PA's first recipient. [PN]Winners:1970: J.O. BAILEY1971: Marjorie Hope NICOLSON1972: Julius KAGARLITSKI1973: Jack WILLIAMSON1974: I.F. CLARKE1975: Damon KNIGHT1976: James E. GUNN1977: Thomas D. CLARESON1978: Brian W. PILLER, EMANUEL S.

(1907-1985) US author, with Leonard ENGEL (whom see for details), of *The World Aflame: The Russian-American War of 1950* (1947). [JC]

PINCHER, (HENRY) CHAPMAN

(1914-) Indian-born UK writer of some fiction and considerable journalism. In his first sf novel, *Not With A Bang* (1965), the effects of an anti-age drug are seen as catastrophic. *The Giantkiller* (1967) is borderline sf in its portrait of a rabid union leader attempting to take over the nation. [JC]Other works: *The Penthouse Conspirators* (1970) and *The Eye of the Tornado* (1976), both borderline.

PINCHIN, FRANK J(AMES)

(1925-1990) UK research chemist and author. His first 4 sf novels, all as by Peter Dagmar, were not exceptional: *Alien Skies* (1962), *Spykos 4: Strange Life-Forms on Unexplored Planets* (1962; vt *Spaceways* 1973 Australia), *Sands of Time* (1963) - a fairly complex TIME-TRAVEL tale - and *Once in Time* (1963; vt *Mind Probe* 1973 Australia). *Mars 314* (1970), under his own name, renders NEAR-FUTURE space flight with some verisimilitude. *Two Equals One* (1982), his last Peter Dagmar title, features an electronic spying device which can read computer memories. *Stargrail* (1989) and *Nexweb* (1990), both as FJP, attempt to marry sf and occultism. [JC]

PINE, E. THEODORE

[s] Henry L. HASSE; Emil PETAJA.

PINES, NED L.

(1905-1990) US magazine and book publisher who in 1931 founded a group of magazines with Thrilling in the title: *Thrilling Detective*, *Thrilling Love*, etc. These became part of the Pines Publications group (which NP served as president 1929-61), whose associated companies included *Standard Magazines*, *Beacon Magazines* and *Better Publications*. In 1936 NP bought Gernsback's *WONDER STORIES* and retitled it *THRILLING WONDER STORIES* to fit neatly among his other magazines. Among NP's senior staff members were Leo MARGULIES and Mort WEISINGER. NP was by no means an sf specialist - of the

44 or so magazines he owned by the end of the 1930s, the huge majority were not sf - but other SF MAGAZINES followed, among them STARTLING STORIES in 1939, CAPTAIN FUTURE in 1940, and the reprint magazine FANTASTIC STORY QUARTERLY in 1950. All of these PULP MAGAZINES had died (like most of their kind) by the mid-1950s, Startling Stories being the last to go (Fall 1955). In 1942 NP founded the paperback publishing house Popular Library (which did not publish much sf) and put Margulies in charge; the Popular Library logo became a pine tree in 1956, in honour of NP, who retired in 1971. [PN]

PINKWATER, DANIEL M(ANUS)

(1941-) US writer whose many novels for children have attracted large adult audiences for their surreal wit, their supple and astringent wisdom and (for sf readers in particular) the wry hilarity of their use of sf venues and themes. After several non-genre works as Manus Pinkwater (a form of his name which appears only in books of the 1970s), DMP began writing tales of genre interest with Wizard Crystal (1973) and Magic Camera (1974), attracting considerable attention with Lizard Music (1976), an sf fantasia in which a young boy begins seeing musical lizards everywhere, finds they are real and in secret occupancy of a nearby invisible island, and later discovers that they have allied themselves with the "right" sort of humans to oppose pod-people from space. Many of DMP's books are either explicitly constructed as series - like the Magic Moscow sequence and the Snarkout Boys sequence - or share venues and characters with one another. In the end, no DMP book stands alone: all occupy, in one way or another, a region whose children tend to be lonely but clear-sighted and whose adults are either blind (or astonishingly open) to the crowded marvellousness of the Universe. Some of the more outstanding singletons for older children are Wingman (1975) as Manus Pinkwater, Fat Men from Space (1976) as Daniel Manus Pinkwater, Alan Mendelsohn, the Boy from Mars (1979), Yobgorgle: Mysterious Monster of Lake Ontario (1979), Java Jack (1980) with Luqman Keele, The Worms of Kukumlima (1981) and Borgel (1990). The books for younger children, heavily illustrated and written in a bumptious though easy-to-follow style, are almost as intriguing. [JC]Other works (mostly for younger readers): The Moose sf trilogy featuring a time-travelling moose vampire and comprising Blue Moose 1975 chap) as Manus Pinkwater, The Return of the Moose (1979 chap) and The Moosepire (1986 chap); The Big Orange Splot (1977 chap); The Blue Thing (1977 chap); Pickle Creature (1979 chap); the Magic Moscow sequence, comprising The Magic Moscow (1980 chap), Attila the Pun (1981 chap) and Slaves of Spiegel (1982 chap); Tooth-Gnasher Superflash (1981 chap); the Snarkout Boys sequence, comprising The Snarkout Boys and the Avocado of Death (1982) and The Snarkout Boys and the Baconburg Horror (1984); Roger's Umbrella (1982 chap) as by Honest Dan'l Pinkwater; I Was a Second-Grade Werewolf (1983); Ducks! (1984 chap); Devil in the Drain (1984 chap); The Frankenbagen Monster (1986 chap); The Muffin Fiend (1986 chap); Guys from Space (1989 chap); Wempires (1991 chap). Nonfiction: Fish Whistle: Commentaries, Uncommentaries, and Vulgar Excesses (coll 1989); Chicago Days/Hoboken Nights (1991), a memoir.

PIONEER AWARD

AWARDS.

PIPER, H(ORACE) BEAM

(1904-1964) US writer and gun collector, employed as a detective on the Pennsylvania Railroad until made redundant in the mid-1950s; his first name is not known for sure, and may have been Henry. Though he wrote for other genres, he is best remembered for his sf, much of which appeared in ASF from 1947, when he began with "Time and Time Again". Though he shared John W. CAMPBELL Jr's political views, and his sense of the appropriate kind of story in which to propound them, it is probably wrong to think of HBP as a mouthpiece for the great editor: he was (in the end tragically) his own man. His first sf novels - Crisis in 2140 (1953 ASF as "Null ABC"; 1957) and A Planet for Texans (1958), both with John J. MCGUIRE - are straightforward adventures, one set in a USA that has revolted from literacy for fear of its consequences, the other on a planet set up like a Western. Much of HBP's work fits very loosely into what has been called the Terro-Human future- HISTORY sequence, though large gaps remained at his death. The Federation tales - ostensibly embedded within the larger series - can be read as self-contained, and themselves encompass the Fuzzy books. Federation stories include Four-Day Planet (1961), Junkyard Planet (1963; vt The Cosmic Computer 1964), Space Viking (1963) and 2 posthumous collections, Federation (coll 1981) and Empire (coll 1981); of these stories "Omnilingual" (1957 ASF) is perhaps the finest (LINGUISTICS). The Fuzzy series, in which HBP's enterprising clarity shows to best advantage, includes Little Fuzzy (1962) and The Other Human Race (1964; vt Fuzzy Sapiens 1976; the original, singularly stupid title was the choice of the book's first publisher), both assembled as The Fuzzy Papers (omni 1977), and the long-lost Fuzzies and Other People (1984). The small, joyful, sapient Fuzzies are natives of the planet Zarathustra (COLONIZATION OF OTHER WORLDS). The first two volumes - which feature some gripping courtroom-drama sequences - centre on the attempts of the mining corporation which runs Zarathustra first to prevent recognition of Fuzzy INTELLIGENCE (so as to retain mining rights) and then, when it has become inevitable, to exploit this recognition. The third volume resolves the conflict between the company and those humans who are fathering the Fuzzies, whose neotenus, childlike nature (Bjorn KURTEN) both demands the attention of adults and reveals HBP's skill at the juvenile. The series was continued in Fuzzy Bones * (1981) by William TUNING and Golden Dream: A Fuzzy Odyssey * (1984) by Ardath MAYHAR. A second distinct sequence, the Paratime Police/Lord Kalvan tales, most published originally in ASF, were assembled as Lord Kalvan of Otherwhen (fixup 1965; vt Gunpowder God 1978 UK) and Paratime (coll 1981). The series was continued in Great Kings' War * (1985) by Roland GREEN and John F. CARR, the latter also editing The Worlds of H. Beam Piper (coll 1983) and presenting his work in other contexts. As a series of ALTERNATE-WORLDS variations, the sequence showed HBP in perhaps excessively argumentative vein, the alternate-world structure allowing him great latitude to express his political feelings. Not in general an innovative writer, HBP was at his best when he applied an ASF-derived firmness of setting and plausibility of characterization to emotionally arousing adventure plots in which political agendas existed only as subtexts. In 1964, his career apparently

on the skids, and prevented by reticence and LIBERTARIAN principles from asking anyone to help him with temporary financial difficulties, he committed suicide. He died in his prime. [JC] Other works: Murder in the Gun Room (1953), HBP's first book, a detective novel; First Cycle (1982), an HBP outline expanded by Michael KURLAND; Uller Uprising (in The Petrified Planet [anth 1953] ed Theodore Pratt; 1983), part of the first SHARED-WORLD anthology in GENRE SF; Four-Day Planet ? (omni 1979), comprising two novels, the first under its original title and the second being A Planet for Texans under a vt.About the author: Henry Beam Piper (1985 chap) by Gordon BENSON Jr. See also: ALIENS; ANTI-INTELLECTUALISM IN SF; CRIME AND PUNISHMENT; NUCLEAR POWER; PASTORAL; SPACE OPERA.

PIRANHA

Film (1978). New World. Executive prods Roger CORMAN, Jeff Schechtman. Dir Joe DANTE, starring Bradford Dillman, Heather Menzies, Kevin McCarthy, Keenan Wynn, Dick Miller, Paul Bartel, Barbara Steele. Screenplay John SAYLES, based on a story by Sayles and Richard Robinson. 94 mins. Colour. The army has been creating cold-water-tolerant man-eating piranhas for use in Vietnam, and some escape into a Texas river. An attempt by the army to hush this up permits a piranha invasion of a holiday resort on a lake. Here one can see some of the notable talents of the 1980s (Dante, Sayles, even Bartel) honing their craft in a MONSTER MOVIE of considerable wit and pace, with a strong (and much-imitated) emphasis on social comedy; the subtext is that ghastly people create metaphorical monsters that will devour them. An unofficial sequel, Piranha II: Flying Killers (1981; vt Piranha II: The Spawning), was a Dutch film, nothing to do with New World. Set in the Caribbean and very inept, it features flying piranhas that look like wind-up toys and was a surprisingly poor directorial debut for the later-celebrated James CAMERON.

PIRANHA II

PIRANHA.

PIRATE WRITINGS

US SEMIPROZINE, #1 1992, current, irregular DIGEST until #5 in Fall 1994, announced as quarterly small- BEDSHEET for future issues, edited by Ed McFadden, pub PirateWritings Publishing. PW is a well produced SMALL PRESS fiction magazine, perhaps more traditional to date than its title (which refers to radical or cutting-edge fiction) suggests. Recent issues have included work by Paul Di Filippo, Charles DE LINT, Dan Hatch, Ian MacLeod and Roger ZELAZNY. [GF/PN]

PISERCHIA, DORIS (ELAINE)

(1928-) US writer, born and raised in West Virginia, in the US Navy 1950-54. She began publishing short fiction with "Rocket to Gehenna" for Fantastic in 1966. Her first novel, the remarkable and densely plotted VAN VOGT-style revenge drama Mister Justice (1973 dos), appeared after she had established some reputation in shorter forms, one of her stories being included in Best Science Fiction for 1972 (anth 1973) ed Frederik POHL. Star Rider (1974) recounts first-person adventures in a chokingly vivid

Universe, versions of which recur throughout her work: events are pellmell, and the protagonist's far-flung quest for Doubleluck, a planet of dreams, constantly becomes enmired in that environment. A Billion Days of Earth (1976) similarly loses energy towards its close, but depicts its FAR-FUTURE venue with precision and eloquence; its ratmen with mechanical claws for hands are a particularly resonant notion, and demonstrate DP's clear creative preference for ALIENS, who rarely fail to outshine her human performers. Earthchild (1977) is similarly set on a far-future Earth under a similar threat of termination. Later novels - like Doomsday (1981) and Earth in Twilight (1981) - likewise tend to subordinate human protagonists to her ornate and sometime animate mises en scene, so that she is at times both daring and a trifle coy in subject matter and style: not even the female protagonists of Spaceling (1978) or The Dimensioneers (1982), though enjoying DP's approval, genuinely manage to dominate their texts. Blood Country (1981) and I, Zombie (1982), both as by Curt Selby, the latter a genuine sf novel about the posthumous revivification - for purposes of forced labour - of suicides, are also of interest. In her self-consciousness, and in the sense she conveys that landscape drowns action (rather than vice versa), DP seemed for a period very much a member of the US NEW WAVE; but she has not published since 1983, and the course of her further development cannot properly be guessed. [JC]Other works: The Spinner (1980); The Fluger (1980); The Deadly Sky (1983). See also: CHILDREN IN SF; CRIME AND PUNISHMENT; LIVING WORLDS.

PLANETA BUR

(vt Planet of Storms; vt Storm Planet; vt Cosmonauts on Venus) Russian Film (1962). Leningrad Studio of Popular Science Films. Dir Pavel Klushantsev, starring Kyunna Ignatova, Gennadi Vernov, Vladimir Yemelyanov, Georgi Zhonov. Screenplay Alexander Kazantsev, Klushantsev. 85 mins, cut to 74 mins. Colour. Cosmonauts land on Venus, accompanied by a robot that plays dance music (thus proving that funny ROBOTS are not peculiar to US CINEMA). A well paced adventure story follows as they search for intelligent life. In an interestingly realized alien landscape they encounter dinosaurs, dangerous plants and a volcanic eruption, but the sole intelligent Venusian appears only at the end, watching unnoticed as the crew departs. By Western standards the film is a little slow and overtalkative (long conversations between the ground crew and the woman controlling the command ship), but it is always watchable. The best Russian sf film until the 1970s, it is, like other Russian sf films of the period (Niebo Zowiet [1959] and Meshte Nastreshu [1963]), stronger on production design than on plot. Much footage from the Venus sequences was used in a Roger CORMAN production, Voyage to the Prehistoric Planet (1965), which includes new US material written/dir John Sebastian (pseudonym of Curtis Harrington), starring Basil Rathbone and Faith Domergue, but is little more than a partial remake. PB footage was used again in Voyage to the Planet of Prehistoric Women (1966; vt Gill Woman), also a Corman production, along with new material dir Peter Bogdanovich (in his directorial debut), starring Mamie Van Doren and Mary Park. The new feature here was the inclusion of telepathic Venusian women who send the crash-landed astronauts home again. [JB] See also: RUSSIA.

PLANETARY ROMANCE

Any sf tale whose primary venue (excluding contemporary or NEAR-FUTURE versions of Earth) is a planet, and whose plot turns to a significant degree upon the nature of that venue, can be described as a planetary romance. For the term to apply properly, however, it is not enough that a tale simply be set on a world: James BLISH's *A Case of Conscience* (1958), for instance, has a planet as a primary venue yet cannot be called a planetary romance because the nature or description of this world has little bearing on the story being told. Nor can the term profitably be used for a tale set upon a planet whose mysteries are solvable in HARD-SF terms: Hal Clement's *MISSION OF GRAVITY* (1954) and Robert L. FORWARD's *Rocheworld* (1990), for instance, are typical hard-sf novels in that the worlds on which they are set amount to little more than the sum of the problems which they illustrate, and in that their protagonists successfully explain (or solve) those worlds. In the true planetary romance, the world itself encompasses - and generally survives - the tale which fitfully illuminates it. Though the term is recent, the form is coeval with SPACE OPERA. Most of Edgar Rice BURROUGHS's sf sequences - like the John Carter tales set on Barsoom - fit the description, and were soon being referred to as "interplanetary romances", a term Gary K. WOLFE defines in his useful *Critical Terms for Science Fiction and Fantasy* (1986) as "broadly, an adventure tale set on another, usually primitive, planet". Wolfe, properly restricting the use of the term to work done before WWII, considers other important contributors to the form to include Ralph Milne FARLEY, Homer Eon FLINT and Otis Adelbert KLINE. Unfortunately, however, few of the tales described as interplanetary romances show more than minimal interest in interplanetary travel, and the term is used only occasionally in this encyclopedia, generally within Wolfe's critical context. When we come to more sophisticated writers, for whom the SWORD-AND-SORCERY simplicities of Burroughs seemed inadequate to exploit the venue he had created, we must abandon the earlier formulation. The ornate and decadent tales of Clark Ashton SMITH - which were also instrumental in the creation of the subgenre SCIENCE FANTASY - are the first planetary romances (if one puts aside the work of E.R. EDDISON as being entirely fantasy, and David LINDSAY's *A VOYAGE TO ARCTURUS* [1920] as being too confusing in its use of various genres to work as a clear example). By substituting temporal displacements for the early (and inconsequential) spatial shifts of Burroughs and his followers, Smith created the venue most favourable for the growth of the form: a FAR-FUTURE-style planet on which magic and science intertwine, inhabited by richly variegated races whose re-creation of the feudalisms and baroque rituals of our own history is generally knowing and often a form of art. Though her work for PLANET STORIES tended to be ostensibly set on MARS or VENUS, the superb planetary romances of Leigh BRACKETT dwelt in versions of those planets so displaced from our common history that they seem natural descendants of Smith's work. Brackett held back, however, from a complete exploitation of the venues hinted at by Smith, and the first full-fledged modern planetary romance is therefore probably Jack VANCE's *THE DYING EARTH* (coll of linked stories 1950), a book which successfully incorporates into the subgenre our own planet - but sufficiently near the end of time for magic to seem plausible. Vance's treatment of his

far-future Earth as a kind of entranced, doomed, topiary paradise, in which primitivism and decadence mix and merge, soon became a trademark for his work and influenced a large number of writers, including Gene WOLFE, whose *The Book of the New Sun* (1980-83) is of course in part a planetary romance. But *THE DYING EARTH* lacks any very convincing sf rationale, and it was another Vance title that supplied sf writers with a model to exploit. *Big Planet* (1952 *Startling Stories*; cut 1957; further cut 1958; full text restored 1978), together with its sequel, *Showboat World* (1975; vt *The Magnificent Showboats of the Lower Vissel River Lune XXIII South*, *Big Planet* 1983), is set in a SPACE-OPERA Galaxy on a huge though Earthlike world whose landmass is vast enough to provide realistic venues for a wide range of social systems, and which is significantly low in heavy-metal resources (this both explains its relatively low gravity and permits a wide range of low-tech societies to flourish). Into this rich environment - in a fashion not dissimilar to the entrance of visitors to the typical UTOPIA - Vance introduces off-world protagonists whose need to travel across the planet provides a quest plot and a rationale for the lessons in ANTHROPOLOGY and SOCIOLOGY so common to the form. The pattern would be repeated often over the next several decades, and remains one of the central models for romantic sf. In his cogent introduction to a 1978 reprint of Philip Jose FARMER's *The Green Odyssey* (1957) Russell Letson argues strongly for the use of the term "planetary romance" - he should be credited for establishing it - to describe novels whose basic settings derive from Burroughs, whose plots often make use of the chase-and-quest conventions of adventure fiction, and whose protagonists frequently turn out to be high-tech men (or women) "stranded among pretechnological natives". Because Farmer is a more active plotter than Vance, *The Green Odyssey* itself might well serve as a model for the transformation of the *Big Planet* into story: its sophisticated play with anachronisms, and its active use of contrasts between different levels of TECHNOLOGY (reminiscent in this of the work of Poul ANDERSON) begins to demonstrate the range of uses to which the basic model might be put. From these three models - *THE DYING EARTH*, *Big Planet* and *The Green Odyssey* - can be seen to derive, after the fashion of sf at its creative best, most of the numerous planetary romances of recent decades. (Although J.R.R. TOLKIEN might be seen, through his creation of Middle-Earth, to have granted an oceanic imprimatur for the building of heavily mapped world-sized venues, it is probable that fantasy and science fantasy should be distinguished from one another precisely by the fact that, while the latter are usually set on planets, the former are usually set in landscapes, which may well be interminable. Middle-Earth is a landscape.) Authors early and importantly associated with the planetary romance include Marion Zimmer BRADLEY, with her *Darkover* novels, L. Sprague DE CAMP, some of the volumes of whose *Viagens Interplanetarias* sequence are crossovers from fantasy, and Frank HERBERT, whose *Dune* sequence incorporates some features from the planetary romance into its complex mix. More recently, examples have appeared from a very large number of authors: the *Helliconia* trilogy by Brian W. ALDISS, *A WOMAN OF THE IRON PEOPLE* (1991) by Eleanor ARNASON, *Hegira* (1979) by Greg BEAR, many of the novels of C.J. CHERRYH, the *Song of Earth* novels by Michael G. CONEY, *The Warriors of Dawn* (1975) by M.A. FOSTER, *GOLDEN WITCHBREED* (1983) and *Ancient Light* (1987) by Mary GENTLE,

Saraband of Lost Time (1985) and its sequels by Richard GRANT, COURTSHIP RITE (1982) by Donald KINGSBURY, the Pern novels by Anne MCCAFFREY, Pennterra (1987) by Judith MOFFETT, the Starbridge Chronicles by Paul PARK, Lord Valentine's Castle (1980) and its sequels and The Face of the Waters (1991) by Robert SILVERBERG, and parts of Neverness (1988) by David ZINDELL. There are many more. [JC]

PLANET EARTH

Made-for-tv film (1974). ABC Dir Marc Daniels, starring John Saxon, Janet Margolin, Ted Cassidy, Diana Muldaur. Teleplay Gene RODDENBERRY, Juanita Bartlett. 75 mins. Colour. One of executive producer Roddenberry's several attempts to repeat the success of STAR TREK, this pilot for a proposed series - similar in concept to his earlier GENESIS II - failed to generate the necessary network enthusiasm. It is sf at its most simplistic. The hero and his companions are revived from SUSPENDED ANIMATION in a tribalized, post- HOLOCAUST 22nd century. In a wretchedly strained attempt at contemporary relevance, the party encounters a society of hostile militant women (who keep men as slaves) and, by saving them from dangerous mutants, proves to them that men can be useful. [JB/PN]

PLANETE SAUVAGE, LA

(vt Fantastic Planet) Animated film (1973). Les Films Armorial/ORTF/Filmovestudio Barrandov. Dir Rene Laloux. Scenario and dialogue by Roland Topor (1938-) and Laloux, based on Oms en serie ["Oms by the Dozen"] (1957) by Stefan WUL. Original artwork by Topor. 72 mins. Colour. The plot of this French/Czech coproduction is not original. Human beings on a distant planet are kept as pets by a race of blue, humanoid giants, but finally organize themselves into a guerrilla army and, despite the disparity in size, force their oppressors to recognize them as equals. The animation is not especially impressive in itself; what makes the film interesting is the bizarre, surreal background in which go about their sinister business such nightmarish creatures as the plant that spends its time swatting down small animals for fun, while giggling unpleasantly. The disturbing world shown in the background is at odds with the juvenile events of the story. [JB]

PLANET OF BLOOD

PLANET OF STORMS

PLANETA BUR.

PLANET OF THE APES

1. Film (1968). Apjac/20th Century-Fox. Dir Franklin J. Schaffner, starring Charlton Heston, Roddy McDowall, Kim Hunter, Maurice Evans, James Whitmore. Screenplay Michael Wilson, Rod SERLING, based on La planete des singes (1963; trans as Planet of the Apes 1963 US) by Pierre BOULLE. 112 mins. Colour. Astronauts crashland on a planet where intelligent apes of three species rule over human savages. One astronaut is killed, one lobotomized, and the survivor (Heston) is put in a zoo. There follows a

long middle sequence whose SATIRE, alternating between sharp and heavy-handed, suffers from an attempt to have it both ways: sometimes ape society - in its racism, its snobbery, its casual cruelty - is seen as a reflection of our own excesses; yet sometimes the humans are seen as crass and insensitive alongside the apes, who perhaps have made a better fist of things than we ever did (APES AND CAVEMEN). After unsuccessfully trying to persuade his captors that he is an intelligent being, the astronaut is befriended by two chimpanzee scientists (McDowall and Hunter) who accept his story; with their help he escapes. The final sequence has him fleeing to the Forbidden Zone with a female "savage" and - in a wonderful image (perhaps inspired by Hubert ROGERS's cover for ASF Feb 1941) - coming across the half-buried Statue of Liberty projecting from a sandy beach. He realizes that he is still on Earth but in the FAR FUTURE, having unknowingly passed through a time-warp. The film is well directed, and the ape make-up by John Chambers is mobile and convincing, and deservedly won an Oscar. A commercial success, POTA was one of the 1968 films that made that year a turning point both for the increasing maturity of sf cinema and for its popularity. POTA inspired 4 sequels - BENEATH THE PLANET OF THE APES (1969), ESCAPE FROM THE PLANET OF THE APES (1971), CONQUEST OF THE PLANET OF THE APES (1972) and BATTLE FOR THE PLANET OF THE APES (1973) - as well as 2 tv series, one live-action (see 2 below) and the other animated: Return to the Planet of the Apes, 13 20min episodes (1975). Books spun-off from the animated series include 3 published as by William Arrow, #1 and #3 being by William ROTSLER and #2 by Donald J. PFEIL: Visions from Nowhere * (1976), Escape from Terror Lagoon (1976) and Man, the Hunted Animal * (1976). 2. US tv series (1974). 20th Century-Fox Television for CBS. Prod Stan Hough. Executive prod Herbert Hirschman. Starring Roddy McDowall, Ron Harper, James Naughton, Booth Colman, Mark Leonard. 1 season, 14 50min episodes. Colour. This spin-off was set in the same future world as the film (though its ethics were more black-and-white), with some episodes in the ancient subterranean ruins of BENEATH THE PLANET OF THE APES (1969). There were 4 books, all by George Alec EFFINGER, based on the tv series: Man the Fugitive * (1974), Escape to Tomorrow * (1975), Journey into Terror * (1975) and Lord of the Apes * (1976). [PN/JB]

PLANET STORIES
US PULP MAGAZINE. 71 issues. Winter 1939-Summer 1955, published by Love
Romances Publishing Co.; ed Malcolm Reiss (Winter 1939-Summer 1942),

Wilbur S. Peacock (1915?-1979) (Fall 1942-Fall 1945), Chester Whitehorn (Winter 1945-Summer 1946), Paul L. Payne (Fall 1946-Spring 1950), Jerome BIXBY (Summer 1950-July 1951), Malcolm Reiss (Sep 1951-Jan 1952), Jack O'Sullivan (Mar 1952-Summer 1955). (Reiss was always in control, however, acting as Managing Editor when he was not named as editor.) The schedule was quarterly Winter 1939-Fall 1950, bimonthly Nov 1950-Summer 1954, quarterly Fall 1954-Summer 1955. Subtitled in its early years "Strange Adventures on Other Worlds - The Universe of Future Centuries", PS was the epitome of PULP sf. Its covers were garish in the extreme, and its story titles promised extravagantly melodramatic interplanetary adventures (which the stories themselves frequently provided). A typical selection of featured stories (from 1947-8) includes "Beneath the Red World's Crust", "Black Priestess of Varda", "The Outcasts of Solar III", "Werwile of the Crystal Crypt", "Valkyrie from the Void" and "The Beast-Jewel of Mars". The authors of these epics include such PS regulars as Erik Fennel, Gardner F. FOX and Emmett McDowell; Fennel and McDowell, like Wilbur S. Peacock (?1915-1979), were frequent contributors whose magazine appearances were largely confined to PS. The magazine's artwork was mostly crude and lurid; A. LEYDENFROST was the most individual of its regular artists. Other authors who appeared often in later issues included Poul ANDERSON and Alfred COPPEL. The most popular contributor, and the one whose work characterizes PS's appeal at its best, was Leigh BRACKETT, with her many colourful PLANETARY ROMANCES of love and adventure on MARS and VENUS. PS's other short stories were more varied and less easily classifiable. All but one of the issues from which the story titles listed above were taken contained also short stories by Ray BRADBURY, including "Zero Hour" (Fall 1947) and "Mars is Heaven!" (Fall 1948). Later PS published Philip K. DICK's first story, "Beyond Lies the Wub" (July 1952). One of the many sf magazines to come into being around 1940, PS was one of the longest survivors, and one of the last sf pulps to continue in that format. A UK edition, published by Pemberton, consisted of 12 numbered, undated, truncated and initially irregular issues Mar 1950-Sep 1954. A Canadian edition published 12 issues, identical to the US issues, Fall 1948-Mar 1951. The reprint magazine TOPS IN SCIENCE FICTION (2 issues 1953) came from the same publisher and drew its material wholly from earlier issues of PS. The Best of Planet Stories I (anth 1975) ed Leigh Brackett, #1 in a book series that never had a #2, assembles 7 typical PS stories. [MJE]

PLATO

(c429-347 BC) Greek philosopher, included here partly because his dialogues Timaeus and its appendix Critias (c350 BC) have been taken as examples of PROTO SCIENCE FICTION in their references to the state of ATLANTIS and its sinking; additionally, and much more importantly, The Republic (undated, but earlier than Timaeus, which is in a sense its afterword) in part describes an ideal state, or UTOPIA, the first literary work to do so in any detail. P's importance to the history of utopian thought was absolutely central for more than 2000 years, but his emphasis on an ideal stasis over the constant changes and evolution of the sensual world was challenged in some 19th-century utopias, and of course runs absolutely counter to the social ideas of most 20th-century sf writers.

Arthur C. CLARKE's *The City and the Stars* (1948; exp 1956) is effectively an attack on a Platonic utopia. P's disapproval of poetry in *The Republic* is a good example of his admonitory prescriptions, and his remarks on children's games in Book VII of *The Laws* (a late work) are even better: ". . . when innovations creep into their games and constant changes are made in them, the children cease to have a sure standard of what is right and proper. The person most highly esteemed by them is the one who introduces new devices in form or colour, or otherwise. There can be no worse evil for a city than this...Change...is most dangerous for a city." Nevertheless, P was one of the first philosophers at least to consider the idea of change, that the future could be better than the past - an imaginative leap ancestral to the whole of sf. P's famous metaphor of the cave reappears everywhere in sf, especially in stories of CONCEPTUAL BREAKTHROUGH: we are prisoners in a cave and take the flickering shadows cast by the firelight on the walls as reality; but the philosopher finds his way into the sunlight and sees that he has hitherto been deceived. [PN] See also: SOCIOLOGY; VIRTUAL REALITY.

PLATONOV, ANDREY (PLATONOVICH)

(1896-1951) Russian writer best known for his mainstream fiction. One of the most talented figures active in the first decades after the 1917 Revolution, he was regarded with suspicion by "official" literary critics and much of his work did not appear in RUSSIA until recently, including his two powerful fictional analyses of UTOPIA-building, *Tchevengur* (1928-29; trans Anthony Olcott 1978 US) and *Kotlovan* (trans as *The Pit* US). *Lunnaia Bomb* ["*The Moon Bomb*"] (1921), *Potomki Solntsa* ["*The Sun Descendants*"] (1926) and *Efirnyi Trakt* ["*The Ether Road*"] (written 1928-30; 1967) are good examples of the HARD SF of the period, although they are marked by AP's uniquely sophisticated language and by some unusual anticipations, including future "machineless" technologies with "herds of electrons, bred like domestic animals". [VG] See also: RUSSIA.

PLATT, CHARLES (MICHAEL)

(1945-) UK-born writer and editor, in the USA from 1970, who began publishing sf with "One of Those Days" for *Science Fantasy* in 1964 and soon became associated with *NEW WORLDS* during the period when, under Michael MOORCOCK's editorship, it was seen as the pre-eminent NEW-WAVE journal. CP performed various editorial functions for several years, becoming editor in 1970 after Moorcock stepped down, and, of the NW anthology series, co-editing with Moorcock #6 (1973; vt *New Worlds Quarterly* #5 1974 US) and with Hilary BAILEY #7 (1974; vt as #6 1975 US). CP's first novel, serialized the previous year in NW, was *Garbage World* (1967 US), in which sf premise and scatological humour sometimes war - for instance, the ASTEROID of the title, used as a garbage dump, is called *Kopra*. *Planet of the Voles* (1971) is a confused SPACE OPERA, but *The City Dwellers* (1970 UK; rev vt *Twilight of the City* 1977 US) is, in its heavily revised version, a substantial NEAR-FUTURE look at the death of New York and of a crisis-ridden USA surrounding it. From the first, CP's work demonstrated undeviating clarity, PULP-MAGAZINE plotting instincts, and a sure inclination to offend. *The Gas* (1970), which has a genuine sf premise, treats its SEX material in pornographic terms. *The Image Job*

(1971 UK) and *The Power and the Pain* (1971 UK) are pornography with marginal sf elements. *A Song for Christina* (1976) as by Blakely St James (a Playboy Press house name) has no genre content, though *Christina Enchanted* (1980), also as by St James, uses sf arguments to underpin an occult hoax; a third St James volume, *Christina's Touch* (1981), once again has no genre content. In the early 1980s CP wrote little sf, concentrating his activities in the field on *The Patchin Review* (June 1981-March 1985), a journal of comment, sometimes controversial, of which he edited and wrote significant portions. A successor journal, *REM* (July 1985-December 1987), after 10 issues became *Science Fiction Guide* (occasionally from March 1988; though none has appeared since 1989, the journal has not been officially terminated). CP had written *FANZINES* during his involvement in UK fandom in the 1960s; these later journals, however, were notable for a rigorous concentration upon literary issues (and scandals), and should not perhaps be categorized as fanzines. During these years CP also published *Dream Makers: The Uncommon People who Write Science Fiction* (coll 1980; exp vt *Who Writes Science Fiction?* 1980 UK) and *Dream Makers, Volume II* (coll 1983), a revised selection from both volumes being published as *Dream Makers: SF and Fantasy Writers at Work* (coll 1986); the interviews here collected were polished and showed an attentive, surprisingly sympathetic mind at work. CP then returned to active sf writing with *Less than Human* (1986 as by Robert Clarke; 1987 UK as CP), the comic tale of an ANDROID's descent upon New York, *Free Zone* (1988), a novel which hilariously makes use of almost every sf theme and instrument yet devised (a chart was provided) to tell a pixilated tale of urban anarchy and dreadful threat, and *The Silicon Man* (1991), a HARD-SF perusal of the implications of CYBERPUNK in which the sense of what it means actually to become information (in CP's terms an infomorph) is chillingly and at points bracingly examined. With the possible exception of this last book, it cannot be claimed that CP is a warm writer, or that he generally finds a narrative structure fit to convey the rigour of his thinking. But sf as a genre is naggingly short of genuine iconoclasts: CP is therefore a necessary writer. [JC] Other works: *Sweet Evil* (1977); *Love's Savage Embrace* (1981) as by Charlotte Prentiss, associational; *Tease for Two* (1983) and *Double Delight* (1983), both as by Aston Cantwell, both associational; two Chthon ties, *Piers Anthony's Worlds of Chthon: Plasm ** (1987) and *Piers Anthony's Worlds of Chthon: Soma ** (1988). Nonfiction: *Micromania: The Whole-Truth Home Computer Handbook* (1984; rev by David LANGFORD, vt *Micromania* 1984 UK); *How to be a Happy Cat* (1986 UK) with Gray Joliffe; *When You Can Live Twice as Long, What Will You Do?* (1989), a sequence of questions based upon sf-oriented visions of the near future. See also: *CITIES*; *DISASTER*; *GAMES WORKSHOP*; *INTERZONE*; *MUSIC*; *PERCEPTION*; *POLLUTION*; *WOMEN SF WRITERS*.

PLAUGER, P(HILLIP) J(AMES)

(1944-) US writer and physicist, involved professionally in computers. He began publishing sf with "Epicycle" for ASF in 1973, being best known for "Child of All Ages" (1975), about an immortal woman (IMMORTALITY) who perpetually retains the body of a child; he won the JOHN W. CAMPBELL AWARD for Best New Author in 1975. The novel-length "Fighting Madness" (in Ben BOVA's *Analog Annual*, anth 1976) remains unpublished in book form. [JC/PN]

PLESKAC, KAREL

[r] CZECH AND SLOVAK SF.

PLOWRIGHT, TERESA

(1952-) Canadian writer who began publishing sf with *Dreams of an Unseen Planet* (1986 US; rev 1989 Canada), in which three human colony ships, having escaped an Earth near terminal ecological collapse, orbit a sentient planet called Gaea, where difficulties soon ensue. The tale, heavily burdened with symbols and a selfconsciously significant prose, climaxes in the realization that the planet needs humans and humans need the planet for either species to reproduce and therefore survive. [JC]

PLUTO

OUTER PLANETS.

POCKET UNIVERSE

It might be said that the inhabitant of any constricted environment lives in a pocket universe, whether as a child, a prisoner, a victim of dementia, a chained watcher in Plato's cave, a resident of Hell or an inhabitant of the world inside Pantagruel's mouth. It might also be suggested that the dynamic moment of escape from confinement - a leitmotiv of Western literature - always marks the transition from a pocket universe to a fuller and more real world. When Huck, in the final pages of Mark TWAIN's *The Adventures of Huckleberry Finn* (1883 UK), decides "to light out for the Territory ahead of the rest", the Hannibal from which he escapes - with its rigid social organization and its conservative inwardness of gaze - has many of the psychological characteristics of the pocket universe as found in sf. The classic movement of the sf tale is of course outward - via CONCEPTUAL BREAKTHROUGHS and all the other forms of initiation or unshackling - and in that sense most sf works contain some sort of pocket universe, implied or explicit, which initially binds and blinds the protagonist, and from which it is necessary to escape. The term should perhaps, therefore, be confined to two usages, one broad, the other narrower. It can be used broadly to describe an actual miniature universe pocketed within a larger explanatory frame or device - like the various godling-crafted worlds nesting within one another in Philip Jose FARMER's *World of Tiers* sequence; or like the set-ups in almost any of Jack L. CHALKER's series (e.g., the *Well World* sequence and the *Four Lords of the Diamond* tetralogy) which feature universes constructed by godlike beings as gamelike contrivances and inhabited by victim-players who must solve their universe to escape from it; or like similar 1950s set-ups (see PARANOIA) such as in Frederik POHL's "The Tunnel under the World" (1955) or Philip K. DICK's *Time Out of Joint* (1958), whose protagonists are victims of artificial worlds shaped to delude and manipulate them; or (again trivially) like any fantasy game which involves role-playing within a VIRTUAL-REALITY world; or in fact like any world (such as that on which John CROWLEY's *The Deep* [1975] is set, or Terry PRATCHETT's *Discworld*) whose origins and extent reflect a sense of constraining artifice. But none of these applications contains the one essential element that defines the true pocket-universe tale: Farmer's and Chalker's protagonists may not know the nature of the worlds in which they find themselves, but they do

know that they are inhabiting some form of construct. In the pocket-universe tale as more narrowly defined, the world initially perceived seems to be the entire world, and the web of taboos preventing the truth about its partial nature being known is structurally very similar to the parental restrictions which initially hamper the move through puberty into adulthood of the young protagonists of most non-genre juveniles. It could, indeed, be argued that this move through puberty is a particular example of the conceptual breakthrough which arguably structures all genuine sf. The classic GENERATION-STARSHIP tale is one in which the descendants of the original crew members have forgotten the true nature of things and have instituted a repressive, TABOO-governed society which suppresses any attempt to discover the truth; it is the task of the young protagonist to break through the social and epistemological barriers stifling this world while at the same time successfully managing puberty. The pure generation-starship story embodies, therefore, the purest form of the concept of the pocket universe. Examples of that pure form, though central to sf, are not numerous - Robert A. HEINLEIN's Universe (1941 ASF; 1951 chap) is the most famous in the list, which includes also Brian W. ALDISS's Non-Stop (1958; vt Starship 1959 US) and Harry HARRISON's Captive Universe (1969); but Alexei PANSHIN's RITE OF PASSAGE (1968), for instance, though explicitly a tale of puberty, does not suggest that there is any epistemological mystery about the nature of the asteroid-sized starship from which its heroine must escape. All post- HOLOCAUST tales in which the descendants of survivors live in underground habitats which they think to be the whole of reality are pocket-universe stories. The best of them is perhaps Daniel F. GALOUYE's Dark Universe (1961), though Margaret ST CLAIR's Sign of the Labrys (1963) and The Shadow People (1969) play fruitfully with the concept, as do Richard COWPER's Kuldesak (1972), Roger ELDRIDGE's The Shadow of the Gloom-World (1977) and many others. In all these stories, the essential movement is from childhood constriction and taboo-driven ignorance to adult freedom and breakthrough, though the protagonist of Gene WOLFE's Darkside the Long Sun (1993) is, unusually, an adult from the very beginning of his long adventure in truth-seeking; in GENRE SF it is only more recently that ironies have significantly pervaded this pattern, as in David LAKE's Ring of Truth (1983), where a traditional enclosed world turns out to be interminably extensive, so that there is, in fact, no exit. In the great pocket-universe stories, however, there is always an out, a SENSE OF WONDER, a new world opening before the opened eyes. [JC] See also: GODS AND DEMONS.

POE, EDGAR ALLAN

(1809-1849) US writer, a major figure in US literature and a pioneer of sf. "By 'scientifiction'," wrote Hugo GERNSBACK, "I mean the Jules Verne, H.G. Wells, and Edgar Allan Poe type of story." As a poet, short-story writer and critic, EAP's influence on world literature has been enormous, though he spent most of his career in the cut-throat world of magazine publishing. He is usually credited as an originator of the detective story and the horror story, an innovator in the areas of psychological realism and poetic form, as well as a precursor of the New Criticism and a strong influence on the French Symbolist movement. In recent years his works have been closely associated with various structuralist and deconstructuralist

approaches to literature. Among French appreciators of EAP was Jules VERNE, who found in certain of his pieces a basis for his own "nuts-and-bolts" sf - "The Balloon Hoax" (1844), for example, inspired both *Cinq semaines en ballon* (1863; trans as *Five Weeks in a Balloon* 1869 US) and *Le tour du monde en quatre-vingt jours* (1873; trans as *Around the World in Eighty Days* 1874 US) - but it should be emphasized that in EAP's context much of the scientific underpinning is of a deliberately specious, hoaxing nature. Another writer of HARD SF, Isaac ASIMOV, created the kind of amalgam between sf and detective fiction that EAP's work anticipated; but something of the more central, metaphysical and visionary aspect of EAP's writing is captured by two different disciples: H.P. LOVECRAFT and Ray BRADBURY. Paul Valery (1871-1945) defined EAP's sf when he observed: "Poe was opening up a way, teaching a very strict and deeply alluring doctrine, in which a kind of mathematics and a kind of mysticism became one ..." What EAP referred to as "the Calculus of Probabilities", a species of extrapolation in which he and his detective hero, Dupin, were expert, calls for the combined talents of the mathematician and the poet. EAP's corpus is very much of a piece, and to isolate his sf would be significantly to distort both the whole and the part. In fact, no single work can be satisfactorily categorized as sf in any conventional sense - for one thing, the hoaxing quality of many of the tales detracts from the necessary illusion of verisimilitude - but at the same time the underlying rationale is marginally sciencefictional, and by that token so is everything EAP wrote. EAP assumed that the fabric of "reality" constituted a "grotesque" deception imposed by limitations of time and space and by such personal impediments as human reason. This revelation and the concomitant awareness of what may be the true "arabesque" nature of a unified reality are available only to the perspective provided by the "half-closed eye" of the imagination or, in the later works, of intuition. EAP makes clear in "Mesmeric Revelation" (1844; rev 1845) that this visionary arabesque reality is of a material, not a spiritual, nature. It is equivalent to the alternative or additional DIMENSIONS of sf and may be apprehended by strategies which constitute EAP's version of the spacetime warp. The dizzying sensation experienced on entering an EAP room, typically containing a luridly lit, kaleidoscopically fluid assemblage of arabesque furnishings, or in the process of literally falling in such tales as "A Descent into the Maelstrom" (1841), will effect the transition. In the case of most visionary or mystical literature, the experience of a transcendent reality depends upon personal volition (an unreliable programme of fasting or praying) or divine intervention. In EAP's case, as in sf, natural phenomena may effect the transition accidentally, and the conditions of such phenomena may be mechanically duplicated. There is a further sense in which all of EAP's work may be regarded as marginal sf. The COSMOLOGY embodied in the late summational treatise *Eureka* (1848) - a scheme of remarkable prescience (to the point of explaining BLACK HOLES) which has some parallel and perhaps conscious development in the speculation of such writers as Olaf STAPLEDON, George Bernard SHAW and Arthur C. CLARKE - is variously anticipated, whether directly, rhythmically or symbolically, in virtually everything he wrote. To this extent, for example, "The Fall of the House of Usher" (1839) and the sea tales may be regarded as displaced versions of a kind of

literalistic sf, if Eureka (which EAP called a "romance" or a "poem") may be described as that. In Eureka the movement from a grotesque, deceptive "reality" to arabesque reality is correlated with the history of the Universe moving from its present diastolic state of dispersion to a glorious future state of centripetal collapse into a primal unity, an "Overmind". Although none of EAP's compositions can be fully accounted for by the sf label, some do come closer than others in that they contain specific sf elements. Three poems merit consideration. "Al Aaraaf" (1829; rev 1831; rev 1845), with its astronomical setting and the apparent destruction of the planet Earth, might be related to the post-apocalyptic prose of "The Conversation of Eiros and Charmion" (1839), in which Earth is destroyed by fire when raped of nitrogen by a passing comet (cf H.G. WELLS's "The Star" [1897] and In the Days of the Comet [1906]). (EAP's "Shadow - A Parable" [1835] and "The Colloquy of Monos and Una" [1841] are similarly metaphysical pieces.) A second poem, "The City in the Sea" (1831; rev 1845), is related to various sf-like sunken-city myths. "Ulalume" (1847) makes use of astrology and, to that degree, relates to EAP's use of other PSEUDO-SCIENCES in some of his most sciencefictional tales: mesmerism in "A Tale of the Ragged Mountains" (1844), in "Mesmeric Revelation" (1844) and in "The Facts in the Case of M. Valdemar" (1845), and alchemy in "Von Kempelen and his Discovery" (1849). The automaton chess-player invented by (the real-life) Baron von Kempelen and probed by EAP in his essay "Maelzel's Chess-Player" (1836) might be linked tenuously to the ROBOTS of sf, while "The Man that was Used Up" (1839) presents a part-human, part-machine being something like a CYBORG. "The Masque of the Red Death" (1842) has humankind destroyed by plague, as in Mary SHELLEY's The Last Man (1826) (END OF THE WORLD). EAP's sea voyages, especially "MS. Found in a Bottle" (1833) and The Narrative of A. Gordon Pym (1837), seem ultimately oriented towards a HOLLOW EARTH (like Captain Adam SEABORN's Symzonia [1820]). EAP's latter unfinished story was "completed" by various hands: by Jules Verne in Le sphinx des glaces (1897; trans as An Antarctic Mystery 1898 UK), by Charles Romyn DAKE in A Strange Discovery (1899), by H.P. LOVECRAFT in "At the Mountains of Madness" (1936) and by Dominique Andre in Conquete de l'Eternal ["The Conquest of the Eternal"] (1947). The most ambitious of the BALLOON tales, "The Unparalleled Adventure of One Hans Pfaall" (1835; rev 1840), is clearly oriented towards outer space; if taken literally, it is an early example of a MOON voyage. Another balloon story and another hoax, "Mellonta Tauta" (1849; the title is Greek for "these things are in the future"), might better be considered as one of the three tales that experiment with the theme of time displacement. "The Thousand and Second Tale of Scheherazade" (1845), "Some Words with a Mummy" (1845), a reanimation story, and "Mellonta Tauta" demonstrate the inaccuracy of past conceptions of the future, present conceptions of the past and future conceptions of the present, respectively; "Mellonta Tauta" itself presents a UTOPIA as a DYSTOPIA, bears on the theme of OVERPOPULATION, and is among the first of such works to open directly in a future environment. Nearly all the above stories and the essay Eureka, but not the poems, appear in The Science Fiction of Edgar Allan Poe (coll 1976) ed Harold Beaver, which has an interesting introduction and commentary. Beaver also ed a companion volume, the Penguin Books edition of The Narrative of Arthur Gordon Pym of Nantucket (1975). A great many of

EAP's stories have been filmed, most famously and prolifically by Roger CORMAN. [DK]About the author: "Edgar Allan Poe - Science Fiction Pioneer" by Clarke Olney in *Georgia Review* #12, 1958; "The Prophetic Edgar Allan Poe" in *Explorers of the Infinite* (coll 1963) by Sam MOSKOWITZ; "Edgar Allan Poe and Science Fiction" in *Future Perfect: American Science Fiction of the Nineteenth Century* (anth 1966) ed H. Bruce FRANKLIN; "The Influence of Poe on Jules Verne" by Monique Sprout in *Revue de Litterature Comparee* #41, 1967; "Edgar Allan Poe and the Visionary Tradition of Science Fiction" in *New Worlds for Old: The Apocalyptic Imagination, Science Fiction, and American Literature* (1974) by David KETTERER; "Poe, Edgar Allan" in *The Encyclopedia of Science Fiction and Fantasy*, vol 2 (1978) by Donald H. TUCK; "The SF Element in the Work of Poe: A Chronological Survey" by David Ketterer, *SCIENCE-FICTION STUDIES* #1, 1974; "Edgar Allan Poe" by E.F. POETRY

Before about 1965 - although much earlier Lilith LORRAINE had published *Wine of Wonder* (coll 1951 chap), which she advertised as being the first volume of poetry devoted to sf - only isolated examples of sf poetry appeared in magazines like *Unknown* and *The Magazine of Fantasy and Science Fiction*. Yet now poetry appears regularly in SF MAGAZINES, anthologies and author collections. This change can be attributed to two separate periods of activity. The first centred on NEW WORLDS (NW) and the NEW-WAVE writers in the UK during the late 1960s. NW published a classic poem during this time, "The Head-Rape" (1968) by D.M. THOMAS. In 1979 Edward Lucie-Smith (1933-) anthologized this and other excellent poems like Edwin Morgan's "In Sobieski's Shield" and Thomas M. DISCH's "A Vacation on Earth" in *Holding Your Eight Hands* (HYEH) (anth 1969 UK), the first anthology of sf poetry. HYEh was followed closely by 2 other all-poetry anthologies, *Frontier of Going* (FG) (anth 1969 UK) ed John Fairfax and *Inside Outer Space* (IOS) (anth 1970 US) ed Robert Vas Dias. FG and IOS were not sf per se but celebrations of SPACE FLIGHT and the Universe inspired by the Soviet/US space race and the unique lexicon of terms, and dreams, it engendered. Also notable were the infusion of a quantity of poetry into the text of Brian W. ALDISS's novel *Barefoot in the Head* (1969) and the book-length poem *Aniara* (1956 Sweden; trans 1963) by the Swedish poet Harry MARTINSON. A decade after HYEh, intense poetic activity in the USA centred on the founding in 1978 of the Rhysling AWARDS (RA) for best sf poetry and their parent association, the Science Fiction Poetry Association, which was founded by Suzette Haden ELGIN. From the late 1970s to the mid-1980s, poets emerged who wrote a large body of their work within the genre, including in the USA Andrew Joron, Peter Dillingham,

Kathy Rantala, Bruce BOSTON, Sonya DORMAN, Gene Van Troyer, Duane Ackerson, Terry A. Garey and Robert FRAZIER, as well as the UK's Steve Sneyd and Andrew Darlington. Established sf writers published a good deal of poetry - Ursula K. LE GUIN, Michael BISHOP, Ray BRADBURY, Jane YOLEN, Joe HALDEMAN and others - and poets from the mainstream crossed over: Dick Allen, Marge PIERCY, William Stafford, Tom Whalen and Marilyn Hacker (1942-). During this time, many magazines started to feature the growing genre on a regular basis. Night Cry (NC) used horror poetry, while the science magazine Science (SC) prominently featured one factual poem per issue. AMAZING STORIES and ISAAC ASIMOV'S SCIENCE FICTION MAGAZINE have often used two or more poems an issue. IASFM featured excellent sf poetry, like the Rhysling winners "The Migration of Darkness" (1979) by Peter Payack and "For Spacers Snarled in the Hair of Comets" (1984) by Bruce Boston; while literary magazines like Speculative Poetry Review, Velocities (V), Uranus, Ice River, Umbral (UM), Star*Line (S*L), The Magazine of Speculative Poetry and the UK's Star Wine devoted themselves to fantastic poetry of all kinds. Fantastic poetry generally falls into 4 types: sf, as in Susan Palwick's "The Neighbor's Wife" (1985 AMZ) (RA), wherein a widowed man nurses a very alien woman to health and accepts her for a wife; science fact, as in Diane Ackerman's "Saturn" from her book The Planets: A Cosmic Pastoral (1976), a long work often quoted by Carl SAGAN in his science books; macabre, as in Lucius SHEPARD's "White Trains" (1987 NC) (RA), about mirage-like trains that pass certain towns on the outskirts of their private mythologies; and speculative poetry, a catchall term for poems on the periphery of the fantastic, as in Joe Haldeman's almost otherworldly vision of Vietnam in "DX" (1987) or the surreal poetry of Ivan Arguelles. Other classic works include: "The Sonic Flowerfall of Primes" (1982 NW) (RA) and "Antenna" (1989) by Andrew Joron, with their hard-science surrealism; "The Nightmare Collector" (1987 NC) (RA) by Bruce Boston; "The Well of Baln" (1981) by Ursula K. Le Guin; "Corruption of Metals" (1977) (RA) by Sonya Dorman; "Two Sonnets" (1983 SC) by Helen Ehrlich; "Your Time and You" (1982 V) (RA) by Adam Cornford; "The Still Point" (1984 IASFM) by David Lunde; "Ybba" (1983 S*L) by Elissa Malcohn; "Lady Faustus" (1982 UM) by Diane Ackerman; and the World Fantasy Award-winning "Winter Solstice, Camelot Station" by John M. FORD (1988). Many of these recent works are anthologized in The Umbral Anthology (anth 1982) ed Steve Rasnic Tem, Burning with a Vision (anth 1984) ed Robert Frazier and Songs of Unsung Worlds (anth 1985) ed Bonnie Gordon. Also of great importance is the book-length THE NEW WORLD: AN EPIC POEM (1985) by Frederick TURNER. Several anthologies of mostly original poetry made impressions around the cusp of the 1990s: the award-winning Poly: New Speculative Writing (anth 1989) ed Lee Ballentine (1954-), Narcopolis ? Other Poems (anth 1989 chap) ed Peggy Nadramia and Time Frames (anth 1991) ed Terry A. Garey. The poet Scott Green has compiled an invaluable guide, Contemporary Science Fiction, Fantasy and Horror Poetry: A Resource Guide and Biographical Dictionary (1989). Star*Line, The Magazine of Speculative Poetry and Velocities continue, along with newcomer Dreams ? as strong poetry magazines. Ocean View Press, publisher of Poly, produces poetry collections by many of the authors mentioned here. And a large wave of fresh poets promises all the right stuff for the 1990s-people like Denise Dumars, Michael R. COLLINGS, W. Gregory Stewart, David

Kopaska-Merkel, t. (not T.) Winter-Damon, Ann K. Schwader, Roger Dutcher, Wendy Rathbone, Tom Wiloch, Terry McGarry, Sandra Lindow, Tony Daniel and Wayne Allen Sallee. [RF]

POGUE, BILL

[r] Ben BOVA.

POHL, CAROL

[r] Frederik POHL.

POHL, FREDERIK

(1919-) US writer, professionally involved in the sf field as an editor, agent and writer since his teens, his first published piece being a poem, "Elegy to a Dead Satellite: Luna" as by Elton V. Andrews, for AMZ in 1937, and his first story proper being "Before the Universe" with C. M. KORNBLUTH, both writing as S.D. Gottesman, for Super Science Stories in 1940. His 3rd marriage was to sf writer Judith MERRIL (1949-52) and his 4th to Carol Metcal Ulf (1952-82), who collaborated with him in editing several anthologies. His 5th and present wife, Elizabeth Anne Hull (married 1984), is an academic and a leading member of the SCIENCE FICTION RESEARCH ASSOCIATION. FP was a member of the FUTURIANS, and wrote much of his early work in collaboration with other members of the group, mostly with C.M. Kornbluth. Names used by these two, sometimes involving third parties (including Robert A.W. LOWNDES and Joseph H. Dockweiler), were S.D. Gottesman (see above), Scott Mariner, Dirk WYLIE and the house name Paul Dennis Lavond. On his early solo work FP usually used the name James MacCreigh, though he published 1 story each as Wylie and Warren F. Howard. He published much of this work himself while editing ASTONISHING STORIES and SUPER SCIENCE STORIES Spring 1940-Fall 1941; he was then assistant editor to Alden Norton on these magazines from late 1941 until their demise in 1943. After WWII he worked as an sf literary agent; he represented many of the most celebrated writers in the field during the late 1940s. He began writing again, abandoning the MacCreigh pseudonym, in 1953, by which time he had used his own name on the first of a new set of collaborations with Kornbluth, the classic THE SPACE MERCHANTS (1952 Gal as "Gravy Planet"; 1953). While working as assistant editor to H.L. GOLD at GALAXY SCIENCE FICTION he wrote a great deal for the magazine, sometimes as Paul Flehr, Ernst Mason or Charles SATTERFIELD, the last once used for a story written in collaboration with Lester DEL REY, in partnership with whom he also wrote Preferred Risk (1955) as Edson MCCANN. Other writers with whom he collaborated at one time or another were Merrill, Isaac ASIMOV and Joseph SAMACHSON, and he built up a second long-term partnership with Jack WILLIAMSON. FP was editor of Gal and IF from late 1961 to mid-1969. While under his aegis If won 3 HUGOS as Best Magazine 1966-8. He also founded and edited 2 shorter-lived magazines, WORLDS OF TOMORROW (1963-7) and INTERNATIONAL SCIENCE FICTION (1967-8). Another significant editorial endeavour was an early series of original ANTHOLOGIES, STAR SCIENCE FICTION STORIES: Star Science Fiction Stories (anth 1953), #2 (anth 1954), #3 (anth 1955), #4 (anth 1958), #5 (anth 1959) and #6 (anth 1959), along with a volume of longer stories, Star Short Novels (1954). He has also ed numerous reprint anthologies. As a writer FP made his first reputation by way of slickly ironic short

stories, mostly SATIRES with a hint of black comedy. Works in this vein include the classics "The Midas Plague" (1954; incorporated into *Midas World*, fixup 1983) and "The Tunnel Under the World" (1955); almost all these stories of the 1950s are collected in *Alternating Currents* (coll 1956; with 1 story dropped and 1 added, rev 1966 US), *The Case Against Tomorrow* (coll 1957), *Tomorrow Times Seven* (coll 1959), *The Man who Ate the World* (coll 1960), *Turn Left at Thursday* (coll 1961) and *The Abominable Earthman* (coll 1963). Oddly, the only short-fiction award FP won before his 1986 Hugo for "Fermi and Frost" was a Hugo for an atypical "posthumous collaboration" with Kornbluth, "The Meeting" (1972), which appeared in *Critical Mass* (coll 1977) with Kornbluth; some of their collaborations had already been assembled as *The Wonder Effect* (coll 1962), and further selections appeared as *Before the Universe, and Other Stories* (coll 1980) and *Our Best: The Best of Frederik Pohl and C.M. Kornbluth* (coll 1987). FP's early solo novels were less successful: *Slave Ship* (1957), *Drunkard's Walk* (1960), *A Plague of Pythons* (1965; rev vt *Demon in the Skull* 1984) and *The Age of the Pussyfoot* (1969) lack the vitality of his collaborations with Kornbluth. The gaudy image of a future dominated by advertising painted in *THE SPACE MERCHANTS* now seems remarkably prescient (*MEDIA LANDSCAPE*) - although FP's solo sequel, *The Merchants' War* (1984), was unfortunately belated; both novels were assembled as *Venus, Inc* (omni 1985). *Gladiator-at-Law* (1955; rev 1986) with Kornbluth is sillier, but makes some telling comments on housing projects (*CRIME AND PUNISHMENT*). The episodic *Search the Sky* (1954; rev 1985) with Kornbluth is an enjoyable early contribution to the "absurd-society" variety of sf. The more ambitious and surrealistically complicated *Wolfbane* (1959; rev 1986) with Kornbluth involves invading alien robots, the kidnapping of the planet Earth, subsequent primitive societies engineered to provide human components for living MACHINES on the aliens' own dirigible planet, and a revolt organized by these. FP's early collaborations with Jack Williamson were the *Undersea* juveniles - *Undersea Quest* (1954), *Undersea Fleet* (1955) and *Undersea City* (1958) (*UNDER THE SEA*) - and the *Starchild* novels, assembled as *The Starchild Trilogy* (omni 1977): *The Reefs of Space* (1964), *Starchild* (1965) and *Rogue Star* (1969). The latter are intelligent SPACE OPERAS combining Williamson's flair for melodrama with FP's economy of style. As FP's solo work has matured, so has his collaborative work with Williamson. *The Saga of Cuckoo - Farthest Star* (fixup 1975) and *Wall Around a Star* (1983), assembled as *The Saga of Cuckoo* (omni 1983) - is action-adventure fiction involving a vast artificial world. *Land's End* (1988) confronts the human survivors of a cosmic DISASTER with a godlike ALIEN. *The Singers of Time* (1991) is an excellent fusion of traditional space opera with modern ideas in PHYSICS. There was a sharp improvement in FP's longer works once he was no longer editing full time. Two fine novellas, "The Gold at the Starbow's End" (1971; exp vt *Starburst* 1982) and "The Merchants of Venus" (1971), were important transitional works, the latter forming a prelude to the enterprising Heechee series - *GATEWAY* (1977), *Beyond the Blue Event Horizon* (1980), *Heechee Rendezvous* (1984), *The Annals of the Heechee* (1987) and *The Gateway Trip* (coll of linked stories 1990) - which tracks humanity's exploration of the Galaxy using artefacts abandoned by aliens who have gone into hiding because of a threat posed to all living species

by the enigmatic Assassins. GATEWAY won the Hugo, NEBULA and JOHN W. CAMPBELL MEMORIAL AWARD, following up the success of MAN PLUS (1976), an effectively cynical novel about the adaptation of a man for life on MARS which had won a Nebula the year before (PANTROPY); the rather less impressive sequel is Mars Plus (1994) with Thomas T. THOMAS. JEM: The Making of a Utopia (1979) is a similarly cynical and compelling account of the COLONIZATION of an alien world - which somewhat resembles the eponymous planet in Medea's World (anth 1985) ed Harlan ELLISON - by competing human power blocs, but the more lightly satirical The Cool War (1981) is less successful. Syzygy (1982), a mundane novel about the failure of a much-touted catastrophe to overwhelm California as a result of a rare alignment of planets, understandably suffers from a lack of melodrama - an absence made good in two later non-sf novels, the thriller Terror (1986) and the "drama-documentary" novel Chernobyl (1987). FP has occasionally complained about the unwillingness of sf writers to be constructive in their dealings with NEAR-FUTURE scenarios, and he made a sustained attempt to practise what he preached in The Years of the City (fixup 1984), a future history of the City of New York. The Coming of the Quantum Cats (1986) is an ALTERNATE-WORLD adventure story only lightly seasoned with satire, but a more considerable satirical edge is evident in Black Star Rising (1985), Narabedla Ltd (1988) and the sharply pointed The Day the Martians Came (fixup 1988). Homegoing (1989) is a more romantic and light-hearted story of confrontation between humans and aliens. The World at the End of Time (1990) recalls the theme of Land's End in presenting a human colony's encounter with a godlike alien in a tale which traverses eons to the time and location referred to in the title; while the novella Outnumbering the Dead (1990 UK) focuses on the predicament of a man who is among the very few who age and die in a world of youthful-seeming immortals (IMMORTALITY).FP was president of the SCIENCE FICTION WRITERS OF AMERICA 1974-6 and president of WORLD SF 1980-82. Much insight into the early days of his career is provided by the commentary in The Early Pohl (coll 1976), much of which was subsequently incorporated into The Way the Future Was: A Memoir (1978). The special Sep 1973 issue of The MAGAZINE OF FANTASY AND SCIENCE FICTION was devoted to his work. In 1993 he was granted the Nebula Grand Master award. [BS]Other works: Digits and Dastards (coll 1966); The Frederik Pohl Omnibus (coll 1966; vt Survival Kit 1979); Day Million (coll 1970); The Gold at the Starbow's End (coll 1972); The Best of Frederik Pohl (coll 1975); In the Problem Pit (coll 1976); Planets Three (coll 1982); Pohlstars (coll 1984); BiPohl (coll 1987); Stopping at Slowyear (1991); Mining the Oort (1992); The Voices of Heaven (1994).Nonfiction: Science Fiction: Studies in Film (1981) with Frederik Pohl IV; Our Angry Earth (1991) with Isaac ASIMOV.As Editor: Beyond the End of Time (anth 1952); Shadow of Tomorrow (anth 1953); Assignment in Tomorrow (anth 1954); Star of Stars (anth 1960; vt Stars Fourteen UK); several Galaxy anthologies, including Time Waits for Winthrop and Four other Short Novels from Galaxy (anth 1962), The Seventh Galaxy Reader (anth 1964), The Eighth Galaxy Reader (anth 1965), The Ninth Galaxy Reader (anth 1966), The Tenth Galaxy Reader (anth 1967; vt Door to Anywhere 1970), The Eleventh Galaxy Reader (anth 1969) and Galaxy: Thirty Years of Innovative Science Fiction (anth 1980) with Martin H. POLAND

Polish sf effectively began with the publication in 1785 of the novel Wojciech Zdzarynski, zycie i przypadki swoje opisujacy ["Wojciech Zdzarynski, Describing his Life and Adventures"] (1785) by the Reverend Michal Dymitr Krajewski. This describes the civilizations of the Moon. Between then and WWII, Polish sf had, in terms of literary quality, at least 4 major landmarks. (1) In 1804 Jan Potocki (1761-1815) published (in French) Manuscrit trouve a Saragosse (2 vols 1804 and 1805 Russia and 1 vol 1813 France; exp 1847 as Rekopis znaleziony w Saragossie Poland; cut trans as The Saragossa Manuscript, ed Roger Caillois 1960 US). This extraordinary work - more fantasy than sf - is a well written and witty novel, a prolonged and vivid joke made by a worldly gentleman, a Count, at the expense of all the superstitions of his age. The complex plot could be seen as a series of ALTERNATE WORLDS nestling within one another like Chinese boxes. It was filmed in Poland under the Polish title in 1965, dir Wojciech Has, and distributed quite widely in the West as The Saragossa Manuscript. (2) Historia przyszlos ci ["History of the Future"] (composed 1829-42; part published in French 1835; 1964) by Adam Mickiewicz (1798-1855), unfortunately unfinished and partly lost, was done as a large fresco of the world seen more from the cultural than from the technological point of view. (3) The Moon trilogy by Jerzy ZUPEAWSKI consists of Na Srebrnym Globie ["On Silver Globe"] (1901), Zwyciezca ["The

Victor"] (1908) and *Stara Ziemia* ["Old Earth"] (1910). This is an essay on the birth of civilization and myth, and on myth's clash with reality, beautifully written in the fin de siècle mood. (4) The road to modern Polish sf was paved by the avant-garde painter and writer Stanislaw Ignacy WITKIEWICZ in his apocalyptic novels *Pozegnanie jesieni* ["Farewell to Autumn"] (1927) and *Nienasycecie* (1930; trans Louis Iribarne as *Insatiability* 1977 US). Having seen the 1917 Revolution from inside Russia, Witkiewicz was obsessed by the vision of "hordes of Asians" invading Europe and destroying whatever cultural values might exist in the future. He lived up to his philosophy and committed suicide when the Red Army invaded Poland in Sep 1939. Polish postwar sf has had its literary achievements, too - not only the celebrated works of Stanislaw LEM but also the classical sf of Konrad Fialkowski, Adam Wisniewski-Snerg's cult novel *Robot* (1973) and, in the 1980s, such novels by the wonderfully inventive Wiktor Zwikiewicz as *Delirium w Tharsys* ["Delirium in Tharsys"] (1986). Poland also has its GENRE-SF writers, such as Bohdan Petecki with *Strefy zerowe* ["Zero Zones"] (1972). The current running through Polish sf has really been political. Because sf provides a perfect means of diverting attention away from drab reality into a beautiful future, it was encouraged in the decade after WWII by Poland's communist rulers. The best examples of such political sf are Krzysztof Borun's and Andrzej Trepka's *Zagubiona przyszłość* ["The Lost Future"] (1953), #1 in a SPACE-OPERA trilogy, and Stanislaw Lem's early novels *Astronauci* ["The Astronauts"] (1951) and *Obłok Magellana* ["The Magellan Nebula"] (1955). Rather later, from the mid-1970s onwards, sf writers began to take the opposite tack. Escaping strict censorship by using sf imagery, and with the help of a linguistic ingenuity reminiscent of George ORWELL, they began to describe the real world - even if at the price of incurring serious publication problems. (Orwell was probably a direct influence on such work, as several of his books had been published in Poland by underground publishers.) The best examples of such works are Edmund Wnuk-Lipinski's *Wir pamięci* ["Whirlpool of Memory"] (1979), Maciej Parowski's *Twarza ku Ziemi* ["Face to Earth"] (1981), Janusz A. Zajdel's *Limes inferior* (1982) and Marek Oramus's *Senni zwycięzcy* ["Sleepy Victors"] (1982). Sf writers of the younger generation are now turning to fantasy, which is more marketable, and, because censorship no longer exists, political sf is in retreat and looks a bit old-fashioned: the gaping hole this leaves in the Polish sf tapestry is currently being filled by the importation (on a massive scale) of US-UK sf by such new private publishers as Amber and Arax. Film has never been a strong point of Polish sf. Aside from *The Saragossa Manuscript*, 2 further sf films deserve attention. Fitting well into the political-criticism-through-sf-metaphor stream, *Wojna Światow - Nastepne Stulecie* (1982; vt *The War of the Worlds-Next Century*) dir Piotr Szulkin tells of government manipulation of the media to disguise the facts of a Martian invasion. Something of an exception to this sort of political cinema is *SEKSMISJA* (1984; vt *Sex Mission*), a comedy dir Juliusz Machulski. There are currently 2 monthly sf magazines in Poland. The older, *Fantastyka*, has run since 1982 and has a circulation of over 120,000. Its strong points are its fine critical essays and a good choice of Polish authors. *Fenix* is the first privately owned and edited magazine; it emerged from FANZINE origins in 1990 and now has a (growing) circulation

of about 70,000. Its selection of US-UK sf is considered the better, and it also publishes young Polish writers. Polish FANDOM is massive and well organized, its main activities centring on fanzines and CONVENTIONS. [KS]

POLITICAL PREDICTIONS

Science fiction writers have a mixed record as far as political predictions are concerned. James Blish's 1957 novel, *The Frozen Year*, made a reference to President Kennedy, while C.M. Kornbluth's 1958 story, "Theory of Rocketry," referred to President Nixon. In 1967, Thomas M. Disch was not so prescient. The novel *Camp Concentration* contains a reference to a President McNamara.

POLITICS

Most of the works which we can characterize with hindsight as PROTO SCIENCE FICTION are political fantasies. The earnest and constructive aspect of this endeavour is displayed in UTOPIAS, the mocking and corrosive aspect in SATIRES. The desire to make political statements has continued to be the main motive force in works of sf by MAINSTREAM WRITERS, although modern works of this kind make much more frequent use of images of DYSTOPIA than either of the traditional modes of comment. Important subgenres of sf like the future- WAR story grew out of exercises in political propaganda (INVASION), and all real-world political crusades have sparked the production of competing images of the future. All images of the NEAR FUTURE embody political speculations, partly because of their close continuity with the present and partly because political events are usually a more significant agent of short-term change than scientific DISCOVERY or technological development. There is today a thriving subgenre of "political thrillers" - often written by sometime politicians like Spiro T. Agnew (1918-) and Jeffrey Archer (1940-), or even practising ones like Gary Hart (1936-) and Douglas HURD, but much more elegantly done by writers like Richard CONDON and Allen DRURY - the great majority of whose plots are necessarily set in the near future. The principal political debates of the 19th century are reflected in many early works of sf, the most important being that associated with the rise of socialism. Edward BELLAMY, William MORRIS, Jack LONDON and - in the early part of his career - George GRIFFITH were all moved to construct images of future socialist utopias and revolutions. H.G. WELLS, the presiding genius of UK scientific romance, was a fervent if somewhat idiosyncratic socialist, as was, in an even more curious way, M.P. SHIEL. Before the founding of the SF MAGAZINES, such writers as George Allan ENGLAND followed Jack London's lead in importing stridently anti-capitalist (or at least "anti-trust") futuristic fables into the pulp stratum of the fiction marketplace. Inevitably, socialist visions of the future called forth opposition in the form of images of hideously bloody revolution and regimented dystopias. Notable novels which combine serious political speculations with some appreciation of the imperatives and opportunities associated with technological progress are Bellamy's *Looking Backward 2000-1887* (1888), Ignatius DONNELLY's *Caesar's Column* (1890), Wells's *When the Sleeper Wakes* (1899), London's *The Iron Heel* (1907), Victor ROUSSEAU's *The Messiah of the Cylinder* (1917) and Claude FARRERE's *Useless Hands* (1920; trans 1926). With the passage of time the dystopian imagery associated with political

fantasies became more and more extreme, as such fantasies began to pose more abstract questions of political philosophy and the political spectrum was confused by the rise of fascism and the spectre of totalitarianism. Owen GREGORY's prophetic account of the nation which might arise from the ashes of German defeat, *Meccania* (1918), stands at the head of a tradition of caricaturistic and surreal political fantasies which includes Milo HASTINGS's *City of Endless Night* (1920), Yevgeny ZAMIATIN's *My* (trans as *We* 1924), Edmund SNELL's *Kontrol* (1928), John KENDALL's *Unborn Tomorrow* (1933), J. Leslie MITCHELL's *Gay Hunter* (1934), Joseph O'NEILL's *Land under England* (1935), John Palmer's *The Hesperides* (1936), Katharine BURDEKIN's *Swastika Night* (1937 as by Murray Constantine), Andrew MARVELL's *Minimum Man* (1938), Ayn RAND's *Anthem* (1938) and P.G. CHADWICK's *The Death Guard* (1939). Alongside these works appeared more modest expressions of sour disenchantment, depicting short-sighted politicians and their equally short-sighted supporters failing dismally to cope with the challenges facing them; these include Rose MACAULAY's *What Not* (1919), J.D. BERESFORD's *Revolution* (1921), Fred MACISAAC's "World Brigands" (1928), Hilaire BELLOC's *But Soft - We Are Observed* (1928), Upton SINCLAIR's *Roman Holiday* (1931), Harold NICOLSON's *Public Faces* (1932) John GLOAG's *Winter's Youth* (1934) and Sinclair LEWIS's *It Can't Happen Here* (1935). In stark contrast to non-genre writers, the suppliers of the specialist sf PULP MAGAZINES paid relatively little attention to political matters, mostly taking it for granted not only that technological progress was the real engine of social change but that contemporary US democracy might be subverted but would never be worthily superseded. Stanton A. COBLENTZ's leaden satires do contain a certain amount of open-minded political discussion, but such stories as Miles J. BREUER's "The Gostak and the Doshes" (1930) relegated ideological disputes to literal meaninglessness, and Breuer's and Jack WILLIAMSON's *The Birth of a New Republic* (1930 *AMZ Quarterly*; 1981 chap) cast the interplanetary politics of the future slavishly in the mode of the political evolution of the USA's past (*HISTORY IN SF*). Despite the conspicuously declared uninterest of Hugo GERNSBACK (who published translations of a few German-supremacist utopian fantasies by Otfried von Hanstein [*GERMANY*] and others), events in Europe gradually infected with anxiety the visions of the future produced by sf writers. Paul A. CARTER's history of magazine sf, *The Creation of Tomorrow* (1977), includes an excellent chapter tracking reflections of and responses to the rise of Hitler in such stories as Wallace WEST's "The Phantom Dictator" (1935) and Nat SCHACHNER's series begun with "Past, Present and Future" (1937). There is a sense in which sf has never stopped reacting to Hitler, in that ALTERNATE-WORLD stories of what might have happened had he triumphed in WWII continue to be extremely popular (*HITLER WINS*). Norman SPINRAD's *The Iron Dream* (1972) suggests that, if Hitler had become an sf writer instead of a dictator, his sublimated dreams would have been readily accommodated within the great traditions of SPACE OPERA and HEROIC FANTASY. WWII, in securing the defeat of European fascism and paving the way for the Cold War, established a new real-world context for political fantasy, but its main effect on sf was to bring the entrenched trends rapidly to a climax in George ORWELL's *NINETEEN EIGHTY-FOUR* (1949), which became the model for a great deal of later fiction in which the future is imagined as a metaphorical boot

stamping on a human face forever. There is a sense in which dystopian fiction after 1949 is merely a series of footnotes to Orwell-so much so that it is not clear whether such works as David KARP's *One* (1953) and L.P. HARTLEY's *Facial Justice* (1960) really qualify as political fantasies at all, although Arthur KOESTLER's *The Age of Longing* (1951) and Adrian MITCHELL's *The Bodyguard* (1970) clearly do. Orwellian fantasy was imported into GENRE SF by Ray BRADBURY in *FAHRENHEIT 451* (1953), and political fantasy of a curious kind, featuring many tales of rebellion against "perverted" political systems in which the interests of some special-interest group have become dominant, became very popular in the magazines of the 1950s. Because it was deemed socially insignificant, sf could play host to political criticism of a kind which might elsewhere have attracted the attentions of Joseph McCarthy (1909-1957) and his Un-American Activities Committee; John W. CAMPBELL Jr's determined affection for unorthodoxy led him to provide a home for such stories as James BLISH's "At Death's End" (1954), whose anti-McCarthy elements were further exaggerated when it was expanded to form part of *They Shall Have Stars* (fixup 1956). On the other hand, Robert SILVERBERG has revealed that Howard BROWNE terminated Rog PHILLIPS's career as a regular contributor to the ZIFF-DAVIS pulps because of his reckless use of the word "communism" in "Frontiers Beyond the Sun" (1953 as by Mallory Storm). The tradition of HARD SF which developed in Campbell's *ASTOUNDING SCIENCE-FICTION* had a conspicuous tendency towards what is now termed LIBERTARIANISM. This is often credited to Campbell's own idiosyncrasies, including his human-chauvinism (which caused the more conventionally liberal Isaac ASIMOV to eliminate ALIENS from the future history mapped out in the *Foundation* series) and his fascination with the merits of slavery, but Campbell's unorthodoxy was actually quite elastic - as evidenced by the permission which he gave to his chief Devil's Advocate of the 1960s, Mack REYNOLDS, to challenge conventional political assumptions. It is rather from Robert A. HEINLEIN's version of SOCIAL DARWINISM that the strident Libertarian tradition of US hard sf stems, but there are noticeable differences of ideological complexion and rhetorical style between the other GOLDEN-AGE writers sometimes lumped together with him as "right-wingers": L. Sprague DE CAMP, L. Ron HUBBARD and A.E. VAN VOGT. The writers of the 1950s who enlisted in these ranks - most notably and most thoughtfully Poul ANDERSON and Gordon R. DICKSON - were by no means followers of a party line, nor were such 1960s writers as Larry NIVEN, Jerry POURNELLE and G.C. EDMONDSON, and nor are more recently emergent writers like James P. HOGAN and L. Neil SMITH. Extreme Libertarians are inevitably drawn to images of the future which vividly display the uncompromising nature of their philosophies - as can be seen in the various writings of Ayn RAND and the work of such political philosophers as Robert Nozick - and the clustering of such writers around the more assertively optimistic threads of the sf tradition needs no conspiracy theory to explain it. At least some of what passes for Libertarianism in the works of these and other writers is not dogmatically based at all, but rather represents a continuation of the tradition of sceptical fantasy which grew up between the wars, taking the view that all political institutions are likely to be manned by corrupt incompetents. The quasi-anarchic spirit which one finds in the work of Eric Frank RUSSELL,

Philip K. DICK and many of the FUTURIANS is rooted in this ironic tradition, as is the work of such non-genre writers as Kurt VONNEGUT Jr. Then again, much supposedly Libertarian sf simultaneously glorifies militarism to such an extent that the bureaucratic organizations of the state are replaced, at least so far as the key characters are concerned, by hyperorganized command structures in which the ethic of individual freedom supposedly being upheld is chimerically bonded to ideals of slavish loyalty and self-sacrificing "honour"; Niven and Pournelle's *Oath of Fealty* (1981) is a particularly cleverly thought-out exercise in this kind of doublethink. The sf writers who found themselves in the "opposite" camp to the Libertarians when GALAXY SCIENCE FICTION published its notorious paired ads about the USA's involvement in Vietnam (WAR) have produced little political rhetoric to compare with the dynamism of the gung-ho glam-tech conquerors of space, although they have produced a good deal of what their macho detractors might describe as "pinko bleeding-heart fiction" lamenting the cruel injustices of a world in danger of spoliation. Active left-wing movements, as featured in Gordon EKLUND's *All Times Possible* (1974) and John SHIRLEY's *Eclipse* (1985), remain rare, although the curious anarchist philosophies displayed in Norman SPINRAD's *Agent of Chaos* (1967) and van Vogt's *The Anarchistic Colossus* (1977) have attracted some attention from would-be followers. Other political issues which gradually came to the fore in post-WWII sf were sexual politics and race relations. Fantasies of sexual politics had a long history dating back to the days of the suffragettes and such feminist writers as Charlotte Perkins GILMAN, but serious speculative work had largely been eclipsed by anxious fantasies about female-dominated societies, written by males. WOMEN SF WRITERS increased dramatically in numbers in the 1950s-60s, and began to build bridges to the FEMINIST movement (see also WOMEN AS DEPICTED IN SCIENCE FICTION). Futuristic fictions bearing on the problems of race relations had a fairly similar history, serious speculations being virtually drowned out by anxious fantasies and by the kind of unthinking racism and antisemitism which were long rife in popular fiction of all kinds. Such (relatively) open-minded works as Herrmann LANG's *The Air Battle* (1859) remain anomalies in a 19th century dominated by the racist ideologies which found virulent expression in King WALLACE's *The Next War* (1892) and Louis TRACY's Anglo-Saxon-supremacist *The Final War* (1896). Tracy's worldview was echoed in M.P. Shiel's early Yellow-Peril novel *The Yellow Danger* (1898), but Shiel repented of it in such later books as the misleadingly retitled *The Dragon* (1913; rev as *The Yellow Peril* 1929), in the same way that he reassessed and reversed his occasional knee-jerk antisemitism in his Messianic political fantasy *The Lord of the Sea* (1901). The USA inevitably produced a considerable number of political fantasies about Black/White relations, including thoughtful works like T. Shirby HODGE's *The White Man's Burden* (1915) and George Samuel SCHUYLER's satire *Black No More* (1931). As the Civil Rights movement began in the 1950s and reached its first climactic phase in the 1960s, several notable futuristic fantasies of race relations were produced by mainstream writers, including *A Different Drummer* (1959) by William Melvin KELLEY, *The Siege of Harlem* (1964) by Warren MILLER, *The Spook who Sat by the Door* (1969) by Sam GREENLEE and several novels by John WILLIAMS, but such direct treatments

seemed too sensitive to most genre-magazine editors, who preferred their writers to use aliens in parables whose arguments were conducted at a more abstract level; the most notable exception is the series by Mack Reynolds begun with *Black Man's Burden* (1961; 1972 dos), set in Africa rather than the USA. UK sf novels bearing on racial problems include Margot BENNETT's *The Long Way Back* (1954), Robert BATEMAN's *When the Whites Went* (1963), John BRUNNER's *The Jagged Orbit* (1969) and - by far the boldest - Christopher PRIEST's *Fugue for a Darkening Island* (1972; vt *Darkening Island US*). South African political fantasies on the theme include Arthur KEPPEL-JONES's anti-Apartheid *When Smuts Goes* (1947) and Garry ALLIGHAM's pro-Apartheid *Verwoerd - The End* (1961). In general, though, as the real-world problems become ever more urgent, the tendency of genre sf has been to ignore the issue or sanctimoniously to take for granted its eventual disappearance. Although there are some interesting sarcastic fantasies about future election campaigns - e.g., William TENN's "Null-P" (1951) and "The Masculinist Revolt" (1965), Arthur T. HADLEY's *The Joy Wagon* (1958) and Gordon Eklund's *The Eclipse of Dawn* (1971) - sophisticated political fantasy remains a rarity in genre sf. Reynolds's efforts along those lines, heroic after their fashion, are muddled, and bogged down by their fusion with the crude melodramatics and uneasy comedy which he found necessary to include to secure publication. A certain transcendence of the expectations of commercially minded editors is a necessary prerequisite to the production of truly serious sf, and it is arguable that the only writer with a keen interest in politics yet to have achieved it is Ursula K. LE GUIN, whose most sustained essay in earnest political fantasy is *The Dispossessed* (1974). The practical politics of coping with the problems which are urgent today and steadily getting more so are rarely addressed in sf, although there are noble exceptions, including Frederik POHL's *The Years of the City* (fixup 1984). The situation has, of course, been even worse in Eastern Europe, where the content of popular fiction was - until very recently - determined by diktat. Political discourse in almost all translated sf from pre-Yeltsin RUSSIA treads the party line dutifully, if not always wholeheartedly; the most interesting partial exception is the work of the brothers STRUGATSKI. Dissident fiction which contrived to reach the West is, of course, much more pointed; a notable example is *1985* (1983) by Gyorgy Dalos, which replays the post-WWII history of Hungary as a sequel to Orwell's *NINETEEN EIGHTY-FOUR*. It will be interesting to see what kinds of sf emerge from post-communist Eastern Europe during the next few years. [PN/BS]

POLLACK, RACHEL (GRACE)

(1945-) US writer, resident in the Netherlands 1973-90. She published her first sf story with NW in 1972, "Pandora's Bust" as by Richard A. Pollack. Her first novel, *Golden Vanity* (1980 US), was an ornate SPACE OPERA whose large cast of aliens ransacks a venal Earth in search of a female runaway. *Alqua Dreams* (1987 US) is a rather flat drama of ontology set on an alien planet; the human protagonist, faced with the obdurate Platonism of the inhabitants, must argue METAPHYSICS with them in an attempt to suggest that the sensory world is sufficiently "real" for them to sell him the rare mineral he needs. The background is voluminously drawn, but the narrative is sluggish. In RP's third novel, *Unquenchable*

Fire (1988 UK), winner of the ARTHUR C. CLARKE AWARD for 1989, a similarly intractable narrative - the book is constructed so that a long flashback reiterates material already delivered - more closely models the situation it depicts. In the ALTERNATE-WORLD USA of the tale, shamanism actually works (MAGIC); and a lovingly described bureaucracy of shamans, revering the Founders who brought them to power generations earlier, are actually able to ask the Earth's roots for energy. The protagonist of the book, finding that her unwilling pregnancy is destined to make her the mother of a new revitalizing shaman, resists her role fiercely; the resume of her life, as given in flashback, only intensifies the sense of her deep stubbornness; the sequel, Temporary Agency (1994 UK), reconfigures some of the same material. Throughout, RP's portrait of a radical different but alarmingly similar USA is densely drawn, and her depiction of life in an alternate Poughkeepsie is frequently hilarious. Several stories - like "The Protector" (1986 Interzone) - depict similarly transformed universes. An anthology of original stories, Tarot Tales (anth 1989 UK) with Caitlin Matthews, carries RP's professional interest in the Tarot (she has published nonfiction in the field) into fiction; each contributor used OULIPO techniques to extract story ideas from a Tarot pack. From issue 64 to its demise at the end of 1994 with issue 87, she wrote Doom Patrol for DC COMICS. RP's subject matter and manner are narrow in their extent, compellingly intense in their focus. POLLOCK, WALTER HERRIES
Walter BESANT; Andrew LANG.

POLLUTION

Early sf stories dealing with catastrophes brought about by pollution of the environment (ECOLOGY) concentrate on the perils of smog; they include W. Delisle HAY's The Doom of the Great City (1880) and Robert BARR's "The Doom of London" (1892). The pollutant effects of industrial waste were very familiar in the 19th-century UK: air pollution had shaped the city of London (the prevailing wind blows east and the upper strata of the population moved steadily west) and slag defaced England's northern counties to the extent that Yorkshiremen coined a proverb: "Where there's muck, there's brass [money]." It is hardly surprising that England produced the one enduring 19th-century image of civilization as pollution, in Richard JEFFERIES's After London (1885). The image of city life presented in the socially conscious, traditional 19th-century novel, as by Charles DICKENS, makes much of the foulness of city dirt, but the problem was generally seen as easily correctable. The notion that environmental pollution might be a serious threat in the future is not evident in early sf, where it tends to be assumed that progress will sweep the dirt away. Virtually all utopian CITIES are remarkable for their cleanliness, and it seemed reasonable to one inhabitant of a northern industrial city, signing himself "A Disciple" (of H.G. WELLS), to borrow the famous TIME MACHINE in order to see The Coming Era, or Leeds Beatified (1900). This optimism seems rather ironic today. By the end of the 1950s, serious attention had been given in sf to only one kind of pollution: radioactive waste. The effects of the residual radiation of the Hiroshima and Nagasaki explosions and the tests at Bikini atoll were well known, and the destruction of the

environment by radiation poisoning became one of the most horrifying aspects of the post-atomic- WAR scenario (HOLOCAUST AND AFTER; MUTANTS). These stories probably helped bring about an increased sensitivity to the idea of insidious poisons in the environment, and it was not long before awareness grew of more commonplace dangers: arsenic in wallpaper, lead in water pipes, etc. The first sf cautionary tales about society's general philosophy of waste disposal began to appear in the 1950s. C.M. KORNBLUTH's "Shark Ship" (1958) is an extreme example; and James WHITE's story of the hazards of orbital garbage, "Deadly Litter" (1960), has been transformed by the passage of time into a neat parable. It was in the early 1960s, however, that the problem was brought very sharply into focus, largely due to the publication of *Silent Spring* (1962) by Rachel Carson (1907-1964), which argued that pollution of a radically new type had begun, involving nonbiodegradable substances which accumulated in living matter to fatal concentrations. DDT, once widely used as an insecticide, was one of the main targets of attack in Carson's book; PBB, a compound responsible for poisoning large numbers of cattle and some people in Michigan, belongs to the same family of compounds; the fluorocarbons more recently blamed for the depletion of the ozone layer are closely related. Awareness of these threats was rapidly absorbed into sf, and virtually overnight became a standard feature of NEAR-FUTURE scenarios. A lurid early dramatization of the issue is *The Clone* (1965) by Theodore L. THOMAS and Kate WILHELM, a horror story about pollutants which spontaneously generate life to become an omnivorous, amorphous monster. A more realistic treatment of some relevant issues is *MAKE ROOM! MAKE ROOM!* (1966) by Harry HARRISON, which also deals with OVERPOPULATION. Similarly alarmist stories include James BLISH's "We All Die Naked" (1969), John BRUNNER's *The Sheep Look Up* (1972), Philip WYLIE's *Los Angeles: A.D. 2017* (1971) and *The End of the Dream* (1972), Kurt VONNEGUT Jr's "The Big Space Fuck" (1972), Andrew J. OFFUTT's *The Castle Keeps* (1972) and Kit PEDLER's and Gerry DAVIS's *Brainrack* (1974). In more recent times pollution has come to be taken so much for granted that it is rarely addressed as an issue in itself, instead forming a constant background element in almost all near-future extrapolations, whether they aspire to be DYSTOPIAN or merely realistic; it is particularly evident in Paul THEROUX's *O-Zone* (1986) and David BRIN's *Earth* (1990). The rapidity with which the subject became familiar is evident in the early appearance of such works of SATIRE as Charles PLATT's *Garbage World* (1967) and Norman SPINRAD's "The Lost Continent" (1970). More thoughtful and sophisticated treatments include *The Thinking Seat* (1970) by Peter TATE and "King's Harvest" (1972) by Gardner DOZOIS. It is widely felt that the biggest danger is complacency—a point made by the effective "To Walk with Thunder" (1973) by Dean MCLAUGHLIN, in which the hero fights to suppress a device that will guarantee clean air inside the home, on the grounds that it would become an industrial *carte blanche* to pollute the atmosphere irredeemably. *Pollution: Omnibus* (anth 1971), issued to cash in on the height of the scare, contains "Shark Ship", *MAKE ROOM! MAKE ROOM!* and the dubiously relevant *CITY* (fixup 1952) by Clifford D. SIMAK. *The Ruins of Earth* (anth 1971) ed Thomas M. DISCH is another theme anthology with a number of relevant stories. [BS]

POMERLEAU, LUC

(1955-) French-speaking Canadian physics graduate, technical translator, editor of the French-language Quebec sf magazine SOLARIS since 1986, and sf and comics critic. He wrote the section on Francophone sf in this encyclopedia's entry on CANADA. [PN]

POPE, GUSTAVUS W.

(? -?) US writer and physician, in whose 2 sf novels, Romances of the Planets, No. 1: Journey to Mars (1894) and Romances of the Planets, No. 2: Journey to Venus (1895), a US officer visits an advanced MARS (falling in love with a princess) and a primitive VENUS (shooting, as E.F. BLEILER has noted, anything that moves). Introducing a reprint edition of the first book, Sam MOSKOWITZ noted some adumbrations of Edgar Rice BURROUGHS's Barsoom. [JC] See also: HISTORY OF SF.

POPKES, STEVEN

(1952-) US writer who began publishing sf with "A Capella Blues" for IASFM in 1982. Caliban Landing (1987) interestingly depicts a human expedition to map a new planet (Caliban)-and the complex consequences of its landing there-from the viewpoint of an ALIEN female, who becomes embroiled in the humans' heated interactions. After a fairly conventional start, the tale expands into a complex exploration of the personalities thus thrust together. [JC] Other work: Slow Lightning (1991 dos).

POPOV, ALEXANDER

(1954-) Bulgarian sf writer and publisher who has won awards for his short fiction, some written under the pseudonym Al Vickers, some translated into foreign languages. His sf novel Provinzia Pet ["Province Five"] as by Al Vickers was contracted in 1991 for publication in Russian translation in Russia. His recently established Gemini publishing house began, in 1991, to publish a fortnightly sf magazine, Drugi Svetove ["Other Worlds"]. AP wrote this encyclopedia's entry on BULGARIA. [PN]

POPULAR FICTION CO.

WEIRD TALES.

POPULAR MAGAZINE, THE

US PULP MAGAZINE published by STREET ?

others. Appeared monthly from Nov 1903, semi-monthly from 1 Oct 1909, weekly from 24 Sep 1927, semi-monthly from 7 July 1928, and monthly Feb-Sep 1931. Merged with Complete Stories from Oct 1931. TPM, which was in competition with the Frank A. MUNSEY chain, regularly published fantasy and sf. Among its noteworthy contributions to the genre were stories in the Craig Kennedy series by Arthur B. REEVE, future- WAR stories by Edwin BALMER and the serialization of Ayesha (1905; 1905) by H. Rider HAGGARD. Other contributors included John Buchan (1815-1940), John COLLIER, Roy NORTON, Sax ROHMER and Edgar WALLACE. [JE]

POPULAR SCIENCE FICTION

Australian thin (64pp) DIGEST-size magazine. 8 numbered issues in all: #1-#6 1953-5, published by Frew Publications, Sydney, plus 2, numbered NEW SERIES 1 and 2, 1967, published by Page Publications, NSW; no eds named. The Frew series printed some US reprints and also original Australian and

US material; the Page series reprinted #4 and #6 of the Frew publications.
A companion magazine, similarly poor, was FUTURE SCIENCE FICTION. [FHP/PN]

POPULATION EXPLOSION OVERPOPULATION.

PORGES, ARTHUR

(1915-) US writer and teacher of mathematics who began publishing sf with "The Rats" for Man's World in 1951, and since then has published about 70 stories - some as Peter Arthur and some as Pat Rogers - without releasing any of them in book collections. He is, however, a strong and inventive writer, especially of fantasy. He is best known for "The Fly" (1952), not to be confused with George LANGELAAN's tale, and "The Ruum" (1953). AP's brother, Irwin Porges (1909-), who collaborated with him on at least 1 story, wrote Edgar Allan Poe (1963) and Edgar Rice Burroughs: The Man who Created Tarzan (1975). [JC]

PORTAL, ELLIS Bruce POWE.

PORTER, ANDREW (IAN)

(1946-) US editor and publisher, active in FANDOM since the 1960s, who founded and ran the influential ALGOL, for which he won a 1974 HUGO, as well as its longer-lived (still current) companion, SCIENCE FICTION CHRONICLE. AP also ed anon 2 critical texts, Exploring Cordwainer Smith (anth 1975 chap) and Experiment Perilous: Three Essays on Science Fiction (anth 1976 chap), and ed The Book of Ellison (anth 1978) - described by Harlan ELLISON as "unauthorized". [JC]

PORTNOY, HOWARD N.

(1946-) US writer and teacher whose Hot Rain (1977) seems to start off as a horror fantasy about apparently supernatural bolts of lightning. Eventually, however, a pseudo-scientific explanation is found in a secret military project. [JC]

POSITRONIC ROBOTS

Because Isaac ASIMOV's ROBOT stories are so celebrated, this term is one of the best known in the genre; it is not, however, a generally used item of sf TERMINOLOGY, few writers having had the cheek to borrow the idea from its inventor - although Data, the android in STAR TREK: THE NEXT GENERATION, is described as having a positronic brain. The positron is the antiparticle of the electron (ANTIMATTER; PHYSICS); the idea of (highly unstable) positrons being suitable material for the construction of an artificial brain with "enforced calculated neuron paths" was sheer double-talk, as Asimov was the first to admit. [PN]

POST-DISASTER AND POST-HOLOCAUST STORIES HOLOCAUST AND AFTER.

POSTMODERNISM AND SF

"Modernism" is a useful umbrella term for the art that followed the

collapse of Romanticism, especially in the first half of the 20th century, but Postmodernism is not simply its more recent replacement. In fact, most contemporary serious writing remains insistently Modernist. The term "Postmodernism" implies a theory of both writing and the world, and a shift in emphasis and method. In literature, Postmodernism is usually held to imply showy playfulness, genre-bending, and denial of neat aesthetic or moral wrap-up; above all, writing that knows or even struts itself as writing, rather than as innocent portrayal. John BARTH, Jorge Luis BORGES, Christine BROOKE-ROSE, Italo CALVINO, Angela CARTER, Don DELILLO, Philip K. DICK, Umberto ECO, Raymond Federman and Thomas PYNCHON are all Postmodernists whose inventions edge close to sf. Within the genre one might name J.G. BALLARD, Samuel R. DELANY, William GIBSON, Michael MOORCOCK, Rudy RUCKER, John T. SLADEK, Kurt VONNEGUT Jr, Robert Anton WILSON, Joanna RUSS and Ian WATSON as well as Norman SPINRAD (sometimes), Lucius SHEPARD (maybe) and even A.E. VAN VOGT (ahead of his time). Sheer novelty, or even quality, are insufficient to qualify as Postmodernists such writers as Brian W. ALDISS, Thomas M. DISCH, Gene WOLFE and the early Roger ZELAZNY - exemplary sf Modernists all, but not Postmodernists. Such catalogues, however, may miss a deeper point. Brian McHale, in *Postmodernist Fiction* (1987), sees Postmodernism as defined by its focus, as ontological rather than epistemological. That is, where Modernism focuses upon "knowing" and its limits, including what we know about others and ourselves as subjects, Postmodernism by contrast asks about "being", the worlds the subject inhabits; it is about objects rather than subjects. This shift reflects a realization that the world of human experience is multiple and open-ended. The Postmodern condition has an analogy in quantum theory (PHYSICS), where phenomena are modelled by abstract waves in many superposed states, collapsing to a single value or "reality" only in the act of observation. Contemporary sf undoubtedly intersects the Postmodernism of mainstream literature, especially when it follows the kinds of strategy pioneered by Delany in such self-reflexive texts as, perhaps, *DHALGREN* (1975) and, definitely, *Triton* (1976). For McHale, sf is "perhaps the ontological genre par excellence. We can think of science fiction as Postmodernism's noncanonized or 'low art' double, its sister-genre in the same sense that the popular detective thriller is Modernism's sister-genre." Sf is, of all the genres, the one that constructs "realities" as a matter of course. Perhaps the most influential critical account is the Marxist Fredric Jameson's. In "Postmodernism, or the Cultural Logic of Late Capitalism" (July/Aug 1984 *New Left Review*), he itemizes its stigmata. He finds "a flatness or depthlessness" to be "perhaps the supreme formal feature of all the Postmodernisms", and also a waning of feeling linked to an alleged loss of people's sense of themselves as individuals, and the consequent replacement of "affect" (especially alienated angst) with "a peculiar kind of euphoria"; the end of personal style and a sense of history (and memory) and their replacement by pastiche (not parody, but the transcoding of Modernist styles into jargon, badges and other decorations) and nostalgia; a schizophrenic fragmentation of artistic texts, marked especially by collage; and, most of all, the "hysterical sublime", in which the alien or "other" surpasses our power to represent it and pitches us into a sort of Gothic rapture (see also *BIG DUMB OBJECTS*; *SENSE OF WONDER*). All of these

qualities often characterize not only the arguably Postmodern environment in which we live but also sf in particular, which Jameson himself has recognized in his many essays on sf topics in *SCIENCE-FICTION STUDIES*. His theorizing is borrowed explicitly and persuasively for sf by Vivian SOBCHACK in the last chapter of her *Screening Space: The American Science Fiction Film* (1987), which projects a "postfuturism". Jameson suggests specifically that today's information networks "afford us some glimpse into a post-modern or technological sublime", which is perhaps what we find in the *VIRTUAL REALITIES* of the *CYBERPUNK* writers, where simulation and reality dissolve into one another. Indeed, Jameson later claimed in *Postmodernism* (1991) that cyberpunk was "the supreme literary expression if not of postmodernism, then of late capitalism itself". Innovative sf writers have adopted several of the expansive possibilities of metafiction, *MAGIC REALISM* and poststructuralist *FABULATION* (which see for further discussion of issues raised in this entry) in general; but more specific both to sf and other Postmodernisms is a comparable adoption of the language of scientific discourse rather than that of traditional literature, and this too tends to the abolition of Modernism's subjectivity - a common feature in late cyberpunk, as in Michael SWANWICK's *Vacuum Flowers* (1987). In their emphasis on the technological surround, on the dense new lexicons bursting up especially from the consumer-oriented market productivity of post-industrial science, both sf and Postmodernism give a privileged position to outward context, code and world rather than to a poetic inward "message". They stress object over subject, ways of being over ways of knowing. The Universe itself becomes a text, open to endless interpretation and rewriting. Two generalizing texts about Postmodernism, neither specifically about sf, are *The Postmodern Condition* (1979) by Jean-Francois Lyotard and the weird *The Postmodern Scene: Excremental Culture and Hyper-Aesthetics* (1986) by Arthur Kroker and David Cook. A book relating Postmodernism in general to sf specifically is the unevenly useful *Postmodern Fiction: A Bio-Bibliographical Guide* (anth 1986) ed Larry McCaffery (1946-). *Alternate Worlds: A Study of Postmodern Antirealistic American Fiction* (1990) by John Kuehl discusses many Postmodern authors of marginal, non-genre sf. A good introduction from several perspectives can be found in the special Postmodernism number of *JOURNAL OF THE FANTASTIC IN THE ARTS* vol 1 #4 (1988). The Postmodernism issue of *Science-Fiction Studies* (Nov 1991) has translations of essays on simulacra and on Ballard by the French sociologist Jean Baudrillard, an important theoretician in this area, along with other interesting material including Ballard's enjoyably intemperate response. Also illuminating is Tom Moylan's *Demand the Impossible: Science Fiction and the Utopian Imagination* (1986 UK). [DB]

POTOCKI, JAN
[r] POLAND.

POTTER, ROBERT
(1831-?) Australian author and clergyman; he died before 1912. His novel *The Germ Growers: An Australian Story of Adventure and Mystery* (1892; vt *The Germ Growers: The Strange Adventures of Robert Easterley and John Wilbraham* 1892 UK) was published in AUSTRALIA as by Robert Easterley and

John Wilbraham, the names of the protagonists, but in the UK as "edited by" RP. A race of discarnate beings, denizens of the interplanetary "ether" capable of assuming human form, invades Earth and sets up beachheads where they cultivate plague germs to be used on humanity; one beachhead is discovered in the Australian outback, with an ALIEN who calls himself Davelli in charge, and the adventures begin. At the end another space dweller called Leafar (i.e., Rafael) saves the day. This alien-INVASION story antedates H.G. WELLS's THE WAR OF THE WORLDS (1898) by 6 years, but the element of Christian allegory (fallen angels confronted by a good angel) leaves its sf potential not fully realized. Nonetheless, the evil experiments in the chemical mutation of bacteria and the electric flying machines are early GENRE SF in style. [PN]

POURNELLE, JERRY E(UGENE)

(1933-) US writer with an undergraduate degree in engineering and PhDs from the University of Washington in psychology (1960) and political science (1964). He was employed for 15 years in the US space programme, working for both government and private firms, and at one time was a political campaign manager. Before entering sf, JP wrote some technical nonfiction and some fiction, occasionally using pseudonyms and house names. His first books were a nonfiction text, *The Strategy of Technology* (1970) with Stefan T. Possony, and two non-sf novels as by Wade Curtis: *Red Heroin* (1969; 1985 as JEP) and *Red Dragon* (1971; 1985 as JEP); he used the Curtis name also for a few stories in ASF, though his first sf story, "Peace with Honor", appeared in 1971 under his own name. This story forms part of JEP's most extended series, the CoDominium sequence, earlier parts of which are named after their chief military protagonist, a cunning, honourable mercenary and military genius named Falkenberg who, in a period of civilian stupidity and venality (it is a sort of period often depicted in JP's work), conspires with the CoDominium military force to maintain a human presence in those worlds already colonized by mankind. He appears in *West of Honor* (1976 Canada) and *The Mercenary* (fixup 1977), the latter book reworking "Peace with Honor" and other stories - both vols being assembled as *Falkenberg's Legion* (omni 1990) - and in *Prince of Mercenaries* (fixup 1989), *Go Tell the Spartans* (1991) and *Prince of Sparta* (1993), both with S.M. STIRLING. Set considerably later in the CoDominium world - after the rise and fall of a first Empire of Man, an interregnum, and the birth of the Second Empire - *A Spaceship for the King* (1973; exp vt *King David's Spaceship* 1981) also features a tough military genius, whose resemblance to Falkenberg is obviously of thematic importance, for JP argues implicitly in the sequence that civilization can be sustained only through a hierarchical structuring of society which - perhaps rather magically - manages to avoid bureaucratic sclerosis, and through the maintenance of such military virtues as honour and loyalty. These arguments are most clearly on view in the series' climax, *THE MOTE IN GOD'S EYE* (1974) with Larry NIVEN, set in a period when the CoDominium has evolved into a full-blown GALACTIC EMPIRE with all the trappings. The fascinating ALIENS depicted in that novel reflect his collaborator's conceptual ingenuity as clearly as the human Empire reflects JP's sustained fictional argument for that kind of solution to the problems of just government. The sequel, *The Gripping Hand* (1993; vt *The Moat Around*

Murcheson's Eyes 1993 UK), lacks the thrusting innovativeness of the first volume. The more recent War World sequence of SHARED-WORLD anthologies - War World, Volume 1: The Burning Eye * (anth 1988) with John F. CARR and Roland GREEN, #2: Death's Head Rebellion * (anth 1990) with Carr and Green, #3: Sauron Dominion * (anth 1991) with Carr alone, #5: Blood Feuds* (anth 1992), #6: Blood Vengeance *(anth 1994) and #8: Invasion *(anth 1994) - carries the CoDominium concept into broader waters, with a prequel, #4: Codominium: Revolt on War World * (anth 1992) with Carr, setting the stage. After THE MOTE IN GOD'S EYE, JEP collaborated with Niven on several further novels, all singletons and most extremely successful in the marketplace (for details see Larry NIVEN). They include Inferno (1976), Lucifer's Hammer (1977), Oath of Fealty (1981), which rewrites CoDominium feudalism in mundane - indeed, suburbanized - terms, Footfall (1985), The Legacy of Heorot (1987 UK), with Niven and Steven BARNES, and Fallen Angels (1991), with Niven and Michael FLYNN. Political subtexts - always evident in both main collaborators' solo work - tend in their joint efforts to surface rather more frequently, to the discomfort of some readers, especially those unaccustomed to the singularly narrow range of political discourse in the USA (though within that narrow range its expression is singularly open); other readers find the books refreshingly "robust" (POLITICS). Most of JEP's solo work not devoted to the CoDominium also focuses on issues of WAR and the decorums and tactics of waging war. A second, shorter and more pessimistic series, the Laurie Jo Hansen sequence, substitutes corporate warfare for military/political conflict: High Justice (coll of linked stories 1977) and Exiled to Glory (1978). The Janissaries sequence - Janissaries (1979), Janissaries: Clan and Crown (1983) with Roland Green and Janissaries 3: Storms of Victory (1987), again with Green - returns to explicit warfare, describing a mercenary leader's efforts to unify the planet to which he and his soldiers have been transplanted. JEP also edited, with John F. Carr (not always credited), the There Will be War sequence of military anthologies: There Will be War (anth 1983), Vol II: Men of War (anth 1984), Vol III: Blood and Iron (anth 1984), Vol IV: Day of the Tyrant (anth 1985), Vol V: Warrior (anth 1986), Vol VI: Guns of Darkness (anth 1987), Vol VII: Call to Battle (anth 1988), Vol VIII: Armageddon! (anth 1989) and Vol IX: After Armageddon (anth 1990). JEP was first recipient of the JOHN W. CAMPBELL AWARD for Best New Writer in 1973, and very rapidly established himself as a dominant creator of the politically conservative-libertarian HARD-SF tale. His military sf has shaped that subgenre as well, though it would be unfair to blame him for the excesses of his imitators. His nonfiction, too, has been notable for its engaging clarity, its constant presentation of political agendas, and its eagerness to convey knowledge. A sense of deep cultural pessimism, though countered by explicit avowals of LIBERTARIAN hopefulness, pervades and - for many readers - humanizes his work. [JC] Other works: Escape from the Planet of the Apes * (1974), a film tie (ESCAPE FROM THE PLANET OF THE APES); Birth of Fire (1976 Canada). Nonfiction: That Buck Rogers Stuff (coll 1977); A Step Farther Out (coll 1979); Mutual Assured Survival: A Space-Age Solution to Nuclear Annihilation (1984) with Dean ING; The User's Guide to Small Computers (1984); Adventures in Microland (1986). As Editor: 2020 Vision (anth 1974); Black Holes (anth 1978) with John F. Carr (here, and occasionally

elsewhere, uncredited); *The Endless Frontier* (anth 1979), *The Endless Frontier, Volume 2* (anth 1985) and *Cities in Space* (anth 1991), all with Carr; *The Survival of Freedom* (anth 1981) with Carr; *Nebula Award Stories Sixteen* (anth 1982); *The Science Fiction Yearbook* (anth 1985) with Carr; the FAR FRONTIERS original anthology series, all with James BAEN, *Far Frontiers* (anth 1985), Vol II (anth 1985), Vol III (anth 1985), Vol IV (anth 1986), Vol V (anth 1986), Vol VI (anth 1986) and Vol VII (anth 1986); the *Imperial Stars* reprint anthologies with Carr, *Imperial Stars, Vol 1: The Stars at War* (anth 1986), *Vol 2: Republic and Empire* (anth 1987) and *Vol 3: the Crash of Empire* (anth 1989). POWE, BRUCE

(1925-) Canadian writer whose sf novels concentrate on political disorders, a theme very common to post-WWII writers from his country. *Killing Ground: The Canadian Civil War* (1968), as *Ellis Portal*, sets its fatal conflict in the NEAR FUTURE. *The Last Days of the American Empire* (1974) more far-rangingly sets its conflicts in the 21st century, when a North American hegemony is threatened by both Europe and Africa. [JC]

POWELL, SONNY

[s] Alfred BESTER.

POWER, THE

Film (1968). *Galaxy/MGM*. Prod George PAL. Dir Pal, Byron HASKIN, starring George Hamilton, Suzanne Pleshette, Nehemiah Persoff, Michael Rennie. Screenplay John Gay, based on *The Power* (1956) by Frank M. ROBINSON. 109 mins. Colour. Without the spectacular special effects of Pal's earlier sf films, TP concentrates instead on suspenseful plotting and the clever investing of apparently ordinary situations with a sense of menace, coming-with considerable success - as close to film noir as Pal ever approached. It tells of a MUTANT supermind VILLAIN, masquerading as an ordinary human, who is eliminating, piecemeal, a group of scientists who suspect his existence. One (Hamilton) survives not only murder attempts but also efforts to make him a non-person, all records of his past being deleted one by one. The reason for his survival, as he himself finally learns, is that he too is a mutant: everybody's favorite cliché in pulp-sf yarns about PSI POWERS. The film ends with a battle of wills between the two superminds - a literally heart-stopping event. The interesting script and taut direction led critic John BAXTER to call it "one of the finest of all sf films". It is certainly, aside from *WAR OF THE WORLDS* (1953), Pal's best sf production. [PN/JB]

POWERS, J.L.

John S. GLASBY.

POWERS, RICHARD M.

(1921-) US illustrator. Born in Chicago, he studied in several art schools in that area before and after WWII. He began work in sf

ILLUSTRATION no later than 1950 - an early abstract RMP cover being for Isaac ASIMOV's *Pebble in the Sky* (1950) - for DOUBLEDAY where he also did mysteries and Westerns, and also with 2 1952 covers for Gal. When Ian Ballantine founded BALLANTINE BOOKS in 1952 he approached RMP to do covers for him. Although some of his early work there was representational (some of the early Doubleday work had been abstract), RMP soon - with the cover for Arthur C. CLARKE's *CHILDHOOD'S END* (1953) - adopted a Surrealist style (much influenced by Yves Tanguy [1900-1955] and Joan Miro [1893-1983]) unique in sf; it became the trademark of Ballantine's 1950s sf. RMP's glowing and sometimes whimsical paintings are full of amorphous shapes, floating in space or over surreal landscapes, and have been enormously influential in sf illustration. He did a little more magazine-cover work, but most of his prolific sf cover illustration - he worked in other fields as well, including children's books - was for books, for Ballantine, Pocket Books, Berkley Books, MacFadden, Dell and others. After his first wife's death he dropped most of his commercial work during the 1960s, then returned in the 1970s, not quite so prolifically but as forcefully as ever. He has had many exhibitions, in New York's Rehn Gallery and elsewhere; his work commands as much respect outside sf as in it. With RMP's work the packaging of sf could be said to have come of age. Covers no longer required glamorous space girls or technological hardware, and Surrealism captured sf's disturbing essence just as strongly as ray-guns or monsters. A portfolio is *Spacetimewarp Paintings* (1983). [PN/JG]

POWERS, TIM(OTHY)

(1952-) US writer who began publishing sf with *The Skies Discrowned* (1976 Canada as Timothy Powers; rev vt *Forsake the Sky* 1986 as TP), a fantasy-tinged sf adventure much influenced - TP stated in his introduction to the revised version - by the work of Rafael Sabatini (1875-1950). *Epitaph in Rust* (1976 Canada as Timothy Powers; text restored, vt *An Epitaph in Rust* 1989 as TP) somewhat more vividly sets the adventures of its protagonist, a reluctant monk, in a post- HOLOCAUST California. Already some features typical of the mature TP novel were taking shape: protagonists who have been lamed by symbolic wounds but who are depicted with a sustaining dark geniality; plots which mix genres with elegant facility but without bleaching out or calling into philosophical question the various worlds which are flung together (so that TP cannot be described as an author of FABULATIONS - differing in this from his colleague and sometime collaborator, James P. BLAYLOCK); and settings described with florid clarity and great devotion to detail. But the first 2 tales - written as they were for LASER BOOKS - only hinted at these riches; it was not until his third novel, *The Drawing of the Dark* (1979), an outright FANTASY, that TP began clearly to demonstrate his complex gifts. The title refers to the drawing of a beer which has been brewed in one location - atop the grave of Finn Mac Cool - for several thousand years, and which must be drawn by Merlin in the middle of the 16th century to allow a reborn Fisher King (and the protagonist, who is an avatar of Arthur himself) to save Europe from the Turks. Vienna is vividly depicted; the story, told in a slangy but unmocking manner, is gripping. *THE ANUBIS GATES* (1983; rev 1984 UK), which won the 1984 PHILIP K. DICK MEMORIAL AWARD and is a central example of STEAMPUNK, may be the easiest of all

TP's books to admire, though it is less daunting in scope than his later work. While tracing the career and work of early-Victorian poet William Ashbless - both TP and James P. Blaylock have written "Ashbless" poems, including "Offering the Bicentennial Edition of the Complete Twelve Hours of the Night" (1985 broadsheet) by both authors - the soon-to-be-wounded protagonist Brendan Doyle is sent by TIME TRAVEL to the London of 1810, where he is trapped, and the plot thickens with virtuoso speed; Egyptian MAGIC (intricately described in terms of the precise techniques necessary to operate it) intersects with a compulsive and feverish vision of the underground life of the great city (patently derived from the work of Charles DICKENS), while haunted MONSTERS roam the aisles of the city and Doyle ricochets backwards through time and forwards into the body of Ashbless, whom he becomes. Fantasy, sf, horror and historical fiction all marry here with an ease which seems entirely natural. TP's next novel, Dinner at Deviant's Palace (1985), which also won the Dick Award, marked a partial return to the comparative simplicities of his first work, though its use of post-holocaust California was markedly less genre-bound than that of Epitaph in Rust, especially in its protagonists' re-enactment of the Orpheus and Eurydice legend, and in the confrontation with an ALIEN, who is both a fake MESSIAH and Lord of the Underworld. On Stranger Tides (1987) is a hugely enriched pirate yarn, set in an ALTERNATE-WORLD 18th century and concerning (in part) a search for IMMORTALITY. The Stress of Her Regard (1989), possibly TP's most sustained single novel, is set in the early 19th century of THE ANUBIS GATES, focusing not only on Byron (who appears in the earlier book) but on Percy Shelley and Mary SHELLEY and John Keats as well, in a story involving lamiae and vampires (SUPERNATURAL CREATURES), culminating in the sf-like revelation that non-carbon-based forms of life have survived and are the secret masters of the Austrian Empire. Last Call (1992) is a complex contemporary fantasy novel in which Bugsy Siegel is one of a series of Fisher Kings; its protagonist must avoid being sacrificed in a ritual of succession. Though his fertility of invention occasionally (as often with Blaylock) impedes the flow of story, TP is at heart a storyteller, and ruthlessly shapes his material into narrative form. The result is one of the few genuinely original bodies of work in the modern sf/fantasy field. [JC]Other works: Night Moves (1986 chap); The Way Down the Hill (1986 chap). About the author: A Checklist of Tim Powers (1991 chap) by Tom Joyce and Christopher P. STEPHENS. See also: CLICHES; GOTHIC SF; HEROES; RECURSIVE SF; WRITERS OF THE FUTURE CONTEST.

POWER SOURCES

We live in an age of imminent resources crisis, anxiously anticipating the depletion of fossil-fuel reserves even while we become reluctant to rely on NUCLEAR POWER because of the POLLUTION problems caused by radioactive wastes. New options rely either on discoveries not yet made - the development of nuclear-fusion reactors, or of more efficient ways to convert solar energy into electricity - or on a political will which governments of all persuasions seem too short-sighted to exercise, as with tidal and wind power. There was, however, little trace of such anxieties in sf published before public concern began to grow; the future scenarios envisaged by early sf writers frequently assumed our energy resources to

be potentially infinite. For most of human history, MACHINES were worked by three basic power sources: wind, water and muscle. For millennia people used fire as a source of heat and an agent of physical and chemical change without learning how to harness it as an energy source in mechanical work; then the invention of the steam engine precipitated the Industrial Revolution. Sf writers, following in the tracks of countless optimists who had tried to sidestep the problem by inventing "perpetual-motion machines", were only too ready to imagine future revolutions of similarly awesome scope. Electricity was often viewed as a quasimagical animating force, as in Mary SHELLEY's *Frankenstein, or The Modern Prometheus* (1818; rev 1831) and Arthur Conan DOYLE's "The Los Amigos Fiasco" (1892). In Lord LYTTON's *The Coming Race* (1871) the key to energy-prosperity is vril, a kind of "atmospheric magnetism" administered by a device bearing a suspicious resemblance to a magic wand (a wand waved to considerable effect in *The Vril Staff* [1891] by "XYZ") (PSEUDO-SCIENCE). Percy GREG's *Across the Zodiac* (1880) employs the equally mysterious "apergy", which seems to be ANTIGRAVITY with a seasoning of electrical mysticism; like vril, apergy was borrowed by other writers, including John Jacob ASTOR in *A Journey in Other Worlds* (1894), and it is the obvious model for the antigravity devices used in Robert CROMIE's *A Plunge into Space* (1890) and H.G. WELLS's *THE FIRST MEN IN THE MOON* (1901). In *Twenty Thousand Leagues under the Sea* (1870; trans 1873) Jules VERNE was ready to assume that electrical energy could be drawn from sea water by quasimagical means. This optimistic outlook was boosted by the discovery of X-rays in 1895; for many years thereafter unlimited power was casually generated in sf stories by the invocation of magical "rays". The discovery of radioactivity only a few years later provided yet another jargon: power derived from atomic breakdown, spontaneous or forced. This, of course, turned out to be a real possibility, but its prominence in early sf owes more to convenience than to an assessment of its true potential. GENRE SF inherited this considerable jargon and understandably made the most of it. E.E. "Doc" SMITH's *The Skylark of Space* (1928; 1946) begins when a bathtub coated with "X, the unknown metal" reacts to the appropriate Open Sesame by releasing limitless quantities of "infra-atomic energy" - a moment cruelly parodied by the discovery of "Cheddite" in Harry HARRISON's *Star Smashers of the Galaxy Rangers* (1973). Given this confidence in the imminent availability of unlimited power, it is not surprising that the most thoughtful work of speculative writers in the early 20th century deals with the question of the social responsibility of scientists making such discoveries. Stories of wise men blackmailing the world into peace and social justice for all are common, but much more delicate exercises include Karel CAPEK's satire *The Absolute at Large* (1922; trans 1927) and his surreal "atomic phantasy" *Krakatit* (1924; trans 1925). The former concerns the "Karburator", which not only releases the energy bound in matter but also the spiritual "power" which went into its creation, generating worldwide religious fanaticism; a later satire with a related theme is Romain GARY's *The Gasp* (1973), in which the energy of immortal souls is harnessed as an industrial power source. Pulp sf celebrated the imminence of what Hugo GERNSBACK sometimes called the "Age of Power Freedom". Antigravity and wonderful rays were given carte blanche to defy the conservation laws - a situation encouraged rather than inhibited by

the real-life discovery of atomic power, which was for a brief period taken as "proof" that limitless energy was actually available. Jack WILLIAMSON's "The Equalizer" (1947) is a thoughtful attempt to analyse the social consequences of free power for all, resurrecting the vril staff as a literary device. Raymond F. JONES's "Noise Level" (1952) supposes that the only thing standing between science and the discovery of limitless power is the belief of scientists in its impossibility. So convincing was this line of argument to readers of ASTOUNDING SCIENCE-FICTION that the story gave rise to several sequels, letters and articles criticizing contemporary patent law for its unfair treatment of perpetual motion and its blatant discrimination against discoveries of new fundamental principles in science. This optimism waned rapidly during the 1960s, although Theodore STURGEON's "Brownshoes"(1969) is a heartfelt parable about the difficulty of making a gift of perpetual motion to mankind in a world where so many vested interests (e.g., oil companies) would do their utmost to suppress it. The dependence of the developed countries on shrinking coal and oil reserves was brought home dramatically from 1973 on by the emergence of OPEC as a political force capable of dictating energy policy to the West. The POLITICS of energy came to play a major part in many near-future novels, including Frederik POHL's JEM: The Making of a Utopia (1979) and The Cool War (1981), the latter also being one of several stories to explore the idea of transmitting power in the form of microwaves down to Earth from solar cells mounted on satellites. The OPEC-precipitated oil crisis of the 1970s inspired such unlikely projects as the attempt to hijack the Middle-Eastern oilfields by TIME TRAVEL in Wolfgang JESCHKE's The Last Day of Creation (1981; trans 1982) and the use of exotic living machinery to extract oil in Rory HARPER's ALTERNATE-WORLD story Petrogypsies (1989); many TECHNOTHRILLERS are concerned with power sources in one way or another, standard plots often centring either on squabbles between multinational power companies or on the discovery - usually merely as a MCGUFFIN - of new ways of producing energy. Fantasies in which energy sources appear by miraculous fiat, like D.G. COMPTON's Ascendancies (1980), acquired a sharp cautionary note. A real measure of imaginative fervour with respect to marvellous power sources survives only in the matter of SPACESHIP propulsion, ranging from the solar yachts of Arthur C. CLARKE's "Sunjammer" (1964; vt "The Wind from the Sun"), which use the SOLAR WIND, to the BLACK-HOLE propulsion system for interplanetary vessels in the same author's Imperial Earth (1975). POWYS, JOHN COWPER

(1872-1963) UK writer, resident for much of his career in the USA, though he returned to the UK in his later years. The novels of his old age, from Morwyn, or The Vengeance of God (1937) onwards, combine fantasy and sf elements in an attempt, sometimes obscure, to heat his eccentric mysticism into a unique amalgam: Porius (1951) is an Arthurian fantasy; The Inmates (1952) presents the "delusions" of a cast of mental patients in exaggerated terms and features a giant helicopter; Atlantis (1954) describes Odysseus's search for ATLANTIS; The Brazen Head (1956) deals with Roger Bacon (c1214-1292) as alchemist. Between 1957 and 1960, near the end of his life, JCP produced a sequence of remarkable FABULATIONS,

some of them unhinged. They were all eventually published as *Up and Out* (coll 1957), the first novella of which is a post- HOLOCAUST tale in which four survivors witness the end of time, *All or Nothing* (1960), in which two children make a kind of tour of the Universe, *Real Wraiths* (1974 chap), *Two and Two* (1974 chap) and *Three Fantasies* (coll 1985). Of JCP's two brothers, both also writers, T(heodore) F(rancis) Powys (1875-1953) wrote much of strong fantasy interest. [JC] Other works: *The Owl, the Duck, and - Miss Rowe! Miss Rowe!* (1930 chap US); *A Glastonbury Romance* (1932 US); *Maiden Castle* (1936 US); *Owen Glendower* (1940 US); *Lucifer: A Narrative Poem* (1956); *Homer and the Aether* (1959). See also: **END OF THE WORLD; FANTASTIC VOYAGES.**

POYER, DAVID C(HARLES)

(1949-) US writer who has published non-genre work as David Poyer, and sf variously as David C. Poyer, D.C. Poyer and David Andreissen. *The Shiloh Project* (1981) is set in the near future of an ALTERNATE WORLD in which the South had won the Battle of Gettysburg 120 years before. *Star Seed* (1982) as Andreissen places within a context of exceeding grimness - ALIENS have irrevocably poisoned Earth in an attempt to "terraform" it for their own needs - a tale of almost exuberant action: a surviving team composed of one human, one mutant and one dolphin subverts the eponymous starship to revolt against the "terraformers", then sets off to find another planet. In DCP's third and most interesting novel, *Stepfather Bank* (1987), set in a post- HOLOCAUST world dominated by a paternalist bank, a rogue poet hornswoggles and destabilizes the entire AI-controlled system, which has in fact been working to preserve humanity as well as to control it. [JC] See also: **UNDER THE SEA.**

POYER, JOE

Working name of US writer Joseph John Poyer (1939-) for his fiction, beginning in 1965 with "Mission Red Clash" for ASF, a magazine with which he was closely associated. Of his novels, *Operation Malacca* (1968), about the use of talking dolphins for military purposes, and *North Cape* (1969) are TECHNOTHRILLERS. *Tunnel War* (1979) is an ALTERNATE-WORLD tale involving the 1911 construction of a Channel Tunnel. JP has also written novels in other genres. [JC]

POYSER, VICTORIA

[r] ROWENA.

PRAGNELL, FESTUS

(1905-?1965) UK writer and policeman who first appeared in the US PULP MAGAZINES with "The Venus Germ" for *Wonder Stories* in 1932, written in collaboration with R.F. STARZL; he published 1 tale as by Francis Parnell (Festus Pragnell is not a pseudonym). His Don Hargreaves stories, all set on a lurid Mars, appeared in AMZ from 1938 ("Ghost of Mars") to 1943 ("Madcap of Mars"). His first sf novel, *The Green Man of Kilsona* (1936; rev vt *The Green Man of Graypec* 1950 US), describes a voyage into a miniature world (GREAT AND SMALL). A second novel, *The Terror from Timorkal* (1946), sets a world-threatening crisis in Africa, where a new mineral suitable for the manufacture of superweapons is being exploited by unscrupulous politicians. His last work, "The Machine God Laughs" (1948),

was the title story of *The Machine God Laughs* (anth 1949) ed William L. CRAWFORD. [JC]Other works: *Thieves of the Air* (c1943 chap) with Benson HERBERT.

PRATCHETT, TERRY

(1948-) UK writer who began publishing with "The Hades Business" in *Science Fantasy* in 1963, and who for many years was in full-time employment, as a journalist until 1980, and as a publicity officer for the Central Electricity Generating Board until 1987; as a consequence, his early books were written and published intermittently. His first, *The Carpet People* (1971; rev 1992), is a fantasy for children. *The Dark Side of the Sun* (1976), sf, makes gentle fun of the alien-cluttered Known Space books of Larry NIVEN, though further targets, including Ron GOULART and Jack VANCE, are also affectionately addressed; *STRATA* (1981) also parodies Niven and other HARD-SF writers, in this case by depicting an artificial flat world embedded within Ptolemaic heavens - it is a POCKET UNIVERSE, in fact-seemingly constructed by the ancient Spindle Kings, though in fact Builder Gods were responsible. No GODS are given responsibility by name for the construction of *Discworld*, a fantasy creation borne through space on the back of a huge turtle, but an sf world-building premise does unseriously underlie the *Discworld* books, which made TP famous. The novels themselves are FANTASY. The series comprises *The Colour of Magic* (1983), *The Light Fantastic* (1986), *Equal Rites* (1987), *Mort* (1987), *Sourcery* (1988), *Wyrd Sisters* (1988), *Pyramids* (1989), *Guards! Guards!* (1989), *Eric* (1990) with Josh KIRBY (responsible for all the UK *Discworld* covers) given equal billing on the original edition (the text is heavily illustrated; paperback editions, lacking the illustrations, give TP alone as author), *Moving Pictures* (1990), *Reaper Man* (1991), *Witches Abroad* (1991), *Small Gods* (1992), *Lords and Ladies* (1992), *Men at Arms* (1993), *Soul Music* (1994) and *Interesting Times* (1994) with further titles projected; they make up the finest set of pure comedies the genre has yet seen. A second series, the *Book of the Nomes* CHILDREN'S-SF trilogy about small extraterrestrials caught for eons on Earth and attempting escape, comprises *Truckers* (1989), *Diggers* (1990) and *Wings* (1990), all three being assembled as *The Bromeliad* (omni 1993 US). *Good Omens: The Nice and Accurate Prophecies of Agnes Nutter, Witch* (1990; rev 1990 US) with Neil GAIMAN is a fantasy about the END OF THE WORLD. The youthful protagonist of *Only You Can Save Mankind* (1992), sf for young adults, must help the space warriors of an arcade game (GAMES AND TOYS) escape futile combat with human players; the sequel is *Johnny and the Dead* (1993), in which Johnny fights on behalf of its dead residents to keep developers from destroying a cemetery. [JC]See also: BRITISH SCIENCE FICTION AWARD; GREAT AND SMALL; HUMOUR; MAGIC; SATIRE; TERRAFORMING.

PRATT, CORNELIA ATWOOD

Working and maiden name of Cornelia Atwood Comer (? -1929), author with Richard Slee of *Dr Berkeley's Discovery* (1899), in which the doctor solves a mystery with his memory-cell-reading device (PSYCHOLOGY). [JC]

PRATT, (MURRAY) FLETCHER

(1897-1956) US writer and historian who began his career as an author and translator for Hugo GERNSBACK's *SCIENCE WONDER STORIES* and its companions

in the early 1930s; his first published story was "The Octopus Cycle" for AMZ in 1928 as with Irvin Lester (a Pratt pseudonym). While doing translations of German sf novels FP evolved what became a renowned method of extracting payment from the notoriously slow Gernsback organization: he would submit the first part of a novel, wait until it was set in type, then refuse to deliver the conclusion until paid. He undertook many collaborations, notably "City of the Living Dead" (1930) with Laurence MANNING, and contributed regularly to the sf magazines; but he is now best remembered for his fantasy, especially for his collaborations with L. Sprague DE CAMP (whom see for fuller details). The most successful were the Harold Shea stories, among which the main titles are: The Incomplete Enchanter (1940 Unknown; 1941), The Castle of Iron (1941 Unknown; 1950) and The Wall of Serpents (fixup 1960; vt The Enchanter Completed 1980 UK). The first 2 titles were assembled as The Compleat Enchanter: The Magical Misadventures of Harold Shea (omni 1975), and all 3 were eventually assembled as The Intrepid Enchanter (omni 1988 UK; vt The Complete Compleat Enchanter 1989 US). A second series with De Camp, the Gavagan's Bar CLUB STORIES, assembled in Tales from Gavagan's Bar (coll 1953; exp 1978), comprised mostly high-spirited tall tales, some of them sf. On their collaborations De Camp, as junior partner, would write a first draft after he and FP had jointly outlined the story; FP would then compose the final draft, to which De Camp would put the finishing editorial touches. This routine was varied on only a very few later short stories. FP's own fantasy novels are The Well of the Unicorn (1948 as by George U. Fletcher; 1967 as by FP) and The Blue Star (1952 in Witches Three ed anon FP; 1969); Witches Three was one of the Twayne Triplets series - Twayne being the publisher - each vol assembling 3 original novellas by different authors with a common theme or setting. The series idea was FP's, and he ed (also anon) 1 later vol, The Petrified Planet (anth 1952). In the end the project proved abortive, but the last title was the first SHARED-WORLD anthology to appear in the genre. FP also wrote several volumes of popular history and 3 books on rockets and space travel including Rockets, Jets, Guided Missiles and Space Ships (1951). [MJE/JC]Other works: The Land of Unreason (1941) and The Carnelian Cube (1948), both with De Camp; Double in Space (coll 1951; rev 1954 UK), in the 1st edn comprising the 2 novellas "Project Excelsior" and "The Wanderer's Return", the latter being replaced in the UK by "The Conditioned Captain", itself already published in the USA as The Undying Fire (1953); World of Wonder (anth 1951), a Twayne book but not a Triplet; Double Jeopardy (fixup 1952); Invaders from Rigel (1932 Wonder Stories Quarterly as "The Onslaught From Rigel"; 1960); Alien Planet (1932 Amazing Stories Quarterly as "A Voice across the Years"; 1962). About the author: Chapter 7 of Literary Swordsmen and Sorcerers (1976) by L. Sprague De Camp. See also: AUTOMATION; CLONES; DYSTOPIAS; FINLAND; HUMOUR; LEISURE; MAGIC; MATHEMATICS; PSYCHOLOGY; PUBLISHING; SCIENCE FANTASY; UTOPIAS.

PREDATOR

Film (1987). Amercent/American Entertainment/20th Century-Fox. Dir John McTiernan, starring Arnold Schwarzenegger, Carl Weathers, Elpidia Carrillo, Bill Duke. Screenplay Jim Thomas, John Thomas. 106 mins. Colour. A special-forces group undertaking a commando-style rescue mission in

South America clashes bloodily with guerrillas and then very much more bloodily with the Predator: an intelligent ALIEN that can bend light to make itself almost invisible. The alien picks them off one by one, losing only to the Schwarzenegger character, by now reduced to primitive combat. The blend of the jungle-warfare (or Vietnam) scenario with the alien-INVASION genre is potentially interesting, but the treatment follows a wholly predictable pattern. Moreover on the evidence presented, the alien should have won. [PN]See also: MONSTER MOVIES.

PREDATOR 2

Film (1990). Gordon/Silver/Davis/20th Century-Fox. Dir Stephen Hopkins, starring Danny Glover, Gary Busey, Ruben Blades, Maria Conchita Alonso, Bill Paxton. Screenplay Jim Thomas, John Thomas. 107 mins. Colour. This superior sequel to PREDATOR is a well oiled adrenaline machine. Los Angeles, 1997, is anarchic, with Jamaican and Colombian drug gangs, the LA police and the FBI all at each other's throats. A new ALIEN Predator, drawn by global hotspots, is trophy-hunting there on safari. A Black policeman succeeds where the creepy feds fail, and as a recognition of his valour receives a duelling pistol from yet more Predators who arrive for the finale. Stan Winston's alien design (great mandibles) is threatening and interesting, just right for a New Right Vigilante alien who picks off the bad guys first. P2 is pure and stylish exploitation-movie making, and shows a witty recognition of the same violence-begets-violence syndrome it abets. [PN]See also: CINEMA; MONSTER MOVIES.

PREDICTION

The most widespread false belief about sf among the general public is that it is a literature of prediction. Very few sf writers have ever claimed this to be the case, although Hugo GERNSBACK did see one function of his sf magazines as to paint an accurate picture of the future. Very few of the stories he published lived up to his editorializing. When John W. CAMPBELL Jr took over the editorship of ASF he demanded an increasing scientific plausibility from his writers, but a plausible-sounding "perhaps" is a long way from prediction. None of this has prevented sf fans from crowing with delight when an sf writer has made a good guess, and the mythology of sf is full of such examples. H.G. WELLS predicted the use of the tank in "The Land Ironclads" (1903), of aerial bombing in The War in the Air (1908) and of the atom bomb (more or less) in The World Set Free (1914). Ever since Einstein's mass-energy equations had been published, it had been generally known that enormous power was locked up in the atom, and stories about NUCLEAR POWER and atomic WEAPONS were commonplace in the 1920s and 1930s; they became very much more accurate in the early 1940s, and Cleve CARTMILL, Robert A. HEINLEIN and Lester DEL REY all wrote good predictive stories before Hiroshima. (Heinlein also predicted the water bed and the use of remote-control WALDOS.) Most early prediction stories were about future WAR, future weapons and the various possibilities of INVASION. Not many of them were correct; although several stories predicted war between the UK and Germany before 1914 (and, indeed, between the UK and almost everyone else), most of them centred on an invasion across the Channel which never took place. Edward Everett HALE wrote rather charmingly about an artificial satellite in "The Brick Moon"

(1869). Arthur C. CLARKE wrote a celebrated article about communications satellites, "Extraterrestrial Relays" (Wireless World Oct 1945), but this was not a story; nor, sadly, did it become a patent. Jules VERNE is thought by many to have invented the submarine in *Vingt mille lieues sous les mers* (1870; trans as *Twenty Thousand Leagues Under the Sea* 1873), but in fact functional submarines had existed since at least the 18th century. One of Verne's best pieces of prediction was quite accidental; the moon-shot in *De la terre a la lune* (1865), which was published with the sequel *Autour de la lune* (1870) in *From the Earth to the Moon* (trans 1873), is fired from a spot very close to Cape Canaveral in Florida. Rudyard KIPLING predicted transatlantic aerial trade, specifically airmail postage, in *With the Night Mail* (1905; 1909 chap US). Erasmus DARWIN's poem *The Temple of Nature* (1802) preceded Verne, Wells and just about everybody else in its joyful description of airborne fleets of transport ships, war in the air, submarines and great CITIES with skyscrapers. Edwin BALMER had an early form of lie detector in *The Achievements of Luther Trant* (coll 1910) with William MacHarg. Hugo Gernsback had many technological predictions in *Ralph 124C 41+* (1911-12; fixup 1925); this is one of the 18 stories of the period quoted by Everett BLEILER in *Science-Fiction: The Early Years* (1990) as anticipating tv. Nevil SHUTE predicted metal fatigue as a danger to aircraft in *No Highway* (1948), written shortly before several planes crashed for exactly that reason. It is a moderately impressive list, and could be made more so by multiplication of examples, but it proves very little. For every correct prediction a dozen were wrong, or correct only if facts are stretched a little; for example, PULP-MAGAZINE sf of the 1930s made much of DEATH RAYS; it is rather a dubious vindication to point out that laser beams can now be used as weaponry. The entry FUTUROLOGY (which includes several examples of real prediction) discusses the usual strategy of sf writers when dealing with the future; their imaginative scenarios are as often as not meant as awful warnings, and the emphasis is almost invariably on what could happen, not what will happen. It would hardly be fair to attack sf writers as false prophets when they seldom think of themselves as being in the prophecy business at all. In many ways their errors are more interesting than their successes, for they add to our knowledge of social history. Our expectations of the future change just as quickly as history itself changes; the AUTOMATION to which Gernsback and others looked forward in the teens of the century had already become a potential nightmare by the time of Kurt VONNEGUT Jr's *PLAYER PIANO* (1952; vt *Utopia* 14). Where sf is correct, of course, the explanation is not magic, just good research. Verne took much advice from his engineer friends and Shute spent many years as an aeronautical engineer - and, of course, many sf writers subscribe to scientific journals . . . One area where sf can claim some credit is SPACE FLIGHT; this was the central dream of sf, even during the years when respectable scientists regularly argued for its impossibility (ROCKETS). But even here, though sf was right enough in the broad sense, it managed to get both the sociological and the technological details appallingly wrong. Most of Heinlein's early Moon rockets were built by capitalist enterprise, and not by the resources of the US Government; the Russian government, naturally, was not mentioned at all, even though it was in Russia that the first solidly grounded theorizing

about space travel had taken place, in the work of Konstantin TSIOLKOVSKY, who wrote somewhat didactic but staggeringly accurate prophetic stories on the subject, beginning in the 19th century. The eponymous vessel in Heinlein's *Rocket Ship Galileo* (1947) is, absurdly, constructed largely by teenage boys in the backyard. Only William TENN ran counter to the free-enterprise spirit of most US sf by imagining in "Alexander the Bait" (1946) that the space programme would be run by giant government institutions, not individuals or even corporations. Sf stories about the first Moon landing almost invariably omit the single most dramatic detail, that the entire proceedings would be watched on Earth on tv; an exception is Arthur C. CLARKE's *Prelude to Space* (1951 US; vt *Master of Space* 1961 US; vt *The Space Dreamers* 1969 US). COMPUTERS are another area where sf's predictive abilities were ridiculously askew; so preoccupied were sf writers with the dramatic possibilities of the ROBOT that they hardly noticed that back in the real world mechanical men were of little interest to anyone while the computer - driven by the invention of the transistor, likewise missed by sf - was rapidly transforming the face of the future. Sf writers caught up, of course, but only after computers were becoming commonplace. Nearly all the examples cited are cases of predictions in the sphere of TECHNOLOGY; more interesting perhaps, and generally with a slightly higher success rate, were the predictions made about future POLITICS and SOCIOLOGY. Fortunately most DYSTOPIAS have not come into being in the real world, but certain aspects of them certainly have. One of the most interesting cases of prediction in the SOFT SCIENCES was Robert Louis STEVENSON's *Strange Case of Dr Jekyll and Mr Hyde* (1886), whose melodramatic suppositions were, even as he wrote, being conceptually paralleled by the work of Sigmund Freud (1865-1939), who also came to believe that the human mind had a primitive component, the id, not wholly masked by the more reputable ego. Occasionally the images thrown up by sf enter the public mind by an apparent process of osmosis, so that they become known even to those who do not read sf, and thereby create a kind of self-fulfilling prophecy. Some examples are given in FUTUROLOGY, which discusses this question. Perhaps the most notable is again the case of space flight, where it is certainly arguable that the US Government could never have got away with budgeting such large amounts of the national income on the space programme had the desire for space flight, largely catalysed by sf, not been so great. Most sf prediction is set in the NEAR FUTURE, and further examples are given in that entry. In the nature of things, a great many thematic entries in this encyclopedia necessarily deal in part with prediction. Apart from those already mentioned, entries where predictions in the social sciences predominate include CITIES; DISASTER, ECOLOGY, ECONOMICS, GAMES AND SPORTS, LEISURE, MEDIA LANDSCAPE and OVERPOPULATION; more technical areas where sf has made checkable predictions are COMMUNICATIONS, CYBERNETICS, ECOLOGY, MACHINES, MEDICINE, MOON, POLLUTION, POWER SOURCES, TRANSPORTATION and UNDER THE SEA; areas where sf predictions have not yet had the opportunity for a full testing, but may be tested in the next 50 years, are CLONES, CRYONICS, CYBORGS, GENETIC ENGINEERING, SPACE HABITATS, SPACESHIPS, SUSPENDED ANIMATION and TERRAFORMING. Many readers suppose that the CYBERPUNK predictions of human experience of VIRTUAL REALITIES achieved by plugging the brain into

machines are truly predictive. A technical problem is that the neurons in the brain transmit information much more slowly than microprocessors do, which might make the brain/computer interface rather tricky - but time will tell. An sf scholar who has written interestingly about prediction is Chris MORGAN, whose relevant books (their remit extends well beyond sf to include popular science, journalism and so on) are *The Shape of Futures Past: The Story of Prediction* (1980) and, with David LANGFORD, *Facts and Fallacies: A Book of Definitive Mistakes and Misguided Predictions* (1981), the latter being especially funny and eye-opening. [PN]

PREHISTORIC ROMANCES

ANTHROPOLOGY; APES AND CAVEMEN (IN THE HUMAN WORLD); ORIGIN OF MAN.

PREHISTORIC WORLD

Roger CORMAN.

PREISS, BYRON (CARY)

(1953-) US book packager, anthologist and co-author of 2 sf novels - *Guts* (1979) with C.J. Henderson and *Dragonworld* (1979) with J. Michael REAVES - and *The Bat Family* (1984), a juvenile. Though he has also edited and co-edited numerous ANTHOLOGIES, BP is best known as the most successful of the independent sf book packagers (i.e., creative middlemen who conceive projects, pitch them to publishers, commission writers, artists and others to produce the required material, etc.), founding Byron Preiss Visual Publications Inc (frequently abbreviated to BPVP) in 1974. The company's first project was the *Weird Heroes* anthology series - BP himself edited *Weird Heroes* #1 (anth 1975), #2 (anth 1975), #6 (anth 1977) and #8 (anth 1978) - which early demonstrated BP's interest in visual presentation. Among the early BPVP projects were a number of GRAPHIC NOVELS: adaptations included a version written by BP of Alfred BESTER's *Tiger! Tiger!* (1956 UK; rev vt *The Stars My Destination* 1957 US) published under the vt in 2 vols (graph 1979 and graph 1992), both vols illus Howard CHAYKIN; original works included Samuel R. DELANY's *Empire* (graph 1978) with Chaykin. In the 1980s, BPVP branched out into many different areas, from children's and young-adult books to art books, nature books and other projects. But most of the company's attention remained on the sf field, and BPVP was one of the forces behind the huge growth during that decade of SHARED-WORLD texts tied either to the work of well known authors or generated by BPVP itself, and almost always written on a SHARECROP basis. Projects of the first sort included Isaac Asimov's *Robot City*, a series of novels by various authors including David F. BISCHOFF, Arthur Byron COVER and William F. WU; Arthur C. Clarke's *Venus Prime*, all by Paul PREUSS (whom see for details); and Robert Silverberg's *Time Tours*, a series of novels by Wu and others. Projects generated by BPVP included *U.S.S.A.*, to which authors like Tom DE HAVEN contributed individual volumes. Such projects - which BPVP was far from alone in producing - generated lively debate, some critics feeling that writers were being led to recycle the ideas of others rather than exploring their own. Defenders of the sharecrop argued that newer writers, who might otherwise have trouble selling a first novel, could more readily work for hire; and suggested that young readers might be encouraged to read more ambitious sf through initial exposure to accessible shared-world books. Other BPVP projects included the *Next Wave*

line of novels, each focusing on a specific area of scientific speculation and accompanied by an essay on the subject by a notable scientist; titles included Red Genesis (1991) by S.C. SYKES, about colonizing MARS, with an essay by Eugene Mallove; and Alien Tongue (1991) by Stephen LEIGH, about ALIEN contact, with an essay by Rudy RUCKER. Also during the 1980s, BP produced several lavishly illustrated, ambitious theme anthologies combining fiction and nonfiction. The Planets (anth 1985) featured fiction by Robert SILVERBERG, Jack WILLIAMSON and others, and essays by scientists such as Dale P. Cruikshank. The Universe (anth 1987) included fiction by Poul ANDERSON and Gene WOLFE along with essays on COSMOLOGY and BLACK HOLES. The Microverse (anth 1989) included the NEBULA-winning "At the Rialto" by Connie WILLIS along with nonfiction from Gerald Feinberg (1933-1992) and Nobel Prize-winning physicist Leon M. Lederman. First Contact (anth 1990) was a similar treatment of CETI. Other anthologies have included the Ultimate series: The Ultimate Dracula (anth 1991) with David Keller, Megan Miller and (anon) Martin H. GREENBERG; The Ultimate Werewolf (anth 1991) with John BETANCOURT, Keller, Miller and (anon) Greenberg; The Ultimate Frankenstein (anth 1991) with Keller, Miller, Betancourt and (anon) Greenberg; The Ultimate Dinosaur: Past, Present, Future (anth 1992) with Robert Silverberg; further titles projected. Despite the controversy surrounding some of his sharecropped projects, BP should be recognized for his contribution to the visual presentation of sf, and for reaching out to a younger readership through such projects as the new Tom Swift adventures (TOM SWIFT for details), the Dragonflight series of short novels, and the Camelot World series. Of all the book packagers, BP is likely the only one from his period to have made any real creative contribution to the field. [RKJK] Other works: The Art of Leo and Diane Dillon (1981); The Secret: A Treasure Hunt (anth 1982).

PRENTISS, CHARLOTTE

Charles PLATT.

PRESCOT, DRAY

Kenneth BULMER.

PRESIDENT'S ANALYST, THE

Film (1967). Panpiper/Paramount. Written/dir Theodore J. Flicker, starring James Coburn, Godfrey Cambridge, Severn Darden, Joan Delaney, Pat Harrington, Barry McGuire. 104 mins. Colour. A psychoanalyst (Coburn), hired to listen to the President's troubles, breaks down under the strain. He takes refuge with a "typical" US family who describe themselves as "militant liberals" (the husband collects guns, the wife takes karate lessons and their son specializes in wire-tapping). Pursued by the FBI (all very short men), the CIA (all college graduates with pipes and tweed jackets), Russians, Chinese and others, the hero repeatedly avoids death by a hairsbreadth; he then learns that the power secretly running the USA is the Telephone Company (manned by bland, smiling ROBOTS), which plans to insert a miniature telephone in the head of every person in the world. The film ends with the robots still in control. Flicker's pleasing SATIRE is witty and literate, and contrives to have it both ways by spoofing PARANOIA movies while actually exploiting our genuine (and well grounded)

paranoias. [JB/PN]See also: CINEMA.

PRESSOR BEAM
FORCE FIELD.

PREUSS, PAUL

(1942-) US writer who worked in film production for a decade before beginning to write popular-science articles. He began to publish sf with *The Gates of Heaven* (1980) which, with *Re-Entry* (1981), comprises a very loose sequence, its main linkage being the assumption that BLACK HOLES may be used to travel through both space and time. The second volume in particular demonstrates considerable virtuosity in its presentation of a SPACE-OPERA venue which is opened up - though at times rendered almost incomprehensibly complicated-through a plot which encompasses various timelines, the protagonist's discovery that he is his own beloved guru, and much action. Later novels back away sharply from such exuberance, gearing themselves more strictly to extrapolations based on contemporary science. The first of these, *Broken Symmetries* (1983), concerns the human and political implications of the markedly plausible discovery by SCIENTISTS of a subatomic particle of explosive military potential; the tone of the book has several times been compared with that of Gregory BENFORD's *TIMESCAPE* (1980). *HUMAN ERROR* (1985) similarly examines the ethical implications of a development in GENETIC ENGINEERING, bearing some resemblance to the practically simultaneous *BLOOD MUSIC* (1985) by Greg BEAR; while *Starfire* (1988) gives a verismo view of a NEAR-FUTURE space expedition. Rather less interestingly, PP then became involved in the Venus Prime sequence of novels tied to works and some concepts generated by Arthur C. CLARKE. The sequence - *Breaking Strain* * (1987), *Maelstrom* * (1988), *Hide and Seek* * (1989), *The Medusa Encounter* * (1990), *The Diamond Moon* * (1990) and *The Shining Ones* * (1991) - features the long hegira of its bio-engineered protagonist, Sparta, in her search through the Solar System for the secret of her birth (or, perhaps, fabrication). It closes with the 6th volume, and it may be hoped that the 1990s will see PP once again apply his sharp abilities to fully independent work. [JC]See also: ASTEROIDS; BIOLOGY.

PRICE, E(DGAR) HOFFMANN (TROOPER)

(1898-1988) US writer whose career lasted 64 years. He served in WWI, graduated West Point in 1923, and began to publish weird fiction - the genre for which he is remembered - with "Triangle with Variations" for *Droll Stories* in 1924. By the time he stopped writing for the PULP MAGAZINES in the 1950s he had published hundreds of stories in dozens of outlets, sometimes as Hamlin Daly, and often drawing upon Oriental and near-Eastern experiences for his backgrounds. His best known story from this period is probably "Through the Gates of the Silver Key" (1934 *Weird Tales*) with H.P. LOVECRAFT, a personal friend. Some of his early work was later assembled in *Strange Gateways* (coll 1967) and *Far Lands, Other Days* (coll 1975). In his retirement EHP became annoyed at being remembered only as one of the "Lovecraft Circle", and in 1979 he resumed writing. In his final decade he wrote a Western, two fantasies - *The Devil Wives of Li-Fong* (1979) and *The Jade Enchantress* (1982) - and the loose Operation sequence of sf novels: *Operation Misfit* (1980), *Operation Longlife* (1983),

in which EHP expressed a loathing of doctors and argued for the individual's right to die, *Operation Exile* (1986) and *Operation Isis* (1987). The sequence is set in a DYSTOPIAN future: it warns about Marxism and comments on the weakness and decadence of the US Government; the heroes are always competent, the plots often chaotic. Since he claimed to be writing novels of ideas, it should be mentioned that EHP was an astrologer, a Theosophist, a practising Buddhist and a conservative Republican, and ideas from those fields do indeed percolate through his work. EHP may be remembered primarily for his vivid biographical sketches of his friends Robert E. HOWARD, Lovecraft and Clark Ashton SMITH. A volume of reminiscences and a late mystery remain unpublished. [RB]See also: SMALL PRESSES AND LIMITED EDITIONS.

PRICE, ROGER (TAYLOR)

(1921-) US writer and tv personality, best known in the 1950s for his cartoon *Doodles*. In his sf novel, *J.G., the Upright Ape* (1960), the eponymous silver-haired articulate gorilla (*APES AND CAVEMEN*), having been transported to the USA, serves as a focus for much amiable but moderately far-reaching SATIRE. He is not to be confused with the Roger Price (1941-) who wrote ties for *The TOMORROW PEOPLE* . [JC]

PRIEST, CHRISTOPHER (McKENZIE)

(1943-) UK writer, married 1981-7 to Lisa TUTTLE and from 1988 to Leigh KENNEDY. He has published several novels (none apparently sf) under various pseudonyms, of which only 2 have been disclosed: John Luther Novak and Colin Wedglock. CP began to publish sf with "The Run" for *Impulse* in 1966; much of his early work, which was relatively undistinguished, was assembled as *Transplantationen* (coll trans Tony Westermayr 1972 Germany), appearing in English only later as *Real-Time World* (coll 1974). CP's first novel, *Indoctrinaire* (1970; rev 1979), is a bleak but fatally abstract tale of imprisonment set in the heart of an unrealized Brazil, where an unhelpful time-gate seems to lurk. His second, *Fugue for a Darkening Island* (1972; vt *Darkening Island* 1972 US), is much stronger; set in an England of the NEAR FUTURE, it deals with POLITICS and racial tension, focusing on the arrival of African refugees whose homeland has been destroyed by nuclear WAR. His third novel, *INVERTED WORLD* (1974; vt *The Inverted World* 1974 US), marked the climax of his career as a writer whose work resembled GENRE SF, and remains one of the two or three most impressive pure-sf novels produced in the UK since WWII; the hyperboloid world on which the action takes place is perhaps the strangest planet invented since Mesklin in Hal CLEMENT's *MISSION OF GRAVITY* (1954), though the characters pace through their lives with a haunted lassitude which seems characteristically British. The tale deals with paradoxes of PERCEPTION and CONCEPTUAL BREAKTHROUGH, and is a striking addition to that branch of sf which deals with the old theme of appearance-versus-reality. (The *Making of the Lesbian Horse* [1979 chap] is CP's spoof continuation of the book.) *The Space Machine* (1976) is a cleverly plotted pastiche of the work of H.G. WELLS, incorporating the author himself in the storyline (RECURSIVE SF) which proposes plot-explanations for some of the narrative gaps left by Wells in *THE TIME MACHINE* (1895) and *War of the Worlds* (1898); in its literary focus and its retrospection, the book marked, in

hindsight, a significant shift in CP's work. With *A Dream of Wessex* (1977; vt *The Perfect Lover* 1977 US), CP began to write tales whose increasingly intricate plots had to be read as maps through which one explored not the world (as in conventional sf) but the protagonists. 39 human minds are meshed into a computer net which projects them (or their mental simulacra) forwards from 1983 into a VIRTUAL-REALITY world of their consensus imagination, 150 years in the future, in which they "live" without memory of the real world. The entire book is a metaphor about the creative process and its relation to solipsism. The Dream Archipelago stories assembled, with others, in *AN INFINITE SUMMER* (coll 1979), intensify the sense that CP's landscapes had now become forms of expression of the psyche, and are of intense interest for the dream-like convolutions of psychic terrain so displayed. The Dream Archipelago itself is a surreally unspecific rendering of England as a land half-sunk beneath the ocean (a vision perhaps influenced by Richard JEFFERIES's *After London* [1885]), and is a powerful late-century representation of Sehnsucht (C.S. LEWIS's expression to describe a longing for something that hovers, forever unattainable, beyond the terms of reality). CP's next novels - *The Affirmation* (1981), also set partly in the Dream Archipelago, and *THE GLAMOUR* (1984; rev 1984 US) - move even more radically away from the regions of sf or fantasy. They are his best work to that point and, although representing to some sf readers an apostasy from the field, may profitably be read as explorations of ravenous psyches whose hunger expresses itself through the ingestion of or control over "unreal" (or fantasy) worlds. It might be possible to suggest that *The Affirmation* is a tale of ALTERNATE WORLDS and *THE GLAMOUR* a tale whose protagonist literally becomes invisible (INVISIBILITY); but these readings do scant justice to their intense and conscious inwardness. Though it shares a good deal of thematic material with these two, *The Quiet Woman* (1990) marks a decided return to the external world. Set in the near future, with radioactive contamination impinging upon the southern counties, the tale is a scathing vision of an England rapidly becoming a DYSTOPIA. CP was Associate Editor of *FOUNDATION* 1974-7. His anthologies are *Anticipations* (anth 1978) and, with Robert P. HOLDSTOCK, *Stars of Albion* (anth 1979). In *The Last Deadloss Visions* (1987 chap; various revs and addenda 1987 chap; rev 1988 chap) he produced a cruel analysis of Harlan ELLISON's non-completion of *Last Dangerous Visions*. PRIESTLEY, J(OHN) B(OYNTON)

(1894-1984) UK novelist, playwright and man of letters, formidably productive from the teens of the century until about 1980; he wrote over 70 plays, many extremely popular in their day, and as many books, though he is now remembered chiefly for *The Good Companions* (1929), a huge picaresque novel in praise of the English. He was married to Jacquetta HAWKES. A surprising amount of his work makes use of sf or fantasy themes

and devices, though sometimes in a delusional frame, as with *Albert Comes Through* (1933), whose eponymous hero's experiences in an absurd cinematic universe are explained as a fever-dream. *The Thirty-First of June* (1961) is a fantasy for young-adult readers. But sf concerns do propel Adam in *Moonshine* (1927) and *Benighted* (1927; vt *The Old Dark House* 1928 US) - both assembled as *Benighted and Adam in Moonshine* (omni 1932) - *The Doomsday Men* (1938), where HOLOCAUST threatens; some of the stories about time (a recurring theme) in *The Other Place* (coll 1953); *The Magicians* (1954), JBP's closest approach to a full-fledged sf novel, featuring the use of a wonder drug to spiritually invade the mind of a tycoon; *Low Notes on a High Level* (1954), about the Dobbophone and other self-consciously daft instruments of MUSIC; *Saturn Over the Water* (1961), a thriller with sf overtones; *The Shapes of Sleep* (1962), which posits the use of compulsively evocative shapes in advertising; and a juvenile, *Snoggle* (1971), in which three children and an old man save an ALIEN pet from bigoted Wiltshire locals and are thanked for their troubles by its masters, advanced beings in a flying saucer (UFOS). Nevertheless, JBP never showed much aptitude for the traditional sf tale, and much of his work has an effect more of bullying noise than bluff energy. His ideas about the nature of the genre were unkindly. "They Come from Inner Space" (1953 *New Statesman*) - later assembled in *Thoughts in the Wilderness* (coll 1957), which also contains an sf story, "The Hesperides Conference" - makes what may be the first use of the term INNER SPACE in print, and goes on to declare that the essential outward movement of sf was "a move, undertaken in secret despair, in the wrong direction". Fittingly, of JBP's considerable sf output, the most interesting titles are those tales and plays which derive their motor impulse from the consolatory time theories of J.W. DUNNE, who felt that various moments in time - whose relationships to one another were, in a sense, geographical - could, in that sense, be visited. Plays like *Time and the Conways* (1937) and *I Have Been Here Before* (1937), both assembled as *Two Time-Plays* (omni 1937), along with *Dangerous Corner* (1932), all assembled as *Three Time Plays* (omni 1947), made extensive use of Dunne's theories. Other plays concerned with time included *Johnson over Jordan* (1939), whose hero posthumously prepares himself for Heaven, and *Summer Day's Dream* (1950). In the nonfiction *Man and Time* (1964) and the essays in *Over the Long High Wall* (1972) JBP meditated speculatively on the same themes. In the end, perhaps surprisingly for a writer so otherwise aggressive, sf served not as a technique to mount challenges but as a form of adjustment. [JC] Other works: At least 2 of JBP's teleplays are of genre interest: "Doomsday for Dyson" (1958), about atomic holocaust, and "Linda at Pulteney's" (1969), a fantasy. About the author: *J.B. Priestley: Portrait of an Author* (1970) by Susan COOPER; *J.B. Priestley* (1988) by Vincent Brome. See also: HISTORY IN SF; THEATRE; TIME TRAVEL.

PRIESTLEY, MARGARET

(?1919-) UK writer who, with Meriol TREVOR, created in childhood an ALTERNATE WORLD called the World Dionysius, where both set several novels. MP's were *The Ring of Fortune* * (1948), *The Three Queens* * (1950) and *Tomay is Loyal* * (1951). They were marginally less effective than Trevor's, though both authors had a tendency to fall back on RURITANIAN

conventions when more radical displacements might have generated a more sustained sequence. [JC]

PRIME PRESS

Short-lived (the business had failed by 1953) US SMALL PRESS specializing in sf; based in Philadelphia, founded in 1947 by Oswald TRAIN (editorial) and James Williams, along with two fans, Alfred C. Prime and Armand E. Waldo, who later dropped out. Several of PP's few titles are of interest, including the first-published books of Lester DEL REY, George O. SMITH and Theodore STURGEON: respectively, . . . And Some Were Human (coll 1948), Venus Equilateral (coll of linked stories 1947) and Without Sorcery (coll 1948; cut vt Not without Sorcery 1961). [MJE]

PRINCE OF DARKNESS

Film (1987). Alive. Dir John CARPENTER, starring Donald Pleasence, Jameson Parker, Victor Wong, Lisa Blount. Screenplay Martin Quatermass (Carpenter). 101 mins. Colour. An old priest, guardian of a vat containing Satan as a green liquid, dies. Young physicists are brought to the derelict church by another worried priest (Pleasence) to analyse the strange powers here. The church is surrounded by bag ladies and vagrants (one being rock-star Alice Cooper) who kill anybody who leaves. Some of the scientists are possessed by telekinetic jets of Satan-liquid, and Anti-God attempts to manifest Himself through a mirror. Carpenter's worst film, resembling a first draft rather than a finished product, inept and barely coherent, POD nevertheless has points of considerable interest. Often an apparent sf film turns out to be HORROR; this is an apparent horror film that turns out to be sf. (Carpenter's screenwriter pseudonym, Quatermass, is in clear homage to Nigel KNEALE, whose scriptwriting speciality has been to rationalize supernatural forces in scientific terms.) The ambitious but confused script evokes Godel and Schrodinger in the first few minutes, explains precognition as TACHYON messages from the future, solemnly broods on indeterminacy and the spiritual inferences to be drawn from quantum mechanics, and appears to see the Anti-God as theological ANTIMATTER present from the beginning, which is in fact a form of the Manichean heresy. [PN]

PRINGLE, DAVID (WILLIAM)

(1950-) Scottish editor and writer, resident in England, who served as Research Fellow for the SCIENCE FICTION FOUNDATION in East London 1978-9 and as editor of FOUNDATION 1980-86. With Malcolm EDWARDS he was one of the prime movers in the 8-strong collective which founded INTERZONE in 1982, eventually becoming its sole editor and publisher in 1988 and co-editing all 5 anthologies taken from the magazine: Interzone: The First Anthology (anth 1985) with John CLUTE and Colin GREENLAND, Interzone: The 2nd Anthology (anth 1987) with Clute and Simon Ounsley, Interzone: The 3rd Anthology (anth 1988) with Clute and Ounsley, Interzone: The 4th Anthology (anth 1989) with Clute and Ounsley, and Interzone: The 5th Anthology (anth 1991) with Clute and Lee Montgomerie. As Series Editor for GW Books 1988-91 he was responsible (in tandem, from 1990, with Neil Jones) for commissioning and publishing several SHARED-WORLD fantasy and sf novels tied to GAMES WORKSHOP games like Warhammer and Dark Future, notably including titles by Kim NEWMAN (as Jack Yeovil), Brian M. STABLEFORD (as

Brian Craig) and David S. GARNETT (as David Ferring). For GW he also edited some tied anthologies, including *Ignorant Armies* * (anth 1989), *Wolf Riders* * (anth 1989) and *Red Thirst* * (anth 1990) in the Warhammer series, *Route 666* * (anth 1990) in the Dark Future series, and *Deathwing* * (anth 1990) with Neil Jones in the Warhammer 40,000 series. In 1991 he began a second magazine, *Million: The Magazine about Popular Fiction*, some of whose articles deal with sf or fantasy writers. As a critic, DP's long advocacy of the works of J.G. BALLARD was developed in *J.G. Ballard: The First Twenty Years* (anth 1976 chap) ed with James Goddard, *Earth is the Alien Planet: J.G. Ballard's Four-Dimensional Nightmare* (1979 chap US) and *J.G. Ballard: A Primary and Secondary Bibliography* (1984 US). He then produced several guides to sf, fantasy and popular literature in alphabetized format: *Science Fiction: 100 SF Authors* (1978 chap), *Science Fiction: The 100 Best Novels: An English-Language Selection, 1949-1984* (1985), *Imaginary People: A Who's Who of Modern Fictional Characters* (1987; rev 1989), *Modern Fantasy: The Hundred Best Novels: An English-Language Selection, 1946-1987* (1988) and *The Ultimate Guide to Science Fiction: An A-Z of SF Books* (1990) with Ken Brown (uncredited). DP's lack of an intuitive grasp of US sf could perhaps be detected in the 1949 inception date for books covered in the first of these (a significant few years after the beginning of the SMALL-PRESS movement in the USA), but the 200 short essays accumulated in that and the volume on fantasy provide a valuable conspectus of fantastic literature over the chosen timespan. DP also edited a retrospective collection of Theodore STURGEON's stories, *A Touch of Sturgeon* (coll 1987 UK). He contributed some major entries to the first edition of this encyclopedia and revised his BALLARD entry for the current edition. [JC]See also: SF MAGAZINES.

PRISON COLONY, THE NO ESCAPE.

PRISONER, THE

UK tv series (1967-8). An Everyman Films prod for ATV. Prod David Tomblin. Created, starring and partly written/dir Patrick McGoohan; other writers included George Anthony Skene, Terence Feely; other dirs included Don Chaffey, Pat Jackson. Script ed George Markstein. 17 50min episodes. Colour. In this KAFKA-esque, sf-related series a UK ex-secret agent (McGoohan), who for unknown reasons has resigned from his organization, is gassed in his apartment and wakes to find himself in *The Village*: a mysterious establishment whose geographical location is ambiguous and whose inhabitants consist of either rebels like himself or stooges of "Them" - the people who run the place. The former spy (McGoohan had previously starred in a spy series called *Danger Man*) is unable to discover just who "They" are - perhaps the communists, perhaps his own government. His every movement in *The Village* - externally a cross between a bland Mediterranean holiday camp and an old people's home (in reality the bizarre resort of Portmeirion, Wales, designed by the architect Sir Clough Williams-Ellis [1883-1978] from 1926 until his death) - is watched by "Number Two" and his staff on video. Various episodes concern his attempts to escape from *The Village*, his neverending search for the unseen Number One, and the efforts of the different Number Twos (they change with

each episode) to break him and discover why he resigned. The most obvious sf elements are the balloon-shaped ROBOT watchdogs and the complex brainwashing and surveillance equipment, including devices that project thoughts onto a screen. McGoohan is a puritan (no kissing on screen) and an acknowledged political conservative. The many liberal supporters of the series may have misinterpreted its libertarian emphasis on individual strength, especially the power to resist incursions into one's mind, seeing the series instead as a plea for human rights and especially democratic freedoms. The excellent, surrealist last episode interestingly renders the POLITICS of the whole series retrospectively ambiguous by suggesting that our metaphorical prisons may be self-imposed. The Prisoner who continues to resist brainwashing may have brainwashed himself into a prison of the mind. The series' thesis may be that freedom is impossible, as is opting out. TP, not popular at first, soon developed an enthusiastic cult following which has lasted for over two decades, especially for its thought-provoking aspects and its deliberate bafflements, unusual in tv drama. It has been repeated on tv several times in the UK and shown in the USA. Its confident manipulations of Surrealist and sf themes, its literate scripts, its sophisticated understanding of visual metaphor and its enjoyably obsessive evocations of a whole range of fantasies of PARANOIA together created what is in the opinion of many - often those discontented with SPACE OPERA - the finest sf tv series to date. Its strengths in many respects resemble those of the late-1980s tv cult favourite Twin Peaks. Novels based on the series are *The Prisoner* * (1969) by Thomas M. DISCH, *The Prisoner No. 2* * (1969) by David MCDANIEL and *The Prisoner 3: A Day in the Life* * (1970) by Hank STINE. Two of several books about the series are *The Official Prisoner Companion* (1988), by Matthew White and Jaffer Ali, and *The Prisoner and Danger Man* (1989) by Dave Rogers. A comic-book series (4 numbers 1988-9), originally from DC COMICS, served as a sequel to the tv series. [JB/PN] See also: GAMES AND TOYS.

PRISONERS OF GRAVITY

Canadian tv series (1990-93). TVOntario; also broadcast on La Chaine Francaise. Prod/dir Gregg Thurlbeck, written and presented Rick Green. Four seasons. 30 mins per programme. Colour. The premise of this vigorous and surprisingly successful series - not a drama series but a talk show about speculative fiction, probably the only such programme in the world - was that Commander Rick (Rick Green) operates a pirate broadcasting station from the communications satellite in which he lives, and intercepts TVOntario's signals once a week, substituting his own quickfire discussions of various sf themes. Quick cutting and Rick's aggressive, well informed, jokey style (he is an ex-comedian as well as an sf expert) won the programme a cult following. The major cultural breakthrough was Rick's presentation of COMICS artists as deserving equal guest time with sf writers, and viewers have been able to see for themselves that, say, Neil GAIMAN, Jean GIRAUD, Frank MILLER and Bill SIENKEWICZ appear just as thoughtful as, say, Douglas ADAMS, Gregory BENFORD, Harlan ELLISON and William GIBSON. Horror writers such as Clive Barker (1952-) and fantasy writers such as Guy Gavriel Kay (1954-) were also included. The wide range of themes explored covers everything from Chaos Theory to Women's Issues and The Family. POG won an Aurora award in 1994, posthumously so to

speak, for "Best Other Work in English". Reruns of the series are expected on the new Canada Discovery channel. [PN]

PRISONS

COLONIZATION OF OTHER WORLDS; CRIME AND PUNISHMENT.

PRIVILEGE

Film (1967). Worldfilm Services and Memorial Enterprises/Universal. Dir Peter WATKINS, starring Paul Jones, Jean Shrimpton, Mark London, Max Bacon. Screenplay Norman Bogner, based on a story by Johnny Speight. 103 mins. Colour. A successful rock-star (Jones) is used by a NEAR-FUTURE UK government as a puppet MESSIAH to manipulate the opinions of the youthful citizens. He is forced to change his image to suit the plans of the Establishment, but rebels, only, ironically, to be destroyed by his teenage followers. Watkins, who also directed *The WAR GAME* (1965), *GLADIATORERNA* (1968) and *PUNISHMENT PARK* (1970), thumps his tub with a heavy hand; but, though simplistic, P was ahead of its time in its depiction of government attempts to co-opt and domesticate the disaffection of the young, a theme of real importance, still rare in the commercial CINEMA - which, after all, does much the same thing. [JB/PN]

PRIX APOLLO AWARDS.

PRIX DU DANGER, LE

(vt *The Prize of Peril*) Film (1983). Swanie/TFI/UGC-Top 1/Avala. Dir Yves Boisset, starring Gerard Lanvin, Michel Piccoli, Marie-France Pisier. Screenplay Boisset, Jan Curtelin, based on "The Prize of Peril" (1958) by Robert SHECKLEY. 98 mins, cut to 88 mins in English-dubbed version. Colour. In this French/Yugoslav coproduction, a man volunteers for the tv game show "The Prize of Peril", in which anyone who can escape being murdered in the streets by trained killers (the whole event being televised) can win large cash prizes. To a large extent the game is rigged. The resourceful victim makes it back to the studio and exposes the sham before being carried off in a straitjacket. A fairly routine action movie masquerades as a morally outraged assault on media corruption. A later film, *The RUNNING MAN* (1987), bears an astonishing resemblance. [PN]

PRIX JULES VERNE AWARDS.

PRIX ROSNY AINE AWARDS.

PRIZE OF PERIL, THE Le PRIX DU DANGER .

PROCTOR, GEO(RGE) W.

(1946-) US writer who began publishing sf with *The Esper Transfer* (1978), a modest sf adventure whose telepathic protagonist must escape various dangers. Although varied in its use of sf devices, and inventively constructed so as to allow its protagonists some room for personal relationships, his work has not exhibited sufficient innovation or energy to bring him into wide repute. Other sf titles include *Shadowman* (1980),

again involving telepaths, Fire at the Center (1981) and Starwings (1984), both involving TIME TRAVEL, and Stellar Fist (1989), in which the discovery of a doom machine must somehow be controlled, once again through the actions of a telepath. GWP's collaborations with Andrew J. OFFUTT, both writing as John Cleve - Spaceways #7: The Manhuntress * (1982) and #10: The Yoke of Shen * (1983) - and his two "V" ties-The Chicago Conversion * (1985) and The Texas Run * (1985) - are of less interest. GWP ed Lone Star Universe: Speculative Fiction from Texas (anth 1976) with Steve UTLEY, which presents material of considerable interest, and The Science-Fiction Hall of Fame #3: The Nebula Winners 1965-69 (anth 1982) with Arthur C. CLARKE. [JC]Other works: The Swords of Raemllyn fantasy sequence, all with Robert E. VARDEMAN: A Yoke of Magic (1985), To Demons Bound (1985), Blood Fountain (1985), The Beasts of the Mist (1986) and For Crown and Kingdom (1987).

PROJECT MOONBASE

Film (1953). Galaxy Pictures/Lippert. Dir Richard Talmadge, starring Donna Martell, Ross Ford, Larry Johns, Hayden Rorke. Screenplay Robert A. HEINLEIN, Jack Seaman. 63 mins, cut to 51 mins. B/w. This rarely seen film is of interest mainly because Heinlein worked on the screenplay. A three-strong expedition takes off from a space station orbiting Earth to select a site for a Moonbase from lunar orbit, but their rocket crashlands on the Moon. One of the three - a foreign spy (Johns) - subsequently dies and the others, a man (Ford) and the woman team leader, coyly named Colonel Breiteis (Martell), though doomed, are married via television by the President of the USA (who, in a typical Heinlein touch, is also a woman). The ambitious idea, with its confident taking for granted of future TECHNOLOGY, is undermined by melodramatics, poor performances, and sets designed for tv, this being the theatrical release of an unsold pilot for a projected tv series, Ring Around the Moon. [JB]

PROJECT UFO

US tv series (1978-79). A Mark VIII Ltd Production/NBC. Executive prod Jack Webb; created Harold Jack Bloom; prod Col. William T. Coleman. Starring William Jordan as Major Jake Gatlin, Caskey Swaim as Sgt Harry Fisk, Aldine King as Libby Virdon, Edward Winter (season 2) as Capt Ben Ryan. Dirs included Richard Quine, Dennis Donnelly, Robert Leeds, John Patterson, Rich Greer. Writers included Harold Jack Bloom, Donald L. Gold, Robert Bles. 2 seasons, 26 50min numbered episodes. Colour. In terms of the size of viewing audience, this was the most successful US sf tv series ever made. The premise is that USAF investigators, belonging to a special unit code-named Project Blue Book, each week look into a supposed UFO (i.e., flying-saucer) sighting. Some of the cases prove to be hoaxes, some misunderstandings of other phenomena; but most turn out to be genuine. PUFO, which assumed the air of drama-documentary, was tabloid tv at its most naked, aimed directly and cynically at a credible audience greedy for wonders. Given the overall similarity of the plot-lines, it is astonishing that 2 seasons were wrung from it. Executive prod Webb is remembered by older viewers as the gravel-voiced presenter of Dragnet. [PN]See also: PARANOIA.

PROJECT X

Film (1987). Amercent Films-American Entertainment Partners/20th Century-Fox. Dir Jonathan Kaplan, starring Matthew Broderick, Helen Hunt, Bill Sadler, Johnny Ray McGhee. Screenplay Stanley Weiser, based on a story by Weiser, Lawrence Lasker. 103 mins, cut to 91 mins. Colour. A trainee airman (Broderick), in trouble for joyriding, is sent to work in an experimental USAF establishment where chimps are being trained in flying simulators; the sinister premise (gradually uncovered) is that, if successfully taught, they can be used on operations where pilots would be subjected to heavy radiation. Several chimps are deliberately irradiated to death. The young airman, who has bonded with an intelligent chimp that understands sign language, helps foment rebellion, escapes with the chimps, and en passant prevents a nuclear meltdown; of course, the chimps themselves finally save the day - by flying a plane to safety. Wholly absurd, emotionally manipulative and anthropomorphically sentimental, the film is nevertheless very neatly crafted, evoking with real panache, through its jittery, unnerving imagery, all kinds of subtexts that are more intelligent than the plot would suggest. [PN]

PROMETHEUS AWARD AWARDS.

PRONZINI, BILL

Working name of US writer William John Pronzini (1943-), prolific and admired in several genres, notably crime fiction, since his first book, *The Stalker* (1971). Though he has published some very effective HORROR, including *Masques: A Novel of Terror* (1981), and several other novels - including *Night Screams* (1979) and *Prose Bowl* (1980), both with Barry N. MALZBERG, the latter being sf - as well as *Beyond the Grave* (1986) with Marcia Muller, his main importance to the field of the fantastic lies in his anthologies. Relevant titles include: *Dark Sins, Dark Dreams: Crime in Science Fiction* (anth 1978) with Malzberg; *Midnight Specials* (anth 1978); *Werewolf!* (anth 1979); *The End of Summer* (anth 1979; vt *The Fifties: The End of Summer* 1979), *Shared Tomorrows: Science Fiction in Collaboration* (anth 1979) and *Bug-Eyed Monsters* (anth 1980), these 3 being with Malzberg; *Voodoo!: A Chrestomathy of Necromancy* (anth 1980), *Mummy!: A Chrestomathy of Crypt'ology* (anth 1981) and *Creature!: A Chrestomathy of "Monstery"* (anth 1981), all assembled as *The Arbor House Necropolis - Voodoo! Mummy! Ghoul!* (omni 1981; with 1 story cut, vt *Tales of the Dead* 1986); *The Arbor House Treasury of Mystery and Suspense* (anth 1981; with 1 story cut, vt *Great Tales of Mystery and Suspense* 1985) with Malzberg and Martin H. GREENBERG; *The Arbor House Treasury of Horror and the Supernatural* (anth 1981; with 1 story cut, vt *Great Tales of Horror ? Supernatural* 1985; text restored, vt *Classic Tales of Horror and the Supernatural* 1991; again cut, vt *The Giant Book of Horror Stories* 1991) with Malzberg and Greenberg; *Specter!: A Chrestomathy of "Spookery"* (anth 1982); and *Witches' Brew: Horror and Supernatural Stories by Women* (anth 1984) with Muller. [JC]See also: ESP.

PROPHECY

Film (1979). Paramount. Dir John FRANKENHEIMER, starring Talia Shire, Robert Foxworth, Armand Assante, Richard Dysart. Screenplay David Seltzer. 102 mins. Colour. A mercuric fungicide used by a Maine pulp-mill has

mutagenic effects, bringing Minimata disease and miscarriages to the local Native Americans and creating gigantism among the area's wildlife, notably a MUTANT bear-creature responsible for many human deaths. All this is discovered by a crusading doctor and his pregnant wife. A surprisingly poor film from Frankenheimer - muddy photography, risible monster, eco-cliche script, wooden performances, stumbling action sequences - P is a rather crass example of the many revenge-of-Nature films (MONSTER MOVIES) made from the mid-1970s to cash in on the increase in the community of legitimate concern for ECOLOGY. [PN]

PROSPERO AND CALIBAN

Frederick ROLFE.

PROTO SCIENCE FICTION

Meaningful use of the term "proto science fiction" obviously depends on one's DEFINITION of the term "science fiction"; indeed, the quest for sf's literary ancestry and "origins" is as much a dimension of the problem of definition as a backward extrapolation of the HISTORY OF SF. If by sf we mean labelled or GENRE SF, everything published before 1926 would become proto sf; but Hugo GERNSBACH clearly believed that he was merely attaching a name to a genre which already existed-he considered H.G. WELLS, Jules VERNE and Edgar Allan POE to be "scientifiction" writers, and reviewers of the 1890s seeking to characterize the kind of work which Wells was doing had already identified a genre of SCIENTIFIC ROMANCE, which included Verne, his UK imitators, and such writers as George GRIFFITH. Brian W. ALDISS argues in *Billion Year Spree* (1973; exp vt *Trillion Year Spree* 1986 with David WINGROVE) that one can trace a coherent literary tradition of sf to its point of origin in Mary SHELLEY's *Frankenstein, or The Modern Prometheus* (1818; rev 1831) (GOTHIC SF). Darko SUVIN's study of *Victorian Science Fiction in the UK* (1983), on the other hand, states that "if ever there was in the history of a literary genre one day when it can be said to have begun, it is May Day 1871 for UK sf", that being the day on which Lord LYTTON's *The Coming Race* and the magazine version of George CHESNEY's *The Battle of Dorking* appeared, and on which Samuel BUTLER handed in the manuscript of *Erewhon* (1872). Other writers, including Peter NICHOLLS, have argued that sf is merely a continuation, without any true hiatus, of a much more ancient tradition of imaginative fiction whose origins are lost in the mythical mists and folkloric fogs of oral tradition. If this were accepted there would be no proto sf at all, and sf's history would begin with, say, HOMER's *Odyssey* and continue with LUCIAN's *True History*. It seems reasonable to argue that we cannot sensibly define something called "science fiction" until we can characterize both "science" and "fiction" with meanings close to those held by the words today. It was largely due to the rise of the novel - which made a formal attempt to counterfeit real experience - that it became appropriate to draw a basic distinction between the types of discourse used for nonfictional commentary and the types used for "fiction". The standardized nonfictional forms of today - the essay, the treatise and the scientific paper - were still in the early stages of their evolution in the late 18th century. Logically, therefore, it seems inappropriate to describe as "science fiction" anything published in the early 18th century or before.

Indeed, so intimately connected is our sense of the word "fiction" with the growth of the novel that it would seem most sensible to begin our reckoning of what might be labelled "science fiction" with the first speculative work which is both a novel and manifests a clear awareness of what is and is not "science" in the modern sense of the word. Willem BILDERDIJK's *A Short Account of a Remarkable Aerial Voyage and Discovery of a New Planet* (1813; trans 1987) and *Frankenstein* both fit this definition well enough, although sceptics might argue that the supposed tradition which extends from them is very tenuous, and that no obvious precursor of Vernian and Wellsian scientific romance appeared before Chrysostom TRUEMAN's *History of a Voyage to the Moon* (1864). There are, of course, pre-19th-century works which, with the aid of hindsight, we can now unequivocally locate within the literature of the scientific imagination, notably Francis BACON's *New Atlantis* (1627; 1629), Johannes KEPLER's *Somnium* (1634) and Gabriel DANIEL's *Voyage to the World of Cartesius* (1692). These would have been considered by their authors to be works of philosophy, although they are cast in a form (the imaginary voyage) which we now consider to be a species of fiction. Some SATIRES also referred to contemporary scientific endeavours, most notably the third book of Jonathan SWIFT's *Gulliver's Travels* (1726), which also co-opts some of the techniques of formal realism associated with early novels; but such works usually extrapolate scientific ideas only to deride their follies. The quasibatirical contes philosophiques of VOLTAIRE include *Micromegas* (1750), which might also be considered an apt point of origin for sf if one were to embrace the common theory that it is the short story rather than the novel which is sf's natural form. On balance, however, it seems more sensible to consider all these as significant works of proto sf. The question as to which other works may be identified likewise, and the extent to which they might be considered important in defining the literary influences and patterns of literary expectation which have contributed to the shaping of sf, is a difficult one - and possibly a sterile one, since we could argue that literary influences have contributed little to the effective shaping of GENRE SF. Other influences - historical and social - have certainly been important, and very probably more important, but the influence on sf of earlier traditions in fantastic literature should not be minimized: much sf, even the roughest-hewn PULP-MAGAZINE sf, has been written with much earlier literary models in mind. The species of proto sf which has exerted most influence on sf and on attitudes towards it is undoubtedly the imaginary voyage (FANTASTIC VOYAGES). Those generally identified as being the closest kin to modern sf are the lunar voyages whose history is chronicled in Marjorie Hope NICOLSON's excellent study *Voyages to the Moon* (1948). Many attempts have been made to incorporate the history of sf into this tradition, including Patrick MOORE's *Science and Fiction* (1957), Roger Lancelyn GREEN's *Into Other Worlds* (1957) and Russell Freedman's *2000 Years of Space Travel* (1963). This view makes Francis GODWIN's *The Man in the Moone* (1638), CYRANO DE BERGERAC's *Other Worlds* (1657-62) and other interplanetary satires the key works of proto sf, although the methods of travel employed are calculatedly absurd. The cynical incredulity of many such stories, however, commends them to the sceptical scientific worldview, and we must remember that scientific fidelity in speculation is only one of the

characteristic demands made of modern sf (DEFINITIONS). Sheer invention - the bolder the better - has always played an important part in sf, and to a large extent the effectiveness of sf derives from the pretence to scientific fidelity which asks that wild flights of the imagination be considered as if they were serious hypotheses. On this basis we can find a close kinship between sf and the traveller's tale, which attempts to make interesting fantasies palatable by reference to exotic distant lands; Lucian's True History is important as a sceptical reminder of the tendency of such tales to exaggerate wildly. Understandable difficulties arise with those travellers' tales whose apparatus is concerned with the religious imagination rather than with secular fabulation: Emanuel SWEDENBORG's cosmic visions - which include some interesting descriptions of LIFE ON OTHER WORLDS - are not frequently cited as examples of proto sf, although Larry NIVEN and others have argued that the cosmological speculations in DANTE ALIGHIERI's Divine Comedy entitle it to be considered a highly significant work in the proto-genre. It should perhaps be remembered that the distinction between scientific thought and religious thought, like the distinction between fiction and nonfiction, has not always been nearly as clearcut as it seems today; moreover, the classics of the religious imagination were frequently echoed in sf, not always with the intention of subverting their messages. Although such works as Milton's Paradise Lost (1667; rev 1674) and Bunyan's Pilgrim's Progress (1678; exp 1684) can hardly be said to take much account of scientific knowledge, they have established literary archetypes of considerable importance, and analogies may be drawn between the kinds of fantastic environment which they establish and those used in many sf stories. It is worth noting that the literary tradition of UTOPIAS - which are also usually cast as imaginary voyages - is not as intimately connected with sf as it might seem. Utopian speculation is echoed in contemporary sf primarily because sf writers have adopted a stereotyped "utopian scenario" as one of the standard environments for futuristic adventure; there is less actual utopian philosophy in modern sf than one might expect. Contrastingly, there is far more transplanted MYTHOLOGY than any widely accepted definition could lead us to expect. If any one imaginary voyage has had a far more than appropriate share of influence on the genre it is Homer's Odyssey, of which there are at least 5 straightforward sf transmogrifications. Of course, the Odyssey is not only an imaginary voyage: it also incorporates two literary forms which more or less died out in the later historical periods under consideration here: the hero-myth and what was then its corollary, the MONSTER story. Both forms have been revived within sf, and there are clear structural and ideative links between many sf stories and legendary constructions of these kinds. There are sf stories explicitly based on the story of the Argonauts, the labours of Hercules and such early literary exercises as Beowulf, although sf's HEROES are characteristically conceived in a rather different way from those of the ancient hero myths. There still remain for consideration the other prose-forms current in the 17th and 18th centuries whose status as "fiction" or "nonfiction" is not so easy to establish with hindsight: the dialogue, the meditation and the history. The dramatic dialogue was quite popular as a medium for imaginative literature in 19th-century France, its most flamboyant product being Edgar Quinet's Ahasverus (1833); Poe's

"Conversation of Eiros and Charmion" (1838) is a notable work of early sf cast in this form. Dialogue is now subsumed within ordinary narrative form, but there are numerous notable sf stories which are basically contes philosophiques cast as dialogues; genre sf, despite the priority which the pulps put on action-adventure, has been reasonably hospitable to such exercises. Even though we now classify them as nonfiction, we should be prepared to concede an important role in the history of proto sf to the basic strategy employed in PLATO's dialogues and later works in the same vein by Galileo Galilei (1564-1642) and David Hume (1711-1776). Socratic debate and interrogation are extensively used in sf, not merely as a means of exposition but also as a way of developing ideas and exploring their implications; any genre which attempts to develop speculations logically and rigorously must, obviously, depend to a considerable degree on the Socratic method of examining ideas. The meditation seems much less important to the form and development of sf, but the history is a different matter. The construction of a history, which necessitates connecting events into a coherent narrative, requires both a creative and an orderly imagination (thus combining the essential requirements of the imaginary voyage and the dialogue). Imaginary histories must be considered alongside imaginary voyages as works which belong to the literary tradition of which modern sf is one product. Many of the early works which attempted to get to grips with the future, described in the early pages of I.F. CLARKE's *The Tale of the Future* (3rd edn 1978), are cast as histories. Mention must also be made in this context of the pioneering exercises in alternative history (ALTERNATE WORLDS) described in the essay "Of a History of Events which Have not Happened" (c1800) by Isaac d'Israeli (1766-1848). Imaginary voyages and imaginary histories may be formulated in POETRY as well as in prose - several of the works referred to above are verse epics rather than prose discourses - and a case might obviously be made for including many poems and plays in the literature of the scientific imagination; but the most important links we can draw between classical literature and sf pertain to the settings in which the stories take place and the apparatus deployed there. With the exception of epic poetry, neither poetry nor drama is strong in this sense. This is not to say that sf cannot be adapted to poetry or to the THEATRE (there are some classic sf plays), but the importance of poetry and drama to any sf tradition is restricted, and it is difficult to argue convincingly that Shelley's *Prometheus Unbound* (1820) and Shakespeare's *The Tempest* (1623) are significant works of proto sf. The attempt to identify a coherent tradition of proto sf is vain, in more than one sense of that word. Without a doubt, individual works of classical literature can be shown to be ancestral in certain respects to occasional themes of sf, but we devalue the word "tradition" if we use it to describe a series of isolated juxtapositions. To say that an assembly of illustrious literary works constitutes such a tradition is a form of self-congratulation on the part of the sf writer/reader/critic akin to that of a prostitute who claims to be operating in the tradition of Cleopatra and Madame de Pompadour, even though in an obvious respect she is correct. Sf is a form of literature and can lay claim to all of literary history as its background if its adherents so wish, but this does not mean that we can turn the historical sequence on its head and claim that sf is the logical culmination of the

"great tradition of proto sf", or the sole beneficiary of its heritage. Nevertheless, going back into literary history with the intention (however eccentric it may be) of classifying literary works according to their various similarities with modern sf is not a complete waste of time. It may serve as a reminder that sf, like prostitutes, is not a mere accident of circumstance, and that it is not - either in the literal or in the commonplace sense of the word - inconsequential. [BS]

PROUMEN, HENRI-JACQUES
[r] BENELUX.

PRUYN, LEONARD
(1898-1973) US writer who began publishing sf with "In Time of Sorrow" in Authentic in 1954 and continued with an sf novel, World without Women (1960) with Day KEENE, about the violent consequences to the world of the loss of its women (WOMEN AS PORTRAYED IN SCIENCE FICTION). [JC]

PRYOR, VANESSA
Chelsea Quinn YARBRO.

PSEUDOMAN, AKKAD
Pseudonym of US writer Edwin Fitch Northrup (1886-1940), whose sf novel Zero to Eighty (1937) tells woodenly of life during the entire 20th century, culminating in technical and pictorial accounts of the building of a gun-launched SPACESHIP and of its trip to the Moon. [JC]

PSEUDONYMS

Reasons for using pseudonyms are very various, but almost always involve concealment. So obvious is this that it might seem to go without saying; but in fact many reference books altogether disregard the factor of concealment in their use of the term, and often designate as pseudonyms variations upon real names made to heighten impact (C.J. Cherry, for instance, writes as C.J. CHERRYH), or to shorten or simplify a spelling (Francis A. Jaworski writes as Frank JAVOR), or to select part of a full or married name for public use (Piers Anthony Jacob writes as Piers ANTHONY, and Kate Wilhelm Knight writes under her maiden name, Kate WILHELM). For this encyclopedia we have chosen to designate as "working names" all such variations; and we restrict the term "pseudonym" to names which, whether or not the author's legal name is known, have no clear lexical relationship to that name (we do not treat acronyms or mirror spellings as conveying a clear lexical relationship). Thus Christopher ANVIL is a pseudonym for Harry Crosby, as are Bron Fane (a partial acronym) and Trebor Thorpe (the given name here being a mirror spelling) for Robert Lionel FANTHORPE, and Frederick R. Ewing for Theodore STURGEON. In almost all cases the main entry for individuals covered in this volume, whether authors, editors, illustrators, critics or film-makers, appears under the name by which they are best known, whether that be the legal name (Isaac ASIMOV), the working name (Algis BUDRYS) or the pseudonym (James TIPTREE Jr). All the author's names that have been used for an sf book - real, working or pseudonymous - appear in this encyclopedia, either as the headword for an entry or as a cross-reference headword directing the reader to the entry under which they are treated. Many (but not all) names that have been used only for sf non-book stories are likewise

cross-referred, but with the additional notation [s]. Cross-reference entries which designate real figures (who may be collaborators, etc., and who on occasion may themselves be pseudonymous) are identified with the notation [r]. Collaborative pseudonyms, floating pseudonyms and house names are given entries. A collaborative-pseudonym entry will usually give details of books written together under that name by the authors concerned. A floating-pseudonym entry covers a name which is, in a sense, freely available for anyone who cares to use it. (Ivar JORGENSEN is an example of a floating pseudonym.) A house name - which is a kind of floating pseudonym - is an imaginary name invented by a publishing company, and such were very frequently used in magazines to conceal the fact that an author had more than one story in a given issue; e.g., had Robert SILVERBERG sold 2 stories to a particular issue of a ZIFF-DAVIS magazine (e.g., AMAZING STORIES), one of the stories might be published under a Ziff-Davis house name such as Alexander BLADE or E.K. JARVIS - usually, though not necessarily, the story of which he had less reason to be proud. House names might also be used in a case where an author did not want it known that he was selling stories to a certain magazine; and (especially in the UK 1950-65) house names were very frequently used by mass-production houses like CURTIS WARREN or BADGER BOOKS to conceal the fact that a small team of writers was producing huge numbers of books in whatever genre the firm required. Pseudonyms - as we said - are forms of concealment. We might add the observation that, in the sf world, pseudonyms were, for many years, very common. The reasons for their popularity were various and (generally) obvious. They have always flourished in PULP-MAGAZINE environments, where writers, being paid pittance for most of the early decades of GENRE SF, were forced to write voluminously, and often needed to use several names during their years of high production before burn-out; the low prestige of sf also undoubtedly inspired their use; and (perhaps mysteriously) many sf writers have clearly enjoyed the creation and maintenance of pseudonymous identities. The most recent guide to sf pseudonyms - Roger ROBINSON's *Who's Hugh?* (1987) - contains about 3000 ascriptions, and is already seriously out of date, having been compiled too early to take properly into account the remarkable 1980s revival in the use of every kind of pseudonym, usually by authors of TIES and adventure series. The flood of concealment is, once again, rising. [JC/PN]

PSEUDO-SCIENCE

Pseudo-sciences are here defined as belief systems which, though adopting a scientific or quasiscientific terminology, are generally regarded as erroneous or unproven by the orthodox scientific community; frequently they not merely disagree with, or are improbable adjuncts to, accepted science but violate its fundamental tenets. They are not to be confused with the IMAGINARY SCIENCES, which are literary conventions, although the borderline can be blurred, especially with pseudo-technologies such as ANTIGRAVITY devices. The adherents of many of the pseudo-sciences often display an almost religious fervour - indeed, some pseudo-scientific schools, notably SCIENTOLOGY (which is registered as a Church), use terminology that is consciously more religious than scientific. A further aspect is that creators of and believers in pseudo-scientific cults often

interpret the scientific establishment's indifference or contempt in terms of jealousy or even as a self-interested conspiracy designed to conceal the Truth. The type-example of this occurs in ufology (UFOS), where scientists, politicians, the military, the CIA (especially) and even the presumed ALIEN crews have been frequently accused of mounting cover-ups of global proportions. (John A. Keel has used the lack of good evidence of alien visitors as an indication that such alien visitors do indeed exist: who else would be able to mount such an effective cover-up?) Martin GARDNER has documented such PARANOIAS in his classic study of pseudo-scientific cults, *In the Name of Science* (1952; rev vt *Fads and Fallacies in the Name of Science* 1957), and the cultic aspect of pseudo-scientific belief systems is noted even in the titles of two further surveys of the field: *Cults of Unreason* (1973) by Dr Christopher Evans, which is moderately sympathetic, and *The New Apocrypha* (1973) by John T. SLADEK, which is very comprehensive and occasionally strident. Other works of note include: *The Natural History of Nonsense* (1947) by Bergen Evans, which concentrates on biological/zoological fallacies; *Can You Speak Venusian?: A Guide to the Independent Thinkers* (1972; rev 1976), by Patrick MOORE, which is an idiosyncratic personal survey; *Science: Good, Bad and Bogus* (coll 1981) by Gardner; *Science and the Paranormal* (anth 1981) ed G. Abell and B. Singer; *Facts and Fallacies: A Book of Definitive Mistakes and Misguided Predictions* (1981) by Chris MORGAN and David LANGFORD; *A Directory of Discarded Ideas* (1981) by John Grant (Paul BARNETT); and *Pseudoscience and the Paranormal: A Critical Examination of the Evidence* (1987) by T. Hines. *A Dictionary of Common Fallacies* (1978; rev and exp in 2 vols 1980) by Philip Ward contains a great deal of scattered information on the pseudo-sciences. The best journal on the topic is probably *The Skeptical Inquirer*, published from Buffalo, New York, by the Committee for the Scientific Investigation of Claims of the Paranormal. Few people could read any of these books without finding one or other of their own pet beliefs being dismissed as nonsense; Gardner, for example, has many harsh words about osteopathy, and Sladek is not gentle with Teilhard de Chardin's theories of EVOLUTION or Marshall McLuhan's ideas about the SOCIOLOGY of the MEDIA LANDSCAPE; Grant, contrariwise, has been attacked for declining to dismiss some pseudo-sciences as necessarily absurd rather than just exceptionally unlikely. Such reactions point up the difficulty of defining the topic with any precision, and also indicate that the authors of these books may have prejudices of their own. There has always been a close and rather embarrassing link between the pseudo-sciences and sf. Some commentators have suggested that, at its lowest level, sf appeals to a childishness in readers, an unwillingness to get to grips with the real world-qualities which could equally be ascribed to devotees of various of the pseudo-sciences. When Gardner wrote in the mid-1950s that "the average fan may very well be a chap in his teens, with a smattering of scientific knowledge culled mostly from science fiction, enormously gullible, with a strong bent towards occultism, no understanding of scientific method, and a basic insecurity for which he compensates by fantasies of scientific power" he was describing not pseudo-science believers but sf fans; and in part he had a point, given that his context was a discussion of John W. CAMPBELL Jr's editorials puffing PSIONICS. Other aspects of mid-1950s magazine sf, notably its

tales of PARANOIA, its SUPERMAN fantasies and its obsession with ESP, were not inconsistent with Gardner's caricature. Pseudo-scientific ideas have a rather different spectrum in sf than outside it. For example, pseudo-medicine is probably the richest (pun intended) area of pseudo-science, being the region that attracts the most frauds as opposed to sincere theoreticians, yet pseudo-medicine is rarely encountered in sf. An early example is A.E. VAN VOGT's flirtation in *Siege of the Unseen* (1946 ASF as "The Chronicler"; 1959) with the notorious eye exercises devised by William Bates (d1931). Since about the mid-1970s, when ideas of Mind/Body/Spirit became fashionable, the ability of characters to heal themselves has, in sf, subtly shifted out of the more general category of PSI POWERS to become regarded as a reasonable consequence of a general enhancement of the mind; such an attitude is found in David ZINDELL's *Neverness* (1988), among very many others. Trepanation - drilling a hole through the skull in the pineal region in order to improve general and particularly intellectual health, promoted from 1965 by the Dutch theoretician Bart Huges - makes a brief appearance in David CRONENBERG's film *SCANNERS* (1981). But such examples are trivial in comparison with the huge diversity of pseudo-medical ideas found outside fiction. One sf idea that has affected pseudo-medicine was LYTTON's vril, described in *The Coming Race* (1871); in the 1920s the US businessman Robert Nelson marketed his cure-all, Vrilium, which - unlike another product named for vril, Bovril - was fortunately not recommended for oral consumption: it proved to be rat poison. At a more fundamental level, one might make a case that sf has contributed more to the pseudo-sciences than they have contributed to sf. Psychiatry - more specifically psychoanalysis - has provided sf and fantasy authors with better pickings. Some critics would dismiss the theories of Carl Gustav Jung (1875-1961) as largely if not entirely pseudo-scientific; and the same can be said with greater assuredness of some of the later ideas of Wilhelm Reich (1897-1957), which drew also upon sciencefictional notions. Reich came to believe that he was a focus of a SPACE-OPERA-style cosmic battle between friendly and hostile UFOs, powered by the "orgone drive". He assisted the Forces of Good and defended himself against the Forces of Evil using one of his own inventions, the cloudbuster, which dispersed "destructive orgone energy". Of psychological interest was the Christos Experiment carried out by occasional sf writer G.M. GLASKIN and others in the 1970s, which suggested that the human mind, in something akin to a dream state, was capable of exploring past and future incarnations (REINCARNATION). Sf has also produced its own psychiatric ideas, notably those associated with DIANETICS and Scientology. Perhaps the most enthusiastic exploiter of such notions in genre sf has been A.E. van Vogt, who played a prominent role in the early days of dianetics and was also much influenced by the GENERAL SEMANTICS philosophy of Count Alfred KORZYBSKI. In more recent years Colin WILSON, who admires van Vogt greatly, has based a considerable amount of his fiction on unorthodox psychological hypotheses; the most interesting example may be his novella "Timeslip" (1979), which mixes the (now rather more reputable) theory of the divided brain with notions of the paranormal and the possibility of humanity developing radically new modes of thinking - a CONCEPTUAL BREAKTHROUGH in more than one sense of that term. Perhaps the greatest single source of pseudo-scientific ideas in genre sf has been

the work produced by Charles FORT in the 1920s and 1930s. Fort himself was not a pseudo-scientist per se - he was a chronicler of strange events rather than a theoretician - but he had a habit of scattering wild theories through his writings in the form of humorous asides. These have been rich ground for sf writers in search of story-ideas, but some seem to have taken them with a greater seriousness. The two areas of his theorizing that have most influenced sf are ESP/ PSI POWERS and the notion that we are being secretly observed, and perhaps controlled, by mysterious intelligences. The latter hypothesis is reflected in many theories at the wilder end of ufology, in the sort of PARANOIA demonstrated in the lurid stories of Richard SHAVER, in the lasting popularity of H.P. LOVECRAFT's Cthulhu Mythos - extensively imitated and developed by others - and, in a roundabout way, in the idea that we have been visited many times in the past by ALIENS, who have directed the evolution of our technology (as in the works of Erich VON DANIKEN; sf stories reflecting this last view are discussed also in the entries on ADAM AND EVE and ORIGIN OF MAN). It is worth noting here that the notion of some archaic and long-lost alien race having "seeded" all the technologically developed planets of the Galaxy has become something of a CLICHE in SPACE OPERA; on occasion, where the setting is the very FAR FUTURE, humanity itself - or its AI emissaries - has been the "seeding" race. The cliché is interestingly deployed in, for example, John BRUNNER's *A Maze of Stars* (1991). One of the most influential pseudo-scientists of the latter half of this century has been Immanuel VELIKOVSKY. He first put forward his theories in *Worlds in Collision* (1950), a book that came to prominence largely thanks to the misguided overreaction to it of orthodox scientists. In his first few books Velikovsky examined countless legends of catastrophe from the Bible and MYTHOLOGY, and claimed these were explicable in terms of profound cosmic disturbances. (In several books in the 1960s W. Raymond Drake repeated the exercise, this time coming to the "inescapable" conclusion that the disasters could be explained only in terms of warring alien races - the "Gods".) Most notable was Velikovsky's idea that the planet VENUS is recent, having been spat out of Jupiter during biblical times and swooping repeatedly near to the Earth before settling in its current orbit; these close encounters naturally caused great upheavals on Earth. In the early 1980s there was an outburst of what can be termed "neo-Velikovskianism", typified by Peter Warlow's *The Reversing Earth* (1982); such revisions of the core theories, being considerably more scientifically literate than the original, proved harder to refute and, because this time few scientists bothered to make the public attempt to do so, were perhaps more influential on the scientifically ignorant intelligentsia. A number of sf novels have been directly affected by the original ideas of Velikovsky (see his entry for examples) or the later revisions; the most notable is *The HAB Theory* (1976) by Allan W. ECKERT. A good parody of Velikovskianism is *Judgement of Jupiter* (1980) by John T. SLADEK writing as Richard A. Tilms. A less well known catastrophe theory was produced in 1886 by the US Quaker scientist Isaac Newton Vail. This was that all planets go through a phase or phases of having rings of ice like those currently observable around the GAS GIANTS. Natural instabilities in Earth's primordial rings caused them eventually to crash down towards the surface, creating a hugely thick cloud canopy in the upper atmosphere. When this canopy in

turn collapsed, there was of course the Flood. A sciencefictional exploration of this is Piers ANTHONY's post- HOLOCAUST novel Rings of Ice (1974). Another historically important theory of catastrophe was the World (or Cosmic) Ice Theory of Hans Horbiger, devoutly espoused by the Nazis in the years leading up to WWII; according to Nazi folklore, various "Jew scientists" like Albert Einstein fled Germany merely because they could not face the public demolition of their life's work in the light of Horbiger's discovered Truth. The theory seems to have been regarded by even the most sensationalist of pulp writers as too silly to be exploitable, but as late as 1953 the Horbiger Institute was using it to "prove" that the MOON's surface was covered in a deep layer of solid ice. It is not only in GENRE SF that we find pseudo-scientific theories. Many eccentricities relating to Spiritualism and astral bodies (ESCHATOLOGY), to IMMORTALITY and REINCARNATION were commonplace in late-19th-century sf, and are still occasionally found today. Theories concerning race (POLITICS), usually implying Black or Native American inferiority, were depressingly common in LOST-WORLD stories and elsewhere (but at least theories were called on to support such claims of racial inferiority: the inferiority of WOMEN was usually just taken for granted), as were ideas about the lost continents ATLANTIS, Lemuria and Mu, and the hidden kingdoms inside the HOLLOW EARTH. For some decades after the Darwinian controversy, alternative theories of EVOLUTION were popular in sf, and the Lamarckian variant (founded on the notion that characteristics acquired during an individual's lifetime may be passed on to its offspring) proved especially fruitful for early writers; even today, Lamarckian ideas turn up more frequently than most sf writers would care to admit, as evolutionary ideas are misapplied to fictional ALIEN species - although it might be claimed that evolutionary mechanisms may be different in distinct biologies. (Very common, of course, is the perfectly justifiable application of Lamarckian assumptions to the evolution of machine INTELLIGENCE.) Pseudo-scientific theories of DEVOLUTION and racial degeneracy appear in much early sf, including pulp sf at least up to the 1930s, John TAINÉ being a frequent culprit. Other SOFT SCIENCES have produced their own rashes of pseudo-scientific ideas, although the defining line between science and pseudo-science can in these areas be especially hard to draw, since the empirical testing of, say, a sociological hypothesis may require decades of patient observation. This is particularly true of FUTUROLOGY, which is often decried as being a pseudo-science in toto. None of the predictive pseudo-sciences have been of much importance in sf, although they are often enough derided in stories whose own purportedly scientific underpinning is at least as dubious: we scorn numerology to pass the time before making a HYPERSPACE jump. Astrology (further discussed under ASTRONOMY) plays a part in several books, examples being MACROSCOPE (1969) by Piers Anthony and The Astrologer (1972) by John CAMERON. Numerology is rare; its wilder eccentricities are parodied in Martin Gardner's The Numerology of Dr Matrix (coll 197?; vt The Incredible Dr Matrix 1976; exp vt The Magic Numbers of Dr Matrix 1985). An example of a numerology story is "Six Cubed Plus One" by John Rankine (Douglas R. MASON). From about the mid-1980s, though, the Tarot has become popular in stories on the borderline of sf and fantasy; examples are Mary GENTLE's "The Tarot Dice" (in Scholars and

Soldiers [coll 1989]), Marsha Norman's interesting mainstream novel *The Fortune Teller* (1988), and the original anthology *Tarot Tales* (anth 1989) ed Rachel POLLACK and Caitlin Matthews. The above is not to imply that some of the theories discussed here (especially those relating to ESP and psi powers) have not had their supporters among the reputable scientific ranks. For example, the scientific essayist (and novelist) Arthur KOESTLER gave support to Jung's idea of synchronicity (that there are acausal principles affecting events, as well as cause-and-effect) in *The Roots of Coincidence* (1972) and made a case for Lamarckism in *The Case of the Midwife Toad* (1971), where he also dealt with seriality, a hypothesis, closely akin to synchronicity, developed by the Austrian biologist Paul Kammerer (1880-1926). The mathematician John Taylor for some years gave credence to the supposed fork-bending abilities of Uri Geller (1946-), although later he recanted, in *Science and the Supernatural* (1980). J. Allen Hynek, a reputable space scientist, contributed considerably to ufology. The psychologist H.J. Eysenck gave rather qualified support to the psi powers, as in *Explaining the Unexplained: Mysteries of the Paranormal* (1982) with Carl Sargent. The neurologist Kit PEDLER was another to take the psi powers seriously, as in *Mind Over Matter: A Scientist's View of the Paranormal* (1981), and many physicists engaged in quantum mechanics today are open-minded about areas of parapsychology that were scientifically TABOO a couple of decades ago. Yet the sometimes aggressively illogical, proudly irresponsible outpourings of pseudo-science have on occasion played a considerable part in establishing such taboos. For example, it was possible in 1966 for Carl SAGAN to speculate joyously about the possibility that alien races might indeed have come among us in the remote past, as he did in *Intelligent Life in the Universe* (1966) with I.S. Shklovskii, without in any sense damaging his own scientific credibility; 10 years later, post-von Daniken, it would have been a brave scientist who would have done the same. Similarly, investigations in the late 1960s and 1970s by the French statistician Michel Gauquelin of possible correlations between planetary positions at individuals' births and their subsequent personalities brought down on him considerable abuse from the scientific establishment - not because of his research per se (interesting but inconclusive) but because he was seen to be working in the taboo area of astrology. The heyday of pseudo-science fiction was arguably the 1950s. Since the 1960s sf writers within the genre, less so those outside it, have in general been more responsible in their use of the dramatic possibilities of the pseudo-sciences, at least within HARD SF, which purports to be based in the scientifically plausible. On occasion their rejections of perceived pseudo-science have been overenthusiastic; for example, in his novel *Quatermass* (1979), Nigel KNEALE derides the (today perfectly respectable) notion that megalithic monuments might be prehistoric astronomical observatories on the grounds that, as computers were required to discover all their astronomical alignments, our ancestors would have required computers in order to design them - an argument exactly analogous to the proof that bees can't fly. Many sf writers, including Isaac ASIMOV and John Brunner, have actively campaigned against the mindless acceptance of pseudo-scientific propaganda and its greedy exploitation by book publishers. Brunner, for example, wrote a scathing article on the latter subject, "Scientific Thought in

Fiction and in Fact", for Science Fiction at Large (anth 1976; vt Explorations of the Marvellous) ed Peter NICHOLLS, presenting the view that the publishing boom (now somewhat abated) in books on the pseudo-sciences was leading to a great deal of cynical and fraudulent production of fictions masquerading as fact; sf writers at least maintain their fictions as fictions. Some sf writers have used the tool of parody to counter the influence of the pseudo-scientists: Sladek has produced not only the Velikovsky parody mentioned above but also Arachne Rising: The Thirteenth Sign of the Zodiac (1977) and The Cosmic Factor (1978), both as by James Vogh; Langford is responsible for An Account of a Meeting with Denizens of Another World, 1871 (1979) as if with his wife's (genuine) ancestor William Robert Loosley; and Grant for Sex Secrets of Ancient Atlantis (1985). Persistent rumour has, despite his strenuous denials, claimed Patrick Moore as author of Flying Saucer from Mars (1955) by "Cedric Allingham". During the late 1980s there began a disturbing tendency for pseudo-scientists (examples include the Church of Scientology, Uri Geller, US ufologist Stanton Friedman [1934-] and Whitley STRIEBER) to respond to criticism with litigation. Sf writers and readers, angered by the threat to freedom of opinion, have been prominent among those supporting the victims of such actions. To extend Brunner's point: the greatest triumph of pseudo-science will come if it is permitted to impose the acceptance of its fictions-or, at best, its hypotheses - as fact. [PN/JGr]

PSIONICS

A common item of sf TERMINOLOGY, referring to the study and use of PSI POWERS, under which head it is discussed. [PN] See also: PSEUDO-SCIENCE.

PSI POWERS

A name given to the full spectrum of mental powers studied by the PSEUDO-SCIENCE of parapsychology, and a common item of sf TERMINOLOGY. In his book From Anecdote to Experiment in Psychical Research (1972), Robert Thouless claims that he and Dr B.P. Wiesner invented the term, prior to its use in sf circles, as being less liable to suggest a pre-existing theory than the term "Extra Sensory Perception" (or ESP). The term was adopted into sf during the "psi boom" which John W. CAMPBELL Jr promoted in ASTOUNDING SCIENCE-FICTION during the early 1950s. Campbell also popularized in the mid-1950s the related term "psionics", which he once defined as "psychic electronics"; one of its earliest uses was in Murray LEINSTER's "The Psionic Mousetrap" (1955). Although many notable psi stories deal with the entire spectrum of such powers, telepathy, clairvoyance and precognition - the "perceptual" paranormal powers - are in this encyclopedia covered in the section on ESP (where many stories featuring the full range of psi powers are also cited). The principal psi powers which remain for specific consideration here are: psychokinesis or telekinesis (moving objects by the power of the mind); teleportation (moving oneself likewise, although the term is sometimes extended to cover technologies of MATTER TRANSMISSION); pyrolysis (psychic fire-raising); and the ability to take control of the minds of others (which, for some unknown reason, has never been dressed up with a fancy jargon term - although it is, of course, often thought to be possible by means of

hypnosis or mesmerism). Campbell's psi-boom was inspired by ideas borrowed from J.B. Rhine (1895-1980) and Charles FORT to the effect that many individuals with latent psi powers were already among us; Campbell took them as representing the "next step" in human EVOLUTION. His own "Forgetfulness" (1937 ASF as by Don A. Stuart) offers a significant early image of a human race which has outgrown its dependence on TECHNOLOGY because the mind can do everything that once required tools. This idea is widely featured in the works of A.E. VAN VOGT and Theodore STURGEON, and received a new lease of life after 1945 when the advent of the Bomb inspired many stories in which the world before or after the HOLOCAUST might be redeemed by psi-powered MUTANTS, as in Poul ANDERSON's Twilight World (1947-61 ASF; fixup 1961), John WYNDHAM's Re-Birth (1955 US; vt The Chrysalids UK) and Phyllis GOTLIEB's Sunburst (1964). Later versions of the theme can be found in David PALMER's Emergence (1984) and the more ambivalent Taji's Syndrome (1988) by Chelsea Quinn YARBRO. All the psi powers, of course, used to be in the repertoire of powerful magicians (MAGIC), and most are featured in occult romances. Mind control (possession) has always been a popular theme in horror stories, and there is a considerable grey area between sf and supernatural fiction of this kind. Notable works featuring such powers include Trilby (1894) by George DU MAURIER, The Parasite (1895) by Arthur Conan DOYLE, Congratulate the Devil (1939) by Andrew MARVELL, "But without Horns" (1940) by Norvell W. PAGE, The Midwich Cuckoos (1957; vt Village of the Damned US) by John Wyndham and Children of the Thunder (1989) by John BRUNNER. Considered historically, teleportation may be seen as an extrapolation of levitation, which is usually given rather ironic treatment in modern literary works, as in Neil BELL's "The Facts About Benjamin Crede" (1935), Michael HARRISON's Higher Things (1945) and John SHIRLEY's Three-Ring Psychus (1980). In logical terms, however, teleportation may be considered simply as a special case of telekinesis, and levitation therefore crops up in a lot of stories which deal with a broader range of telekinetic powers, including James H. SCHMITZ's The Witches of Karres (1966), Tom REAMY's Blind Voices (1978) and Timothy ZAHN's A Coming of Age (1985). In the psi-boom years teleportation featured most prominently in Alfred BESTER's Tiger! Tiger! (1956 UK; rev vt The Stars My Destination 1957 US), which shows NEAR-FUTURE society adapting to the development of "jaunting" (teleportation), and also in such works as Gordon R. DICKSON's Time to Teleport (1955 Science Fiction Stories as "Perfectly Adjusted"; 1960). Teleportation by alien creatures is a significant plot element in Anne MCCAFFREY's Pern series, and comes into sharper focus in Vernor VINGE's The Witling (1976) and Walter Jon WILLIAMS's Knight Moves (1985). A recent story in which human teleportation comes in for specific examination is Jumper (1992) by Steven Gould. Fire-raising rarely receives separate treatment in sf stories, a notable exception being Stephen KING's Firestarter (1980). In order to be dramatically effective, abilities like mind control and telekinesis usually have to be moderated in some way, unless the point of the story is sarcastically to demonstrate the appalling tyranny which would surely result from the human possession of godlike powers, as in Jerome BIXBY's classic "It's a Good Life" (1953), Frederik POHL's "Pythias" (1955) and Henry SLESAR's "A God Named Smith" (1957). On the other hand, the unthinkingly casual use of extravagant

powers for trivial purposes is ironically featured in Henry KUTTNER's comedies about the hillbilly Hogbens. Humans made godlike by psi powers are given less cynical treatment in Frank HERBERT's "The Priests of Psi" (1959) and The God Makers (1972), and in several novels by Roger ZELAZNY. One might perhaps wish that L. Ron HUBBARD had retained the amiable cynicism he exhibited in his early psi story "The Tramp" (1938), but instead he went on to build SCIENTOLOGY around a mythology of human evolution towards psionic godhood. Several stories of gradually unfolding psi power reach climaxes which may be regarded as apotheoses - Arthur C. CLARKE's CHILDHOOD'S END (1953) is the most notable example; others are Keith LAUMER's The Infinite Cage (1972) and Oscar ROSSITER's Tetrasomy Two (1974). Carole Nelson DOUGLAS's Probe (1985) and Counterprobe (1988) offer a more moderate account of psi powers, not initially under conscious control, being gradually revealed. Despite the widespread publicity given to the phenomenon of "spoon-bending" in the 1970s there is no convincing evidence that real-world psychics can accomplish more than moderate conjurers by way of telekinesis. It is a little recognized fact that the evidence for ESP, seemingly a more plausible talent, is even worse. That stories of ESP far outnumber stories devoted to the other psi powers has far more to do with intrinsic narrative interest than with questions of likelihood. Some critics feel that, in spite of the elaborate pseudo-scientific jargon developed by believers in the "paranormal", stories of psi powers really belong to the realm of magical FANTASY rather than sf. The rapid growth of genre fantasy in the past two decades has, in fact, allowed many such stories to be appropriately relocated. [PN/BS]

PSYCHEDELIC HUXLEY

Aldous Huxley wrote Brave New World in 1932, and his vision of a future world was original, funny, and shocking. In the book, drugs were presented as an unqualified evil. Soma, the drug of choice, was used by the authorities to tranquilize humanity into euphoric complacency. But Huxley himself spent the last decade of his life exploring consciousness-altering drugs with a lot more sympathy. He experimented with mescaline in 1953 and tried LSD several times during the 1950s, writing about his experiences with great enthusiasm and, as he said, "an unspeakable sense of gratitude for the privilege of being born into this universe." Huxley died on November 22, 1963, the day John F. Kennedy was assassinated. A few hours before Huxley's death, he requested LSD. As the doctor and nurses who were attending him were clustered around the television, Huxley passed away, under the influence.

PSYCHOHISTORY

A much-loved item of sf TERMINOLOGY, coined in Isaac ASIMOV's very popular Foundation (1942-50; fixups 1951-3) (and not to be confused with the term sometimes used by historians, which refers to the study of the relation of psychological motives to historical process). The attractive but purely IMAGINARY SCIENCE of psychohistory supposes that the behaviour of humans in the mass - and thus future HISTORY - can be predicted by purely statistical means, but ". . . a further necessary assumption is that the human conglomerate be itself unaware of psychohistoric analysis in order that its reactions be truly random". It is upon this condition

that the meta-plot of the trilogy depends. [PN]

PSYCHOLOGY

The science of the mind is sufficiently different from the physical sciences for its discoveries and hypotheses to set very different problems and offer very different opportunities to the writer of speculative fiction. Psychology still carries a considerable burden of pseudo-scientific conjecture even if one sets aside its close and problematic relationship with parapsychology (ESP; PSI POWERS). The absence of convenient models of the mind (whether based on physical analogy or purely mathematical) means that the mind remains much more mercurial and mysterious than the atom or the Universe, in spite of the fact that introspection appears to be a simple and safe source of data. A great deal of fiction which attempts to explore the mysteries of mind lies on the borderline between sf and MAINSTREAM fiction. Studies of both normal and abnormal psychology may be accommodated within the province of the traditional novel of character, even if their insights are derived from scientific constructs like psychoanalysis. There is a whole school of modern novelists, their work generally reckoned to be a long way removed from sf, whose self-defined task has been to capture the "stream of consciousness" - a psychological hypothesis we owe to the philosopher William James (1842-1910), not to his writer brother Henry. Studies of obsession, alienation and various forms of insanity are by no means uncommon in contemporary fiction, and even the most exaggerated - e.g., many studies of "dual personality" - seem perfectly acceptable as "realistic" novels. It is not until a notion of this kind is taken to bizarre extremes, as in Stanley G. WEINBAUM's dual-personality tale *The Dark Other* (1950), that the story becomes unmistakably sf. Even stories replete with the jargon of supposedly scientific psychoanalysis, like Thomas Bailey ALDRICH's *The Queen of Sheba* (1877) and S. Guy ENDORE's classic Freudian murder mystery *Methinks the Lady* (1945), are intrinsically mundane, although Endore's study of the psychological syndrome of lycanthropy, *The Werewolf of Paris* (1933), is normally considered a FANTASY. There is a certain irony in the fact that the subgenre of psychological speculative fiction which is most easily claimed for sf is the class of stories dealing with mesmerism and hypnosis - because these are sufficiently disreputable to be evidently fantastic! Thus a story like Edgar Allan POE's "The Facts in the Case of M. Valdemar" (1845) invites classification as sf not so much because it mimics the form of a scientific report but because the mesmerised hero's immunity to decay is so obviously impossible. Stories of delusional neurosis or vivid hallucination which become very bizarre - e.g., Sir Ronald FRASER's *The Flower Phantoms* (1926) - are more conveniently classed as visionary fantasy than as sf, because of rather than in spite of the fact that their "impossible" events are entirely subjective, even though scientific theories like Freud's psychoanalysis may have been used to generate the substance of the fantasies. Early exercises in speculative psychology which uncontroversially belong to sf are those in which some invention, usually a MACHINE or a drug, is invoked as a literary device to exert specific control over the substance of the psyche (although it is arguable that all such devices are based on philosophical errors concerning the nature of

mental phenomena). The origins of psychological sf thus lie in such stories as Edward BELLAMY's *Dr Heidenhoff's Process* (1880), about a technology of selective amnesia, Robert Louis STEVENSON's *Strange Case of Dr Jekyll and Mr Hyde* (1886), about a drug which separates the principle of evil from that of good (or the id from the superego, as the Freudian reader is bound to interpret it), Richard Slee and Cornelia Atwood PRATT's *Dr Berkeley's Discovery* (1899), about a method of "photographing" memories, Walter BESANT's "The Memory Cell" (1900), again dealing with selective amnesia, and Vincent HARPER's materialist polemic *The Mortgage on the Brain* (1905), about an electrical method of personality-modification. The early sf PULP MAGAZINES featured numerous devices of these and related types, and Hugo GERNSBACK's recruitment of the practising psychiatrist David H. KELLER did not result in any conspicuous sophistication of pulp sf's handling of psychological matters. Keller's most notable stories extrapolating psychological theory - the remarkable Freudian erotic fantasy *The Eternal Conflict* (1939) and "The Abyss" (1948), which tracks events following the release of a drug which destroys inhibitions - were too risqué for pulp publication. The theme of "The Abyss" is featured also in Vincent MCHUGH's libidinous comedy *I am Thinking of My Darling* (1943), which anticipated counterculture-inspired LSD fantasies like William TENN's "Did your Coffee Taste Funny this Morning?" (1967; vt "The Lemon-Green Spaghetti-Loud Dynamite-Dribble Day") and Brian W. ALDISS's *Barefoot in the Head* (fixup 1969), rather than endorsing the view shared by Freud and Keller that repression of our more vicious urges is the necessary price we pay for society and civilization. Other notable sf stories which side with Keller in their suspicion of the unfettered id are Jerome BIXBY's "It's a Good Life" (1953) and James K. MORROW's *The Wine of Violence* (1981). The most impressive psychological study to appear in the pulps was not in an sf magazine but in UNKNOWN; this was L. Ron HUBBARD's classic *Fear* (1940; 1957), about a man who loses a slice of his life by repression and is tortured by the "demons" of guilt. Material from the story was transplanted into Hubbard's substitute psychotherapy, DIANETICS, which later became part of the dogma of SCIENTOLOGY; dianetic theory is much in evidence in the stories collected in *Ole Doc Methuselah* (1947-50 as by Rene Lafayette; coll 1972). It is a fairly common ploy in sf stories to use amnesiac heroes whose memories eventually turn out to be magnificently bizarre; examples are H.P. LOVECRAFT's "The Shadow Out of Time" (cut 1936; restored 1939), L.P. DAVIES's *The Shadow Before* (1970) and Keith LAUMER's *The Infinite Cage* (1972). One of the most famous pulp sf stories, Isaac ASIMOV's "Nightfall" (1941), deals with the psychology of revelation - a subject dealt with in a less pessimistic fashion in other stories of CONCEPTUAL BREAKTHROUGH. Asimov's more significant contribution to psychological sf, however, is the IMAGINARY SCIENCE of robopsychology, which he invented for the stories in *I, ROBOT* (1940-50; coll 1950), many of which feature robopsychologist Susan Calvin in confrontation with practical and theoretical problems arising from the Three Laws forming the basis of robotic ethics. Robopsychology remained an essential element in Asimov's ROBOT stories, especially such philosophically inclined ones as "That Thou Art Mindful of Him" (1974) and "The Bicentennial Man" (1976). Technologically assisted journeys into the hypothetical INNER SPACE of the human mind became

increasingly common in post-WWII sf. The hero of "Dreams are Sacred" (1948) by Peter Phillips (1921-) has to entice a catatonic dreamer back to the real world by disrupting his fantasy world. Other such journeys are featured in "The Mental Assassins" (1950) by Gregg Conrad (Rog PHILLIPS), "City of the Tiger" (1958) by John BRUNNER, "Descent into the Maelstrom" (1961) by Daniel F. GALOUYE, "The Girl in his Mind" (1963) by Robert F. YOUNG, Mindplayers (1987) by Pat CADIGAN, The Night Mayor (1989) by Kim NEWMAN and Queen of Angels (1990) by Greg BEAR. Several of the above-named stories extrapolate the idea of "telepathic psychiatry" with considerable intelligence; the Brunner story became the basis of the pioneering novel THE WHOLE MAN (fixup 1964 US; vt Telepathist 1965 UK). Another fine novel on the same theme is THE DREAM MASTER (1966) by Roger ZELAZNY; dreams are taken very seriously in Connie WILLIS's Lincoln's Dreams (1987). Brunner's numerous essays in psychological sf also include a notable story about a reality-distorting drug, The Gaudy Shadows (1960; exp 1971), and a psychiatric case-study, Quicksand (1967); both belong to categories of sf story which became very abundant in the 1960s. Several other post-WWII writers have shown a consistent interest in psychology. Alfred BESTER produced, among others, the quasi-Freudian vignette, "The Devil's Invention" (1950; vt "Oddy and Id"), a classic novel about a psychotic murderer who eventually undergoes psychic demolition and reconstitution, THE DEMOLISHED MAN (1953), and a remarkable study of confused identity, "Fondly Fahrenheit" (1954). Most of Theodore STURGEON's sf consists of psychological studies of loneliness, angst and alienation, often resolved by the quasitranscendental curative power of love; a few examples selected from a great many are the bitter study of prejudice, "The World Well Lost" (1953), the painful study of megalomania, "Mr Costello, Hero" (1953), and the classic novels of literal psychic reintegration, MORE THAN HUMAN (fixup 1953) and The Cosmic Rape (1958). Ray BRADBURY has written a number of neat stories turning on the vagaries of child psychology, most notably the ironic "Zero Hour" (1947) and "The World the Children Made" (1950; vt "The Veldt"), although most of his work in this nostalgic vein is pure fantasy. Very many of Philip K. DICK's sf stories are concerned with false worldviews of various kinds - and, indeed, with the possibility that reality is intrinsically subjective; Eye in the Sky (1957) features a series of ALTERNATE WORLDS incarnating neurotic worldviews, while THE THREE STIGMATA OF PALMER ELDRITCH (1965) was the first of a sequence of novels dealing with reality-warping drugs which eventually culminated in the deeply embittered black comedy A SCANNER DARKLY (1977). Several of Dick's novels deal with schizophrenia (in the true clinical meaning rather than the vulgar sense embodied in such split-personality stories as Wyman GUIN's "Beyond Bedlam" [1951]), including Martian Time-Slip (1964) and We Can Build You (1972), while Clans of the Alphane Moon (1964) features the full panoply of neuroses. PARANOIA and schizophrenia are sufficiently widespread in modern sf to warrant a separate entry in this book, but mention may be made here of the paranoid fantasies in which Barry N. MALZBERG has specialized to great effect; different sf situations become archetypes of paranoid delusion in Overlay (1972), Beyond Apollo (1972), The Day of the Burning (1974) and The Gamesman (1975), and even Freud cannot cope with the situations which confront him in THE REMAKING OF SIGMUND FREUD (1985). Sf situations are used in much the same way to

construct exaggerated models of alienation in a number of stories by Robert SILVERBERG, including *Thorns* (1967), *The Man in the Maze* (1969) and *Dying Inside* (1972). Other writers who consistently extrapolate psychological syndromes into situations, landscapes and world-designs include J.G. BALLARD, in virtually all his work, and Philip Jose FARMER, whose early short stories - including the Oedipus-complex fantasy "*Mother*" (1953) and "*Rastignac the Devil*" (1954)-were pioneering exercises in this vein. The use of sf to address such psychological questions as the problem of identity - as in Algis BUDRYS's excellent *WHO?* (1958) or Silverberg's *The Second Trip* (1972) - is often closely related to mainstream work; in this instance, to such stories as Marcel AYME's *The Second Face* (1941; trans 1951), David ELY's *Seconds* (1963) - filmed as *SECONDS* (1966) - and Kobo ABE's *Tanin no Kao* (1964; trans as *The Face of Another* 1966 US). Variants on the sf/mainstream borderline include skin-colour-change fantasies, such as Chris Stratton's *Change of Mind* (1969) and the film *Watermelon Man* (1970), and sex-change fantasies, such as Hank STINE's *Season of the Witch* (1968) and Angela CARTER's *The Passion of New Eve* (1977). The processes of mind control involved in "brainwashing" - which play a key part in George ORWELL's *NINETEEN EIGHTY-FOUR* (1949) and which have become a standard element in DYSTOPIAN fiction - bestride the same borderline; exemplary works include *A CLOCKWORK ORANGE* (1962) by Anthony BURGESS and *The Mind Benders* (1963) by James KENNAWAY. Sf writers can, however, come up with wild variants which attempt to clarify the moral and philosophical questions involved; examples include *The Ring* (1968) by Piers ANTHONY and Robert E. MARGROFF and *The Barons of Behavior* (1972) by Tom PURDOM. Psychological themes of considerable interest where sf has a monopoly include: the augmentation of INTELLIGENCE, as featured in Poul ANDERSON's *Brain Wave* (1954), Daniel KEYES's *FLOWERS FOR ALGERNON* (1959; exp 1966) and Thomas M. DISCH's *CAMP CONCENTRATION* (1968); psychotic plague stories like Gregory BENFORD's *Deeper than the Darkness* (1970; rev as *The Stars in Shroud* 1978) and Jack DANN's *THE MAN WHO MELTED* (1984); and stories dealing with the recording of emotional experiences for replaying by consumers, including Lee HARDING's "*All My Yesterdays*" (1963) and D.G. COMPTON's *SYNTHAJOY* (1972). The last story is a variant of the more common notion that memories, and perhaps knowledge, might be transferred from one mind to another, a theme featured in Curt SIODMAK's *Hauser's Memory* (1968) and various films by him, A.E. VAN VOGT's *Future Glitter* (1973; vt *Tyrannopolis*) and James E. GUNN's *The Dreamers* (fixup 1980). Another related theme is that of recording and marketing dreams, a notion elaborately developed in Chelsea Quinn YARBRO's *Hyacinths* (1983) and James K. Morrow's *The Continent of Lies* (1984). Despite the profligacy of sf writers in devising machines and drugs as facilitating devices, the actual progress of experimental and physiological psychology has had very little impact on sf by comparison with the more abstract and theoretical side of the science, perhaps because of the kind of repugnance displayed in "*The Psychologist who Wouldn't Do Awful Things to Rats*" (1976) by James TIPTREE Jr - herself a psychologist, and better qualified than most to draw upon that inspiration. The heroic analyst selected by Jeremy LEVEN's computer-incarnated Satan (1982) to solve the problem of evil is similarly horrified by the gruesome activities of his experimentally inclined colleagues. The psychological implications of theories in LINGUISTICS have

had more impact, notably in Samuel R. DELANY's BABEL-17 (1966) and Ian WATSON's THE EMBEDDING (1973). Mention must also be made of a group of stories dealing with the psychology of sf itself in a rather alarmingly cynical fashion. The pioneer was a story purporting to be an essay, Robert LINDNER's "The Jet-Propelled Couch" (1955), about a psychiatrist's encounter with a patient who believes he has a second existence as the hero of a series of SPACE OPERAS, a theme echoed by Iain BANKS in The Bridge (1986), where SWORD-AND-SORCERY motifs obtrude into real life. Norman SPINRAD's The Iron Dream (1972), in which Hitler channels his power-fantasies into pulp sf rather than politics, and Malzberg's Herovit's World (1973) and GALAXIES (1975) offer uncompromisingly harsh judgments about the consolations of sf, and have aroused considerable ire among sf fans. Some psychoanalytical literary criticism of well known sf works is even harsher - examples are C.M. KORNBLUTH's "The Failure of the Science Fiction Novel as Social Criticism" (1959), Robert Plank's analysis of Robert A. HEINLEIN's STRANGER IN A STRANGE LAND (1961) in "Omnipotent Cannibals" (1971), and Thomas M. DISCH's analysis of the same author's STARSHIP TROOPERS (1959) in "The Embarrassments of Science Fiction" in Science Fiction at Large (1976; vt Explorations of the Marvellous) ed Peter NICHOLLS. The basic charge of all three essays is infantilism: together with the oft-quoted adage that the GOLDEN AGE OF SF is 13, they suggest that sf may appeal particularly strongly to people who cannot (yet) cope with reality, and to those condemned to remain existentially becalmed in psychological pre-adolescence forever. Spinrad's The Void Captain's Tale (1983) extrapolates the thesis that tales of the conquest of space are encoded sexual fantasies, and that SPACESHIPS are phallic symbols; the one in the story is propelled by a literal sexual drive. On the other hand, K.W. JETER's Dr Adder (1984) suggests that our deep SEX fantasies are much more exotic and much sicker than anything which can routinely be found in sf. Given that no one really knows what secrets lurk in the shadowy recesses of the unconscious mind and how our imaginative fictions are shaped to flatter them, speculation on such matters will presumably continue to roam freely across the whole spectrum of possibilities. PSYCHOTIC

US FANZINE, ed Richard E. GEIS; begun 1953; after 20 issues retitled Science Fiction Review for 3 issues in 1955; then stopped publishing. Geis resumed it with Psychotic #21 in 1967, then again changed the title to Science Fiction Review from #28. It was by this time printing more serious reviews and interviews, though its main feature remained Geis's amusing, rambling, personal comments. As Science Fiction Review it won a HUGO for Best Fanzine in 1969 and 1970; in its first incarnation Science Fiction Review ended with #43, Mar 1971, at which point it had a circulation, unusually high for a fanzine, of 1700. The editor also won 7 Hugos as Best Fan Writer; 6 were for his work in The ALIEN CRITIC, a later fanzine he began in 1973 and which itself, confusingly, underwent a change of title to Science Fiction Review in 1975. PUBLISHING

The history of sf publishing is, in its widest sense, the HISTORY OF SF itself; this entry, however, is concerned with a much more recent phenomenon, the emergence of GENRE SF as an identifiable and distinctive category of publishing, and therefore concentrates on US firms. A great amount of sf was published in the UK 1900-1950, but, although some transplanted US genre sf appeared, until about 1950 most UK firms published sf without any clear generic tagging, whether issued by prestige houses or by firms specializing in the library market. It was the first US sf magazines which, from 1926 onwards, established SCIENTIFUNCTION (for a few years) and then "science fiction" as a generic term. The original material which they featured was viewed, outside an immediate circle of enthusiasts, as debased and trivial pulp literature. The term became synonymous with ill written space adventure, while MAINSTREAM authors from outside the PULP MAGAZINES, who in retrospect have become identified as sf writers, pursued their careers and published their books without being tarred with the sf brush. This entry concentrates on sf book publishing; for magazine publishing SF MAGAZINES. Before 1945 only a small handful of stories from the sf and fantasy pulp magazines found their way into general publishers' lists; these included J.M. WALSH's *Vandals of the Void* (1931), Edmond HAMILTON's *The Horror on the Asteroid* (coll 1936 UK), L. Sprague DE CAMP's *LEST DARKNESS FALL* (1941) and two of De Camp's collaborations with Fletcher PRATT, and a number of UK anthologies partly or wholly drawn from the pages of WEIRD TALES. Meanwhile authors who sold their sf and fantasy to the better-paying and less-despised general-fiction pulps like *The ARGOSY* (Ray CUMMINGS, Otis Adelbert KLINE, A. MERRITT and others) regularly had their magazine serials issued in book form. In the absence of interest from established publishers, it fell to sf enthusiasts themselves to publish in book form the stories they admired (SMALL PRESSES AND LIMITED EDITIONS). The first such project of real importance was the memorial volume of Stanley G. WEINBAUM's stories, *The Dawn of Flame and Other Stories* (coll 1936); the first enterprise to launch itself as a proper publishing imprint was ARKHAM HOUSE, founded by August DERLETH and Donald WANDREI to preserve the memory of H.P. LOVECRAFT, beginning with their first title, *The Outsider* (coll 1939). WWII postponed the establishment of any rival ventures. It also saw the publication of the first significant sf ANTHOLOGIES: Phil STONG's *The Other Worlds* (anth 1941) and Donald A. WOLLHEIM's *Pocket Book of Science Fiction* (anth 1943) and *Portable Novels of Science* (anth 1945). The immediate post-WWII years saw a boom in sf anthology publishing from respectable imprints, epitomized by *Adventures in Time and Space* (anth 1946), a mammoth compilation ed by Raymond J. HEALY and J. Francis MCCOMAS and published by the prestigious Random House. Other anthologists, notably Groff CONKLIN and Derleth, mined the sf magazines extensively. Successful as these books were, they did not immediately lead to an interest in publishing novels or single-author collections written by magazine-sf writers, and a rash of specialist publishers appeared to fill the gap. Some of these, such as the Buffalo Book Company, New Era and Polaris Press, vanished rapidly; others, such as HADLEY PUBLISHING COMPANY and

PRIME PRESS, though short-lived, were more significant; and four imprints, FANTASY PRESS, FANTASY PUBLISHING COMPANY INC, GNOME PRESS and SHASTA, proved more enduring. There was no shortage of material to draw on, and a plentiful readership of sf enthusiasts who did not have access to the old magazines in which many of the stories were confined. To a significant degree it was the specialist publishers who determined the form in which future readers would perceive the stories of the stable of contributors to ASTOUNDING SCIENCE FICTION who formed the core of their lists. For example, Isaac ASIMOV's Foundation series was merely a long string of magazine stories until Gnome Press's packaging turned it into a trilogy of FIXUPS; similarly, Shasta determined the shape of Robert A. HEINLEIN's Future History series. By the early 1950s, however, a number of established US publishers had become aware of the commercial potential of sf, and they began sf lists. DOUBLEDAY was the most significant and enduring of these, though Scribners had begun a few years earlier with Heinlein juveniles; others included Grossett ?

similar boom occurred. Many of the giant US anthologies were republished, generally heavily cut, and such publishers as Grayson ?

Weidenfeld ?

the mid-1950s the first sf list to try to establish the category as worthwhile literature; its series, under the umbrella title "Novels of the Future", was edited by the romantic novelist Clemence DANE and included work by C.M. KORNBLUTH, Wilson TUCKER and others, but rode on the considerable reputation already established by John WYNDHAM, whose career with Michael Joseph had begun with The Day of the Triffids (1951); John CHRISTOPHER shortly followed a similar path. UK publishers like Michael Joseph found it easy to treat sf, with some confidence, as an unstigmatized kind of literature. At the same time, however, some of the worst sf ever published - assembly-line books from such publishers as CURTIS WARREN, Scion, BADGER BOOKS, Hamilton (who later became Panther Books) and the Tit-bits SF Library - appeared in the UK during these years. Where paperback sf remained, with certain exceptions, largely worthless ephemera in the UK until the late 1950s, in the USA it more quickly became an established part of publishers' lists. From their inception, publishers such as ACE BOOKS and BALLANTINE BOOKS relied heavily, and successfully, on sf; other publishers had a less considerable but nevertheless significant involvement. Ace, in particular, gave much encouragement to newer writers, using their Ace Double format (DOS-A-DOS) to couple them with more established names. Competition from paperback publishers was already, by the 1960s, causing the magazine publishers severe difficulties, and from this time on it is fair to say that books became the dominant form of sf publishing, with work that had not previously been printed in magazine form often appearing in paperback originals. Through the 1960s and 1970s sf continued to grow in strength as a publisher's category. The last of the important specialist sf publishers, Gnome Press, died in the early 1960s, although FPCI continued into the 1970s on a semiprofessional basis; both had been squeezed out by the larger firms, whose resources they could not match. Arkham House, however, continued successfully to publish weird material, chiefly collections of macabre stories and Lovecraftiana. Harper ?

Berkley/Putnam joined Doubleday as the leading US hardcover publishers of

sf (though Doubleday continued to produce the largest volume of titles); in the UK GOLLANCZ books, in their distinctive yellow jackets, dominated the market, although Faber ?

ROBERT HALE LIMITED (in descending order of discrimination and ascending order of volume) also made significant contributions. In the paperback field Ace Books faded in importance following the departure of editor Donald A. Wollheim; his new imprint, DAW BOOKS, begun 1972, took over Ace's place in the market with renewed success. In 1977 Ballantine retitled its sf imprint DEL REY BOOKS after its editor, Judy-Lynn DEL REY. From the late 1970s BANTAM BOOKS became a major rather than a minor player in sf publishing, especially after joining forces with Doubleday in 1986. In the UK, Panther Books was for many years the leading sf imprint, though this supremacy was challenged in the early 1960s by Penguin Books and in the 1970s by Sphere Books, Pan Books and the specialist imprint Orbit. By 1978 virtually every significant paperback publisher on both sides of the Atlantic included sf as an integral part of its list, and a high proportion of paperback editors were themselves sf enthusiasts. The 1970s also saw a revival of small specialist publishers, but, whereas in the 1940s they had been largely animated by a wish to bring unobtainable novels back into print, in the 1970s they were to a great degree feeding the demand of the growing market of sf and fantasy collectors, publishing obscure items by "collectable" authors (such as Lovecraft or, most particularly, Robert E. HOWARD) or lavishly produced illustrated editions of favourite works. FAX COLLECTORS EDITIONS was one of these, followed in the 1980s by MARK V. ZIESING, UNDERWOOD-MILLER and others. Another phenomenon of the 1970s, attesting to the academic respectability which sf was achieving in some quarters, was the establishment of scholarly reprint series, bringing classic sf works back into print in special durable editions. Such series have been published by ARNO, GARLAND, HYPERION PRESS and, most notably, GREGG PRESS. Thus sf novels first published in obscure and garish pulp magazines, later reprinted in hardcovers by loving enthusiasts when no commercial publisher would look at them, later still issued in equally garish paperback editions, were now made safe for posterity. By the 1980s, especially in the USA, sf publishing had begun to be weighted, more heavily than previously, towards lower-end-of-the-market series books, books derived from GAMES AND TOYS, film TIES and so forth, a rather disturbing phenomenon noted and discussed in several of this encyclopedia's entries (e.g., HISTORY OF SF, SERIES, SHARECROP and SHARED WORLDS). Many serious sf writers became disturbed at what they perceived as the shrinking of the middle-of-the-road part of publisher's lists, the "midlist", to which much of their work had previously belonged, as it was crowded out by formulaic "product". Nonetheless, serious sf publishing continued, and new companies arrived. Two brave, short-lived experiments were TIMESCAPE BOOKS, an imprint of Simon ? lasted only 1981-3 but was prestigious and influential while it did, and BLUEJAY BOOKS (1983-6), a quixotic attempt by a small press to enter mass-market publishing. Much more successful was TOR BOOKS, initially a mostly paperback house, founded in 1981 and brought under the umbrella of St Martin's Press, which came from nowhere to be for a time the leading sf publisher (in terms of number of titles, but also very competitive in terms of quality) in the USA. By the beginning of the 1990s, US sf

publishing was dominated by Putnam/Berkley/Ace, Bantam/Doubleday/Dell, Tor/St. Martins and Random House/Ballantine/Del Rey, with firms like Warner Books edging towards a full involvement. Specialist sf publishers like DAW and Baen Books (Jim BAEN), while not exactly languishing, are a good way down the list, publishing much less sf/fantasy/horror than the big four groups. Sf publishing in the UK is on a much smaller scale, and is perhaps quirkiest and more individualistic for that reason, though many titles published in the UK are reprints of US titles (a traffic that does not flow so efficiently in the other direction). Of those publishers mentioned above, Gollancz has survived more than one change of ownership in the 1990s, Pan no longer publishes a large amount of sf, the Sphere sf list has been absorbed into Orbit, and Penguin is less and less important as an sf publisher. Panther is long gone, having been transmuted into Granada and then Grafton, as such becoming a division of HarperCollins, which in 1992 is perhaps the major player in UK publishing. It has, however, received strong competition from Legend (a division of Random Century), from New English Library (a division of Hodder ? from Gollancz, which now publishes paperbacks as well as hardcovers, from Orbit (from early 1992 a division of Little, Brown UK), from Headline (mostly fantasy and horror), and from Millennium (a division of the new-founded Orion Books). One interesting UK company has been The Women's Press, whose sf list has specialized in sf by women. A recession in book publishing generally in the late 1980s and early 1990s was predicted to affect sf particularly adversely, but it is surviving well to date, though the overall number of sf books published per year shrank a little from its 1988 peak, but then reached - in the USA at least - a new record, with LOCUS magazine counting 1990 separate sf/fantasy/horror titles (including reprints) published there in 1991, an average of over 5 per day. A further 1980s development in sf publishing has been the rise in popularity of the large-format trade paperback, which has the same page size as the hardcover edition, and is often printed and published simultaneously with it; in fact, in such instances it is usually more accurate to say that the trade-paperback version is the true first edition, the hardcover version representing a small run-on in a special binding for the institutional and gift markets. [MJE/PN]

PUC CETTI, ROLAND (PETER)

(1922-) US philosopher and writer, long professionally involved in mind-body problems. He published several essays on the split-brain controversy, perhaps most accessibly in "Sperry on Consciousness: A Critical Appreciation" for *The Journal of Medicine and Philosophy* in 1977. Both of his novels deal, in their way, with the question. In *The Death of the Fuhrer* (1972 UK) Hitler's brain is transplanted into the body of a voluptuous woman, and "his" identity discovered, in (as it were) flagrante delicto by the hero at a moment of passion. *The Trial of John and Henry Norton* (1973 UK) convincingly updates the Jekyll and Hyde theme, in that the two Nortons of the title inhabit a single body as the result of an operation to cut the link between the two lobes of the upper brain, the left and right lobes becoming in effect two different people. One of them proves to be a murderer, and they are tried "together". RP's concern with identity problems was evident also in *Persons: A Study of Possible Moral*

Agents in the Universe (1968 UK), which argues an expansion of the concept of "person" beyond its usual human-centred limitations and provides serious cognitive backing for the more speculative attempts in sf to apprehend the potential nature of ALIENS. [JC]

PULPHOUSE: A WEEKLY MAGAZINE
PULPHOUSE: THE HARDBACK MAGAZINE.

PULPHOUSE PUBLISHING

Based in Eugene, Oregon, this SMALL PRESS was founded by its publisher Dean Wesley SMITH in 1988, in association with Kristine Kathryn RUSCH and others, and specializes in sf, fantasy and horror. It began with PULPHOUSE: THE HARDBACK MAGAZINE in a limited edition. By 1990 it had become quite active in book publishing also, and in 1991, with 20 employees, the company seemed on the verge of becoming a full-scale publishing house; by mid-1992, however, most of these employees had been laid off. Along with its subsidiary Axolotl Press, Pulphouse publishes mostly limited editions. These include: a most unusual line of small paperbacks each containing a single short story (mostly reprints of award-winners and classics), a series that fell into abeyance in mid-1992; a series of novellas in book form; and the Author's Choice Monthly numbered series of single-author collections (28 of these by late 1992). Most of the above are sf or fantasy, but in mid-1991 Pulphouse announced a projected Mystery Scene imprint also. [PN]

PULPHOUSE: THE HARDBACK MAGAZINE

Quarterly "magazine" in hardcover-book format, in fact an ORIGINAL-ANTHOLOGY series; ed Kristine Kathryn RUSCH; published by Dean Wesley SMITH trading as PULPHOUSE PUBLISHING of Eugene, Oregon; 11 issues (each 1250 copies) Fall 1988-Spring 1991; publication projected to cease after 12 issues. This interesting, eclectic and mostly successful experiment alternated horror, speculative fiction, fantasy and sf in different issues. Horror and dark fantasy, in which categories much of the best work appeared, were the most repeated genres. The intended market appears to have been sophisticated: P:THM published some experimental work, and despite the notional pigeonholing of the fiction into categories, many of its stories transcend or ignore genre conventions. Many new authors were published by P:THM; more experienced contributors included George Alec EFFINGER, Charles DE LINT, Robert SHECKLEY, Lisa GOLDSTEIN, Joe R. Lansdale (1951-) and Harry TURTLEDOVE. An anthology is The Best of Pulphouse: The Hardcover Magazine (anth 1991) ed Rusch. P:THM was replaced in 1991 by Pulphouse: A Weekly Magazine ed Smith, in small BEDSHEET format - first (test) issue marked "Issue Zero" (Mar 1, 1991), official #1 dated June 1, 1991 - though for a number of months the two titles overlapped. The new 48pp magazine was anything but weekly to begin with, and, belatedly realistic, changed its title to Pulphouse: A Fiction Magazine with #5 (Sep 20, 1991) and announced a biweekly schedule. In its

eight official issues to Dec 1991 it published short fiction, serialized novels by Robert SHECKLEY, Spider and Jeanne ROBINSON and S.P. SOMTOW, and published nonfiction articles. P became more irregular in 1992, with only six issues, then lurched on with only two further issues in 1993, and one in 1994. #18 came out in early 1995. This latter edition was guest-edited by Damon KNIGHT, and featured all stories about Jesus, all written by graduates of CLARION SCIENCE FICTION WRITERS' WORKSHOP. P is perfectly capable of lingering on like this for years, displaying all the wan fascination of the Undead. [PN]

PULP MAGAZINES

In discussions of popular literature, as in this volume, the term "pulp" is used metaphorically as often as specifically, and when used specifically it has both a narrow and a wide sense.1. "Pulp" is used in this encyclopedia as an indication of format, in contrast to BEDSHEET and DIGEST. The pulp magazine normally measured 10in x 7in (about 25cm x 18cm); where the word "pulp" is used with no other indication of size, it can be assumed that the magazine in question was of approximately these dimensions.2. More broadly, "pulp" is used to designate the type of magazine whose format is as above. There was more to a pulp magazine than its size. Pulp magazines, as their name suggests, were printed on cheap paper manufactured from chemically treated wood pulp, a process invented in the early 1880s. The paper is coarse, absorbent and acid, with a distinctive sharp smell much loved by magazine collectors. Pulp paper ages badly, largely because of its acid content, yellowing and becoming brittle. Because of the thickness of the paper, pulp magazines tended to be quite bulky, often 1/2in (1.25cm) thick or more. They generally had ragged, untrimmed edges, and later in their history had notoriously garish, brightly coloured covers, many of the coal-tar dyes used to make cover inks being of the most lurid hues. It is usually accepted that Frank A. MUNSEY invented the pulp-magazine formula when in 1896 he changed the contents of The ARGOSY to contain nothing but fiction; previously the most popular periodicals had published a mixture of fiction, factual articles, poetry, etc. Sf was already popular in magazine format before the advent of the pulps - for example, in The STRAND MAGAZINE, The IDLER and MCCLURE'S MAGAZINE. However, these three and the many like them were aimed at a wealthier, more middle-class and possibly more literate audience than that which the pulps were invented to exploit: they were family magazines, with a more demure format and usually printed on coated, slick paper, which in the USA led to their being dubbed the "slicks" to distinguish them from their humbler brethren, the pulps. It is sometimes stated that the slicks were more expensive than the pulps, but this was not necessarily so. The popular slicks and the pulps were both part of a magazine-publishing revolution beginning in the 1880s, in which mass-distribution techniques and greatly increased advertising allowed the dropping of prices. Most magazines before the 1880s had had a small circulation and been relatively expensive, aimed at a narrow, upper-middle-class, literate group. But now, in the UK and USA, literacy was becoming nearly universal, population was increasing at an amazing rate (doubling in 30 years in the USA), modern technology was on the whole leading to more leisure, and there was as yet no cinema to offer

opposition in the telling of stories. As a consequence, magazine circulations became massive towards the end of the century, over half a million in the most successful cases. The slicks and, a little later, the pulps rode the crest of this wave, with the pulps cornering the all-fiction-magazine market. Other periodical formats - some of which had a longer history (BOYS' PAPERS; DIME-NOVEL SF) included the popular weekly tabloid, such as PEARSON'S WEEKLY. The general-fiction pulp magazine began to give way to specialized genre pulps after the founding in 1915 of Detective Story Monthly. (Frank Munsey had been a pioneer here, too, with Railroad Man's Magazine [1906] and Ocean [1907].) Western Story followed in 1919, Love Stories in 1921 and WEIRD TALES in 1923. It is surprising that sf did not get its own pulp until AMAZING STORIES in 1926, for the SCIENTIFIC ROMANCE had been a staple of the general-fiction pulps, along with LOST-WORLD stories and FANTASY, and in these fields the pulps had produced writers as celebrated and well loved as Edgar Rice BURROUGHS, Ray CUMMINGS, George Allan ENGLAND, Ralph Milne FARLEY, William Hope HODGSON, A. MERRITT, Sax ROHMER and Garrett P. SERVISS, as well as helped to popularize H.G. WELLS (more commonly published in the slicks) and H. Rider HAGGARD. Many of these writers retain their popularity. The advent of specialized pulps did little at first to disturb the hardened pulp writers, who turned from pirate stories to jungle stories, detective stories to sf, etc., with admirable sang-froid, though often with unhappy literary results. It was not until the late 1930s that sf writers in the pulps generally came to see themselves as specialists, concentrating usually on sf, fantasy and horror, and seldom ranging further. (The crossing of genre boundaries is not, however, a rarity among pulp sf and fantasy writers; many have written detective novels, and more recently some have done very well with DISASTER novels.) Nor did the advent of specialized pulps mark the end of sf in the general-fiction pulps. Argosy and BLUE BOOK MAGAZINE, for example, continued in the early 1930s to attract the most popular sf writers, including Burroughs and Farley; Argosy was paying up to 6 cents a word, and Blue Book also paid well, considerably better than the cent or even half-cent a word available from the sf pulps. However, by the end of the 1930s Argosy's rates had dropped to 1 1/2 cents a word. This marked the effective death of the general-fiction pulp, and probably had a lot to do with the new vigour apparent in such sf pulps as ASTOUNDING SCIENCE-FICTION. Although the sf pulps of the 1930s are remembered with great nostalgia by sf fans, the fact is that they formed a very minor portion of the overall pulp-publishing business. The great US pulp-publishing houses, such as Clayton, STREET ?

sf, in terms of number of titles and overall sales, formed only a tiny proportion. Sf as big business had to wait for the post-WWII paperback-book publishing boom (PUBLISHING). Most of the pulp magazines, sf included, had died by the middle 1950s, to be replaced by DIGESTS (SF MAGAZINES) in increasingly unhappy competition with paperback books; also, the reading of stories was itself giving way to the watching of TELEVISION. Indeed, many pulp historians would claim that, despite the proliferation of titles in the 1930s, the heyday of the pulp magazines with their half-million circulations ended with the paper shortages following WWI and the rapidly growing popularity of the CINEMA. The

economic depression of the late 1920s probably prolonged the end, bringing with it an urgent need for fiction which escaped the greyness of an ordinary world in which individuals seemed impotent. In the pulps, individuals not only influenced events, they regularly saved the world. A full index of sf and post-1930 fantasy magazines with entries in this volume - including many pulp magazines - is given under SF MAGAZINES. Other periodicals in which sf was published are discussed under BOYS' PAPERS, COMICS, DIME-NOVEL SF and MAGAZINES, the latter entry listing the most important of the general slicks and tabloids which published sf in the period 1890-1940. The following are the general-fiction pulp-magazine entries: The ALL-STORY, The ARGOSY, The BLUE BOOK MAGAZINE, The CAVALIER, The POPULAR MAGAZINE and The SCRAP BOOK. 3 specialized early pulps given entries are SCIENCE AND INVENTION, THRILL BOOK and WEIRD TALES. A number of 1930s "weird-menace" and science/detective pulps whose sf content was very marginal do not receive entries, with the pious exception of Hugo GERNSBACH's SCIENTIFIC DETECTIVE MONTHLY. There is a small fantasy element in such various genre pulps as Oriental Stories (1930), Golden Fleece Historical Adventure (1938) and Jungle Stories (1938), but the line had to be drawn somewhere in the no-man's-land between sf and fantasy, and they have been omitted. The sf content of the SUPERHERO/supervillain genre is sometimes greater and, though many are omitted - including the extremely popular The Shadow (1931-49), whose sf content was marginal and irregular (but see Walter B. GIBSON for some details) - there are entries for CAPTAIN HAZZARD, CAPTAIN ZERO, DOC SAVAGE MAGAZINE, DR. YEN SIN, DUSTY AYRES AND HIS BATTLE BIRDS, FLASH GORDON STRANGE ADVENTURE MAGAZINE, G-8 AND HIS BATTLE ACES, The MYSTERIOUS WU FANG, The OCTOPUS, OPERATOR #5, The SCORPION, The SPIDER and TERENCE X. O'LEARY'S WAR BIRDS. A good account of life as a pulp writer is The Pulp Jungle (1967) by Frank Gruber; books on pulp publishing are Cheap Thrills: An Informal History of the Pulp Magazines (1972) by Ron GOULART, The Fiction Factory, or From Pulp Row to Quality Street: The Story of 100 Years of Publishing at Street? (1902-1965), and Pulp Voices: Interviews with Pulp Magazine Writers and Editors (chap 1983) ed J.M. Elliot; the feeling of the pulps themselves is captured in The Pulps: 50 Years of American Pop Culture (1970) ed Tony Goodstone; and The Shudder Pulps (1975) by Robert Kenneth Jones is on the "weird-menace" pulps. Also relevant is Yesterday's Faces: A Study of Series Figures in the Early Pulp Magazines: Volume 2: Strange Days (1984) by Robert Sampson, vol 1 being largely about precursors in the dime novels. 3. When used metaphorically the word "pulp" describes the quality and style of the fiction published in the pulp magazines - and, by extension, any similar fiction, no matter in what format it was published. The term is still used in this sense today, 40 years after the death of the pulps proper. The pulps emphasized action, romance, heroism, success, exotic milieux, fantastic adventures (often with a sprinkling of love interest), and almost invariably a cheerful ending. In literary criticism "pulp" is often taken as a synonym for "stylistically crude", but this was not necessarily the case. Good narrative pacing, by no means a negligible quality, was regularly found in the pulps, as were other the virtues of colour, inventiveness, clarity of image and occasional sharp observation, such as might be seen in the work of the early pulp writer Jack LONDON.

But it is true that the voracious appetite of the pulp market led to many writers becoming, in effect, word factories, writing too swiftly and to a cynical formula. The pulps did not generally pay as well for fiction as did the slicks, so economic pressure forced the pulp writer into high productivity. Today the term "pulp sf" is associated primarily with stories written, usually rapidly, for the least intellectual segment of the sf market - packed with adventure but with little emphasis on character, which is usually stereotyped, or on ideas, which are frugally and constantly recycled (CLICHES). Many of the entries in this volume discuss typical pulp-sf themes and modes, including GALACTIC EMPIRES, HEROES, OPTIMISM AND PESSIMISM, SEX, SPACE OPERA, SUPERMAN, SWORD AND SORCERY and

VILLAINS. On the other hand, not all the fiction published in the pulp magazines was subject to the limitations that the word "pulp" usually suggests. Two famous examples from crime fiction of writers transcending their pulp origins, even while continuing to be published in a pulp format, are Dashiell Hammett (1894-1961) and Raymond Chandler (1888-1959), both associated with Black Mask, and examples from sf are common, too, or else the genre would long ago have died of malnutrition (GOLDEN AGE OF SF). [PN]

PULP SF

PULP MAGAZINES.

PULSARS

BLACK HOLES; NEUTRON STARS.

PUNISHMENT PARK

Film (1970). Chartwell/Francoise. Dir Peter WATKINS, starring Carmen Argenziano, Stan Armsted, Jim Bohan, Frederick Franklin, Gladys Golden. Screenplay Watkins. 89 mins. Colour. Set in the NEAR FUTURE, PP concerns a group of young political dissidents who are forced to endure a government-controlled "run of the gauntlet" before they can attain amnesty for their political crimes. They must travel many miles across a US desert to reach a flagpole flying the Stars and Stripes, at the same time avoiding the patrols of government troops who have orders to shoot to kill. The presence of a tv team that follows one group of dissidents, increasingly involved with their situation, ingeniously increases our own involvement. Made at a time when youthful protest against the USA's involvement in Vietnam was at its peak, and a propaganda film on the side of the protesters, PP nevertheless shows a genuinely individual cinematic vision in its gloomy portrayal of a USA experiencing political repression. [JB/PN]

PURDOM, TOM

Working name of US writer Thomas Edward Purdom (1936-) for all his sf, which he started publishing with "Grieve for a Man" for Fantastic Universe in 1957. His sf novels, beginning with I Want the Stars (1964 dos), have been unpretentious but competent adventures, generally set on challenging alien worlds. The Tree Lord of Imeten (1966 dos) vividly puts two human colonists into a crisis situation in the jungle while two native races fight one another. The Barons of Behavior (1972) mixes politics and social

conditioning in a DYSTOPIAN future Earth. [JC]Other works: Five against Arlane (1967 dos); Reduction in Arms (1967 ASF; exp 1971).As Editor: Adventures in Discovery (anth 1969).See also: PSYCHOLOGY.

PURPLE DEATH FROM OUTER SPACE
FLASH GORDON.

PURSUIT

Made-for-tv film (1972). ABC Circle/ABC TV. Dir Michael CRICHTON, starring Ben Gazzara, E.G. Marshall, William Windom, Joseph Wiseman, Martin Sheen. Screenplay Robert Dozier, based on Binary (1972) by John Lange (Crichton). 72 mins. Colour.In this lively thriller, Crichton's directorial debut, an extremist politician plans to use a nerve-gas chemical weapon, capable of killing millions, in San Diego during a Republican convention in order to kill the US President. [JB/PN]

PYNCHON, THOMAS

(1937-) US writer, all of whose works are FABULATIONS which resemble sf under some interpretations, though the PARANOIA-wracked worlds his protagonists inhabit defeat any secure reading of the malign figurations of reality. In V (1963) dovetailing searches for a character named V geographically reproduce the title; some events in the book border on sf. The Crying of Lot 49 (1966) presents a complex conspiracy theory of history, the tone of which seems to have influenced Robert SHEA's and Robert Anton WILSON's Illuminatus! trilogy (1975). Enormous and complex, GRAVITY'S RAINBOW (1973) offers no repose for a secure reading, but the search for its main protagonist (whose sexual climaxes predict and attract rockets from the V-2s on) fabulously posits an sf world. The walking dead in Vineland (1990) are - it is almost certain - not literally posthumous. TP's general concerns with ENTROPY, paranoia and COMMUNICATION have had a fruitful effect on some sf writers. [JC]Other works: Entropy (1960; 1977 chap UK), also contained in Slow Learner (coll 1986).See also: CYBERPUNK; FANTASY; HISTORY OF SF.

SF?

Q

(vt The Winged Serpent; vt Q: The Winged Serpent) Film (1983). Larco. Prod and dir Larry COHEN, starring Michael Moriarty, Candy Clark, David Carradine. Screenplay Cohen. 92 mins. Colour.In this witty MONSTER MOVIE - which subverts our expectations about how both society and B-movies work in almost the same breath - "Q" represents on the one hand Quetzalcoatl, a giant winged serpent (thus sf) and Aztec god (thus not sf) that terrorizes New York, possibly called up by the city's violence, and on the other hand Quinn (Moriarty), a small-time jewel thief and opportunist who discovers the monster's lair atop the Chrysler Building (where there is, naturally enough, an Aztec pyramid). The likable human monster Quinn metaphorically coalesces with the literal monster. But Quinn plays Judas to the incarnated god, thus laying himself open to retribution from a ritual mutilator, one of Q's disciples. He is saved by cool policeman Shepard (Carradine), to whom monsters are just one more story in the Naked City. Moriarty is superb and, in its confident mounting, its sophistication, and

its higher-than-average (for Cohen) production values, Q may be its director's best film. [PN]

QERAMA, THANAS
[r] ALBANIA.

Q: THE WINGED SERPENT
Q.

QUANDRY
US FANZINE (1950-53), 30 issues, ed from Georgia by Lee HOFFMAN. Though undistinguished in appearance, Q was noted for the quality and humour of its writing; along with HYPHEN, its influence on fan publishing is still strong. Contributors included Walt Willis (1919-), Robert SILVERBERG, Wilson TUCKER, Robert BLOCH and James WHITE. Hoffman still publishes, but no longer edits, Science Fiction Five Yearly, the fanzine holding the record for the longest gaps between regular issues, founded 1951, #9 in 1991; it shares many contributors with Q. A single-issue reprint collection of Quandry #14-#17 was published in 1982 by Joe D. Siclari. [PR/RH]

QUANTUM LEAP
US tv series, (1989-1993). Universal/MCA for NBC. Created and prod Donald P. Bellisario. Supervising prod Deborah Pratt. Writers include Bellisario, Pratt, Beverly Bridges, Paul Brown, Chris Ruppenthal, Scott Shepherd, Tommy Thompson. Dirs include David Hemmings, Aaron Lipstadt, James R. Whitmore, Gilbert Shelton, Christopher Welch, Joe Napolitano, Michael Watkins, Michael Zinberg. Five seasons to May 1993, 95 one-hour episodes in all. Colour. QL is an unusual TIME-TRAVEL series, with Scott Bakula as Sam Beckett (!), a scientist lost in time, helped only by the projected hologram of Albert (Dean Stockwell), an eccentric colleague trapped in the future. Unlike the heroes of The TIME TUNNEL (1966-7), who were physically dumped into historical situations, Beckett travels mentally, his consciousness inhabiting the bodies of other people at any time between the 1950s and the 1980s (the time visited has to be after his own birth). As in Here Comes Mr Jordan (1941), the audience sees the hero as himself while those around him see the person he is possessing. Although the premise is gimmicky, the series reached a surprisingly high standard. Highspots from 1989 have Beckett suddenly in the bodies of a test pilot about to step into an experimental plane Beckett can't possibly fly, a mobster required to sing in Italian at a wedding, an old Black man in the South in the 1950s during a civil-rights demonstration, and a pretty woman being pursued by a lecherous suitor. Only notionally sf, this is a shade grittier, funnier and cleverer than it has any right to be, and benefits strongly from the two relaxed, witty central performances. [KN]

QUANTUM: SCIENCE FICTION AND FANTASY REVIEW
THRUST.

QUARBER MERKUR
Austrian FANZINE; ed Franz ROTTENSTEINER since its inception in 1963. In the argot of fans, QM is a "sercon" (serious and constructive) fanzine, one of the longest-running and most impressive of its type. It publishes

critical, bibliographical, sociopolitical and historical studies of sf, UTOPIAS, weird fiction and FANTASY. Averaging 90 large unillustrated pages per issue, QM has now published around 3 million words of serious criticism; it had reached #74 by the end of 1990. Contributors have included most of the major German sf critics, and writers such as Herbert W. FRANKE and Stanislaw LEM; many contributors have been from Eastern Europe. A collection of some of the best contents is Quarber Merkur (anth 1979 Germany). [PN]

QUARK

US ORIGINAL-ANTHOLOGY series from Paperback Library, ed Samuel R. DELANY and the poet Marilyn Hacker (1942-) - they were married 1961-80 - subtitled "A Quarterly of Speculative Fiction". It was the most overtly experimental and NEW-WAVE of the ANTHOLOGY series of the early 1970s, and provoked some hostility in the sf world. It attempted an ambitious, graphically sophisticated package; but some illustration was substandard and the design was irritating rather than innovative, with such counterproductive features as the appearance of authors' names only at the end of each story and, for #2 (because of a production oversight), the omission of a contents page. Although Q featured good work by Thomas M. DISCH, R.A. L AFFERTY, Ursula K. LE GUIN, Joanna RUSS and others, it lasted only 4 issues: Quark 1 (anth 1970), #2 (anth 1971), #3 (anth 1971) and #4 (anth 1971). [MJE/PN]

QUASARS

BLACK HOLES.

QUATERMASS

(vt The Quatermass Conclusion) UK tv serial (1979). Euston Films/ITV. Prod Ted Childs. Dir Piers Haggard, starring John Mills, Simon MacCorkindale, Rebecca Saire. Written Nigel KNEALE. 4 60min episodes. Colour. Version for film release (but receiving general release only on videotape) titled The Quatermass Conclusion, 102 mins. This fourth and weakest of the Quatermass tv serials (see below for details of the others) was written in the late 1960s for BBC TV, rejected as too expensive, and finally made for commercial tv a decade later. The delay rendered out-of-date the sequences about hippie adolescents lured to neolithic sites to be harvested by aliens. The other part of the plot, dealing with near-future breakdown of law and order in a London becoming a wasteland, is stronger; but the two halves never properly meld, and Q lacks the narrative thrust of its predecessors. John Mills's Quatermass is rather old and sad, and, though there is much to enjoy, there is a faintly querulous, elderly air about the whole production. The cut version, though planned from the beginning, is semi-incoherent. Kneale's obsessive, 30-year repetition of the science-meets-superstition theme is altogether jollier in his screenplay for HALLOWEEN III: SEASON OF THE WITCH (1983), also featuring a stone circle. [PN]

QUATERMASS AND THE PIT

1. UK tv serial (1958-9). BBC TV. Prod and dir Rudolph Cartier, starring Andre Morell (as Quatermass), Anthony Bushell. Written Nigel KNEALE. 6 35min episodes. (Released on video 1988 at 178 mins.) B/w.As in QATP's two

predecessors, *The QUATERMASS EXPERIMENT* and *QUATERMASS II*, Kneale's theme is demonic possession, dressed up ingeniously as sf. Morell was the best of the BBC's three Professor Quatermasses, and most critics judge the tv serial better than the film version. The published script is *Quatermass and the Pit* * (1960) by Kneale. For details of the story see below. 2. Film (1967; vt *Five Million Years to Earth* US) Hammer/Seven Arts. Dir Roy Ward Baker, starring Andrew Keir (as Quatermass), Barbara Shelley, James Donald. Screenplay Nigel KNEALE, based on his BBC TV serial. 97 mins. Colour. Hammer's third Quatermass film, a decade after the second and the only one with an English actor (Keir) in the title role. The first two were *The QUATERMASS XPERIMENT* (1955) and *QUATERMASS II* (1957). Workers excavating a tunnel find an apparent unexploded bomb; it is actually a Martian spaceship. In a plot-turn deftly blending sf with speculation on Jungian archetype, it turns out that racial memories have been coded in our brains by Martians during our prehistory: our image of the Devil is a distorted "memory" of the Martians' appearance (antennae equalling horns), and our irrational belligerence reflects the Martians' ritualistic culling of the weaker members of their species. The spaceship's power source is merely dormant, and as it comes to life (poltergeist phenomena being the first effect) it reinforces ancient nightmares. In the disturbing climax panicked Londoners begin an orgy of destruction as a Devil's head rises above the streets and paranormal powers are let loose. QATP is surely the inspiration for Stephen KING's novel *The Tommyknockers* (1987). Kneale's characteristic blend of GOTHIC and science is intelligent and entertaining. Although inferior to its tv original, which had more time to develop its irrational but mesmerizing thesis, the film is still above average. [PN/JB] See also: SUPERNATURAL CREATURES.

QUATERMASS CONCLUSION, THE QUATERMASS.

QUATERMASS EXPERIMENT, THE
UK tv serial (1953). BBC TV. Prod and dir Rudolph Cartier, starring Reginald Tate (as Quatermass), Isabel Dean, Duncan Lamont. Written Nigel KNEALE. 6 30min episodes. B/w. Before the first episode, the BBC warned that the serial was "thought to be unsuitable for children or persons of a nervous disposition". For 6 Saturday nights the UK tv audience watched a genuinely unsettling story unfold - an ingenious combination of sf and the traditional horror theme of possession. It was a milestone in televised sf. The script was published as *The Quatermass Experiment* * (1959) by Kneale. For details of the story *The QUATERMASS XPERIMENT* . [JB]

QUATERMASS II

1. UK tv serial (1955). BBC TV. Prod and dir Rudolph Cartier, starring John Robinson (as Quatermass). Written Nigel KNEALE. 6 35min episodes. B/w. This was the sequel to *The QUATERMASS EXPERIMENT* ; for details of the story see below. The script was published as *Quatermass II* * (1960) by Kneale. 2. Film (1957; vt *Enemy from Space* US) Hammer/United Artists. Dir Val Guest, starring Brian Donlevy (as Quatermass), Bryan Forbes, John Longden, Sidney James. Screenplay Nigel KNEALE, Val Guest, based on the BBC TV serial by Kneale. 85 mins. B/w. This was #2 of the 3 Quatermass films produced by Hammer, and the first coscripted by Kneale; it is the

most difficult to judge since Kneale, who disliked Donlevy's US performance and Guest's tampering with his script, withdrew the film from circulation in 1965 when rights reverted to him. Many critics think it the best of the Quatermass films, and some deem it the greatest of all UK sf movies (though astonishingly similar in theme to the US film *INVASION OF THE BODY SNATCHERS* [1956]): disturbing, intense, unrelenting, paranoid and especially nightmarish in its depiction of figures in power conspiring with aliens capable of entering and controlling human bodies. Much of the action takes place in the brooding landscapes of the North of England, where a mysterious technological complex turns out to be the alien power base. The strong political allegory of ordinary people cruelly exploited by a cold-blooded (and in this case literally inhuman) ruling class was very adventurous for the time. The tv ending (Quatermass goes into space to destroy the asteroid which is the alien base) is dropped in the film. The film's predecessor was *The QUATERMASS XPERIMENT* (1955) and its successor was *QUATERMASS AND THE PIT* (1967). [PN]See also: *MONSTER MOVIES*; *PARANOIA*; *QUATERMASS*.

QUATERMASS XPERIMENT, THE

(vt *The Creeping Unknown US*) Film (1955). Hammer. Dir Val Guest, starring Brian Donlevy (as Quatermass), Richard Wordsworth, Jack Warner. Screenplay Richard Landau, Val Guest, based on the BBC TV serial by Nigel KNEALE. 82 mins, cut to 78 mins. B/w. It was this film version of the BBC's tv serial *The QUATERMASS EXPERIMENT* that convinced the Hammer company there was money in horror. (The spelling "Xperiment" referred jokingly to the X certificate Hammer correctly expected the film to be given because of what seemed in those innocent days its alarming horror content.) An astronaut returns to Earth infected by spores from space that slowly take over his body, finally transforming him into an amorphous blob that retreats into Westminster Abbey, where it is electrocuted by Quatermass. (The original tv serial ends with Quatermass talking to all the three astronaut psyches lingering within the monster, thus convincing the blob to self-destruct.) Richard Wordsworth's shambling, pitiful performance as the afflicted astronaut is quite moving, communicating (though he barely speaks) a sense of something utterly alien to human experience. TQX is a minor classic. [PN/JB]See also: *MONSTER MOVIES*.

QUESTAR

US sf magazine; large- BEDSHEET slick format; 13 issues, Spring 1978-Oct 1981; published by M.W. Communications Inc (William G. Wilson and Robert V. Michelucci), Pittsburgh; ed William G. Wilson Jr. The final, redesigned

issue, had a new title: Quest/Star, subtitled "The World of Science Fiction". Questar began as a media SEMIPROZINE largely devoted to talk about COMICS and sf CINEMA, with a sprinkling of not very good stories. #3 introduced interior colour illustration, and a greater concentration on movies and interviews. Though glossy, it remained insipid. Only with #13 - for which, astonishingly, H.L. GOLD was dragged from retirement as fiction editor - did Q begin publishing reputable fiction. This was too little, too late. Undercapitalized - and undersold, despite its patchy national distribution from #7 - Q sank, lamented by few. Publication was irregular, though approximately quarterly. [PN]

QUEST FOR FIRE

Film (1981). ICC-Cine-Trail (Montreal)/Belstar Productions/Stephan Films (Paris). Dir Jean-Jacques Annaud, starring Everett McGill, Ron Perlman, Nameer El-Kadi, Rae Dawn Chong. Screenplay by Gerard Brach, based on La Guerre du Feu (1909) by J.H. ROSNY aine. 100 mins. Colour. This Canadian/French coproduction dramatizes the 1909 French classic prehistoric romance by J.H. Rosny aine, trans as The Quest for Fire: A Novel of Prehistoric Times (cut trans 1967 US). Great care (possibly misplaced, since who can know?) was taken to make it all seem authentic, from positions adopted for love-making (body language credited to Desmond Morris) and an imaginary agglutinative language with a vocabulary of about 200 sounds (linguistics credited to Anthony BURGESS). The tribe's fire has gone out, and three tribesmen go on a quest to find fresh fire (it is a kind of Holy Grail), confronting a more primitive cannibal tribe and then the more sophisticated Ivaka, who know how to make fire. As an exercise in imaginary ANTHROPOLOGY it is mildly impressive (though it has its cod aspects, its 1909 original not being the last word in prehistoric insight); as story-telling, it covers familiar generic ground, but is all very enjoyable - especially the arbitrary herd of mammoths (elephants wearing rugs) - and rather touching. The Kenyan and Scottish highlands, beautifully photographed, stand in for prehistoric Europe. [PN]

QUEST FOR LOVE

Film (1971). Peter Rogers Productions. Dir Ralph Thomas, starring Tom Bell, Joan Collins, Denholm Elliott, Laurence Naismith. Screenplay Terence Feely, based on "Random Quest" (1961) by John WYNDHAM. 91 mins. Colour. Romance about a physicist (Bell) accidentally transferred to a PARALLEL WORLD, where he falls in love with the wife (Collins) of his alter ego, a playwright and cad, whose place he has taken. She dies. On being sucked back to our own world, he desperately quests for her counterpart, hoping to save her and have a second chance at love. He does. Good performances, so-so as sf, with the differences of the new world (Kennedy not assassinated, etc.) established only perfunctorily. Wyndham's original story is one of his weakest. [PN]

QUESTOR TAPES, THE

Made-for-tv film (1974). Universal/NBC. Dir Richard A. Colla, starring Robert Foxworth (as Questor), Mike Farrell, John Vernon. Teleplay Gene RODDENBERRY, Gene L. Coon. 100 mins. Colour. This was the rather good pilot episode for a tv series that never sold. Questor, the last of a series of ANDROID guardians deposited on Earth eons ago by a beneficent ALIEN race,

has been faultily programmed, and the story involves his search for information that will explain his origin and mission. Little is resolved, since the film was designed as an introduction only. The novelization is *The Questor Tapes* * (1974) by D.C. FONTANA. [JB]

QUESTS

FANTASTIC VOYAGES; FANTASY.

QUEST/STAR

QUESTAR.

QUICK, W.T.

(? -) US writer who began publishing sf with "Rest in Pieces" for IASFM in 1980, but who came to more general notice, after several 1980s stories in ASF, with the Dreams sequence of sf adventures: *Dreams of Flesh and Sand* (1988), *Dreams of Gods and Men* (1989) and *Singularities* (1990). The tales are clear-cut and taut, but the huge corporations dominated by AIs were unsurprising fare for readers familiar with the rapid explosion of the CYBERPUNK subgenre. *Yesterday's Pawn* (1989), also an adventure tale, takes its adolescent protagonist through space and time as he attempts to decipher the importance of an ancient artefact; but *Systems* (1989) returns to cyberpunk territory in the fast-paced story of a "data hunter" simultaneously grieving for his pregnant wife and solving the mysteries surrounding her murder. [JC]

QUIET EARTH, THE

Film (1985). Cinepro/Pillsbury. Dir Geoffrey Murphy, starring Bruno Lawrence, Alison Routledge, Peter Smith. Screenplay Bill Baer, Bruno Lawrence, Sam Pillsbury, based on *The Quiet Earth* (1981) by Craig HARRISON. 91 mins. Colour. This New Zealand film tells of a scientific/metaphysical DISASTER, perhaps consequent upon a secret project in energy transmission, in which all people disappear from the Earth except those who coincidentally die at the moment of the disaster: these are resurrected. A guilt-ridden scientist plays solitary games in a deserted city; he meets a woman survivor and then a tough Maori, with the usual male rivalry ensuing. The scientist realizes the fabric of the Universe has become unstable and tries to put it right, with interesting results. A small, low-key, honest film, suffering from a derivative storyline and rather pedestrian direction and performances. [PN]

QUILL, JOHN

[s] Max ADELER.

QUILLER, ANDREW

Kenneth BULMER.

QUILP, JOCELYN

Pseudonym of UK writer Halliwell Sutcliffe (1870-1932), whose *Baron Verdigris: A Romance of the Reversed Direction* (1894) features a 12th-century knight cast into confusion by being able to remember both the past and the future, but not to distinguish between them. [JC]

QUINN, DANIEL

(1935-) US writer who began publishing work of genre interest with

Dreamer (1988), a dark fantasy, and who came to wide notice with Ishmael (1992), which won the first Turner Tomorrow Award of \$500,000. The novel is a quietly told but elegantly unrelenting indictment of Homo sapiens's lethal tenure as rulers of the planet, spoken through the consciousness of a melancholy, didactic great ape (APES AND CAVEMEN) who attempts to teach the human protagonist what must be done: you must (he insists) change your lives; or you will all die. [JC]

QUINN, GERARD A.

(1927-) Northern Irish illustrator. One of the "grand old men" (with Brian LEWIS) of UK sf illustration in the 1950s, GAQ did hundreds of illustrations for UK sf magazines, beginning 1951, including 36 covers for NW, 24 for Science Fantasy, 3 for Nebula Science Fiction, 2 for Vision of Tomorrow and, in a minor 1982 comeback after largely disappearing from the scene in the mid-1960s, 2 for EXTRO. Specializing in alien landscapes, his astronomical paintings were often compared to those of Chesley BONESTELL, though his use of colour was less photographically realistic. His interior black-and-white work was intricate. [JG/PN]

QUINN, JAMES L(OUIS)

(? -) US editor whose Quinn Publishing Co started the magazine IF in 1952; JLQ became editor after the first 4 issues. Its circulation gradually declined, and in 1958 JLQ appointed Damon KNIGHT in his place. The magazine's fortunes did not revive and JLQ suspended publication, subsequently selling the title to the publishers of GALAXY SCIENCE FICTION. With Eve Wulff he ed 2 anthologies drawn from the magazine: The First World of If (anth 1957) and The Second World of If (anth 1958). [MJE]

QUINN PUBLISHING CO.

IF.

QUINTET

Film (1979). Lion's Gate/20th Century-Fox. Dir Robert Altman, starring Paul Newman, Bibi Andersson, Vittorio Gassman, Fernando Rey, Brigitte Fossey, Nina Van Pallandt, David Langton. Screenplay Frank Barhydt, Altman, Patricia Resnick, from a story by Altman, Lionel Chetwynd, Resnick. 118 mins. Colour. This strange film, crucified on release, is perhaps better than the then-consensus suggested. Newman is the seal-hunter in an (apparently) post- HOLOCAUST frozen future, a new Ice Age, who with his pregnant wife joins a dying but still crowded city, where corpses are left in the snow for the dogs to eat, where nobody is born any more, and where anomie is held at bay only by obsessive playing of the game Quintet. This is played either on a board or in real life; in the latter case 5 people must be killed: only 1 will survive. Newman's wife (Fossey) is accidentally killed during a game attack (along with Earth's last foetus), and Newman vengefully joins the game, wins, killing his new lover (Andersson) in the process, and vanishes back into the snow. The obvious reading is that of the still vigorous, romantic hero destroying a corrupt society. Another plausible reading is that the death-focused game is all the real life that is left, and that the hero's despising it is itself a sterile act of turning away: the hero as lost

fool. The imagery is strong, the pace glacial and the theme overintellectualized; the deliberately international cast sounds most of the time very uncomfortable with English (though the very alienation that suggests is appropriate to the story). Q bores the watcher, yet lingers for years in the mind. [PN]

SF?

RABELAIS, FRANCOIS

(?1494-1553) French monk, doctor, priest and writer. The various manuscripts now generally published as *Gargantua and Pantagruel* (1532-52 plus a posthumous text of dubious authenticity 1564; many trans, of which the best known is that by Sir Thomas Urquhart - first 2 books 1653 UK, 3rd book 1693 UK - and Peter Le Motteux - 4th and 5th books 1694 UK, and of which the most successful contemporary version is trans Burton Raffel 1990 US) form an immense, exuberant, linguistically inventive SATIRE with most of medieval Christendom the target. The giants of the title are enormous both physically and in their joyous gusto. In the Fourth Book (1552) of the sequence, ISLANDS exemplary of various aspects of society are visited-including the island of the Papimanes, description of whose inhabitants involves a radical criticism of the Catholic Church. Darker and more bitter in tone, the Fifth Book (1564) - which may well have been completed by another hand from FR's first draft-incorporates a section, *The Ringing Island* (1562), originally published separately, with the most notable sf imagery of the entire work. The islands of the 4th and 5th books were probably the most sustained invention of other worlds in literature up to that time. The succession of ALIEN societies, often making some kind of satirical comment on our own, complete with all sorts of colourful anthropological detail, has been greatly influential in PROTO SCIENCE FICTION, and its resonances can be sensed even today in the work of writers like Jack VANCE, who, even if not directly influenced by him, continue the FR tradition. [JC/PN]See also: FRANCE.

RABID
